Subject: RE: Tire Chart for tires/vehicles going to GCC countries

We were originally going to send the 245/45R17 95W, but switched to the P235/50R17 95V in the April timeframe.

PS I just got back from an inspection clinic and our caliper plating and anodizing is taking a beating from carwashes, wheel cleaners, and even household detergents! Ouch. This was the big chassis item from the clinic.

Give Steve a call on it; I am supposed to be on vacation.

Regards,
Darin Petrini

You told me you were sending V rated tire. This note says W rated. Now which is correct.

Thanks,

Without looking at your chart, the DEW should read 140 MPH limit for GCC.

We are using the US P235/50R17 95W in GCC to mitigate flat spotting concerns.

(We are finding that we are getting flat spotting on Dealer lots in Ohio!)
Steve and I spent 3 days at a dealer in Barberton Ohio fixing vibrating cars.

Every time I walked out the door and into the parking lot, I would swear I could hearing "Dueling Banjos" being played out in the woods.

Regards,
Darin Petrini
