News Release

U.S. Department of Labor | April 26, 2020

U.S. Department of Labor's OSHA and CDC Issue Interim Guidance To Protect Workers in Meatpacking and Processing Industries

WASHINGTON, DC – The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control and Prevention (CDC) have released joint coronavirus-related interim guidance for meatpacking and meat processing workers and employers – including those involved in beef, pork and poultry operations. The guidance includes recommended actions employers can take to reduce the risk of exposure to the coronavirus.

"As essential workers, those in the meatpacking and processing industries need to be protected from coronavirus for their own safety and health," said Principal Deputy Assistant Secretary of Labor for Occupational Safety and Health Loren Sweatt. "OSHA's newest guidance document outlines steps employers can take to provide a safe and healthy workplace for workers in the meatpacking and processing industries."

The coronavirus has affected many meat and poultry processing facility workers in plants in several U.S. states. While the meat products these workers handle do not expose them to the coronavirus, close contact with

coworkers and supervisors may contribute to their potential exposures.

The interim guidance from OSHA and the CDC includes information regarding:

- Cleaning of shared meatpacking and processing tools;
- Screening employees for the coronavirus before they enter work facilities;
- Managing workers who are showing symptoms of the coronavirus;
- Implementing appropriate engineering, administrative, and work practice controls;
- Using appropriate personal protective equipment, and;
- Practicing social distancing at the workplace.

Visit OSHA's coronavirus webpage frequently for updates. For further information about the coronavirus, please visit the Centers for Disease Control and Prevention.

Under the Occupational Safety and Health Act of 1970, employers are responsible for providing safe and healthful workplaces for their employees. OSHA's role is to help ensure these conditions for America's working men and women by setting and enforcing standards, and providing training, education and assistance. For more information, visit www.osha.gov.

The mission of the Department of Labor is to foster, promote and develop the welfare of the wage earners, job seekers and retirees of the United States; improve working conditions; advance opportunities for profitable employment; and assure work-related benefits and rights.

I believe housing not compensation — alternative housing for workers, multi-lingual social distancing education, increased day care, etc.

Hey Lillie,

Is the Red Cross approaching this from a housing standpoint? Or are they alluding to unemployment compensation?

I'm not entirely certain what information they are trying to obtain.

Thanks,
Mike

Hey, Mike. Please see the inquiry below from the Red Cross concerning displaced workers from the closing of meat packing facilities. Does this fall in DOL's lane? Or it might be HUD... Any guidance is helpful!

Best,
Lillie

Subject: COVID-19: Updated DOL Guidance

Dear State Workforce Director,

The U.S. Department of Labor (DOL) has posted additional Questions and Answers regarding implementation of certain provisions of the Families First Coronavirus Response Act (FFCRA). For your reference, the updated information begins with Question #15.

As a reminder, DOL previously issued the following implementation guidance pursuant to the FFCRA:

- ETA: Unemployment Insurance Program Letter 13-20
- WHD: Fact Sheet for Employees
- WHD: Fact Sheet for Employers
- WHD: Posters for Federal Employees and Other Employees
- WHD: Field Assistance Bulletin

The Department of Labor encourages you to forward this information to appropriate stakeholders, county governments and municipal governments in your state.

Please give me a call at (b) (6) with any questions.

Best,
Mike

Michael R. Downing

Thanks for sending this along Michael. Very much appreciate it. Unfortunately, we are starting to hear lots of concerns about what the FFCRA, especially when combined with the provisions in the CARES Act to provide an additional $600 per week unemployment benefit, will do to our already extremely tight essential critical infrastructure workforce.

Specifically thinking about employees in rural America making $35,000 - $40,000 a year who would be in a situation – since the school systems have closed now to earn significantly more if they were to take leave due to lack of child care than they would earn normally.

Since these are essential jobs on farms (or in pork packing plants) and many of our members have over 50 employees so they wouldn't qualify for the small business exemption in the FFCRA seems to be to define what an Emergency Responder under Sec. 3105 of the FFCRA is to include those employed as essential critical infrastructure workers. In our case, it would be necessary to have them continue working so we could continue to produce food.

This would be consistent, with for example, how livestock haulers have been classified in the state of Minnesota under Gov. Walz's Executive Order 20-24 which states: "Vehicles and drivers providing direct assistance for emergency relief efforts in response to COVID-19 are exempted from certain regulations as described in this Executive Order."

Not sure who the right person to contact at DOL might be. If you could direct me to them, it would be much appreciated. Thanks!

To: Levinson, Andrew - OSHA
Subject: RE: Treatment question
Date: Tuesday, April 21, 2020 6:47:59 PM
Attachments: image001.png

We haven't found anything on this being used in the US. I don't think there are any products approved for this type of people treatment. We are investigating to see if there is any viable product or system that could be used in conjunction with all the other systems we have put in place.

Thanks
Brian

Subject: [Ext]- RE: Treatment question

Hi Brian,
Thanks for reaching out. My first thoughts on this are for potential impact of bleach on eyes, nose, mouth. Is this likely to ruin workers clothes? Also, I suspect the main problem is going to be asymptomatic/presymptomatic transmission of COVID that the workers have themselves and carry into the plant regardless of what's on their clothes. If a worker is infected, I suspect they are likely to re-contaminate their clothing over the course of the work day. A quick search of the internet from the countries using these systems has the following articles that say they are not based on science and may harm people.

https://www.financialexpress.com/lifestyle/health/anti-covid-19-disinfection-tunnels-may-harm-eyes-say-alkali-makers/1927289/
https://thefederal.com/states/south/tamil-nadu/covid-19-sodium-hypochlorite-tunnels-may-harm-humans-more-than-virus/

Are you aware of any US companies selling this equipment? Aware of any studies of efficacy?

I suspect that OSHA, FDA and USDA would be asked about the safety of this for both workers and food safety I think we would need a little more detail on what equipment you were planning to use and your procedures and any studies on efficacy.

Best,
Andy

Subject: RE: Treatment question

Andrew – hope all is treating you well and you are staying healthy! We are looking for an application

to treat employees as they enter our production facilities. We will employ up to ~3,000 team members per facility and would like to treat clothes, footwear, and personal belongings and they enter our facilities. There are systems like this popping up all over the world, but not sure there is any products / disinfectants that are approved for a system like this in the US. It appears that most countries are using a sodium hypochlorite solution. Any chance this would fall under some approval in the US?

Hi Brian,

After consulting with a few FDRs, we've come to the conclusion that this is more likely an OSHA and/or EPA issue.

For OSHA, I recommend reaching out to:

Andrew Levinson, MPH
Deputy Director
OSHA Standards and Guidance
202-693-2048
Levinson.andrew@dol.gov

I don't have an EPA contact readily available but can try to ID one if helpful. Please let me know.

Thank you,
Nina

Subject: Treatment question

Mr. Yiannas - I got two different email addresses from Dr. Brashears and Al Almanza, so hoping one of these is correct! Hoping you can assist me. There is a process in Brazil that employees are treated with a mist of polyhexamethylene biguanide (BHMB) as they enter processing facilities. This treatment is for a variety of bacteria and viruses as they enter their work facility.

We are looking for a similar application at our domestic facilities. Are you aware of approved product or similar treatment / application that can or is used in the US? If not, who would be a good contact at FDA that may have some insight on an approved products or processes that we could consider for a similar application here in the US?

Feel free to contact me via email or call my cell any time.

Thank You

Hi Doug and Chris,

I hope you both are doing well. I have a few questions from our members as a follow up from our call on May 1. You answered these questions on the call but I want to send a report out to our members with written responses. I know you are both very busy so I drafted responses based on your feedback from the call and the CDC/OSHA guidance for the meat and poultry industry. Can you both review these responses and let me know if they are accurate? Please provide any clarification where needed.

Thank you again for all you are doing!

Subject:	Questions for Webinar
Date:	Wednesday, April 29, 2020 2:29:08 PM
Attachments:	image001.png image002.png image005.png
Importance:	High

Please find below the questions provided by the industry for tomorrow's 2 PM EST webinar. If you have received any additional questions that you feel are pertinent for the webinar, please share it with the group.

- One question is, can we expect to see this interim guidance turn into regulation for enforcement purposes?
- An employee has symptoms and has a test with negative results. Symptoms continue, should the employee have the test repeated?
- Employees are trained in social distancing, and workplaces have been designed to keep employees separated. However, employees on breaks and after work do not follow the social distancing guidelines. Will the company be held accountable for an employee's actions?
- What regulations must be used for redesigning or removing Air Circulation to prevent the spread of airborne or aerosolized viruses?
- How will the USDA, under the Executive Order and the authority of the Defense Production Act, with meat processing to affirm they will operate under the CDC and OSHA guidance?
- How are the CDC and OSHA working with State Plan OSHA states for the use of the guidance?
- Do companies need to document there use of the hierarchy of controls for steps to try and eliminate processes that create exposure?
- How will the Federal government provide testing materials and protective gear for employees?
- Will anyone discuss in plant ventilation and makeup air units? Suggestions for achieving a balance between airflow requirements in the facilities and CDC recommendations.
- Correlation between HIPAA laws and steps employers can take to gain knowledge of 3rd party positive employee tests for the sole purpose of managing employee exposure events.
- How do we overcome cultural socializing traditions that are putting employees at risk (Cinco de Mayo)?
- Some religious denominations believe that God will protect people/employees from harm, and therefore, there is resistance to wearing extra PPE based on religious objections. How do we enforce extra safety precautions when some employees feel it violates their religious freedoms?

Please contact me if you have any questions.

Subject: Re: Call with the meat and poultry industry

Good morning! We anticipate that there will be 200-300 people on the call. We're open to almost anytime Thursday or Friday (4/30 or 5/1). The only time that does NOT work for the meat industry is 11:00a.m-12:00pm on Friday. We've asked members to get their questions in by COB today. We'll consolidate that list and aim to get it to you by this evening.

As soon as you identify a time and call-in info, please let me know so that I can disseminate it.

Thanks again!!

Subject: Call with the meat and poultry industry

Good afternoon! I've recently been retained by the North American Meat Institute to assist the meat industry in navigating some of the many challenges resulting from the COVID-19 pandemic. Up until last month, I was the Administrator of USDA's Food Safety Inspection Service. I left government mid-March to start up a new consulting firm, and as you can imagine, it's been a very hectic time for the meat industry over the past several weeks.

Having worked with many state and local public health partners as a federal government employee, I know how committed they are to ensuring the health of their communities. I'm appreciative that CDC and DOL worked together on the meatpacker specific interim guidance that was published on Sunday, and as you can see in the email string, I'm hoping that CDC-NIOSH and DOL-OSHA will host a joint call for the producer groups and their members (the meat and poultry packers) to attend. I'd be happy to assemble questions ahead of the meeting and get them to you.

Please let me know what you need from me to get this set up. Thank you!

Subject: Re: Request for tele-com meeting

Loren, the following questions were developed internally by NAMI. I'm sure other producer groups may have questions as well, but here are some initial questions folks had.

1. Given that there is community spread occurring across the country, if the CDC/DOL guidance is followed by the meat and poultry industry, should plants be safe to operate?

2. CDC has recognized that meat and poultry establishments are a part of critical infrastructure. How important is the DOL/CDC guidance for the state and local public health authorities to utilize to keep establishments open and operating safely?

3. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE and physical barriers reduce the risk of spread and therefore should allow for continued operation?

4. CDC has referenced its plan to publish decision trees to assist industries with reopening plans. When will these decision trees be released and what industries will they target?

Subject: Request for tele-com meeting

Good morning, Lisa and Loren! I'm doing some work for the Meat Institute as they navigate through the COVID-19 pandemic.

We've reviewed the joint CDC and OSHA interim guidance for meat and poultry packing industry, and would like to schedule a follow up call with CDC and OSHA to allow producers the opportunity to ask clarifying questions.

Would you be willing to host a call this week specifically for the meat and poultry industry? It would be great to have you walk through the document and then take questions, which could be submitted in advance.

Thanks!

Thanks for your patience, Dr. Brown.

Dr. McCullough and I will be on the speaker line tomorrow. After opening comments from OSHA/CDC, she will take a minute to thank both Agencies, on behalf of the industry, before the presentation begins.

Talk to you tomorrow!

Good morning! We anticipate that there will be 200-300 people on the call. We're open to almost anytime Thursday or Friday (4/30 or 5/1). The only time that does NOT work for the meat industry is 11:00a.m-12:00pm on Friday. We've asked members to get their questions in by COB today. We'll consolidate that list and aim to get it to you by this evening.

As soon as you identify a time and call-in info, please let me know so that I can disseminate it.

Thanks again!!

Subject: Call with the meat and poultry industry

Good afternoon! I've recently been retained by the North American Meat Institute to assist the meat industry in navigating some of the many challenges resulting from the COVID-19 pandemic. Up until last month, I was the Administrator of USDA's Food Safety Inspection Service. I left government mid-March to start up a new consulting firm, and as you can imagine, it's been a very hectic time for the meat industry over the past several weeks.

Having worked with many state and local public health partners as a federal government employee, I know how committed they are to ensuring the health of their communities. I'm appreciative that CDC and DOL worked together on the meatpacker specific interim guidance that was published on Sunday, and as you can see in the email string, I'm hoping that CDC-NIOSH and DOL-OSHA will host a joint call for the producer groups and their members (the meat and poultry packers) to attend. I'd be happy to assemble questions ahead of the meeting and get them to you.

Please let me know what you need from me to get this set up. Thank you!

Subject: Re: Request for tele-com meeting

Loren, the following questions were developed internally by NAMI. I'm sure other producer groups may have questions as well, but here are some initial questions folks had.

1. Given that there is community spread occurring across the country, if the CDC/DOL guidance is followed by the meat and poultry industry, should plants be safe to operate?

2. CDC has recognized that meat and poultry establishments are a part of critical infrastructure. How important is the DOL/CDC guidance for the state and local public health authorities to utilize to keep establishments open and operating safely?

3. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE and physical barriers reduce the risk of spread and therefore should allow for continued operation?

4. CDC has referenced its plan to publish decision trees to assist industries with reopening plans. When will these decision trees be released and what industries will they target?

Good morning, Lisa and Loren! I'm doing some work for the Meat Institute as they navigate through the COVID-19 pandemic.

We've reviewed the joint CDC and OSHA interim guidance for meat and poultry packing industry, and would like to schedule a follow up call with CDC and OSHA to allow producers the opportunity to ask clarifying questions.

Would you be willing to host a call this week specifically for the meat and poultry industry? It would be great to have you walk through the document and then take questions, which could be submitted in advance.

Thanks!

Hi Carmen and KatieRose,

(b) (6) from OSHA's Office of Communications will be facilitation today's call, and I wanted to share the agenda below so you know how things will progress. I included the remarks you mentioned wanting to give at the start of the call (third bullet). When we get to the pre-submitted questions, we'd like you two to "ask" those questions on the line so it's not just us droning through a list. Given the number of questions, you might pick the most significant ones so we have time for live Q&A within the hour, but I'll leave that up to you.

Agenda

- Pre-conference, 1:45 p.m. ET (all speakers/facilitator) / Call starts at 1:00 p.m. ET
- Welcome – Facilitator
- Meat stakeholders' remarks – KatieRose McCullough / Carmen Rottenberg
- Introduce speakers – Facilitator
- Overview of COVID-19 – Doug Trout, CDC/NIOSH
- Overview of joint guidance – Chris Brown, OSHA
- Additional information on worker screening, testing recommendations – Doug Trout, CDC/NIOSH
- Q&A from pre-submitted questions - KatieRose McCullough / Carmen Rottenberg
- Q&A from participants – Facilitator + Operator
- Conclusion – Facilitator

Thanks, and let me know if you have any concerns before the call.

Chris

Good morning! We anticipate that there will be 200-300 people on the call. We're open to almost anytime Thursday or Friday (4/30 or 5/1). The only time that does NOT work for the meat industry is 11:00a.m-12:00pm on Friday. We've asked members to get their questions in by COB today. We'll consolidate that list and aim to get it to you by this evening.

As soon as you identify a time and call-in info, please let me know so that I can disseminate it.

Thanks again!!

Subject: Call with the meat and poultry industry

Good afternoon! I've recently been retained by the North American Meat Institute to assist the meat industry in navigating some of the many challenges resulting from the COVID-19 pandemic. Up until last month, I was the Administrator of USDA's Food Safety Inspection Service. I left government mid-March to start up a new consulting firm, and as you can imagine, it's been a very hectic time for the meat industry over the past several weeks.

Having worked with many state and local public health partners as a federal government employee, I know how committed they are to ensuring the health of their communities. I'm appreciative that CDC and DOL worked together on the meatpacker specific interim guidance that was published on Sunday, and as you can see in the email string, I'm hoping that CDC-NIOSH and DOL-OSHA will host a joint call for the producer groups and their members (the meat and poultry packers) to attend. I'd be happy to assemble questions ahead of the meeting and get them to you.

Please let me know what you need from me to get this set up. Thank you!

Chris, is it possible to record today's call? We have some members who might not be able to make it, but would listen at a later time.

Also, will the call be able to accommodate up to 300 people? There's been a ton of interest in the call.

Thanks again!

Good morning! We anticipate that there will be 200-300 people on the call. We're open to almost anytime Thursday or Friday (4/30 or 5/1). The only time that does NOT work for the meat industry is 11:00a.m-12:00pm on Friday. We've asked members to get their questions in by COB today. We'll consolidate that list and aim to get it to you by this evening.

As soon as you identify a time and call-in info, please let me know so that I can disseminate it.

Thanks again!!

Thank you for contacting OSHA and NIOSH about the meat and poultry guidance. Our agencies are working to identify the right staff to speak with the NAMI group. In the meantime, a few logistical items we hope you can help with:

- Would you like to set-up a call line or would you prefer us to do this? We can do either; just let us know what works best.
- Do you have an idea of the number of participants who will join the planned call?
- Could you give us some proposed times tomorrow, Thursday, and Friday?
- I see you initially suggested the four questions at the bottom of this message. Would it be possible for you to come up with a more complete list of questions you'll want to ask and have answered during the call? This will help make sure we have the right subject matter experts to talk with your group.

Thanks very much,

Chris

Subject: Call with the meat and poultry industry

Good afternoon! I've recently been retained by the North American Meat Institute to assist the meat industry in navigating some of the many challenges resulting from the COVID-19 pandemic. Up until last month, I was the Administrator of USDA's Food Safety Inspection

Service. I left government mid-March to start up a new consulting firm, and as you can imagine, it's been a very hectic time for the meat industry over the past several weeks.

Having worked with many state and local public health partners as a federal government employee, I know how committed they are to ensuring the health of their communities. I'm appreciative that CDC and DOL worked together on the meatpacker specific interim guidance that was published on Sunday, and as you can see in the email string, I'm hoping that CDC-NIOSH and DOL-OSHA will host a joint call for the producer groups and their members (the meat and poultry packers) to attend. I'd be happy to assemble questions ahead of the meeting and get them to you.

Please let me know what you need from me to get this set up. Thank you!

Subject: Re: Request for tele-com meeting

Loren, the following questions were developed internally by NAMI. I'm sure other producer groups may have questions as well, but here are some initial questions folks had.

1. Given that there is community spread occurring across the country, if the CDC/DOL guidance is followed by the meat and poultry industry, should plants be safe to operate?

2. CDC has recognized that meat and poultry establishments are a part of critical infrastructure. How important is the DOL/CDC guidance for the state and local public health authorities to utilize

to keep establishments open and operating safely?

3. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE and physical barriers reduce the risk of spread and therefore should allow for continued operation?

4. CDC has referenced its plan to publish decision trees to assist industries with reopening plans. When will these decision trees be released and what industries will they target?

Would you be willing to host a call this week specifically for the meat and poultry industry? It would be great to have you walk through the document and then take questions, which could be submitted in advance.

Thanks!

I left government mid-March to start up a new consulting firm, and as you can imagine, it's been a very hectic time for the meat industry over the past several weeks.

Having worked with many state and local public health partners as a federal government employee, I know how committed they are to ensuring the health of their communities. I'm appreciative that CDC and DOL worked together on the meatpacker specific interim guidance that was published on Sunday, and as you can see in the email string, I'm hoping that CDC-NIOSH and DOL-OSHA will host a joint call for the producer groups and their members (the meat and poultry packers) to attend. I'd be happy to assemble questions ahead of the meeting and get them to you.

Please let me know what you need from me to get this set up. Thank you!

Carmen

Hi Carmen,

Just circling back on our conversation from this morning. Have you been able to finish combing through the questions? It might be most helpful for us to have things where they stand so we have time to read through them ahead of the call.

Chris

Good morning! We anticipate that there will be 200-300 people on the call. We're open to almost anytime Thursday or Friday (4/30 or 5/1). The only time that does NOT work for the meat industry is 11:00a.m-12:00pm on Friday. We've asked members to get their questions in by COB today. We'll consolidate that list and aim to get it to you by this evening.

As soon as you identify a time and call-in info, please let me know so that I can disseminate it.

Thanks again!!

Loren, the following questions were developed internally by NAMI. I'm sure other producer groups may have questions as well, but here are some initial questions folks had.

1. Given that there is community spread occurring across the country, if the CDC/DOL guidance is followed by the meat and poultry industry, should plants be safe to operate?

2. CDC has recognized that meat and poultry establishments are a part of critical infrastructure. How important is the DOL/CDC guidance for the state and local public health authorities to utilize to keep establishments open and operating safely?

3. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE and physical barriers reduce the risk of spread and therefore should allow for continued operation?

4. CDC has referenced its plan to publish decision trees to assist industries with reopening plans. When will these decision trees be released and what industries will they target?

Good morning, Lisa and Loren! I'm doing some work for the Meat Institute as they navigate through the COVID-19 pandemic.

We've reviewed the joint CDC and OSHA interim guidance for meat and poultry packing industry, and would like to schedule a follow up call with CDC and OSHA to allow producers the opportunity to ask clarifying questions.

Would you be willing to host a call this week specifically for the meat and poultry industry? It would be great to have you walk through the document and then take questions, which could be submitted in advance.

Thanks!

1. Given that there is community spread occurring across the country, if the CDC/DOL guidance is followed by the meat and poultry industry, should plants be safe to operate?

2. CDC has recognized that meat and poultry establishments are a part of critical infrastructure. How important is the DOL/CDC guidance for the state and local public health authorities to utilize to keep establishments open and operating safely?

3. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE and physical barriers reduce the risk of spread and therefore should allow for continued operation?

4. CDC has referenced its plan to publish decision trees to assist industries with reopening plans. When will these decision trees be released and what industries will they target?

Subject: RE: NAMI Follow Up Questions

Thank you both! These responses are great! Thanks for getting back to me so quickly.

If you develop an FAQ, *which we think would be VERY beneficial*, please use these questions and responses. We want our communications to the industry to match what you say.

There is only one bit of follow up I think will be helpful. We have a lot establishments concerned about community spread (in addition to anything inside the establishment) that is outside of their

control (especially as things start to open up) and want to know how this effects them. Are you comfortable with the addition below in red? Let me know if it aligns with NIOSH/OSHA thinking.

1. **Question: Should employees feel safe coming to work and confident in the control of potential COVID-19 spread in establishments that implement the CDC/OSHA guidance?**
   Answer: The CDC/OSHA guidance for the meat and poultry industry is written to assist establishments in completing a COVID-19 assessment and control plan. The establishment specific COVID-19 assessment and control plan is designed to reduce the potential introduction and control the potential spread of COVID-19. Establishments that have implemented the CDC/OSHA guidance should feel confident that they doing their part to keep their employees safe while continuing their critical operations. Employers should continue to monitor their workers for signs/symptoms of illness. In workplaces that have implemented the CDC/OSHA guidance, continued spread of the disease may mean that the employer's COVID-19 plan is not fully effective or it may mean that greater community-wide mitigation activities are necessary. Control measures may need to be adjusted and workers may need to be re-trained. Knowledge about COVID-19 is continually evolving. All plans to address COVID-19 among workers and in the community may need updating and revision as more is learned.

Hi KatieRose,

See attached, and thanks for letting OSHA and CDC/NIOSH take a look at these before you finalized. We offer some suggested edits, including to clarify a few things readers might not have found as clear as you and we would probably hope.

We don't have anything in the works yet, but if we were to try to develop FAQs at some point, would you mind if we borrowed from what is already started here?

Hi Doug and Chris,

I hope you both are doing well. I have a few questions from our members as a follow up from our call on May 1. You answered these questions on the call but I want to send a report out to our members with written responses. I know you are both very busy so I drafted responses based on your feedback from the call and the CDC/OSHA guidance for the meat and poultry industry. Can you both review these responses and let me know if they are accurate? Please provide any clarification where needed.

Thank you again for all you are doing!

Good Afternoon,

I know that all of you are extremely busy addressing COVID-19 issues. Loren Sweatt would like to have a conversation with you and/or your key staff covering your primary challenges and efforts in this area. Ms. Sweatt is available this Friday, April 24th between 10 and 11am or between 1 and 4pm for a 60 minute call.

The purpose of this email to determine if you are available any of these times. Please let me know as soon as you can so that we can firm up the time frame based on the majority of availability.

Please let me know if you have any questions.

Thank you very much,

Doug Kalinowski

Subject: [Ext]- Discussion With Loren Sweatt, Principal Deputy Assistant Secretary of Labor for OSHA

Use caution before opening attachments or links!

Good Afternoon,

I know that all of you are extremely busy addressing COVID-19 issues. Loren Sweatt would like to have a conversation with you and/or your key staff covering your primary challenges and efforts in this area. Ms. Sweatt is available this Friday, April 24th between 10 and 11am or between 1 and 4pm

for a 60 minute call.

The purpose of this email to determine if you are available any of these times. Please let me know as soon as you can so that we can firm up the time frame based on the majority of availability.

Please let me know if you have any questions.

Thank you very much,

Doug Kalinowski
Directorate of Cooperative and State Programs

Subject: For Your Information: DOL Twitter Chat on Families First Coronavirus Response Act (FFCRA)

Date: Wednesday, March 25, 2020 10:57:13 AM

Importance: High

Good Morning,

We wanted to make you aware that the U.S. Department of Labor will be hosting a national

online dialogue to provide employers and employees with an innovative opportunity to offer their perspective as the Department develops compliance assistance materials and outreach strategies related to the implementation of the Families First Coronavirus Response Act (FFCRA). The ideas and comments gathered from this dialogue will inform compliance assistance guidance, resources, and tools, as well as outreach approaches, that assist employers and employees in understanding their responsibilities and rights under the FFCRA. Input is needed by March 29, 2020. Anybody who is interested can participate online at >>https://ffcra.ideascale.com<< from March 23 through March 29, 2020 or can join a Twitter chat hosted by @ePolicyWorks on March 25, 2020 at 2 p.m. using the hashtag #EPWChat.

Please share this with your members and stakeholders, as appropriate.

Subject: For Your Information: Further Guidance On Enforcement For Use Of Respiratory Protection Equipment

Date: Monday, April 6, 2020 9:45:04 AM

Good Morning,

The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) has issued new Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019

(COVID-19) Pandemic. This memorandum provides additional interim guidance to Compliance Safety and Health Officers (CSHOs) for enforcing the Respiratory Protection standard, 29 CFR § 1910.134, and certain other health standards, with regard to supply shortages of disposable N95 filtering facepiece respirators (FFRs). This guidance applies in all industries and outlines enforcement discretion to permit the use of FFRs and air-purifying elastomeric respirators that are either:

- Certified under certain standards of other countries or jurisdictions, as specified below; or
- When equipment certified under standards of other countries or jurisdictions is not available, previously certified under the standards of other countries or jurisdictions but are beyond their manufacturer's recommended shelf life (i.e., expired).

For more information about COVID -19 please visit OSHA's COVID-19 webpage and CDC's COVID-19 webpage.

Subject: For Your Information: Summary of Available OSHA and CDC COVID-19 Resources

Date: Monday, April 6, 2020 4:36:35 PM

Good Afternoon,

We understand that you are receiving emails from everywhere on COVID-19 and are sharing the information with your members and stakeholders as quickly as you are receiving them. Below, we have tried to digest the information that we have shared over the last several

weeks about the resources on OSHA's webpage, and encourage you to share this information as broadly as possible. In addition, as you receive questions and requests from your members that identify gaps in the information available for protecting their essential workers, we encourage you to share them with us as well, so that we are able to target resources to areas of need.

OSHA's primary resource is the OSHA COVID-19 Official Webpage. This page is being updated routinely and we encourage you to review it frequently. Recent guidance released and housed on this page includes:

- Guidance on Preparing Workplaces for COVID-19 (Spanish)
- Prevent Worker Exposure to Coronavirus (Spanish)
- Worker Exposure Risk to COVID-19 (Spanish)
- Temporary Guidance on the enforcement of OSHA's Respiratory Protection standard:
  - March 14 Memo: on Healthcare Respiratory Protection Annual Fit-Testing for N95 Filtering Facepieces During the COVID-19 Outbreak
  - April 3 Memo: on Respiratory Protection Equipment Certified Under Standards of Other Countries or Jurisdictions During the COVID-19 Pandemic
  - April 3 Memo: on Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic
- **NEW** Short video: Higher Risk Jobs Need Extra Protections to Keep Workers Safe
- **NEW** Poster: Steps All Workplaces Can Take to Reduce the Risk of Exposure to Coronavirus (Spanish)
- Visit OSHA's Publications webpage for other useful workplace safety information.

The Wage and Hour Division's (WHD) primary resource is the WHD COVID-19 Official Webpage

- Departmental national dialogue on the implementation of the Families First Coronavirus Response Act (FFCRA) The ideas and comments gathered from this dialogue will inform compliance assistance guidance, resources, and tools, as well as outreach approaches, that assist employers and employees in understanding their responsibilities and rights under the FFCRA. The dialogue will remain open until the close of business on April 10.

CDC's primary resource is the CDC COVID-19 Official Web Page. This page is being updated routinely and we encourage you to review it frequently. Recent guidance released and housed on this page includes:

- CDC COVID-19 Guidance Documents
- Strategies to Optimize PPE and Equipment (Healthcare)
  - Decontamination and Reuse of Filtering Facepiece Respirators using Contingency and Crisis Capacity Strategies (Healthcare)

    - Strategies for Optimizing of N95 Respirators (Healthcare)
- Resources for Businesses and Employers
    - Interim Guidance for Businesses and Employers
    - Cleaning and Disinfecting Building Facility
- Cases in U.S.

The World Health Organization's (WHO) primary resource is the WHO COVID-19 Webpage.

Subject: For Your Information: U.S. Department of Labor Issues Temporary Enforcement Guidance for Respirator Fit-Testing in Healthcare during COVID-19 Outbreak

Date: Monday, March 16, 2020 9:53:30 AM

Good Morning,

As you may be aware, the Occupational Safety and Health Administration (OSHA) has issued

new temporary guidance regarding the enforcement of OSHA's Respiratory Protection standard. This guidance is aimed at ensuring healthcare workers have full access to needed N95 respiratory protection in light of anticipated shortages. The temporary enforcement guidance is in effect beginning March 14, 2020, and will remain in effect until further notice.

For further information about COVID-19, please visit the U.S. Department of Health and Human Services' Centers for Disease Control and Prevention.

Subject: For Your Information: U.S. Department of Labor Issues COVID-19 Guidance for Respirator Shortage

Date: Friday, April 3, 2020 1:23:27 PM

Good Afternoon,

The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) has issued new Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the

Coronavirus Disease 2019 (COVID19) Pandemic. This memorandum provides interim guidance to Compliance Safety and Health Officers (CSHOs) for enforcing the Respiratory Protection standard, 29 CFR § 1910.134, and certain other health standards, with regard to supply shortages of disposable N95 filtering facepiece respirators. Specifically, it outlines enforcement discretion to permit the extended use and reuse of respirators, as well as the use of respirators that are beyond their manufacturer's recommended shelf life (sometimes referred to as "expired"). This guidance applies in all industries and will also be highlighted on the OSHA COVID-19 webpage shortly.
For further information about COVID-19, please visit the U.S. Department of Health and Human Services' Centers for Disease Control and Prevention.

Date:	Monday, April 20, 2020 1:59:48 PM

Good Afternoon,

I know that all of you are extremely busy addressing COVID-19 issues. Loren Sweatt would like to have a conversation with you and/or your key staff covering your primary challenges and efforts in this area. Ms. Sweatt is available this Friday, April 24th between 10 and 11am or between 1 and 4pm for a 60 minute call.

The purpose of this email to determine if you are available any of these times. Please let me know as soon as you can so that we can firm up the time frame based on the majority of availability.

Please let me know if you have any questions.

Thank you very much,

Doug Kalinowski
Directorate of Cooperative and State Programs

Importance:	High

Please find below the questions provided by the industry for tomorrow's 2 PM EST webinar. If you have received any additional questions that you feel are pertinent for the webinar, please share it with the group.

- One question is, can we expect to see this interim guidance turn into regulation for enforcement purposes?
- An employee has symptoms and has a test with negative results. Symptoms continue, should the employee have the test repeated?
- Employees are trained in social distancing, and workplaces have been designed to keep employees separated. However, employees on breaks and after work do not follow the social distancing guidelines. Will the company be held accountable for an employee's actions?
- What regulations must be used for redesigning or removing Air Circulation to prevent the spread of airborne or aerosolized viruses?
- How will the USDA, under the Executive Order and the authority of the Defense Production Act, with meat processing to affirm they will operate under the CDC and OSHA guidance?
- How are the CDC and OSHA working with State Plan OSHA states for the use of the guidance?
- Do companies need to document there use of the hierarchy of controls for steps to try and eliminate processes that create exposure?
- How will the Federal government provide testing materials and protective gear for employees?
- Will anyone discuss in plant ventilation and makeup air units? Suggestions for achieving a balance between airflow requirements in the facilities and CDC recommendations.
- Correlation between HIPAA laws and steps employers can take to gain knowledge of 3rd party positive employee tests for the sole purpose of managing employee exposure events.
- How do we overcome cultural socializing traditions that are putting employees at risk (Cinco de Mayo)?
- Some religious denominations believe that God will protect people/employees from harm, and therefore, there is resistance to wearing extra PPE based on religious objections. How do we enforce extra safety precautions when some employees feel it violates their religious freedoms?

Please contact me if you have any questions.

Subject:	Re: Call with the meat and poultry industry
Date:	Wednesday, April 29, 2020 9:47:07 AM

Good morning! We anticipate that there will be 200-300 people on the call. We're open to almost anytime Thursday or Friday (4/30 or 5/1). The only time that does NOT work for the meat industry is 11:00a.m-12:00pm on Friday. We've asked members to get their questions in by COB today. We'll consolidate that list and aim to get it to you by this evening.

As soon as you identify a time and call-in info, please let me know so that I can disseminate it.

Thanks again!!

Subject: Call with the meat and poultry industry

Good afternoon! I've recently been retained by the North American Meat Institute to assist the meat industry in navigating some of the many challenges resulting from the COVID-19 pandemic. Up until last month, I was the Administrator of USDA's Food Safety Inspection Service. I left government mid-March to start up a new consulting firm, and as you can imagine, it's been a very hectic time for the meat industry over the past several weeks.

Having worked with many state and local public health partners as a federal government employee, I know how committed they are to ensuring the health of their communities. I'm appreciative that CDC and DOL worked together on the meatpacker specific interim guidance that was published on Sunday, and as you can see in the email string, I'm hoping that CDC-NIOSH and DOL-OSHA will host a joint call for the producer groups and their members (the meat and poultry packers) to attend. I'd be happy to assemble questions ahead of the meeting and get them to you.

Please let me know what you need from me to get this set up. Thank you!

Subject: Re: Request for tele-com meeting

Loren, the following questions were developed internally by NAMI. I'm sure other producer groups may have questions as well, but here are some initial questions folks had.

1. Given that there is community spread occurring across the country, if the CDC/DOL guidance is followed by the meat and poultry industry, should plants be safe to operate?

2. CDC has recognized that meat and poultry establishments are a part of critical infrastructure. How important is the DOL/CDC guidance for the state and local public health authorities to utilize to keep establishments open and operating safely?

3. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE and physical barriers reduce the risk of spread and therefore should allow for continued operation?

4. CDC has referenced its plan to publish decision trees to assist industries with reopening plans. When will these decision trees be released and what industries will they target?

Subject: Request for tele-com meeting

Good morning, Lisa and Loren! I'm doing some work for the Meat Institute as they navigate through the COVID-19 pandemic.

We've reviewed the joint CDC and OSHA interim guidance for meat and poultry packing industry, and would like to schedule a follow up call with CDC and OSHA to allow producers the opportunity to ask clarifying questions.

Would you be willing to host a call this week specifically for the meat and poultry industry? It would be great to have you walk through the document and then take questions, which could be submitted in advance.

Thanks!
Carmen

Hi Matt – thank you – yes, I think it would help to have a short call with GA Tech and OSHA/NIOSH speakers on Tuesday, if possible. Also, if there will be a registration site or invitation developed, then we would like to share it with the OSHA field staff, State Plans, and other Consultation staff. I can follow-up with you and Christian off-line on this if needed.

Tina,

Thank you for the quick response, Thursday, April 30, 2 PM EST will work great. You are correct, Georgia Tech will facilitate the webinar, and I have added them to the email. We will be asking our industry members to submit questions before the webinar so that we can provide Q/A response. Georgia Tech is happy to provide an overview of the consultation program during this webinar, as well.

Please let me know if a call is needed either on Tuesday or Wednesday, leading up to the webinar.

Subject: For Your Response: Poultry Industry Alliance COVID-19 Webinar
Importance: High

Hi Christian/Matt,

Thursday, April 30, at 2:00 PM works for both the OSHA and NIOSH SMEs, who are:

- Chris Brown, who led the coordination of the guidelines for OSHA and is cc'd on this email
- Douglas Trout, who is with NIOSH and coordinated with Chris on the final joint guidelines. He is not included on the email, but, I can wrap him in if needed. His contact is (b) (6)(b) (6)

I've also included our Office of Communications leadership on the email, Frank Meilinger and Gina Scott, to keep them in the loop and in case we need their assistance.

I got the sense that GA Tech would be facilitating the webinar and could speak to how OSHA Consultation could be a resource to members. How would you like to proceed with the planning – I'm happy to coordinate a call among the main participants or industry/GA Tech could do that if you wish. I will follow-up by phone, but wanted to get the email train going and provide you with the SME contacts.

Tina

Webinar Proposal:

Target Audience: Members of the U.S. Poultry and Egg Association (US Poultry), the National Chicken Council (NCC), and the National Turkey Federation (NTF)

Target Date: As soon as possible after the release of OSHA's COVID-19 Guidelines for Meatpacking and Meat Processing Employers and Workers (currently in development, will be harmonized or jointly released with NIOSH)

Goal of Webinar: Provide US Poultry/NCC/NTF members with current guidance regarding the mitigation of COVID-19 in poultry processing, and any strategies/innovative ways to slow the spread

of COVID-19 in their facilities.

Webinar Topics:

- OSHA's COVID-19 Guidelines for Meatpacking and Meat Processing Employers and Workers (currently in development)
- OSHA's On-Site Consultation Program
- NIOSH's COVID-19 Guidelines for Meatpacking and Meat Processing Employers and Workers (currently in development) and practical ways to implement the guidelines in poultry processing plants/facilities.
- Industry practices for implementing guidelines; select members implementing innovative ways to mitigate the spread of COVID-19 in their facilities will share this information with the audience.

Webinar Presenters:

- OSHA: SME on COVID-19 Guidelines
- OSHA: SME on OSHA's On-Site Consultation
- NIOSH SME on COVID-19 Guidelines/Meatpacking Meat Processing
- 2 to 3 Members of Target Audience (selection made by Alliance partners)

The Alliance Partners (US Poultry/NCC/NTF) will facilitate the webinar. Our participation in the proposed webinar will allow OSHA to leverage the resources of its alliance participants to provide information and guidance on COVID-19 to the poultry alliance participants' members/poultry industry that will help them keep their workers safe during the current COVID-19 pandemic.

Subject:	Questions for Webinar
Date:	Wednesday, April 29, 2020 2:29:08 PM
Attachments:	image001.png image002.png image005.png
Importance:	High

Please find below the questions provided by the industry for tomorrow's 2 PM EST webinar. If you have received any additional questions that you feel are pertinent for the webinar, please share it with the group.

- One question is, can we expect to see this interim guidance turn into regulation for enforcement purposes?
- An employee has symptoms and has a test with negative results. Symptoms continue, should the employee have the test repeated?
- Employees are trained in social distancing, and workplaces have been designed to keep employees separated. However, employees on breaks and after work do not follow the social distancing guidelines. Will the company be held accountable for an employee's actions?
- What regulations must be used for redesigning or removing Air Circulation to prevent the spread of airborne or aerosolized viruses?
- How will the USDA, under the Executive Order and the authority of the Defense Production Act, with meat processing to affirm they will operate under the CDC and OSHA guidance?
- How are the CDC and OSHA working with State Plan OSHA states for the use of the guidance?
- Do companies need to document there use of the hierarchy of controls for steps to try and eliminate processes that create exposure?
- How will the Federal government provide testing materials and protective gear for employees?
- Will anyone discuss in plant ventilation and makeup air units? Suggestions for achieving a balance between airflow requirements in the facilities and CDC recommendations.
- Correlation between HIPAA laws and steps employers can take to gain knowledge of 3rd party positive employee tests for the sole purpose of managing employee exposure events.
- How do we overcome cultural socializing traditions that are putting employees at risk (Cinco de Mayo)?
- Some religious denominations believe that God will protect people/employees from harm, and therefore, there is resistance to wearing extra PPE based on religious objections. How do we enforce extra safety precautions when some employees feel it violates their religious freedoms?

Please contact me if you have any questions.

Subject: Discussion With Loren Sweatt, Principal Deputy Assistant Secretary of Labor for OSHA

Good Afternoon,

I know that all of you are extremely busy addressing COVID-19 issues. Loren Sweatt would like to have a conversation with you and/or your key staff covering your primary challenges and efforts in this area. Ms. Sweatt is available this Friday, April 24th between 10 and 11am or between 1 and 4pm for a 60 minute call.

The purpose of this email to determine if you are available any of these times. Please let me know as soon as you can so that we can firm up the time frame based on the majority of availability.

Please let me know if you have any questions.

Thank you very much,

Doug Kalinowski
Directorate of Cooperative and State Programs

Date:	Friday, May 1, 2020 11:29:56 AM

Hi Mr. Bongers,

I'm following up on your request to Kim Stille below on scheduling a meeting on Monday, May 4, 2020 to discuss a potential COVID-19 focused Alliance between OSHA and NAMI. Below are suggested times for Monday, May 4th. Please let me know if any of these timeframes would work to have a 60-minute discussion.

- 9:00 AM - 11:00 AM Eastern
- 12:00 PM – 1:30 PM Eastern
- After 3:00 PM Eastern

Tina Jones
Director, Office of Outreach Services and Alliances
DOL/OSHA
202-693-1984 (Office)

To: Hank Bongers <HBongers@meatinstitute.org>
Subject: FW: Focused Alliance Between the North American Meat Institute and OSHA

What does your availability look like for tomorrow? I would like to complete our modification of the draft alliance and get it to you before we talk. I want to make sure you are comfortable with it before proceeding. Understanding the tremendous amount of communications and guidance you have already done (and continue to do) to assist your members, I want to make sure the alliance language notes how the agency can be of value in furthering those communications - even if it is simply educating us to the challenges faced by the industry so that those challenges may be considered in future guidance.

The pandemic is causing great stressors in your industry as well as across the Agency.

Attached is the template developed and approved for use by OSHA's national office.

You may wish to review the template, but we will modify it to address specifically COVID 19 (the attached is a starting point if you will).

If we are successful (having a positive impact thru a collaboration), the alliance can be modified to embrace other safety and health topics

Subject: For Your Information: Further Guidance On Enforcement For Use Of Respiratory Protection Equipment

Date: Monday, April 6, 2020 9:45:04 AM

Good Morning,

The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) has issued new Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019

(COVID-19) Pandemic. This memorandum provides additional interim guidance to Compliance Safety and Health Officers (CSHOs) for enforcing the Respiratory Protection standard, 29 CFR § 1910.134, and certain other health standards, with regard to supply shortages of disposable N95 filtering facepiece respirators (FFRs). This guidance applies in all industries and outlines enforcement discretion to permit the use of FFRs and air-purifying elastomeric respirators that are either:

- Certified under certain standards of other countries or jurisdictions, as specified below; or
- When equipment certified under standards of other countries or jurisdictions is not available, previously certified under the standards of other countries or jurisdictions but are beyond their manufacturer's recommended shelf life (i.e., expired).

For more information about COVID -19 please visit OSHA's COVID-19 webpage and CDC's COVID-19 webpage.

Subject: For Your Information: U.S. Department of Labor Issues Temporary Enforcement Guidance for Respirator Fit-Testing in Healthcare during COVID-19 Outbreak

Date: Monday, March 16, 2020 9:53:30 AM

Good Morning,

As you may be aware, the Occupational Safety and Health Administration (OSHA) has issued

new temporary guidance regarding the enforcement of OSHA's Respiratory Protection standard. This guidance is aimed at ensuring healthcare workers have full access to needed N95 respiratory protection in light of anticipated shortages. The temporary enforcement guidance is in effect beginning March 14, 2020, and will remain in effect until further notice.

For further information about COVID-19, please visit the U.S. Department of Health and Human Services' Centers for Disease Control and Prevention.

Doug Kalinowski

From: Stille, Kim - OSHA
To: Hank Bongers
Subject: COVID-19 focused Alliance with NAMI
Date: Tuesday, April 28, 2020 5:59:00 PM
Attachments: Draft National Alliance Agreement - NAMI.doc

Please find attached the updated draft OSHA/NAMI national Alliance agreement.

- We've made clear throughout that the Alliance is centered around COVID-19 prevention; note in particular that all 5 Alliance objectives specifically allude to this as a focus area.
- The mention of "us[ing] available injury, illness, and hazard exposure data" in the third paragraph refers to the use of publicly available data sources (e.g., OSHA inspection records and Serious Injury Reporting (SIRS) data, as well as data from the Bureau of Labor Statistics)
- The Alliance is for the standard 2-year initial term, but either OSHA or NAMI may withdraw from the agreement at any time with 30 days' written notice.

As mentioned during our talk earlier today, we have brainstormed several activities that could be tackled through an alliance and would be of great benefit to both organizations:

- Participation of OSHA representatives (i.e., a compliance assistance specialist) in one or more of NAMI's weekly safety calls, as appropriate, to:
    - Discuss and answer member questions regarding the OSHA-CDC Guidance for Meat and Poultry Processing Workers and Employers regarding the prevention of COVID-19 transmission in meatpacking and processing facilities, and clarify OSHA's expectations with regard to enforcement questions.
    - Share information regarding OSHA guidance, compliance assistance tools, and other resources for identifying and mitigating COVID-19 hazards, including the On-Site Consultation Program.
    - Provide NAMI members and other industry stakeholders the opportunity to (1) share information with the agency regarding the unique challenges faced by meatpacking and processing industry employers, including small to medium-sized businesses, in preventing COVID-19 transmission, and (2) provide suggestions regarding identified best practices.
- Work together to compile a list of guidance, tools, and training resources relevant to preventing the transmission of COVID-19 in meatpacking and processing operations, and make this information available to NAMI members and other industry stakeholders in a stand-alone portal on the NAMI website.
- Sponsor webinars or other outreach activities that spotlight best practices that small to medium-sized meatpacking and processing employers can employ to prevent COVID-19 transmission.
- Collaborate in developing toolbox talks that could be employed by front-line supervisors to elevate employees' understanding of, and adherence to, recommended best practices for preventing COVID-19 transmission at work, at home, and in the community.
- Hold an industry-wide "Stand-Up" event that encourages employers and workers in the meatpacking and processing industry to participate in COVID-19 prevention activities, such as safety training, hazard identification, and hazard correction.

Nationally OSHA entered into an alliance with the National Grain and Feed Association two years ago

for similar purposes – prevent fatalities in the grain industry primarily by addressing the engulfment hazards of grain bin entry. That alliance has been very successful for both the NGFA and OSHA. We are entering into a second iteration of the alliance this fall. The renewed alliance allows the Grain Elevator and Processing Society (GEAPS) and Grain Handling Safety Council (GHSC) to join NGFA and OSHA as signatories. The efforts of the signatories are culminated every year in an annual Stand Up for Grain Safety Week, which encourages employers and workers in the grain handling industry to participate in safety related activities such as training, hazard identification, and hazard correction. Several states across the US planned events for the 2020 Stand-Up (April 13-17, 2020). Although circumstances did not allow those events to be held live, webinars were held daily. The webinars were attended by approximately 1700 people and the Stand-Up website drew viewers from across the United States and nine other countries around the globe.

Subject: Data Availability - if Interested
Date: Tuesday, April 28, 2020 9:44:00 AM
Attachments: Draft National Alliance Agreement - NAMI.doc

OSHA is now listing data specific to enforcement activities and complaints on our public website – we have been receiving a tremendous number of FOIA requests particularly involving OSHA activities during the pandemic. The enforcement and whistleblower data is updated daily, but does not list employers by name.

https://www.osha.gov/news
https://www.osha.gov/enforcement/covid-19-data
https://www.whistleblowers.gov/covid-19-data

However, specific information is available under the FOIA page data, such as Region (RID), Type of Activity (Act ID: C = Complaint, R = Referral, ..). The FOIA webpage is updated weekly

RID	Act ID	Primary/Site NAICS	Receipt Date	Receipt Type	Formality	Insp ID	Addl' Code

The FOIA page data will be updated once a week; here's the link
https://www.osha.gov/foia#covid-19

On another note – attached is the working draft for the alliance. I have a meeting with my National Office folks this afternoon regarding it, but my initial concerns revolve around the fact that it does not appear to be too focused. I need to hear from you with respect to length of participation (understanding that they are anticipating a resurgence in the fall AND the fact that anything the federal government does takes time, it would need to be in place at least a year), willingness to share / provide data in some form or fashion that would allow us (NAMI and OSHA) to adjust the alliance activities to meet the needs of your members, ….

There isn't anything that would prohibit us from modifying the alliance and extending it once COVID is "tackled" (if that is possible)

Let me know

Attached is the template developed and approved for use by OSHA's national office.

You may wish to review the template, but we will modify it to address specifically COVID 19.

If we are successful (having a positive impact thru a collaboration), the alliance can be modified to embrace other safety and health topics

Hi Kim – we'll start modifying the attached template so that it's focused on information dissemination, outreach, etc. related to COVID-19. If you would like someone involved in any of your conversations with Hank/Mark, let me know. If you think it would help with the discussion, you may want to share the attached National Alliance template with them.

Ms. Potts,

I am writing to express OSHA's interest in exploring a focused alliance with NAMI that could address the current COVID crisis facing your members.

OSHA currently has 40 national and over 200 regional alliances with various associations and organizations. The primary purposes of these alliances are to strengthen relationships and share information in both directions. OSHA did have such an alliance with the AMI a little over 10 years ago.

I know that Hank Bongers has spoken with Kim Stille, Regional Administrator in Kansas City about this recently and has had a strong working relationship with him for a number of years. If you are interesting in further exploring such an alliance, we can arrange a call with the key OSHA staff and me to discuss what this entails and the potential benefits in more detail. We have availability Monday morning or after 3:30pm on April 27, or the afternoon of April 28th. If neither work for you, we can explore other dates/times.

Please let me know if you are interested in discussing further.

Thanks,

Doug Kalinowski, Director
Directorate of Cooperative and State Programs

From: Julie Anna Potts [mailto americanmeat@meatinstitute ccsend com] **On Behalf Of** Julie Anna Potts
Sent: Monday, April 27, 2020 3:57 PM
To: Hank Bongers <HBongers@meatinstitute org>
Subject: Coronavirus (COVID-19) Update

April 27, 2020

To: **NAMI Members, Board of Directors, Scientific Affairs Committee, Labor and Employment Committee, Worker Safety Committee, International Affairs Committee, Food Safety and Inspection Affairs Committee, Washington Representatives**

From: **Julie Anna Potts, President and CEO**

Subject: **Coronavirus (COVID-19) Update**

This memorandum includes new documents and information pertaining to the coronavirus (COVID-19) pandemic, links to several government agencies, and law firms with COVID-19 websites with useful information.

Interim Guidance for Meat and Poultry Processing Workers and Employers

The Centers for Disease Control and Prevention (CDC) and the Occupational Safety and Health Administration (OSHA) (the agencies) yesterday issued Interim **Guidance** for Meat and Poultry Processing Workers and Employers. The guidance highlights how to conduct and create a COVID-19 assessment and control plan.

The Guidance provides suggestions plants may want to consider implementing if they have not already done so, *e.g.*, engineering controls such as modifying the alignment of workstations, including along processing lines, if feasible, erecting physical barriers, etc. The Guidance also discusses administrative controls such as encouraging single-file movement with a six-foot distance between each worker through the facility, where possible.

The Guidance also discusses the appropriate Personal Protective Equipment individuals should wear to control the spread of COVID-19 within establishments. Information on how to screen employees, manage ill employees, and allow people to return to work also is provided

Importantly, employers may permit workers exposed to COVID-19, but remain without symptoms, to continue to work, provided they adhere to additional safety precautions. The additional precautions are intended to protect them and the community. Although an objective of the Guidance was to help create a consistent approach by state and local facilities to COVID-19 issues in meat and poultry processing facilities, it remains to be seen whether that will be accomplished.

OSHA also discussed training regarding the virus and prevention. Although in-person training may be difficult due to social distancing restrictions, the Guidance provides a free poster link. The agencies recommend placing simple posters in languages common in the worker population encouraging employees to stay home when sick. The posters also include cough and sneeze etiquette and proper hand hygiene practices. These posters should be placed at the entrance to the workplace and in break areas, locker rooms, and other workplace areas where they are likely to be seen. The Guidance includes a link to the posters in multiple languages.

CDC has free, simple posters available to download and print, some of which are translated into different languages. The Stop the Spread of Germs poster is available in Amharic, Arabic, Burmese, Dari, Farsi, French, Haitian Creole, Kinyarwanda, Karen, Korean, Nepali, Pashto, Portuguese, Russian, Simplified Chinese, Somali, Spanish, Swahili, Tigryna, Ukrainian, and Vietnamese.

COVID-19 Testing Considerations and Operational Continuity Document

The ability to test employees is likely to become increasingly available. The Meat Institute created a document that provides information companies may consider if they are contemplating conducting testing. That document can be found here. Companies also need to take steps when employees test positive. This document includes questions to consider when that occurs. Finally, NAMI has developed "return to work" guidance for companies whose employees become ill from COVID-19 or test positive.

The Food and Drug Administration (FDA) recently posted several documents on its website that may be useful. "What to Do if You Have COVID-19 Confirmed Positive or Exposed Workers in Your Food Production, Storage, or Distribution Operations Regulated by FDA" can be found here. "Use of Respirators, Facemasks, and Cloth Face Coverings in the Food and Agriculture Sector During Coronavirus Disease (COVID-19) Pandemic" can be found here. And "Food Safety and the Coronavirus Disease 2019 (COVID-19)" can be found here.

Testing and Personal Protective Equipment Resources

The United States Department of Agriculture (USDA) and the Federal Emergency Management Agency (FEMA) compiled a list of companies that may supply personal protective equipment, disinfectants, and sanitation supply needs for the Food and Agriculture Sector. The USDA/FEMA information has been supplemented by NAMI with additional companies and that larger list can be found here.

The Meat Institute will provide other testing and personal protective equipment resources as they become available. If you have testing or PPE resources to share please send them to Mark Dopp, mdopp@meatinstitute.org.

Agricultural Marketing Service Product Solicitation

The USDA Agricultural Marketing Service (AMS) released a Request for Proposal for the USDA Farmers to Families Food Box Purchase Program on April 24. Under this program, AMS will procure an estimated $100 million per month in fresh fruits and vegetables, $100 million per month in a variety of dairy products, and $100 million per month in meat products.
Distributors will supply a pre-approved portfolio of fresh fruit and vegetables and dairy and meat products in a box to non-profit and governmental organizations with the capacity to distribute the boxes to individuals in need.

Proposals must include several elements including: technical information on how their role will support American agriculture; performance ability; past performance including written references; and pricing information including the pricing for a specific product, delivery information and constraints. Examples of meat (pork and chicken) that may be included are pre-cooked chicken nuggets, pre-cooked bacon, pre-cooked pork patties, pork or chicken taco filling. AMS will award contracts with regionally located distributors in seven U.S. regions with the goal of targeted coverage within the United States.

The Request for Proposal and other applicable attachments, including an informational webinar with technical details, can be found here. Proposals are due to AMS by 1 p.m. ET on May 1.

* * * * *

We will update this memorandum as needed. Please contact me or Mark Dopp at mdopp@meatinstitute.org with questions.

Any word??

Do you know generally the percentage of non-English speaking employees at meat packing facilities? Or, is that variable based on region / state?

From: Stille, Kim - OSHA
Sent: Tuesday, April 28, 2020 8:45 AM
To: 'Hank Bongers' <HBongers@meatinstitute.org>
Subject: Data Availability - if Interested

OSHA is now listing data specific to enforcement activities and complaints on our public website – we have been receiving a tremendous number of FOIA requests particularly involving OSHA activities during the pandemic. The enforcement and whistleblower data is updated daily, but does not list employers by name.

https://www.osha.gov/news
https://www.osha.gov/enforcement/covid-19-data
https://www.whistleblowers.gov/covid-19-data

However, specific information is available under the FOIA page data, such as Region (RID), Type of Activity (Act ID: C = Complaint, R = Referral, ..). The FOIA webpage is updated weekly

RID	Act ID	Primary/Site NAICS	Receipt Date	Receipt Type	Formality	Insp ID	Addl' Code

The FOIA page data will be updated once a week; here's the link
https://www.osha.gov/foia#covid-19

On another note – attached is the working draft for the alliance. I have a meeting with my National Office folks this afternoon regarding it, but my initial concerns revolve around the fact that it does not appear to be too focused. I need to hear from you with respect to length of participation (understanding that they are anticipating a resurgence in the fall AND the fact that anything the federal government does takes time, it would need to be in place at least a year), willingness to share / provide data in some form or fashion that would allow us (NAMI and OSHA) to adjust the alliance activities to meet the needs of your members, ….

There isn't anything that would prohibit us from modifying the alliance and extending it once COVID is "tackled" (if that is possible)

Let me know

Yes. I know you do – the alliance will do nothing to undermine those, but rather "formalize" all of your efforts for your employees for the Agency and for the public. In addition, it will open up a channel for OSHA to hear directly from your members (through you) any issues/obstacles/challenges that we may aid in addressing. In addition, it will open up communications to CDC/NIOSH, as well as other federal agencies that may have an impact on the situation

What does your availability look like for tomorrow? I would like to complete our modification of the draft alliance and get it to you before we talk. I want to make sure you are comfortable with it before proceeding. Understanding the tremendous amount of communications and guidance you have already done (and continue to do) to assist your members, I want to make sure the alliance language notes how the agency can be of value in furthering those communications - even if it is simply educating us to the challenges faced by the industry so that those challenges may be considered in future guidance.

The pandemic is causing great stressors in your industry as well as across the Agency.

Perhaps she was asking you to participate on the call with Doug this afternoon.

I know you have to be working overtime – I know I am. The number of COVID confirmations in Nebraska have more than doubled in a two week period. I suspect that is the case in most states with a number of meatpacking facilities (Iowa, Kansas, Wisconsin, ..)

Let me know if there is anything I can do

IF nationally my folks cannot seem to "get it together", would you or Ms. Potts have issues with you and I forging ahead? Time is of the essence

Subject: Potential Focused Alliance Between the North American Meat Institute and OSHA

Ms. Potts,

I am writing to express OSHA's interest in exploring a focused alliance with NAMI that could address the current COVID crisis facing your members.

OSHA currently has 40 national and over 200 regional alliances with various associations and organizations. The primary purposes of these alliances are to strengthen relationships and share information in both directions. OSHA did have such an alliance with the AMI a little over 10 years ago.

I know that Hank Bongers has spoken with Kim Stille, Regional Administrator in Kansas City about this recently and has had a strong working relationship with him for a number of years. If you are interesting in further exploring such an alliance, we can arrange a call with the key OSHA staff and me to discuss what this entails and the potential benefits in more detail. We have availability Monday morning or after 3:30pm on April 27, or the afternoon of April 28th. If neither work for you, we can explore other dates/times.

Please let me know if you are interested in discussing further.

Thanks,

Doug Kalinowski, Director
Directorate of Cooperative and State Programs

News Statement

U.S. Department of Labor | April 28, 2020

Statement of Enforcement Policy by Solicitor of Labor Kate O'Scannlain and Principal Deputy Assistant Secretary for OSHA Loren Sweatt regarding Meat and Poultry Processing Facilities

WASHINGTON, DC – The U.S. Department of Labor issued the following statement from Solicitor of Labor Kate O'Scannlain and Principal Deputy Assistant Secretary for OSHA Loren Sweatt regarding Meat and Poultry Processing Facilities:

"The Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control and Prevention (CDC) recently issued joint interim guidance for meat and poultry processing workers and employers (Joint Meat Processing Guidance) in light of multiple outbreaks of COVID-19 among meat, pork, and poultry processing facility workers. It is vitally important that employers in this critical industry adhere to the Joint Meat Processing Guidance to protect their workers from the risk of COVID-19 infection. Moreover, the security of America's food supply relies on meat, pork, and poultry processing facilities continuing to operate, which they cannot do without a healthy workforce. In light of President Trump's invocation of the Defense Production Act (DPA) with respect to meat and poultry processing, OSHA and the Solicitor of Labor issue this statement to clarify the effect of the Joint Meat Processing Guidance in this circumstance.

"OSHA has issued enforcement guidance indicating the agency will use enforcement discretion for employers adhering to appropriate guidance, including the Joint Meat Processing Guidance. As stated in the Joint Meat Processing Guidance, employers should conduct worksite assessments to identify COVID-19 risks and prevention strategies and then implement them. It is important that employers seek to adhere to this Guidance. To the extent employers determine that certain measures are not feasible in the context of specific plants and circumstances, they are encouraged to document why that is the case. In the event of an investigation, OSHA will take into account good faith attempts to follow the Joint Meat Processing Guidance. OSHA does not anticipate citing employers that adhere to the Joint Meat Processing Guidance. Additionally, because of the President's invocation of the DPA, no part of the Joint Meat Processing Guidance should be construed to indicate that state and local authorities may direct a meat and poultry processing facility to close, to remain closed, or to operate in accordance with procedures other than those provided for in this Guidance.

"In addition, courts often consider compliance with OSHA standards and guidance as evidence in an employer's favor in litigation. Where a meat, pork, or poultry processing employer operating pursuant to the President's invocation of the DPA has demonstrated good faith attempts to comply with the Joint Meat Processing Guidance and is sued for alleged workplace exposures, the Department of Labor will consider a request to participate in that litigation in support of the employer's compliance program. Likewise, the Department of Labor will consider similar requests by workers if their employer has not taken steps in good faith to follow the Joint Meat Processing Guidance.

"OSHA encourages employers to contact OSHA for compliance assistance or the OSHA On-Site Consultation Program for assistance in applying the joint guidance to their worksites. Employers also may contact CDC for assistance."

Subject: Worker Safety Efforts Against Covid-19

Hi All,
Here is a list of NAMI member worker safety efforts being conducted to prevent the spread of covid-19. It is not an all-inclusive list but it may give additional ideas for your employee safety efforts.
Stay safe,

Hank Bongers, CSP
Director Worker Safety
North American Meat Institute
hbongers@meatinstitute.org
(608) 208-5783

Meat and Poultry Industry Worker Safety Efforts Against COVID-19

1. Temperature testing prior to entering the facility, sometimes with hands free thermometers or thermal imaging.
2. Asking workers COVID-19 exposure assessment questions prior to entering the facility.
3. Sanitation of areas away from food production. (food production areas are required by law to be sanitized routinely). These additional areas could include breakrooms, lunch rooms, locker rooms etc.

4. Modify facilities with the addition of tents to provide more space to socially distance during breaks.
5. Slowing production lines requiring fewer employees on the line allowing them to socially distance.
6. Staggering shifts requiring less employees in the facility at any one time.
7. Staggering breaks and lunches.
8. Providing facemasks and face shields to all employees.
9. Erecting shields or barriers between employees on the production line and on cafeteria/break tables.
10. Educate employees on social distancing at home and in the community for example: no carpooling, no large gatherings.
11. Hiring dedicated staff to continuously clean facilities, including common areas beyond the production floor.
12. Removing vulnerable populations from facilities, offering full pay and benefits.
13. Requiring sick employees to stay home from work
14. Waiving short-term disability waiting periods.
15. Providing free 100% preventative care to all employees.
16. Offering free online health services that allow for virtual doctor visits at no cost.
17. Providing paid sick leave.
18. Restricting access to facilities and not allowing visitors.
19. Having CDC, OSHA, EPA, FSIS, FDA guidelines and policies on hand.
20. Ensuring detergents and sanitizers used are effective at killing the Coronavirus.
21. Adjusting traffic patterns in hallways and in workflows to aid in social distancing.
22. Conducting mid-shift temperature checks.

Subject: List for Julie Anna

Hello gang,
Julie Anna wants to have a comprehensive list of our members' efforts to protect

employees from the virus.
Samantha created a database of some of this information, but it was more toward what the companies were doing to support employees like bonuses etc.
Over the past several weeks I have assembled a list of basic efforts. I am hoping you all can help me add to it and flesh it out. This is meant to be a list of examples. I will put the ones that are most common at the top of the list, and then we can add more unique efforts as well. The list doesn't have to be detailed, just comprehensive.

Also important, if there are government requirements that are new that I am not aware of, please include.

Edit away! Thanks!

Subject: Trump to invoke Defense Production Act to keep meat-processing plants open amid fears of supply shortage | Fox News
Date: Tuesday, April 28, 2020 3:33:00 PM

I will reach out to you after my 2:30pm call.

Though I fear you may be overwhelmed with activity. Based on my data and the recent news (see below) I suspect we need to move very quickly on any alliance

President Trump plans to sign an executive order to ensure meat processing plants stay open during the coronavirus pandemic.

https://fxn.ws/3aK3qPN

COVID confirmation increases experienced in Region 7 exclusively since yesterday.

- MO & KS – Approx. 300 case increase
- NE – Approx. 600 case increase
- IA – Approx. 800 case increase

Distilling the increases down to the county level, I believe the increases in NE and IA can be attributed to a great extent to meatpacking

Supply	Criticality
ITEM	Criticality I
Hairnets	
Hand Sanitizer	
Disposable aprons	
Thermometers	
Sanitizers	
Disinfectant Wipes	
N-95 Respirators	
Nitrile Gloves	
Alcohol	
CO2	

Notes
days. We are developing alternatives if condition persists
Item is become tight with all suppliers to us
We do have some supply but not able to re-order normal quantities. Could be critical in 20-30 days.
lead time We are temp checking employees coming back from call ins for sickness but would not be able to
nothing that affects proper cleaning. Not a critical issue for us at this time.
Unable to source disinfectant wipes at this time. Using alternative means
temps and interacting with employees. We would don't be able to outfit employees in correct PPE if 100% temp
Have some inventory but unable to reorder
Unable to find liquid alcohol to sanitize tools and quality testing equipment.
issue in a few days.

MINNESOTA

COVID-19 Health and Safety Guidelines for the Meatpacking Industry

In order to minimize the risk from COVID-19 in the workplace, take the following steps:

Employee and visitor screening

- Conduct screening each time employees or visitors enter the facility. Use the following verbal screening for all persons:
- Have you had any of the following symptoms since your last day at work or the last time you were here? Please answer "Yes" or "No" to each question:
    - A new fever (100 F or higher), or feeling feverish?
    - A new cough?
    - Shortness of breath?
    - A new sore throat?
    - New muscle aches?
- Conduct temperature screening if it can be done with proper social distancing and hygiene.
- If a worker answers "Yes" to **any** of the screening questions **or** has an oral or aural temperature **above 99.5°** confirmed with oral or aural thermometer, the worker should be further evaluated by a plant occupational health nurse, who can determine if the employee can go home to recover, or should report to healthcare. In addition, they can confirm that isolation is feasible in the home environment and can request assistance from the local public health department for housing and any needed services.

Cleaning and disinfection

- Fully clean and disinfect work area equipment and common areas at least daily, and at every shift change. Use Environmental Protection Agency (EPA) registered disinfectants to sanitize surfaces.
- Increase staffing for cleaning and disinfecting necessary to increase frequency of cleaning and disinfection throughout the facility including break areas, lunch rooms and bathrooms
- If a worker becomes ill at work, their work area must be cleaned and disinfected immediately before another worker may be assigned to their work area.
- Check that you are following label directions and observing contact times to ensure cleaning and disinfection is effective.
- Pay special attention to high touch areas such as stair railings, tools, guards, doorknobs, computers, etc.
- CDC has issued guidance: Cleaning and Disinfecting Your Facility, www.cdc.gov/coronavirus/2019-ncov/prepare/disinfecting-building-facility.html.
- Ensure the facility is adequately ventilated and use air filters in systems where this is feasible.

Distancing

- Implement distancing guidelines in the facility.
- Implement operational changes that allow for workers' physical distancing of 6 feet required by CDC guidelines and to effectively use personal protective equipment, including mask and face shields.
- Install partitions of plexiglass or stretched plastic on a frame of nonporous, smooth material to provide barrier protection between workers where physical distancing of 6 feet cannot be consistently maintained.
- Designate one-way entrances and exits in and out of the facility to support 6-foot physical distancing for workers.
- Designate an area for isolating workers who show symptoms of COVID-19 infection, such as a wellness area, isolated first aid station or other area where access can be restricted.
- Mark out 6-foot distances or circles for workers to stand in while they wait to punch in, to conduct health assessments, to perform handwashing, waiting for transportation and in other areas where workers would normally congregate.
- Mark out a 6-foot line in front of desks used by staff.
- Ensure 6-foot distances between chairs and people during meetings.
- Designated staff to monitor and instruct workers about compliance with distancing protocols and hygiene requirements.
- Routinely inspect, maintain, clean and disinfect separation barriers and other safeguards.

Production, work-shift schedules and work-break schedules

- Adjust line speeds so workers can maintain distancing.
- Stagger work-shift schedules to prevent congregating in changing rooms, entrance areas, transport areas, health screening areas, timeclock areas.
- Revise break times to prevent congregating in cafeterias and breakrooms.
- Designate additional areas for breaks and meals.

Personal protective equipment (PPE) and facial coverings

- Require that all workers routinely wear cotton face masks, face coverings or disposable masks along with the standard PPE that is needed.
- Limit the use of filtering facepiece respirators by following other COVID-19 exposure control strategies and use of other facial coverings.
- Required PPE, along with training, is to be provided and paid for by the employer.

Personal hygiene

- Require and allow workers sufficient time to wash their hands frequently, including arrival and departure from workplace, before and after using the restroom, before eating and drinking and after touching surfaces that may be contaminated.
- Have handwashing facilities easily available that can be accessed without workers congregating in groups.
- Maintain ample supplies of soap and hand towels for handwashing.

- Provide additional (portable) handwashing stations, where needed.
- Provide work areas with hand sanitizer and sanitizer wipes.
- Require cough and sneeze etiquette.

Communication

- Communicate with workers about actions being taken to prevent COVID-19 exposure through routine meetings, postings, including electronic postings, the company website and start-of-day reminders.
- Institute a process for workers to report COVID-19 symptoms and other hazards in the workplace.
- Remind workers not to come to work if they are having symptoms of COVID-19 and fully inform and allow workers to use sick leave and other benefits if they are ill.
- Provide information in languages understood by workers and prominently post instructions and reminders about illness symptoms, handwashing and hygiene etiquette and to report if they are feeling ill.

Orientation of COVID-19 Business Plan

- Provide an orientation for workers about the company's required COVID-19 Business Plan and the measures taken to minimize exposure to COVID-19, including changes to production, maintenance, human resources and worker safety.
- Include information about the COVID-19 virus, such as illness symptoms, methods of transmission, proper hand hygiene, respiratory etiquette and other safeguards to prevent exposure.
- Managers and supervisors will monitor the effectiveness of the COVID-19 Business Plan.

Business travel

- Restrict or suspend business travel.
- Use virtual platforms for meetings when possible.

Working remotely

- Allow workers to work remotely if they are able to perform their work.
- Limit workers in business offices to only those deemed critical to facility operations.

Visitor restrictions

- Screen visitors prior to their arrival on site and confirm they have had no travel to destinations with widespread COVID-19 transmission within the past 14 days.
- Follow CDC risk-assessment guidance. Limit visitors to those essential to business operations and restrict where visitors can go within the facility.

Employment and human resources items

Employment status

- Clarify employment status with workers during the COVID-19 pandemic, including alternative work shifts, working from home, not working and wage changes.
- Clarify that discrimination against workers for any reason will not be tolerated and must be reported.

Incentive programs

- Modify worker incentive programs to ensure workers stay home when they are sick to protect others working at the facility.
- Communicate clearly that workers will not face adverse consequences for staying home when they are sick.

Paid time off (PTO) and sick leave policies

- Allow flexibility on PTO accrual maximums. Allow workers to use PTO if they or someone in their household has symptoms of or tests positive for COVID-19.
- Relax attendance policies during the COVID-19 pandemic.
- If a doctor's note is required to be absent from work, don't require employees to have a doctor's note in advance of approving an absence.

Medical assistance

- Waive co-pays on medical appointments for COVID-19 related treatment.
- Provide access to medical professionals, including tele-medicine options, if an on-site nurse is not available.
- Waive the five-day waiting period for short-term disability benefits for workers who are sick with COVID-19.

Isolation

- Workers showing symptoms of the COVID-19 virus must be isolated from other workers.
- Human resources should help arrange for sick workers to return home.

Other support services

Offer worker assistance services to deal with added stresses and financial impacts associated with the COVID-19 pandemic.

The Packinghouse Workers Bill of Rights law, Minnesota Statutes 179.86, requires employers to provide workers a safe workplace and the equipment necessary to safely perform their work. Visible leadership that promotes a company culture of caring for workers and the community helps to reinforce a company's efforts to promote workplace safety and protect workers.

If you provide housing, ill persons must be separated from well persons

- Discuss grouping options available for the operation. Ideally, each ill person should have a private room and a dedicated bathroom. If this is not feasible and there is more than one ill worker, then ill workers may be grouped together, but separated from non-ill workers. For ill individuals, consider using a large, well-ventilated room. In areas where ill workers are staying, keep beds at least 6 feet apart, use temporary barriers between beds (such as curtains), and request that ill persons sleep head-to-toe.
- Separate ill workers with laboratory-confirmed COVID-19 infections from ill workers with suspect COVID-19.
- **Even if you don't normally provide housing, consider providing temporary housing to ill workers living in households in which self-quarantining is not possible.**
- Provide care to the worker while sick and recovering. Contact your local public health department for assistance with needed services.
- If the worker is at greater risk of developing severe illness (e.g., aged 65 years or older or with an underlying condition such as chronic lung disease, chronic heart disease, diabetes, cancer, or weakened immune system), call a healthcare provider.
- If the worker's symptoms are getting worse, call a healthcare provider.
- If the worker has trouble breathing, persistent pain or pressure in the chest, or other emergency signs, call 911.
- Follow CDC recommendations for cleaning and disinfection the home or facility.

What can you expect if a worker is laboratory-confirmed with COVID-19?

- For laboratory-confirmed COVID-19 cases, Minnesota Department of Health (MDH) will call the ill worker to interview them. They may make recommendations about high-risk contacts of the infected person to stay at home (self-quarantine) for 14 days.

When can an ill worker return to work?

- The ill person should stay at home and, if possible, have their own room and bathroom to reduce risk to other household members. They need to stay isolated at home until their symptoms have resolved and all three of these conditions are met:
  - Symptoms have improved (this can take up to 14 days) AND,
  - At least seven days have passed since symptoms first appeared AND,
  - At least three days have passed since fever has gone (without use of fever reducing medications).

What about co-workers of ill workers when there has not been a positive lab test?

- Co-workers (not part of an official MDH quarantine or a facility quarantine) can report to work as long as they are symptom-free. They will have to carefully follow the health and safety guidelines you have developed for the facility. See above discussion of health screening, temperature checks and use of masks.

AGREEMENT

ESTABLISHING AN ALLIANCE

BETWEEN

THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

U.S. DEPARTMENT OF LABOR

AND

THE NORTH AMERICAN MEAT INSTITUTE

The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) and the North American Meat Institute (NAMI) recognize the value of establishing a collaborative relationship to foster safety and health practices and programs to improve American workplaces. To that end, OSHA and NAMI hereby form an Alliance to provide NAMI's members and the public with information, guidance, and access to training resources that will help them protect workers by reducing and preventing exposure to Coronavirus 2019 (COVID-19), and understand the rights of workers and the responsibilities of employers under the Occupational Safety and Health Act.

This agreement provides a framework and objectives for the Alliance's activities. Alliance participants also agree to meet the requirements for program participation laid out in the "Fundamental Requirements for OSHA Alliance Program Participants" and the "Guidelines for OSHA's Alliance Program Participants: Alliance Products and Other Alliance Projects."

Through the Alliance, the organizations will use available injury, illness, and hazard exposure data, when appropriate, to help identify areas of emphasis for Alliance awareness, outreach, and communication activities. The Alliance will also explore and implement selected options, including but not limited to member surveys, to evaluate the Alliance and measure the impact on improving workplace safety and health. In developing this Alliance, OSHA and NAMI recognize that OSHA's State Plan and On-Site Consultation Program partners are an integral part of the OSHA national effort, and that information about the products and activities of the Alliance may be shared with these partners for the advancement of common goals.

<u>Raising Awareness: Outreach and Communication</u>

The Participants intend to work together to achieve the following objectives:

- Share information among OSHA personnel and industry safety and health professionals regarding potential exposure to COVID-19 and the challenges for exposure control in meat packing and processing facilities.

- Work together to develop and refine OSHA guidance and NAMI good practices for preventing COVID-19 transmission, and disseminate these resources (e.g., via

print and electronic media, electronic assistance tools, and OSHA and the NAMI websites) to employers and workers in the industry.

- Conduct outreach through joint forums, roundtable discussions, stakeholder meetings, webinars, or other formats on OSHA guidance and NAMI's good practices or effective approaches for preventing COVID-19 transmission in meat packing and processing facilities.

- Speak, exhibit, or appear at OSHA and NAMI conferences, local meetings, and other events.

- Encourage NAMI members and other industry stakeholders to build relationships with OSHA's Regional and Area Offices and State Plans, and to utilize OSHA's On-Site Consultation Program to improve health and safety and prevent COVID-19 transmission in meat industry workplaces.

- Share information on OSHA's National Initiatives (Emphasis Programs, Regulatory Agenda, Outreach), and opportunities to participate in initiatives and the rulemaking process.

- Share information on occupational safety and health laws and standards, including the rights and responsibilities of workers and employers.

OSHA's Alliances provide organizations an opportunity to participate in a voluntary cooperative relationship with OSHA for purposes such as raising awareness of OSHA's initiatives, outreach, communication, training, and education. These Alliances have proven to be valuable tools for both OSHA and Alliance participants. By entering into an Alliance with an organization, OSHA is not endorsing or promoting, nor does it intend to endorse or promote, any of that organization's products or services.

An implementation team made up of representatives of each organization will meet one to two times per year to discuss the responsibilities of the participants, to share information on activities, and to track results in achieving the goals of the Alliance. OSHA team members will include representatives of the Directorate of Cooperative and State Programs, the Directorate of Technical Support and Emergency Management, and any other appropriate offices. OSHA will encourage State Plan' and OSHA On-Site Consultation programs' participation on the team.

This agreement will remain in effect for two years. Either signatory may terminate it for any reason at any time, provided they give 30 days' written notice. This agreement may be modified at any time with the written concurrence of both signatories.

Signed this <date> day of <month>, 2020.

MEMORANDUM FOR: REGIONAL ADMINISTRATORS
STATE PLAN DESIGNEES

THROUGH: AMANDA EDENS
Deputy Assistant Secretary

FROM: PATRICK J. KAPUST, Acting Director
Directorate of Enforcement Programs

SUBJECT: Enforcement Guidance on Decontamination of Filtering Facepiece Respirators in Healthcare During the Coronavirus Disease 2019 (COVID-19) Pandemic

This memorandum provides interim guidance to Compliance Safety and Health Officers (CSHOs) for enforcing the Respiratory Protection standard, 29 CFR § 1910.134, with regard to the reuse of filtering facepiece respirators (FFRs) that have been decontaminated through certain methods.[1]

This guidance applies in workplaces in which workers need respirators to protect against exposure to infectious agents that could be inhaled into the respiratory system, including during care of patients with suspected or confirmed coronavirus disease 2019 (COVID-19) and other activities that could result in respiratory exposure to SARS-CoV-2 (the virus that causes COVID-19). The guidance describes decontamination methods for FFRs contaminated with pathogens, and is not intended to facilitate re-use of FFRs laden with other contaminants (e.g., FFRs overloaded with silica dust).

This memorandum further expands flexibilities outlined in OSHA's previous COVID-19 enforcement memoranda posted at www.osha.gov/enforcementmemos.[2] In light of the essential need for adequate

[1] For the purposes of this memorandum, *filtering facepiece respirators (FFRs)* means disposable filtering facepiece respirators designated as N95, N99, N100, R95, R99, R100, or P95, P99, and P100.

[2] "OSHA's previous COVID-19 enforcement memoranda" refers to: *Healthcare Respiratory Protection Annual Fit-Testing for N95 Filtering Facepieces During the COVID-19 Outbreak*; *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*; *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic;* and *Expanded Temporary Enforcement Guidance on Respiratory Protection Fit-Testing for N95 Filtering Facepieces in All Industries During the Coronavirus Disease 2019 (COVID-19) Pandemic*. *See* www.osha.gov/enforcementmemos.

supplies of respirators, this memorandum will take effect immediately and remain in effect until further notice. This guidance is intended to be time-limited to the current public health crisis. Please frequently check OSHA's webpage at www.osha.gov/coronavirus for updates.

Background

On January 31, 2020, the Secretary of Health and Human Services (HHS) declared the COVID-19 outbreak a public health emergency.[3] The President also declared a national emergency due to COVID-19.[4]

The response to the pandemic has created an increased demand for FFRs, limiting their availability for use in protecting workers in healthcare and emergency response from exposure to the virus. As a result, the President directed the Secretary of Labor to "*consider all appropriate and necessary steps to increase the availability of respirators.*"[5]

Although the Secretary, through OSHA, has allowed for enforcement flexibility around respirators—including with regard to fit-testing, the use of respirators that are beyond their manufacturer's recommended shelf life, extended use and reuse of respirators, and the use of alternative equipment certified by the National Institute for Occupational Safety and Health (NIOSH) or in accordance with standards of certain other countries and jurisdictions—the availability of FFRs remains a concern throughout the country.

In some circumstances, employers may find it necessary to decontaminate FFRs to facilitate their reuse. However, because of the potential for decontamination methods to affect respirator fit and/or performance, there are no NIOSH-approved methods for such processes. That is, decontamination voids the NIOSH certification for the respirator. Still, during periods of shortages of FFRs when other preferred alternative respirators (as described in *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the 2019 Novel Coronavirus Disease (COVID-19) Pandemic* and *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*) are not available, filtering facepiece respirator decontamination and reuse may need to be considered as a crisis capacity strategy to ensure continued availability of respiratory protection equipment.[6]

Enforcement Guidance

All employers whose employees are required to use or are permitted voluntary use of respiratory protection must continue to manage their respiratory protection programs (RPPs) in accordance with the

[3] The Secretary of Health and Human Services (HHS) declared on January 31, 2020 that the COVID-19 pandemic was a public health emergency. HHS, *Determination of Public Health Emergency*, 85 FR 7316 (February 7, 2020).
[4] Proclamation 9994 of March 13, 2020, 85 FR 15337 (March 18, 2020).
[5] Presidential Memorandum, *Memorandum on Making General Use Respirators Available*, March 11, 2020, www.whitehouse.gov/presidential-actions/memorandum-making-general-use-respirators-available/.
[6] According to guidance on decontamination and reuse of FFRs, the Centers for Disease Control and Prevention (CDC) and NIOSH do not recommend that FFRs be decontaminated and then reused as standard care. This practice would be inconsistent with their approved use, but, in times of crisis, this option may need to be considered when FFR shortages exist. *See* www.cdc.gov/coronavirus/2019-ncov/hcp/ppe-strategy/decontamination-reuse-respirators.html.

OSHA respirator standard, and should pay close attention to shortages of FFRs during the COVID-19 pandemic.[7] Paragraph (d)(1)(iii) in section 1910.134 requires employers to identify and evaluate respiratory hazards in the workplace, and paragraph (c)(1) requires employers to develop and implement written RPPs with worksite-specific procedures and to update their written programs as necessary to reflect changes in workplace conditions that affect respirator use. CSHOs should generally refer to CPL 02-00-158, *Inspection Procedures for the Respiratory Protection Standard*, 6/26/2014, for further guidance.[8]

Due to the impact on workplace conditions caused by limited supplies of FFRs, employers should reassess their engineering controls, work practices, and administrative controls to identify any changes they can make to decrease the need for respirators.

If respiratory protection must be used, and acceptable alternatives are not available for use in accordance with OSHA's previous COVID-19 enforcement memoranda, NIOSH has identified limited available research that suggests the following methods offer the most promise for decontaminating FFRs:

- Vaporous hydrogen peroxide;[9]
- Ultraviolet germicidal irradiation; and/or
- Moist heat (e.g., using water heated in an oven).

If such methods are not available, the above-referenced NIOSH-evaluated research showed the following methods could also be suitable decontamination options:

- Microwave-generated steam; and/or
- Liquid hydrogen peroxide.

Based on the above-referenced NIOSH-evaluated research, employers should not use the following methods unless objective data that sufficiently demonstrate the safety and effectiveness of such methods become available:

- Autoclaving;
- Dry heat;
- Isopropyl alcohol;
- Soap;
- Dry microwave irradiation;
- Chlorine bleach; and/or
- Disinfectant wipes, regardless of impregnation (i.e., chemical saturation); and/or
- Ethylene oxide (EtO).[10]

[7] *See also*, OSHA letter of interpretation to John Boren, *Voluntary Use of Surgical Masks*, Dec. 20, 2017, at: www.osha.gov/laws-regs/standardinterpretations/2017-12-20.
[8] www.osha.gov/enforcement/directives/cpl-02-00-158.
[9] As of the date of issuance of this memorandum, the U.S. Food and Drug Administration had issued Emergency Use Authorizations for several decontamination systems that rely on vaporous hydrogen peroxide.
[10] The recommendation against EtO in this category is based on OSHA's concern about worker (particularly those wearing decontaminated respirators) exposure to levels of EtO, including above the action level (0.5 ppm as an eight-hour time weighted average) in the OSHA standard (29 CFR § 1910.1047) for this substance—a known human carcinogen and teratogen. While EtO has been demonstrated to effectively deactivate viral pathogens on FFRs, additional information is

The NIOSH-evaluated research provides justification for each method evaluated.

Note that, according to NIOSH, only respirator manufacturers can reliably provide guidance on how to decontaminate their specific models of FFRs. In the absence of manufacturers' recommendations, third parties (e.g., respiratory protection or other industrial hygiene consultants) may also provide guidance or procedures on how to decontaminate respirators without impacting respirator performance.

Further, the effectiveness of using any of the methods mentioned in this guidance should be explored with specific filtering facepiece respirator models and with manufacturer, and, if needed, third party expert, input and support to better understand the impact on respirator performance, including filtration and fit, and structural integrity (including integrity of head straps and other parts). Employers should be able to demonstrate effectiveness of any decontamination method(s) used against the likely contaminant(s) (i.e., pathogens) of concern. Employers should also ensure that any decontamination method(s) used do not produce additional safety hazards (e.g., electrical arcs resulting from placing FFRs with metal parts into microwaves), or that workers are adequately protected from those hazards through appropriate engineering and administrative controls, safe work practices, and personal protective equipment.

OSHA will continue to consider methods for decontamination of FFRs on a case-by-case basis as objective data demonstrating the safety and effectiveness of such methods become available, and the agency will provide updated guidance, as appropriate.

The following specific enforcement guidance is provided for CSHOs inspecting workplaces where workers are using decontaminated FFRs.

All employers should:

- Make a good-faith effort to provide and ensure workers use the most appropriate respiratory protection available for the hazards against which workers need to be protected. Efforts should be consistent with flexibilities outlined in OSHA's previous COVID-19 enforcement memoranda.
- When respirators must be decontaminated to facilitate their reuse in ways consistent with OSHA's previous COVID-19 enforcement memoranda and the U.S. Centers for Disease Control and Prevention (CDC) *Strategies for Optimizing the Supply of N95 Respirators*, ensure that decontamination is accomplished according to the methods described above and detailed in CDC's *Decontamination and Reuse of Filtering Facepiece Respirators using Contingency and Crisis Capacity Strategies*.

needed about worker exposure to EtO associated with use of particular decontamination systems, including while conducting decontamination operations and while wearing particular FFRs that have been decontaminated using such methods.

- Ensure users perform a user seal check each time they don a respirator. Employers should not permit use of a respirator on which the user cannot perform a successful user seal check. *See* 29 CFR § 1910.134, Appendix B-1, *User Seal Check Procedures*.[11]
- Train employees to follow appropriate precautionary measures prior to using a decontaminated filtering facepiece respirator (FFR). *See* www.cdc.gov/coronavirus/2019-ncov/hcp/ppe-strategy/decontamination-reuse-respirators.html.
- Train employees using decontaminated respirators to understand that if the structural and functional integrity of any part of the respirator is compromised, it should not be used by that individual as respiratory protection. The inability to achieve a successful user seal check could be an indicator that the integrity of the respirator is compromised.
- Visually inspect, or ensure that workers visually inspect, the FFRs to determine if the structural and functional integrity of the respirator has been compromised. Over time or as a result of the decontamination process, components such as the straps, nose bridge, and nose foam material may degrade, which can affect the quality of the fit and seal.
- Train employees on the procedures for the sequence of donning/doffing to prevent self-contamination. *See* www.cdc.gov/niosh/npptl/pdfs/PPE-Sequence-508.pdf.
- If no manufacturer or third-party guidance or procedures are available to support the specific decontamination method(s) employed, avoid the use of decontaminated FFRs when healthcare personnel perform surgical procedures on patients infected with, or potentially infected with, SARS-CoV-2 or perform or are present for procedures expected to generate aerosols or procedures where respiratory secretions are likely to be poorly controlled (e.g., cardiopulmonary resuscitation, intubation, extubation, bronchoscopy, nebulizer therapy, sputum induction). If decontamination methods degrade FFR performance, including filtration and fit, or otherwise affect structural integrity, the decontaminated FFR may not provide the level of protection needed or expected during aerosol-generating procedures.

Citation guidance:

OSHA will, on a case-by-case basis, exercise enforcement discretion related to the reuse of FFRs that have been decontaminated using the methods recommended above when considering issuing citations under 29 CFR § 1910.134(d) and/or the equivalent respiratory protection provisions of other health standards in cases where:

- Other feasible measures, such as using partitions, restricting access, cohorting patients, or using other engineering controls, work practices, or administrative controls that reduce the need for respiratory protection, were implemented to protect employees;
- The employer has made a good faith effort to obtain other alternative FFRs, reusable elastomeric respirators, or PAPRs, including NIOSH-certified equipment or equipment that was previously NIOSH-certified but that has surpassed its manufacturer's recommended shelf life (in accordance with OSHA's April 3, 2020 memo), that is appropriate to protect workers;

[11] *User Seal Check Procedures*, at: www.osha.gov/laws-regs/ regulations/standardnumber/1910/1910.134AppB1. OSHA tutorial videos are available at: www.youtube.com/watch?v=Tzpz5fko-fg (English); www.youtube.com/watch?v=jgRKuRcTGeE (Spanish).

- The employer has monitored its supply of FFRs, prioritized their use according to CDC guidance (www.cdc.gov/coronavirus/2019-ncov/release-stockpiled-N95.html; www.cdc.gov/coronavirus/2019-ncov/hcp/respirators-strategy/index.html), and controlled the number of times a respirator is decontaminated before issuing a new one given supply level and burn rate considerations; and
- Surgical masks and eye protection (e.g., face shields, goggles) were provided as an interim measure to protect against splashes and large droplets (note: surgical masks are not respirators and do not provide protection during aerosol-generating procedures).

Where the above efforts are absent and respiratory protection use is required, or voluntary use is permitted, and an employer fails to comply with fit testing, maintenance, care, and training requirements, cite the applicable provision(s) of 29 CFR § 1910.134 as serious violations. If you have any questions regarding this policy, please contact the Directorate of Enforcement Programs at (202) 693-2190.

cc: DCSP
DTSEM
DSG

General

1. **Question: Should employees feel safe coming to work and confident in the control of potential COVID-19 spread in establishments that implement the CDC/OSHA guidance?**
   Answer: The CDC/OSHA guidance for the meat and poultry industry is written to assist establishments in completing a COVID-19 assessment and control plan. The establishment specific COVID-19 assessment and control plan is designed to reduce the potential introduction and control the potential spread of COVID-19. Establishments that have implemented the CDC/OSHA guidance should feel confident that they doing their part to keep their employees safe while continuing their critical operations. Establishments following CDC and OSHA guidance are doing all they can to keep employees safe.

Contact Tracing

1. **Question: Contact tracing is an important tool for COVID-19 investigations. In an establishment that is implementing controls like partitions, face shields, and face coverings, what can establishments expect in terms of contact tracing by local health authorities?**
   Answer: Contact tracing is a key strategy for preventing further spread of COVID-19. During the investigation, the establishment's COVID-19 assessment and control plan should be considered in determining if tracing of in-plant co-worker contacts should be conducted. If the establishment has put into place CDC and OSHA recommended controls, the risk of exposure to other establishment employees is low, potentially alleviating the need for tracing of in-plant contacts. It is likely that tracing contacts of COVID-19 positive employees will be focused on those individuals who had prolonged close contact with the employee, and have therefore had a high-risk exposure.

Testing

1. **Question: What role does testing play in meat and poultry establishments? Should establishments test a large proportion or all of their employees? Does CDC/OSHA anticipate issuing additional guidance on the topic of asymptomatic or symptomatic testing of employees?**
   Answer: CDC has released testing recommendations.[1] However, based on the severity and circumstance in specific areas of the country, establishments should be aware and in consultation with the local and state health authorities for additional recommendations. Currently, CDC does not recommend establishment-wide testing because the results are a snapshot in time and can give employees a false sense of security. Even if an employee tests negative, he or she still must follow CDC guidance to prevent future exposure to COVID-19. CDC and OSHA are constantly updating guidance on COVID-19 and there will be additional guidance provide when appropriate.

Face Coverings

1. **Question: Will there be any proposed recommendation on the construction specifications for face covers, masks? Are single layer fabric face coverings acceptable?**
   Answer: The CDC provides guidance on the fit and construction of face coverings.[2] Cloth face coverings should fit snugly but comfortably against the side of the face, be secured with ties or ear loops, include multiple layers of fabric, allow for breathing without restriction, and be able to be laundered and machine dried without damage or change to shape.

[1] https://www.cdc.gov/coronavirus/2019-ncov/hcp/clinical-criteria.html
[2] https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html

2. **<u>Question</u>: Regarding N-95 respirator masks for employees conducting the screening of personnel, does this fall under the normal OSHA standards and require a fit test? Is this OSHA standard applicable in this circumstance?**
   <u>Answer</u>: OSHA has released N-95 enforcement discretion, where appropriate. At this time annual fit tests may be delayed. However, initial fit test are still required and establishment should encouragement allow voluntary use which does not require any special training.

Social Distancing

1. **<u>Question</u>: In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE, face coverings, and physical barriers reduce the risk of spread and therefore should allow for safe operation? If it is impossible to maintain 6 feet on a line or install barriers, is the face mask and personal face shield an acceptable alternative?**
   <u>Answer</u>: Physical barriers do not replace social distancing recommendations, when feasible. When not possible to maintain 6 feet of separation between employees, the CDC and OSHA guidance is clear that other controls can and should be employed to allow safe operation. The establishment specific COVID-19 assessment and control plan should address the controls an establishment will utilize (physical barriers, face coverings, PPE, etc.). These controls should align with the CDC and OSHA guidance.

National Alliance Agreement Template

PAPERWORK REDUCTION ACT STATEMENT

OSHA's Alliance Program provides the following agreement template to assist organizations preparing an initial, national Alliance agreement. Under the Paperwork Reduction Act, a Federal agency generally cannot conduct or sponsor, and the public is generally not required to respond to, an information collection, unless it is approved by OMB and displays a valid OMB Control Number. Use of this template is voluntary. The template ensures that Alliance participants provide required information about potential Alliance activities to OSHA. OSHA estimates employer burden for the completion of this collection of information ranges from 6 to 10 hours, with an average of 8 hours. This estimate includes the time for reviewing instructions, determining goals, and developing objectives for the agreement. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to OSHAPRA@dol.gov or to OSHA's Directorate of Cooperative and State Programs, Office of Outreach Services and Alliances, Department of Labor, Room N-3662, 200 Constitution Ave., NW, Washington, DC 20210; Attn: Paperwork Reduction Act Comment. 1218-0274 (This address is for comments regarding this form only; **DO NOT SEND ANY COMPLETED TEMPLATES TO THIS OFFICE IN THIS MANNER**.)

OMB Approval # 1218-0274; Expires 02-28-2023

AGREEMENT

ESTABLISHING AN ALLIANCE

BETWEEN

THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

U.S. DEPARTMENT OF LABOR

AND

<ORGANIZATION NAME(S)>

[The opening paragraph and overall goals may be modified to reflect the specifics of the Alliance but in general should fit this model.]

The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) and <Organization Name(s)> recognize the value of establishing a collaborative relationship to foster safety and health practices and programs to improve American workplaces. To that end, OSHA and <Organization Name (s)> hereby form an Alliance to provide <Organization(s)> members and the public with information, guidance, and access to training resources that will help them protect workers by reducing and preventing exposure to <specify> hazards <and/or> addressing <specify> issues, and understand the rights of workers and the responsibilities of employers under the Occupational Safety and Health Act (OSH Act).

This agreement provides a framework and objectives for the Alliance's activities. Alliance participants also agree to meet the requirements for program participation laid out in the "Fundamental Requirements for OSHA Alliance Program Participants" and the "Guidelines for OSHA's Alliance Program Participants: Alliance Products and Other Alliance Projects."

Through the Alliance, the organizations will use available injury, illness, and hazard exposure data, when appropriate, to help identify areas of emphasis for Alliance awareness, outreach, and communication activities. The Alliance will also explore and implement selected options, including but not limited to member surveys, to evaluate the Alliance and measure the impact on improving workplace safety and health. In developing this Alliance, OSHA and <Organization Name(s)> recognize that OSHA's State Plan and On-Site Consultation Program partners are an integral part of the OSHA national effort, and that information about the products and activities of the Alliance may be shared with these partners for the advancement of common goals.

[The goals and objectives listed below are broken out by standard goal types (Raising Awareness: Outreach and Communication, and Training and Education). The goals and objectives should be customized to reflect anticipated the projects or to otherwise fit the circumstances. Delete any that do not apply.]

Raising Awareness: Outreach and Communication

The Participants intend to work together to achieve the following objective<s>:

[Following are sample objectives for this goal. Delete any that do not apply and add additional objectives consistent with anticipated activities. To the extent possible, make any applicable objectives listed below more specific by, for example, naming specific conferences to attend or the audience(s) to be reached.]

- Share information on OSHA's National Initiatives (Emphasis Programs, Regulatory Agenda, Outreach), and opportunities to participate in initiatives and the rulemaking process.

- Share information on occupational safety and health laws and standards, including the rights and responsibilities of workers and employers.

- Develop information on the recognition and prevention of workplace hazards, and communicate such information (e.g., print and electronic media, electronic assistance tools, and OSHA and the <Organization(s)> websites) to employers and workers in the industry.

- Speak, exhibit, or appear at OSHA and <Organization(s)> conferences, local meetings, or other <specify> events.

- Convene or participate in forums, roundtable discussions, or stakeholder meetings on <specify topic/hazard> to help forge innovative solutions in the workplace or to provide input on safety and health issues.

- Share information among OSHA personnel and industry safety and health professionals regarding <specify Organization(s)> good practices or effective approaches through training programs, workshops, seminars, and lectures (or any other applicable forum).

- Encourage worker participation in workplace safety and health by <specify efforts to be undertaken>.

- Collaborate with other Alliance participants on specific issues and projects on <specify issue, industry, or audience> .

- Develop and disseminate case studies on <Insert topic/hazard> and publicize their results.

- Encourage <Organization(s) chapters/worksites> to build relationships with OSHA's Regional and Area Offices to address health and safety issues, including <specify>.

Training and Education

The Participants intend to work together to achieve the following objective<s>:

[Following are sample objectives for this goal. Delete any that do not apply and add additional objectives consistent with anticipated activities. To the extent possible, make any applicable objectives listed below more specific by, for example, naming the type of course to be developed or the course content or updating the language to reflect specific projects.]

- Develop effective training and education programs for <specify audience> regarding <specify hazard(s) or issue area(s)>, and to communicate such information to constituent employers and workers.

- Deliver or arrange for the delivery of <specify> courses.

- Develop effective training and education programs for <specify audience> to promote understanding of workers' rights, including the use of the OSHA complaint process, and the responsibilities of employers and to communicate such information to workers and employers.

OSHA's Alliances provide organizations an opportunity to participate in a voluntary cooperative relationship with OSHA for purposes such as raising awareness of OSHA's initiatives, outreach, communication, training, and education. These Alliances have proven to be valuable tools for both OSHA and Alliance participants. By entering into an Alliance with an organization, OSHA is not endorsing or promoting, nor does it intend to endorse or promote, any of that organization's products or services.

An implementation team made up of representatives of each organization will meet one to two times per year to discuss the responsibilities of the participants, to share information on activities, and to track results in achieving the goals of the Alliance. OSHA team members will include representatives of the Directorate of Cooperative and State Programs [<other National Office Directorate>, (*if applicable*)] and any other appropriate offices. OSHA will encourage State Plan' and OSHA On-Site Consultation programs' participation on the team.

This agreement will remain in effect for <specify: two years/other period not to exceed two years>. <specify: Either/Any> signatory may terminate it for any reason at any time, provided they give 30 days' written notice. This agreement may be modified at any time with the written concurrence of <specify: both/all> signatories.

Signed this <date> day of <month>, <year>.

Question	Answer
Control Strategies Questions	
Will acknowledging the Hierarchy of Control sufficiently serve as a Risk Assessment for CV19?	No, there is more to the Risk Assessment. All positions within the plant need to be considered within the Risk Assessment. Consult CDC's Meat and Poultry Processing Workers and Employers guidance: www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html
In the CDC/OSHA Interim Guidance, it refers to physical control statements such as "ensure adequate ventilation" "place handwashing... in multiple locations," "add additional clock-in stations" and "have employees walk in single file." Is there a plan to provide guidance or standards a company can use to evaluate their current situation, e.g. what is adequate, how many per employee or sq. ft. etc.	Ventilation: ASHRAE Position Document on Infectious Aerosols www.ashrae.org/file library/about/position documents/pd_infectiousaerosols_2020.pdf Distancing Measures: The goal is to prevent crowding and to maintain a distance of 6' where possible. To achieve this, companies are encouraged to evaluate where bottlenecks are prone to occur – handwashing stations and time-clocks, for example – and plan to control distance between employees with options that work for their situation. This could mean going to a touchless clock-in/clock-out (via phone app, or proximity sensor), or creating and enforcing work practice controls such as how far apart employees line up (use tape on wall or floor as guide). Additionally, as it will likely take additional time for employees to complete the necessary steps, this should be considered as decisions are made regarding number of entry or hand-washing points. These guidance statements represent the examples and suggestions of current and best practice control strategies for this industry. They are not an OSHA standard, but it should be stated that OSHA expects employers to follow the hierarchy of controls when it comes to controlling hazards, and that effort should be made to document the strategies considered or attempted.
If physical barriers such Plexiglas/vinyl curtains are sufficient as separation devices for workers who are working within 6' of each other, does a face mask AND face shield count the same as a physical barrier in terms of contact tracing should someone present as COVID-19 positive?	There is a free online training for how to conduct contact tracing: https://learn.astho.org/ This is an "it depends" situation. You will have to evaluate if there is uniform compliance with the use of masks and face shields. During the webinar, there was discussion regarding ad hoc conversations between various state officials that if masks are mandatory and screens/dividers or face shields are in place, that is the same as 6' distancing so "close contact" definition does not apply to workers. This was overall agreed with (in

	principle). It's not explicitly stated, but is likely accurate in interpretation. However, if these employees have close contact on their way to and from the workstations or at other points during the day, it would be need to be reevaluated. (Such as the commute to and from work, during break times, etc.)
Are all employers "required" to use CDC guidelines?	Please refer to the following press release: https://www.dol.gov/newsroom/releases/osha/osha20200428-1 Also these are the existing standards that apply to the current pandemic situation: https://www.osha.gov/SLTC/covid-19/standards.html
Does this new guidance supersede the "Interim Guidance for Implementing Safety Practices for Critical Infrastructure Workers Who May Have Had Exposure to a Person with Suspected or Confirmed COVID-19" or is it meant to be used in tandem? If we can still use this guidance in tandem, can you define the criteria for "suspected" COVID-19 for the purposes of following the steps outlined in the above mentioned guidance.	They are meant to be used in tandem. Please refer to: https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html for the "Interim Guidance for Implementing Safety Practices for Critical Infrastructure Workers Who May Have Had Exposure to a Person with Suspected or Confirmed COVID-19". CDC advises that critical infrastructure workers may be permitted to continue work following potential exposure to COVID-19, provided they remain asymptomatic and additional precautions are implemented to protect them and the community. A potential exposure means being a household contact or having close contact within 6 feet of an individual with confirmed or suspected COVID-19 [aka co-worker]. The timeframe for having contact with an individual includes the period of time of 48 hours before the individual became symptomatic.
Transmission and PPE Questions	
The spread of Covid-19 is through large mass droplets and through the action of droplet spread. The masks that are suggested are to stop this mass droplet spread by collecting on the [inside of the] mask from the wearer. Can you elaborate on this once again? The methods that are currently believed to cause disease transmission.	From CDC's FAQ on COVID-19: www.cdc.gov/coronavirus/2019-ncov/faq.html#How-COVID-19-Spreads The virus that causes COVID-19 is thought to spread mainly from person to person, mainly through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs. Spread is more likely when people are in close contact with one another (within about 6 feet).

	COVID-19 seems to be spreading easily and sustainably in the community ("community spread") in many affected geographic areas. Community spread means people have been infected with the virus in an area, including some who are not sure how or where they became infected. Additionally, there is evidence of viral material surviving on surfaces (and for varying durations of time) – although transmissibility/infectiousness is still under investigation. This is why best practice is to clean/disinfect all routinely touched surfaces with regularity in order to reduce the possibility of contact transmission.
Should we (poultry/meat-packing industry) require the use of face mask and face shield?	First, be clear on the difference between a face covering (such as a cloth face covering), a surgical face mask, and a respirator https://www.cdc.gov/niosh/npptl/pdfs/UnderstandDifferenceInfographic-508.pdf. Currently (5/4/2020), the CDC recommends wearing cloth face coverings as a protective measure in addition to social distancing (i.e., staying at least 6 feet away from others). Cloth face coverings may be especially important when social distancing is not possible or feasible based on working conditions. A cloth face covering may reduce the amount of large respiratory droplets that a person spreads when talking, sneezing, or coughing. Cloth face coverings may prevent people who do not know they have the virus that causes COVID-19 from spreading it to others. Cloth face coverings are intended to protect other people from the wearer's aerosolized droplets (sneezes, coughs, speech). Cloth face coverings are not traditional PPE, nor are they appropriate substitutes for PPE such as respirators (like N95 respirators) or medical facemasks (like surgical masks) in workplaces where respirators or facemasks are recommended or required to protect the wearer. A faceshield can be used to prevent the contamination of the face covering, disposable facemask, or disposable respirator during work on the line or when closer than 6' to another employee. While wearing cloth face coverings is a public health measure intended to reduce the spread of COVID-19 in communities, it may not be practical for workers to wear a single cloth face covering for the full duration of a work shift (e.g., eight or more hours) in a meat or poultry processing facility if they

	become wet, soiled, or otherwise visibly contaminated during the work shift. If cloth face coverings are worn in these facilities, employers should provide readily available clean cloth face coverings (or disposable facemask options) for workers to use when the coverings become wet, soiled, or otherwise visibly contaminated. Employers who determine that cloth face coverings should be worn in the workplace, including to comply with state or local requirements for their use, should ensure the cloth face coverings: • fit over the nose and mouth and fit snugly but comfortably against the side of the face; • are secured with ties or ear loops; • include multiple layers of fabric; • allow for breathing without restriction; • can be laundered using the warmest appropriate water setting and machine dried daily after the shift, without damage or change to shape (a clean cloth face covering should be used each day); • are not used if they become wet or contaminated; • are replaced with clean replacements, provided by employer, as needed. • are handled as little as possible to prevent transferring infectious materials to the cloth; and • are not worn with or instead of respiratory protection when respirators are needed.
If facial coverings are not PPE, is the employer responsible for providing it to the employees at no cost?	At this point you need to determine what it is you are asking employees to do, how burdensome it is, how work activity/performance is affected, and what you want in regards to compliance. Best practice would be to provide adequate face coverings (and replacements) for all affected employees if you are unable to achieve the recommended compliance via engineering controls per the Hierarchy of Controls. As part of their hazard assessments, employers must always consider whether PPE is necessary to protect workers.
What recommendations do you have for employers if the face mask presents a direct threat due to the health of that employee or an entanglement hazard?	Use the hierarchy of controls to provide a higher level or protection to the employee if the use of a facemask creates a greater risk. For certain employees, if wearing the facemask provides a health risk (i.e. the employee is claustrophobic, or if the employee is working in a hot environment), then the employer must find a suitable protective alternative. Additionally, the Interim Guidance for Meat-packing and

	Poultry discusses the need to ensure that any face mask/face covering fits snugly to the face and uses ties/earloops to secure it. If the employer determines that this face mask presents a direct threat, then the employer must find a different way for the job to be completed that keeps the employee safe from these hazards.
Under the PPE section near the end of the guidance there is a list of items under "Employers should" that includes the last bullet "PPE worn at the facility should not be taken home or shared." As the surgical masks are not PPE, does this mean that it's not an issue to allow the employees to wear employer provided face coverings home? If they are clean, why can the employees not wear them home (surgical masks) if they are carpooling?	Surgical masks and cloth face coverings are not considered PPE because they do not protect the *wearer* – they are worn to protect *others* from the wearer. Typically, OSHA standards prohibit employees taking home PPE because there is a contamination risk – if there is contamination in the workplace and it gets on PPE, and the employee takes that PPE home then others may have an exposure. In this current situation, due to the recommendation that individuals who are unable to maintain a 6' distance in ANY setting (work, home, carpooling, etc.) are encouraged to use a face covering, AND that some companies have begun requiring employees to use face coverings on this basis, this could be considered attire required for the workplace. Employers need to determine what approach will work best for their employee population – whether it is providing disposable surgical masks daily, providing clean reusable face coverings daily on-site, or allowing employees to take them home for individual laundering. The challenge is that handling of a used (aka "contaminated") face covering is also a potential hazard. If employees had clean face coverings to wear home (or during carpooling), that would in this instance be considered best practice.
Has anyone tested the masks (tight) for protection against COVID-19 when comparing droplet or airborne?	Assuming the question is asking if N95's – or tight-fitting respirators – are known/tested to ensure they actually provide protection, the following applies: tight-fitting masks (aka "respirators") and their filtration materials are tested via rigorous protocols, https://www.cdc.gov/niosh/npptl/stps/respirator_testing.html, and then provided the employee passes a "fit-test" [via OSHA 1910.134(f)], then the wearer would have documented protection against COVID-19. This is why healthcare workers are deemed most in need of tight-fitting masks ("respirators) because their risk is highest. A study of data from New York by Arizona State University researchers suggests that immediate "broad adoption," by 80% of New Yorkers, in using "moderately" effective face masks could have a significant impact on the spread of disease, along with other social distancing methods.

	According to the researchers, the data suggests that the use of masks could reduce the number of deaths due to the virus by between 17 percent and 45 percent in the next two months. The full study is here: https://arxiv.org/pdf/2004.03251.pdf
HR/Recordkeeping Questions	
Can you give guidance on Covid-19 whether to record or not record on the OSHA 300 log?	https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19
What do you do for vendors or contractors that may need to enter the site?	Best practice to hold them to the same standards: aka temperature/symptom screening, social distance requirements, etc.
If an employer were checking employees for fever when entering the workplace, is there any concern about legal privacy issues?	See EEOC guidance: https://www.eeoc.gov/eeoc/newsroom/wysk/wysk_ada_rehabilitaion_act_coronavirus.cfm https://www.fisherphillips.com/faqs From Fisherphillips FAQs: It is important to remember that you must maintain all information about employee illness as a confidential medical record in compliance with the ADA. Note: If your company does business in the State of California (e.g., if you have one or more locations, employees, customers, suppliers, etc. in the state), and your business is subject to the California Consumer Privacy Act (CCPA), then you must provide employees a CCPA-compliant notice prior to or at the same time as your collection of this information. For advice on CCPA compliance, please reach out to any member of our Data Security and Workplace Privacy Practice Group at any of California offices. Additionally: Employers should evaluate the burdens and benefits of recording workers' temperatures or asking them to complete written questionnaires. These types of written products become records that must be retained for the duration of the workers' employment plus 30 years. See OSHA's Access to Employee Exposure and Medical Records standard: 29 CFR 1910.1020)

General

1. Given community spread occurring across the country, if the CDC/OSHA guidance is followed by the meat and poultry industry, should plants be safe to operate?
2. Should employees feel safe coming to work and confident in the control of potential COVID-19 spread in establishments that implement the CDC/OSHA guidance?

Contact Tracing

1. Contact tracing is an important tool for COVID-19 investigations. Is CDC considering amending guidance for conducting contact tracing specifically in meat and poultry plants that are implementing the guidance? In an establishment that is implementing controls like plexiglass partitions, vinyl curtains, face shields and face coverings, some potential exposure events should be considered low-risk while others present a high-risk of transmission exposure. Can CDC/OSHA strengthen the language around cloth/disposable/surgical masks used with face shields and other engineering controls as adequate exposure controls or barriers while conducting contact tracing for a positive case in the context of risk of spread?

Testing

1. What role does testing play in meat and poultry establishments? Should establishments, urged by the state and local health departments, test a large proportion or all of their employees?
2. Does CDC/OSHA anticipate issuing additional guidance on the topic of asymptomatic or symptomatic testing of employees?
3. Because COVID-19 is a recordable illness, and notwithstanding circumstances involving multiple positives at a single plant location, will OSHA enforce 29 CFR §1904 if the employer has reason to believe that community spread is at least a factor in explaining a positive test for COVID-19 by an employee?
4. Whole Plant – What is the threshold/criteria/best practice for whole plant testing? What tests should be used for this? PCR and/or antibody? What is required for follow up and frequency?

Return to Work

1. Regarding critical infrastructure workers who have had an exposure but remain asymptomatic; when they return to work, can you please explain the “regular monitoring” practice further? It says the employee should self-monitor under the supervision of their employer’s occupational health program. Should the supervision come from a physician, and if so when/how often (initially and then again 14 days later)?

Face Coverings

1. Will there be any proposed recommendation on the construction specifications for face covers, masks? Are single layer fabric face coverings acceptable? It would be helpful to simply have a minimum specification that the industry can procure.
2. Regarding N-95 respirator masks for employees conducting the screening of personnel, does this fall under the normal OSHA standards and require a fit test? Some plants typically send people to a medical clinic for this testing. However, under the pandemic, this would seem to put an unnecessary additional burden on the healthcare system and even increase employees’ potential exposure to COVID-19. Is this OSHA standard applicable in this circumstance? Is OSHA considering any temporary waivers for this? Is there any additional training or support from OSHA or CDC to assist with fit testing compliance? At some point should N-95 masks become more widely available and we issue to all employees, would fit tests be required for all employees?

3. There is a lot of information available about face coverings (disposable masks, homemade mask, etc.) We are having fogging issues with safety glasses while wearing face coverings. Are face shields an approved alternative as another form of face coverings? Can we use face shields rather than mask?
4. Because of Covid-19 and Covid-19 only – if a food manufacturer requires employees to wear cloth face coverings as PPE, is the company required to comply with OSHA's Respiratory Protection standard (29 CFR 1910.134)? Which in turn results in workers being medically evaluated by a physician or other licensed health care professional using OSHA's mandatory medical questionnaire before an employee can wear company provided PPE? Companies are subject to large fines if they don't comply
5. If a food manufacturer requires employees to wear cloth face covering as PPE and the company runs out of masks due to supply chain interruptions, does the facility need to shut down until cloth face coverings are available? Would homemade masks be an acceptable alternative?
6. Will the guidance be revised to include specific requirements for the types of face masks to be worn? What actions will be taken to facilitate getting PPE to industry? Are there recommendations for face masks for specific jobs like sanitation, where chemicals are handled and the mask could increase risk of other injury?

Social distancing

1. In many establishments, it is very difficult or impossible for employees to maintain a distance of 6 feet apart at all times. Does the use of PPE, face coverings, and physical barriers reduce the risk of spread and therefore should allow for safe operation?
2. If it is impossible to maintain 6 feet on a line or install barriers, is the face mask and personal face shield an acceptable alternative for safe operation?
3. Has a determination been made that dividers are best practice and preferred over mandatory face shields and face masks in all positions? Sometimes partitions can create issue and may contradict guidance for air flow, etc. Define the risk assessment rational of installing barriers when feasible in how or who can make that determination? Can properly worn face mask, safety grasses and a face shield be used in place of physical barriers between employees?
4. Can employee be working on a line back to back and not be six feet apart or have a face shield over their face? They are wearing a bonnet that covers their face and a face mask. The only area open is around their eyes.

Misc.

1. OSHA guidelines require us to consider "workers' individual risk factors (e.g. older age; presence of chronic medical conditions, including immunocompromising conditions, pregnancy) — how are we to implement this with existing ADA, HIPAA and other EEOC/DOL non-discrimination regulations?
2. Is there a number of sinks and sanitizer stations that should be followed?

Safety glasses anti-fogging recommendations from members:

- We have been using medical paper tape to tape the mask to the bridge of the nose and top of cheekbones. It's not perfect, but we've had some success.
  https://www.nytimes.com/article/glasses-fog-wearing-mask-coronavirus.html
  https://www.newsweek.com/how-keep-glasses-fogging-wearing-face-mask-coronavirus-covid-19-1498933

- Wipe lenses with hand soap, rinse under running water and then air dry. Leaves a slight soap film which helps Fogging.
  Also look at dive shops for anti-fogging wipes and solutions in scuba masks

- 3M S11012GAF Clear Scotchgard Anti-fog safety glasses. We've deployed several hundred of them here and the plant and they work very well. They're a little pricey, but worth the investment.

- We discussed fogging of safety glasses due to face masks in our weekly safety manager webinar on Tuesday and again this morning. For non-impact jobs, we are running a pilot program using a 9" W x 13" L clear face shield that fits underneath the hard hat instead of using safety glasses. The interior side of the face shield has an anti-fog coating and the clear plastic shield provides a barrier for the eyes. The face shield will be used in conjunction with a face mask and will allow the employee to wear the face mask properly.

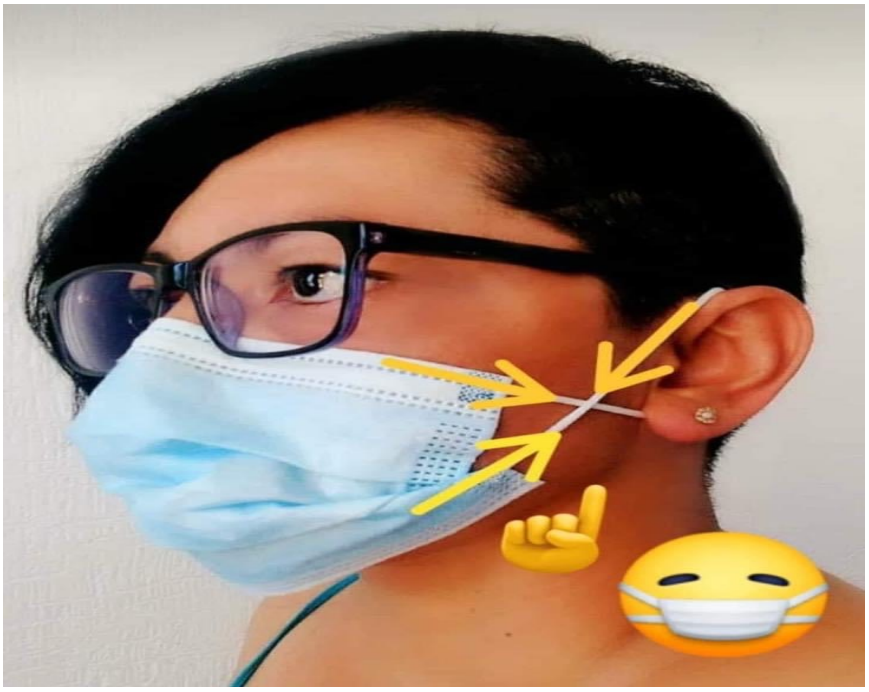
  https://www.scmp.com/lifestyle/fashion-beauty/article/3080804/how-stop-face-mask-fogging-your-glasses

- Also with the cloth masks, take one of the ear loops and turn it 1/2 rotation before putting it over the ear

- On my prescription safety glasses, I have used RainEx Anti-fog for about 30 years with great success on my 3rd shift tours and we all know the challenges on 3rd shift.

- If there is not an anti-fog or other coating already on the safety glasses, it works well there also. However, if the safety glasses already have any coating on them what so ever, it will ruin (cracked eggshell) the safety glasses. On those without any coating, it works great!

- We have gone to face shields and allowed them to be used rather than safety glasses…..it's of course based on risk and there are exceptions.



- There are numerous anti-fog lens cleaners out there as well. One of my favorites is "cat crap"….yes that's the name.

- We are ordering Iron Wear anti fogging glasses
- One thing that works decent is to apply dawn dish soap. It is not a cure but does help.

- Untested here, however am hearing that “shaving cream” applied then wiped off- prevents fogging. We are currently using the lens cleaning towelettes that have anti-fog ingredients- MCR Safety manufacturer. www.mcrsafety.com

- We use Iron-Fog 3085-B-C/A safety glasses.

- We found that if the user follows the instructions on the back of the box “Wash with mild soap and warm water. Rinse clean and remove excess water with soft tissue or cloth. Do not use ammonia, alkaline cleaners, solvents or abrasive compounds.”, and doesn’t use the lens cleaning wipes or solutions, there is minimal fogging.

You must put your face mask crosswise, this will prevent fogging in glasses
Coloca tu mascarilla de forma cruzada ara evitar que se empañe los lentes

OSHA Production
01/29/2021

From: Newsome, Shawna - OSEC, Washington, DC
To: Sweatt, Loren E. - OSHA; Pearce, Krisann - OSHA
Subject: Ag Approps language
Date: Wednesday, July 8, 2020 11:46:55 AM

SEC. 751. (a) The Secretary of Agriculture, acting through the Administrator of the Food Safety and Inspection Service, shall—
(1) revoke any line speed waivers issued to a processor subject to the Federal Meat Inspection Act (21 U.S.C. 601 et seq.) or the Poultry Products Inspection Act (21 U.S.C. 451 et seq.) during the period beginning on or after the first day of the COVID-19 emergency period and ending on the date of the enactment of this Act; and
(2) subject to subsection (b), not issue any such waivers on or after such date of enactment, for the duration of the COVID-19 emergency period.
(b) Notwithstanding subsection (a), the Secretary may issue a line speed waiver to a processor referred to in such subsection, if such processor—
(1) agrees to an inspection for such purpose conducted by the Assistant Secretary of Labor for Occupational Safety and Health; and
(2) the Assistant Secretary certifies to the Secretary of Agriculture that any increases in line speed at such processor's facilities would not have an adverse impact on worker safety.
(c) For purposes of this section, the term ''COVID-19 emergency period'' has the meaning given the term ''emergency period'' in section 1135(g)(1)(B) of the Social Security Act (42 U.S.C. 1320b–5(g)(1)(B)).

Good evening,

I think (b) (5) [redacted]. Attached are the clean documents for review. I have highlighted the last couple of things outstanding.

Talk to you all tomorrow!

Shawna Newsome
Chief of Staff
Office of Food Safety, USDA
1400 Independence Ave., SW
Washington, D.C. 20250
Cell: (202) 684-5522

Shawna,
Attached, please find OSHA's version of the attestation. This has not undergone task force clearance. It is also not in track changes. (b) (5) [redacted] Please let us know if you have comments, question, or concerns. And, how we can assist in the your order going forward.

I look forward to continuing to work with you on worker safety in meatpacking.

V/R
Loren

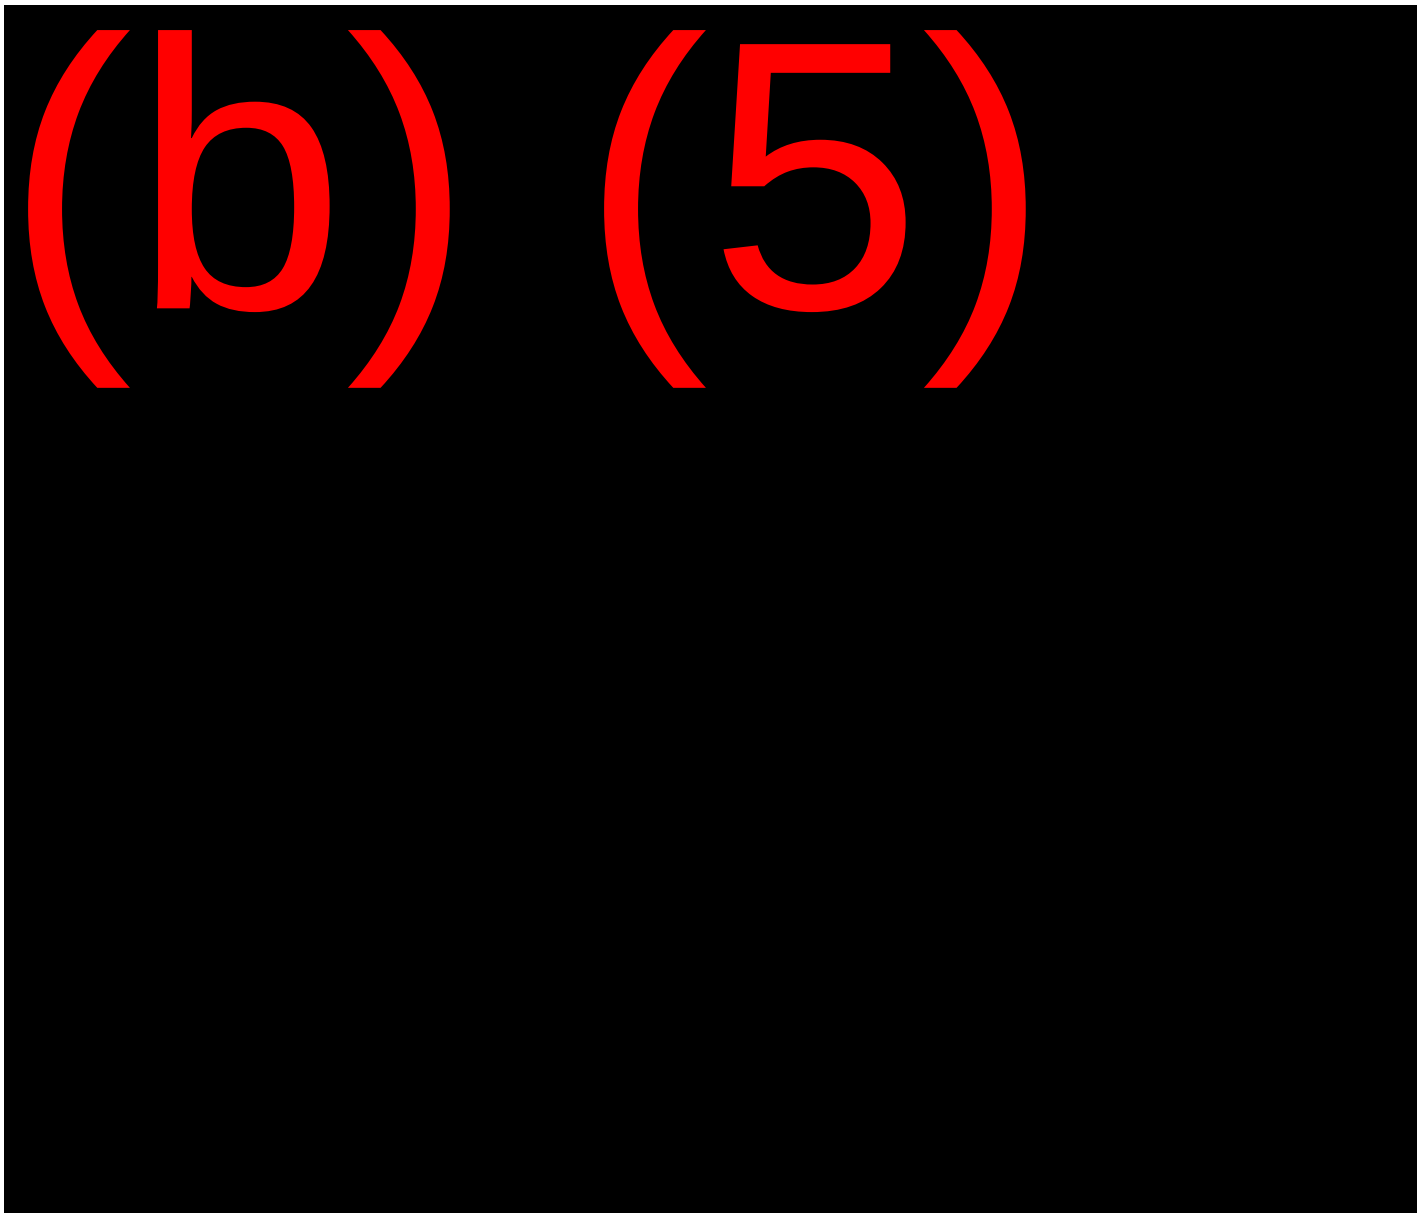
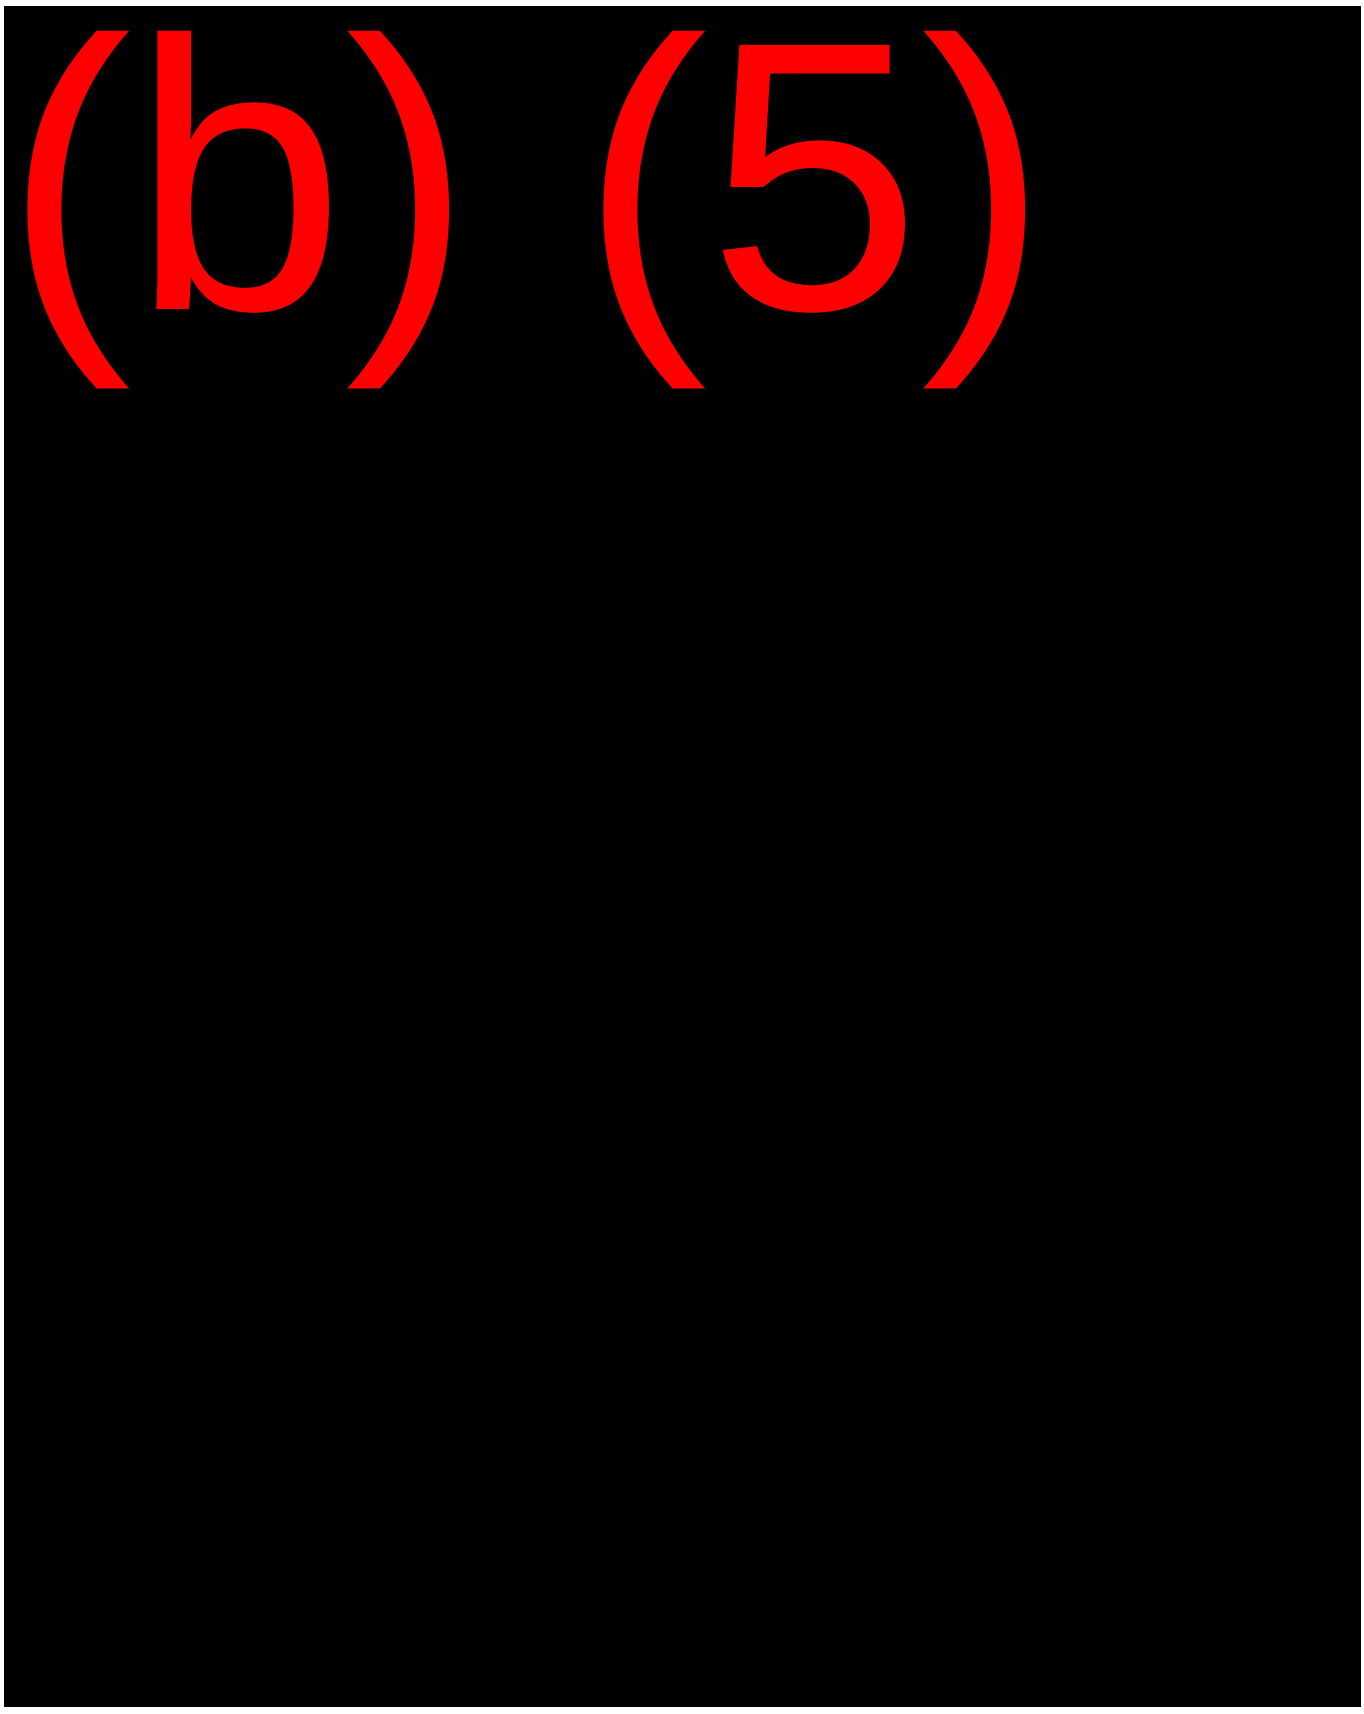
DRAFT/PRE-DECISIONAL



Hi Loren,

Thanks for hopping on the phone. Here are the documents I referenced. We would welcome your input and would hope that someone from OSHA could serve as part of the leadership coordination team. If you could provide initial feedback within 24 hours, that would be helpful.



Thanks!

	stephen.eck@usda.gov
Employee Numbers	
Total number of employees:	81,940
Number of federal employees working overseas:	999 (most temporary)

CY 2019 Fatalities and Accidents	
Total number of fatalities in CY 2019:	1
Total number of in-patient hospitalizations in CY 2019:	24
Total number of full or partial amputations in CY 2019:	1
Total number of events involving the loss of an eye in CY 2019:	0
Report Certification	

SAFETY AND HEALTH MANAGEMENT SYSTEM EVALUATION

Please rate your agency's OSH performance using the 7 attributes below. For each attribute, select one of the following responses from the dropdown menu provided.

- The attribute does not exist.
- The attribute needs major improvements.
- The attribute needs minor improvements.
- The attribute is highly effective.
- The attribute is not applicable.

Additional information on how to rate each attribute is included in "**Evaluation Guide**" tab.

Attribute 1. Effective safety and health self-inspections are performed regularly.	Attribute is highly effective.

How often are self-inspections conducted? Select all that apply.

☑ Daily ☑ Monthly ☑ Yearly
☑ Weekly ☑ Quarterly ☑ Other

High risk areas as needed

Were all workplaces inspected in CY 2019?	NO

Who conducts these inspections? Select all that apply.

☑ Supervisors and employees trained to recognize hazards
☑ Safety and health staff
☑ Other

Region and Station safety managers evaluate sub-uniys within their purview and CDSOs.

Are checklists used when conducting these inspections?	YES
Was each identified hazard corrected immediately, or scheduled for correction in your agency's action plan for safety and health?	YES
How many inspections were announced?	***Approximately 90%***
How many inspections were unannounced?	***Varies with units .***
Are these inspections analyzed over time to see if patterns of recurring hazards or noncompliance exist?	YES

Please provide examples in the narrative section of the report, under Injury and Illness Prevention Initiatives.

Attribute 2. Effective safety and health rules and safe work practices are in place.	Attribute is highly effective.

How does your agency communicate these rules and practices. Please select all that apply.

☑ Written manuals or memorandums ☑ Agency websites and/or posters
☑ Verbal instruction or direction ☑ Other

Other - please describe:

How can employees report hazards? Please select all that apply.

☑ Electronic reporting system ☑ Inform safety personnel verbally or by email
☑ Inform manager verbally or by email ☑ Other

Other - please describe:

Unit safety meetings

CY 2019 Occupational Safety and Health Annual Report

Is anonymous reporting allowed?	YES
If yes, approximately what percentage of your reports were anonymous?	***Unknown***

Attribute 3. Hazard incidence data are effectively analyzed. — Attribute needs minor improvement.

Please identify the information included in your agency's incidence data. Select all that apply.

- ☑ Number and type of near misses
- ☑ Incidents that did not cause personal injury
- ☑ Failure to use specified PPE
- ☑ Number of OSHA non-compliances
- ☑ Number of workers without required training
- ☑ Other
- ☑ Number and types of uncontrolled hazards identified (e.g. missing machine guards, chemical releases, etc.)

- ☑ Identifying injury and illness types
- ☑ Detecting trends and patterns
- ☑ Determining distributions
- ☑ Assisting in hazard detection
- ☑ Setting priorities for hazard correction
- ☐ Other

Other - please describe:

Do all employees have access to the data analysis results?	YES

Attribute 4. A review of the overall safety and health management system is conducted at least annually. — Attribute needs minor improvement.

Please indicate what is included in your agency's review/audit. Select all that apply.

- ☑ Leading Indicators (If checked, please select all that apply)
  - ☑ Review of OSH training records
  - ☑ Tracking of management participation in walkthroughs/inspections
  - ☑ Review of existing budget for OSH
  - ☐ Other

Other - please describe:

- ☑ Lagging Indicators (If checked, please select all that apply)
  - ☑ Review of OSHA recordable injuries/illnesses
  - ☑ Review of injury frequency and severity
  - ☑ Review of workers' compensation costs
  - ☐ Other

Other - please describe:

- ☑ Review is written
- ☑ Management is involved in review or aware of the audit results
- ☑ Review identifies accomplishments, failures and root cause(s) for failures
- ☐ Other

Other - please describe:

Attribute 5. Individuals with assigned safety and health responsibilities have the necessary knowledge, skills, and timely information to perform their duties. — Attribute needs minor improvement.

Please indicate the training your agency provides to staff with assigned safety and health responsibilities (Safety Coordinators/ Safety Committee members/ Other safety & health personnel). Select all that apply.

- ☑ Agency provided classroom training
- ☑ Agency provided online training
- ☑ OSHA FEDWEEK
- ☐ OSHA Education Center training
- ☑ OSHA Training Institute classroom courses
- ☑ National Safety Council/ ASSE/AIHA/NFPA

CY 2019 Occupational Safety and Health Annual Report

☑ OSHA online collateral duty course

☑ Other

Other - AgLearn. Collateral duty safety coordinators and safety committee members are also provided training by the full time unit safety manager.

Individuals with assigned safety and health responsibilities have the knowledge, skills, and authority to:

☑ Make and implement operational decisions relative to the assigned task, including work stoppage if necessary.

☑ Identify task-related resource needs and obtain/specify/requisition, those resources. (If checked, please select all that apply)

- ☑ Supplies, such as PPE
- ☑ Equipment
- ☑ Training
- ☑ Repairs
- ☑ Maintenance
- ☑ Housekeeping
- ☐ Other

Other - please describe:

☑ The responsible person is able to make and enforce task-related assignments to others.

☐ Other

Other - please describe:

Attribute 6. Managers allocate the resources needed to properly support the organization's safety and health management system. — Attribute needs minor improvement.

Please indicate whether the resources include the following. Select all that apply.

- ☐ Encouraging participation in Field Federal Safety and Health Councils
- ☑ Encouraging staff participation in the safety committee(s)
- ☑ Providing stipends for offsite safety and health training and meetings
- ☑ Providing necessary PPE to employees
- ☐ An OSH budget exists and is easily identified
- ☐ Other

Other - please describe:

Please indicate whether any of these policies or programs exist at your agency. Select all that apply.

- ☑ Employee surveys that include questions about reporting hazards
- ☐ An incentive program for reporting hazards
- ☑ A clear non-retaliation policy (Select all that apply)
  - ☑ Policy is provided at new employee orientation
  - ☑ Policy is posted on agency internal website
- ☐ Other

Other - please describe:

Attribute 7. There is an effective process to involve employees in safety and health issues. — Attribute is highly effective.

Please indicate how your agency solicits OSH-related employee input. Select all that apply.

- ☑ Post notices
- ☑ Email employees
- ☑ OSH meetings with employee input
- ☑ Joint Labor/Management OSH meetings
- ☑ Stop-work authority is given to employees
- ☑ Suggestion box
- ☐ Other

Other - please describe:

Date of incident:		30-Sep-19
Time of incident:		1100
Region 1, Kootenai NF		**Provide Number Impacted**
Nature of incident:	Fatality	
	Hospitalization	1
	Amputation	
	Loss of Eye	
Was incident work-related?	YES	

Work environment was relatively open tree canopy forested area, somewhat remote. The conditions at the site were very flat ground, low amounts of forest floor debris and vegetation (grasses and pine needle cast) with damp vegetation (it had snowed lightly the night before, but the snow had melted before work started).

Describe incident:

The sawyer was cutting a tree < 5" dbh towards the tree base with the bar at a 90-degree angle from the ground when the left leg slipped towards the chain saw bar.

Was an accident investigation conducted?	YES

What were results of investigation (causes, contributing factors and conditions)

Contributing factor was wet ground and positioning of saw stance altered a bit due to closeness of 2 trees to be cut which put legs more in alignment with kickback zone during "flush cut."

Were corrective actions taken?	YES

If yes, please describe:

Remind and re-emphasize direction to all crewmembers that it's ok to walk away from individual or clumps of trees if they pose an additional hazard. Always position yourself in the safest alignment with the chain saw bar should an unexpected event occur (kickback, thrown chain, slippery footing, etc.).

Were programmatic changes made?	No

No programmatic changes were identified as needed to the Forest saw program. Excellent safe saw practices are occurring as reflected in hundreds of hours of district fuels slashing occurring each year involving 20-25 sawyers with no injuries prior to this one for over 10 years. Strong supervision, mentoring and saw skill development is occurring within the Forest chainsaw program. Awareness and safety will continue to be emphasized.

If yes, please describe:

Safety and Health Training Offered by Your Agency - U.S. Department of Agriculture

Name of Training Course Provided	Training Platform Used	If other, explain	# Employees Trained	# Supervisors/ Managers Trained	Quiz/Knowledge Check used? (Yes or No)
29 CFR 1960 - Employee Rights/Responsibilities	Classroom		3,090	456	No
Active Shooter	Classroom	Hands On	1,525	153	Yes
Agricultural Worker Protection Standard	Classroom		35	5	No
Aviation Safety	Classroom		316	50	Yes
Bark Beetle Theater Safety	Classroom	Online	389	11	No
Bear Behavior/Spray Use	Classroom		427	146	No

From: Holmes, Mikki - OSHA
To: Reed, Jeremy Todd - FSIS
Subject: FSIS MOU
Date: Thursday, June 11, 2020 10:57:00 AM
Attachments: OSHA_FSIS MOU - 06-10-20 - Clean.docx

Todd,

Apologies for the delay in getting this back to you. Please find the changes we discussed. [redacted] I'm working to find out how to proceed for formal MOU approval but thought I'd pass this on for your informal review.

I'll let you know what I find out in terms of the MOU approval process.

Thanks,

Mikki

Mikki Holmes, PhD | Acting Director
Office of Federal Agency Programs
Occupational Safety and Health Administration
202.693.2491

From: Sweatt, Loren E. - OSHA
To: Newsome, Shawna - OSEC, Washington, DC; Brown, Christopher K. - OSHA
Cc: Edens, Mandy - OSHA; Pearce, Krisann - OSHA
Subject: FSIS stakeholder call
Date: Monday, May 18, 2020 12:00:50 PM

Shawna,
As discussed, I've copied Dr. Chris Brown on the email to find a time that works for you to conduct a stakeholder call.
We can also work to provide you the answer on barriers v. PPE.
Thanks.

From: Reed, Jeremy Todd - FSIS
To: Holmes, Mikki - OSHA
Subject: FW: CDC/DOL Issues Guidance to Industry
Date: Sunday, April 26, 2020 4:08:47 PM

Mikki,

Just a quick FYI.

We sent this to all FSIS regulated establishments and to all FSIS employees as well. We also plan to cover it in a calls with industry and employees later this week.

V/r,

Todd

Subject: CDC/DOL Issues Guidance to Industry

The Centers for Disease Control and Prevention (CDC) and the Department of Labor (DOL) have issued guidance specific to the meat and poultry processing industry in order to facilitate ongoing operations and support the food supply, while also mitigating the risk of spreading COVID-19.

USDA strongly recommends establishments utilize the recommendations highlighted in the guidance document where practical, recognizing that how they are implemented may differ given the unique circumstances of establishments and processing facilities nationwide. In the event of a closure, establishments should work with the state departments of agriculture and state and local health authorities, in coordination with CDC, to utilize the guidance and develop a plan to safely resume operations as soon as possible.

These guidelines were developed recognizing that these establishments and their operations are critical to the security of the nation's food supply. Steps to prevent the spread of COVID-19 should remain in place throughout the pandemic and to the extent that companies must reduce or alter capacity, split shifts, or add additional processing days to implement the CDC and DOL recommendations, FSIS remains committed to ensuring that food safety regulations are met.

Dear Lisa and Lorren,
As we have reviewed the CDC/OSHA document for meat and poultry establishments, we feel that it would be useful to add the information. This can help facilitate re-opening and give them a path forward to keep the food supply chain moving.

We are open to edits and suggestions from your team on this information.

We appreciate all you have done.

Thank you.

News Release

U.S. Department of Labor | July 8, 2020

U.S. Department of Labor Issues Poster to Keep Meat Packing, Poultry And Pork Workers Safe During the Coronavirus Pandemic

WASHINGTON, DC – The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) has issued a new poster listing safety tips employers can follow to help protect meat packing, poultry and pork workers from exposure to coronavirus.

The poster highlights nine infection prevention measures employers can implement during the coronavirus pandemic. Safety measures include encouraging sick workers to stay home; maintaining at least 6 feet of distance between workers; installing partitions along the production line; discouraging workers from sharing equipment and tools and avoiding the gathering of workers during break periods.

In addition to English and Spanish, the poster is available for download in the following 15 languages:

– Arabic	– French Creole	– Polish
– Brazilian Portuguese	– Hmong	– Portuguese
– Chinese Simplified	– Korean	– Somali
– Chinese Traditional	– Kunama	– Thai
– French	– Nepali	– Vietnamese

Visit OSHA's Publications webpage for other useful workplace safety information.

The posters are the latest effort by OSHA to educate and protect America's workers and employers during the coronavirus pandemic. OSHA has also published Guidance on Preparing Workplaces for COVID-19, a document aimed at helping workers and employers learn about ways to protect against the ongoing pandemic.

Visit OSHA's COVID-19 webpage frequently for updates. For further information about the coronavirus, please visit the Centers for Disease Control and Prevention.

Under the Occupational Safety and Health Act of 1970, employers are responsible for providing safe and healthful workplaces for their employees. OSHA's role is to help ensure these conditions for America's working men and women by setting and enforcing standards, and providing training, education and assistance. For more information, visit www.osha.gov.

The mission of the Department of Labor is to foster, promote and develop the welfare of the wage earners, job seekers and retirees of the United States; improve working conditions; advance opportunities for profitable employment; and assure work-related benefits and rights.

U.S. Department of Labor | April 26, 2020

U.S. Department of Labor's OSHA and CDC Issue Interim Guidance To Protect Workers in Meatpacking and Processing Industries

WASHINGTON, DC – The U.S. Department of Labor's Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control and Prevention (CDC) have released joint coronavirus-related interim guidance for meatpacking and meat processing workers and employers – including those involved in beef, pork and poultry operations. The guidance includes recommended actions employers can take to reduce the risk of exposure to the coronavirus.

"As essential workers, those in the meatpacking and processing industries need to be protected from coronavirus for their own safety and health," said Principal Deputy Assistant Secretary of Labor for Occupational Safety and Health Loren Sweatt. "OSHA's newest guidance document outlines steps employers can take to provide a safe and healthy workplace for workers in the meatpacking and processing industries."

The coronavirus has affected many meat and poultry processing facility workers in plants in several U.S. states. While the meat products these workers handle do not expose them to the coronavirus, close contact with coworkers and supervisors may contribute to their potential exposures.

The interim guidance from OSHA and the CDC includes information regarding:

- Cleaning of shared meatpacking and processing tools;
- Screening employees for the coronavirus before they enter work facilities;
- Managing workers who are showing symptoms of the coronavirus;
- Implementing appropriate engineering, administrative, and work practice controls;
- Using appropriate personal protective equipment, and;
- Practicing social distancing at the workplace.

Visit OSHA's coronavirus webpage frequently for updates. For further information about the coronavirus, please visit the Centers for Disease Control and Prevention.

Under the Occupational Safety and Health Act of 1970, employers are responsible for providing safe and healthful workplaces for their employees. OSHA's role is to help ensure these conditions for America's working men and women by setting and enforcing standards, and providing training, education and assistance. For more information, visit www.osha.gov.

The mission of the Department of Labor is to foster, promote and develop the welfare of the wage earners, job seekers and retirees of the United States; improve working conditions; advance opportunities for profitable employment; and assure work-related benefits and rights.

MEMORANDUM FOR CARRIE SNIDAR
Acting Departmental Clearance Officer
Office of the Chief Information Officer

THROUGH: **MAUREEN RUSKIN**
Acting Director
Directorate of Standards and Guidance (DSG)
Occupational Safety and Health Administration

FROM: **SELEDA PERRYMAN**
Director, Office of Information Quality and Paperwork Reduction
Directorate of Standards and Guidance
Occupational Safety and Health Administration

SUBJECT: Request for Emergency Processing of Paperwork ICR for Voluntary COVID-19 Attestation Form for Meat and Poultry Industry Employers

PRIORITY: Highest

SUMMARY

OSHA plans to distribute an "Attestation Form" to employers in the beef, pork, and poultry ("meat and poultry") processing industry so that they can notify OSHA if they are following OSHA regulations and guidance on reducing exposure to COVID-19 in that industry. OSHA will submit to OMB an emergency information collection request to identify the time and expense associated with employer completion and submission of this form. For the reasons explained below, OSHA has determined that this paperwork request satisfies the public comment exceptions in § 3507(j) of the Paperwork Reduction Act and requests that OMB conduct emergency processing of this request pursuant to 5 CFR § 1320.13.

BACKGROUND/STATEMENT OF ISSUES

The recent outbreaks of COVID–19 among workers at some processing facilities have raised concerns about continued worker exposure in that industry and led to the reduction in some of those facilities' production capacity. In response, OSHA and CDC jointly issued guidance to the meat and poultry processing industry on April 26, 2020, identifying protocols and practices for employers in that industry to prevent, monitor, and document any COVID-19 cases among workers. Shortly after, the President issued Executive Order 13917 (April 28, 2020), which specifically calls for the continued operation of meat and poultry facilities "consistent with the guidance for the operations of meat and poultry processing facilities jointly issued by the CDC and OSHA."

Need for an Attestation Form

OSHA plans to provide an "Attestation Form" to employers in the meat and poultry processing industry. Using this form, employers could voluntarily attest to OSHA that they are maintaining protocols and practices in accordance with the OSH Act, OSHA regulations, and the recent OSHA/CDC guidance to the meat and poultry processing industry. OSHA would also distribute with the form a letter explaining the purpose of the form and providing instructions employers.

The Attestation Form is intended to protect workers in furtherance of the OSH Act and the President's policy goals as follows:

(1) The voluntary submission of the form to OSHA would help the agency assess the extent to which OSHA regulations and OSHA/CDC guidance are being implemented in this industry. The agency can use this information to formulate future guidance and enforcement strategies as appropriate.

(2) Employer receipt of the attestation form would heighten and focus awareness of the safety measures available for worker protection.

(3) OSHA anticipates that many employers will not only submit the form to OSHA but also make their attestation available to their employees as a vehicle for demonstrating their commitment to worker protection from COVID-19, thereby encouraging workers in their facilities to remain working or return to work.

(4) Employers could make their attestations public to respond to public concerns about the impact of exposed workers on the surrounding community.

Because of the rapid spread of COVID-19 and the urgency for exposure reduction, OSHA intends to distribute the Attestation Form, accompanied by an instruction letter, as soon as possible.

Paperwork Reduction Act and Need for Emergency Processing

The Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 et seq., and its implementing regulations require that the Department consider the impact of paperwork and other information collection burdens. The PRA forbids OSHA and other agencies from conducting or sponsoring a collection of information, whether mandatory or voluntary, unless it has been approved by OMB. OSHA has prepared an information collection request (ICR) that would be submitted to OMB for expedited review.

The PRA normally requires a 60-day period for public comment on proposed information collections prior to approval of the request for information collection, but § 3507(j) of the PRA specifies several situations in which an agency may request that OMB approve the ICR without first making it available for public comment:

- an unanticipated event has occurred; or
- public harm is reasonably likely to result if normal clearance procedures are followed.

Pursuant to 5 CFR § 1320.13(d) and §1320.13(a), an agency need not seek public comment if it provides a written determination that those criteria are met and OMB grants an exemption for emergency processing.

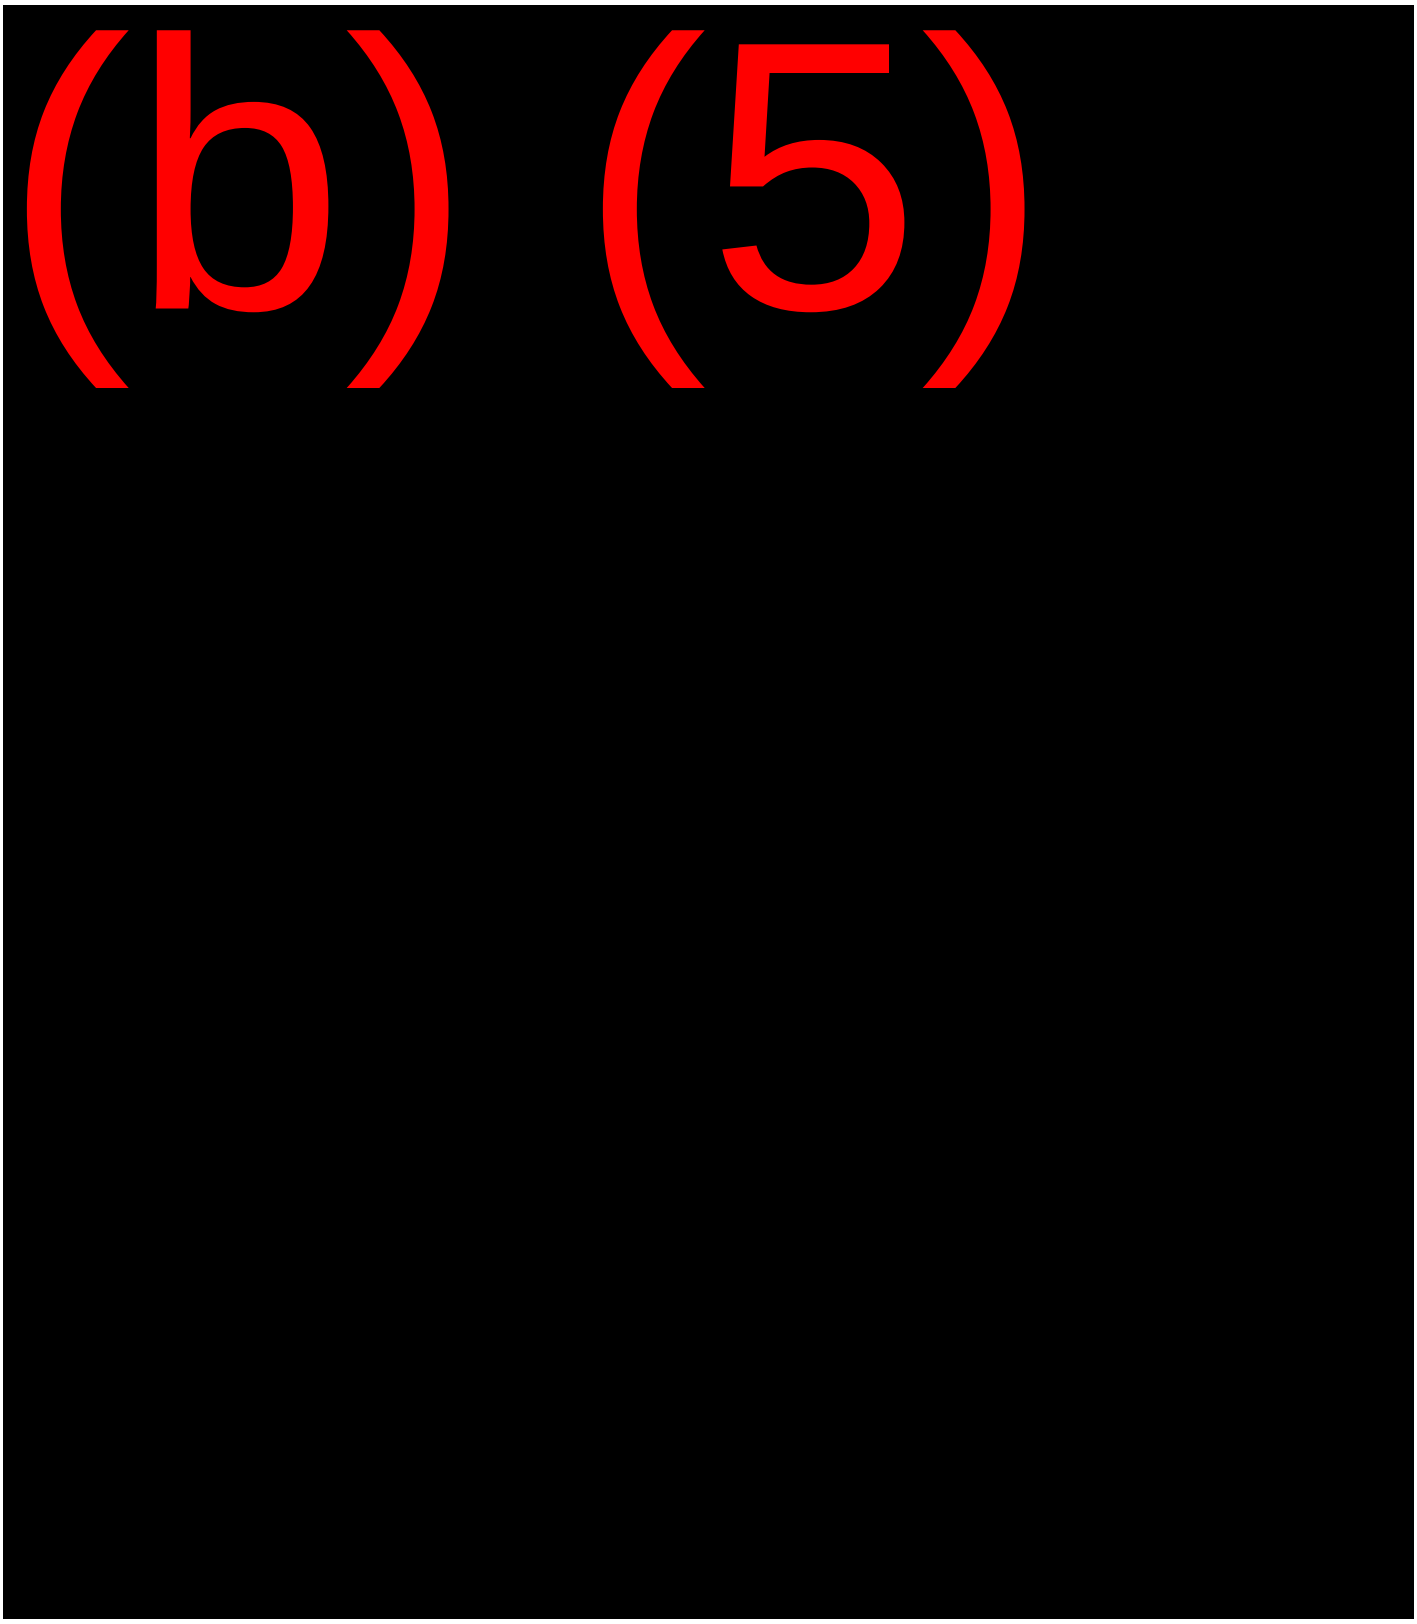
OSHA has determined that both criteria of § 3507(j) and the relevant regulations are met and seeks emergency processing approval from OMB (without a public comment period) for the six-month period permitted in accordance with OMB's memorandum on emergency review flexibility (*Flexibilities under the Paperwork Reduction Act for Compliance with Information Collection Requirements*, July 22, 2016). The COVID-19 virus has spread at a rate and scale that is virtually unprecedented in this country, and the exposure to this novel virus in the meat and poultry processing constitutes an unanticipated event. The President determined in March that the COVID–19 outbreak in the United States constituted a national emergency, and the number of exposures in the meat and poultry processing industry has been significant. Public harm is reasonably likely to result from any delay in OSHA obtaining the information it needs to ensure that employers are taking appropriate steps to protect workers in this industry from workplace exposures that would also likely lead to increased exposures for members of the surrounding communities. OSHA believes that OMB approval for six months will allow the agency to distribute the Attestation Form and receive the information it needs to accomplish those tasks.

INFORMATION COLLECTIONS
OSHA has identified the following paperwork burdens associated with employer completion and submission to OSHA of the Attestation Form:

- Attestation Form completion, signature and submission time, including time to read the introductory letter, and posting the form for employees.

- Employer familiarization time to review the regulatory requirements and CDC/OSHA COVID-19 guidelines and determine that the facility meets those criteria.

REQUESTED TIMELINE FOR APPROVAL
The agency requests clearance by COB of May 18, 2020.



OTHER FEDERAL AGENCIES INVOLVED
OSHA issued guidance to the industry jointly with the CDC. Executive Order 13917 directs the Secretary of Agriculture to ensure that meat and poultry processors continue operations consistent with the OSHA/CDC guidance. The attestation form and accompanying letter were developed in consultation with the Food Safety Inspection Service (FSIS) at the Department of Agriculture, and FSIS will send the letter and attestation form to affected meat and poultry packers.

USDA, FDA Strengthen U.S. Food Supply Chain Protections During COVID-19 Pandemic

(Washington, D.C.) May 19, 2020

The following statement is attributed to Mindy Brashears, Ph.D., USDA Under Secretary for Food Safety, and Frank Yiannas, FDA Deputy Commissioner for Food Policy and Response.

As the COVID-19 pandemic response continues, the U.S. Department of Agriculture and the U.S. Food and Drug Administration have been working around the clock on many fronts to support the U.S. food and agriculture sector so that Americans continue to have access to a safe and robust food supply. As a next step in carrying out Executive Order 13917, the USDA and FDA today announced a Memorandum of Understanding (MOU) to help prevent interruptions at FDA-regulated food facilities,

including fruit and vegetable processing.

This is an important preparedness effort as we are approaching peak harvesting seasons, when many fruits and vegetables grown across the U.S. are sent to be frozen or canned. The MOU creates a process for the two agencies to make determinations about circumstances in which the USDA could exercise its authority under the Defense Production Act (DPA) with regard to certain domestic food resource facilities that manufacture, process, pack, or hold foods, as well as to those that grow or harvest food that fall within the FDA's jurisdiction.

While the FDA will continue to work with state and local regulators in a collaborative manner, further action under the DPA may be taken, should it be needed, to ensure the continuity of our food supply. As needed, the FDA will work in consultation with state, local, tribal and territorial regulatory and public health partners; industry or commodity sector; and other relevant stakeholders (e.g. Centers for Disease Control and Prevention, Occupational Safety and Health Administration) to chart a path toward resuming and/or maintaining operations while keeping employees safe.

We are extremely grateful to essential workers for everything they do every day to keep our pantries, refrigerators and freezers stocked. All of the food and agriculture sector -- whether it is regulated by the USDA or FDA -- are considered critical infrastructure, and it is vital for the public health that they continue to operate in accordance with guidelines from the CDC and OSHA regarding worker health and safety. As we work to get through the current challenge together, we remain committed to workers' safety, as well as ensuring the availability of foods, and that our food remains among the safest in the world.

Additional Information

On April 28, 2020, President Donald J. Trump signed Executive Order 13917, Delegating Authority Under the Defense Production Act with Respect to the Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, delegating the powers of the President under the DPA to the Secretary of Agriculture to ensure continuity of operations for our nation's food supply chain. The Executive Order gave the Secretary of Agriculture the authority to utilize the DPA if needed to require the fulfillment of contracts at food processing facilities. The MOU makes clear that the FDA will work with stakeholders to monitor the food supply for food resources not under the USDA's exclusive jurisdiction in order to prevent interruptions at FDA-regulated food facilities.

This action is another in a series of proactive steps the USDA and FDA have taken to maximize food availability following unprecedented disruptions the COVID-19 pandemic has caused to food supply chains that have been established and refined for decades.

Supporting Industry and Protecting Frontline Workers

Our nation's food and agriculture facilities and workers play an integral role in the continuity of our food supply chain.

The USDA and FDA have been working to ensure that frontline workers in food facilities and retailers that have remained on the job during this crisis have the information and resources they need for business continuity and to continue working safely, which includes mitigating the risk of spreading COVID-19. We continue to provide information and update frequently asked questions on both the FDA and USDA's websites.

We will continue to work with facilities and farms, CDC, OSHA, and state, tribal, and local officials to ensure facilities and farms are implementing practices consistent with federal worker safety guidelines to keep employees safe and continue operations.

We are working with our federal partners who have the authority and expertise over worker safety to develop information on protecting worker health. We are also working with other federal partners to assist the food and agriculture industry in addressing shortages of personal protective equipment (PPE), cloth face coverings, disinfectants and sanitation supplies.

Monitoring and Securing Human and Animal Food Supply Chains 24/7

Throughout the pandemic, the USDA and FDA have been closely monitoring the food supply chain for shortages in collaboration with industry and our federal and state partners. We are in regular contact with food manufacturers and grocery stores.

We have issued guidances to ensure regulatory flexibility to safely reroute food that typically would be bought in bulk by food facilities and restaurants, like eggs and flour, directly to consumers.

Food Safety Reminders for Every American

As we continue to respond to COVID-19, we want to remind consumers that there is no evidence that COVID-19 has been transmitted by food or food packaging, as well as the importance of taking precautionary food safety steps to protect against foodborne illness pathogens such as *Salmonella* and *E. Coli*.

With respect to the safety of food across the U.S., both the USDA and FDA continue to use their respective authorities, including conducting inspections, as appropriate. The agencies also continue to monitor foods for hazards, work with industry on any potential or reported issues in their facilities, and conduct food recalls when appropriate. This applies to both domestically produced food and food that is imported from other countries.

Unlike foodborne gastrointestinal (GI) viruses like norovirus and hepatitis A that often make people ill through contaminated food, foodborne exposure is not known to be a route of transmission for SARS-CoV-2, which causes COVID-19.

With respect to foodborne pathogens, the CDC, FDA and FSIS continue to work with state and local partners to investigate foodborne illness and outbreaks. During this coronavirus outbreak, we will continue to operate to prepare for, coordinate and carry out response activities to incidents of foodborne illness in both human and animal food.

DEPARTMENT OF HEALTH & HUMAN SERVICES

Centers for Disease Control and Prevention (CDC)

MEMORANDUM

Date: May 15, 2020

From: Jessica F. Li, CDC National Institute for Occupational Safety and Health
John Dreyzehner, CDC Center for Preparedness and Response
Max Zarate-Bermudez, CDC National Center for Environmental Health
Amanda Hott, CDC National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention
Yvonne Cruz, CDC National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention

To: Sam Rascona, Perdue Accomac Poultry Plant

Copy: Richard Williams, Eastern Shore Health District, Virginia Department of Health
Jonathan Richardson, Eastern Shore Health District, Virginia Department of Health

Subject: Strategies to reduce COVID-19 transmission at the Perdue Accomac Poultry Plant

Background

On April 25, 2020, CDC received a request for technical assistance from the Virginia Department of Health (VDH). VDH requested assistance in developing strategies to help prevent and mitigate SARS-CoV-2 infections among Perdue Accomac Poultry Plant workers.

On May 1, 2020, a CDC team visited the Perdue Accomac Poultry Plant with a worker population of approximately 2,000. The CDC team included an epidemiologist, an industrial hygienist, a laboratorian, a public health advisor, and an occupational medicine physician. We toured and observed production areas and reviewed processes inside the Perdue Accomac Poultry plant. In this plant, the poultry are shackled in a hanging room, after which they were stunned, killed, bled-out, and de-feathered by machinery. Evisceration, or removal of the animals' internal organs, is completed using machinery. The poultry is then washed and inspected and processed into the desired parts and the bones removed. The final product is packaged and labeled for shipment. The plant operated two processing shifts and a third sanitation shift with plant workers.

We also toured non-production areas including the locker rooms, restrooms, and lunchrooms. We talked with management to provide guidance to prevent potential SARS-CoV-2 transmission in the plant. Through our discussions with Perdue Accomac management, we learned about the existing interventions to help prevent and mitigate the spread of SARS-CoV-2 between workers. There was no union present at the plant. The plant had a COVID-19 coordination committee consisting of only management.

The observations and recommendations included in this memo are specific to the Perdue Accomac Poultry Plant but may be helpful in developing strategies for other Perdue facilities. This memo is not intended to document every observation and intervention that occurred at the Perdue Accomac Poultry Plant. It is a summary of the plant's implementation of the CDC/OSHA guidance found at

https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html.

Observations and discussion

Worker screening

Workers were screened prior to their shift before the walkway leading to the plant turnstile. The verbal screening was conducted by screeners at the temperature tent. The screening asked workers if they were ill, were feeling unwell, or have had contact with someone who had confirmed COVID-19. If a worker replied with a "yes" to any of the screening questions, they were sent directly to the Perdue Wellness Center. Workers were permitted short-term disability while they were out with illness that is confirmed or presumptive COVID-19 or if they were under quarantine as documented by a physician's note. The short-term disability waiting period of 5 workdays has been waived for ill workers, and the payment amount is 32 hours per week at the worker's hourly rate for up to 2 weeks.

Workers who passed initial screening walked through the temperature tent where a screener measured their temperature with an infrared thermometer. If a worker had a fever (100.4°F or greater), their temperature was taken again with a different infrared thermometer after waiting 3 to 5 minutes. If worker had false, high temperature reading they were allowed to pass though screening. Management said they recently begun implementing a second temperature check for workers after their second break.

If the worker was confirmed to have a fever, they were sent to the Wellness Center for secondary screening. During secondary screening, a Wellness Center provider checked the worker's temperature again with an infrared thermometer and asks follow-up questions about symptoms, wellness, and potential exposure. If the worker was found to have a fever, feel ill, or have symptoms consistent with COVID-19 (fever, cough, shortness of breath), they were told to return home. A Wellness Center staff person followed up with these workers by phone. The Wellness Center coordinated with the Accomack County Health Department to determine when workers may return to work following the CDC criteria to discontinue home isolation. The Wellness Center was staffed with providers who treated employees and eligible dependents free of charge.

Only essential visitors, or visitors required to keep the plant functioning, were currently allowed to enter the plant. Essential visitors were screened at the guard station. Screening questions for visitors were similar to the worker screening but consisted of more questions related to potential exposure to and symptoms of COVID-19. Visitors who answered "yes" to any of these questions were not allowed to enter the plant.

Increasing distance between workers during work and breaks

After screening, employees must swipe in using a keycard to pass through a turnstile. Management installed a physical barrier consisting of a pole and chain in the walking paths before and after the turnstile to encourage single file travel with reminders spray-painted on the ground in English periodically to maintain distance. Management had placed tape in the entrance/exit hallway to encourage uni-directional flow of traffic.

Plant production has decreased due to absenteeism, and in some work locations workers were able to be spaced at least 6 feet apart. Management has a written policy to stagger workers on the line in the cut-up area, so workers do not work adjacent to or facing another worker. However, this configuration may not be possible when more workers are working on the line.

Barriers consisting of a stainless-steel frame with replaceable plastic film or plastic strip curtain were installed between workers on the line where management said the work process prohibited maintaining this spacing. For some areas on the line where employees work facing one another, management stated it was difficult to install barriers or maintain spacing due to work processes or machinery. Not all planned barriers had been installed at the time of the visit. Management was in the

process of pilot testing barriers in the live hang area. In production areas where barriers interfere with work processes, workers were given reusable face shields to serve as personal protective equipment (PPE) and source control. Supervisors collected reusable face shields from workers at the end of the shift and cleaned and disinfected them. Hard-mounted fans in the evisceration area had been turned off according to CDC/OSHA interim guidance for meat and poultry processing.

Management has added and spaced out timeclocks. Plexiglass barriers had been installed at lunchroom tables to provide a physical barrier between workers during meals. Visual reminders on the cafeteria floor reminded workers to maintain a 6 feet distance while standing in line. Fountain drink dispensers had also been turned off to discourage gathering in the cafeteria. The plant has implemented staggered shifts and break times to reduce workers gathering in parking areas, locker rooms, time clocks, and restrooms.

Use of face masks

CDC recommends wearing cloth face coverings as a protective measure in addition to social distancing (i.e., staying at least 6 feet away from others). Cloth face coverings may be especially important when social distancing is not possible or feasible based on working conditions**.** A face covering requirement among all staff has been established based on management provided a new disposable facemask with moldable nosepieces to workers each day after temperature screening and encouraged workers to request a new disposable facemask if theirs becomes dirty or wet. Workers could wear their own homemade face covering. We observed almost all employees wore face coverings correctly. Management said that safety glasses, which were previously required, are currently optional because face coverings were fogging up the safety glasses and impairing vision.

Supplementary infection control measures

Workers are instructed to sanitize hands at the temperature tent after screening. Management indicated that several hand sanitizer pump dispenser stations had been added throughout the plant as COVID-19 prevention measures. The restrooms and plant handwashing stations had touchless faucets, manual soap dispensers, and air hand dryers. Contracted janitorial staff had been assigned to clean and disinfect commonly touched surfaces more frequently, such as handrails, door handles, lunchroom surfaces, and restroom surfaces. Management implemented an auditing system to inspect and record that additional sanitization has occurred. The cafeteria is shut down for 30 minutes once per day for additional disinfection of tables, chairs, vending machines, plexiglass partitions, and other common area surfaces. Plant entrance/exit doors were propped open to reduce workers needing to touch door handles.

Management has instructed contracted transportation services to require employees to wear face coverings in the vehicle and to clean and disinfect commonly touched surfaces (e.g. door handles, seat belts, seats) once per day. Educational posters encouraged workers to conduct hand hygiene before and after riding in the vehicle, distance when possible, and to stay home and not enter the vehicle if they feel sick. A different poster indicates that carpooling workers are required to wear face coverings in a vehicle with three or more passengers.

Supervisors collected reusable face shields from workers at the end of the shift in order to clean and disinfect them. Management said employees with bump caps were already trained to clean and disinfect them before leaving the production area.

On May 6, 2020, mandatory testing of all employees and contractors for COVID-19 was conducted. Employees who do not get tested will not be allowed to return to work.

Educating workers on COVID-19 risks, prevention, and company policies

Throughout common area hallways, there were written communications and posters in the three languages used by plant workers: English, Haitian Creole, and Spanish.

These communications include simple posters about carpooling etiquette, wearing face coverings, and the CDC Stop the Spread poster. Other written communication topics included how SARS-CoV-2 spreads; COVID-19 symptoms; ways to prevent infection, including practicing social distancing, wearing face coverings, and staying home if sick. An in-plant display system displayed messages reminding workers to sanitize hands, wearing face masks properly, and maintaining physical distance and work and at home.

Human resources distributes relevant discussion points weekly or more often for supervisors to use to educate workers on COVID-19 topics. These discussion points have included how workers can protect themselves from COVID-19 at work and at home, encouraging workers to stay home and follow up with a provider when ill, notification of steps and controls implemented to protect workers, encouraging workers to get the flu vaccine at the Wellness Center. These talking points also discuss related human resources issues, such as pay during quarantine, wage continuation if the plant shuts down, extending hours for the Wellness Center, and contacting management with any childcare issues. Management uses a text alert system to notify workers of COVID-19 related messages and updates in English.

The plant has currently implemented a pay increase of $1 per hour for hourly workers and $40 per week for piece-rate workers effective March 23, 2020 to May 10, 2020.

Additional activities planned by the company as reported to our team

1. Convert the tent set up for mandatory testing into an overflow break area.
2. Add additional timeclocks in the hallway to reduce crowding at the beginning and end of shifts.
3. Finish installing planned barriers in production areas and install plexiglass barriers on lunch storage racks in the lunchroom.
4. Install a thermal imaging system for body temperature monitoring located in the plant entrance/exit hallway.
5. Install plexiglass barriers on lunch storage racks.

Conclusions

The company has implemented several controls at the plant to help prevent and mitigate the spread of SARS-CoV-2 between workers while in the plant and is in the process of implementing more as discussed above. We provide some additional recommendations below to assist both management and workers with efforts to limit virus transmission in the plant.

Recommendations

We provide the following recommendations to help ensure existing controls are as effective as possible in preventing the spread of SARS-CoV-2 between workers. While we understand that with ongoing community transmission of SARS-CoV-2, COVID-19 cases will continue to be identified, existing and recommended controls with ongoing education will be useful in reducing transmission in the workplace. These recommendations are intended specifically for the Perdue Accomac Poultry Plant. The COVID-19 coordination committee should develop an implementation plan for these and any other planned interventions.

Controls

The following recommendations should be implemented according to the hierarchy of controls. Hierarchy of controls is an approach to hazard intervention that starts with the controls perceived to be most effective and moves down to those considered least effective. In most cases, the preferred approach is to eliminate a hazard or exposures, install engineering controls, and implement appropriate sanitation

and cleaning to reduce workers' exposure to the hazard. Until such controls are in place, or if they are not adequately effective or feasible, administrative measures and PPE may be needed.

Engineering Controls

1. Modify the alignment of workstations so that workers are at least 6 feet apart in all directions (e.g., side-to-side and when facing one another). Ideally, modify the alignment of workstations so that workers do not face one another. The rate of animal processing may need to be reduced.
2. Use physical barriers, such as strip curtains, plexiglass or similar materials, or other impermeable dividers or partitions, to separate workers from each other, if feasible. Physical barriers should not be used as a replacement for maintaining at least 6 feet between workers
    a. Observe workers while they work to ensure barriers are placed in the optimal position to separate workers from each other. Ensure barriers are large enough to accommodate for height and size variations.
3. Establish an alternative entrance or exit for workers to promote single-file, uni-directional movement with through the plant to promote social distancing. Consider allowing only uni-directional travel in hallways and production areas.
4. Consult with maintenance staff or a heating, ventilation, and air conditioning engineer to ensure adequate ventilation in production areas to help minimize workers' potential exposures.
5. Hard-mounted fans were used in the live hang area. Take steps to minimize air from fans blowing from one worker directly at another worker. If fans are removed or turned off, employers should remain aware of, and take steps to prevent heat hazards.
6. Noise levels in production areas require the use of hearing protection. Although not typically required for job tasks, devise a method of non-verbal communication using sign language or pictograms for the most common communications to facilitate worker communication while maintaining physical distance.
    a. Create a space where employees can remove masks briefly to make interpretation easier for one-on-one or very small meetings/counseling sessions. The space should be large enough that employees can maintain appropriate distance.
7. Consider replacing current timeclocks with touch-free timeclocks. Increase spacing between timeclocks or add additional timeclocks to reduce crowding in the hallway.
8. Provide a covered area for workers to line up prior to screening and in the walkways leading up to the plant. The current temperature tent does not provide shelter from the elements when waiting for screening. This could lead to employees congregating in an area with shelter during inclement weather.
9. Install touchless soap dispensers and paper towel dispensers and provide single-use paper towels at all handwashing stations. Air hand dryers may disperse virus particles in the air.
10. Replace current pump-dispensed hand sanitizers with touch-free hand sanitizer dispensers.
11. Add handwashing stations and temporary restrooms when setting up overflow break areas to encourage handwashing before eating and reduce congregation in restrooms during breaks.
12. Determine if proposed controls, such as barriers between work position on the line, could pose a safety hazard for workers. Ensure it would not be possible for workers' tools, hands, or arms to be caught between the barrier and moving parts of the conveyor. This may require pilot testing barriers before implementing them in all workstations where workers cannot be separated by 6 feet or more.

Administrative controls

1. Assign dedicated social distancing monitors for common areas, including parking and smoking areas, between shifts and during breaks to promote social distancing.

2. Provide visual cues (e.g., floor markings 6 feet apart) as a reminder to workers to maintain social distancing.
3. Encourage workers to avoid carpooling to and from work. If carpooling or using contracted transportation services, implement the following infection control practices:
    a. Limit the number of people per vehicle as much as possible. This may mean using more vehicles or making multiple trips.
    b. Continue encouraging workers to maintain social distancing as much as possible.
    c. Continue requiring masks when riding in the vehicle.
    d. Continue encouraging workers to use hand hygiene before entering the vehicle and when arriving at the destination. Provide the contracted transportation service with hand sanitizer for workers to use.
    e. Clean and disinfect commonly touched surfaces after each trip (e.g., door handles, handrails, seatbelt buckles).
    f. Encourage employees to follow coughing and sneezing etiquette when in the vehicle.
    g. Train and educate the transportation contractor to screen employees for symptoms of COVID-19.
4. Review leave and incentive policies to determine if they may affect a worker's decision to come to work while ill:
    a. Review the current policy to increase hourly pay by $1 per hour based upon time limitations and requirement to work a certain number of hours to receive this pay increase.
    b. Analyze the sick leave policy that limits short-term disability payments for COVID-19 to 2 weeks. This time limit on short-term disability payments may lead employees to come to work while ill.
    c. Communicate these policies in all three languages, and make sure that employees are aware of and understand these policies.
5. Consider cohorting (grouping together) . This can increase the effectiveness of altering the plant's normal shift schedules by making sure that groups of workers are always assigned to the same shifts with the same coworkers. Cohorting may reduce the spread of workplace SARS-CoV-2 transmission by minimizing the number of different individuals who come into close contact with each other over the course of a week. Cohorting may also reduce the number of workers quarantined because of exposure to the virus.
6. Ensure workers use cloth face coverings that include multiple layers of fabric, can be laundered using the warmest appropriate water setting and machine dried daily after the shift without damage or change to shape, and are handled as little as possible to prevent transferring infectious materials to the cloth. Consider exclusively providing disposable facemasks to all workers.
7. Continue providing ongoing training to all management, supervisors, and workers. All training should be easy to understand and provided in languages that are understood by the worker. Training may need to be verbal. Options include pre-shift briefings or refresher training in settings where social distance can be maintained. Training topics should include symptoms of COVID-19, how it spreads, risks for workplace exposures, and how workers can protect themselves at work and in the community; proper handwashing practices and use of hand sanitizer stations; cough and sneeze etiquette; other infection control precautions (social distancing measures, safely putting on and taking off PPE and face coverings); and sick leave policies.
    a. Provide information in a written format in different languages for workers to take home and share with their housemates and communities.

8. Place simple posters with pictograms that encourage staying home when sick, cough and sneeze etiquette, COVID-19 symptoms, and proper hand hygiene practices at the entrance to the workplace, break areas, locker rooms, and restrooms.
9. Modify the text messaging alert system to allow employees to receive COVID-19 relate communications in the language of their choice.
10. Establish process to include workers to join the COVID-19 coordination committee to help determine communication gaps and implement the provided recommendations.
11. Engage community partners to develop culturally informed and effective messaging about how workers can protect themselves and their family in the community.
12. Train employees removing plastic film from physical barriers on how to remove plastic film without potentially re-aerosolizing particles that may be on the film.
13. Continue using PPE needed in production areas, including safety glasses. Troubleshoot ways that workers can wear safety glasses and face coverings without interfering with required PPE. Goggles or face shields may be used in place of safety glasses depending on the protection needed; if safety glasses are required for impact protection, ensure alternative PPE is rated for impact.
14. Collect, clean, and disinfect bump caps at the end of the shift so workers do not take them home.

Screening and monitoring workers

1. Continue to screen workers for COVID-19 symptoms, including temperature checks.
    a. Provide and require workers to wear face coverings before their temperature is taken.
    b. Ensure all workers and essential visitors are screened regardless of the time they arrive at the site.
    c. If a thermal imaging system is installed for body temperature monitoring, the system should be used in accordance with all manufacturer specifications and FDA guidance, and should be set up in such a way to accommodate the height variation of all entrants.
    d. If such a system cannot be used according to manufacturer specifications and FDA guidance, then entrants' temperatures should be measured individually using a temporal or tympanic thermometer.
    e. If screeners need to be within 6 feet of workers, provide them with appropriate PPE such as respirators (like N95 respirators) or medical facemasks (like surgical masks), gloves and face shields for the repeated close contact with other workers.
2. Consider using pictograms and non-verbal forms of communication to facilitate screening while maintaining a distance of 6 feet.
    a. Train security guards to conduct visitor screening while maintaining a distance of 6 feet. Conduct this screening outside of the guard station if possible. Post screening questions outside the guard post so that essential visitors can read them from a far distance to facilitate this.
3. Instruct any worker who has tested positive for COVID-19 or who has symptoms consistent with COVID-19 to stay home from work. When speaking to the worker, collect a list of work-related close contacts over past 14 days and their contact information. This list should include any co-workers who live in the same household and with whom they carpool or take breaks. Inform these workers of their possible exposure to COVID-19 in the workplace but maintain confidentiality as required by the Americans with Disabilities Act (ADA).

The Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA) for Meat & Poultry Packaging found at https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html states the following:

- Reintegration (bringing back) of exposed, asymptomatic workers to onsite operations should follow the CDC Critical Infrastructure Guidance. The guidance advises that employers may permit workers who have been exposed to COVID-19, but remain without symptoms, to continue to work provided they adhere to additional safety precautions. Consultation with an occupational health provider and state and local health officials will help employers develop the most appropriate plan consistent with CDC guidance.
- Reintegration of workers with COVID-19, including those workers who have remained asymptomatic, to onsite operations should follow the CDC interim guidance Discontinuation of Isolation for Persons with COVID-19 Not in Healthcare Settings, which states for persons who have NOT had COVID-19 symptoms but tested positive and are under isolation, options now include both a 1) time-based strategy, and 2) test-based strategy.

1. Time-based strategy: Persons with laboratory-confirmed COVID-19 who have not had any symptoms and were directed to care for themselves at home may discontinue isolation under the following conditions:
    - At least 10 days have passed since the date of their first positive COVID-19 diagnostic test assuming they have not subsequently developed symptoms since their positive test. If they develop symptoms, then the symptom-based or test-based strategy should be used.
    - Note, because symptoms cannot be used to gauge where these individuals are in the course of their illness, it is possible that the duration of viral shedding could be longer or shorter than 10 days after their first positive test.
2. Test-based strategy: Persons with laboratory-confirmed COVID-19 who have not had any symptoms and were directed to care for themselves at home may discontinue isolation under the following conditions:
    - Negative results of an FDA Emergency Use Authorized COVID-19 molecular assay for detection of SARS-CoV-2 RNA from at least two consecutive respiratory specimens collected ≥24 hours apart (total of two negative specimens). See Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Persons Under Investigation (PUIs) for Coronavirus Disease 2019 (COVID-19).
    - Note, because of the absence of symptoms, it is not possible to gauge where these individuals are in the course of their illness. There have been reports of prolonged detection of RNA without direct correlation to viral culture.

- The time-based, and test-based strategies may result in different timeframes for discontinuation of isolation post-recovery. For all scenarios outlined above, the decision to discontinue isolation should be made in the context of local circumstances. In addition, CDC guidance for COVID-19 may be adapted by state and local health departments to respond to rapidly changing local circumstances.

CDC and OSHA have developed an Interim Guidance for Meat and Poultry Packing Industry to prevent and mitigate the spread of SARS-CoV-2 between workers while at work. Consult with USDA to determine if proposed controls are acceptable with regards to food safety and sanitation. Continue communicating and working with Accomack County Health Department and VDH. We appreciate your interest in occupational safety and health.

MEMORANDUM

Date: May 15, 2020

From: Jessica F. Li, CDC National Institute for Occupational Safety and Health
John Dreyzehner, CDC Center for Preparedness and Response
Albert Barskey, CDC National Center for Immunization and Respiratory Diseases
Sancta St. Cyr, CDC National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention

To: Sidney Newnam, Tyson Temperanceville Poultry Plant

Copy: Richard Williams, Eastern Shore Health District, Virginia Department of Health
Jonathan Richardson, Eastern Shore Health District, Virginia Department of Health

Subject: Strategies to reduce COVID-19 transmission at the Tyson Temperanceville Poultry Plant

Background

On April 25, 2020, CDC received a request for technical assistance from the Virginia Department of Health (VDH). VDH requested assistance in developing strategies to help prevent and mitigate SARS-CoV-2 infections in Tyson Temperanceville Poultry Plant workers.

On April 30, 2020, a CDC team visited the Tyson Temperanceville Poultry Plant with a worker population of approximately 1,250. The CDC team included two epidemiologists, one industrial hygienist, and one occupational medicine physician. We toured and observed the evisceration, cut-up, debone, and label production areas and processes. The evisceration department is where the animals are shackled in a hanging room, after which they are stunned, killed, bled-out, and de-feathered by machinery. Evisceration, or removal of the animals' internal organs, is completed using machinery. The poultry is then washed and inspected. In the cut-up and debone departments, the poultry is processed into the desired parts and the bones removed. The label department packages and labels the final product for shipment. The plant operated two processing shifts and a third sanitation shift with plant workers.

We also toured non-production areas including the locker rooms, restrooms, and lunchrooms. We discussed with management and provided guidance to prevent potential SARS-CoV-2 transmission in the plant. Through our discussions with Tyson Temperanceville management, we learned about the existing interventions to help prevent and mitigate the spread of SARS-CoV-2 between workers. There was no union present at the plant; however, the plant did have an established safety and health committee.

The observations and recommendations included in this memo are specific to the Tyson Temperanceville Poultry Plant but may be helpful in developing strategies for other Tyson facilities. This memo is not intended to document every observation and intervention that occurred at the Tyson Temperanceville Poultry Plant. It is a summary of the plant's implementation of the CDC/OSHA guidance found at https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html.

Observations and discussion

Worker screening

Workers were screened prior to their shift at the plant entrance. The verbal screening was conducted by a temperature team member, usually the plant safety manager. The screener asks workers if they have a fever of 100.4°F (37.7°C) or greater or symptoms of COVID-19 (fever, cough, shortness of breath, chills, muscle pain, headache, sore throat, new loss of taste or smell), if they are taking any temperature reducing medications, if they have been in close contact with someone with confirmed COVID-19 or if they themselves have tested positive for COVID-19, and if they have traveled out of the country or on a cruise ship in the past 14 days. Only essential visitors, or visitors necessary to keep the plant running, were currently allowed to enter the plant.

If a worker replied "yes" to any of the screening questions, they were told to return home and contact their personal care provider. They were notified of pay and benefits available to them if they were ill or instructed by their personal care provider to quarantine due to potential exposure. Workers were permitted up to 3 days of paid sick leave plus additional short-term disability while they were out with illness that was confirmed or presumptive COVID-19 and/or flu as documented by a physician's note. The short-term disability waiting period of 5 workdays has been waived for ill workers, and the payment amount has been increased from 60% to 90% of the worker's regular pay. Management has waived co-pays for telemedicine and co-pays, co-insurance, and deductibles related to COVID-19 testing.

Workers who passed initial screening entered through the main entrance, walking past a thermal imaging system for body temperature measurement. If a worker had a fever (100.4°F or greater) as indicated by the thermal imaging system, they under-went secondary screening. Secondary screening was done by a plant Occupational Health Office nurse, who also checked the worker's temperature with a tympanic thermometer and asked follow-up questions about symptoms, wellness, and potential exposure. If the worker was found to have a fever, feel ill, or have symptoms consistent with COVID-19 as noted above, they were told to return home and follow up with their personal care provider.

The plant Occupational Health Office followed up with symptomatic workers every day and asymptomatic workers who were not working every other day by phone. The Occupational Health Office coordinates with the Accomack County Health Department to determine when workers may return to work, following CDC guidelines on the discontinuation of home isolation.

Increased distance between workers during work and breaks

Management had marked visual reminders on the floors for workers to maintain a 6 feet distance starting from the parking lot and continuing up the steps leading to the plant entrance and throughout common area hallways. Management has assigned social distance monitors to encourage distancing between workers in common areas during high traffic periods like shift changes and breaks.

Plant production had decreased due to absenteeism, and in some work locations workers were able to be spaced at least 6 feet apart. Plexiglass barriers were installed between workers on the line where management said the work process prohibited maintaining this spacing. For some areas on the line where employees work facing one another, management stated it was difficult to install barriers or maintain spacing due to work processes or machinery. In the label department, where barriers interfere with work processes, workers were given reusable face shields to serve as personal protective equipment (PPE) and source control.

In the lunchroom, adjacent chairs had been removed and tables moved to increase distance between workers. Some tables were placed outside under a covered patio. Management set up additional break/lunch areas outdoors in tents with an additional 20 picnic tables to create an overflow break area. Plexiglass barriers had been installed at lunchroom and break tables to provide a physical barrier

between workers during meals. Handwashing stations and temporary restrooms were placed near the tent overflow break/lunch areas.

The plant has implemented staggered shifts and break times to reduce workers gathering in parking areas, locker rooms, time clocks, and restrooms. Workers were only allowed to enter the plant 5 minutes before the start of their shift to facilitate the screening process and to reduce workers gathering in common areas before the shift. During shift change times, management has configured the plant to have a unidirectional flow so workers ending their shift exit through a different door than workers beginning their shift.

Use of facemasks

A disposable facemask requirement among all staff has been established based on CDC/OSHA guidance for meat and poultry processing. Management provided a new disposable facemask with moldable nosepieces to workers each day at the plant entrance and exit and encouraged workers to request a new disposable facemask if theirs becomes dirty or wet. Homemade cloth face coverings were not allowed in the plant. We observed almost all employees wearing face coverings correctly.

Worker Transportation

Management has also instructed contracted transportation services to measure their workers' temperature with an infrared thermometer and provide them with a new disposable facemask before they board the vehicle. Employees with a temperature of 99°F or higher are asked to stay home.

Worker Testing

Plant management conducted all employee mandatory nasal swab testing on May 5 and 6 for COVID-19. Employees who do not get tested will not be allowed to return to work.

Supplementary infection control measures

As workers enter the plant, they are instructed by a temperature team member to sanitize their hands using a touchless hand sanitizer dispenser. There were touchless hand sanitizer dispensers installed on walls throughout the plant. Management indicated that several hand sanitizer dispensers had been added as COVID-19 prevention measures. The restrooms had hands-free pedal operated handwashing stations, manual soap dispensers, and air hand dryers.

Janitorial staff have been specifically assigned to clean and disinfect commonly touched surfaces more frequently, such as handrails, door handles, vending machines, common area surfaces, and restroom surfaces. The plant suspended operations on April 24 to conduct a deep cleaning of the plant. Fogging of the plant with PURE ® has been occurring twice weekly in break room and common areas.

Management in the label department collected reusable face shields from workers at the end of the shift in order to clean and disinfect them.

Educating workers on COVID-19 risks, prevention, and company policies

At the main entrance and throughout common area hallways, there were written communications and posters in the three languages used by plant workers: English, Haitian Creole, and Spanish. Written communication topics included how SARS-CoV-2 spreads; COVID-19 symptoms; guidance for people at higher risk for severe COVID-19 illness; and ways to prevent infection, including practicing social distancing, wearing face coverings, and staying home if sick. One of these written communications was obtained from a different state's health department with contact information not consistent with VDH's contact information. Other posters in English had pictures representing COVID-19 symptoms of fever, cough, shortness of breath or difficulty breathing, chills, repeated shaking with chills, muscle pain,

headache, sore throat, and new loss of taste or smell. For staff who cannot read, management follows up with them privately to ensure they receive messaging about COVID-19.

Management conducts a safety huddle at the beginning of each shift in smaller groups in the three languages to communicate updates. The plant also has a Facebook page that management uses to communicate COVID-19 related messages and updates.

Conclusions

The company has implemented several controls at the plant to help prevent and mitigate the spread of SARS-CoV-2 between workers while in the plant. We provide some additional recommendations below to assist both management and workers with efforts to limit virus transmission in the plant.

Recommendations

We provide the following recommendations to help ensure existing controls are as effective as possible in preventing the spread of SARS-CoV-2 between workers. While we understand that with ongoing community transmission of SARS-CoV-2, COVID-19 cases will continue to be identified, existing and recommended controls with ongoing education will be useful in reducing transmission in the workplace.

These recommendations are intended specifically for the Tyson Temperanceville Poultry Plant. A qualified workplace coordinator should be identified who will be responsible for assessment and control planning for these and any other interventions to be rolled out in the workforce.

Controls

The following recommendations should be implemented according to the hierarchy of controls. Hierarchy of controls is an approach to hazard intervention that starts with the controls perceived to be most effective and moves down to those considered least effective. In most cases, the preferred approach is to eliminate a hazard or exposure, install engineering controls, and implement appropriate sanitation and cleaning to reduce workers' exposure to the hazard. Until such controls are in place, or if they are not adequately effective or feasible, administrative measures and PPE may be needed.

Engineering Controls

1. Modify the alignment of workstations so that workers are at least 6 feet apart in all directions (e.g., side-to-side and when facing one another), when possible. Ideally, modify the alignment of workstations so that workers do not face one another. The rate of animal processing may need to be reduced.
2. Use physical barriers, such as strip curtains, plexiglass or similar materials, or other impermeable dividers or partitions, to separate workers from each other, if feasible. Physical barriers should not be used as a replacement for social distancing and should only be used when it is not possible due to work design or task to be completed (e.g., two people needing to work together on a specific task that need to be done next to each other).
    a. Observe workers while they work to ensure barriers are placed in the optimal position to separate workers from each other. Ensure barriers are large enough to accommodate for height and size variations.
3. Consult with maintenance staff or a heating, ventilation, and air conditioning engineer to ensure adequate ventilation in production areas to help minimize workers' potential exposures
4. Hard-mounted fans were used in the evisceration department. Take steps to minimize air from fans blowing from one worker directly at another worker. If fans are removed or turned off, employers should remain aware of and take steps to prevent heat hazards.
5. Noise levels in production areas require the use of hearing protection. Although not typically required for job tasks, devise a method of non-verbal communication using sign language or

pictograms for the most common communications to facilitate worker communication while maintaining physical distance.
    a. Create a space where employees can remove masks briefly to make interpretation easier for one-on-one or very small meetings/counseling sessions. The space should be large enough that employees can maintain appropriate distance.
6. Consider replacing current timeclocks that require swiping with touch-free timeclocks. Increase spacing between timeclocks or add additional timeclocks to reduce crowding in the hallway so social distancing can be maintained.
7. Increase spacing between existing microwaves or add additional microwaves to reduce crowding of employees during breaks so social distancing can be maintained.
8. Provide an additional covered area for workers to line up prior to screening. The current covered area is small and does not provide shelter from the elements when waiting for screening. This led to employees congregating in the extra lunchroom/breakroom area set up outside during inclement weather.
9. Install touchless soap dispensers and paper towel dispensers and provide single-use paper towels at all handwashing stations.
10. Install touchless hand sanitizing stations near the temporary exit and the entrances and exits to all lunchroom and breakroom areas to encourage hand hygiene.
11. Determine if proposed controls, such as barriers between work position on the line, could pose a safety hazard for workers. Ensure it would not be possible for workers' tools, hands, or arms to be caught between the barrier and moving parts of the conveyor. This may require pilot testing barriers before implementing them in all workstations where workers cannot be separated by 6 feet or more.

Administrative controls

1. Assign social distancing monitors for parking areas between shifts and smoking areas during breaks to promote social distancing.
2. Encourage workers to avoid carpooling to and from work. If carpooling or using contracted transportation services, implement the following infection control practices:
    a. Limit the number of people per vehicle as much as possible. This may mean using more vehicles or making multiple trips.
    b. Encourage workers to maintain social distancing as much as possible.
    c. Encourage workers to use hand hygiene before entering the vehicle and when arriving at the destination. Provide the contracted transportation service with hand sanitizer for workers to use.
    d. Encourage employees in a shared van or car space to wear cloth masks.
    e. Clean and disinfect commonly touched surfaces after each trip (e.g., door handles, handrails, seatbelt buckles).
    f. Encourage employees to follow coughing and sneezing etiquette when in the vehicle.
3. Consider cohorting (grouping together). This can increase the effectiveness of altering the plant's normal shift schedules by making sure that groups of workers are always assigned to the same shifts with the same coworkers. Cohorting may reduce the spread of workplace SARS-CoV-2 transmission by minimizing the number of different individuals who come into close contact with each other over the course of a week. Cohorting may also reduce the number of workers quarantined because of exposure to the virus.
4. Establish protocols and provide supplies to increase the frequency of sanitization in work and common spaces. Disinfect frequently touched surfaces in workspaces and break rooms (e.g.,

microwave touchpads and handles, refrigerator handles, vending machine touchpads) at least once per shift.

5. Continue providing ongoing training to all management, supervisors, and workers. All training should be easy to understand and provided in languages that are understood by the worker. Training may need to be verbal. Options include pre-shift briefings or refresher training in settings where social distance can be maintained. Training topics should include symptoms of COVID-19, how it spreads, risks for workplace exposures, and how workers can protect themselves at work and in the community; proper handwashing practices and use of hand sanitizer stations; cough and sneeze etiquette; other infection control precautions (social distancing measures, safely putting on and taking off PPE and face coverings); and sick leave policies.
    a. Provide information in a written format in different languages for workers to take home and share with their housemates and communities.
6. Update posters regarding maintaining a physical distance which erroneously indicate that 6 feet is 1 meter to the correct conversion of 6 feet (2 meters).
7. Modify posters with a different state's contact information to the appropriate plant or health department contact information.
8. Place simple posters with pictograms that encourage cough and sneeze etiquette and proper hand hygiene practices at the entrance to the workplace, break areas, locker rooms, and restrooms.
    a. CDC has simple posters available to download and print, some of which are translated into different languages. The Stop the Spread of Germs poster is available in several languages, including English, Spanish, and Haitian Creole.
9. Consider the use of a text messaging alert system to send COVID-19 related messages and updates to employees in the language of their choice.
10. Engage community partners to develop culturally informed and effective messaging about how workers can protect themselves and their family in the community.
11. Collect, clean, and disinfect bump caps at the end of the shift so workers do not take them home.

Screening and monitoring workers

1. Continue to screen workers' for COVID-19 symptoms, including temperature checks.
    a. If a thermal imaging system continues to be used for body temperature monitoring, the system should be used in accordance with all manufacturer specifications and FDA guidance, and should be set up in such a way to accommodate the height variation of all entrants.
    b. If such a system cannot be used according to manufacturer specifications and FDA guidance, then entrants' temperatures should be measured individually using a temporal or tympanic thermometer.
    c. Consider lowering the temperature threshold at which the system alerts for fever to 99°F as the threshold to conduct secondary screening.
2. Post the screening questions in the three most commonly spoken languages at the screening point to assist with screening. Consider using pictograms and non-verbal forms of communication to facilitate screening while maintaining a distance of 6 feet.
    a. Train security guards to conduct screening while maintaining a distance of 6 feet. Post screening questions outside the guard post so that essential visitors can read them from a far distance to facilitate this.
3. Continue instructing any worker who has tested positive for COVID-19 or who has symptoms consistent with COVID-19 to stay home from work. The employers should inform anyone they have come into contact with (including fellow workers, inspectors, graders, etc.) of their possible

exposure to COVID-19 in the workplace but should maintain confidentiality as required by the Americans with Disabilities Act (ADA).

The Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA) for Meat & Poultry Packaging found at https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html states the following:

- Reintegration (bringing back) of exposed, asymptomatic workers to onsite operations should follow the CDC Critical Infrastructure Guidance. The guidance advises that employers may permit workers who have been exposed to COVID-19, but remain without symptoms, to continue to work provided they adhere to additional safety precautions. Consultation with an occupational health provider and state and local health officials will help employers develop the most appropriate plan consistent with CDC guidance.
- Reintegration of workers with COVID-19, including those workers who have remained asymptomatic, to onsite operations should follow the CDC interim guidance Discontinuation of Isolation for Persons with COVID-19 Not in Healthcare Settings, which states for persons who have NOT had COVID-19 symptoms but tested positive and are under isolation, options now include both a 1) time-based strategy, and 2) test-based strategy.

1. Time-based strategy: Persons with laboratory-confirmed COVID-19 who have not had any symptoms and were directed to care for themselves at home may discontinue isolation under the following conditions:
    - At least 10 days have passed since the date of their first positive COVID-19 diagnostic test assuming they have not subsequently developed symptoms since their positive test. If they develop symptoms, then the symptom-based or test-based strategy should be used.
    - Note, because symptoms cannot be used to gauge where these individuals are in the course of their illness, it is possible that the duration of viral shedding could be longer or shorter than 10 days after their first positive test.
2. Test-based strategy: Persons with laboratory-confirmed COVID-19 who have not had any symptoms and were directed to care for themselves at home may discontinue isolation under the following conditions:
    - Negative results of an FDA Emergency Use Authorized COVID-19 molecular assay for detection of SARS-CoV-2 RNA from at least two consecutive respiratory specimens collected ≥24 hours apart (total of two negative specimens). See Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Persons Under Investigation (PUIs) for Coronavirus Disease 2019 (COVID-19).
    - Note, because of the absence of symptoms, it is not possible to gauge where these individuals are in the course of their illness. There have been reports of prolonged detection of RNA without direct correlation to viral culture.

- The time-based, and test-based strategies may result in different timeframes for discontinuation of isolation post-recovery. For all scenarios outlined above, the decision to discontinue isolation should be made in the context of local circumstances. In addition, CDC guidance for COVID-19 may be adapted by state and local health departments to respond to rapidly changing local circumstances.

CDC and OSHA have developed an Interim Guidance for Meat and Poultry Packing Industry to prevent and mitigate the spread of SARS-CoV-2 between workers while at work. Consult with USDA to

determine if proposed controls are acceptable with regards to food safety and sanitation. Continue communicating and working with Accomack County Health Department and the Virginia Department of Health. We appreciate your interest in occupational safety and health.

End of memorandum

Interagency Food Supply Chain Team

Future Planning Working Group

Handling Instructions

- All individuals handling this information are required to protect it from unauthorized disclosure
- Handling, storage, reproduction, and disposition of the attached document(s) must be in accordance with 32 CFR Part 2002 and applicable agency policy
- Access to and dissemination of Controlled Unclassified Information (CUI) shall be allowed as necessary and permissible to any individual(s), organization(s), or grouping(s) of users, provided such access or dissemination is consistent with or in furtherance of a Lawful Government Purpose and in a manner consistent with applicable law, regulations, and Government-wide policies

Agenda

- Background
  - Origin story
  - Initial (and current) membership
  - Initial areas of interest and data needs
- Membership feedback
- Discussion
- Next steps/action items

Origin Story

- March 24, 2020 - FEMA OPORD 05-2020 Amendment #6 stood up the DHS led Food Supply Chain Task Force (FSCTF).
- April 28, 2020 - FEMA OPORD 05-2020 Amendment #11 transitioned the DHS FSCTF to USDA ESF #11 due to elevated risk for disruption among food production, processing, and distribution infrastructure requiring heightened integration of ESF #11 operations.
  - *ESF11 will operate from the NRCC and coordinate with ESFs 6, 10, 14, and 15, and the Recovery Support Functions, to address national food supply disruptions, workforce safety, community mitigation, Personal Protective Equipment (PPE), and other emergency protective measures to safeguard public health.*
- May 6, 2020 – USDA ESF #11 Interagency Food Supply Chain Team (IFSCT) coordination calls began
  - ESF #11 expanded scope to incorporate a whole of government approach due to the need to have situational awareness of the entirety of agriculture and natural resources impacted by the pandemic.

Membership (95 Required & 35 Optional Attendees)

USDA	APHIS	FNS	FSIS	AMS	RD	NRCS	OHS
DHS	FEMA	CISA	CWMD				
HHS	CDC	FDA					
DOI	BIA						
DOL							
EPA							
DOT							
NOAA							
NRF	ESF #6	ESF #10	ESF #11	ESF #14	ESF #15		
NDRF	RSF Coordinators						
F&A Sector	Government Coordinating Council Co-Chairs						

Initial Areas of Interest

Area of Interest	Interested Agencies
What is the status of food processing plants and the risks of COVID-19 outbreak to the capacity of those plants? What is the downstream and upstream impact of disruptions? How can we better prioritize and allocate resources and support to processing plants?	FSIS, AMS, FPAC, FNS, FDA, FEMA, ERS, CDC, DHS
What are risks to availability of non-substitutable consumer products (infant and medical)?	FDA, FNS, AMS
What is the state of food insecurity and the availability of food for those populations?	AMS, FNS, FDA, DHS
What is or will be the magnitude of labor disruptions and how does it/will it vary across the supply chain and by commodity?	FPAC, AMS, ERS, FEMA, APHIS, FDA
What is or will be the magnitude of impact on farm production due to disruptions (labor/workforce, demand shifts, etc.) caused COVID-19?	FPAC, AMS, ERS, FEMA, APHIS, FDA
What will be the impact to future production and the next planting season due to COVID-19?	FPAC, AMS, ERS, FDA
What is or will be impact on workload for agencies supporting different parts of food supply chain (e.g., FDA regulatory capacity, FPAC field office capacity)?	FDA, FPAC, AMS, FSIS
What is or will be the economic impact from disruptions to various parts of the supply chain?	ERS, FPAC, FEMA, Treasury
What is or will be the impact to government lending loan portfolios?	RD, Treasury, FPAC
What is or will be the impacts to trade flows, especially with China?	ERS, FPAC, Treasury, USTR
What are the impacts to normal surveillance inspections? What criteria should be applied to prioritize commodity types?	FDA

Initial Data Needs

Data Needed	Potential Sources
PPE and other safety equipment	Supply chain data aggregators
Daily food distribution, inventory and point-of-sale data	Supply chain data aggregators
Farm production/output/dumping	USDA, trade organizations, data aggregators
Food processing plant capacity and utilization	USDA, Trade organizations, data aggregators
Food consumption patterns	NHANES
Food insecurity	Census, FNS

Membership Feedback

- How beneficial has the IFSCT call been in supporting member programs/services? ★★★☆☆
- How do the IFSCT calls currently support/benefit your program/service?
  - **Situational awareness**
  - Ground truthing/deconflicting information
- What would you change to improve the usefulness/benefit of the IFSCT calls?
  - More data-drive/action oriented
  - *Unconstructive criticisms - No specific or meaningful products being produced and seems redundant to ongoing program/service efforts*
- Other comments or suggestions to increase the effectiveness of the IFSCT.
  - Later meeting time
  - Make calls more focused and requirements-driven rather than going through the motions
  - Provide meeting summary of conclusions

Discussion

Framing Questions

- What authority are we operating under?
- Is there a need to align our efforts to existing coordination bodies (NSC Sub-PCC, UCG)?
- How are we identifying, prioritizing, and tracking issues and resolutions?
- Are our areas of interest and data needs the same?
- What resilience challenges do the hurricane and flu seasons bring?
- Do we need to change the current membership (size or representation)?

Next Steps/Action Items

todd.mccoy@usda.gov | (202) 579-8894

From:	Mccoy, Todd - OHS, Washington, DC
To:	Mccoy, Todd - OHS, Washington, DC
Subject:	IFSCT Call - Follow Up & Feedback Requested
Date:	Tuesday, June 30, 2020 2:15:56 PM
Attachments:	NBEOC Snapshot - COVID-19 #105 (FINAL 6.26.20).pdf

IFSCT Members,

Below are two follow up items and one action item from this morning's call:

- Attached is the National Business Emergency Operations Center (NBEOC) Snapshot referenced in our discussion.
- Protecting Seafood Processing Workers from COVID-19 – This is the recent guidance for seafood industry employers that was developed jointly by CDC, OSHA and FDA.
- **ACTION** – If you cannot participate in the smaller working group session, we still want to hear from you.
  - Click here to provide your feedback on the IFSCT.

Thank you for your continued efforts; your dedication to this critical work is greatly appreciated.

Best,
Todd

Todd McCoy
Emergency Management and Homeland Security Branch Chief (Acting)
Animal and Plant Health Inspection Service
United States Department of Agriculture
O: 202.720.5886

-----Original Appointment-----
From: Mccoy, Todd - OHS, Washington, DC
Sent: Tuesday, June 16, 2020 10:16 AM
To: Interagency Food Supply Chain Team
Subject: USDA ESF #11 Interagency Food Supply Chain Team
When: Tuesday, June 30, 2020 8:00 AM-8:30 AM (UTC-05:00) Eastern Time (US & Canada).
Where: (b) (6)

Purpose: (b) (5)

Frequency: Every Tuesday (weekly) from 8:00 AM to 8:30 AM ET.

Location: (b) (6)

Agenda:

Background: The global COVID-19 pandemic and cascading supply chain impacts are unprecedented and there are unique challenges to the Food and Agriculture (FA) Sector including but not limited to worker safety; depopulation and carcass disposal; food production and processing; supply/demand/distribution; food security; cross-sector interdependencies; and related.

The FA Sector is composed of complex production, processing, and delivery systems and has the capacity to feed people and animals both within and beyond the boundaries of the United States. These food and agriculture systems are almost entirely under private ownership, operate in highly competitive global markets, strive to operate in harmony with the environment, and provide economic opportunities and an improved quality of life for American citizens and others worldwide. These factors contribute to unique challenges

related to disparate and disconnected data sources to inform FSC intelligence.

The continuity of critical infrastructure sectors, including the Food and Agriculture Sector, is not a given. (b) (5) [redacted]

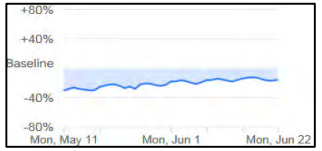
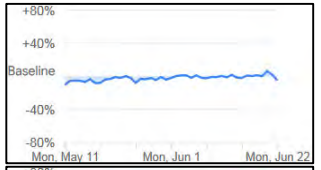
NBEOC Lifeline Snapshot
Coronavirus (COVID-19) – Report #105
June 26, 2020

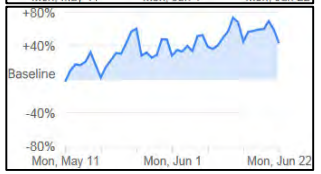
Business & Industry - Domestic Supply Chains

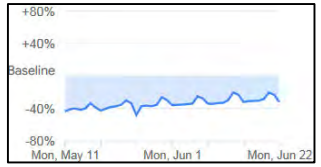
Background: 1.48M Americans filed for unemployment benefits for the week ending June 20, higher than most economist projections by 200K. While this is the 12th straight weekly decline since first-time claims peaked at 6.9 million at the end of March, it also marks the 2nd week in a row where weekly jobless claims have been higher than estimated. Over the past 14 weeks, more than 47M Americans have filed for unemployment insurance. This is also the 14th straight week that filings remained above 1M. While a number of sectors are seeing increases in revenue, the continuing high claims is a worrying indicator of a plateau or stall in the economy. If the pace of labor market improvement does not accelerate significantly in the next few weeks, more federal stimulus will be needed to keep the economy afloat and on track for recovery. Hot spots of infection may also slow the reopening of the nation as several states have paused re-opening plans in the face of rising infection rates. Unemployed Americans will face a substantial reduction in the unemployment safety net next month as the CARES Act which gives an additional $600 a week to jobless workers, on top of their weekly state benefits is still set to expire after July 31st. National pork overstock estimates are now at 3.5M, lower than the previous week. It is likely that overstock levels will continue to drop as long as instances of infection within industry decline. Overstock estimates do not include depopulation numbers as these are not widely reported publicly.

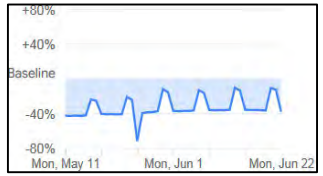
Lifeline		Status
Safety and Security	US	• 1.48M new jobless claims were filed for the week ending June 20th. More than 47M Americans have applied for unemployment in the last fourteen weeks. • The insured unemployment rate averaged 13.4% for the week ending June 13, a decrease of 0.5% from the previous week's 12.9%. • US GDP contracted by 4% in the first quarter of 2020 and analysts estimate a fall between -36.9% and -45.5% in the second quarter. • The national average price of gasoline has increased for the eighth straight week in a row. U.S. gasoline demand rose 3% versus last week. • Refineries increased utilization by 0.7% from 73.1% to 73.8% of capacity last week to meet growing demand. This is still off from normal seasonal utilization of 80-95%. • Retail sales in May rose 17.7% on a seasonally adjusted basis from April, however they still are down 6.1% year-over-year.
Food, Water, Shelter	US	• US pork processing capacity is at 99% pre-Covid capacity. Overstock estimates of above market weight hogs remained at 3.5M. It is likely that livestock overages will continue into September and October. • CPI for food at home increased 4.8% in the last 12 months. Overall prices for food have risen 0.7% in May.

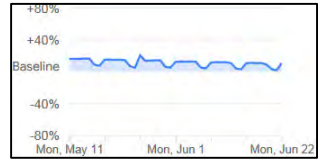












Lifeline		Status
Health and Medical	US	• Maritime imports of PPE and existing supply chain channels are sufficient to meet national PPE demands. FEMA Project Airbridge will be phased out by the end of the month, however it will remain an open option to expedite deliveries of medical supplies in the event of a second Covid-19 wave.
Transportation	Ground	• The Federal Motor Carrier Administration extended the emergency hours-of-service waiver until July 14th. • National outbound tender volumes continued a resurgence for last week, up 0.84%. The index is still up nearly 8% year-over-year. If consumer spending remains strong, it is expected that volumes will continue to rise. • National outbound tender rejections continued a positive trajectory. The steady rise of this index for the past two months suggests that carriers are beginning to have more choice in the freight and routes they can choose. Trucking capacity is commensurately tightening in many markets across the country.
	Maritime	• At least 200K seafarers working as ship crew have been marooned since the pandemic. Pre-pandemic, some 90-100K monthly crew changes were made. Since the pandemic, crew changes have averaged 15-30K a month. If plans cannot be made to expeditiously change out crews, this could affect global maritime trade and US imports and exports.

- For the week ending 6/14/20, Total CPG demand levels grew 11% vs. Year At a Glance (YAG), and increased slightly on a sequential basis, ending a four week streak of declining growth rates.
- The sequential improvement was driven by Non-Edible demand (106), which increased 300 basis points from the prior week. Total Edible demand growth remained consistent with the prior week, up 12% vs. YAG.
- Fresh Food demand (108) declined 400 basis points from the prior week, driven by a sequential decline in demand in all Fresh Food categories except Deli Meat (109) and Deli Prep (77).
- Deli Prep (77) continued to show the weakest demand vs. YAG of any category by far, but increased slightly compared to demand for the category measured a week earlier.

CPG Demand: Grocery (June 28, 2020)

Seafood [3]	98	103	119	95	140	140	152	149	152	147	145	124	138

- For the week ending 6/14/20, Total CPG demand grew 16% vs. YAG, but declined 300 basis points from the prior week, continuing a seven week trend of declining or flat growth rates.
- While all departments continue to show growth vs. YAG, demand declined sequentially across Total Edible (117), Total Non-Edible (109) and Fresh Foods (108).
- The only categories to demonstrate demand growth compared to the prior week are Home Care (114), Deli Meat (108) and Deli Prep (77). Health (105) demand remained steady. Demand in every other category declined sequentially.
- The strongest performing categories were Frozen and Seafood, which both grew 24% vs. YAG.

*The IRI CPG Demand Index is calculated weekly from point of sales data of measured retail channels which include convenience and multi-outlets (food, drug, mass, club, dollar, military), including click-and-collect orders for all brick-and-mortar stores, as well as delivery services like Instacart. IRI CPG Demand Index also includes insights into changes in weekly dollar sales by U.S. state and region as well as changes in basket size (the average spending per trip) and trip frequency (how often the shopper makes a purchase in a store or for online orders picked up at the store). Dynamic charts from IRI may be found at https://advantage.iriworldwide.com/Engineering/covid19/.

Seafood [2]	103	103	102	114	106	108	108	105	106	104	107	103

- For the week ending 6/14/20, average price per unit of Total CPG (up 6% vs. Year At a Glance [YAG]) dropped slightly after six consecutive weeks of remaining up 7% vs. YAG.
- Edible inflation (up 8% vs. YAG) continues to outpace Non-Edible inflation (up 5% vs. YAG), as it has for every week since at least late-March.
- General Food (107) was the only category in the Total Edible (108) department where inflation stayed level with the week prior, all other categories dropped slightly.
- Meat (114) continues to show the highest inflation of any category vs. YAG, however it dropped slightly compared to the week prior (115).
- Produce is the only category where average price per unit is consistent with YAG, all other categories across departments showed an increase.

CPG Inflation: Grocery (June 14, 2020)

2020 Week Ending	03.29	04.05	04.12	04.19	04.26	05.03	05.10	05.17	05.24	05.31	06.07	06.14

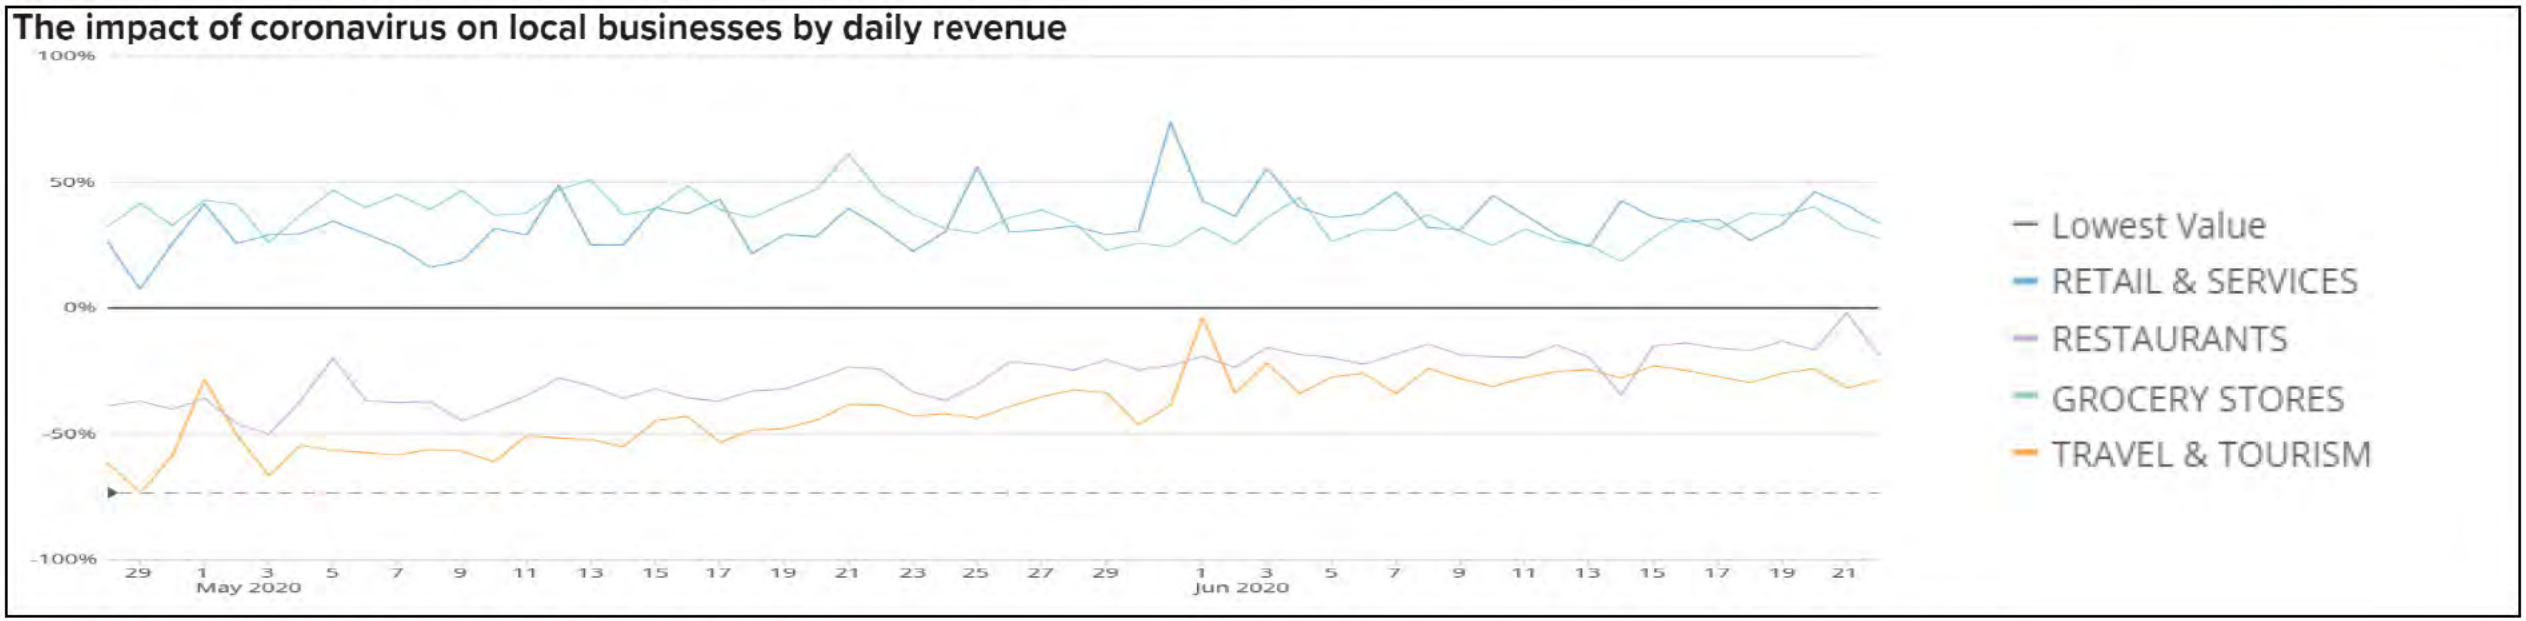
Health	106	108	108	108	106	107	108	109	107	108	108	106
Home Care	105	103	106	105	104	103	106	107	104	107	108	110
Tobacco	110	111	111	110	110	110	109	109	109	109	110	109
Fresh Foods*	105	107	107	101	105	108	107	105	106	106	107	105
Deli Cheese [1]	105	106	106	105	104	108	107	107	107	105	106	105
Deli Meat [1]	104	105	105	107	104	106	104	103	103	104	103	104
Deli Prep [1]	97	96	95	96	97	98	98	97	98	98	98	98
Floral [2]	92	100	96	86	92	96	104	96	98	101	104	102
Meat [2]	110	111	116	100	113	116	116	115	118	116	117	115
Produce [2]	101	102	101	101	99	100	100	100	100	101	102	101
Bakery [2]	110	112	114	108	112	113	113	112	112	112	113	111
Seafood [2]	103	103	102	116	106	108	109	106	107	104	108	103

- For the week ending 6/14/20, Total CPG inflation (up 8% vs. YAG) declined on a sequential basis. This was driven by small drops in inflation across every department, particularly Fresh Foods (105), which saw average price per unit drop 200 basis points compared to the week prior.
- The sequential drop in average price per unit of Fresh Foods (105) was driven by dips in every category except Deli Meat (104).
- Within Non-Edible (108), Home Care (110) was the only category that saw average price per unit increase on a sequential basis.
- Meat (115) continues to show the highest level of inflation of any category. However, it dropped 200 basis points on sequential basis, continuing a downward trend that began the week ending 5/31.



*The IRI CPG Inflation Tracker™ provides the well-known price per unit metric for tracking changes in pricing of consumer packaged goods. It provides weekly changes in consumer prices, price per unit against the year-ago period across departments including fixed and random weight products, grocery aisles and retail formats. Price per unit changes can be due to one or more of four factors: list price changes, changes in price promotions, trading up or down to higher or lower priced products, and finally, purchasing of larger or smaller packages. The IRI CPG Inflation Tracker™ is calculated from point of sales data of measured retail channels which include convenience and multi-outlets (food, drug, mass, club, dollar, military), including click-and-collect orders for all brick-and-mortar stores, as well as delivery services like Instacart. Dynamic charts from IRI may be found at https://advantage.iriworldwide.com/Engineering/covid19/.

Date:	Tuesday, July 14, 2020 4:43:37 PM
Attachments:	IFSCT SOC 07142020.docx IFSCT Briefing 07142020.pptx

IFSCT Members,

Thank you for your participation on this morning's call. Attached is the briefing we discussed and a summary of what we covered. Below are links to the two media articles Dr. McElroy referenced in her out brief.

Please keep in mind these media articles are based on a "preprint" version of an USAMRIID research paper, meaning that the research paper has <u>not</u> gone through a formal peer review or publication process:

- **South China Morning Post**: Coronavirus can live for four days on animal skin: US military study July 6, 2020

- **SWARAJYA**: Coronavirus Can Stay Active On Animal Skin For Four Days, Meatpacking Plants Could Facilitate Virus Spread: US Army Study July 7, 2020

If you would like more information about the preprint USAMRIID research, please reach out to Dr. McElroy directly:

Dr. Kristina McElroy, DVM, MPH, DACVPM
Veterinary Public Health Officer
Veterinary DSCA (Defense Support of Civil Authorities) & Interagency Coordinator | DOD - DHA - Veterinary Services kristina.m.mcelroy2.civ@mail.mil

Frank,
I have copied Loren Sweatt on this email. The two of you may already know each other.

Loren has been very helpful with us in addressing OSHA needs through the Executive Order and as we move forward with re-opening our meat and poultry establishments.

LOREN…Frank will be overseeing the re-opening of FDA operations under the EO. I am sure he will want to coordinate with you or other members of your team.

Thank you.

Mindy Brashears

Date:	Saturday, April 11, 2020 3:49:42 PM

Hi Jessica and David,

OSHA is looking for a USDA contact who could tell us if your agency is doing anything on meatpacking worker safety during the COVID-19 pandemic. We're interested to hear about any guidance in the works similar to what FDA recently put out for supermarkets and food retail.

See: https://www.washingtonpost.com/news/voraciously/wp/2020/04/10/fda-issues-new-supermarket-food-retail-safety-guidelines-to-protect-workers-customers/?itid=hp_rhp-top-table-low_fda-725am%3Ahomepage%2Fstory-ans

Thanks,
Chris

SEC. 751. (a) The Secretary of Agriculture, acting through the Administrator of the Food Safety and Inspection Service, shall—
(1) revoke any line speed waivers issued to a processor subject to the Federal Meat Inspection Act (21 U.S.C. 601 et seq.) or the Poultry Products Inspection Act (21 U.S.C. 451 et seq.) during the period beginning on or after the first day of the COVID-19 emergency period and ending on the date of the enactment of this Act; and
(2) subject to subsection (b), not issue any such waivers on or after such date of enactment, for the duration of the COVID-19 emergency period.
(b) Notwithstanding subsection (a), the Secretary may issue a line speed waiver to a processor

referred to in such subsection, if such processor—
(1) agrees to an inspection for such purpose conducted by the Assistant Secretary of Labor for Occupational Safety and Health; and
(2) the Assistant Secretary certifies to the Secretary of Agriculture that any increases in line speed at such processor's facilities would not have an adverse impact on worker safety.
(c) For purposes of this section, the term ''COVID-19 emergency period'' has the meaning given the term ''emergency period'' in section 1135(g)(1)(B) of the Social Security Act (42 U.S.C. 1320b–5(g)(1)(B)).

Krisann,

Attached are two documents. The first is the attestation form with the recommended edits that we discussed. The second document is a draft letter that would be sent to establishments explaining what the form is and providing instructions to them. Please let us know if you have any comments or concerns with the letter.

In regard to the Paperwork Reduction Act, our POC is Gina Kouba gina.kouba@usda.gov. She is available to provide information to the submission to OMB if needed.

We're updating the list of establishments now, and I'll send that to you soon.

I think that is everything, but let us know if there is anything else.

V/r,

Todd

Follow ups from today's call

To confirm, here's the correct email address – FSIS-Attest@dol.gov

And thanks in advance for sending over the edit to the form and the list of 6500ish entities.

And I'll get the regional contact info for you. It may be in what loren send earlier, but I'll confirm.

-krisann

Subject:	RE: FSIS stakeholder call
Date:	Tuesday, May 19, 2020 10:49:00 AM

Hi all,

We received this question which provides more background on this issue and I wanted to pass it along to you all.

The Executive Order signed by President Trump makes it clear that in addition to taking all reasonable actions to provide for employees' safety, meat and processing facilities are to operate at the maximum capacity possible, within the constraints of imposed by staffing limits. Operating in that manner is important not only for purposes of producing meat and poultry for dinner tables across the country but it is also is critical for livestock producers and the supply chain at large.

Against that background, the guidelines are replete with qualifying terms such as "if feasible" particularly regarding social distancing and the 6ft recommendation. To provide clarity and achieve the goals outlined in the EO, the guidelines set by CDC/OSHA as well as the expectation set by Secretary Perdue, USDA and its partner agencies need to confirm that the term "if possible" means "if possible while also maintaining maximum operating capacity."

Although it may be possible or feasible to maintain social distancing at reduced capacity, it is critical the meat and poultry processing industry continues full production. It may not be possible or feasible to maintain the recommended 6 ft of distance and also run at a speed necessary for maximum output.

Confirmation is needed from federal government that when not possible to maintain 6 ft of distance and run at full capacity, other controls can and should be employed to provide for safe operation. The establishments' specific COVID-19 control and assessment plan should address the controls that establishments will utilize, according to the hierarchy of controls outlined in the CDC/OSHA guidance document. These controls should align with the CDC/OSHA guidance, but employers may need to make adaptations to suit their specific operations.

I would propose editing the question I proposed yesterday a bit to:

Question:
In some areas of meat and poultry processing facilities, social distancing at 6ft of distance may not be feasible in order to maintain continued operation at the maximum capacity possible. In these areas, are other controls, based on the hierarchy of controls outlined in the CDC/OSHA guidance, e.g. PPE, acceptable in order to maintain safe operations at the maximum capacity possible?

Subject: RE: FSIS stakeholder call

Hi Loren,

Thanks for making the connection. Chris, I'll follow up with you separately about the stakeholder call.

For the FAQ, the question we get asked the most is: For areas in meat processing facilities where social distancing or physical barriers are not feasible in order to maintain continued operation, is PPE, such as face masks and/or face shields, an acceptable alternative?

Subject: Iowa

Iowa is a state plan, (b) (6) . We can discuss tomorrow maybe.

- Tyson Foods is reinstating an attendance policy that punishes workers for missing shifts, even as it reports new COVID-19 outbreaks in its Iowa meatpacking plants. Company spokeswoman Liz Croston confirmed to the Des Moines Register on Wednesday that Tyson Foods is returning to the policy it had put on hold in mid-March, when the coronavirus began spreading rapidly through closely spaced workers on the meatpacking lines at Iowa processing plants. Under the policy, employees are assessed points for missing shifts. Those who accumulate too many can be fired.

Food Safety News

June 8, 2020

Top Stories:

- **Coronavirus outbreaks climb at U.S. meatpacking plants despite protections, Trump order (*USA Today*, Rachel Axon, 6/6)**

  Coronavirus outbreaks at U.S. meatpacking plants continue to soar as the beleaguered industry ramps up production, scales back plant closures and tries to return to normal in the weeks after President Donald Trump declared it an essential operation. Meat production, which had briefly tanked, quickly rebounded after the order to near pre-coronavirus levels and quelled consumer fears of pork, beef and poultry shortages. But the number of coronavirus cases tied to meatpacking plants has more than doubled since then, topping 20,400 infections across 216 plants in 33 states, the Midwest Center for Investigative Reporting found. The joint guidance issued by OSHA and the CDC and cited in Trump's executive order says plants must make only "good faith" efforts to keep workers safe. A month later, it's unclear what, if any, impact the guidelines have had. Officials from OSHA have previously said they can enforce the guidelines under a legal provision that employers have a general duty to provide safe working conditions. But it's unclear how rigorously the USDA follows up with plants to ensure changes have been made.

- **Bill Marler's last word (or maybe not) on the Salmonella petition (*Food Safety News*, Dan Flynn, 6/8)**

  Bill Marler is getting the last word on the petition he filed with USDA's Food Safety and Inspection Service (FSIS) in January, which is on behalf of Rick Schiller, Steven Romes, the Porter Family, Food & Water Watch, Consumer Federation of America, and Consumer Reports. Marler is getting the "last word" in a June 5 letter to Mindy Brashears, USDA's Under Secretary for Food Safety. In it, he provides a "supplement" to the original petition "with additional and updated" information.

- **Slaughterhouse briefly suspended over inhumane slaughter of hog (*The Daily Sentinel*, Dennis Webb, 6/6)**

  A Fruita slaughterhouse's slaughtering and meat-processing operations were briefly suspended after an incident in which a hog was inhumanely killed, having been left conscious and "vocalizing" after a failed initial attempt to stun it, according to a federal agency. The Food Safety and Inspection Service, part of the Department of Agriculture, notified owner Gary Baysinger of Mountain Meat Packing of the suspension April 29. On May 4, the agency ended the suspension after a review of the plant's corrective actions.

Food Safety Related News:

- **Give meat a chance (*Food Safety News*, Guest Contributor, 6/8)**

As to that delicious steak or pork chop you are about to sink your teeth into, do you know where it came from? Will the grocery refrigerated cooler where you purchased that meat be empty tomorrow?

- **WEBINAR: Workers, Food Safety, and the Global Pandemic (*YouTube*, Food & Water Action, 6/5)**
  The COVID-19 outbreak has put essential workers in harm's way. Many workers, including those who work in food production, aren't being provided with the protections they need to be safe, and they're getting sick in record numbers.

- **Summer Food Safety: 9 Tips to Prevent Foodborne Illness (*IFT*, News Desk, 6/5)**
  Incorporate these tips into your plans for outdoor gatherings this summer to help ensure your plans and your food aren't spoiled.

Registration or Subscription Required:

- **Report: DOJ takes action in meatpacking probe (*Agri-Pulse*, Spencer Chase, 6/5)**

The Department of Justice is seeking information from the nation's largest meatpackers, a move that provides further indication of an investigation into the practices of the four major players in the industry.

According to a report from Bloomberg, a source familiar with the matter says DOJ sent civil investigative demands to the so-called "big four" meatpackers: Tyson, JBS, Cargill, and National Beef. The department has not publicly confirmed its investigation into beef packers, but when asked about the disparity between prices in the meat case and prices producers receive for live animals, President Donald Trump said he would "ask the Justice Department to look into it."

"I will ask them to take a very serious look into it, because it shouldn't be happening that way," Trump said in May. "And we want to protect our farmers. But they're looking into that very strongly."

DOJ did not respond to an inquiry from *Agri-Pulse*. Tyson declined to comment; JBS, Cargill, and National Beef did not respond to a request for comment.

Many have long been critical of the meatpacking sector due to the high level of control exerted by a small amount of companies. At the onset of the COVID-19 pandemic, plants were forced to shut down after outbreaks among workers, a move resulting in shrinkage in processing capacity. Prices offered for live cattle fell while retail prices for steaks, roasts, and ground beef rose, leading to calls for an investigation into the pricing practices.

The Department of Agriculture has been investigating beef pricing practices since last year following a fire at a beef packing plant in Holcomb, Kan. That investigation was expanded to include price disparities in the early days of the coronavirus outbreak.

The news comes on the heels of four indictments in a separate investigation into the poultry industry. On Wednesday, a Colorado grand jury indicted executives with Pilgrim's, including current CEO Jayson Penn, and Claxton Poultry Farms stemming from "an ongoing criminal investigation into price fixing and bid rigging involving broiler chickens."

In a statement, Claxton said the "allegations attributed to our company are without merit and we intend to vigorously defend our company and its good name as this process moves forward." Pilgrim's said it takes "this matter very seriously" and "will continue to fully cooperate with the Department of Justice in their investigation."

- **FSIS to expand testing for Shiga toxin-producing E. coli (*Meatingplace*, Susan Kelly, 6/5)**

The Food Safety and Inspection Service (FSIS) has announced plans to expand its routine verification testing for six Shiga toxin-producing Escherichia coli that are adulterants and the adulterant E. coli O157:H7.

The testing is being expanded to cover ground beef, bench trim, and raw ground beef components other than raw beef manufacturing trimmings, product from advanced meat recovery systems, partially defatted chopped beef and partially defatted beef fatty tissue, low temperature rendered lean finely textured beef, and heart meat.

FSIS currently tests only its beef manufacturing trimmings samples for the six non-O157 STEC (O26, O45, O103, O111, O121, or O145) and E. coli O157:H7; all other raw beef products are tested for E. coli O157:H7 only.

FSIS is requesting comments, submitted by Aug. 3, on the proposed sampling and testing of ground beef, bench trim, and other raw ground beef components. FSIS will announce the date it will implement the new testing in a subsequent Federal Register notice.

FSIS also is responding to comments on the Nov. 19, 2014 Federal Register notice titled "Shiga Toxin-Producing Escherichia coli (STEC) in Certain Raw Beef Products." FSIS is making available its updated analysis of the estimated costs and benefits associated with the implementation of its non-O157 STEC testing on raw beef manufacturing trimmings and the expansion of its non-O157 STEC testing to ground beef, bench trim, and other raw ground beef components.

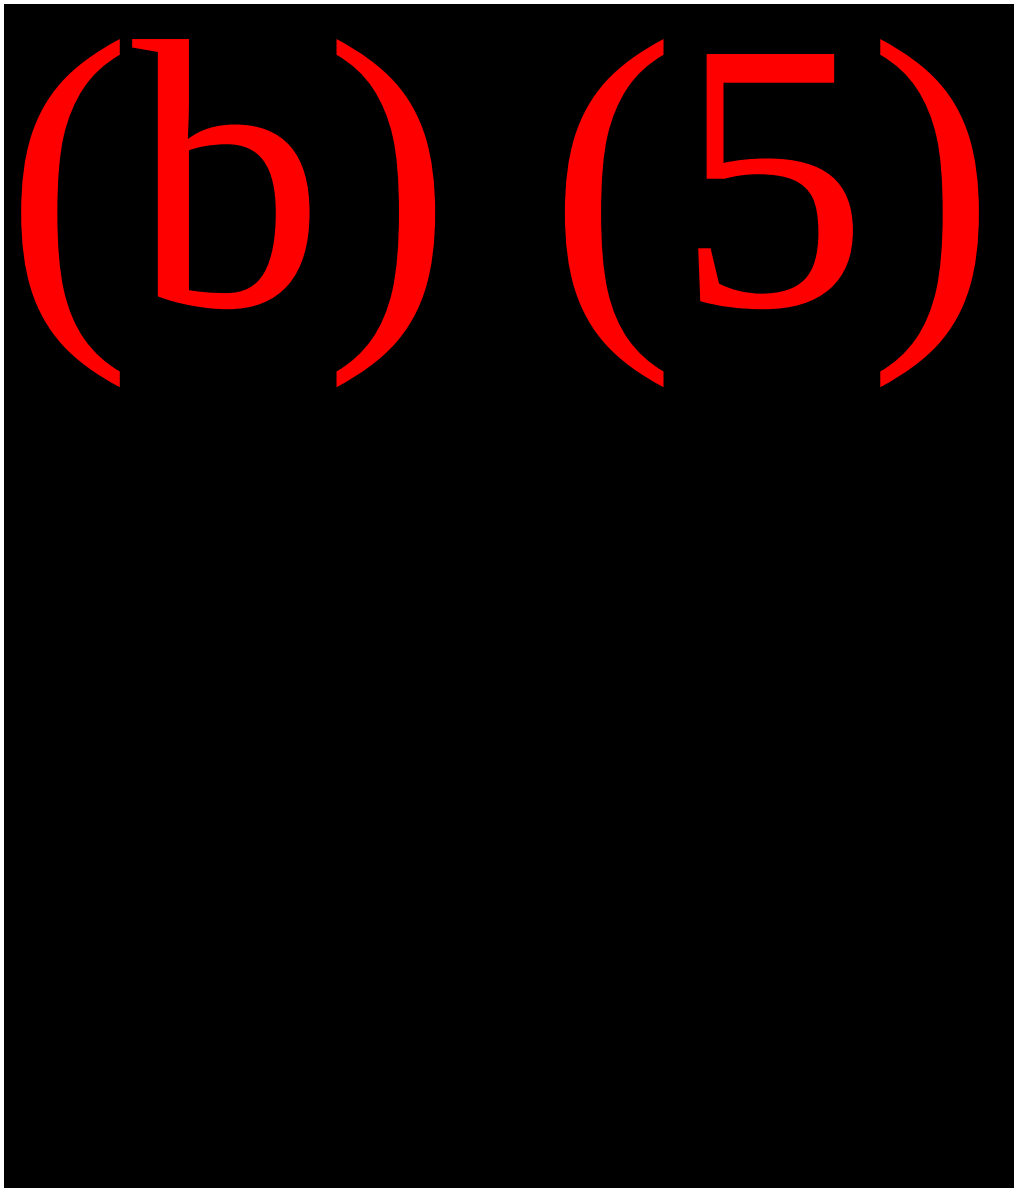
Sent: Tuesday, June 16, 2020 10:16 AM
To: Interagency Food Supply Chain Team
Subject: USDA ESF #11 Interagency Food Supply Chain Team
When: Tuesday, June 30, 2020 8:00 AM-8:30 AM (UTC-05:00) Eastern Time (US & Canada).
Where: (b) (6)



Purpose: (b) (5)

(b) (5)

Frequency: Every Tuesday (weekly) from 8:00 AM to 8:30 AM ET.

Location: (b) (6)

Agenda:

Background: The global COVID-19 pandemic and cascading supply chain impacts are unprecedented and there are unique challenges to the Food and Agriculture (FA) Sector including but not limited to worker safety; depopulation and carcass disposal; food production and processing; supply/demand/distribution; food security; cross-sector interdependencies;

and related.

The FA Sector is composed of complex production, processing, and delivery systems and has the capacity to feed people and animals both within and beyond the boundaries of the United States. These food and agriculture systems are almost entirely under private ownership, operate in highly competitive global markets, strive to operate in harmony with the environment, and provide economic opportunities and an improved quality of life for American citizens and others worldwide. These factors contribute to unique challenges related to disparate and disconnected data sources to inform FSC intelligence.

The continuity of critical infrastructure sectors, including the Food and Agriculture Sector, is not a given. (b) (5) [redacted]

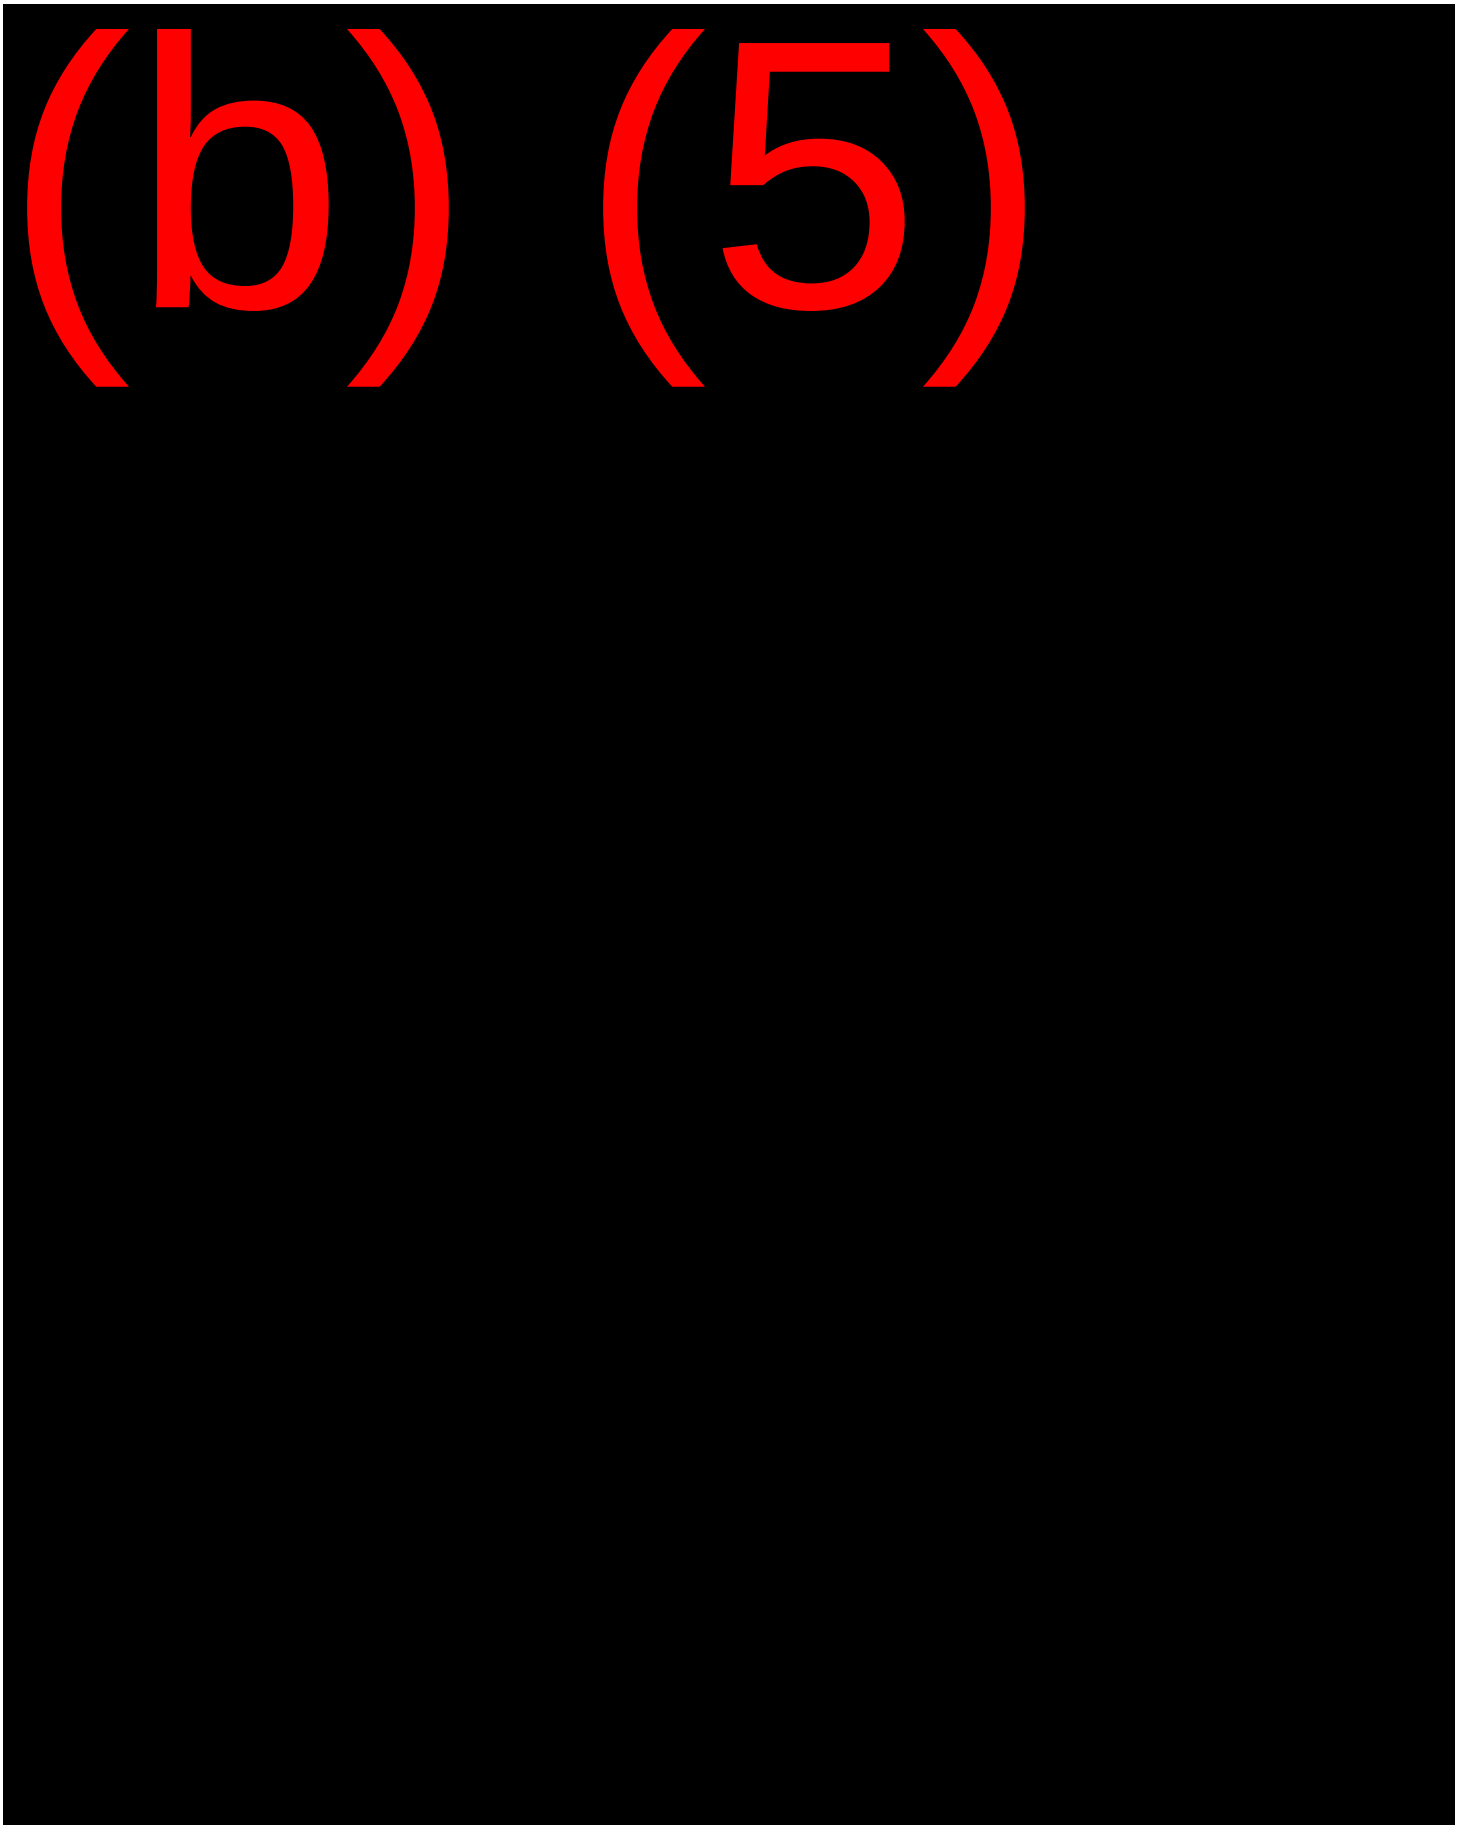
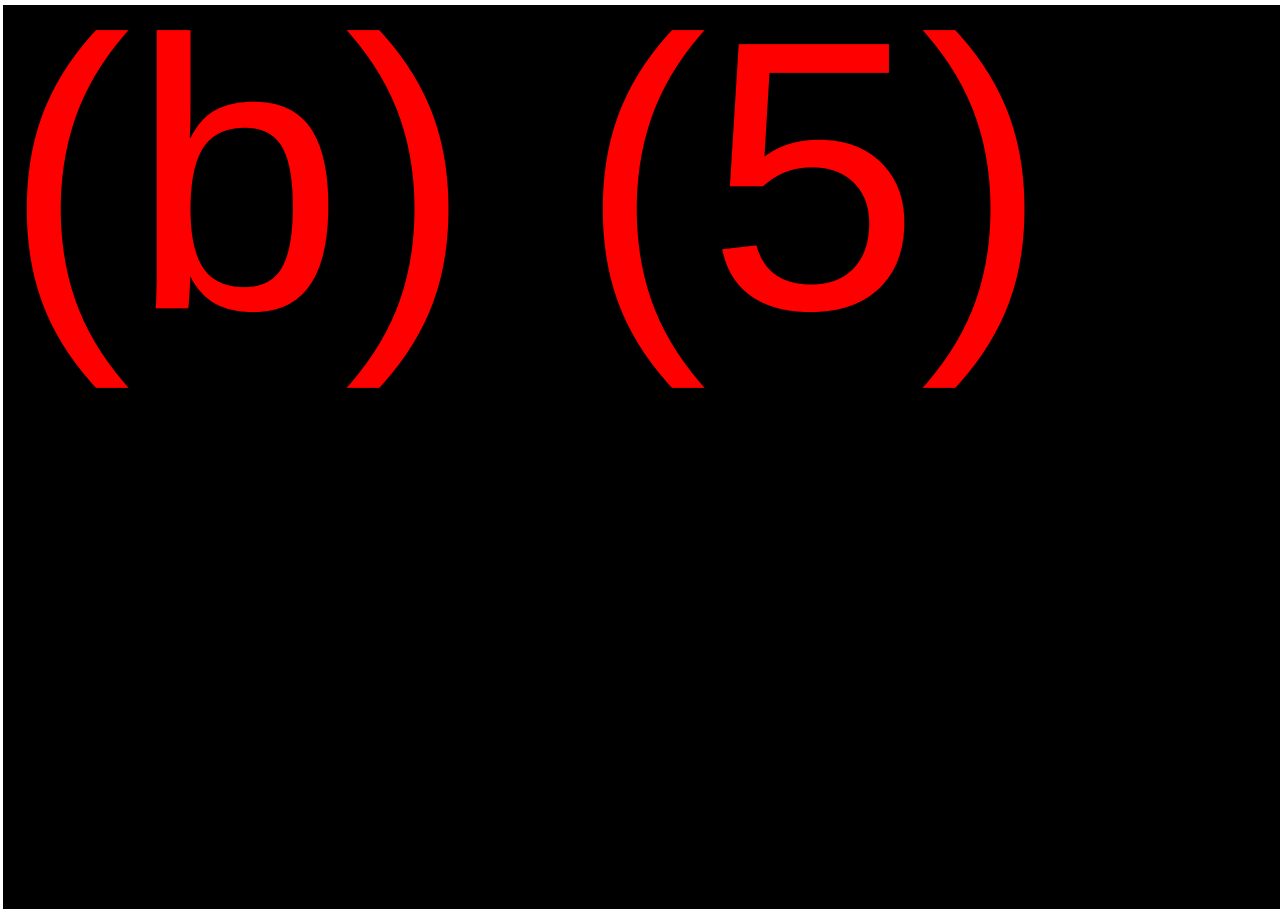
Subject: language for constituent update



Loren ,



May we use this language in a note that we are sending out to our stakeholders today?

OSHA has an extensive consultation program that offers no-cost and confidential occupational health and safety services in all 50 states. Though usually aimed at small- and medium-sized employers, OSHA has waived this size requirement for meat processing facilities during the national emergency. Facilities that need assistance in implementing the CDC/OSHA guidance in their facilities may contact their local consultation office.

Mikki,

Any update on this alert? We started plugging it last week, but I haven't seen it yet. I apologize in advance if I'm the one who missed it.

On a side note, any chance you or Gina have a few minutes to talk this afternoon? I can be available any time after 12:00 today. I want to discuss a related, but slightly different topic.

Thank you,

Todd

Subject: OSHA Alerts

Hi Todd,

Hope you and yours are doing well.

OSHA has been publishing some safety/health alerts for different industries about COVID-19. We're working to get something out for the meat/poultry processing industries and didn't want to duplicate efforts. Of course, everything is on the fast track, so anything you can do respond asap is appreciated.

I've cc'ed Gina, whose taking the lead, in case you have specific questions.

Here's a link to provide examples. alerts

Many thanks, Mikki

Subject: RE: Question

Thank you! We had one suggestion to link to the guidance. Thoughts on this?

Question:
In some areas of meat and poultry processing facilities, social distancing at 6ft of distance may not be feasible in order to maintain continued operation at the maximum capacity possible. In these areas, are other controls, based on the hierarchy of controls outlined in the CDC/OSHA guidance, e.g. PPE, acceptable in order to maintain safe operations at the maximum capacity possible?

Answer

Employers should use the hierarchy of controls to control hazards and protect workers as outlined in the CDC/OSHA guidance, including by first trying to eliminate hazards from the workplace, then implementing engineering controls followed by administrative controls and safe work practices, and finally using personal protective equipment. When engineering controls, such as physical barriers, are not feasible in a particular workplace or for a certain

operation, other types of controls, including PPE, may be considered in accordance with the hierarchy.

Subject: Updates to CDC/OSHA guidance

Good afternoon, Shawna,

I'm reaching out to give USDA an early heads up that CDC and OSHA are working to update our four cobranded COVID-19 guidance documents for meat and poultry processing, manufacturing, agriculture, and seafood processing. (b) (5) [redacted]

We'll aim to share updates with USDA as we move through the process; things are still preliminary.

Thanks for your continued collaboration and partnership throughout the USG response to the pandemic.

Chris

Subject: RE: USDA ESF #11 Interagency Food Supply Chain Team

IFSCT Members,

Thank you for your participation in this morning's call.

We need your feedback on two quick surveys as soon as possible:

1. Feedback on IFSCT
2. Validate and Prioritize Areas of Interest

Action Requested – Send your D/A's primary POC info to Todd McCoy – This person should have authority to speak on behalf of your D/A priorities, and have access to your D/A's rep on the National Economic Council's Food Supply Chain Policy Coordination Committee.

Below is a quick summary of today's call:

(b) (5)

(b) (5)

Not discussed but attached for consideration, the most recent report on *COVID-19 Near-Term Issues Spotting in Food Supply Chain*.

Thank you all again for you participation, and please feel free to reach out if you have any questions.

Best,
Todd

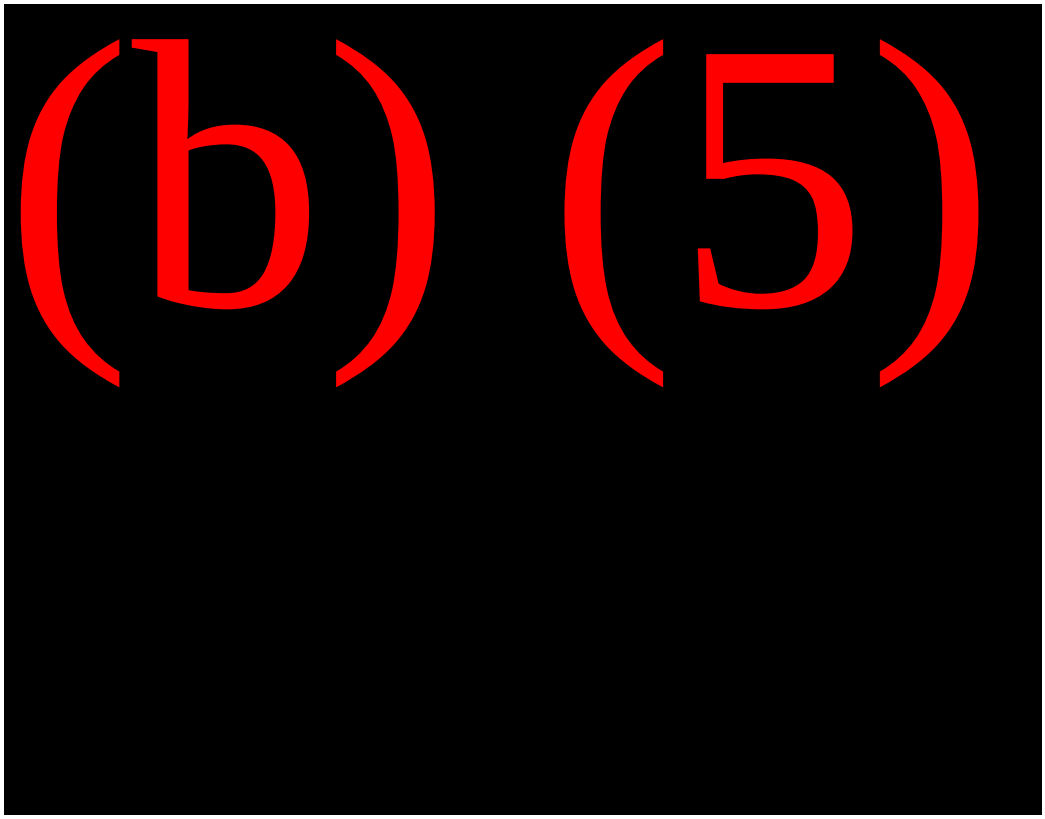
Subject: USDA ESF #11 Interagency Food Supply Chain Team
When: Tuesday, July 7, 2020 8:00 AM-8:30 AM (UTC-05:00) Eastern Time (US & Canada).
Where: (b) (6)

Update: Attachments added to support tomorrow's call.



Purpose: (b) (5)

Frequency: Every Tuesday (weekly) from 8:00 AM to 8:30 AM ET.

Location: (b) (6)

Agenda:

(b) (5)

Background: The global COVID-19 pandemic and cascading supply chain impacts are unprecedented and there are unique challenges to the Food and Agriculture (FA) Sector including but not limited to worker safety; depopulation and carcass disposal; food production and processing; supply/demand/distribution; food security; cross-sector interdependencies; and related.

The FA Sector is composed of complex production, processing, and delivery systems and has the capacity to feed people and animals both within and beyond the boundaries of the United States. These food and agriculture systems are almost entirely under private ownership, operate in highly competitive global markets, strive to operate in harmony with the environment, and provide economic opportunities and an improved quality of life for American citizens and others worldwide. These factors contribute to unique challenges related to disparate and disconnected data sources to inform FSC intelligence.

The continuity of critical infrastructure sectors, including the Food and Agriculture Sector, is not a given. (b) (5) [redacted].

(b) (5)

Background: The global COVID-19 pandemic and cascading supply chain impacts are unprecedented and there are unique challenges to the Food and Agriculture (FA) Sector including but not limited to worker safety; depopulation and carcass disposal; food production and processing; supply/demand/distribution; food security; cross-sector interdependencies; and related.

The FA Sector is composed of complex production, processing, and delivery systems and has the capacity to feed people and animals both within and beyond the boundaries of the United States. These food and agriculture systems are almost entirely under private ownership, operate in highly competitive global markets, strive to operate in harmony with the environment, and provide economic opportunities and an improved quality of life for American citizens and others worldwide. These factors contribute to unique challenges related to disparate and disconnected data sources to inform FSC intelligence.

The continuity of critical infrastructure sectors, including the Food and Agriculture Sector, is not a given. (b) (5)

Attachments: CDAP Access Instructions_200605.pdf
DAWG MAX Access Instructions_200605.pdf

IFSCT Members,

Per this morning's call, attached are two sets of instructions related to the demo provided:

- **COVID-19 Data and Assessment Portal (CDAP) Access Instructions** –This provides instructions for accessing the Data and Assessment Working Group's (DAWG) CDAP, which is the tool demo'ed this morning.
    - The first step in the process is to request access to the CDAP tool by emailing DAWG@anl.gov. In your request, you must provide your name and organizations. Access is free to all federal D/As.

- **DAWG MAX Access Instructions** – This provides instructions on how to access the DAWG's website on MAX.gov. MAX.gov is a government-wide suite of advanced collaboration, information sharing and data collection tools used to facilitate cross-government collaboration and knowledge management.

If anyone would like to follow up with SBA on their out brief this morning, please contact Lynda Lowe at SBA's Office of Disaster Assistance by emailing her at lynda.lowe@sba.gov.

Please let us know if there are any addition topics or questions that should be addressed in next week's meeting.

Thank you for participating in this morning's call, and we look forward to hearing from you next week.

Best,
Todd

IFSCT Members,

Based on feedback we will reschedule our weekly IFSCT meetings to reoccur at a later time. Click here and select a later day/time that best fits your weekly schedule. If we get enough responses today, we will reschedule our next meeting which is currently set for Tuesday (July 14) at 8:00 AM ET.

If you have not done so already, please take a few minutes to validate and prioritize our areas of interest.

Best,
Todd

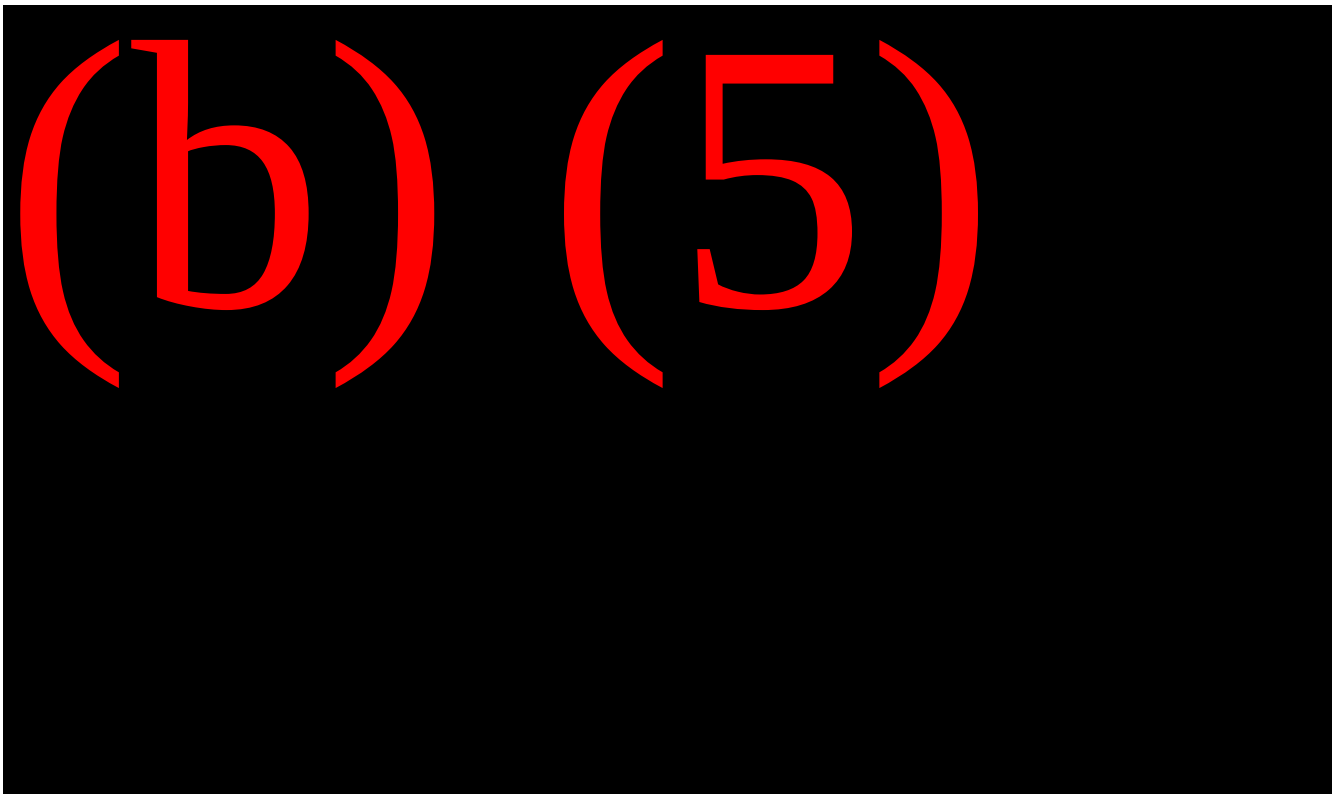
IFSCT Members,



Thank you for your participation in this morning's call.

We need your feedback on two quick surveys as soon as possible:

1. Feedback on IFSCT
2. Validate and Prioritize Areas of Interest

Action Requested – Send your D/A's primary POC info to Todd McCoy – This person should have authority to speak on behalf of your D/A priorities, and have access to your D/A's rep on the National Economic Council's Food Supply Chain Policy Coordination Committee.

Below is a quick summary of today's call:

Not discussed but attached for consideration, the most recent report on *COVID-19 Near-Term Issues Spotting in Food Supply Chain*.

Thank you all again for you participation, and please feel free to reach out if you have any questions.

Best,
Todd

USDA, FDA Strengthen U.S. Food Supply Chain Protections During COVID-19 Pandemic

(Washington, D.C.) May 19, 2020

The following statement is attributed to Mindy Brashears, Ph.D., USDA Under Secretary for Food Safety, and Frank Yiannas, FDA Deputy Commissioner for Food Policy and Response.

As the COVID-19 pandemic response continues, the U.S. Department of Agriculture and the U.S. Food and Drug Administration have been working around the clock on many fronts to support the U.S. food and agriculture sector so that Americans continue to have access to a safe and robust food supply. As a next step in carrying out Executive

Order 13917, the USDA and FDA today announced a Memorandum of Understanding (MOU) to help prevent interruptions at FDA-regulated food facilities, including fruit and vegetable processing.

This is an important preparedness effort as we are approaching peak harvesting seasons, when many fruits and vegetables grown across the U.S. are sent to be frozen or canned. The MOU creates a process for the two agencies to make determinations about circumstances in which the USDA could exercise its authority under the Defense Production Act (DPA) with regard to certain domestic food resource facilities that manufacture, process, pack, or hold foods, as well as to those that grow or harvest food that fall within the FDA's jurisdiction.

While the FDA will continue to work with state and local regulators in a collaborative manner, further action under the DPA may be taken, should it be needed, to ensure the continuity of our food supply. As needed, the FDA will work in consultation with state, local, tribal and territorial regulatory and public health partners; industry or commodity sector; and other relevant stakeholders (e.g. Centers for Disease Control and Prevention, Occupational Safety and Health Administration) to chart a path toward resuming and/or maintaining operations while keeping employees safe.

We are extremely grateful to essential workers for everything they do every day to keep our pantries, refrigerators and freezers stocked. All of the food and agriculture sector -- whether it is regulated by the USDA or FDA -- are considered critical infrastructure, and it is vital for the public health that they continue to operate in accordance with guidelines from the CDC and OSHA regarding worker health and safety. As we work to get through the current challenge together, we remain committed to workers' safety, as well as ensuring the availability of foods, and that our food remains among the safest in the world.

Additional Information

On April 28, 2020, President Donald J. Trump signed Executive Order 13917, Delegating Authority Under the Defense Production Act with Respect to the Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, delegating the powers of the President under the DPA to the Secretary of Agriculture to ensure continuity of operations for our nation's food supply chain. The Executive Order gave the Secretary of Agriculture the authority to utilize the DPA if needed to require the fulfillment of contracts at food processing facilities. The MOU makes clear that the FDA will work with stakeholders to monitor the food supply for food resources not under the USDA's exclusive jurisdiction in order to prevent interruptions at FDA-regulated food facilities.

This action is another in a series of proactive steps the USDA and FDA have taken to maximize food availability following unprecedented disruptions the COVID-19 pandemic has caused to food supply chains that have been established and refined for decades.

Supporting Industry and Protecting Frontline Workers

Our nation's food and agriculture facilities and workers play an integral role in the

continuity of our food supply chain.

The USDA and FDA have been working to ensure that frontline workers in food facilities and retailers that have remained on the job during this crisis have the information and resources they need for business continuity and to continue working safely, which includes mitigating the risk of spreading COVID-19. We continue to provide information and update frequently asked questions on both the FDA and USDA's websites.

We will continue to work with facilities and farms, CDC, OSHA, and state, tribal, and local officials to ensure facilities and farms are implementing practices consistent with federal worker safety guidelines to keep employees safe and continue operations.

We are working with our federal partners who have the authority and expertise over worker safety to develop information on protecting worker health. We are also working with other federal partners to assist the food and agriculture industry in addressing shortages of personal protective equipment (PPE), cloth face coverings, disinfectants and sanitation supplies.

Monitoring and Securing Human and Animal Food Supply Chains 24/7

Throughout the pandemic, the USDA and FDA have been closely monitoring the food supply chain for shortages in collaboration with industry and our federal and state partners. We are in regular contact with food manufacturers and grocery stores.

We have issued guidances to ensure regulatory flexibility to safely reroute food that typically would be bought in bulk by food facilities and restaurants, like eggs and flour, directly to consumers.

Food Safety Reminders for Every American

As we continue to respond to COVID-19, we want to remind consumers that there is no evidence that COVID-19 has been transmitted by food or food packaging, as well as the importance of taking precautionary food safety steps to protect against foodborne illness pathogens such as *Salmonella* and *E. Coli*.

With respect to the safety of food across the U.S., both the USDA and FDA continue to use their respective authorities, including conducting inspections, as appropriate. The agencies also continue to monitor foods for hazards, work with industry on any potential or reported issues in their facilities, and conduct food recalls when appropriate. This applies to both domestically produced food and food that is imported from other countries.

Unlike foodborne gastrointestinal (GI) viruses like norovirus and hepatitis A that often make people ill through contaminated food, foodborne exposure is not known to be a route of transmission for SARS-CoV-2, which causes COVID-19.

With respect to foodborne pathogens, the CDC, FDA and FSIS continue to work with state and local partners to investigate foodborne illness and outbreaks. During this coronavirus outbreak, we will continue to operate to prepare for, coordinate and carry

out response activities to incidents of foodborne illness in both human and animal food.

SARS-CoV-2 failure to infect or replicate in mosquitoes: an extreme challenge

Yan-Jang S. Huang[1,2], Dana L. Vanlandingham[1,2], Ashley N. Bilyeu[1,2], Haelea M. Sharp[1,2], Susan M. Hettenbach[2] & Stephen Higgs[1,2]✉

This research addresses public speculation that SARS-CoV-2 might be transmitted by mosquitoes. The World Health Organization has stated "To date there has been no information nor evidence to suggest that the new coronavirus could be transmitted by mosquitoes". Here we provide the first experimental data to investigate the capacity of SARS-CoV-2 to infect and be transmitted by mosquitoes. Three widely distributed species of mosquito; *Aedes aegypti*, *Ae. albopictus* and *Culex quinquefasciatus*, representing the two most significant genera of arbovirus vectors that infect people, were tested. We demonstrate that even under extreme conditions, SARS-CoV-2 virus is unable to replicate in these mosquitoes and therefore cannot be transmitted to people even in the unlikely event that a mosquito fed upon a viremic host.

The question has been asked as to whether or not SARS-CoV-2, the causative agent of COVID-19, can infect and be transmitted by mosquitoes. The WHO has definitively stated that mosquitoes cannot transmit the virus[1], and in interviews, various experts have unanimously and definitively also dispelled the suggestion that SARS-CoV-2 could be transmitted by mosquitoes. The presumption may be based on various observations and facts extrapolated from other coronaviruses. For example, neither the closely related SARS-CoV nor MERS produce the level of virus in the blood that for typical arthropod-borne viruses such as dengue and yellow fever, would be regarded as high enough to infect mosquitoes. Recent studies with infected humans and non-human primates infected with SARS-CoV-2, found no detectable virus in peripheral blood[2,3]. Lack of viremia is also suggested by the fact that neither SARS-CoV nor MERS infections have resulted from blood transfusions or organ transplantations. Since mechanical transmission of viruses by arthropods requires a very high viremia[4], even if mosquitoes were interrupted when feeding on a SARS-CoV-2 infected person, the mouthparts would not be contaminated. Although we do not know the duration of virus infectivity on contaminated surfaces, mechanical transmission by non-hematophagous arthropods seems highly unlikely, and even if not impossible, would result in very few, if any human infections, and not be epidemiologically relevant. Despite the lack of detectable viremia, experiments to determine the potential role of mosquitoes in SARS-CoV-2 transmission, are necessary because previous experiments have demonstrated that mosquitoes may become infected with viruses even when exposed to levels of infectious virus that are below the level of detection[5–7].

To be a biological vector of viruses, mosquitoes must take up sufficient virus to infect midgut epithelial cells, and the virus must then disseminate to infect other organs in the hemocoel, notably the salivary glands. Overcoming the midgut infection and escape barriers is essential for a virus to be transmissible by mosquitoes. If these barriers are bypassed by direct inoculation of virus into the hemocoel, then even non-susceptible mosquitoes can be infected. Intrathoracic inoculation[8,9] of virus directly into the hemocoel can accomplish short-term infection of insects that could never be naturally infected because they do not feed on blood. These include not only non-hematophagous mosquitoes such as *Toxorhynchites* spp, but also male mosquitoes and even beetles and butterflies[10,11]. The use of intrathoracic inoculation, also addressed published reports that the natural physical breaching of the midgut wall by filarial, may enable a disseminated coinfection of viruses in resistant mosquitoes[12].

Similar to over 500 viruses that are transmitted by arthropods[13], with the exception of African swine fever virus, coronaviruses have an RNA genome. In spite of the recovery of coronavirus or coronavirus-like agents

Table 1. Recovery rates of SARS-CoV-2 in mosquitoes receiving intrathoracic injection. * Mosquitoes obtained at day 0 post infection were collected within 2 h from the time of intrathoracic injection. ** All mock control groups of mosquitoes received Leibovitz's L-15 media.

from various arthropods[14,15], no virus in the family has been isolated from mosquitoes. To date, only one report related to epidemic coronaviruses and mosquitoes has been published[16]. This study that evaluated the potential use of mosquitoes for surveillance, included feeding of MERS virus to *Anopheles gambiae* mosquitoes. Residual viral RNA, probably in the remains of the bloodmeal in the midgut, was detected up to 1-day post-feeding. Similarly, positive PCR detection was observed for *Bacillus anthracis*, *Trypanosoma brucei gambiensis,* and Zika virus, none of which infect or are transmitted by *An. gambiae*. Levels of detected RNA were equal to or below the input level, indicating a lack of replication. By analyzing samples using in vitro cultivation, rather than using molecular approaches, we focused specifically on detection of infectious virus rather than on RNA. As illustrated by, for example, the use of inactivation techniques specifically developed to enable safe handling and shipping of viral material, the mere presence of RNA does not mean that any infectious virus is actually present. It is well known that viral RNA can be detected in mosquitoes simply because they have fed on a viremic host, and so RNA detection should never be interpreted as proof of mosquito susceptibility to infection and competence to transmit the virus.

Results

In this study, the susceptibility of three mosquito species, *Ae. aegypti*, *Ae. albopictus* and *Cx. quinquefasciatus*, were determined through the intrathoracic inoculation with SARS-CoV-2. Infectious viruses were recovered from 13/15 mosquitoes collected within two hours of inoculation. It is possible, that in the two negative mosquitoes, the inoculated virus lost infectivity during the holding period. No virus was detected in the 277 inoculated mosquitoes collected and titrated at time points beyond 24 h, suggesting a rapid loss of infectivity and the lack of replication after injection. From a total of 48 mosquitoes analyzed, infectious viruses were only recovered from one *Ae. albopictus* collected at 24 h post-inoculation. The quantity of infectious virus in this mosquito corresponded to the amount of inocula, producing infectious titers at approximately 1.5 $\log TCID_{50}$/ml. No virus was detected in control L-15 medium inoculated mosquitoes. Collectively, our findings suggest that mosquitoes in the *Aedes* and *Culex* genera are refractory to SARS-CoV-2 and unlikely to contribute to viral maintenance and transmission in nature (Table 1.).

Discussion

The most extreme approach for viral challenge of mosquitoes, namely intrathoracic inoculation, was used as an ultimate test of the capacity of SARS-CoV-2 to infect and replicate in mosquitoes. The hypothesis was that if the virus did not replicate in mosquitoes after intrathoracic inoculation, then even if mosquitoes did feed on viremic people, and the virus disseminated from the midgut, the lack of replication would preclude the possibility of biological transmission. Three widely distributed species of mosquito, representing the two most significant genera of arbovirus vectors that infect people, were tested. All three of the species: *Aedes aegypti*, *Ae. albopictus,* and *Culex quinquefasciatus* are present in China, the country of origin of SARS-CoV-2. Samples collected within two hours of inoculation confirmed efficient delivery of infectious viruses to mosquitoes. Based upon the lack of detectable infectious virus in any of the 277 samples collected at all time points beyond 24 h post-inoculation, we conclude that SARS-CoV-2 is unable to replicate in mosquitoes and that even if a mosquito fed on a person with virus in the blood, that the mosquito would not be a vector if feeding on a naïve host.

Methods

Virus: SARS-CoV-2 virus WA1/2020 strain was obtained from BEI Resources (Catalog # NR-52281). Virus was propagated in Vero76 cells at the approximate multiplicity of infection of 0.01. Using serial tenfold dilutions in 96-well plates[17], infectious titers of viral stocks used for intrathoracic injection were approximately 5.5 $\log TCID_{50}$/ml.

Mosquitoes: The colonized *Aedes aegypti* strain Rex D, Higgs white eye was originally obtained from Puerto Rico[18], *Ae. albopictus* generation F11 originated from New Jersey, and *Culex quinquefasciatus* F43 were from Florida[19,20]. All mosquitoes were reared at 28 °C, relative humidity of 80% and a 12 h light:12 h dark photoperiod. These colonized mosquitoes have proven to be susceptible to several arboviruses[19,21–26].

Viral challenge of mosquitoes: For intrathoracic inoculation[9], mosquitoes were cold-anaesthetized on ice, transferred to a secure glove box, and then inoculated with approximately 0.5 µl of viral stock. It was anticipated that each mosquito received approximately 2.0 $\log TCID_{50}$/ml of infectious viruses. L-15 medium was inoculated

as a negative control. The results were compiled from two experiments using *Ae. aegypti* and *Ae. albopictus* and one experiment using *Cx. quinquefasciatus*. Experimentally challenged mosquitoes were maintained and sampled under conditions as described above. Mosquitoes were individually triturated in 1 ml of medium using a TissueLyser II platform (Qiagen, Valencia, CA), and titrated on Vero cells as previously described.

FYI: Mosquitoes are not seen as a likely transition vector for SARS-CoV-2, as published by the Kansas State University's Biosecurity Research Institute last Friday.

Abstract: This research addresses public speculation that SARS-CoV-2 might be transmitted by mosquitoes. The World Health Organization has stated "To date there has been no information nor evidence to suggest that the new coronavirus could be transmitted by mosquitoes". Here we provide the first experimental data to investigate the capacity of SARS-CoV-2 to infect and be transmitted by mosquitoes. Three widely distributed species of mosquito; *Aedes aegypti, Ae. albopictus and Culex quinquefasciatus*, representing the two most significant genera of arbovirus vectors that infect people, were tested. We demonstrate that even under extreme conditions, SARS-CoV-2 virus is unable to replicate in these mosquitoes and therefore cannot be transmitted to people even in the unlikely event that a mosquito fed upon a viremic host.

Importance:	High

All,

Thank you so much for your participation on the ESF #11 Interagency Food Supply Chain Team. As we are continuing to build momentum, I would like to take the temperature of our members. I am working with the standing, and new, working groups and want to make sure that our team is hitting the mark on the current needs. With that, **I request that you all respond to David Stiefel (david.stiefel@usda.gov) by COB tomorrow (5/22) with your responses to the following short survey:**

- (b) (5) [redacted]
- [redacted]
- [redacted]

Thank you so much for your help making this group as useful as possible.

Have a great rest of your day.

Sincerely,

Rosalynn Days-Austin

Statement of Enforcement Policy by Solicitor of Labor Kate O'Scannlain and Principal Deputy Assistant Secretary for OSHA Loren Sweatt regarding Meat and Poultry Processing Facilities

The Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control and Prevention (CDC) recently issued joint interim guidance for meat and poultry processing workers and employers (Joint Meat Processing Guidance) in light of multiple outbreaks of COVID-19 among meat, pork, and poultry processing facility workers. It is vitally important that employers in this critical industry adhere to the Joint Meat Processing Guidance to protect their workers from the risk of COVID-19 infection. Moreover, the security of America's food supply relies on meat, pork, and poultry processing facilities continuing to operate, which they cannot do without a healthy workforce. In light of President Trump's invocation of the Defense Production Act (DPA) with respect to protein processing, OSHA and the Solicitor of Labor issue this statement to clarify the effect of the Joint Meat Processing Guidance in this circumstance.

OSHA has issued enforcement guidance indicating the agency will use enforcement discretion for employers adhering to appropriate guidance, including the Joint Meat Processing Guidance. As stated in the Joint Meat Processing Guidance, employers should conduct worksite assessments to identify COVID-19 risks and prevention strategies and then implement them. It is important that employers seek to adhere to this Guidance. To the extent employers determine that certain measures are not feasible in the context of specific plants and circumstances, they are encouraged to document why that is the case. In the event of an investigation, OSHA will take into account good faith attempts to follow the Joint Meat Processing Guidance. OSHA does not anticipate citing employers that adhere to the Joint Meat Processing Guidance. Additionally, because of the President's invocation of the DPA, no part of the Joint Meat Processing Guidance should be construed to indicate that state and local authorities may direct a meat and poultry processing facility to close, to remain closed, or to operate in accordance with procedures other than those provided for in this Guidance

In addition, courts often consider compliance with OSHA standards and guidance as evidence in an employer's favor in litigation. Where a meat, pork, or poultry processing employer operating pursuant to the President's invocation of the DPA has demonstrated good faith attempts to comply with the Joint Meat Processing Guidance and is sued for alleged workplace exposures, the Department of Labor will consider a request to participate in that litigation in support of the employer's compliance program. Likewise, the Department of Labor will consider similar

requests by workers if their employer has not taken steps in good faith to follow the Joint Meat Processing Guidance.

OSHA encourages employers to contact OSHA for compliance assistance or the OSHA On-Site Consultation Program for assistance in applying the joint guidance to their worksites. Employers also may contact CDC for assistance.

DAVID G. SARVADI

Mr. Sarvadi practices in the areas of occupational health and safety, toxic substance management, pesticide regulation, and product safety.

Mr. Sarvadi represents clients before a variety of federal and state enforcement agencies in legal proceedings involving OSHA citations, EPA Notice of Violations, TSCA consent orders, CPSC Notices, FIFRA Stop Sale Use and Removal Orders, and EEOC Charges of Discrimination. He works with clients in developing, reviewing, and auditing compliance programs in all of these areas, and in obtaining agency rulings on proposed or novel activities and questions, seeking interpretations of regulations as they apply to specific sets of facts. He has been counsel to the National Coalition on Ergonomics from its inception.

He has a background in occupational safety and health, having worked as an industrial hygienist for more than 15 years and became a Certified Industrial Hygienist in 1978, a designation he held until he voluntarily relinquished it in 2010. Prior to becoming an attorney, he managed a corporate industrial hygiene program for a Fortune 500 company. Mr. Sarvadi was selected by the National Academy of Sciences to participate in a panel of the Institute of Medicine that was asked to review a NIOSH study on the use of respirators. He was asked to participate because of his expertise in law and industrial hygiene.

TOPICS TO BE DISCUSSED

- Background on AFL-CIO emergency petition
- Understanding OSHA Emergency Temporary Standards
- Agency deference
- OSHA's approach to COVID-19
- What employers should do

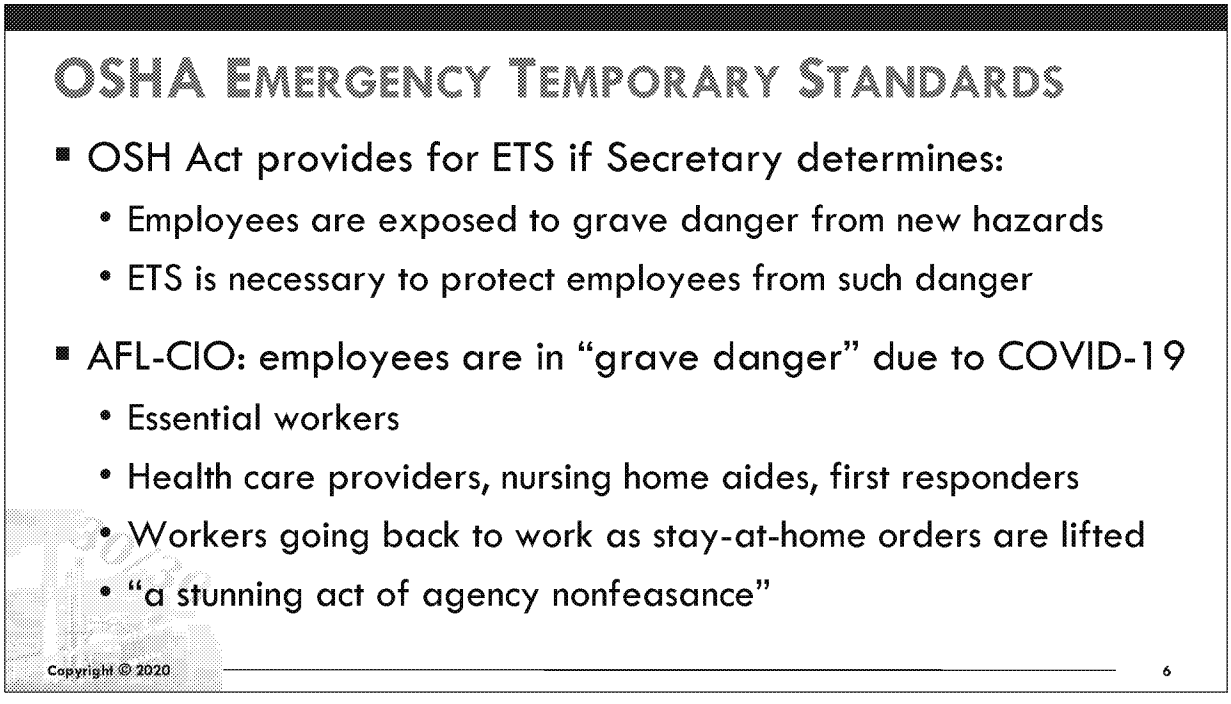
Copyright © 2020

RATH

RATH

This is not the first time the AFL-CIO has petitioned OSHA to issue a rulemaking for infectious disease. AFL-CIO has done similar petitions in the past:
Asked OSHA to issue ETS in 2005 to address influenza
Asked OSHA to issue permanent standard in 2009 for infectious diseases
OSHA began rulemaking for infectious diseases but never completed it
Request for information from 2010
SBREFA panel took place and issued report on infectious diseases in 2014
Public stakeholder meetings on an infectious disease standard in 2011.

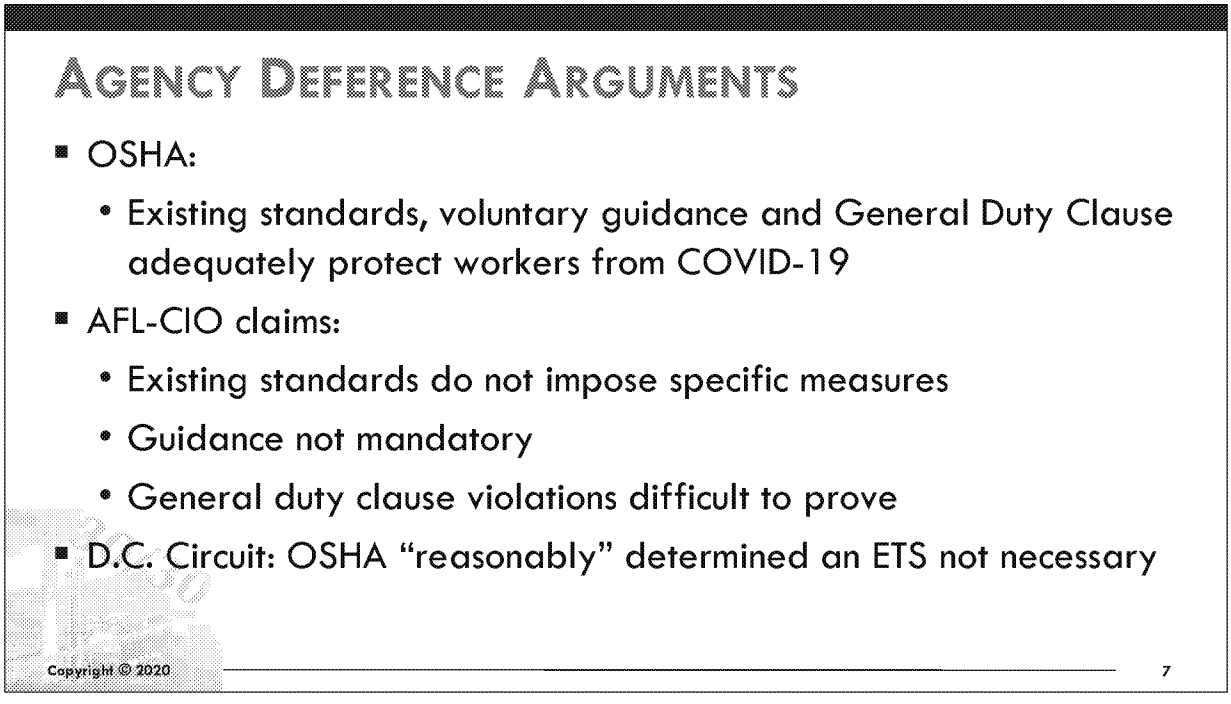
This petition came about in response to COVID-19
AFL-CIO: in the face of a global health emergency causing more deaths in less time than any other workplace crisis OSHA has faced in its fifty-year existence, OSHA's refusal to issue an ETS constitutes an abuse of agency discretion so blatant and of "such magnitude" as to amount to a clear "abdication of statutory responsibility."



Argued that OSHA's evolving voluntary guidance "no substitute" for mandatory COVID-19-specific duties on employers.

AFL-CIO argued that OSHA effectively denied its petition and is unreasonably delaying its statutory obligations by not formally responding to the petition in 2 months, besides an informal letter from the Secretary or Labor defending the adequacy of OSHA's guidance.

The AFL-CIO filed a petition for a writ of mandamus in the DC Circuit to compel OSHA to issue the ETS within 30 days (Argue OSHA can issue ETS within 30 days because it has been working on infectious disease standard already).



The Court of Appeals has authority to consider claims that an agency unlawfully withheld or unreasonably delayed regulatory action and the court can compel the agency to take action

OSHA denial of petition: Letter from Loren Sweatt , Principal Deputy Assistant Secretary for OSHA, said that OSHA determined it lacks compelling evidence to find that an undefined category of infectious diseases generally pose a grave danger for which an ETS is an appropriate remedy. Also not necessary to issue an ETS for COVID-19 because the guidance issued, enforcement of existing standards, in combination with COVID-19 related requirements and guidelines by other entities render an ETS unnecessary
It would be counter productive to attempt to fashion a COVID-19 standard at this time given that it is the subject of a constantly evolving multi-agency response

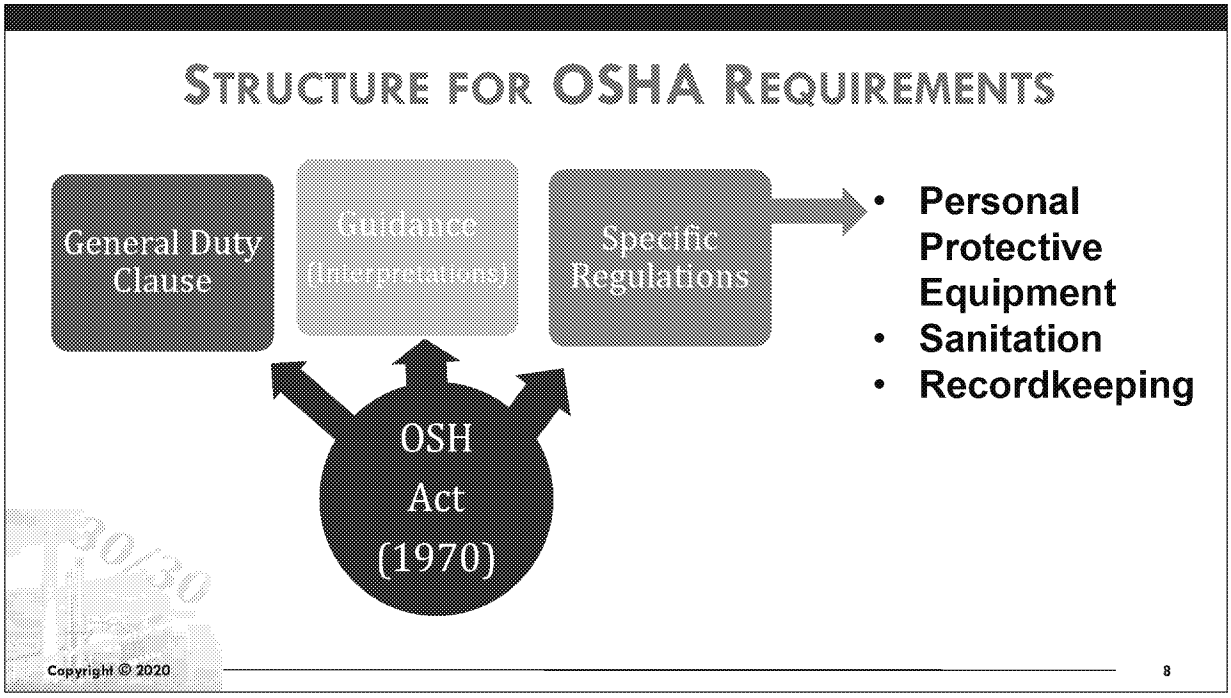
JAV
- Section 6 of the OSH Act gives OSHA the authority to issue emergency temporary standards if the Agency determines:
--that employees are exposed to grave danger from exposure to new hazards, and
--that an emergency standard is necessary to protect employees from such danger.
-So if OSHA issues an emergency temporary standard, it takes effect immediately until it is superseded by a permanent standard which OSHA is supposed to promulgate within 6 months of the ETS
AFL-CIO argued that and ETS is appropriate because COVID-19 put employees in grave danger, saying that the virus poses a danger of incurable, permanent, or fatal consequences to workers exposed to the hazard. They cite to figures that over 2 million people in the US have been infected with the virus and about 110,000 people have died.
The AFL-CIO also discussed how the dangers of COVID are especially true for workers who were deemed to be essential workers so they still went into work, and of course health care workers and nursing home aides and emergency responders who come into direct contact with people with the virus, and also for workers going back to work as state stay at home orders are lifted.
AFL-CIO argued that an OSHA standard for infectious diseases is necessary to protect employees from this grave danger. They asked OSHA to issue an ETS that would require employers to evaluate their workplaces for the risk of airborne disease transmission and to develop a comprehensive infection control plan with specified elements like social distancing, PPE, access to hand sanitizers, testing and quarantining.

And the AFL-CIO called OSHA's refusal to take action on an ETS a stunning act of nonfeasance in the midst of this workplace heath emergency.

RATH

OSHA:
-- two prong strategy:
1) enforcing existing rules
2) using rapid, flexible guidance that is industry specific so that it can be easily updated as information on COVID and spread prevention continues to evolve
- AFL-CIO wants OSHA to issue ETS which would go into effect immediately without public input, and then a permanent rule informed by comment just 6 mos later
- "That is warp-speed for an agency like OSHA that must act upon substantial evidence with extensive public input, and ill-suited for an evolving hazard"
--ETS is rarely used and a drastic measure
-- to find that an ETS is necessary to address the grave danger, OSHA has to show that an ETS would substantially reduce the grave danger during the time the ETS would be in effect and that such a reduction could not be obtained by enforcing existing OSH Act requirements or widespread voluntary efforts to address the hazard
-- AFL-CIO lacks evidence that infectious diseases generally (as a group) pose a grave danger to worker safety (cannot issue broad standard to entire class of known and unknown substances and agents) or that enforcement of existing standards would not substantially reduce the danger and so an ETS is needed
-- AFL-CIO fails to meet its high burden of overcoming the great deference that is due to OSHA's assessment of facts and policies underlying its decision that an ETS is not necessary now.
-- all enforcement guidance and guidance to industries; investigations of complaints
-- existing standards and general duty clause
-- coordination with other agencies and businesses and employee groups
-- coordination with state plans
-- monitoring state and local activities and industry guidance
-- attempting to permanently address workplace exposure to COVID based on evolving information is counterproductive and would deprive agency of needed flexibility to respond
AFL-CIO has not demonstrated that the lack of an ETS is the traceable cause of any injury
Setting rules in stone through an ETS and later a permanent rule may undermine worker protection by permanently mandating precautions that later prove to be ineffective

AFL-CIO
--Concerned about nonmandatory guidance because of non-uniform implementation
--Says given reported illnesses and deaths, it "should be obvious" that voluntary employer action has not adequately protected workers from COVID
--Also argued other agencies are taking regulatory action to address COVID to OSHA should too

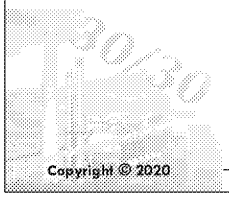


--General duty clause: difficult to prove that hazard is present and that it is feasible for employers to abate the hazard

The Court accords great deference to the policy judgments of the agency unless their decision lacks support in the record.
DC Circuit: denied AFL-CIO petition for a writ of mandamus
OSHA's decision to not issue an ETS is entitled to considerable deference
In light of the unprecedented nature of the COVID 19 pandemic, as well as the regulatory tools that OSHA has at its disposal to ensure employers are maintaining hazard-free work environments, OSHA reasonably determined that an ETS is not necessary at this time

---

FYI Amicus briefs arguing why Secretary's decision is supported:
Chamber and other associations amicus brief
Secretary's decision is supported
Enforceable OSHA standards already protect workers from COVID such as PPE, eye and face protection, respiratory protection, sanitation, and hazard communication standard
OSHA has issued industry specific guidance explaining how these existing standards apply and articulated best practices for businesses and employers to follow in light of evolving scientific understanding of COVID
Approach is reasonable and preferable because data on COVID continues to develop so employers have to be able to adapt to the changing circumstances
Also CDC has issued guidance for industries
Better than a rigid uniform standard
Easier to quickly revise guidance
Guidance can be tailored to the needs of a specific industry
Private sector also issuing best practices



NAHB, ABC and other contractors amicus brief
Already a lot of construction specific guidance out there so no need for ETS
Not enough time for OSHA to assess how rule can apply to all industries
AFL-CIO petition does not present evidence of a need or risk specific to construction
Petition trivializes extensive industry efforts to implement control measures and active involvement of state and local authorities
The ETS would not provide for construction specific considerations (like being outdoors with continuous air flow)

STRUCTURE FOR OSHA REQUIREMENTS
General Duty Clause
Guidance (Interpretations)
Specific Regulations
• Personal Protective Equipment
• Sanitation

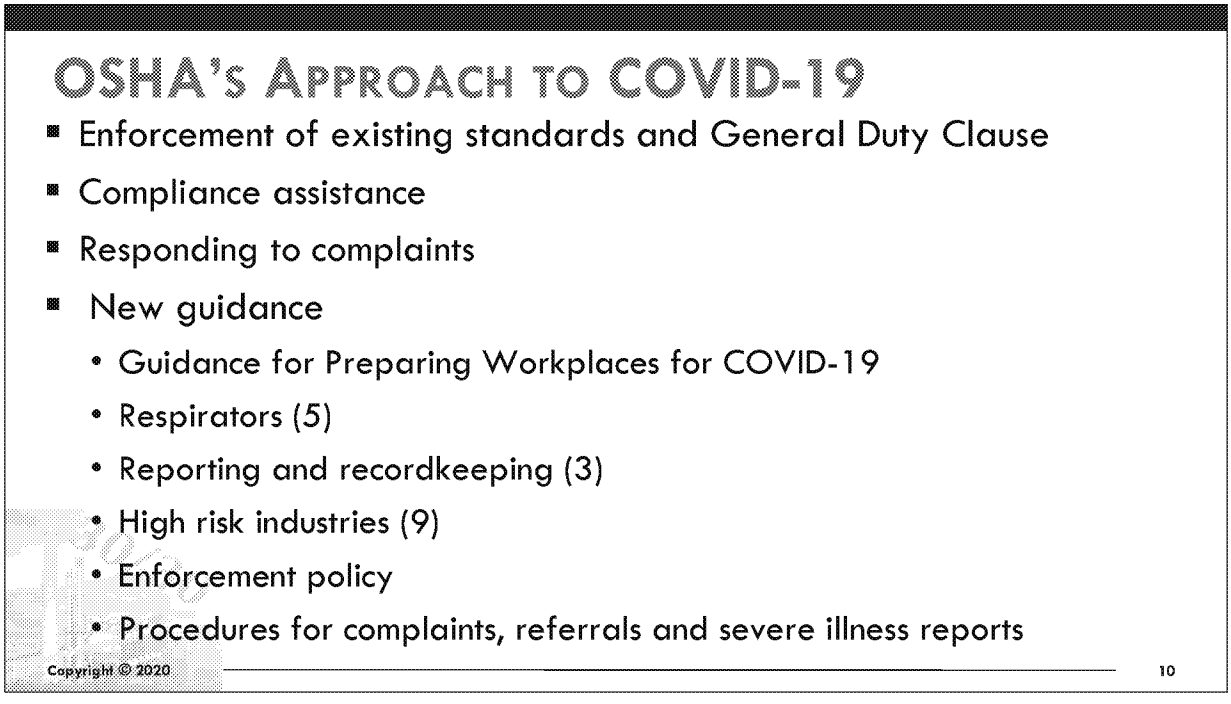
AGENCY DEFERENCE ON ETS DECISIONS

- "The OSHA's decision not to issue an ETS is entitled to considerable deference."
  - *Pub. Citizen Health Research Grp. v. Auchter* (D.C. Cir. 1983)
  - *the unprecedented nature of the pandemic*
  - *Regulatory tools available to OSHA*



Copyright © 2020

JAV
So before we get into the DC Circuit's ruling on the case, we wanted to give some background on the level of deference the D.C. Circuit affords OSHA when it decides not to issue an ETS

The D.C. Circuit here looked to precedent in the Public Citizen Health Research Group vs. Auchter case from 1983 where the DC Circuit decided that OSHA is entitled to considerable deference when deciding whether or not to issue an ETS unless their decision lacks support in the record.

So that was the standard applied in this case by the D.C. Circuit.

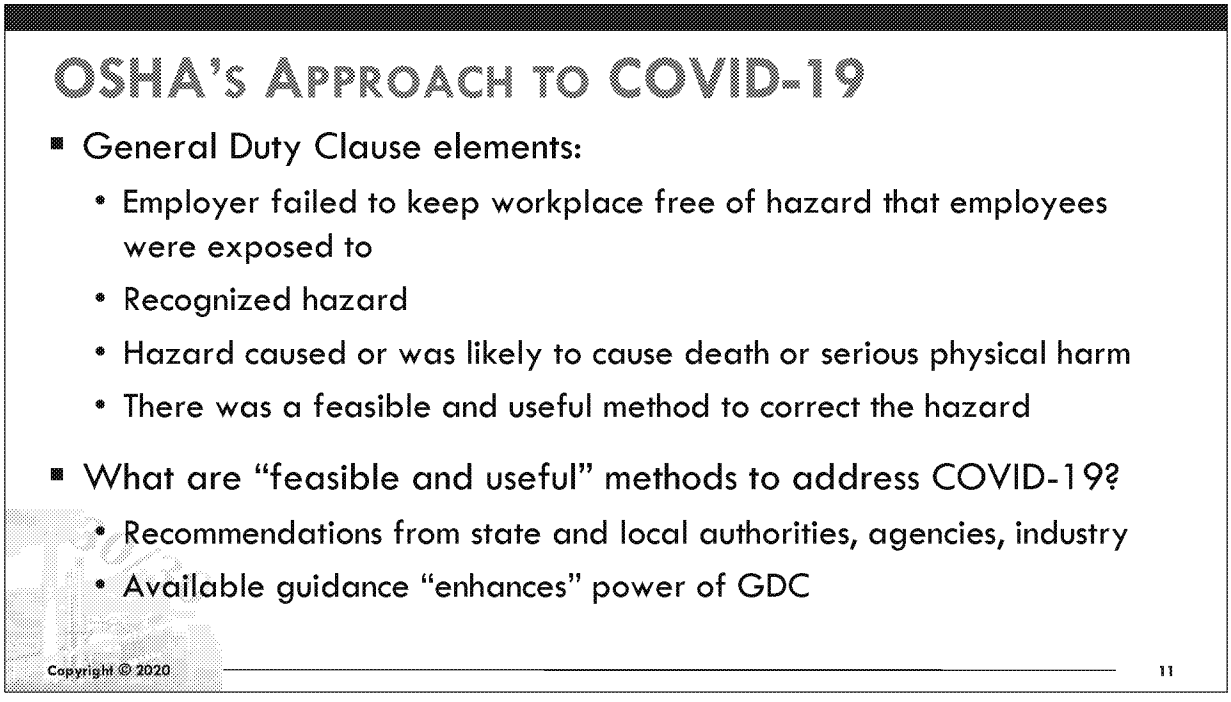
JAV
Let's dig in more to the actions that OSHA has taken so far to address COVID-19 that OSHA cited to for support that an ETS is not required

First, OSHA already has existing standards that can address worker protections that are relevant to infectious diseases. For example, the respiratory protection, PPE, hazard communication, sanitation and bloodborne pathogens standards impose enforceable requirements on employers that can protect employees from airborne exposures.

OSHA has also worked to provide compliance assistance to companies by answering employers', workers', industry representatives and union representatives questions webinars, OSHA's online portal, and phone calls.
OSHA also shares best practices with its State Plan states every two weeks
OSHA's consultation programs have also conducted over 4,000 outreach activities and its regional and area offices have conducted over 900 outreach activities related to COVID-19.

OSHA has also responded to COVID-19- related complaints. OSHA cited that as of May 21, OSHA has received about 4,200 COVID-19 related complaints, of which almost 3000 have been closed. And they are addressing whistleblower complaints

And finally, OSHA has issued numerous guidance documents since March that address COVID-19, starting with guidance for preparing workplaces for COVID-19 so employers can assess the hazards in their workplaces; to issuing 5 different guidances on the use of respirators, and 3 different guidances that address recordkeeping and reporting, and at least 9 guidance documents addressing specific high risk industries like nursing home workers and food delivery services and meat packaging workers
And it clarified its enforcement policy during COVID-19 as well as its procedures for handling complaints and referrals during the pandemic



So OSHA has been using all of these tools to address COVID-19

Guidance: From: https://www.osha.gov/news/newsreleases/national/05282020

Respirator Guidance:
U.S. Department of Labor Expands Temporary Guidance for Respirator Fit-Testing to All Industries During COVID-19 Pandemic – OSHA has expanded temporary guidance provided in a March 14, 2020, memorandum regarding supply shortages of N95s or other filtering facepiece respirators (FFRs) due to the COVID-19 pandemic. This expanded guidance applies to all workplaces covered by OSHA where there is required respirator use.
U.S. Department of Labor Issues Temporary Enforcement Guidance for Respirator Fit-Testing in Healthcare during COVID-19

Outbreak – Following President Donald J. Trump's memorandum on the availability of respirators during the COVID-19 outbreak, OSHA has issued new temporary guidance regarding the enforcement of its s Respiratory Protection standard.
U.S. Department of Labor Issues Additional Respirator Guidance for Healthcare During The Coronavirus Pandemic – OSHA issued its fifth guidance document aimed at expanding availability of respirators as front line workers respond to the coronavirus pandemic. The latest interim guidance document outlines acceptable methods for decontaminating and reusing disposable N95 FFRs.
U.S. Department of Labor Issues Guidance for Respirators Certified under Other Countries' Standards During COVID-19 Pandemic – OSHA has issued interim enforcement guidance regarding disposable N95 FFRs that are either certified under certain standards of other countries or jurisdictions or certified under other countries' or jurisdictions' standards but are expired.
U.S. Department of Labor Issues Guidance for Respiratory Protection During N95 Shortage Due to COVID-19 Pandemic – OSHA has issued interim enforcement guidance to help combat supply shortages of disposable N95 FFRs. The action marks the department's latest step to ensure the availability of respirators and follows President Donald J. Trump's Memorandum on Making General Use Respirators Available.
Protecting Workers in High-Risk Industries
U.S. Department of Labor Issues Alert to Keep Nursing Home and Long-Term Care Facility Workers Safe During Coronavirus Pandemic – OSHA issued an alert listing safety tips employers can follow to help protect nursing home and long-term care facility workers from exposure to the coronavirus.
U.S. Department of Labor Issues Alert to Help Keep Retail Pharmacy Workers Safe During the Coronavirus Pandemic – OSHA has issued an alert listing safety tips employers can follow to help protect retail pharmacy workers from exposure to the coronavirus.
U.S. Department of Labor Issues Alert for Rideshare, Taxi And Car Service Safety During Coronavirus Pandemic – OSHA has issued an alert listing safety tips to help reduce the risk of exposure to the coronavirus in the car service industry.
U.S. Department of Labor Publishes New OSHA Poster Aimed At Reducing Workplace Exposure to the Coronavirus – OSHA issued a new poster listing steps all workplaces can take to reduce the risk of exposure to coronavirus.
U.S. Department of Labor Issues Alert to Keep Package Delivery Workers Safe during COVID-19 Pandemic – OSHA issued an alert listing safety tips employers can follow to help protect package delivery workers from exposure to coronavirus.
U.S. Department of Labor Issues Alert to Keep Retail Workers Safe During Coronavirus Pandemic – OSHA issued an alert listing safety tips employers can follow to help protect retail workers from exposure to coronavirus.
U.S. Department of Labor Issues Alert to Help Keep Manufacturing Workers Safe During Coronavirus Pandemic – OSHA issued an alert identifying workplace safety practices to help protect manufacturing workers from exposure to coronavirus.
U.S. Department of Labor Issues Alert to Help Keep Construction Workers Safe During The Coronavirus Pandemic – OSHA issued an alert identifying workplace safety practices to help protect construction workers from exposure to coronavirus.
OSHA Issue Safety Alert for Restaurant, Food and Beverage Businesses Providing Curbside Pickup and Takeout Service – OSHA released guidance to help restaurant, food and beverage businesses to keep employees safe while utilizing curbside pickup and takeout service delivery methods. The guidance includes practical recommendations like avoiding direct hand-off when possible and practicing social distancing.
Enforcing Safety in the Workplace
U.S. Department of Labor Adopts Revised Enforcement Policies For Coronavirus – OSHA has adopted revised policies for enforcing its requirements with respect to coronavirus as economies reopen in states throughout the country.
U.S. Department of Labor Announces OSHA Interim Enforcement Response Plan to Protect Workers During The Coronavirus Pandemic – OSHA announced an interim enforcement response plan for the coronavirus pandemic that provides instructions and guidance to OSHA Area Offices and compliance safety and health officers for handling coronavirus-related complaints, referrals and severe illness reports. The plan concentrates enforcement on coronavirus exposures of health workers, emergency responders and others.
U.S. Department of Labor Reminds Employers That They Cannot Retaliate Against Workers Reporting Unsafe Conditions During Coronavirus Pandemic – OSHA is reminding employers that it is illegal to retaliate against workers because they report unsafe and unhealthful working conditions during the coronavirus pandemic. Acts of retaliation can include terminations, demotions, denials of overtime or promotion, or reductions in pay or hours.
OSHA and CDC Issue Interim Guidance to Protect Workers in Meatpacking and Processing Industries – OSHA and the Centers for Disease Control and Prevention released joint interim guidance for meatpacking and meat processing workers and employers—including those involved in beef, pork, and poultry operations. The guidance includes recommended actions employers can take to reduce the risk of exposure to the coronavirus.
Statement of Enforcement Policy by Solicitor of Labor Kate O'Scannlain and Principal Deputy Assistant Secretary for OSHA Loren Sweatt regarding Meat and Poultry Processing Facilities – Responding to President Trump's Executive Order, Solicitor of Labor Kate O'Scannlain and OSHA Principal Deputy Assistant Secretary Loren Sweatt released a statement of enforcement policy. The statement, which addresses guidance and enforcement actions regarding worker safety at meat, pork and poultry processing facilities, provides clarity for businesses whose continued operation will be critical to America's food supply.
Offering Clear Direction for Employers:
U.S. Department of Labor Issues Enforcement Guidance For Recording Cases of COVID-19 – OSHA issued interim guidance for enforcing its recordkeeping requirements (29 CFR Part 1904) as it relates to recording cases of COVID-19.
U.S. Department of Labor Considers Employer's Good Faith Efforts When Enforcing Compliance During COVID-19 Pandemic – OSHA issued interim guidance that advises compliance safety and health officers to evaluate an employer's good faith efforts to comply with safety and health standards during the coronavirus pandemic. Employers are also expected to take corrective

action as soon as possible once normal activities resume.

OSHA also has asserted that in addition to its standards, the General Duty Clause imposes additional mandatory obligations on employers.
Under Section 5(a)(1) of the OSH Act, employers are required to furnish its employees a place of employment free from recognized hazards that cause or are likely to cause death or serious physical harm
And so OSHA can cite an employer for a general duty clause violation if (READ ELEMENTS)

Even in OSHA's April guidance on Interim Enforcement Response for Coronavirus, it says that if there are deficiencies that are not addressed by OSHA's standards, then the general duty clause can be considered

OSHA said in its brief that COVID is a recognized hazard and that "employers who fail to take preventative measures against COVID-19 face potential liability under the general duty clause."
-- So all of the guidance from CDC, OSHA, and other government authorities and private entities demonstrate the possible feasible methods employers may use.
--employers have the ability to choose the effective method to abate the hazard under the general duty clause.
--The public availability of so much COVID-19 guidance actually enhances the power of the general duty clause as an enforcement tool.

Smithfield– similar suit but bought in federal court. Dismissed. The court concluded that dismissal was appropriate because the two traditional requirements of the primary jurisdiction doctrine applied. First, the court reasoned that the merits of plaintiffs' claims will hinge on the determination of whether the company is complying with the CDC/OSHA joint guidance for industry operations, a matter that OSHA, in coordination with the USDA, is better positioned to assess. Second, the court concluded that deference to OSHA/USDA will ensure uniform national enforcement of the regulatory guidance. The court rejected plaintiffs' argument that deferral would result in delay that might adversely impact employees and the community, citing emergency relief procedures available through OSHA's statutory framework.

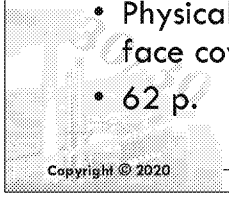
Amazon public nuisance suit (common law)
Brief from members of Congress (Open Society Policy Center)- brief submitted to U,.S. District Court for the Eastern District of

New York in Amazon case (also public nuisance case).
Plaintiffs identified practices in a fulfilment center that promote the spread of COVID like practices that limit handwashing, sanitization, use of sick and personal leave, and limiting worker knowledge of potential exposures.
Brief asks court to take action and not defer to OSHA (primary jurisdiction doctrine). OSHA has not promulgated a relevant standard here and OSHA does not protect non-employees (family members of plaintiffs)
OSHA has not issued citations for COVID violations– only one, and it was a recordkeeping violation
Argue OSHA not inspecting enough facilities (only focusing on health care facilities); mostly doing non-formal investigations (hazard alert letters) and not prioritizing onsite inspections
No standard directly addresses exposure to airborne or aerosol diseases in the workplace
Court can enforce common law tort of public nuisance
This is a claim that affects the public (outside of the workplace) and not just workers
Not preempted by OSHA
No state law actions are preempted by GDC

AFL-CIO Filed For Rehearing



- June 18
- Moved for rehearing *en banc*
- Alleges that the three-judge panel "misstated" OSHA's arguments

IN THE UNITED STATES DISTRICT COURT FOR THE WESTERN DISTRICT OF MISSOURI ST. JOSEPH DIVISION

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,[1]	)	
Plaintiffs,	)	
v.	)	No. 5:20-CV-06063-DGK
SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,	)	
Defendants.	)	

ORDER GRANTING DEFENDANTS' MOTION TO DISMISS

This lawsuit arises from Plaintiffs' allegations that Defendant Smithfield Foods, Inc. and its wholly owned subsidiary, Defendant Smithfield Fresh Meats Corporation (collectively, "Smithfield") have failed to adequately protect workers at its meat processing plant in Milan, Missouri, ("the Plant" or "the Milan Plant") from the virus that causes COVID-19. Now before the Court are Plaintiffs' Motion for a Temporary Restraining Order ("TRO") and Preliminary Injunction (Doc. 3), and Smithfield's motion to dismiss and/or stay pursuant to the primary-jurisdiction doctrine (Doc. 28).

After carefully reviewing the motions and the existing record, the Court holds that it should decline to hear this matter pursuant to the primary-jurisdiction doctrine to allow the Occupational Health and Safety Administration ("OSHA") to consider the issues raised by this case. But even if the Court did not apply the primary-jurisdiction doctrine, the Court would not

[1] The Court notes that there is currently a motion pending to allow Jane Doe to proceed using a pseudonym (Doc. 42). Given the Court's dismissal of this action and the denial of injunctive relief, the Court finds that requiring Plaintiff to reveal her identity would serve no important purpose, especially given that another named plaintiff appears in this case. The issues presently before the Court are—for the most part—purely legal, and the majority of Plaintiff's allegations are not individualized. Thus, the public's interest in Plaintiff's identity and the prejudice to Smithfield in allowing Plaintiff to proceed anonymously for purposes of deciding the instant motions is minimal. Plaintiff Doe may therefore use a pseudonym for purposes of the motions presently before this Court. This Court reserves judgment on her ability to do so should this case proceed to further stages of litigation.

issue a preliminary injunction because Plaintiffs have not met their burden of proving that the extraordinary remedy of an affirmative injunction is justified. Smithfield's motion is GRANTED, and the case is DISMISSED WITHOUT PREJUDICE.

Background

The Background section of this order is arranged in chronological order. Although regrettably lengthy, it details how the regulatory environment in which meat-processing plants operate is constantly changing during this unique national emergency.

In late 2019, a new coronavirus emerged named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).[2] This virus causes coronavirus disease 2019 (COVID-19), a respiratory illness that can cause serious health problems, including death.[3] SARS-CoV-2 is highly contagious; it appears to spread from person to person through respiratory droplets produced when an infectious person coughs, sneezes, or talks, and the virus can be spread by presymptomatic, or even asymptomatic, individuals.[4]

A global pandemic ensued, and the virus and COVID-19 reached the United States in early 2020. On March 13, 2020, the President declared a national emergency concerning COVID-19. That same day, Missouri's governor also declared a state emergency, and on April 3, the Missouri Department of Health and Senior Services issued a stay-at-home order that mandated all individuals abide by social-distancing requirements and closed all nonessential

OSHA-001972

businesses in Missouri through May 4.[5] The stay-at-home order defines essential businesses in accordance with guidance from the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency ("Homeland Security"), which identified livestock-slaughter facilities, including the Plant and its operations, as "critical infrastructure."[6] On April 9, the Centers for Disease Control ("CDC") published *Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19)*, which outlined several policies and procedures employers should implement to help prevent workplace exposure and community spread of the virus.

On April 22, OSHA sent Smithfield a "Rapid Response Investigation" requesting information regarding its COVID-19 work practices and infection at the Milan Plant, giving Smithfield seven days to respond. As part of its inquiry, OSHA requested information about Smithfield's COVID-19 practices including what, if any, personal protective equipment has been given to its workers, what engineering controls have been implemented, what contact tracing methods have been employed, and what policies have been changed or implemented in light of the pandemic (Doc. 29-2). Smithfield responded on April 29 (Doc. 41).

The next day, on April 23, Plaintiffs Jane Doe and the Rural Community Workers Alliance ("RCWA") filed suit. They allege Smithfield is not taking adequate steps to prevent transmission of the virus at its Plant, thereby endangering workers and members of the surrounding community. According to her declaration, Doe is a current Smithfield employee who has worked at its Milan Plant for at least five years. She claims she currently works on the

OSHA-001973

"cut floor" where animals are broken down into products and packaged.

The RCWA is a Missouri non-profit advocacy group whose members consist exclusively of workers in Northern Missouri. Several members of RCWA's current leadership council work at the Plant, and sixty to seventy workers who attend its meetings work at the Plant, including Jane Doe.

Defendant Smithfield is one of the largest meat-processing companies in the world, with meat-processing plants all over the United States, including in Milan, Missouri. Several of its meat-processing plants in the United States have closed recently due to outbreaks of COVID-19 among its workers.

The Complaint (Doc. 1) alleges that several meat-processing plants in this country owned and operated by Smithfield have become major COVID-19 "hot spots." It also alleges that in direct contravention of CDC guidelines, Smithfield has not implemented certain precautions to keep its workers and the Milan community safe from the virus. Such measures include keeping adequate distance between workers, prohibiting workers from taking a break to wash their hands or face, preventing workers from covering their faces if they need to cough or sneeze, implementing a sick-leave policy that penalizes workers for missing work even if they are exhibiting COVID-19 symptoms, and failing to implement plans for testing and contact tracing.

The Complaint brings state-law claims for public nuisance and breach of duty to provide a safe workplace. Plaintiffs are not seeking monetary damages, only declaratory judgments stating that: (1) Smithfield's practices at the Plant constitute a public nuisance; and (2) Smithfield has breached its duty to provide a safe workplace.

The same day Plaintiffs filed suit, they also moved for a temporary restraining order and preliminary injunction (Doc. 3), seeking to force Smithfield to: provide masks; ensure social

distancing; give employees an opportunity to wash their hands while on the line; provide tissues; change its leave policy to discourage individuals to show up to work when they have symptoms of the virus; give workers access to testing; develop a contact-tracing policy; and allow their expert to tour the Plant. Attached to the motion were declarations from: (1) Jane Doe, who described working conditions at the Plant and stated she was afraid for health and safety, as well as the health and safety of the Milan community, because of what she considers inadequate safety procedures at the Plant; (2) RCWA's Executive Director, Alex Fuentes; (3) a senior lobbyist with the non-profit organization Food & Water Watch ("FWW"), Anthony Corbo; (4) a lawyer, Thomas Fritzsche, who has interviewed a number of Alabama poultry-plant workers about working conditions and authored a 2013 report for the Southern Poverty Law Center about modern industrial slaughterhouse workers; and (5) an occupational-medicine specialist, Dr. Robert Harrison, who works as Clinical Professor of Medicine at the University of California, and also serves the California Department of Public Health.

On April 26, the Court set a videoconference hearing on the preliminary injunction motion for April 30. That same day, the CDC and OSHA issued *Meat and Poultry Processing Workers and Employers – Interim Guidance* ("the Joint Guidance"), which provided supplemental guidance to meat-processing plants concerning COVID-19.[7] The Joint Guidance states that to reduce the risk of transmission among employees, employers at meat-processing facilities should, where "feasible," implement engineering controls, such as staggering shifts and breaks, requiring workers to stay six-feet apart, and/or erecting physical barriers; place handwashing or hand-sanitizing stations in multiple locations and encourage hand hygiene; give workers additional short breaks to wash hands; provide tissues; and allow workers to take breaks

[7] Ctrs. for Disease Control and Prev. & Occ. Safety and Health Admin., Meat and Poultry Processing Workers and Employers, https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html (Apr. 26, 2020).

OSHA-001975

in alternative areas to ensure social distancing. It also recommends employers provide personal protective equipment for workers to use during their shift and increase the frequency of sanitization in work and common spaces. It states employers should educate employees on measures they can take to decrease the risk of spreading the virus and provides a specific list of measures employers should take to promote social distancing, such as providing visual cues on floors, as reminders for social distancing. It encourages employers to screen workers for COVID-19 by implementing temperature checks prior to entering the workplace and sending home workers who appear to have symptoms (e.g., cough, fever, or shortness of breath), and monitor workers' contacts so they can alert anyone who may have been exposed to the virus. Finally, it recommends employers review leave and incentive policies so as to not penalize workers for taking sick leave if they contract COVID-19.

On April 27, Smithfield filed a motion to dismiss this case pursuant to the primary-jurisdiction doctrine, arguing this Court should defer to OSHA in this case. The next day—April 28—the President signed an executive order ("the Executive Order") under § 4511(b) of the Defense Production Act ("DPA"), 50 U.S.C. § 2061 *et seq*., delegating authority to the Secretary of Agriculture to take all appropriate action "to ensure that meat and poultry processors continue operations consistent with the guidance for their operations jointly issued by" the CDC and OSHA.[8]

On April 29, Smithfield made several filings, including a supplemental brief to its motion to dismiss, which alleged that pursuant to the Executive Order, the United States Department of Agriculture ("USDA") now had jurisdiction over this case. It also submitted its Suggestions in

[8] Exec. Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/ (Apr. 28, 2020).

OSHA-001976

Opposition (Doc. 32) to the preliminary injunction motion. Attached to its brief as exhibit A (Doc. 32-1) is a declaration from the Plant's general manager, Tim Messman, along with pictures of the Plant and copies of the Plant's policies and procedures related to COVID-19. Exhibit B (Doc. 32-2) is a declaration from John Henshaw, the head of OSHA from 2001 to 2003.

Later that same day, Plaintiffs' filed their suggestions in opposition (Doc. 35) to Smithfield's motion to dismiss. Included in it is a declaration from Dr. Melissa Perry (Doc. 35-2), a professor of environmental health at George Washington University.

On April 30, the Court held a hearing on the motion via teleconferencing. The Court offered the parties an opportunity to introduce evidence, including witness testimony, but both parties elected to stand on the existing record. The parties then argued their respective positions.

After the hearing, the parties filed supplemental briefs. Attached to Smithfield's brief (Doc. 46) is a supplemental declaration from Smithfield's plant manager, clarifying Smithfield's leave policy and updating the Court on additional safety changes at the Plant.

Plaintiffs concede that Smithfield implemented new policies and procedures after this lawsuit was filed and have narrowed their requested injunctive relief to direct Smithfield to:

> (1) make all reasonable changes to its "production practices," including potentially lowering its line speeds, to place as many workers as possible at least six feet apart; (2) provide reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing; and (3) ensure that its policies do not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers.

(Doc. 48 at 10). Plaintiffs characterize their requested relief as compliance with the Joint Guidance.

Findings of Fact

The Court gives the various declarations submitted by the parties the following

evidentiary weight.[9]

The Court gives Jane Doe's declaration limited weight. While she has personal knowledge of conditions in those parts of the Plant in which she works, it is unclear exactly what part of the "cutting floor" she works in, and whether she can see all that she claims to see from this area. Further, it appears that some of the information in her declaration is no longer accurate due to recent changes in the Plant's policies and procedures. For example, although her declaration may be correct that Smithfield initially told workers they would receive only one mask per week, this policy has been superseded. As discussed below, workers are now given masks every day. Finally, because her identify is unknown, there is no way to determine, through the adversarial process or otherwise, whether Doe has some bias against Smithfield that could lead her to misrepresent or exaggerate conditions at the Plant. The Court notes that at least one of her statements—that Smithfield has increased the line speed at the Plant during the pandemic—is contradicted by other, more persuasive evidence.

Mr. Fuentes' declaration concerning working conditions at the Plant are even less reliable than Jane Doe's, and so the Court gives them less weight. Mr. Fuentes has no personal knowledge of conditions at the Plant because he has never set foot in it. His understanding is based on hearsay from unidentified employees whose statements to him, even if accurately relayed by Mr. Fuentes, were not made under penalty of perjury. That said, the Court finds the portions of his declaration concerning RCWA's membership and activities are credible.

The Court finds the declarations of Messrs. Corbo, Fritzsche, and Harrison are based on some relevant knowledge, education, and experience concerning working conditions in American meat-processing plants generally, and so they possess some limited insight into what

[9] Smithfield filed a motion to strike Plaintiffs' five declarations attached to the motion for a temporary restraining order and/or preliminary injunction (Doc. 34). The Court denies the motion, since, in considering these motions, the issues it complains of go to the weight of the evidence rather than its admissibility.

OSHA-001978

steps could be taken to prevent the spread of the SARS-CoV-2 virus in a generic American meat-processing facility. Because they are unfamiliar with specific working conditions at the Plant, however, their declarations provide limited help in determining whether Smithfield's policies and procedure at the Plant are sufficient to stem transmission of the virus.

Finally, the Court turns to the declaration of Dr. Melissa J. Perry, Professor and Chair of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University. Dr. Perry credentials are excellent: She is a past President of the American College of Epidemiology and a past chair of the Board of Scientific Counselors for the CDC. She has also served as a member of the National Institute for Occupational Safety and Health research grant-review panel. She has studied meat-processing facilities since 2004 and has published six peer-reviewed-journal articles on work health and safety at meat-processing facilities. As part of that work, she has visited four meat-processing plants and spoken with engineers regarding the organizational structure of processing plants and how they can be redesigned to further worker health and safety.

Dr. Perry opines that meat-processing plants can allow workers to stand six feet apart if they reduce production line speed, and that, if they do not space production line workers six feet apart, the plants will "inevitably" have a COVID-19 outbreak. She contends slowing the production line is the only way the plant will be able to continue meat production without an outbreak. She also endorses the other requests Plaintiffs make, such as for more rest breaks and paid leave, as "absolutely necessary" so the Plant can continue operating.

This Court has respect for Dr. Perry's opinion but finds it of limited value in this case. While this Court agrees that slowing down line speed may be beneficial for workers and allow more opportunities for social distancing, the Court found nothing in the Joint Guidance

recommending a decrease in line speed. To that point, she provides no specific opinion regarding whether the Milan Plant is currently in compliance with the Joint Guidance, and there is no evidence that Dr. Perry reviewed the policies and procedures at the Milan Plant in forming her opinion. Accordingly, the Court gives little weight to her opinion that unless the production line speed is slowed and workers spread six feet apart, spread of the virus through the Plant is "inevitable" and it "will be forced to shutter." This assertion appears to be more of a good-faith speculation than an evidenced-based conclusion.

The Court gives more weight to the declarations provided by Smithfield. The statements made by Mr. Messman, the Plant's general plant manager, are almost all based on his personal knowledge. He possesses the most recent information concerning working conditions at the Plant, and he appears to be a reliable source of information about Smithfield's policies and procedures there.

The Court gives considerable weight to the declaration of John Henshaw, Smithfield's expert witness. After reviewing Smithfield's written policies and procedures at the Plant, the general manager's declaration, the pictures, and the declarations in Plaintiffs' motion, Mr. Henshaw opined that Smithfield's current policies and procedures, if followed, were consistent with the Joint Guidance as of April 29, 2020. Although the Court is aware that he is a retained expert witness whose assumptions and conclusions have not been tested by cross-examination, his opinion is measured, qualified, and grounded in the facts at the Milan Plant.

With the credibility determinations in mind, the Court makes the following findings of fact concerning current the Plant's working conditions and Smithfield's COVID-19 policies and procedures.

Before entering the Plant, Smithfield requires all employees to undergo thermal screening. If employees exhibit one primary symptom or two secondary symptoms of COVID-19,[10] Smithfield provides them with instructions for next steps, including directions to quarantine and call their physician for guidance, and sends the employee home for fourteen days of paid leave or until the individual receives a negative COVID-19 test result. Employees with underlying health concerns—verified by a doctor—that place them at a higher risk of COVID-19 are given fourteen days of paid leave and then are shifted to short-term disability leave.

While quarantining as a result of COVID-19 symptoms, Smithfield requires employees to complete a questionnaire that in part entails naming all other employees they have closely contacted within the two days before experiencing symptoms. If the employee tests positive for COVID-19, Smithfield notifies and screens the close contacts. As of April 29, 2020, thirteen employees had been tested for COVID-19. None were positive.

If employees miss work as a result of COVID-related symptoms, Smithfield does not penalize them. They do not receive attendance points and remain eligible for Smithfield's Responsibility Bonus ($500), regardless of whether individuals provide a doctor's or nurse's note. Moreover, Smithfield has expanded its employee benefits by eliminating co-pays for COVID-related testing and treatment.

To ensure that those inside the Plant are complying with Smithfield's COVID-19 safety procedures and policies, Smithfield has assigned both a nurse and a health-and-safety clerk to perform checks throughout the Plant. Smithfield has communicated these procedures and policies to its employees by several different media, including on televisions and signs at the Plant, through the Beekeeper communications app, and through the Textcaster mass

[10] Primary symptoms include fever, persistent dry cough, and shortness of breath, while secondary symptoms include chills, repeated shaking with chills, muscle pain/extreme fatigue, headache, sore throat, and/or loss of taste or smell (Doc. 46-2 at 8).

OSHA-001981

text-messaging tool. Signs at the Plant relay the information in English, Spanish, and French, while the Beekeeper and Textcaster communications are available in the employee's language of choice. Interpreters are also available at the Plant to assist with these communications.

The Plant provides workers with an ear-looped face mask upon entry to the Plant each day, and if a mask breaks or becomes soiled, it provides a new one. Smithfield now requires all workers at the Plant to wear a mask at all times other than during meals and in certain offices where employees are spaced six feet apart. These masks prevent the spread of germs if an employee sneezes or coughs while on the line, reducing the need for tissues to reduce the spread of COVID-19. Additionally, Smithfield requires employees on the production floor to wear nitrile gloves and a plastic face shield.

As Smithfield concedes, it does not provide tissues to employees. It cannot provide tissues to individuals working on the production line because doing so would violate health standards set by the USDA. Thus, one of Plaintiff's original complaints cannot be remedied. Smithfield could, however, provide tissues for employees to wipe their nose while on breaks, but the record does not support that employees are banned from bringing their own tissues or other hygienic wipes to use while on breaks.

As for Plaintiffs' claim that Smithfield does not allow employees to wash their hands without penalty, the Court finds that Smithfield policies and procedures are reasonable under the circumstances. Due to the nature of the meat-processing business, employees must wear gloves on the production line. When workers leave the line for a break, they remove their gloves and sanitize their hands before entering common areas. They must also wash their hands and put on gloves before returning to the line. Smithfield currently administers hand sanitizer to employees every thirty minutes to use on their gloves and has added approximately 110 hand-sanitizing

OSHA-001982

stations throughout the Plant. Smithfield also expects a shipment of small hand-sanitizer bottles soon, which it will make available to employees for personal use. In the meantime, the Plant has invited employees to bring in personal bottles they may refill using the company supply. Thus, the need for continued hand washing is unnecessary because any contamination that may occur on the line is contained by the required use of gloves.

Moreover, Smithfield has also enhanced cleaning and disinfection of the Plant's frequently touched surfaces in common areas using cleaning solutions identified by the CDC for use against the virus. These cleanings are performed as often as every two hours throughout the workday. Additional deep cleanings occur over the weekends, and Smithfield is working to implement use of fogging/misting disinfectants where possible.

Finally, the Court turns to the steps Smithfield has taken steps to facilitate social distancing at the Plant. Smithfield has staggered workday start times, as well as lunch and break times, to avoid large numbers of workers congregating in break rooms or around time clocks. Smithfield is currently working to secure a wireless means for employees to clock in and out of their shifts to minimize crowding. In the meantime, it has expanded the number of available clocks for employees to use and will implement a grace period for workers to clock in and out of their shifts, all increasing the ability of workers to maintain social distance.

Smithfield has erected two large tents and three carport structures on the Plant lawn and placed tables and chairs underneath each so that workers have more space to eat while on breaks. The Plant has also installed plastic barriers on eating tables that separate employees from those sitting beside and across from them. Tables are sanitized after one employee leaves and before another sits down.

Smithfield has also reduced the number of hogs harvested each day and sends some employees home before lunch. This requires fewer employees to be at the Plant, helping to minimize crowding in the cafeteria and other areas. However, these policies reduce the number of hours worked by the affected employees, thereby decreasing their weekly pay. To ease the resulting financial burden on employees, Smithfield has temporarily increased pay by $5/hour, and such pay is available to any employee who takes an approved leave as a result of COVID-related symptoms. Smithfield has also installed clear plastic barriers along the Plant production line to separate employees working across from each other and employees working side by side.

Discussion

I. The primary-jurisdiction doctrine applies.[11]

Before reaching the merits of Plaintiffs' request for a preliminary injunction, the Court must determine whether it should dismiss or stay this case pursuant to the primary-jurisdiction doctrine. "Primary jurisdiction is a common-law doctrine that is utilized to coordinate judicial and administrative decision making." *Access Telecomms. v. Sw. Bell Tel. Co.,* 137 F.3d 605, 608 (8th Cir. 1998) (citation omitted). "The doctrine allows a district court to refer a matter to the appropriate administrative agency for ruling in the first instance, even when the matter is initially cognizable by the district court." *Id.* (citation omitted). "There exists no fixed formula for determining whether to apply the doctrine of primary jurisdiction." *Id.* (citing *United States v. W. Pac. R.R. Co.,* 352 U.S. 59, 64 (1956)). Instead, courts must consider in each case "whether the reasons for the doctrine are present and whether applying the doctrine will aid the purposes

[11] Although Smithfield previously argued *Burford* abstention also applied here, it conceded during the preliminary-injunction hearing that that argument no longer applies due to the President's Executive Order. Accordingly, the Court does not address it. Because this Court finds the primary jurisdiction doctrine applies, it does not address Smithfield's preemption arguments, which were asserted after the preliminary-injunction hearing.

OSHA-001984

for which the doctrine was created." *Id.* (citation omitted). In undertaking this analysis, a court must be mindful that the primary-jurisdiction doctrine "is to be invoked sparingly, as it often results in added expense and delay." *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005). "Once a district court decides to refer an issue or claim to an administrative agency under the doctrine of primary jurisdiction, it may either dismiss or stay the action." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 913 (8th Cir. 2015).

There are two primary reasons courts apply the primary-jurisdiction doctrine. First, "to obtain the benefit of an agency's expertise and experience . . . 'in cases raising issues of fact not within the conventional experience of judges or cases requiring the exercise of administrative discretion. . . .'" *Access Telecomms.*, 137 F.3d at 608 (noting "'agencies created by Congress for regulating the subject matter should not be passed over'") (quoting *Far E. Conference v. United States*, 342 U.S. 570, 574 (1952)). Second, "to promote uniformity and consistency within the particular field of regulation." *Id.* (citation omitted). Thus, in deciding whether to apply the doctrine, courts focus on two questions: (1) "whether the issues raised in the case 'have been placed within the special competence of an administrative body,'" and (2) whether the court's disposition of the case could lead to inconsistent regulation of businesses in the same industry. *Sprint Spectrum L.P. v. AT&T Corp.*, 168 F. Supp. 2d 1095, 1098 (W.D. Mo. 2001) (quoting *United States v. W. Pac. R.R. Co.,* 352 U.S. at 64). In this case, the answer to both questions is yes.

Plaintiffs allege that because the Plant is not abiding by the Joint Guidance, it constitutes a public nuisance and has created an unreasonably unsafe workplace. Thus, Plaintiffs' claims both succeed or fail on the determination of whether the Plant is complying with the Joint Guidance. Due to its expertise and experience with workplace regulation, OSHA (in

coordination with the USDA per the Executive Order) is better positioned to make this determination than the Court is. Indeed, this determination goes to the heart of OSHA's special competence: its mission includes "enforcing" occupational safety and health standards. In fact, OSHA has already shown interest in determining whether the Plant is abiding by the Joint Guidance. The day before Plaintiffs filed this lawsuit, OSHA sent Smithfield a request for information regarding its COVID-19 work practices and infection at the Plant.

Turning to the second question, the Court finds only deference to OSHA/USDA will ensure uniform national enforcement of the Joint Guidance. If the Court ruled on whether the Plant is complying with the Joint Guidance, this ruling would be binding on Smithfield but not other meat-processing facilities because the Court lacks personal jurisdiction over them. Thus, any determination by this Court whether the Plant is complying with the Joint Guidance could easily lead to inconsistent regulation of businesses in the same industry. And under these circumstances, where the guidelines are rapidly evolving, maintaining a uniform source for guidance and enforcement is crucial.

Plaintiffs' argue that deference will add delay. But OSHA has already requested information about the Plant's safety measures. And if OSHA fails to act quickly on this information, Plaintiffs have a remedy: they may receive emergency relief through OSHA's statutory framework. Section 662(a) of the Occupational Safety and Health Act ("the Act"), 29 U.S.C. §§ 651 *et seq.*, permits the Secretary of Labor to petition the court "to restrain any [dangerous] conditions or practices in any place of employment . . . which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by [the Act]." Upon the filing of such petition, "the district court shall have jurisdiction to grant such injunctive

relief or temporary restraining order pending the outcome of an enforcement proceeding." *Id.* at § 662(b). If the Secretary "arbitrarily or capriciously fails to seek relief," a worker can file a writ of mandamus to compel the Secretary to seek such an order. *Id.* at § 662(d). Granted, there may be some delay before Plaintiffs can invoke this procedure, but following this procedure ensures the USDA and OSHA can take a measured and uniform approach to the meat-processing plants under its oversight. The Court's intervention at this point, on the other hand, would only risk haphazard application of the Joint Guidance.

In sum, the Court holds that the issue of Smithfield's compliance with OSHA's guidelines and regulations falls squarely within OSHA/USDA's jurisdiction. The Court finds dismissal without prejudice is preferable to a stay here so that Plaintiffs may seek relief through the appropriate administrative and regulatory framework.

III. Plaintiffs' have not met their burden for a preliminary injunction.

Although the Court's ruling on the primary-jurisdiction doctrine is dispositive, to aid in any appellate review, the Court will consider whether Plaintiffs have met their extraordinary burden of proving an affirmative preliminary injunction is proper in this case.

In determining whether to grant injunctive relief the Court considers the following factors, which were set forth in the seminal decision *Dataphase Sys., Inc. v. C L Sys., Inc.*, 640 F.2d 109, 114 (8th Cir. 1981): 1) the threat of irreparable harm to the movant; 2) the balance between this harm and any injury that granting the injunction will inflict on the non-moving party; 3) the likelihood that the moving party will prevail on the merits; and 4) the public interest. *Phelps-Roper v. Nixon*, 509 F.3d 480, 484 (8th Cir. 2007). No single factor is determinative; they must be "balanced to determine whether they tilt towards or away" from

OSHA-001987

granting the injunction. *Noodles Dev., LP. v. Ninth St. Partners, LLP*, 507 F. Supp. 2d 1030, 1034 (E.D. Mo. 2007).

Preliminary injunctive relief "is an 'extraordinary and drastic remedy, one that should not be granted unless the movant, by a clear showing, carries the burden of persuasion.'" *North Dakota v. U.S. Army Corps of Eng'rs*, 264 F. Supp. 2d 871, 878 (N.D. 2003) (quoting *Mazurek v. Armstrong*, 520 U.S. 968, 972 (1997)). This burden is particularly great where, as here, Plaintiffs seek a preliminary injunction requiring an affirmative act. *Sanborn Mfg. Co. v. Campbell Hausfeld/Scott Fetzer Co.*, 997 F.2d 484, 484 (8th Cir. 1993).

1. Plaintiffs have not demonstrated a threat of irreparable harm.

To demonstrate a sufficient threat of irreparable harm, the moving party must show that there is no adequate remedy at law; that is, that an award of damages cannot compensate the movant for the harm. *See Noodles Dev.*, 507 F.Supp.2d at 1036-37. But, when analyzing this factor, the Eighth Circuit has held that "[m]erely demonstrating the 'possibility of harm' is not enough." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 915 (8th Cir. 2015); *see also S.J.W.* ex rel *Wilson v. Lee's Summit R–7 Sch. Dist.,* 696 F.3d 771, 779 (8th Cir. 2012) ("Speculative harm does not support a preliminary injunction."). In the context of a global pandemic, this Court must consider the threat after "accounting for the protective measures" defendant has already implemented. *Valentine v. Collier*, --- F.3d ---, 2020 WL 1934431, *5 (5th Cir. Apr. 22, 2020).

Plaintiffs argue that their injury is potentially contracting COVID-19, which could result in serious illness or even death. But this type of injury is too speculative under Eighth Circuit precedent.

Plaintiffs' claim otherwise, citing two cases from the Eighth Circuit, which they argue held the possibility of "death or serious illness" constitutes an irreparable injury (Doc. 3 at 24). Plaintiffs' cite *Kai v. Ross*, 336 F.3d 650, 656 (8th Cir. 2003), a case in which the state of Nebraska revoked a program providing medical care for the needy. The plaintiffs, who suffered from physical and mental disabilities and received their prescription medications through the program, sought to enjoin revocation of the program. *Id.* The Eighth Circuit held that the present danger to plaintiffs' health without their medications is an irreparable harm. *Id.* Plaintiffs also cite *Harris v. Blue Cross Blue Shield of Mo.*, 995 F.2d 877, 879 (8th Cir. 1993), which similarly held that denial of coverage for the treatment of a life-threating illness is an irreparable injury. These two cases are inapposite, since the plaintiffs were already suffering from illnesses, and would undoubtedly suffer serious illness or death in the absence of an injunction.[12] In other words, the threat of serious injury or death was a certainty and not merely a possibility.

The Court is not unsympathetic to the threat that COVID-19 presents to the Plant's workers. But in conducting its analysis, the Court must determine whether Plaintiffs will suffer an actual, imminent harm if the injunction is denied. This is not the same as analyzing whether employees risk exposure if they continue to work, and, unfortunately, no one can guarantee health for essential workers—or even the general public—in the middle of this global pandemic.

[12] Plaintiffs also cite *Mertzlufft v. Bunker Res. Recycling & Reclamation, Inc.*, 760 S.W.2d 592 (Mo. Ct. App. 1988) as persuasive authority. In *Mertzluff*, the plaintiffs sought to enjoin a business which was illegally transporting, storing, and incinerating hazardous waste without a permit. *Id.* at 595. The plaintiffs brought a citizen's suit to enjoin the defendant from charging and loading the incinerator with hospital wastes, or otherwise operating it, which the trial court granted. *Id.* The Missouri court of appeals, reviewing the case under a standard deferential to the trial court's judgment—not operating under the preliminary injunction standard set forth in *Dataphase*—held that the preliminary injunction was warranted. *Id.* at 598. It did not, however, address whether the plaintiffs proved there was a threat of irreparable harm. *Id.* at 598. To the contrary, the court held that plaintiffs were "not obligated to allege and prove they had suffered irreparable harm in order to obtain injunctive relief, but were only required to prove that they were adversely affected in fact by the unlicensed operation, which they did." *Id.* Accordingly, this case is also inapplicable because the court of appeals did not consider—and plaintiffs were not required to prove—a threat of irreparable harm. But, even if they were, the defendant was illegally operating a hazardous waste facility, and thus presented a present threat of certain harm to the plaintiffs.

OSHA-001989

But given the significant measures Smithfield is now taking to protect its essential workers from COVID-19 and the fact that there are no confirmed cases of COVID-19 currently at the Plant, the Court cannot conclude that the spread of COVID-19 at the Plant is inevitable or that Smithfield will be unable to contain it if it occurs. Thus, Plaintiffs have not established an immediate threat of irreparable harm.

2. Plaintiffs have not shown that the balance of harms favors issuing injunctive relief.

The second factor "examines the harm of granting or denying the injunction upon both of the parties to the dispute and upon other interested parties, including the public." *Noodles Dev.*, 507 F. Supp. 2d at 1038 (citing *Dataphase*, 640 F.2d at 114). "To determine what must be weighed, . . . courts of this circuit have looked at the threat to each of the parties' rights that would result from granting or denying the injunction." *Id.* The "potential economic harm to the parties" is a relevant consideration, as is "whether the defendant has already voluntarily taken remedial action." *Id.*

Here, there is no doubt that if workers at the Plant contract COVID-19, the harm to Plaintiffs could be great. But Plaintiffs have alleged only that—potential harm—and, in this time, no essential-business employer can completely eliminate the risk that COVID-19 will spread to its employees through the workplace. Thus, it is important that employers make meaningful, good faith attempts to reduce the risk. Here, Smithfield has taken significant remedial steps in accordance with the Joint Guidance to protect its workers from COVID-19.

Moreover, national and local guidance on COVID-19 is continuously evolving and changing. An injunction would deny Smithfield the flexibility needed to quickly alter workplace procedures to remain safe during the ever-changing circumstances of this pandemic. *Valentine*, 2020 WL 1934431 at *5 (staying injunction that would "interfer[e] with the rapidly changing and

OSHA-001990

flexible system-wide approach that [defendant] has used to respond to the pandemic so far" and "[defendant's] ability to continue to adjust its policies is significantly hampered by the preliminary injunction, which locks in place a set of policies for a crisis that defies fixed approaches") (citing *Jacobson v. Massachusetts*, 197 U.S. 11, 28–29 (1905); *In re Abbott*, 954 F.3d 772, 791 (5th Cir. 2020)). Thus, the remedial measures Smithfield has implemented convince the Court that the balance of harms weighs in its favor.

3. Plaintiffs have not shown a likelihood of success on the merits.

To demonstrate likelihood of success on the merits, a movant does not need to show that it ultimately will succeed on its claims, only that the movant's prospects for success is *sufficiently likely* to support the kind of relief it requests. *See Noodles Dev.*, 507 F.Supp.2d at 1036–37 (emphasis added) (citations omitted). That is, the movant need only show "a fair chance of prevailing." *Phelps-Roper*, 509 F.3d at 485. On this record, Plaintiffs have not shown a fair chance of prevailing on either of their claims.

a. Plaintiffs have not shown they are likely to succeed on their public-nuisance claim.

Under Missouri law, "a public nuisance is an offense against the public order and economy of the state and violates the public's right to life, health, and the use of property, while, 'at the same time annoys, injures, endangers, renders insecure, interferes with, or obstructs the rights or property of the whole community, or neighborhood, or of any considerable number of persons.'" *State* ex rel. *Schmitt v. Henson*, ED 107970, 2020 WL 1862001, at *4 (Mo. Ct. App. April 14, 2020) (citations omitted).

The parties agree that the Plant cannot be a public nuisance simply by virtue of the fact that it is a meat-processing plant during a global pandemic. Moreover, in this case, Smithfield has implemented substantial health and safety measures to protect Plant workers, and no

employees of the Plant have been diagnosed with COVID-19. While Plaintiffs argue that Smithfield could do more to protect its workers, that is not the issue before this Court. The issue is whether the Plant, as it is currently operating, constitutes an offense against the public order. Because of the significant measures Smithfield has implemented to combat the disease and the lack of COVID-19 at the facility, the Plant cannot be said to violate the public's right to health and safety. Thus, the Court finds that Plaintiffs are unlikely to be succeed on their public nuisance claim.

b. Plaintiffs have shown they are unlikely to succeed on their right to a safe workplace claim.

Under Missouri law, Plaintiffs must prove that Smithfield negligently breached its duty to provide a safe place to work and that such negligence was the direct and proximate cause of the Plaintiffs injuries. *Hamilton v. Palm*, 621 F.3d 816, 818 (8th Cir. 2010). As discussed, Smithfield has taken substantial steps to reduce the potential for COVID-19 exposure at the Plant and appears to the Court to be complying with the Joint Guidance regarding the same. Thus, Plaintiffs are not substantially likely to prove Smithfield breached any duty.

More importantly, however, Plaintiffs have not alleged they have suffered any injury, only that they may suffer an injury in the future. A potential injury is insufficient to state a claim of the breach of the duty to provide a safe workplace under Missouri law. Plaintiffs citation to *Smith v. W. Elec. Co.*, 643 S.W.2d 10 (Mo. Ct. App. 1982), to establish that they have stated a sufficient injury is unavailing. In *Smith*, the plaintiff proved that he had been exposed to harmful second-hand smoke in the workplace which caused him to suffer a severe adverse reaction. *Id.* at 12. The adverse reaction was the actual injury he suffered, and he suffered this harm—and sought relief through an administrative process—before seeking an injunction. Thus, *Smith* is not analogous to this case, and Plaintiffs have not shown they are likely to be successful on their

OSHA-001992

breach of a safe workplace claim.

4. The public interest factor is neutral.

Certainly, the spread of COVID-19 is a public-health matter of great concern, and, so, preventing transmission of the virus which causes COVID-19 is within the public interest. At the same time, the public has an interest in maintaining the food-supply chain and access to meat products, an interest which might be impaired if the Court granted the injunction. Because Smithfield's current policies and procedures temper public health worries, the Court finds a preliminary injunction is not in the public interest at this time.

Thus, Plaintiffs have not met their extraordinary burden of showing an affirmative preliminary injunction is warranted in this case.

III. Plaintiffs' requested relief lacks the specificity required for a preliminary injunction.

Finally, the Court finds that Plaintiffs requested relief is impermissibly vague. Federal Rule of Civil Procedure 65(d) states that an injunction must be "specific in [its] terms" and describe in reasonable detail the actions sought to be enjoined. Fed. R. Civ. P. 65(d). This specificity requirement is "designed to prevent uncertainty and confusion on the part of those to whom the injunction is directed and to avoid the possible founding of a contempt citation on a decree too vague to be understood." *Helzberg's Diamond Shops, Inc. v. Valley W. Des Moines Shopping Ctr., Inc.*, 564 F.2d 816, 820 (8th Cir. 1977).

In this case, Plaintiffs request this Court enter an injunction requiring Smithfield to "make all reasonable changes to its 'production practices,' including potentially lowering its line speeds, to place as many workers as possible at least six feet apart" (Doc. 46 at 10). Plaintiffs do not explain what changes would be "reasonable," except for "potentially" reducing line speeds. In other words, they do not specify in reasonable detail what Smithfield should do. They

OSHA-001993

demand workers have "reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing," but they do not specify how often or how long such breaks should take place, or what would constitute a reasonable break. Finally, Plaintiffs request the Court order Smithfield to change its policies to "not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers." But Plaintiffs do not identify which policies should be eliminated, what constitutes "reasonable steps," or why Smithfield's current policies are insufficient. Because "a person of ordinary intelligence" would not understand what is prohibited based on Plaintiffs' proposed preliminary injunction, *Schenck v. Pro-Choice Network of W. N.Y.*, 519 U.S. 357, 383 (1997), it is impermissibly vague, and thus unenforceable.

Conclusion

Plaintiffs are naturally concerned for their health and the health of their community in these unprecedented times. The Court takes their concern seriously. Nevertheless, the Court cannot ignore the USDA's and OSHA's authority over compliance with the Joint Guidance or the significant steps Smithfield has taken to reduce the risk of a COVID-19 outbreak at the Plant.

For the reasons discussed above, Defendants motion to dismiss is GRANTED, and the case is DISMISSED without prejudice.

IT IS SO ORDERED.

Scott D. Szymendera
Analyst in Disability Policy

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

The Occupational Safety and Health Administration (OSHA) does not currently have a specific standard that protects healthcare or other workers from airborne or aerosol transmission of disease or diseases transmitted by airborne droplets. Some in Congress, and some groups representing healthcare, meat and poultry processing, and other workers, are calling on OSHA to promulgate an emergency temporary standard (ETS) to protect workers from exposure to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). The Occupational Safety and Health Act of 1970 (OSH Act) gives OSHA the ability to promulgate an ETS that would remain in effect for up to six months without going through the normal review and comment process of rulemaking. OSHA, however, has rarely used this authority in the past—not since the courts struck down its ETS on asbestos in 1983.

The California Division of Occupational Safety and Health (Cal/OSHA), which operates California's state occupational safety and health plan, has had an aerosol transmissible disease (ATD) standard since 2009. This standard includes, among other provisions, the requirement that employers provide covered employees with respirators, rather than surgical masks, when these workers interact with ATDs, such as known or suspected COVID-19 cases. In addition, according to the Cal/OSHA ATD standard, certain procedures require the use of powered air purifying respirators (PAPR).

The Virginia state occupational safety and health plan (VOSH) and the Michigan state occupational safety and health plan (MIOSHA) have each promulgated emergency standards to specifically address COVID-19 in workplaces. Unlike the Cal/OSHA ATD standard, these emergency standards are in effect for only six months and apply to all employers.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020, would require OSHA to promulgate an ETS on COVID-19 that incorporates both the Cal/OSHA ATD standard and the Centers for Disease Control and Prevention's (CDC's) 2007 guidelines on occupational exposure to infectious agents in healthcare settings; similar provisions appear in S. 3475. The CDC's 2007 guidelines generally require stricter controls than its interim guidance on COVID-19 exposure. The provisions of H.R. 6139 were incorporated into the version of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The OSHA ETS provisions were not included in the House- and Senate-passed version of legislation that was signed into law as P.L. 116-127.

H.R. 6379, as introduced in the House, also would include a requirement for an OSHA ETS and permanent standard to address COVID-19 exposure; similar provisions appear in S. 3584. H.R. 6559 would include the requirements for an ETS and permanent standard, clarify the requirement that employers must report work-related COVID-19 cases, and expand protections for whistleblowers; similar provisions appear in S. 3677. The provisions of H.R. 6559 were included in H.R. 6800, The Heroes Act, passed by the House on May 15, 2020, and in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act passed by the House on October 1, 2020.

Through October 1, 2020, OSHA has issued COVID-19-related citations to employers at 62 work sites, with total proposed penalties of $913,133. These citations have been issued for violations of the OSH Act's General Duty Clause and other existing OSHA standards, such as those for respiratory protection, that may apply to COVID-19. Senators Elizabeth Warren and Cory A. Booker have raised concerns about the low amount of penalties being assessed for COVID-19-related violations.

Occupational Safety and Health Administration Standards

Section 6 of the Occupational Safety and Health Act of 1970 (OSH Act) grants the Occupational Safety and Health Administration (OSHA) of the Department of Labor (DOL) the authority to promulgate, modify, or revoke occupational safety and health standards that apply to private sector employers, the United States Postal Service, and the federal government as an employer.[1] In addition, Section 5(a)(1) of the OSH Act, commonly referred to as the General Duty Clause, requires that all employers under OSHA's jurisdiction provide workplaces free of "recognized hazards that are causing or are likely to cause death or serious physical harm" to their employees.[2] OSHA has the authority to enforce employer compliance with its standards and with the General Duty Clause through the issuance of abatement orders, citations, and civil monetary penalties. The OSH Act does not cover state or local government agencies or units. Thus, certain entities that may be affected by Coronavirus Disease 2019 (COVID-19), such as state and local government hospitals, local fire departments and emergency medical services, state prisons and county jails, and public schools, are not covered by the OSH Act or subject to OSHA regulation or enforcement.

State Plans

Section 18 of the OSH Act authorizes states to establish their own occupational safety and health plans and preempt standards established and enforced by OSHA.[3] OSHA must approve state plans if they are "at least as effective" as OSHA's standards and enforcement.[4] If a state adopts a state plan, it also must cover state and local government entities, such as public schools, not covered by OSHA. Currently, 21 states and Puerto Rico have state plans that cover all employers, and 5 states and the U.S. Virgin Islands have state plans that cover only state and local government employers not covered by the OSH Act.[5] In the remaining states, state and local government employers are not covered by OSHA standards or enforcement. State plans may incorporate OSHA standards by reference, or states may adopt their own standards that are at least as effective as OSHA's standards. State plans do not have jurisdiction over federal agencies and generally do not cover maritime workers and private-sector workers at military bases or other federal facilities.

Promulgation of OSHA Standards

OSHA may promulgate occupational safety and health standards on its own initiative or in response to petitions submitted to the agency by various government agencies, the public, or employer and employee groups.[6] OSHA is not required, however, to respond to a petition for a

[1] 29 U.S.C. §655. The provisions of the Occupational Safety and Health Act of 1970 (OSH Act) are extended to the legislative branch as an employer by the Congressional Accountability Act (P.L. 104-1).

[2] 29 U.S.C. §654(a)(1).

[3] 29 U.S.C. §667.

[4] For additional information on Occupational Safety and Health Administration (OSHA) state plans, see CRS Report R43969, *OSHA State Plans: In Brief, with Examples from California and Arizona*.

[5] Information on specific state plans is available from the OSHA website at https://www.osha.gov/stateplans.

[6] Per Section 6(b)(1) of the OSH Act [29 §655(b)(1)], a petition may be submitted by "an interested person, a representative of any organization of employers or employees, a nationally recognized standards-producing

standard or to promulgate a standard in response to a petition. OSHA may also consult with one of the two statutory standing advisory committees—the National Advisory Committee on Occupational Safety and Health (NACOSH) or the Advisory Committee on Construction Safety and Health (ACCSH)—or an ad-hoc advisory committee for assistance in developing a standard.[7]

Notice and Comment

OSHA's rulemaking process for the promulgation of standards is largely governed by the provisions of the Administrative Procedure Act (APA) and Section 6(b) of the OSH Act.[8] Under the APA informal rulemaking process, federal agencies, including OSHA, are required to provide notice of proposed rules through the publication of a Notice of Proposed Rulemaking in the *Federal Register* and provide the public a period of time to provide comments on the proposed rules.

Section 7(b) of the OSH Act mirrors the APA in that it requires notice and comment in the rulemaking process.[9] After publishing a proposed standard, the public must be given a period of at least 30 days to provide comments. In addition, any person may submit written objections to the proposed standard and may request a public hearing on the standard.

Statement of Reasons

Section 6(e) of the OSH Act requires OSHA to publish in the *Federal Register* a statement of the reasons the agency is taking action whenever it promulgates a standard, conducts other rulemaking, or takes certain additional actions, including issuing an order, compromising on a penalty amount, or settling an issued penalty.[10]

Other Relevant Laws and Executive Order 12866

In addition to the APA and OSH Act, other federal laws that generally apply to OSHA rulemaking include the Paperwork Reduction Act,[11] Regulatory Flexibility Act,[12] Congressional Review Act,[13] Information Quality Act,[14] and Small Business Regulatory Enforcement Fairness Act (SBREFA).[15] Also, Executive Order 12866, issued by President Clinton in 1993, requires

organization, the Secretary of Health and Human Services (HHS), the National Institute for Occupational Safety and Health, or a state or political subdivision."

[7] The National Advisory Committee on Occupational Safety and Health (NACOSH) was established by Section 7(a) of the OSH Act [29 U.S.C. §656(a)]. The Advisory Committee on Construction Safety and Health (ACCSH) was established by Section 107 of the Contract Work Hours and Safety Act (P.L. 87-581). Section 7(b) of the OSH Act provides OSHA the authority to establish additional advisory committees.

[8] The Administrative Procedure Act (APA) is codified at 5 U.S.C. §§500-596. For detailed information on federal agency rulemaking and the APA, see CRS Report RL32240, *The Federal Rulemaking Process: An Overview*.

agencies to submit certain regulatory actions to the Office of Management and Budget (OMB) and Office of Information and Regulatory Affairs (OIRA) for review before promulgation.[16]

OSHA Rulemaking Time Line

OSHA rulemaking for new standards historically has been a relatively time-consuming process. In 2012, at the request of Congress, the Government Accountability Office (GAO) reviewed 59 significant OSHA standards promulgated between 1981 (after the enactments of the Paperwork Reduction Act and Regulatory Flexibility Act) and 2010.[17] For these standards, OSHA's average time between beginning formal consideration of the standard—either through publishing a Request for Information or Advance Notice of Proposed Rulemaking in the *Federal Register* or placing the rulemaking on its semiannual regulatory agenda—and promulgation of the standard was 93 months (7 years, 9 months). Once the Notice of Proposed Rulemaking was published for these 59 standards, the average time until promulgation of the standard was 39 months (3 years, 3 months).

In 2012, OSHA's Directorate of Standards and Guidance published a flowchart of the OSHA rulemaking process on the agency's website.[18] This flowchart includes estimated duration ranges for a variety of rulemaking actions, beginning with pre-rule activities—such as developing the idea for the standard and meeting with stakeholders—and ending with promulgation of the standard. The flowchart also includes an estimated duration range for post-promulgation activities, such as judicial review. The estimated time from the start of preliminary rulemaking to the promulgation of a standard ranges from 52 months (4 years, 4 months) to 138 months (11 years, 6 months). After a Notice of Proposed Rulemaking is published in the *Federal Register,* the estimated length of time until the standard is promulgated ranges from 26 months (2 years, 2 months) to 63 months (5 years, 3 months). **Table 1** provides OSHA's estimated time lines for six major pre-rulemaking and rulemaking activities leading to the promulgation of a standard.

Table 1. OSHA Rulemaking Process: Estimated Durations of Activities

Stage	Activities	Estimated Duration
1	Preliminary rulemaking activities	12-36 months
2	Developing the proposed rule	12-36 months
3	Publishing the Notice of Proposed Rulemaking (NPRM)	2-3 months
4	Developing and analyzing the rulemaking record, including public comments and hearings	6-24 months
5	Developing the final rule, including Office of Information and Regulatory Affairs (OIRA) submission	18-36 months
6	Publishing the final rule (promulgating the new standard)	2-3 months
Total estimated duration		52-138 months
Estimated duration from NPRM to final rule		26-63 months

Judicial Review

Both the APA and the OSH Act provide for judicial review of OSHA standards. Section 7(f) of the OSH Act provides that any person who is "adversely affected" by a standard may file, within 60 days of its promulgation, a petition challenging the standard with the U.S. Court of Appeals for the circuit in which the person lives or maintains his or her principal place of business.[19] A petition for judicial review does not automatically stay the implementation or enforcement of the standard. However, the court may order such a stay. OSHA estimates that post-promulgation activities, including judicial review, can take between 4 and 12 months after the standard is promulgated.[20]

Emergency Temporary Standards

Section 6(c) of the OSH Act provides the authority for OSHA to issue an Emergency Temporary Standard (ETS) without having to go through the normal rulemaking process. OSHA may promulgate an ETS without supplying any notice or opportunity for public comment or public hearings. An ETS is immediately effective upon publication in the *Federal Register*. Upon promulgation of an ETS, OSHA is required to begin the full rulemaking process for a permanent standard with the ETS serving as the proposed standard for this rulemaking. An ETS is valid until superseded by a permanent standard, which OSHA must promulgate within six months of publishing the ETS in the *Federal Register*.[21] An ETS must include a statement of reasons for the action in the same manner as required for a permanent standard. State plans are required to adopt or adhere to an ETS, although the OSH Act is not clear on how quickly a state plan must come into compliance with an ETS.

ETS Requirements

Section 6(c)(1) of the OSH Act requires that both of the following determinations be made in order for OSHA to promulgate an ETS:

- that employees are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful or from new hazards, and
- that such emergency standard is necessary to protect employees from such danger.

Grave Danger Determination

The term *grave danger*, used in the first mandatory determination for an ETS, is not defined in statute or regulation. The legislative history demonstrates the intent of Congress that the ETS process "not be utilized to circumvent the regular standard-setting process," but the history is unclear as to how Congress intended the term grave danger to be defined.[22]

In addition, although the federal courts have ruled on challenges to previous ETS promulgations, the courts have provided no clear guidance as to what constitutes a grave danger. In 1984, the U.S. Court of Appeals for the Fifth Circuit in *Asbestos Info. Ass'n v. OSHA* issued a stay and invalidated OSHA's November 1983 ETS lowering the permissible exposure limit for asbestos in the workplace.[23] In its decision, the court stated that "gravity of danger is a policy decision committed to OSHA, not to the courts."[24] The court, however, ultimately rejected the ETS, in part on the grounds that OSHA did not provide sufficient support for its claim that 80 workers would ultimately die because of exposures to asbestos during the six-month life of the ETS.

Necessity Determination
