

NAFTA Proponents Use Flawed Methods to Try to Hide Large NAFTA Trade Deficit

During the fierce 1993 debate over the North American Free Trade Agreement (NAFTA), proponents made rosy promises of job creation – 170,000 net new jobs within the pact’s first two years—predicated on NAFTA improving the U.S. balance of trade with Canada and Mexico.¹ Two decades later, the reality has been the opposite. Starting soon after NAFTA’s passage, the small pre-NAFTA U.S. trade surplus with Mexico turned into a massive new trade deficit, and the pre-NAFTA U.S. trade deficit with Canada expanded greatly.² The new NAFTA trade deficit had already equated to an estimated net loss of one million U.S. jobs by 2004.³ **The 2016 the U.S. NAFTA deficit in goods reached \$173 billion.⁴ Including goods and services trade, the combined U.S. trade deficit with Mexico and Canada rose (in inflation-adjusted terms) from \$10 billion before NAFTA in 1993 to \$142 billion in 2016.⁵**

Canada NAFTA deficit: The U.S. goods and services trade balance with Canada in 1993 before NAFTA went into effect was a \$17.4 billion deficit. That consisted of a \$30.5 billion goods trade deficit and a \$13 billion services surplus. In 2016, the last year for which full annual data is available, the U.S. goods and services trade balance with Canada was a \$32.6 billion deficit. That consisted of a \$56.6 billion goods trade deficit and a \$24 billion services surplus.

Mexico NAFTA deficit: In 1993, the U.S. goods and services trade balance with Mexico was a \$7.4 billion surplus. That consisted of a \$2.6 billion goods trade surplus and a \$4.8 billion services surplus. In 2016, the U.S. goods and services trade balance with Mexico was a \$109 billion deficit. That consisted of a \$116.5 billion goods trade deficit and a \$7.5 billion services surplus.

**U.S. Trade Deficit with Canada and Mexico
in Goods and Services under NAFTA**

Sources: U.S. International Trade Commission; Bureau of Economic Analysis, in 2016 dollars

The goods and services deficit increase with Mexico and Canada during the years NAFTA has been in effect – a jump of \$132 billion or 1,311 percent – represents hundreds of thousands of lost U.S. jobs. More than 930,000 specific U.S. jobs have been certified as lost to NAFTA trade and offshoring under just one narrow government program, called Trade Adjustment Assistance (TAA). TAA only covers certain types of jobs and must be applied for and approved, so it undercounts total NAFTA job loss. But the TAA data show that NAFTA trade, not automation, cost hundreds of thousands of U.S. jobs. See www.citizen.org/TAAdatabase to find local certified NAFTA job losses.

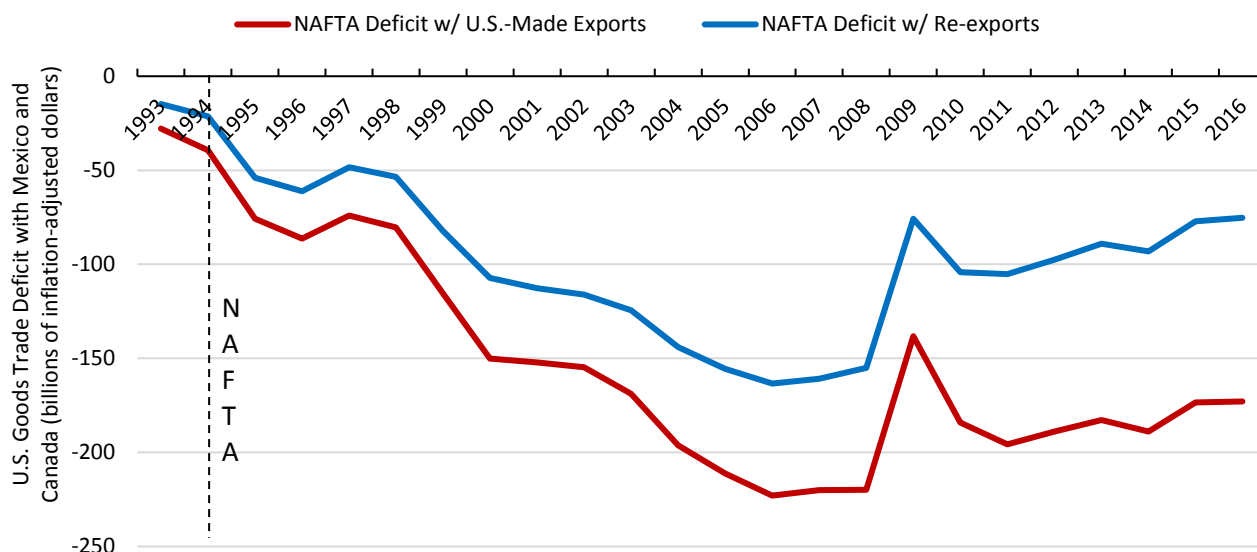

NAFTA Proponents Use Data Manipulations to Try to Make Deficit Appear Smaller

Instead of facing the reality that NAFTA led to a large trade deficit and trying to fix that, NAFTA proponents have resorted to manipulating the data to try to obscure the depth of the NAFTA deficit.

Counting Foreign-Made Exports as U.S. Exports

The primary data trick used to vastly understate the NAFTA deficit is to count as “U.S. exports” to Mexico and Canada products that are actually just “re-exports” – goods made abroad, such as in China, that are simply shipped through the United States *en route* to Mexico or Canada”.⁶ These foreign-made exports do not support U.S. production jobs.⁷ **The actual \$173 billion U.S. goods deficit with Mexico and Canada in 2016 can be made to look less than half as large (\$75.3 billion) by counting as U.S. exports the foreign-made products that simply pass through U.S. ports.**⁸ The misleading numbers are frequently repeated in the press because for eight years the Obama administration reported the NAFTA trade figures using this data trick. But in reality, **the 2016 U.S. goods trade deficit with Mexico is \$115.4 billion, not \$63.2 billion as often reported.**

Adding Foreign-Made Exports Halves the Real NAFTA Trade Deficit

Source: U.S. International Trade Commission, in 2016 dollars

The difference has to do with which data set is used. The U.S. Census Bureau releases monthly raw data on total exports leaving the U.S. and total imports coming in. But this data lumps together U.S.-made goods and foreign-made goods that are also known as “re-exports.” These goods are made abroad, imported into the United States, and then re-exported having “not undergone any substantial change in form or condition, or any enhancement in value by further manufacturing” here.⁹ For instance, the raw Census data counts as U.S. exports goods made in China and shipped to and stored in a warehouse in Long Beach port and then later, without alteration, trucked to Mexico.

Each month, the U.S. International Trade Commission (ITC) reports U.S. trade data with foreign re-exports removed and the imports for domestic consumption separated from total imports, providing the official government data on made-in-America exports relative to imports for domestic consumption.¹⁰ Adding re-exports to U.S.-made exports has had an increasingly distortionary effect on the true NAFTA trade deficit. The portion of re-exported goods versus domestically-produced goods in total U.S. exports to NAFTA nations has increased over time from the year before NAFTA went into effect (1993) to the last full year of goods trade data (2016).

Growing Share of NAFTA Re-Exports

	Total U.S. goods exports	Domestic U.S. goods exports	% of goods re-exports relative to total U.S. exports
Canada '93	\$163.9 billion	\$150.3 billion	8.3 percent
Canada 03	\$221.2 billion	\$194.1 billion	12.2 percent
Canada 16	\$266 billion	\$220.4 billion	17.1 percent
Mexico 93	\$68.1 billion	\$65.9 billion	3.3 percent
Mexico 03	\$127.2 billion	\$108.4 billion	14.7 percent
Mexico 16	\$231 billion	\$177.4 billion	23.2 percent

The NAFTA Trade Deficit Is Not Mainly Oil and Fossil Fuels: It’s Manufactured and Agricultural Goods

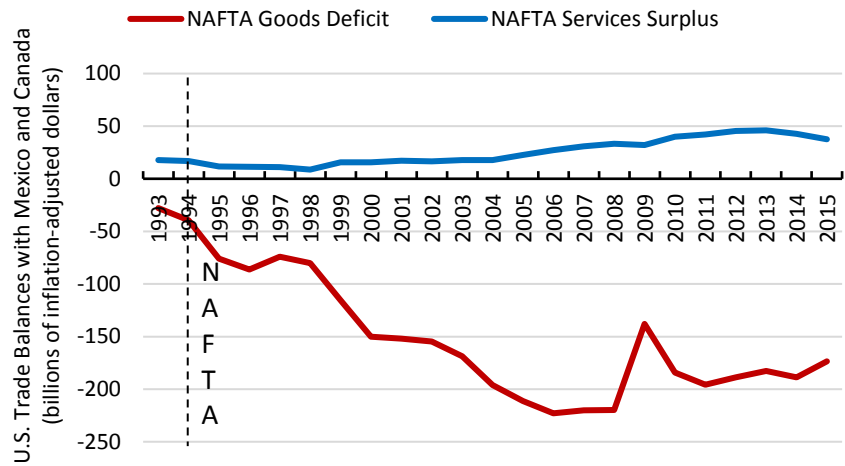

Defenders of NAFTA argue that the NAFTA deficit is really only due to fossil fuel (oil, gas and coal) imports. For instance, in 2016 the U.S. Trade Representative website noted: “The largest factor affecting the trade balance with NAFTA countries is the importation of fossil fuels and their byproducts. If those products are excluded, there is no deficit. In fact, the United States has a large and growing trade surplus in goods...” That is wrong: **Even if one removes all of the fossil fuel categories from the NAFTA trade balance, the remaining 2016 NAFTA goods trade deficit was \$145.1 billion.** Moreover, the share of the U.S. NAFTA goods trade deficit that is comprised of fossil fuels (oil, gas and coal) has declined under NAFTA, from 82 percent in 1993 to 16 percent in 2016, as we have faced a surge of imported manufactured and agricultural goods.¹¹ As a result, minus fossil fuels our NAFTA goods *and services* deficit in 2016 was \$107.6 billion, which represents a deficit in manufactured and agricultural goods.

Ignoring the Huge NAFTA Goods Deficit to Cherry-Pick Small Services Surplus

Pro-NAFTA corporate groups, such as the U.S. Chamber of Commerce,¹² emphasize the growth of U.S. services exports to Mexico and Canada since NAFTA to downplay the deal’s overall impact on the U.S. trade deficit. But **the annual growth of U.S. services exports to Mexico and Canada since NAFTA has actually fallen more than half below the pre-NAFTA rate.**¹³ **And growth in the NAFTA services surplus has been dwarfed by the huge increase in the NAFTA goods deficit.**

In the year before NAFTA took effect, the U.S. goods trade deficit with Canada and Mexico was \$27.5 billion while the services trade surplus with those countries was \$17.6 billion. By 2016 the burgeoning NAFTA goods deficit had soared 522 percent, spelling a large net loss for U.S. jobs.¹⁴ Even those NAFTA-displaced U.S. manufacturing workers who have been able to find new service-sector jobs have typically suffered declining income. According to the U.S. Bureau of Labor Statistics, two out of every five displaced manufacturing workers who were rehired in 2016 experienced a wage reduction, many of them taking a pay cut of greater than 20 percent.¹⁵

NAFTA Goods Trade Deficit Soars More than Four Times Higher than Services Trade Surplus

Trade Deficits Have Become the Norm for U.S. Agriculture Under NAFTA

The average annual U.S. trade deficit in agricultural goods with Canada and Mexico the five years before NAFTA nearly tripled (a 174 percent increase) in the five years after the deal took effect. Since then, high imports and lackluster exports have continued to wrack U.S. farmers. The average annual U.S. agricultural deficit with Canada and Mexico since NAFTA reached \$1.6 billion, more than four times the pre-NAFTA level.¹⁶

Agricultural Deficits Deepen Under NAFTA: U.S. Agricultural Trade Balance with Mexico and Canada

Source: U.S. International Trade Commission, in 2016 dollars

Key Agriculture Exports Remain Stagnant Under NAFTA While Imports Soar

Some U.S. farming sectors have suffered not only a flood of NAFTA imports, but have also seen very little gains on the export side, even with the post-2006 spikes in international prices, despite promises to the contrary. **Small gains in U.S. beef and live cattle exports have been swamped by high imports throughout the NAFTA era.**¹⁷

Source: U.S. International Trade Commission, in 2016 dollars

And while total U.S. vegetable imports from Canada and Mexico have more than quadrupled (a 332 percent increase) under NAFTA, U.S. vegetable exports to NAFTA partners have risen only a fifth of that amount. As a result, the U.S. vegetable deficit with Canada and Mexico has soared to \$5.4 billion, more than 11 times the pre-NAFTA level, as the graph below indicates.¹⁸

Source: U.S. International Trade Commission, in 2016 dollars

U.S. corn is, however, an exception. U.S. corn exports to Mexico in the three years after NAFTA soared 377 percent above the level in the three years before the deal. In 2016, the United States exported 36 times as much corn to Mexico as before NAFTA.¹⁹ But when the flood of U.S. corn caused prices to plummet 66 percent for Mexican farmers, 2.5 million farmers and agricultural workers in Mexico lost their livelihoods, many of whom resorted to migration.²⁰ In NAFTA's first seven years, the annual number of people emigrating from Mexico to the United States more than doubled.²¹
