

May 3, 2023

The Honorable Robert Menendez  
The Honorable Chris Van Hollen  
Members, U.S. Senate Banking Committee  
538 Dirksen Bldg.  
Washington, D.C. 20005

Dear Honorable Senators,

On behalf of more than 500,000 members and supporters of Public Citizen, we offer the following comment for the Senate Banking Committee’s hearing entitled, “Holding Executives Accountable for Recent Bank Failures.”

Bankers regularly defraud customers, crash their own banks, sometimes crash the entire economy, yet rarely confront the kind of accountability that even a petty shoplifter faces, namely, prison. Until a few months ago, the number of senior bankers jailed for the massive frauds leading to the 2008 crash and other misconduct since then was an easy number to remember: zero.<sup>1</sup> Now, with the prosecution of a senior Wells Fargo executive in the fake account scandal

---

<sup>1</sup> Massive frauds led to the financial crash of 2008. In November 2013, the U.S. Department of Justice (DOJ) announced a “record \$13 billion global settlement with JPMorgan” for misconduct leading to the financial crisis. In July 2014, the DOJ announced “a record \$7 billion global settlement with Citigroup for misleading investors about securities containing toxic mortgages” that were central to inflation of the housing bubble. In August 2014, Bank of America agreed to pay a “record” \$16.65 billion “for financial fraud leading up to and during the financial crisis.” Massive fraud also caused the savings and loan crisis of the 1980s. Whereas prosecutors sent about 1,000 savings and loan officers to prison in the 1990s, the DOJ has failed to imprison a single senior banker or even secure a criminal plea from a bank for the frauds it identified in the 2008 white-collar crime spree. Observers have hazarded several theories for this striking disparity in judicial response. One of the more chilling explanations came from then Attorney General Eric Holder himself. In December 2012, the DOJ entered into a deferred prosecution agreement with the global mega-bank HSBC Inc. The company admitted to violations of money laundering laws covering \$200 trillion worth of transactions. The bank admitted to the facts. But the DOJ only required the firm to forfeit \$1.256 billion. That was about a month’s profit at the bank. The DOJ charged no individuals with a crime. When asked why the DOJ did not seek stiffer penalties, such as a criminal admission, Attorney General Holder told a Senate committee that some firms had become “so large” that a criminal charge could endanger the world economy. This led critics to charge that the DOJ applied unequal justice to the mega-banks, that they were immunized as too big to jail. Holder’s candid remarks unleashed criticism by a public suspicious that the government intentionally chose not to bring hardball enforcement actions against Wall Street for the obvious fraud leading to the crash of 2008. The DOJ reinforced these suspicions in the two years after the HSBC non-prosecution with a succession of prosecutorial failures in the face of misdeeds by major banks directly related to the mortgage crisis. In each case, DOJ claimed that the banks engaged in massive fraud. At Bank of America, government attorneys claimed that “fraud pervaded every level” of the industry. The bank “caved to the pernicious forces of greed.” But none of these cases resulted in a criminal

and her sentence to 16 months in prison, the number is still easy to remember: one.<sup>2</sup>

It is not immediately apparent that the failures of Silicon Valley Bank (SVB), Signature, and First Republic stemmed from any misconduct other than recklessness. There may be a case of illegal insider trading, given the miraculously well-timed sales of stock moments before the government seized some of the banks and the stock price fell to nothing. In the weeks before these failures, as management undoubtedly understood the banks' peril, senior executives cashed out their stock.

SVB CEO Greg Becker netted \$2.27 million in the weeks leading up to the collapse.<sup>3</sup> This is appalling, and may amount to illegal insider trading, but it also reveals how prominently executive compensation must have figured in the minds of senior managers.

These stock sales point to an arena of accountability begging for reform, namely, compensation. Without any intervention, the senior executives of these three failed banks will walk away from the wreckage they caused with tens of millions of dollars in compensation – each. Based on this reward, if they've learned any lesson, it would be, "Let's do this again."

Each company has clawback policies and it is possible that some of their more recent compensation may be recouped. Clawbacks, however, are imperfect tools. Often, the money is spent on Ivy League tuition, a third home in Aspen, a yacht. Try asking Harvard for the tuition money back. At Goldman Sachs, where the company was found guilty of bribery, management has attempted to clawback certain payments without complete success.<sup>4</sup>

We believe a better mechanism for accountability would be a collective deferral fund, forfeitable following bank failure, or misconduct fines. Let us expand.

---

plea, a criminal prosecution of an individual, or a material, punitive restriction on the firms' business operations. Deconstructing these "record" penalties by the DOJ reveals a number of weaknesses. Most importantly, in none of these cases did the government charge the banks with a crime, nor did it identify and charge any individual with a crime. Second, some of the "penalties" levied against the bank serve little or no practical effect because they merely compel the banks to forgive failed loans that they had no hope of ever collecting, according to observers. Third, by settling for fines, prosecutors effectively forced the shareholders to pay. Arguably, shareholders may profit from the ill-gotten gains and as owners, have technical control over management. In practice, shareholder rights provide limited policing power. Executives themselves did not pay out of lost or foregone wages. Fourth, some of the fines could be deducted from the bank's tax liability, effectively forcing other taxpayers to subsidize the payment. Finally, the government did not detail how the penalties compared with any ill-gotten gains. Where the gains may have exceeded the penalties, those penalties could be dismissed as a cost of doing business. Nobody claims such crimes could be immaculate with no actual individuals responsible and accountable. Indeed, even the DOJ has claimed that it would hold individuals to account where it could prove a case. For example, in the JPMorgan settlement, the DOJ emphasized that the agreement "does not release individuals from civil charges, nor does it release JPMorgan or any individuals from potential criminal prosecution. From: Bartlett Naylor: *Too Big*, PUBLIC CITIZEN (2016) <https://www.citizen.org/wp-content/uploads/toobig.pdf>

<sup>2</sup> Stacey Cowley, *Former Wells Fargo Executive to Plead Guilty in Sham Accounts Scandal* NEW YORK TIMES (March 15, 2023) <https://www.nytimes.com/2023/03/15/business/wells-fargo-carrie-tolstedt-jail.html>

<sup>3</sup> Emily Jacobs, *SVB Collapse: CEO Cashed Out Millions While Employees Got Bonuses* WASHINGTON EXAMINER (March 11, 2023) <https://www.washingtonexaminer.com/policy/economy/svb-ceo-stock-sales-employee-bonuses>

<sup>4</sup> Charles Elson, *Why Executive Compensation Clawbacks Won't Work*, HARVARD BUSINESS REVIEW (March 22, 2021) <https://hbr.org/2021/03/why-executive-compensation-clawbacks-dont-work>

Importantly, as the committee explores what went wrong with SVB, Signature, and First Republic, we encourage attention to the role that executive compensation structure played in the poor decisions by SVB management regarding its Treasury securities portfolio. As has been well documented, SVB management’s fatal mistake was to invest in long-term Treasuries at a time when the Federal Reserve raised interest rates precipitously.<sup>5</sup>

Compounding this mistake, SVB terminated a hedge against certain other securities, exposing it to even greater interest rate risks. It did so, arguably, to boost net income. Noted one observer: “Essentially, to juice its P&L [profit and loss] in the short term, SVB ambled into 2023 almost completely unhedged — in effect, a massive multibillion-dollar bet that interest rates were approaching their peak.”<sup>6</sup> Net income served as the principal driver of the firm’s incentive compensation plan. In 2021, CEO Becker received \$3 million through the incentive compensation plan. This was three times the value of his salary.<sup>7</sup> The board explains that the incentive compensation plan is driven by return on equity. This is a simply mathematical formula, where net income is divided by the difference between assets and liabilities (shorthanded as equity). Without net income, there is zero return on equity, and surely the board could not justify any bonus for zero return on equity.

It appears that in 2022, SVB was headed for a loss, that is, negative net income. Income from investment securities plummeted from a gain of \$761 million in 2021 to a loss of \$285 million in 2022. In 2021, the firm reported overall net income of \$1.7 billion.<sup>8</sup> With other 2022 line items also trailing their counterparts from 2021, that swing in investment losses of more than \$1 billion might well have put the bank in the red. One way to paper this over: terminate the hedge. The firm explains that the hedge covered roughly \$16 billion in certain securities and reports tersely, “All hedges using the last-of-layer method were terminated in 2022.” Experts estimate the cost of a hedge for a portfolio of this size is more than \$1 billion.<sup>9,10</sup>

We attach a timeline of the SVB case to help the committee explore the link between this failure and executive compensation.

Section 956 explicitly states that banks must not pay “excessive” compensation, especially when it may lead to “inappropriate” risk-taking. We believe that a bonus based on return on equity that

<sup>9</sup> Public Citizen spoke with several interest rate swap experts. They said that it is difficult to estimate the precise cost of the swap without knowing the nature, terms, durations, etc. of the underlying securities, but that the price could easily exceed \$1 billion. The price of a swap is determined by a mathematical estimate of the present value of future interest payments compared with the discount, which must be estimated because it will vary with prevailing interest rates established by the Federal Reserve.

<sup>10</sup> The Financial Accounting Standards board recently changed hedge accounting standards. See Alanna Armstrong, *FASB Clarifies Hedge Accounting Guidance*, DELOITTE (March 29, 2022)

<https://dart.deloitte.com/USDART/home/publications/deloitte/heads-up/2022/fasb-clarifies-hedge-guidance>

is three times the value of a base salary may qualify as “excessive.” (In 2013, the EU capped banker bonuses at twice the value of base salary.<sup>11</sup>) We certainly believe that holding long-term securities at a time of rapidly rising interest rates was “inappropriate.” We also believe that selling a hedge to protect against those rising interest rates was “inappropriate.”

A strong rule may have prevented this. In a 2016 proposal on Section 956 (which was not finalized), the regulators wisely proposed that a significant portion of senior executive bonus pay be deferred into a fund. In the case of misconduct or failure, this fund would be forfeited, either to help pay for the resolution of the bank, or to pay fines associated with the misconduct (instead of having shareholders effectively pay the fines). This dynamic would essentially deputize and incentivize all bankers to police one another. These “inside cops” would be better positioned than regulators who only visit the bank occasionally, better than shareholders who must depend on imperfect, dated information, better than rating agencies, and better than auditors. Had SVB’s senior executives all had their bonuses at risk, one or more of them may have insisted on changing course. (The 2016 proposal left forfeiture to the discretion of the bank’s board; we insist that forfeiture be mandatory.<sup>12</sup>)

Further, we believe Congress should enact this specific reform without waiting for regulators to adopt it. The rule is vague and there is no guarantee that the current team will stick with the contours of the 2016 proposal. We applaud you, Senators. Robert Menendez and Chris Van Hollen, for pursuing this option.<sup>13 14</sup>

SVB may be the most conspicuous current example of how badly constructed compensation figures in a banking crisis, but it is not alone, as well-known cases abound. JP Morgan lost \$6 billion in flawed derivatives bets known as the “London Whale,” connected to plan to boost senior executive pay.<sup>15 16</sup> Goldman Sachs bribed Malaysian government officials to win lucrative bond underwriting deals, which also involved embezzlement of more than \$1 billion that might have gone to needed development in that country.<sup>17</sup> Wells Fargo placed untenable quotas on its agents to increase consumer accounts, forcing them to create fake accounts so as to boost senior executive pay linked to account growth metrics.<sup>18 19</sup> Supporters of a OneWest merger flooded regulators with suspect endorsement letters in a deal that promised a \$24 million payout for the

CEO. The firm faced criticism for massive foreclosures, an action that might have stymied the merger under the Community Reinvestment Act.<sup>20</sup>

In 2022 alone, numerous cases link compensation to fraud and investor abuse by banks, including examples such as: investor abuse by Allianz<sup>21</sup>, First Republic Bank,<sup>22</sup> and Credit Suisse<sup>23,24</sup>; and maintain insufficient anti-money laundering controls by USAA Federal Savings Bank<sup>25</sup> and Wells Fargo.<sup>27</sup>

Public Citizen has documented this persistent problem in several reports. We attach a recent report, entitled “*Inappropriate*,” to this letter.

We understand there are many failures to explore in the SVB, Signature and First Republic cases. We trust you will insist that regulators complete Section 956 and include a strong compensation deferral mechanism as one of the remedies. We also ask that you pursue legislation along these same lines.

For questions, please contact Bartlett Naylor at [bnaylor@citizen.org](mailto:bnaylor@citizen.org).

Sincerely,

Public Citizen

## Executive Summary

The 2008 financial crash stemmed from numerous causes, and risk-taking by bankers in pursuit of incentive-based compensation figured as one of the most conspicuous triggers. Bankers committed massive frauds selling flawed mortgages, ultimately sending the economy into a Great Recession. Congress responded in 2010 with the Dodd-Frank Wall Street Reform and Consumer Protection Act.<sup>28</sup> This law mandated several executive pay reforms, including requiring the drafting of a rule to prohibit compensation structures that promote “inappropriate” risk-taking. Fraud certainly is inappropriate. Congress set a deadline for implementation of this rule: May 2011. Twelve years since passage of the law, this rule remains unimplemented.

Perhaps there might be an excuse for the government’s inaction if the rule were no longer relevant or urgent. However, that is not the case. Bankers continue to engage in inappropriate risk-taking, including perpetrating fraud. Well-known cases abound. JP Morgan lost \$6 billion in flawed derivatives bets known as the “London Whale,” connected to plan to boost senior executive pay.<sup>29</sup> <sup>30</sup> Goldman Sachs bribed Malaysian government officials to win lucrative bond underwriting deals, which also involved embezzlement of more than \$1 billion that might have gone to needed development in that country.<sup>31</sup> Wells Fargo placed untenable quotas on its agents to increase consumer accounts, forcing them to create fake accounts so as to boost senior executive pay linked to account growth metrics.<sup>32</sup> Supporters of a OneWest merger flooded regulators with suspect endorsement letters in a deal that promised a \$24 million payout for the CEO. The firm faced criticism for massive foreclosures, an action that might have stymied the merger under the Community Reinvestment Act.<sup>33</sup>

In 2022 alone, numerous cases link compensation to fraud and investor abuse by banks, including examples such as: a fake account scam at U.S. Bank<sup>34</sup>; abuse in student loans by

Navient<sup>35</sup>; investor abuse by Allianz<sup>36</sup>, Schwab<sup>37</sup>, First Republic Bank,<sup>38</sup> and Credit Suisse<sup>39</sup>; and maintaining insufficient anti-money laundering controls by USAA Federal Savings Bank<sup>40</sup> and Wells Fargo.<sup>41</sup>

This ongoing litany of inappropriate action by executives in search of enrichment clearly demonstrates the urgency of why regulators must take swift action to finalize this pay reform rule.

## Introduction

Bankers pursuing incentive-based compensation figured as one of the most important causes of the financial crash of 2008.

The 2008 financial crash centered around unsafe mortgage-making and trading. Risky mortgages became part of complicated debt packages, sold to investors around the world. When mortgage borrowers began to default, the problems spread throughout the financial plumbing. Misguided pay structures figured at every stage. Mortgage sales agents intentionally sold expensive, subprime mortgages to borrowers who qualified for better, prime mortgages. That's because subprime mortgages generated better commissions for sales agents.<sup>42</sup> Securitization of those mortgages into bonds meant lucrative underwriting fees for investment bankers. When the supply of sound mortgages began to dwindle, as most qualified borrowers already owned homes, the industry reduced its underwriting standards, awarding mortgages to unqualified borrowers to keep the fee-generating securitization machine buzzing.

Bankers also profited from failure. Goldman Sachs bankers generated fees for themselves by bundling bad mortgages into securities they sold to investors, and then won more by placing bets those securities would falter.<sup>43</sup>

“[F]lawed incentive compensation practices in the financial industry were one of the many factors contributing to the financial crisis that began in 2007,” according to a collective statement by federal regulators.<sup>44</sup> Separately The Financial Crisis Inquiry Commission found that pay systems too often encouraged “big bets” and rewarded short-term gains without proper consideration of long-term consequences.<sup>45</sup> Wall Street bankers themselves agree, with surveys demonstrating that more than 80 percent of financial market participants believe that compensation practices played a role in promoting the excessive risk that led to the financial crisis.<sup>46</sup>

The 10 senior executives of Bear Stearns and Lehman Brothers, which failed under those executives’ leadership, were paid \$1.4 billion, including severance packages, in the years leading to the ’08 crash. That’s an average of \$140 million each. They made riches to risk—and lose—their companies.<sup>47</sup>

The Senate Permanent Subcommittee on Investigations found that pay incentives throughout the firm played a major role in inducing Washington Mutual to make inappropriately high-risk loans, eventually driving the firm into bankruptcy.<sup>48</sup>

In the restrained terms of the Securities and Exchange Commission (SEC): “Poorly structured incentive-based compensation arrangements can provide executives and employees with incentives to take inappropriate risks that are not consistent with the long-term health of the institution and, in turn, the long-term health of the U.S. economy. Larger financial institutions are interconnected with one another and other companies and markets, which can mean that any negative impact from inappropriate risk-taking can have broader consequences. The risk of these negative externalities may not be fully considered in incentive-based compensation arrangements, even arrangements that otherwise align the interests of shareholders and other stakeholders with those of executives and employees.”<sup>49</sup>

<sup>49</sup> Incentive compensation, joint rulemaking, Securities and Exchange Commission (2016) <https://bit.ly/2XTucm8>

In these examples from the '08 crash, senior bank managers obscured vital risk information. This misled shareholders, auditors, and prudential supervisors.<sup>50</sup> The risky behavior at cause stemmed from the fact that senior managers were compensated largely in stock options. Firms that pay executives with stock options provide an asymmetric incentive to produce financial results that may involve excessive risks. If the risks lead to rewards, the stock options can pay handsomely. If those risks instead lead to losses, the manager does not suffer a loss of pay. Individual regulators agree. Steven Harris, then a member of the Public Company Accounting Oversight Board, observed that certain stock-option plans proved to be “strong incentive for excessive risk-taking.”<sup>51</sup>

Bankers also engaged in wholesale fraud based on the compensation packages leading to the 2008 crash. For this, 49 financial institutions paid various government entities and private plaintiffs nearly \$190 billion in fines and settlements, according to one analysis.<sup>52</sup>

Before the pay-fueled financial crash of 2008, compensation figured at the center of other bank-related fiascos. The Wall Street crash of 1929 leading to the Great Depression of the 1930s, followed massive fraud by senior bankers aiming to fatten their already enormous compensation.<sup>53</sup> The Latin American debt crisis of the 1980s, where American bankers plied Central and South American governments with more loans than they could repay, stemmed from pay packages connected to the volume of loan-making.<sup>54</sup>

And, as detailed below, this compensation-fueled risk taking and wrongdoing is not a relic of the past, and instead is currently driving bad decision-making by bankers.

### Pay Reform: Section 956

Following the financial crash of 2008, Congress responded in 2010 with the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank).<sup>55</sup> This statute directed regulators to write and implement some 400 rules designed to increase the safety of banks and combat reckless loan-making. One of these is Section 956, part of a suite of six pay rules designed to blunt the role of compensation in promoting bad banking. Section 951, for example, requires a shareholder vote on compensation disclosures, ideally enlisting bank owners to guard against bad

<sup>55</sup> *Dodd-Frank Wall Street Reform and Consumer Protection Act*, GOVERNMENT PRINTING OFFICE (2010) <https://www.govinfo.gov/content/pkg/PLAW-111publ203/pdf/PLAW-111publ203.pdf>

pay practices. Section 954 calls on banks to recover pay in the past when it turns out that performance metrics to which the pay was linked were untrue. Before the crash, bankers might have been paid for making good loans; when those loans went bad, that pay could be recouped.

Then there is Section 956. This brief section of the statute “prohibit[s] any types of incentive-based payment arrangement, or any feature of any such arrangement, that the regulators determine encourages *inappropriate* risks by...financial institutions.” (Emphasis added.)<sup>56</sup> To establish this prohibition, Congress called on five regulators to coordinate a final rule: The Federal Reserve, Federal Deposit Insurance Corp (FDIC), the Office of the Comptroller of the Currency (OCC), the Securities and Exchange Commission (SEC) and the National Credit Union Administration.

Of the 400 rules of the 853-page Dodd-Frank Act, few placed deadlines on the regulators. Presumably, this meant that they were of less urgency, and given the massive number, Congress may have understood that finalization would take regulators time to complete. Congress did mandate deadlines for a few rules. One of these was Section 956, presumably underscoring its importance and urgency. That deadline was May 2011, which passed without agencies finalizing a rule.

The agencies did propose a rule in 2011 but, as noted, failed to finalize it. Public Citizen and others criticized this initial proposal and called for a more robust rule. In 2016, regulators obliged with another, somewhat stronger proposal. But they again failed to finalize this rule. During the Trump administration, regulators failed to propose any rule.

The most common explanation for this delay in regulatory action on Section 956 has been the complication of five-agency coordination. But under the Obama administration, the agencies were able to propose a rule—twice. Moreover, other Dodd-Frank rules required multiple agencies, such as the so-called Volcker Rule that bars proprietary trading, which was finalized in 2013.<sup>57</sup>

For the American public, the important question is whether implementation of Section 956 remains relevant. After all, the financial crash took place 14 years ago.

The sad, urgent, and perhaps obvious answer is yes.

### Major Cases of Banker Misconduct Tied to Compensation

Below is a sampling of some of the more infamous instances since 2010 where major harms to Americans and others resulted from “inappropriate” actions taken by bankers and where their compensation structures can be identified as a contributing factor. What is “inappropriate” risk-taking may be subject to interpretation, especially when it applies to banks. By nature, banks take risks when they make loans—a risk that the borrower will not repay. Some borrowers may be less creditworthy. Others may be involved in socially problematic enterprise. For example,

<sup>56</sup> *Id.*

<sup>57</sup> Peter Schroeder, *D-Day for Volcker Rule*, THE HILL, (Dec. 10, 2013) <https://thehill.com/policy/finance/192554-d-day-arrives-for-volcker-rule/>

Public Citizen believes that banks should not lend to firms that exacerbate climate change.<sup>58</sup> However, there can be no debate that engaging in activity that involves fraud, consumer abuse and other actions that result in penalties and/or prison for bankers is “inappropriate.” Where compensation may promote such fraud and abuse, Section 956 should apply. The following well-known cases involved fraud and abuse that led to government sanctions, and have been shown to have been prompted, at least in some part, by executives’ search for increased riches.

### Goldman Sachs Bribery

In 2020, the Department of Justice (DOJ) announced that during a period of five years, Goldman Sachs conspired in “a sweeping international corruption scheme” that involved more than “\$1.6 billion in bribes to multiple high-level government officials across several countries so that the company could reap hundreds of millions of dollars in fees.”<sup>59</sup> There can be no debate that bribery is inappropriate.

One government that was involved in this scandal was Malaysia. The Malaysian government created a fund known as 1Malaysia Development Berhad, or 1MDB, to promote economic development in the country through global partnerships and foreign direct investment. The funds were intended to be used for improving the well-being of the Malaysian people. Malaysia is a relatively successful emerging economy; poverty rates have declined in the last two decades.<sup>60</sup> The funds were intended to help keep these improvements on track.

Instead, more than \$1 billion of these funds—generated in part by Goldman Sachs bond underwriting—“were taken and spent on a wide variety of extravagant items, including luxury homes and properties in Beverly Hills, New York, and London; a 300-foot superyacht; and fine art by Monet and Van Gogh,” according to the DOJ.<sup>61</sup> Other funds went to acquisition of a boutique hotel in Beverly Hills; a movie production company that made “The Wolf of Wall Street” (!), the redevelopment of the Park Lane Hotel in Manhattan; and shares in EMI, the largest private music-rights holder.<sup>62</sup> Najib Razak, the Malaysian prime minister who established and oversaw the fund reportedly deposited \$731 million of these funds into his personal bank account.<sup>63</sup>

<sup>63</sup> Matthew Goldstein et al, *Goldman Sachs Ensnarled in Vast 1MDB Fraud Scandal*

New York Times, (Nov. 1, 2018) <https://www.nytimes.com/2018/11/01/business/goldman-sachs-malaysia-investment-fund.html>

In October 2020, Goldman Sachs “admitted to conspiring to violate the Foreign Corrupt Practices Act (FCPA) in connection with a scheme to pay over \$1 billion in bribes to Malaysian... officials,” according to the DOJ.<sup>64</sup> Goldman Sachs paid these bribes to win underwriting deals for roughly \$6.5 billion in three bond deals for 1MDB. The bank received some \$600 million in fees for these deals.

The embezzlement led to protests involving hundreds of thousands of Malaysians. At least three murders are associated with the scandal and investigation, including one Malaysian prosecutor.<sup>65</sup>

The fees meant a major reward for certain senior Goldman Sachs bankers, notably Tim Leissner, the former Southeast Asia Chairman and participating managing director of Goldman Sachs. Leissner sealed three bond deals that netted Goldman \$600 million and meant he received “large bonuses,” according to U.S. prosecutors.<sup>66</sup> Leissner pleaded guilty to violations of anti-bribery laws.<sup>67</sup>

Leissner’s Goldman partner, Ng Chong Hwa, also known as Roger Ng, was convicted in 2022 by a federal jury in the embezzlement scheme. Commented prosecutor Breon Peace, the verdict was “a resounding victory for justice and for the people of Malaysia who were the victims of this massive scheme that the defendant and his partners in crime carried out in a frenzy of greed to get rich by stealing millions of dollars from [a] fund intended to benefit that country’s economy.”<sup>68</sup>

Other Goldman executives may have participated in the scheme to benefit their compensation as well, and not simply one or a few rogue bankers.<sup>69</sup> More than 30 senior Goldman executives reportedly knew about the bank’s dealings with 1MDB.<sup>70</sup>

Goldman Sachs CEO, Lloyd Blankfein, attended two meetings with the Malaysian financier at the center of one of the schemes, including one meeting after Goldman’s compliance department had raised multiple concerns about the financier’s background and said the bank shouldn’t do

<sup>70</sup> David Dayen, *Goldman Sachs’s Still Unpunished Adventures in Malaysia* AMERICAN PROSPECT, (Jan 29, 2020) <https://prospect.org/power/goldman-sachs-unpunished-adventures-malaysia-1mdb-iho-low/>

business with him, according to the Wall Street Journal.<sup>71</sup> In addition, CEO Blankfein openly praised his Malaysian bankers at a meeting in 2014: “Look at what Tim and Andrea [Vella, a third executive who helped structure the bonds] did in Malaysia... We have to do more of that.”<sup>72</sup>

After Goldman admitted to criminal wrongdoing in the Malaysian bribery and embezzlement scheme, Goldman announced it would claw back \$174 million in pay to past and present executives: CEO Lloyd Blankfein, COO Gary Cohn and CFO. David Viniar. It also announced pay cuts for the current chief executive and his top lieutenants.<sup>73</sup>

Bankers who “work...behind the scenes for their own illegal benefit, and not that of their citizens and shareholders, their behavior lends credibility to the narrative that businesses don’t succeed based on the quality of their products, but rather their willingness to play dirty,” said Assistant Director in Charge William F. Sweeney Jr. of the FBI’s New York Field Office. “Greed eventually exacts an immense cost on society, and unchecked corrupt behavior erodes trust in public institutions and government entities alike.”<sup>74</sup>

### JP Morgan’s London Whale

At JP Morgan, some of the largest paychecks go to derivatives traders. Some of these are employees who make bets on the direction of a financial metric, such as interest or exchange rates. At the end of 2012, JP Morgan deployed about \$180 billion worth of deposits into trading, which the bank primly calls “other available-for-sale securities.”<sup>75</sup> These “other” securities, it turns out, include bets that the bank dignifies with the term “derivatives.” Former Rep. Brad Miller (D-N.C.) observed that JP Morgan’s bets “had nothing to do with real credit. These derivatives trades did not make it possible for more businesses to buy equipment, pay overtime or hire new employees; no household was able to buy a new car or replace their furnace. Instead, the trades were “synthetic” credit, a bet on whether a borrower would default on debt to someone else.”<sup>76</sup> JP Morgan did well on some of these bets. For example, it bet that American Airlines would go bankrupt. When American Airlines did declare bankruptcy, JP Morgan realized a profit

<sup>74</sup> DOJ, *Goldman Sachs Charged in Foreign Bribery Case and Agrees to Pay Over \$2.9 Billion*, DOJ (Oct. 22, 2020) <https://www.justice.gov/opa/pr/goldman-sachs-charged-foreign-bribery-case-and-agrees-pay-over-29-billion>

<sup>75</sup> At JP Morgan, some of the largest paychecks go to derivatives traders. Some of these are employees who make bets on the direction of a financial metric, such as interest or exchange rates. At the end of 2012, JP Morgan deployed about \$180 billion worth of deposits into trading, which the bank primly calls “other available-for-sale securities.”

<sup>76</sup> The bank gambled in a complicated index composed of bond insurance policies called credit default swaps. As with fire insurance, the failure of a firm to make a bond payment results in payment of the insurance, or credit default swap.

of \$450 million.<sup>77 78</sup> The traders earned handsome bonuses for this success. One trader made \$11 million that year, and the trader’s supervisor earned \$14 million in that same period.<sup>79</sup>

One bet went seriously awry in the case known as the “London Whale.” A handful of traders in JP Morgan’s London office handling that “excess cash” made mistakes. The bank lost more than \$6 billion on the bets, and a U.S. Senate investigation later turned up evidence that an attempt to increase senior management compensation motivated the trades.

In “Exhibit 46” of the Senate report, JPMorgan’s chief investment officer directed subordinates to implement a plan to enable the bank to buy back stock. That plan depended on convincing regulators that such a step would be financially prudent. In a series of emails about the trades, the CFO stated she was “trying to work” with the regulators on an “acceptable...increased buyback plan.”<sup>80</sup> In conventional terms, the committee report alleged that JPMorgan sought to manipulate how the “whale” trade would conform with regulatory safeguards so that JPMorgan could buy back stock – an action that typically boosts a share price and thus leads to higher executive compensation.<sup>81 82</sup>

### Wells Fargo Fake Accounts

Wells Fargo’s compensation structure drove widespread fraud in many of its business operations, including checking accounts, credit cards, car insurance, investment accounts and more. Account growth figured as one of the long-standing metrics for senior employees’ pay bonuses. Wells Fargo wanted its customers to have not one or two, but as many as eight (“go for gr-eight”) connections to the bank, such as a checking account, a credit card, a mortgage and more.<sup>83</sup>

Wells Fargo reported these account connections, known as “cross-selling,” as a key indicator of how it could manage growth. When it acquired other banks, such as Wachovia, its employees faced pressure to show how those cross-selling numbers would continue to rise steadily. That satisfied shareholders who might otherwise have been concerned that growth might lead to management complications. And satisfied shareholders meant a rising stock price, and as a result, greater senior management pay. Public Citizen documented this decades-long dynamic in “The King of the Cross-Sell.”<sup>84</sup>

Internal whistleblowers alerted their superiors and eventually the media that much of these cross-selling figures were fabricated. Bank employees created fake accounts to meet quotas. Wells

<sup>84</sup> *Id.*

Fargo terminated many of these line employees, but senior managers nevertheless retained their bonuses. Eventually, the Consumer Financial Protection Bureau (CFPB) and the City Attorney of Los Angeles brought charges for these fabrications and leveled a record fine against Wells Fargo.<sup>85</sup> When greater scrutiny of the bank followed, even more abuses were revealed, and eventually, the CEO resigned. The fruits from this fraud amounted to \$130 million in compensation for the CEO, and millions more for other senior managers.<sup>86</sup>

Once known as the benign mega-bank, the fake account scandal at Wells Fargo became only the first of a wave of problems that surfaced at the company, involving illegal student loan servicing practices, car insurance scams, federal home insurance misconduct and more, arguably most connected to bankers attempting to fatten their compensation packages.<sup>87</sup>

### Credit Suisse Bribery

In 2021, Credit Suisse paid \$475 million to U.S. and U.K. authorities for fraudulently misleading investors and violating the Foreign Corrupt Practices Act (FCPA) in a scheme involving underwriting for state-owned organizations meant to promote tuna fishing in Mozambique. Bankers are paid underwriting fees.

The SEC said the underwriting transactions raised more than \$1 billion to “perpetrate a hidden debt scheme, pay kickbacks to now-indicted former Credit Suisse investment bankers along with their intermediaries, and bribe corrupt Mozambique government officials.”<sup>88</sup>

As a result of the Mozambique scam, along with major losses from deals with Archegos Capital Management, and an accounting fraud loss with a Chinese client, the bank’s board responded by cutting executive pay.<sup>89</sup> <sup>90</sup> The Swiss Financial Market Supervisory Authority (FINMA) required pay reforms as well.<sup>91</sup>

### One West Homeowner Abuse

High pay also figured in some questionable decisions by the CEO of OneWest, who surprisingly went on to become the nation’s chief bank police officer as Comptroller of the Currency. This episode began when hedge fund manager, and subsequently Treasury Secretary, Steven Mnuchin purchased the failed IndyMac savings and loan association from the FDIC and renamed it

OneWest. Mnuchin brought in a mid-level manager named Joseph Otting from US Bancorp to serve as OneWest CEO. Under this new ownership, the bank foreclosed on thousands of homeowners by using fraudulent methods: They fabricated foreclosure documents such as filing unnotarized documents with state and federal courts. OneWest's regulator itemized these misdeeds, and under new CEO Otting, the bank signed a "consent order" acknowledging those former misdeeds along with a promise to reform. However, the bank did not reform, and under Otting, OneWest affiliate Financial Freedom allegedly made false claims to the government for federal insurance and paid a \$89 million penalty.<sup>92</sup> Otting's bank put thousands of families out of their homes.<sup>93</sup> One judge deemed this "harsh, repugnant, shocking and repulsive" conduct.<sup>94</sup>

Otting and Mnuchin arranged to sell OneWest to CIT group for a profit; completion of the deal promised Otting a \$24 million bonus.<sup>95</sup> What stood in the way of his huge payout were protests by some of those thousands of families and other victims of OneWest's practices. Under the Community Reinvestment Act (CRA), regulators can block mergers where a firm fails to serve its community. In trying to secure approval for OneWest's merger with CIT Group, Otting's bank created an online petition urging Federal Reserve Chair Janet Yellen to approve the transaction without a public hearing. Many of the names were Wall Street associates. The California Reinvestment Coalition noted, "In Mr. Otting's judgment, his friends on Wall Street, thousands of miles away, were somehow better situated to provide input on a California bank merger than the community members who were actually going to be impacted by the merger."<sup>96</sup>

The email campaign also included some irregularities. One petition was composed of 593 individuals purportedly supporting the merger with Yahoo email accounts. (Yahoo has a 3 percent market share for email.) Many these emails were time stamped as 2 a.m., February 13, 2015. Yahoo had suffered a security breach before this period. Other emails came from persons who, after they received receipt confirmation from the Washington regulator, denied they had originated them and theorized their email had been hacked.<sup>97</sup>

Despite the foreclosures and violations, despite the protests of the merger, despite the irregularities in the pro-merger petitions, and despite the fact that CIT terminated Otting shortly after then merger, Otting nevertheless received his \$24 million payoff.<sup>9899</sup>

### HSBC Money-laundering

In 2012, the DOJ filed a criminal charge against HSBC for money laundering, entering a so-called “deferred prosecution agreement” and fining the company \$1.25 billion. According to the DOJ, HSBC “severely understaffed” its anti-money laundering division, failing to “monitor over \$670 billion in wire transfers and over \$9.4 billion in purchases of physical U.S. dollars from HSBC Mexico during this period, when HSBC Mexico’s own lax AML controls caused it to be the preferred financial institution for drug cartels and money launderers.”<sup>100</sup> The Senate Permanent Subcommittee on Investigations noted that those attracting the funds from money launderers received bonuses.<sup>101</sup>

Public Citizen and others questioned why the government didn’t seek a final criminal charge, sanction the bank more harshly (the fine amounted to a month’s worth of profit), and identify and prosecute responsible individuals.<sup>102</sup> Then-Attorney General Eric Holder told a Senate committee that some firms had become “so large” that a criminal charge against one of them could endanger the world economy; they were “too big to jail.”<sup>103</sup>

Public Citizen and others warned that inadequate justice promotes recidivism. In 2021, officials fined HSBC again for money laundering violations.<sup>104</sup>

---

<sup>98</sup> Paulina Gonzalez & Sharon Kinlaw, *Let’s Stop Wall Street Predators from Banking on Displacement*, TRUTHOUT (November 8, 2019), <https://bit.ly/3bjtanb>

<sup>99</sup> Otting then became Comptroller. His visits to Capitol Hill for testimony also drew controversy. He declared at one hearing that he’s never experienced or witnessed racial discrimination, a plague that the Community Reinvestment Act aims to combat. Asked whether he watched or read the news about the Charlottesville white nationalist demonstration, he claimed that he doesn’t read newspapers or watch TV news. As Comptroller, Otting did finalize a rule gutting the Community Reinvestment Act. *Fake it Till They Make It: How Bad Actors Use Astroturfing to Manipulate Regulators, Disenfranchise Consumers and Subvert the Rulemaking Process*, Testimony to House Financial Services Committee (February 6, 2020) <https://bit.ly/2VCHDUD>. ## Cases From 2022

In addition to the well-publicized examples highlighted above, very recent instances of “inappropriate” behavior connected to compensation abound. Below is a sampling of cases announced this year—2022—which as of this research, is only nine months old.

### Credit Suisse (again)

On January 9, 2022, the Financial Industry Regulatory Authority (FINRA) fined Credit Suisse \$9 million for an assortment of misdeeds, including failure to explain to clients in its research reports that its Credit Suisse employees might receive compensation from the deals described in these reports.<sup>105</sup> According to FINRA, Credit Suisse issued more than 20,000 research reports between 2006 and 2017 that contained inaccurate disclosures regarding potential conflicts of interest. FINRA requires firms to “disclose in research reports if the firm or any of its affiliates received compensation for [investment banking] services from the subject company in the past 12 months, or if the firm or any of its affiliates expect to receive or intend to seek compensation for [such] services from the subject company in the next three months.” In this way, an investor can better understand if a report that promotes an investment might include puffery that serves a current or prospective Credit Suisse client.<sup>106</sup>

### Navient

On January 13, 2022, 39 state attorneys general won a \$1.85 billion settlement from student loan servicing giant Navient to resolve allegations of widespread unfair and deceptive practices and abuses in originating predatory student loans.<sup>107</sup> The state law enforcers claimed that since 2009, Navient steered struggling student loan borrowers into costly long-term forbearances instead of counseling them about the benefits of more affordable income-driven repayment plans.<sup>108</sup>

Navient compensates its executives based on several factors, including “fee income.” The firm explains that “fee income emphasizes the continuing importance of our fee-based businesses, which generate income through loan servicing [and] asset recovery.”<sup>109</sup> In addition, the CFPB alleged that Navient’s compensation policies for its customer service representatives

---

<sup>105</sup> FINRA Rule 2241, and its predecessor NASD Rule 2711, require member firms that issue research reports to make certain conflict of interest disclosures concerning a subject company. Among other things, a firm is required to disclose: (1) if it or any of its affiliates received compensation for investment banking (IB) services from the subject company in the past 12 months, or if it expects to receive or intends to seek compensation for IB services from the subject company in the next three months; (2) if it has received any non-IB revenue within the previous 12 months from the subject company; or (3) if it was making a market in the subject company’s securities at the time the research report was published, [https://www.finra.org/sites/default/files/fda\\_documents/2018059446101%20Credit%20Suisse%20Securities%20%28USA%29%20LLC%20CRD%20816%20AWC%20sl.pdf](https://www.finra.org/sites/default/files/fda_documents/2018059446101%20Credit%20Suisse%20Securities%20%28USA%29%20LLC%20CRD%20816%20AWC%20sl.pdf)

“incentivized them to push numerous borrowers” into these forbearance plans that were inferior for the student but more profitable for Navient.<sup>110</sup>

### USAA Federal Savings Bank

On March 31, 2022, the Financial Crimes Enforcement Network (FinCEN) fined USAA Federal Savings Bank \$80 million for anti-money laundering surveillance violations. FinCEN detailed several customers with questionable activity that the bank failed to surveil. For example, “Customer B,” a 22-year-old individual in Los Angeles, California, held checking and credit card accounts with USAA for four years. Customer B reported to USAA that she owned a “performance art company.” Customer B reported that her annual income was between \$50,000 and \$100,000, and that her account was for personal and household expenses. However, the bank found that the “performance art” maybe have been an “unlawful internationally-based prostitution/escort” service. One overseas client sent three wire transfers totaling \$44,500. The foreign individual was identified in the Panama Papers, a trove of information about offshore accounts. USAA failed to notify FinCEN about Customer B and other suspicious accounts.<sup>111</sup>

FinCEN did not detail how USAA bankers profited from failing to close these accounts, but the Senate Permanent Subcommittee on Investigations found that bankers that secure new deposits, known in accounting terms as Net New Assets (NNA), is “one of the metrics used for measuring employee performance and compensation.”<sup>112</sup> Further, FinCEN asserted that as its “consumer base and revenue grew,” the bank “willfully failed to ensure that its compliance program kept pace, resulting in millions of dollars in suspicious transactions.”<sup>113</sup> In this case, a prominent factor was the compensation *not* paid. FinCEN noted that the bank itself determined in 2018 that it needed 178 permanent staff to comply with anti-money laundering compliance, but a year later, there were 62 vacant positions.<sup>114</sup>

### Allianz Global Investors

On May 17, 2022, the DOJ announced guilty pleas of bankers at Allianz Global Investors, and an indictment of a third in a securities fraud conspiracy that led to billions in losses for pension fund and other investors “in order to line their own pockets.”<sup>115</sup>

Allianz is a German-based global financial firm that includes subsidiary Allianz Global Investors. Between 2014 and 2020, the Allianz conspirators promoted a set of private funds known as Structured Alpha Funds to “institutional investors, including pension funds for workers all across America,” according to the DOJ. They “misled” these investors into believing that the funds were protected from a sudden stock market crash by engaging in sophisticated trading strategies known as hedges. As the cost of this strategy increased, they “decided to lie and secretly buy cheaper hedges that provided much less protection to investors.” In March 2020, following the crash in the stock market after the COVID-19 pandemic stifled the world economy, the funds lost an excess of \$7 billion in market value. These losses fell on more than 100 institutional investors who held savings of more than 100,000 customers. This included pension funds for teachers in Arkansas, laborers in Alaska, bus drivers and subway conductors in New York City, as well as religious organizations, engineers, and other individuals, universities, and charitable organizations across the United States.<sup>116</sup>

Before the 2020 crash, the scheme enhanced the profits of the firm, including the compensation paid to the conspirators. One of the alleged conspirators was “either the highest or second-highest compensated employee” of the firm. In 2019, two of the conspirators received \$13 million each. The DOJ concluded, “As a result of this compensation structure, the [conspirators] earned higher pay by taking greater risk with the Funds’ money to generate larger performance fee.”<sup>117</sup> Certainly this should be seen as inappropriate risk-taking behavior.

In addition to prison sentences for the two conspirators who pleaded guilty, the government fined Allianz \$1 billion.<sup>118</sup>

### First Republic Bank

On May 19, 2022, the SEC fined First Republic \$1.8 million for failing to disclose compensation conflicts with its investing clients. Specifically, the bank received compensation from another firm by placing investors’ monies with this second firm, when First Republic could have found more favorable investment opportunities.<sup>119</sup>

---

<sup>115</sup> DOJ, *Three Portfolio Managers And Allianz Global Investors U.S. Charged In Connection With Multi-Billion Dollar Fraud Scheme*, DOJ, (May 17, 2022) <https://www.justice.gov/usao-sdny/pr/three-portfolio-managers-and-allianz-global-investors-us-charged-connection-multi>

<sup>119</sup> Securities and Exchange Commission, *In the Matter of First Republic Investment Management*, SECURITIES AND EXCHANGE COMMISSION (May 19, 2022) <https://www.sec.gov/litigation/admin/2022/ia-6030.pdf>

In particular, First Republic invested clients' funds in certain mutual funds and so-called cash sweep products that led to a revenue sharing with an affiliated broker. First Republic might have used a different broker that would have been cheaper for First Republic clients.

### Wells Fargo (again)

On May 20, 2022, The SEC charged Wells Fargo for failing to file at least 34 Suspicious Activity Reports (SARs) and the firm agreed to pay \$7 million to settle the charges. The SEC said Wells Fargo failed to monitor foreign wire transfers properly, including transfers from foreign countries that it determined to be at a “high or moderate risk for money laundering, terrorist financing, or other illegal money movements.”<sup>120</sup>

Brokers are generally compensated by charging fees on assets they attract and manage, so it is in their interest to attract, and not reject customers' requests to open an account.<sup>121</sup>

This 2022 fine follows another anti-money laundering fine at Wells Fargo from 2017. In this case, the SEC alleged that a new Wells Fargo manager for anti-money laundering compliance decided the bank was “filing too many” SARS and required that any report contain “proof” of illegal activity, a requirement that naturally led to the bank reporting less suspicious activity. Following this, Wells Fargo suspicious activity reporting declined 60 percent.<sup>122</sup>

### Charles Schwab

On June 13, 2022, the SEC fined Charles Schwab \$187 million for allegedly misleading investors so the firm could profit from reduced earnings for their clients. From March 2015 through November 2018, the SEC said Schwab told customers in its proprietary Schwab Intelligent Portfolios that the amount of cash was determined through a “disciplined portfolio construction methodology” to generate “optimal return[s].” In fact, the SEC said the firm's own data showed that under most market conditions, the cash in the portfolios would cause clients to make less money even while taking on the same amount of risk. Schwab failed to tell clients about this drag on their investment. As a result, the firm profited by “sweeping the cash to its affiliate bank, loaning it out, and then keeping the difference between the interest it earned on the loans and what it paid in interest to... clients.”<sup>123</sup> The SEC did not identify specific individuals who many have profited; these profits may have been allocated generally to portfolio managers.

### US Bank

On July 28, 2022, the CFPB fined U.S. Bank for a Wells Fargo-like fake-account scam. This allegedly began in 2016. “To increase sales of certain consumer financial products or services, U.S. Bank imposed sales goals on bank employees as part of their job description and

implemented an incentive-compensation program that financially rewarded employees for selling those products and services,” according to findings of the CFPB.<sup>124</sup> This activity spanned the years 2010 to 2020.<sup>125</sup> U.S. Bank is the nation’s fifth largest bank and paid a \$37 million penalty.<sup>126</sup>

### Policy Reform

Bad pay structures led to the massive frauds precipitating the financial crash of 2008 and the resulting Great Recession. Historically, compensation structures that incentivize bending the rules to line one's pockets have caused crises in American history." Bad pay structures led to other bank-caused crises in American history, most notably the Crash of 1929 that precipitated the Great Depression. And since 2008, bad pay structures have led to major bank losses, bribery, money laundering, fraud, investor and consumer abuse.

Clearly, Washington rule-makers must use the available tool approved by Congress in 2010 to combat future injuries.

Public Citizen believes that a well-structured rule under Section 956 can help reduce the potential for recurrence of the types of problems this report documents.

We believe any final rule should contain the following.

#### Implement A Ban On Stock Options At Wall Street Banks

Risk-taking can become volatile at a bank when mixed with stock options.<sup>127</sup> Stock options promise executives all the benefits of share price increases with none of the risk of share price declines. In other words, stock options provide executives with asymmetric incentives to shoot for the moon. On Wall Street in the mid-2000s, this meant relaxing the underwriting standards on mortgage lending to generate fees for the bank while inflating the housing bubble. As long as massive stock option jackpots — often worth seven-, eight-, and even nine-digits — are sitting on the table, with little or no downside risk, Wall Street executives and traders have a powerful incentive to make outrageous gambles that put us all at risk. Many of the senior executives in cases above profited when they or their subordinates engaged in fraudulent activity because that raised the stock price. For example, pressure by Wells Fargo’s executives on the line clerks to fabricate fake accounts for customers yielded growth numbers that pleased Wall Street, driving up the stock price.

Some firms, including JP Morgan and Citigroup, have already voluntarily stopped issuing executive stock options.<sup>128</sup> They should be banned for all bankers. We note that rules from the

<sup>128</sup> Proxy Statement, JPMorgan, [2015]

European Union introduced in 2014 limit banker bonuses to no more than annual salary, or up to 200 percent of annual salary with shareholder approval.

### A requirement that significant compensation be deferred for 10 years to pay potential misconduct fines

The fraud perpetrated by bankers leading up to the 2008 crash resulted in tens of billions of dollars in fines. But prosecutors failed to imprison any senior banker or assess fines on any of the responsible individuals. Instead, bank shareholders effectively paid those fines. We advocate that a significant portion of senior banker annual pay be deferred for ten years.<sup>129</sup> These collective funds would then be used to pay fines that a company might incur for misconduct settlements. William Dudley, then president of the New York Federal Reserve Bank, advanced this proposal as a way to change the dangerously reckless, individualistic culture on Wall Street.<sup>130</sup> In concept, it returns investment firms to their pre-public partnership model, where fines were effectively deducted from the profits that might be distributed to partners.

Many of the frauds discussed above must have been understood by at least some senior executives who nevertheless kept quiet lest their lack of loyalty jeopardize their job security. If their own pay were jeopardized, they might have spoken up. If executives knew that the tsunami of fraudulent mortgage-making leading to the 2008 financial crash would lead not to shareholder-funded fines, but elimination of their own bonus, they may have bridled this behavior.

### A Ban On Executive Hedging Of Bonus Pay

Any effort to reduce inappropriate risk-taking will be ineffective if employees can use hedging strategies to reduce their risk from poor company performance. In 2005, AIG CEO Hank Greenberg bought insurance to hedge about \$300 million worth of stock, allowing him to avoid millions of dollars in losses when the firm collapsed in 2008.<sup>131</sup> The Bank of England already imposes a hedging ban on executives of the banks it supervises, and several major U.S. banks have voluntarily instituted such anti-hedging policies.<sup>132</sup> The U.S. rule should do so as well.

### Conclusion

Financial institutions play a pivotal role in our economy, matching savers and users of capital. America's great industries grew with the financing of banks, from the railroads, automobiles and airplanes, to pharmaceuticals, technology, food and more. These businesses, in turn, can provide

---

good jobs. Homebuyers can live in greater comfort with sound loan-making. Consumers can access credit for needed purchases.

But when bankers seek to maximize their compensation by any means, the devastation can be equally bleak, as attested by the Great Depression, the Great Recession, money-laundering that fuels drug lords and tyrants, bribery that undermines government development programs and public trust, consumers paying fees on accounts they didn't open, abused shareholders and investors, and other harms to consumers due to inappropriate behavior by bankers.

Washington's regulators must propose a strong rule to implement Section 956. The time is now.
