In addition to addressing a grave danger to employees, an ETS must also be *necessary* to protect employees from that danger. In *Asbestos Info. Ass'n*, the court invalidated the asbestos ETS for the additional reason that OSHA had not demonstrated the necessity of the ETS. The court cited, among other factors, the duplication between the respirator requirements of the ETS and OSHA's existing standards requiring respirator use. The court dismissed OSHA's argument that the ETS was necessary because the agency felt that the existing respiratory standards were "unenforceable absent actual monitoring to show that ambient asbestos particles are so far above the permissible limit that respirators are necessary to bring employees' exposure within the PEL of 2.0 f/cc."[25] The court determined that "fear of a successful judicial challenge to enforcement of OSHA's permanent standard regarding respirator use hardly justifies resort to the most dramatic weapon in OSHA's enforcement arsenal."[26]

Although OSHA has not promulgated an ETS since the 1983 asbestos standard, it has since determined the necessity of an ETS. In 2006, the agency considered a petition from the United Food and Commercial Workers (UFCW) and International Brotherhood of Teamsters (IBT) for an ETS on diacetyl. The UFCW and IBT petitioned OSHA for the ETS after the National Institute for Occupational Safety and Health (NIOSH) and other researchers found that airborne exposure to diacetyl, then commonly used as an artificial butter flavoring in microwave popcorn and a flavoring in other food and beverage products, was linked to the lung disease *bronchiolitis obliterans*, now commonly referred to as "popcorn lung."[27] According to GAO's 2012 report on OSHA's standard-setting processes, OSHA informed GAO that although the agency may have been able to issue an ETS based on the grave danger posed by diacetyl, the actions taken by the food and beverage industries, including reducing or removing diacetyl from products, made it less likely that the necessity requirement could be met.[28]

ETS Duration

Section 6(c)(2) of the OSH Act provides that an ETS is effective until superseded by a permanent standard promulgated pursuant to the normal rulemaking provisions of the OSH Act. Section 6(c)(3) of the OSH Act requires OSHA to promulgate a permanent standard within six months of

[28] GAO-12-330, *Workplace Safety and Health*.

promulgating the ETS. As shown earlier in this report, six months is well outside of historical and currently expected time frames for developing and promulgating a standard under the notice and comment provisions of the APA and OSH Act, as well as under other relevant federal laws and executive orders. This dichotomy between the statutory mandate to promulgate a standard and the time lines that, based on historical precedent, other provisions in the OSH Act might realistically require for such promulgation raises the question of whether or not OSHA could extend an ETS's duration without going through the normal rulemaking process. The statute and legislative history do not clearly address this question.

OSHA has used its ETS authority sparingly in its history and not since the asbestos ETS promulgated in 1983. As shown in **Table A-1** in the Appendix, of the nine times OSHA has issued an ETS, the courts have fully vacated or stayed the ETS in four cases and partially vacated the ETS in one case.[29] Of the five cases that were not challenged or that were fully or partially upheld by the courts, OSHA issued a permanent standard either within the six months required by the statute or within several months of the six-month period and always within one year of the promulgation of the ETS.[30] Each of these cases, however, occurred before 1980, when a combination of additional federal laws and court decisions added additional procedural requirements to the OSHA rulemaking process. OSHA did not attempt to extend the ETS's expiration date in any of these cases.

Although the courts have not ruled directly on an attempt by OSHA to solely extend the life of an ETS, in 1974, the U.S. Court Appeals for the Fifth Circuit held in *Florida Peach Growers Ass'n v. United States Department of Labor* that OSHA was within its authority to amend an ETS without going through the normal rulemaking process.[31] The court stated that "it is inconceivable that Congress, having granted the Secretary the authority to react quickly in fast-breaking emergency situations, intended to limit his ability to react to developments subsequent to his initial response."[32] The court also recognized the difficulty OSHA may have in promulgating a standard within six months due to the notice and comment requirements of the OSH Act, stating that in the case of OSHA seeking to amend an ETS to expand its focus, "adherence to subsection (b) procedures would not be in the best interest of employees, whom the Act is designed to protect. Such lengthy procedures could all too easily consume all of the temporary standard's six months life."[33]

OSHA Standards Related to COVID-19

Current OSHA Standards

Currently, no OSHA standard directly covers exposure to airborne or aerosol diseases in the workplace. As a result, OSHA is limited in its ability to enforce protections for healthcare and other workers who may be exposed to SARS-CoV-2, the virus that causes COVID-19.[34]

OSHA may enforce the General Duty Clause in the absence of a standard, if it can be determined that an employer has failed to provide a worksite free of "recognized hazards" that are "causing or are likely to cause death or serious physical harm" to workers.[35] In addition, OSHA's standards for the use of personal protective equipment (PPE) may apply in cases in which workers require eye, face, hand, or respiratory protection against COVID-19 exposure.[36]

As of October 1, 2020, OSHA has issued citations related to COVID-19 to employers at 62 work sites resulting in a total of $913,133 in proposed civil penalties.[37] The majority of these citations were issued to healthcare, nursing, and long-term care providers, including two Department of Veterans Affairs facilities—a hospital in Indianapolis, Indiana, and a community living center in Queens, New York.[38] Two employers in the meat processing industry—Smithfield Packaged Foods, Inc. in Sioux Falls, South Dakota and JBS Foods, Inc. in Greeley, Colorado—were also cited.[39] In the two meat processing cases, citations were issued for General Duty Clause violations. Other citations were issued for violations of OSHA's respiratory protection, injury and illness reporting, and recordkeeping standards.

The highest amount of proposed penalties issued to a single employer for COVID-19-related violations was $28,070 to the Harborage nursing home operated by Hackensack Meridian Healthcare in New Jersey for four serious and one other than serious violations of the respiratory protection standard.[40] For two of the serious violations, OSHA issued the maximum allowable penalty of $13,494.[41] For the other two serious violations, OSHA issued citations but no monetary penalties. For the other than serious violation, OSHA issued a penalty of $1,082. The two meat processing employers were each assessed maximum penalties of $13,494 for serious violations of the General Duty Clause.

In a letter to OSHA, Senators Elizabeth Warren and Cory A. Booker raised concerns over the amount of penalties issued to these employers.[42] The Senators asked OSHA why these employers

[34] OSHA has a standard on blood-borne pathogens (29 C.F.R. §1910.1030) but does not have a standard on pathogens transmitted by airborne droplets.

[35] 29 U.S.C. §654(a)(1).

[36] 29 C.F.R. §§1910.133, 1910.134, and 1910.138.

[37] OSHA, *U.S. Department of Labor's OSHA Announces $913,133 in Coronavirus Violations*, OSHA National News Release, October 9, 2020, https://www.osha.gov/news/newsreleases/national/10092020.

[38] A list of all COVID-19-related citations issued by OSHA through October 1, 2020, is available at https://www.osha.gov/enforcement/covid-19-data/inspections-covid-related-citations.

[39] OSHA has the authority to issue citations to Executive Branch agencies, but does not have the authority to issue civil monetary penalties to these agencies.

[40] Detailed information on the citations issued to this employer is available at https://www.osha.gov/pls/imis/establishment.inspection_detail?id=1476465.015.

[41] OSHA citations are classified as "serious," "other than serious," "willful," or "repeated." The maximum amounts of OSHA penalties are subject to annual inflationary adjustments.

[42] Letter from Senators Elizabeth Warren and Cory A. Booker to Loren Sweatt, Principal Deputy Assistant Secretary of

were each cited for single serious violations of the General Duty Clause rather than multiple violations for each area of the facilities in which social distancing measures were not implemented. They also asked why OSHA did not issue penalties for willful or repeated violations that carry maximum penalties of $134,937 per violation. None of the employers cited for COVID-19-related violations were issued penalties for willful or repeated violations.

OSHA Respiratory Protection Standard

National Institute for Occupational Safety and Health Certification

The OSHA respiratory protection standard requires the use of respirators certified by NIOSH in cases in which engineering controls, such as ventilation or enclosure of hazards, are insufficient to protect workers from breathing contaminated air.[43] Surgical masks, procedure masks, and dust masks are not considered respirators. NIOSH certifies respirators pursuant to federal regulations.[44] For nonpowered respirators, such as filtering face piece respirators commonly used in healthcare and construction, NIOSH classifies respirators based on their efficiency at filtering airborne particles and their ability to protect against oil particles. Under the NIOSH classification system, the letter (N, R, or P) indicates the level of oil protection as follows: N—no oil protection; R—oil resistant; and P—oil proof. The number following the letter indicates the efficiency rating of the respirator as follows: 95—filters 95% of airborne particles; 97—filters 97% of airborne particles; and 100—filters 99.7% of airborne particles. Thus an N95 respirator, the most common type, is one that does not protect against oil particles and filters out 95% of airborne particles. An R or P respirator can be used in place of an N respirator.

A respirator that is past its manufacturer-designated shelf life is no longer considered to be certified by NIOSH. However, in response to potential shortages in respirators, NIOSH has tested and approved certain models of respirators for certified use beyond their manufacturer-designated shelf lives.[45]

Respirators designed for certain medical and surgical uses are subject to both certification by NIOSH (for oil protection and efficiency) and regulation by the Food and Drug Administration (FDA) as medical devices. In general, respirators with exhalation valves cannot be used in surgical and certain medical settings because, although the presence of an exhalation valve does not affect the respirator's protection afforded the user, it may allow unfiltered air from the user into a sterile field. On March 2, 2020, FDA issued an Emergency Use Authorization (EUA) to approve for use in medical settings certain NIOSH-certified respirators not previously regulated by FDA.[46]

Labor, Occupational Safety and Health Administration, September 22, 2020, https://www.warren.senate.gov/imo/media/doc/Letter%20from%20Senators%20Warren,%20Booker%20to%20OSHA%209-22-20.pdf.

The list of respirators approved under this Emergency Use Authorization (EUA) is in Appendix B to this letter, updated at https://www.fda.gov/media/135921/download.

CDC Interim Guidance on Respiratory Protection

On March 10, 2020, the Centers for Disease Control and Prevention (CDC) updated its interim guidance for the protection of healthcare workers against exposure to COVID-19 to permit healthcare workers caring for known or suspected COVID-19 cases to use "facemasks" when respirators are not available or are in limited supply.[47] This differs from the CDC's 2007 guidelines for control of infectious agents in healthcare settings, which required the use of respirators for treatment of known or suspected cases.[48] CDC states that respirators should be prioritized for use in medical procedures likely to generate respiratory aerosols. Before this interim guidance was released, Representative Bobby Scott, Chairman of the House Committee on Education and Labor, and Representative Alma Adams, Chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Health and Human Services (HHS) Alex M. Azar II expressing their opposition to this change in the interim standard.[49]

Medical Evaluation and Fit Testing

The OSHA respiratory protection standard requires that the employer provide a medical evaluation to the employee to determine if the employee is physiologically able to use a respirator. This medical evaluation must be completed before any fit testing. For respirators designed to fit tightly against the face, the specific type and model of respirator that an employee is to use must be fit tested in accordance with the procedures provided in Appendix A of the OSHA respiratory protection standard to ensure there is a complete seal around the respirator when worn.[50] Once an employee has been fit tested for a respirator, he or she is required to be fit tested annually or whenever the model of respirator, but not the actual respirator itself, is changed. Each time an individual uses a respirator, he or she is required to perform a check of the seal of the respirator to his or her face in accordance with the procedures provided in Appendix B of the standard.[51] On March 14, 2020, OSHA issued guidance permitting employers to suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator.

---

[47] Although the interim guidance does not specifically define the term *facemask*, it does differentiate between a facemask and a respirator such that any recommendation to use a facemask does not require the use of a respirator. CDC, *Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings*, updated March 10, 2020, at https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html.

[51] 29 C.F.R. §1910.134 Appendix B.

Temporary OSHA Enforcement Guidance on the Respiratory Protection Standard

In response to shortages of respirators and other PPE during the national response to the COVID-19 pandemic, OSHA has issued three sets of temporary enforcement guidance to permit the following exceptions to the respiratory protection standard:

1. Employers may suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator;[52]
2. Employers may permit the use of expired respirators and the extended use or reuse of respirators, provided the respirator maintains its structural integrity and is not damaged, soiled, or contaminated (e.g., with blood, oil, or paint);[53] and
3. Employers may permit the use of respirators not certified by NIOSH, but approved under standards used by the following countries or jurisdictions, in accordance with the protection equivalency tables provided in Appendices A and B of the enforcement guidance document:
   - Australia,
   - Brazil,
   - European Union,
   - Japan,
   - Mexico,
   - People's Republic of China, and
   - Republic of Korea.[54]

California: Cal/OSHA Aerosol Transmissible Disease Standard

Although no OSHA standard specifically covers aerosol or airborne disease transmission, the California Division of Occupational Safety and Health (Cal/OSHA), under its state plan, promulgated its aerosol transmissible disease (ATD) standard in 2009.[55] The ATD standard covers most healthcare workers, laboratory workers, as well as workers in correctional facilities, homeless shelters, and drug treatment programs. Under the ATD standard, SARS-CoV-2, the virus that causes COVID-19, is classified as a disease or pathogen requiring airborne isolation. This classification subjects the virus to stricter control standards than diseases requiring only

[53] OSHA, *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-respiratory-protection-and-n95-shortage-due-coronavirus. Under this guidance, employers are required to address in their written respiratory protection plans when respirators are contaminated and not available for use or reuse.

[54] OSHA, *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-use-respiratory-protection-equipment-certified-under.

[55] Cal. Code Regs. tit. 8, §5199. The California state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers; workers on military bases and in national parks, monuments, memorials, and recreation areas; workers on federally recognized Native American reservations and trust lands; and U.S. Postal Service contractors.

droplet precautions, such as seasonal influenza.[56] The key requirements of the ATD standard include

- written ATD exposure control plan and procedures,
- training of all employees on COVID-19 exposure, use of PPE, and procedures if exposed to COVID-19,
- engineering and work practice controls to control COVID-19 exposure, including the use of airborne isolation rooms,
- provision of medical services to employees, including removal of exposed employees,
- specific requirements for laboratory workers, and
- PPE requirements.

Cal/OSHA Aerosol Transmissible Disease PPE Requirements

The Cal/OSHA ATD standard requires that employers provide employees PPE, including gloves, gowns or coveralls, eye protection, and respirators certified by NIOSH at least at the N95 level whenever workers

- enter or work in an airborne isolation room or area with a case or suspected case;
- are present during procedures or services on a case or suspected case;
- repair, replace, or maintain air systems or equipment that may contain pathogens;
- decontaminate an area that is or was occupied by a case or suspected case;
- are present during aerosol generating procedures on cadavers of cases or suspected cases;
- transport a case or suspected case within a facility or within a vehicle when the patient is not masked; and
- are working with a viable virus in the laboratory.[57]

In addition, a powered air purifying respirator (PAPR) with a high-efficiency particulate air (HEPA) filter must be used whenever a worker performs a *high-hazard procedure* on a known or suspected COVID-19 case.[58] High-hazard procedures are those in which "the potential for being exposed to aerosol transmissible pathogens is increased due to the reasonably anticipated generation of aerosolized pathogens"—they include intubation, airway suction, and caring for patients on positive pressure ventilation.[59] Emergency medical services (EMS) workers may use N100, R100, or P100 respirators in place of PAPRs.

[56] Cal. Code Regs. tit. 8, §5199 Appendix A.

[57] California Division of Occupational Safety and Health (Cal/OSHA), *Interim Guidance for Protecting Health Care Workers from Exposure to Coronavirus Disease (COVID-19)*, March 2020, at https://www.dir.ca.gov/dosh/Coronavirus-info.html.

[58] A PAPR uses a mechanical device to draw in room air and filter it before expelling that air over the user's face. In general, PAPRs do not require a tight seal to the user's face and do not need to be fit tested.

[59] Cal. Code Regs. tit. 8, §5199(b).

Cal/OSHA Interim Guidance on COVID-19

Cal/OSHA has issued interim guidance in response to shortages of respirators in the state due to the COVID-19 pandemic response.[60] Under this interim guidance, if the supply of N95 respirators or PAPRs are insufficient to meet current or anticipated needs, surgical masks may be used for low-hazard patient contacts that would otherwise require the use of respirators, and respirators may be used for high-hazard procedures that would otherwise require the use of PAPRs.

Virginia: VOSH COVID-19 ETS

On July 15, 2020, the Virginia Safety and Health Codes Board adopted an ETS to specifically protect employees from exposure to SARS-CoV-2, the virus that causes COVID-19.[61] This ETS, promulgated under Virginia's state occupational safety and health plan (VOSH) is the first state standard to specifically address COVID-19 in the workplace.[62] As an ETS, the VOSH standard expires within six months of its effective date, upon expiration of the Governor's State of Emergency, when superseded by a permanent standard, or when repealed by the Virginia Safety and Health Codes Board, whichever comes first. The ETS can be extended only through the normal state rulemaking process.

Unlike the Cal/OSHA ATD standard, the VOSH ETS applies to all state and local government agencies and all covered private-sector employees in the state. As part of a state plan, the VOSH ETS applies to state and local government entities, such as public schools, as employers. All covered employers in Virginia must comply with the following ETS requirements:

- exposure assessment and determination, notification of suspected cases and contacts with those cases, and employee access to their own exposure and medical records;
- return to work of employees known or suspected to have COVID-19 based on a duration of time since last symptoms or negative COVID-19 tests;[63]
- maintenance of physical distancing between employees while working and on paid breaks at the worksite, including restricted access to the worksite and common areas and break rooms;
- compliance with applicable existing PPE and respiratory protection standards when physical distancing between employees is not possible; and
- sanitation and disinfection requirements.

For all employers, if engineering, administrative, or work practice controls are not feasible or do not provide sufficient protection from SARS-CoV-2 transmission, then PPE, including respiratory PPE—such as respirators, if necessary—must be provided to employees.

---

[60] California Division of Occupational Safety and Health (Cal/OSHA), *Cal/OSHA Interim Guidance on COVID-19 for Health Care Facilities: Severe Respirator Supply Shortages*, March 28, 2020, at https://www.dir.ca.gov/dosh/coronavirus/Cal-OSHA-Guidance-for-respirator-shortages.pdf.

[61] *Infectious Disease Prevention: SARS-CoV-2 Virus That Causes COVID-19*, 16 Va. Admin. Code §25-220. This ETS is effective upon publication in a Richmond, VA, newspaper during the week of July 27, 2020.

[62] The Virginia state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S Postal Service contractors, workers at military bases or other federal enclaves in which the federal government has civil jurisdiction, workers at the U.S. Department of Energy's Southeastern Power Administration Kerr-Philpott System, and aircraft cabin crew members.

[63] A COVID-19 test for the purposes of determining if an employee can return to work must be paid for by the employer or offered such that the employee bears no cost for the test.

Hazard and Job Task Classification

The VOSH ETS requires that each employer assess its workplace for hazards and job tasks that potentially expose employees to the SARS-CoV-2 virus. Employers must classify each job task as having a "very high," "high," "medium," or "lower" risk level of exposure, according to the hazards to which employees are potentially exposed. The VOSH ETS provides the following examples of activities for the "very high" and "high" risk levels:

- "very high" risk activities include
  - using aerosol-generating procedures, such as intubation, on patients known or suspected to be infected with SARS-CoV-2;
  - collecting or handling specimens from patients known or suspected to be infected with SARS-CoV-2; and
  - performing an autopsy involving aerosol-generating procedures on the body of a person known or suspected to be infected with the SARS-CoV-2 virus at the time of death; and
- "high risk" activities include
  - health care services, including inpatient care, outpatient care, skilled nursing care, and nonmedical support services such as room cleaning, provided to patients known or suspected to be infected with SARS-CoV-2;
  - first responder and medical transport services to patients known or suspected to be infected with SARS-CoV-2; and
  - mortuary services to persons known or suspected to be infected with the SARS-CoV-2 virus at the time of death.

"Medium" risk activities are those that require employees to have more than minimal contact, within six feet of other employees, customers, or members of the public who are not known or suspected to be infected with SARS-CoV-2.[64] "Lower" risk activities are those that do not require contact with other persons within six feet or that are able to utilize the following types of engineering, administrative, or work practice controls to minimize contact between persons:

- installation of floor to ceiling barriers, such as barriers between cashiers and customers;
- telecommuting;
- staggered work shifts to reduce the number of workers at a site;
- delivering services remotely, including curbside pickup of retail purchases; and
- mandatory physical distancing of persons.

The use of face coverings other than respirators or medical or surgical masks, including cloth face coverings now required by several states, is not an acceptable method of minimizing physical contact between persons. However, the VOSH ETS requires the use of face coverings for brief contacts between persons within six feet of each other.

[64] Examples of "medium" risk work activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-30.

Engineering, Administrative, Work Practice, and PPE Requirements for "Very High," "High," and "Medium" Risk Activities

Employers with job tasks or activities in the "very high," "high," or "medium" risk classifications must adhere to specific engineering, administrative, work practice, and PPE requirements. For "very high" and "high" risk activities, engineering controls include the use of airborne infection isolation rooms (AIIR) for known or suspected COVID-19 patients and aerosol-generating procedures and Biosafety Level 3 (BSL-3) precautions for the handling of specimens from known or suspected COVID-19 patients.[65]

Employers with "very high" and "high" risk activities must implement administrative and work practice controls, including the prescreening of all employees to ensure that employees do not have signs or symptoms of COVID-19; enhanced medical screening of employees during COVID-19 outbreaks; and the use of flexible work arrangements, such as telecommuting, when feasible. In addition, all employers with "very high" or "high" risk activities must provide, to the extent feasible, psychological and behavioral support to address employee stress at no cost to the employee.

The standard also provides for engineering, administrative, and work practice controls for "medium" risk activities.[66]

PPE Requirements for "Very High" and "High" Risk Activities

Employers with "very high" and "high" risk activities, who are not already covered by the general OSHA PPE standards, are required to comply with the VOSH ETS requirements for PPE. An employer subject to these requirements must assess the workplace to determine if there are any COVID-19 hazards present or likely to be present that would require the use of PPE by employees. The employer must provide for the participation of employees and employee representatives in this assessment process and verify that this assessment has been conducted through a written certification.

If hazards that require PPE are identified, the employer must select and provide the appropriate PPE to each employee and ensure that PPE fits properly. If respiratory PPE, such as respirators or PAPR are used as PPE, the existing OSHA standards for respiratory PPE, which include medical evaluation of employees and fit testing, must be followed.

Unless contraindicated by the hazard and PPE assessment, when any employee is in contact within six feet of any person known or suspected to be infected with SARS-CoV-2, that employee must be provided with the following types of PPE:

- gloves,
- gown large enough to cover areas needing protection,
- face shield or goggles, and
- respirator.

---

[65] The VOSH ETS requires compliance with Biosafety Level 3 precautions provided in HHS, *Biosafety in Microbiological and Biomedical Laboratories. Fifth Edition*, HHS Publication no. (CDC) 21-1112, December 2009, at https://www.cdc.gov/labs/BMBL.html.

[66] Engineering, administrative, and work practice controls for "medium" risk activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-60.

While there are no specific PPE requirements for "medium" risk activities, PPE may be required based on an assessment of the hazards of these activities.

Infectious Disease Preparedness and Response Plan and Training

Infectious Disease Preparedness and Response Plan

All employers with "very high" and "high" risk activities, and employers with 11 or more employees and "medium" risk activities, must develop written infectious disease preparedness and response plans. These plans must be developed with input from employees. The deadline for the development of these plans is 60 days from the effective date of the ETS.

The infectious disease preparedness plan must include a consideration of the COVID-19 risks in the workplace, and to the extent possible and in compliance with medical privacy laws, the specific risks faced by employees with certain preexisting medical conditions. The plan must include contingency plans for continued operations during a COVID-19 outbreak and provide for the prompt identification and isolation of employees with known or suspected COVID-19 and a procedure for employees to notify the employer of COVID-19 signs or symptoms. The plan must also address interactions between the employer's worksite and other businesses, such as vendors and contractors to ensure employees of these businesses comply with the VOSH ETS and the employer's infectious disease preparedness and response plan.

Training

All employers with "very high," "high," or "medium" risk activities must provide training to all employees, including those employees whose work does not involve any COVID-19 risks. This training must teach employees to recognize the hazards of the SARS-CoV-2 virus, signs and symptoms of COVID-19, and the procedures to minimize SARS-CoV-2 hazards. If the employer has an infectious disease preparedness and response plan, training must be provided on this plan. Written certification of training must be prepared, and retraining must be provided when necessary.

Employers with only "lower" risk activities are not required to prepare a formal training plan but must provide oral or written communication on the hazards of SARS-CoV-2, the signs and symptoms of COVID-19, and measures to minimize SARS-CoV-2 exposure. VOSH is required to develop an information sheet that employers can use to satisfy this training requirement.

Training must be provided within 30 days of the effective date of the standard, except for training on the infectious disease preparedness and response plan, which must be completed within 60 days.

Whistleblower Protections

The VOSH ETS prohibits any employer from discharging or otherwise discriminating against any employee who does the following:

- exercises his or her rights under the ETS or existing whistleblower protection provisions, including the limited right of an employee to refuse work because of a reasonable fear of injury or death or serious injury;[67]

[67] To exercise this right, the employee must, if possible, have sought unsuccessfully to have the employer remedy the hazard, and there must be insufficient time to attempt to remedy the hazard through normal regulatory enforcement

- provides and wears his or her own PPE, provided the PPE does not create a greater hazard to the employee or create a serious hazard to other employees; or
- raises a reasonable concern about SARS-CoV-2 and COVID-19 infection control to the employer, the employer's agent, other employees, the government, or the public through any type of media including social media.

Michigan: MIOSHA COVID-19 Emergency Rules

On October 14, 2020, the director of the Michigan Department of Labor and Economic Opportunity, which operates Michigan's state occupational safety and health plan (MIOSHA), promulgated emergency rules to address workplace exposure to COVID-19.[68] These rules, which apply to all employers in the state, went into immediate effect and will remain in effect for six months. In addition to rules that apply to all employers, the emergency rules include specific provisions that apply to the following industries:

- construction;
- manufacturing;
- retail, libraries, and museums;
- restaurants and bars;
- healthcare;
- in-home services such as house cleaning and repair;
- personal care services such as hair styling and tattooing;
- public accommodations such as sports and entertainment venues;
- sports and exercise facilities;
- meat and poultry processing; and
- casinos.[69]

Exposure Determination

Rule 3 of the MIOSHA emergency rules requires all employers to evaluate all routine and anticipated job tasks and categorize these job tasks based on potential employee exposure to COVID-19 into one of the following four categories:

1. "Lower exposure risk" tasks are those that do not require contact with known or suspected COVID-19 cases or frequent close (within six feet) contact with the general public.
2. "Medium exposure risk" tasks are those that require frequent or close contact with persons who may be infected with COVID-19 but who are not known or suspected COVID-19 cases. In areas of the state without ongoing community

channels. This right is provided in the OSHA standards at 29 C.F.R. §1977.12(b)(2) and in the VOSH standards at 16 Va. Admin. Code §25-60-110.

[68] Department of Labor and Economic Opportunity, Michigan Occupational Safety and Health Administration (MIOSHA) Emergency Rules: Coronavirus 2019 (COVID-19), available at https://www.michigan.gov//documents/leo/Final_MIOSHA_Rules_705164_7.pdf. The Michigan state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S. Postal Service contractors, workers at businesses owned or operated by tribal members at Indian reservations, and aircraft cabin crew members.

[69] MIOSHA Emergency Rules: Coronavirus 2019 (COVID-19), Rule 11.

transmission of COVID-19, tasks that require frequent contact with persons travelling from areas with widespread COVID-19 transmission are included in this category. In areas with ongoing community transmission, tasks that involve contact with the general public are included in this category.

3. "High exposure risk" tasks are those with high potential for exposure to known or suspected COVID-19 cases. Licensed healthcare providers, medical first responders, nursing home workers, law enforcement and correctional officers, and mortuary workers are examples of types of workers that may perform tasks in this category.
4. "Very high exposure risk" tasks are those that involve the generation of aerosols during medical or mortuary procedures on known or suspected COVID-19 cases and the collection and handling of laboratory specimens from known or suspected COVID-19 cases.

Preparedness and Response Plan

Rule 4 of the MIOSHA emergency rules requires all employers to develop a written COVID-19 preparedness and response plan based on current CDC and OSHA guidance. This plan must detail measures the employer will take to protect employees from COVID-19 exposure and must be readily available to employees and their representatives.

Basic Infection Prevention Measures

Rule 5 of the MIOSHA emergency rules requires all employers to implement the following basic infection prevention measures:

- promote frequent hand-washing and provide hand-washing facilities or hand sanitizer to workers, customers, and visitors;
- require employees who are sick to not report to work or to report to an isolated location;
- prohibit workers from using other workers' desks, phones, and other equipment when possible;
- increase facility cleaning, especially of high-touch surfaces and shared equipment;
- establish procedures, consistent with CDC guidance, for disinfection of the worksite if a worker, customer, or visitor has a known case of COVID-19;
- use Environmental Protection Agency (EPA) approved disinfectants that are expected to effective against SARS-CoV-2;
- follow all manufacturer's guidelines for use of all cleaning and disinfectant products; and
- prohibit in-person work for employees whose work can be done remotely.

Health Surveillance

Rule 6 of the MIOSHA emergency rules requires all employers to implement a health surveillance system for the workplace. This system must include, at a minimum, a COVID-19 screening questionnaire for all employees and contractors entering the workplace. Employees must be directed to immediately report any signs or symptoms of COVID-19 to the employer and known and suspected COVID-19 cases must be isolated from the rest of the workforce. When an

employer learns of an employee, contractor, customer, or visitor to the worksite with a known case of COVID-19, the employer must immediately notify the local health department and, must notify, within 24 hours, any workers, contractors, or suppliers who may have come into contact with the infected person. When determining if an employee with a known or suspected case of COVID-19 may return to the workplace, the employer must follow CDC guidelines and health department quarantine and isolation orders.

Workplace Controls

Rule 7 of the MIOSHA emergency rules requires all employers to implement the following workplace controls:

- designate one or more worksite COVID-19 safety coordinators to implement, monitor, and report on COVID-19 control strategies developed by the employer and to remain on site at all times when employees are present;
- place posters in appropriate languages in the workplace that provide information on staying away from work while sick, cough and sneeze etiquette, and hand hygiene;
- keep all persons at least six feet from each other using signs, floor markings, and barriers appropriate for the worksite, to the extent possible;
- provide all employees with non-medical grade face coverings at no cost to the employees;
- require the use of face coverings when employees cannot maintain six feet of distance from other persons in the workplace, and consider the use of face shields when three feet of distance cannot be maintained;
- require face coverings in shared spaces, such as restrooms and hallways and during in-person meetings.

PPE

Rule 8 of the MIOSHA emergency rules requires that employers provide appropriate PPE, including respiratory protection, to employees based on the exposure risks of the job and current CDC and OSHA guidelines. All PPE must be properly fitted, inspected, maintained, cleaned, stored, and disposed of. In workplaces that provide medical treatment to known or suspected COVID-19 cases, employees with frequent or prolonged close contact with such patients must be provided with and wear, at a minimum, an N95 respirator, goggles or face shield, and gown.

Training Requirements

Rule 10 of the MIOSHA emergency rules requires all employers to provide training and communication, in languages common among the employees, on the following subjects:

- workplace infection-control practices;
- proper use of PPE;
- how to notify the employer of COVID-19 symptoms or diagnosis;
- how to report unsafe working conditions.

This training must be updated if the employer's COVID-19 preparedness and response plan changes or new information on COVID-19 transmission becomes available.

Recordkeeping Requirements

Rule 11 of the MIOSHA emergency rules requires that all employers maintain, for one year, records of employee training, the screening of persons entering the workplace, and any health surveillance notifications required by Rule 6.

OSHA Infectious Disease Standard Rulemaking

In 2010, OSHA published a Request for Information in the *Federal Register* seeking public comments on strategies to control exposure to infectious diseases in healthcare workplaces.[70] After collecting public comments and holding public meetings, OSHA completed the SBREFA process in 2014. Since then, however, no public actions have occurred on this rulemaking; since spring 2017, this rulemaking has been listed as a "long-term action" in DOL's semiannual regulatory agenda.

Congressional Activity to Require an OSHA Emergency Temporary Standard on COVID-19

On March 5, 2020, Representative Bobby Scott, chairman of the House Committee on Education and Labor, and Representative Alma Adams, chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Labor Eugene Scalia calling on OSHA to promulgate an ETS to address COVID-19 exposure among healthcare workers.[71] This letter followed a January 2020 letter requesting that OSHA reopen its rulemaking on the infectious disease standard and begin to formulate for possible future promulgation an ETS to address COVID-19 exposure.[72] Senator Patty Murray, ranking member of the Senate Committee on Health, Education, Labor, and Pensions and a group of Democratic Senators sent a similar letter to the Secretary of Labor calling for an OSHA ETS.[73]

In addition, in March 2020, David Michaels, who served as the Assistant Secretary of Labor for Occupational Safety and Health during the Obama Administration, wrote an op-ed in *The Atlantic* calling on OSHA to promulgate a COVID-19 ETS.[74] On March 6, 2020, the AFL-CIO and 22 other unions petitioned OSHA for an ETS on infectious diseases that would cover all workers with potential exposures.[75] OSHA formally denied the AFL-CIO petition on May 29, 2020, claiming that an ETS is not necessary to protect employees from infectious diseases generally, or

[75] Letter from Richard L. Trumka, president, AFL-CIO, to The Honorable Eugene Scalia, Secretary of Labor, March 6, 2020, at https://aflcio.org/statements/petition-secretary-scalia-osha-emergency-temporary-standard-infectious-disease.

from COVID-19.[76] National Nurses United submitted a similar petition requesting that OSHA promulgate an ETS based largely on the Cal/OSHA ATD standard.[77] On May 4, 2020, the Center for Food Safety and Food Chain Workers Alliance submitted a petition requesting that OSHA promulgate an ETS to protect meat and poultry processing workers from COVID-19 exposure in the workplace.[78] On May 18, 2020, the AFL-CIO petitioned the U.S. Court of Appeals for the D.C. Circuit for a writ of mandamus to compel OSHA to promulgate a COVID-19 ETS.[79] The circuit court denied this petition on June 11, 2020.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020

On March 9, 2020, Representative Bobby Scott introduced H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020. This bill would require OSHA to promulgate a COVID-19 ETS within one month of enactment. The ETS would be required to cover healthcare workers and any workers in sectors determined by the CDC or OSHA to be at an elevated risk of COVID-19 exposure. The ETS would be required to include an exposure control plan provision and be, at a minimum, based on CDC's 2007 guidance and any updates to this guidance. The ETS would also be required to provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD standard, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS. Title II of the bill would provide that hospitals and skilled nursing facilities that receive Medicare funding and that are owned by state or local government units and not subject to state plans would be required to comply with the ETS. Similar provisions are included in S. 3475.

P.L. 116-127, the Families First Coronavirus Response Act

The provisions of H.R. 6139 were included as Division C of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The American Hospital Association (AHA) issued an alert to its members expressing its opposition to the OSHA ETS provisions in the bill.[80] Specifically, the AHA opposed the requirement that the ETS be based on the CDC's 2007 guidance. The AHA stated that unlike severe acute respiratory syndrome (SARS), which was transmitted through the air, COVID-19 transmission is through droplets and surface contacts. Thus, the requirement of the 2007 CDC guidance that N95 respirators, rather than surgical masks, be used for patient contact is not necessary to protect healthcare workers from COVID-19, and the use of surgical masks is consistent with World Health Organization guidance. The AHA also

[79] In re: American Federation of Labor and Congress of Industrial Organizations, D.C. Cir., No. 19-1158, May 18, 2020. This petition was filed in the U.S. Court of Appeals as Section 6(f) of the OSH Act [29 U.S.C. §655(f)] grants this court exclusive jurisdiction to provide judicial review of OSHA standards.

[80] Emily Kopp, "Hospitals want to kill a policy shielding nurses from COVID-19 because there aren't enough masks," *Roll Call*, March 3, 2020, at https://www.rollcall.com/2020/03/13/hospitals-want-to-kill-a-policy-shielding-nurses-from-covid-19-because-there-arent-enough-masks/. This alert is available to American Hospital Association (AHA) members on the AHA website at https://www.aha.org.

claimed that shortages of available respirators could reduce the capacity of hospitals to treat COVID-19 patients, due to a lack of respirators for staff. The OSHA ETS provisions were not included in the version of the legislation that was passed by the House and the Senate and signed into law as P.L. 116-127.

H.R. 6379, the Take Responsibility for Workers and Families Act

Division D of H.R. 6379, the Take Responsibility for Workers and Families Act, as introduced in the House on March 23, 2020, includes the requirement that OSHA promulgate an ETS on COVID-19 within seven days of enactment and a permanent COVID-19 standard within 24 months of enactment to cover healthcare workers, firefighters and emergency response workers, and workers in other occupations that CDC or OSHA determines to have an elevated risk of COVID-19 exposure. Division D of H.R. 6379 would amend the OSH Act, for the purposes of the ETS only, such that state and local government employers in states without state plans would be covered by the ETS. The provisions of Division D of H.R. 6379 were also included in S. 3584, the COVID-19 Workers First Protection Act of 2020, as introduced in the Senate.

This legislation would specifically provide that the ETS would remain in force until the permanent standard is promulgated and would explicitly exempt the ETS from the Regulatory Flexibility Act, Paperwork Reduction Act, and Executive Order 12866. OSHA would be granted enforcement discretion in cases in which it is not feasible for an employer to fully comply with the ETS (such as a case in which PPE is unavailable) if the employer is exercising due diligence to comply and implementing alternative means to protect employees.

Like the provisions in H.R. 6139 and the version of H.R. 6201 introduced in the House, the ETS and permanent standard under H.R. 6379 would be required to include an exposure control plan and provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS and permanent standard. Although the ETS provisions in H.R. 6139 and H.R. 6201 would require that the ETS be based on the 2007 CDC guidance, specific reference to the 2007 guidance is not included in this legislation. Rather, under H.R. 6379, the ETS and permanent standard would have to incorporate, as appropriate, "guidelines issued by the Centers for Disease Control and Prevention, and the National Institute for Occupational Safety and Health, which are designed to prevent the transmission of infectious agents in healthcare settings" and scientific research on novel pathogens.

States with occupational safety and health plans would be required to adopt the ETS, or their own ETS at least as effective as the ETS, within 14 days of the legislation's enactment.

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020, was introduced in the House by Representative Bobby Scott on April 21, 2020. This legislation includes the ETS and permanent standard provisions of Division D of H.R. 6379 and S. 3584 and would require that these standards cover healthcare workers, emergency medical responders, and "other employees at occupational risk" of COVID-19 exposure. This legislation also adds two provisions that would clarify the requirements for employers to record work-related COVID-19 infections and strengthen the protections against retaliation and discrimination offered to whistleblowers. Similar provisions are included in S. 3677 and were incorporated into H.R. 6800, the Heroes Act, as passed by the House.

COVID-19 Recordkeeping

Sections 8(c) and 24(a) of the OSH Act require employers to maintain records of occupational injuries and illnesses in accordance with OSHA regulations.[81] OSHA's reporting and recordkeeping regulations require that employers with 10 or more employees must keep records of work-related injuries and illnesses that result in lost work time for employees or that require medical care beyond first aid.[82] Employers must also report to OSHA, within 8 hours, any workplace fatality, and within 24 hours, any injury or illness that results in in-patient hospitalization, amputation, or loss of an eye. Employers in certain industries determined by OSHA to have lower occupational safety and health hazards are listed in the regulations as being exempt from the recordkeeping requirements but not the requirement to report to OSHA serious injuries, illnesses, and deaths.[83] Offices of physicians, dentists, other health practitioners, and outpatient medical clinics are included in the industries that are exempt from the recordkeeping requirements.

OSHA regulations require the employer to determine if an employee's injury or illness is related to his or her work and thus subject to the recordkeeping requirements.[84] The regulations provide a presumption that an injury or illness that occurs in the workplace is work-related and recordable, unless one of the exemptions provided in the regulations applies.[85] One of the listed exemptions is "The illness is the common cold or flu (Note: contagious diseases such as tuberculosis, brucellosis, hepatitis A, or plague are considered work-related if the employee is infected at work)."[86]

Because of the nature of COVID-19 transmission, which can occur in the community as well as the workplace, it can be difficult to determine the exact source of any person's COVID-19 transmission. Absent any specific guidance, this may make it difficult for employers to determine if an employee's COVID-19 is subject to the recordkeeping requirements.

Initial OSHA Recordkeeping Guidance

On April 10, 2020, OSHA issued enforcement guidance on how cases of COVID-19 should be treated under the recordkeeping requirements.[87] This guidance stated that COVID-19 cases were recordable if they were work-related.

Under this guidance, employers in the following industry groups were to fully comply with the recordkeeping regulations, including the requirement to determine if COVID-19 cases were work-related:

- healthcare;
- emergency response, including firefighting, emergency medical services, and law enforcement; and
- correctional institutions.

---

[81] 29 U.S.C. §§657(c) and 673(a).

[82] OSHA's reporting and recordkeeping regulations are at 29 C.F.R. Part 1904.

[83] The list of exempted industries is at 29 C.F.R. Subpart B, Appendix A. States with state occupational safety and health plans may require employers in these exempted industries to comply with the recordkeeping requirements.

[84] 29 C.F.R. §1904.5.

[85] 29 C.F.R. §1905.5(a).

[86] 29 C.F.R. §1904.5(b)(2)(viii).

[87] OSHA, *Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, April 10, 2020, at https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

For all other employers, OSHA required employers to determine if COVID-19 cases were work-related and subject to the recordkeeping requirements only if both of the following two conditions were met:

1. There was objective evidence that a COVID-19 case may have been work-related. This could have included, for example, a number of cases developing among workers who worked closely together without an alternative explanation.
2. The evidence of work-relatedness was reasonably available to the employer. For purposes of this guidance, examples of reasonably available evidence included information given to the employer by employees, as well as information that an employer learned regarding its employees' health and safety in the ordinary course of managing its business and employees.

Updated OSHA Recordkeeping Guidance

OSHA issued new guidance, effective May 26, 2020, on recordkeeping of COVID-19 cases.[88] This new guidance rescinds the previous guidance issued by OSHA on April 10, 2020. Under this new guidance, all employers, regardless of type of industry or employment, are subject to the recordkeeping and recording regulations for work-related cases of COVID-19. To determine if an employer has made a reasonable determination that a case of COVID-19 was work-related, OSHA says it will consider the following factors:

- the reasonableness of the employer's investigation of the COVID-19 case and its transmission to the employee;
- the evidence that is available to the employer; and
- the evidence that COVID-19 was contracted at work.

The guidance provides examples of evidence that can be used to demonstrate that a COVID-19 case was or was not work-related such as if an employee had frequent close contact with members of the public in an area with ongoing community transmission of COVID-19.

H.R. 6559

H.R. 6559 would require that the ETS and permanent standard established pursuant to the legislation include the requirement for the recording and reporting of all COVID-19 cases in accordance with OSHA regulations in place at the time of enactment. By referencing the regulations in place, this provision would serve to supersede OSHA's guidance from April 10, 2020, and apply the requirement, currently provided in the guidance effective May 26, 2020, to determine the work-relatedness of COVID-19 cases to all employers covered by the recordkeeping regulations.

Whistleblower Protections

Section 11(c) of the OSH Act prohibits any person from retaliating or discriminating against any employee who exercises certain rights provided by the OSH Act.[89] Commonly referred to as the

[88] OSHA, *Revised Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, May 19, 2020, at https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

[89] 29 U.S.C. §660(c). OSHA also enforces whistleblower provisions in 22 other federal statutes. Information on statutes with whistleblower provisions enforced by OSHA is at OSHA, *Whistleblower Statutes Summary Chart*, October 17, 2009, at https://www.whistleblowers.gov/sites/wb/files/2019-12/WB-Statute-Summary-Chart-10.8-Final.pdf.

whistleblower protection provision, this provision protects any employee who takes any of the following actions:

- files a complaint with OSHA related to a violation of the OSH Act;
- causes an OSHA proceeding, such as an investigation, to be instituted;
- testifies or is about to testify in any OSHA proceeding; and
- exercises on his or her own behalf, or on behalf of others, any other rights afforded by the OSH Act.[90]

Other rights afforded by the OSH Act that are covered by the whistleblower protection provision include the right to inform the employer about unsafe work conditions; the right to access material safety data sheets or other information required to be made available by the employer; and the right to report a work-related injury, illness, or death to OSHA.[91] In limited cases, the employee has the right to refuse to work if conditions reasonably present a risk of serious injury or death and there is not sufficient time to eliminate the danger through other means.[92]

H.R. 6559 would require that the ETS and permanent standard promulgated pursuant to the legislation expand the protections for whistleblowers. The following additional activities taken by employees would grant them protection from retaliation and discrimination from employers and agents of employers:

- reporting to the employer; a local, state, or federal agency; or the media; or on a social media platform; the following:
  - a violation of the ETS or permanent standard promulgated pursuant to the legislation;
  - a violation of the infectious disease control plan required by the ETS or permanent standard; or
  - a good-faith concern about an infectious disease hazard in the workplace;
- seeking assistance from the employer or a local, state, or federal agency with such a report; and
- using personally supplied PPE with a higher level of protection than offered by the employer.

H.R. 6800, The Heroes Act

The provisions of H.R. 6559, including the provisions relating to recordkeeping and whistleblower protections, were included as Title III of Division L of H.R. 6800, The Heroes Act. H.R. 6800 was passed by the House on May 15, 2020. In a letter to Speaker of the House Nancy Pelosi, the AHA expressed its opposition to the ETS provisions in The Heroes Act citing the potential for confusion that new regulations could bring and the "ongoing global lack of supplies, equipment and testing capability" faced by hospitals.[93] The AHA also stated that the provision

[90] 29 C.F.R. §1977.3. Public-sector employees, except employees of the United States Postal Service, are not protected by the whistleblower provision, but may be covered by whistleblower provisions in other federal and state statutes.

[91] For additional information on other rights covered by the whistleblower protection provision, see OSHA, January 9, 2019, *Investigator's Desk Aid to the Occupational Safety and Health Act (OSH Act) Whistleblower Protection Provision*, pp. 5-7, at https://www.osha.gov/sites/default/files/11cDeskAid.pdf.

[92] 29 C.F.R. §1977.12(b)(2).

[93] Letter from Thomas P. Nickels, executive vice president, American Hospital Association, to Hon. Nancy Pelosi,

OSHA-002022

that would require the ETS to be based on state standards "suggests that the federal government is surrendering its responsibility to appropriately regulate the nation to a state government agency without consideration of whether that state's decisions are appropriate for implementation anywhere and everywhere."

H.R. 925, The Heroes Act (Revised)

The provisions of H.R. 6559 and H.R. 6800 were included in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act, passed by the House on October 1, 2020.

Speaker, U.S. House of Representatives, May 14, 2020, at https://www.aha.org/system/files/media/file/2020/05/web-AHALettertoHouseonHEROESAct051420final.pdf.

Subject: Virginia Petition for an Emergency Temporary Standard for COVID-19 Hazards in the Poultry Processing/Meatpacking Industries

Attachments: Letter to Administration (Requests re Poultry Worker Protections) (2).pdf; Exhibit A - Model Language (Poultry).pdf

Importance: High

Hi All,

Virginia has received the attached petition for an Emergency Temporary Standard for COVID-19 Hazards in the Poultry Processing/Meatpacking Industries.

While I'm aware that OSHA has received a petition from the AFL-CIO for a broad based Emergency Temporary Standard for COVID-19 Hazards, I wanted to know if any other state plans are dealing with any such petitions (either broad based or focused on particular industries) and if you would be willing to share information with Virginia on what approach you are taking?

If you could provide contact information for someone we could contact directly, that would be very helpful.

Thanks much,

Jay

Exhibit A
Model Policy Language & Commentary

Policy Language	Commentary
Section 1. Definitions (a) "Worker" means any person whom an employer suffers or permits to work, and shall include independent contractors, and persons performing work for an employer through a temporary services or staffing agency. (b) "Employer" means an individual or entity that suffers or permits a person to work, and shall include contracting for the services of a person. More than one entity may be the "employer." (c) "Hand sanitizer" means alcohol-based hand sanitizer that is at least 60% alcohol. (d) "Department" means the Department of Labor, or other state or local agency responsible for enforcing this Act.	• In order to protect workers and the public during the COVID-19 crisis, it is essential that worker health and safety protections, and related protections for whistleblowers, apply broadly to all workers who regardless of how they are classified – or in many cases misclassified. • This policy therefore uses a broad definition of "worker" that includes employees (using the broad "suffer or permit" to work employment standard found in the federal Fair Labor Standards Act), but also independent contractors and employees performing work through temporary services or staffing agencies. • It also recognizes a Department chiefly charged with enforcement of the policy – which could be either the state Department of Labor or, for a municipal policy, a city or county labor or health agency. • As discussed below in the enforcement section, it also empowers a full range of law enforcement entities, including the attorney general, district attorneys, and city and county attorneys to enforce the law, recognizing that limited enforcement capacity is a major obstacle to ensuring safe workplaces. • And crucially, it authorizes workers and other whistleblowers to enforce the law through a private right of action and "qui tam" enforcement, supplementing limited government enforcement resources.
Section 2. Protecting Workers From COVID-19 (b) **Employers**	• Since OSHA has failed to adopt a COVID-19 standard, or any infectious disease standard, to protect workers, states and even cities, can act to adopt such standards.

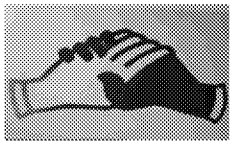
Employers must comply with the following measures: (1) Social Distancing: The employer shall maintain 6 feet between workers, and between workers and customers, by using one or more of the following measures: Implementing flexible worksites (e.g., telework); Implementing flexible work hours (e.g., staggered shifts); Increasing physical space between workers at the worksite to six feet; Increasing physical space between workers and customers (e.g., drive-through, partitions, and limits to the number of customers in grocery stores , for example); Implementing flexible meeting and travel options (e.g., postpone non-essential meetings or events); Delivering services remotely (e.g. phone, video, or web); or Delivering products through curbside pick-up or delivery. Further, this should include reconfiguring spaces where workers congregate including lunch and break rooms, locker rooms and time clocks. (2) Face Masks and Plastic Face Shields: All workers shall be provided (free of charge) cotton face masks (double layer cotton) by their employer. All customers in grocery stores and pharmacies shall be required to wear face masks. Face shields shall also be made available by employers to workers. (3) Hand Sanitizing, Hand Washing and Gloves: Employers must provide hand sanitizers that are readily available in multiple locations in the workplace. Workers must have the ability to wash their hands with soap and water regularly. Gloves shall be provided by employers to workers who request them. (4) Regular Disinfection: Employers must clean and disinfect regularly all frequently touched surfaces in the workplace, such as workstations, touchscreens, telephones, handrails, and doorknobs. (5) Increase ventilation rates. Increase the percentage of outdoor air that circulates in the system. (6) Notification of Workers: If a worker is confirmed to have COVID-19 infection, the employer must inform fellow workers of their possible exposure to COVID-19 in the workplace while keeping the infected worker's identity confidential as required by the Americans with Disabilities Act (ADA).	• This section outlines standards that states should adopt to protect workers. The model includes basic protections in six areas: (1) Social distancing; (2) Face masks and plastic face shields; (3) Hand sanitizing, hand washing and gloves; (4) Regular disinfection; (5) Ventilation (6) Notification of workers of illness in the workplace; and (7) Deep cleaning after confirmed cases. • This proposed standard is drawn in large part from voluntary, non-binding guidance that CDC and OSHA have issued for employers on how to protect all other essential workers. That guidance is gathered and linked to below the proposed standard. • Already states are beginning to step in to mandate some of these protections for workers during the COVID crisis – though none have yet mandated the full range of needed protections. In addition to California, New York Governor Andrew Cuomo recently issued an Executive Order that requires all employers to provide essential workers with masks free of charge when interacting with the public. • Cities are also now stepping in to require employers to protect workers. Los Angeles now requires that delivery employers provide masks, gloves or hand sanitizers and physical distancing to workers. They have also enacted specific limits to how many customers can be in stores. • The most critical guidance to follow to prevent COVID transmission in the workplace, is social distancing —physical distancing of workers from the public and from one another. • Equally important, face masks are recommended by CDC to help those who are infected with the virus and do not know it (those who are asymptomatic or pre-symptomatic) from spreading the virus to others. It is well established that there is significant risk of transmission from asymptomatic and presymptomatic individuals. CDC states: "It is critical to emphasize that maintaining six feet social distancing remains important to slowing the spread of the virus. CDC is additionally advising the use of simple cloth face coverings to slow the spread of the virus and help people who may have the virus and do not know it from transmitting it to others." • Because not all cotton face masks provide equal protection, face shields are also being provided

(7) Deep Cleaning after Confirmed Cases: If a worker is suspected or confirmed to have COVID-19, the employer shall close off workplace areas visited by the ill person. Open outside doors and windows and use ventilating fans to increase circulation in the area. Wait 24 hours or as long as practical, and then conduct cleaning and disinfection as directed by CDC Cleaning and Disinfection for Community Facilities guidelines. References: https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-business-response.html; https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/cloth-face-cover.html (employers must provide masks that are at least as protective as the more protective masks made from two layers of cotton sheet); https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/cleaning-disinfection.html; https://www.osha.gov/Publications/OSHA3990.pdf	in grocery stores and other workplace, and should be required for all such workers. Further, as N95 respirators become more available (now being prioritized during the shortage for use among the most at risk health care workers) states can require these for all workers interacting with the public or who work in workplaces where social distancing is not always followed. All equipment must be provided free of charge to workers. • Note that unfortunately CDC weakened its guidance on when COVID-19 exposed workers should return to work. The new guidance, which allows exposed workers to return with just masks and some other precautions is very dangerous. Many state health departments have rejected this guidance- including Minnesota and New York. States must make sure employers do not follow this guidance — but instead require COVID-19 exposed workers to quarantine for 14 days.
Section 3. Whistleblower Protection (a) No employer or other person shall discriminate or take adverse action against any worker or other person who raises any concern about infection control related to COVID-19 to the employer, the employer's agent, other workers, a government agency, or to the public such as through print, online, social, or any other media. (b) No employer shall discriminate or take adverse action against a worker who voluntarily brings in and wears his or her own personal protective equipment, such as a mask, faceguard, or gloves, if such equipment is not provided by the employer. (c) If an employer or other person takes an adverse action against a worker or other person within 90 days of the worker or person's engagement or attempt to engage in activities protected by this Section, such conduct shall raise a presumption that the action is retaliation in violation of this act. The presumption may be rebutted by clear and convincing evidence that the action was taken for other permissible reasons.	• Workers must feel free to speak up about threats to their health and safety from COVID-19. Their voice must be protected in order to mitigate the spread of the virus. • We have also seen front line health care works being retaliated against, and fired, for bringing in their own equipment when the employer cannot provide adequate protection. • Providing workers with a private right of action so that they may go to court if they are retaliated against is critical for ensuring workers are protected. • Similarly, most existing state whistleblower protections only narrowly protect workers from retaliation for filing formal complaints – and don't protect them from being punished for complaining informally to employers, or notifying fellow workers or the public about workplace threats. It is essential that whistleblower protections be expanded to protect that full range of communication, which is essential for publicizing and addressing serious workplace threats.

	• This model also includes a rebuttable presumption that any adverse action taken against an employee or person within 90 days of protected activity is retaliatory. Such a presumption is an effective approach for protecting whistleblowers and has been incorporated into state and local wage theft laws.
Section 4. Refusal to Work Under Dangerous Conditions (a) A worker shall have the right to refuse to work under conditions that the worker reasonably believes would expose him or her, other workers or the public to an unreasonable risk of illness or exposure to COVID-19. (b) An employer shall not discriminate or take adverse action against a worker for a good faith refusal to work if the worker has requested that the employer correct such a condition and the condition remains uncorrected. (c) A worker who has refused in good faith to work under such a condition and who has not been reassigned to other work by the employer shall, in addition to retaining a right to continued employment, shall continue to be paid by the employer for the hours that would have been worked until such time as the employer can demonstrate that the condition has been remedied. (d) If an employer or other person takes an adverse action against a worker or other person within 90 days of the worker or person's engagement or attempt to engage in activities protected by this Section, such conduct shall raise a presumption that the action is retaliation in violation of this act. The presumption may be rebutted by clear and convincing evidence that the action was taken for other permissible reasons.	• Workers should not have to choose between their lives and their paycheck. • While OSHA rules protect this right on paper, they are weak at best and are largely unenforced. • It is therefore urgent that states and cities step to ensure that workers may refuse to work under dangerous conditions without being subject to retaliation – and that they continue to be paid so long as the dangerous workplace condition remains unremedied. • This right to be free from retaliation should, like the whistleblower protections detailed above, include a rebuttable presumption that any adverse action taken against an employee or person within 90 days of protected activity is retaliatory.
Section 5. State Unemployment Insurance Benefits for Separating from Work Because of Dangerous Conditions Notwithstanding any other provisions of chapter X [the state Unemployment Insurance law]:	• State unemployment insurance laws should be amended to clarify that workers have good cause to quit -- and therefore should be eligible for unemployment insurance benefits -- if their

(a) A claimant who has left his or her employment, or had their hours reduced after they refused to work because their employer maintained and failed to cure a health or safety condition that made the environment unsuitable, or because the claimant needed to care for a sick or quarantined family member, shall be deemed constructively discharged and eligible for benefits. (b) In a public health emergency, no claimant shall be required to prove that an unreasonable condition created a risk unique to them. Nor shall a claimant be required to prove that the risk was not customary to their occupation. (c) The claimant shall not be subject to traditional exhaustion requirements, but shall be deemed to have exhausted alternatives if he or she notified the employer and the employer refused to cure, if another employee notified the employer and the employer refused to cure, or if the employer had or should have had reason to know that the condition made the work environment unsuitable and did not cure it. (d) In a public health emergency, when processing a claim for benefits for a worker who has quit for a health/safety-related reason, the worker shall be entitled to a presumption that he or she left their job for good cause, and the agency shall interpret any other existing statutory or regulatory requirement accordingly.	employer requires them to work under conditions that they believe would threaten their health and safety. Furthermore, good cause quits should include work assignments that violate workers' health and safety, and a workers' need to care for quarantined or sick family members. • While permanent reform of state unemployment insurance rules generally requires legislative action, in many states governors can – and in Michigan, Kentucky and Georgia are beginning to – adopt modifications to their unemployment insurance rules under their emergency powers. In many states, governors likely could adopt this crucial reform temporarily using those powers. Cities, however, cannot reform state unemployment insurance systems.
Section 6. Presumption of State Worker's Compensation Coverage for All Workers For purposes of workers compensation coverage under chapter X [the state workers' compensation law], a worker who contracts COVID-19 is presumed to have an occupational disease arising out of and in the course of employment if the worker is a worker of a health care and emergency responder employer, or a front-line worker, including workers of grocery stores and pharmacies, food beverage, cannabis production and agriculture, organizations that provide charitable and social services, gas stations and businesses needed for transportation, financial institutions, hardware and supplies stores, critical trades, mail, post, shipping, logistics, delivery, and pick-up services, educational institutions, laundry	• Workers' compensation provides a crucial source of healthcare coverage and income support for sick workers. Importantly, workers' compensation coverage is broadly available to all sick workers, regardless of factors such as immigration status. • During the COVID-19 crisis, states should ensure that COVID-19 and any associated quarantine are covered by the state workers' compensation program. • Governors and legislatures in some states are already acting to clarify or expand workers' compensation eligibility for COVID-19 illness through orders issued under their emergency

services, restaurants for consumption off-premises, supplies to work from home, supplies for essential businesses and operations, transportation, home-based care and services, residential facilities and shelters, professional services, day care centers, and manufacture, distribution, and supply chain for critical products and industries, media or any other worker deemed to be essential during the COVID-19 crisis.	powers, while other states are doing so through legislation. Cities, however, cannot reform state workers' compensation systems. • This model language is adapted from some of these new workers' compensation reforms that have been implemented in states across the country. • The best language contains a presumption that all workers who continue to work outside of their homes are covered by workers' compensation if they become sick with COVID-19. • These changes can be implemented by legislation or governors' executive orders. It would be advisable to have the orders include a requirement for immediate payment of benefits pending resolution of individual claims (and hold harmless the claimant for benefits paid). • Illinois' Emergency COVID-19 related workers' compensation amendment is a great model with broad coverage. It contains a rebuttable presumption that any COVID-19 illness is covered. https://www2.illinois.gov/sites/iwcc/news/Documents/13APR20-Emergency_Amendment_Only-50IAC9030_70.pdf • Kentucky's governor recently adopted a similar workers' compensation coverage presumption through an executive order issue pursuant to the governor's emergency powers: https://governor.ky.gov/attachments/20200409_Executive-Order_2020-277_Workers-Compensation.pdf • Washington State's governor took steps to ensure workers compensation coverage during the COVID crisis for healthcare workers and first responders: https://www.governor.wa.gov/news-media/inslee-announces-workers-compensation-coverage-include-quarantined-health-workersfirst • Alaska passed new legislation to ensure that COVID-19 illness among health care workers and first responders is presumed to be work-related: http://www.akleg.gov/PDF/31/Bills/SB0241Z.PDF • Here is a summary of workers' compensation action by states since April 2020: https://www.iaiabc.org/Document.asp?MODE=DOWNLOAD&DocID=8395



Section 7. Enforcement a. Administrative Enforcement. The Department shall enforce the requirements of this Act and shall have the authority to inspect workplaces, and to subpoena records and witnesses. Where an employer does not comply with any of them, the Department shall order relief as authorized in this Section. b. Private Civil Action. Where an employer does not comply with any requirement of this Act, an aggrieved worker or other person, may bring a civil action in a court of competent jurisdiction within three years of an alleged violation and, upon prevailing, shall be awarded the relief authorized in this section. Pursuing administrative relief shall not be a prerequisite for bringing a civil action. c. Other Government Enforcement. The attorney general, a district attorney, or a city or county attorney may also enforce the requirements of this Act, acting in the public interest, including the need to deter future violations. Such law enforcement agencies may inspect workplaces and subpoena records and witnesses and, where they determine that a violation has occurred, may bring a civil action as provided in Section 7(b). d. Relief. In a civil action or administrative proceeding brought to enforce this Act, the court or the Department shall order relief as follows: i. For any violation of any provision of this Act: i. An injunction to order compliance with the requirements of this Act and to restrain continued violations, including through a stop-work order or business closure; ii. Payment to a prevailing worker by the employer of reasonable costs, disbursements, and attorney's fees; and iii. Civil penalties payable to the state or city of not less than $100 per day per worker affected by any noncompliance with the provisions of this chapter.	• Strong enforcement of these important new protections is crucial in order for them to be effective. This proposed policy includes key components detailed below that are essential for strong enforcement. For an even more comprehensive model bill detailing the full range of state-of-the-art protections against retaliation, see NELP, Model Bill to Protect Workers Who Experience Wage Theft from Retaliation (Sept. 2019). • This proposal provides four distinct avenues for enforcement, to ensure maximum flexibility and empower a range of public and private actors to serve as watch dogs and fill the enforcement gap. • First, it authorizes administrative enforcement by the state or local Labor Department – the agency chiefly responsible for implementation and enforcement. • Second, it provides for a private right of action which is especially important to enforce worker whistleblower protections and the right to still be paid while refusing to work under dangerous conditions, together with attorney's fees and other remedies to make it realistic for low-wage workers to hire lawyer to help them enforce their rights. Given limited government enforcement capacity, a private right of action is crucial for ensuring meaningful enforcement – and is a key gap in OSHA's enforcement system. • Third, it empowers the full range of public enforcement officers, including the Labor Department, the state attorney general, district attorneys, and city and county attorneys to bring actions to enforce the law. Public enforcement by the full range of law enforcement entities can help fill the enforcement gap left by OSHA's failure to act during the COVID crisis. • Fourth, it authorizes "qui tam" enforcement to enlist whistleblowers in holding companies accountable, expand limited public enforcement capacity, and ensure that workers who are blocked by forced arbitration clauses from bringing private suits can play a powerful role in enforcement.

ii. For any violation of Sections 3 and 4 of this Act protecting whistleblowers and workers' right to refuse to work under dangerous conditions: i. Reinstatement of the worker to the same position held before any adverse personnel action, or to an equivalent position, reinstatement of full fringe benefits and seniority rights, and compensation for unpaid wages, benefits and other remuneration, or front pay in lieu of reinstatement; and ii. Compensatory damages payable to the aggrieved worker equal to the greater of $5,000 or twice the actual damages, including but not limited to unpaid wages, benefits and other remuneration. e. Qui tam enforcement. The relief specified in subdivision (d)(i) of this section may be recovered through a civil action brought on behalf of the Department in a court of competent jurisdiction by a whistleblower, defined herein as a worker, contractor, or employee of a contractor of the employer, or by a representative nonprofit or labor organization designated by said person, pursuant to the following procedures: i. The whistleblower shall give written notice to the Department of the specific provisions of this Act alleged to have been violated. The whistleblower or representative organization may commence a civil action under this subsection if no enforcement action is taken by the Department within 30 days. ii. Civil penalties recovered pursuant to this subsection shall be distributed as follows: 70 percent to the Department for enforcement of this act, with 25 percent of that amount reserved for grants to community organizations for outreach and education about worker rights under this Act; and 30 percent to the whistleblower or representative organization. iii. The right to bring an action under this section shall not be impaired by any private contract. A public enforcement	• For remedies, it authorizes the full range of necessary relief. • For violations of the workplace protection standards: injunctive relief, civil penalties payable to the state, and attorneys' fees to make it economically realistic for low-wage workers to find attorneys to represent them. • For violations of the whistleblower and right-to-refuse to work under dangerous conditions provisions: the above plus reinstatement or "front pay" in lieu of reinstatement, unpaid wages and benefits, and compensatory damages equal to the greater of $5,000 or twice any unpaid wages, to provide a strong deterrent against employers punishing whistleblowers during this time when public health and safety depend on workers' being able to speak up.

	action shall be tried promptly, without regard to concurrent adjudication of private claims.

RE: Protecting Poultry Workers During the COVID-19 Pandemic

Dear Governor Northam, Commissioner Oliver, Attorney General Herring, Commissioner Davenport, and Director Graham:

We write you with urgency to request immediate protection for the Commonwealth of Virginia's poultry plant worker community during this dire health care crisis.

As workers in the food supply chain, poultry plant workers are considered essential workers, both in normal times and especially now. As this global crisis deepens, these workers are as invaluable as they are at risk. Many poultry plant workers in Virginia are highly vulnerable to COVID-19 illness because they are low-income individuals, lack access to medical care, are sometimes not fluent in English (which limits their ability to relay health concerns to employers), and work in very tight spaces in factories with hundreds of other workers.

Meat processing plants typically employ hundreds of workers who work in tight quarters with others. Meat processing is one of the most dangerous jobs in the country, with injury rates at 2.4 times the national average and occupational illness rates at 17 times the national average. These statistics illustrate the heavy burden we already place on these workers and the duty we owe to them now.

Further, these plants are located in semi-rural areas such as Harrisonburg or extremely rural areas such Accomack, where resources are spread thin. As a result, poultry workers are much more likely to not have access to COVID-19 testing and will instead suffer in silence, or go to work even though they are symptomatic, out of both fear of losing their jobs and the necessity to keep food on their own tables.

Inaction could lead to rapid outbreaks in the processing plants, overwhelming rural health centers and quickly turning into a catastrophe. These workers' health and financial stability—and that of their families—must be unequivocally prioritized in recognition of their human rights and dignity, as well as their essential role in keeping our food system running during this emergency.

We stress that the above concerns are not merely hypothetical. Processing plants around the country are already experiencing outbreaks and are being forced to reckon with the fallout, including worker deaths.

Just this month, COVID-19 has killed four Tyson Foods poultry workers in Georgia and two in Iowa. In South Dakota, a massive Smithfield Foods swine plant was shut down after nearly 600 workers contracted the virus. **Most notably, workers indicate that most (if not all) poultry plants in the Commonwealth already have multiple workers who have tested positive for COVID-19, and that number is growing daily. Workers are dying from COVID-19 in the Commonwealth. In sum, the potential for an outbreak is ripe, and the time to act is now.**

States have broad power to protect public health and to protect workers. At present, however, there are few (if any) enforceable state or federal regulations in place to protect Virginia poultry workers. Fortunately, **federal OSHA law does not preempt or limit states from acting to protect workers from the threats of COVID-19 transmission in the workplace.** Indeed, as an OSHA "State Plan" state, **Virginia is free to promulgate its own standards regarding worker health and safety**, as long as they are at least as protective as the standards promulgated by the federal Occupational Safety and Health Administration (OSHA). And since OSHA has not adopted a federal standard that deals specifically with the workplace health and safety risks associated with COVID-19, the Virginia Occupational Safety and Health Program (VOSH) has free rein to create its own. Moreover, neither OSHA nor any other federal law would preempt state or local laws that protect whistleblowers who speak up about COVID-19 in the workplace.

Unfortunately, neither VOSH nor OSHA have issued any <u>enforceable</u> standards to protect workers during pandemics. Rather, only recommendations and suggested guidance have been issued, providing no oversight over employers and no protection to employees. As a State Plan state, however, **VOSH *does not* have to wait for OSHA to act** – it can issue enforceable emergency standards immediately in conjunction with the Governor's office and the Attorney General's office. *See* Va. Code § 2.2-4011; *see also* Va. Code § 32.1-13 (granting emergency rulemaking power to the State Board of Health); Va. Code § 44.146-17 (granting emergency rulemaking power to the Governor, including in cases of a communicable disease of public health threat).

In light of the above, we ask that VOSH and other state agencies immediately work with the Governor's and Attorney General's offices to promulgate enforceable emergency standards, as well as implement a procedure for inspections and enforcement of those standards.

For your review and consideration, we attached to this letter as Exhibit A recommended regulatory language, along with commentary. This model language is broad, and encompasses sectors beyond meat processing plants.

In addition to the requests delineated in Exhibit A, we further request that you strongly urge the General Assembly to enact emergency state legislation that applies the paid leave provisions in the federal Families First Coronavirus Response Act to employers with over 500 employees. As noted above, states have the ability to protect workers beyond what is required under federal law.

Finally, the following requested regulations are specific to the poultry and meatpacking industry:

1. To the maximum extent allowable under the law and in conformity with applicable privacy regulations, facilities must notify the local health department and facility workers immediately when an employee tests positive for COVID-19. The companies shall provide:
    a. The department(s) and shift(s) worked by the employees testing positive for COVID-19. This is a continuing request for information if other employees test positive for the COVID-19 virus.
    b. The names of all employees who worked in those department(s) and shift(s) on days when the COVID-19 positive employees last worked.
    c. The date or dates last worked by the employees testing positive for the COVID-19 virus.

2. Workers who failed the temperature check shall be sent home, and be paid at their regular rate of pay.
3. Poultry and meatpacking facilities must take the following actions in order to protect the health and safety of workers at all poultry and meatpacking facilities:
    a. Immediately shut down for a minimum of 72 hours the department(s) in which the COVID-19 positive employees worked and clean and sanitize the department in accordance with CDC recommended guidelines. Workers in these departments should be paid at their regular rate of pay during the duration of the cleaning.
    b. Pursuant to CDC guidelines, require that any employee who worked in the same department(s) and shift(s) with the COVID-19 positive employees quarantine for 14 consecutive days. Employees shall be paid during this period of quarantine at their regular rate of pay.
    c. Proper PPE shall be provided for all employees, including but not limited to gloves, masks, face shields, smocks and other appropriate PPE in order to prevent any transmission of the COVID-19 virus.
    d. Install Plexiglass shielding between workstations, especially on the deboning lines where some poultry companies are currently forcing employees to work shoulder to shoulder without proper PPE.
    e. Employers should set a schedule to ensure that all frequently touched surfaces are sanitized on a regular basis during the work day.
4. In addition to mandated daily temperature checks, as of the date of adoption of the regulations, facilities shall require mandatory COVID-19 testing of each employee. The employer shall bear the burden of the costs of such testing.

CONCLUSION

As Virginia addresses these concerns, we strive to ensure that the administration has the information and community trust needed to help implement the above requests. As such, we request a telephonic or videoconference meeting on or before Wednesday, April 29, 2020 to address the above concerns to ensure protection of all workers in Virginia (including but not limited to poultry plant workers), their families and communities, and the residents of the Commonwealth of Virginia. Finally, we acknowledge that you are exceedingly busy during this extraordinarily tasking time. As such, to the extent you would not be able to participate in such a call, we request the telephone or videoconference meeting be with the policy directors at your respective offices that are charged with oversight of the requested protections.

Sincerely,

Legal Aid Justice Center

(b) 5

ORDER OF THE HEALTH OFFICER OF THE COUNTY OF MERCED
DIRECTING FOSTER FARMS POULTRY PROCESSING PLANT
IN LIVINGSTON, CA TO RESPOND TO CURRENT OUTBREAKS AT THE LIVINGSTON
COMPLEX AND COMPLY WITH OTHER DIRECTIVES OF THIS ORDER
DATE OF ORDER: August 26 , 2020

WHEREAS, the worldwide pandemic of COVID-19 disease, also known as "novel coronavirus" has infected over 7,500 Merced County residents and has resulted in the death of 112 Merced County residents.

WHEREAS, over 800 residents in the City of Livingston, located in Merced County, have been infected with COVID-19.

WHEREAS, there is significant evidence of increasing transmission of COVID-19 within the County of Merced and surrounding counties, placing a measurable strain on the local healthcare systems.

WHEREAS, according to the Meat and Poultry Processing Workers and Employers Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA), meat and poultry processing facilities are particularly vulnerable to COVID-19 infections due to working conditions. These conditions include prolonged, close contact with coworkers on the production line.

WHEREAS, Foster Poultry Farms maintains a poultry processing facility located in the City of Livingston.

WHEREAS, the California Department of Public Health has defined an outbreak in a congregate employment setting as three (3) or more cases of laboratory confirmed COVID-19 in employees not linked outside of the workplace.

WHEREAS, the Foster Farms complex at Livingston consists of multiple buildings on the same campus. Foster Farms first experienced an outbreak of COVID-19 at their Livingston facility on June 29, 2020, the first known case dated to June 9, 2020. As of the date of this Order, the initial outbreak is ongoing and outbreaks are widespread throughout multiple separate buildings at the Livingston facility. One department at the facility currently has an active outbreak that has affected 105 workers and other departments have active outbreaks affecting over 20 workers. Of the approximate 2,600 workers at the Livingston facility, 13.7 percent of the workforce has received a positive test result based on worker self-reporting. Most concerning is that these current testing figures do not accurately represent the extent of outbreak at the facility as universal testing has not been accomplished within the timeline necessary to accurately identify the extent of the outbreak.

WHEREAS, since April 24, 2020, the Merced County Department of Public Health (MCDPH) has received report of 358 confirmed cases of COVID-19 and eight (8) deaths attributed to COVID-19 linked to workers from the Foster Farms Livingston facility. Five (5) of the eight (8) deaths occurred in a hospital located outside of Merced County, illustrating the serious impact of the Foster Farms outbreak on healthcare systems and the community-at-large in California.

WHEREAS, in the past month, Foster Farms has experienced an increase of 214 reported cases of COVID-19 positive workers and six (6) deaths. Weekly reports from Foster Farms indicate the outbreak has continued since the initial reported outbreak on June 29, 2020.

WHEREAS, to-date, there has been insufficient timely testing of Foster Farms workers to assess the true extent of cases at the facility. Without accurate information on the number of cases, it is not possible to properly identify workers who require testing and/or quarantine because of exposure to the virus. This is hampered by the difficulty of testing and monitoring a growing temporary workforce. Hospital data on current hospitalizations and mortality has been slowly reported to MCDPH, further complicating decisive interventions that would allow a safe production process to continue at the facility.

WHEREAS, the Merced County Health Officer issued Directives to Foster Farms on August 5, 2020 and August 11, 2020, providing specific direction on testing requirements and other measures to control the spread of COVID-19 within the Livingston building. In summary, these Directives required immediate COVID PCR testing of all permanent, volunteer, and temporary employees who share air within a facility that has an outbreak (three or more individuals within the same building). Once an outbreak is initiated within a building, the outbreak is not considered resolved until the building reports zero additional cases for two consecutive weeks, or until universal testing of the building within the previous three (3) day period, reveals less than 1% positivity rate within the workforce.

WHEREAS, in response to the previous Merced County Health Officer Directives, Foster Farms has not implemented the required universal testing of the entire Livingston Complex, as directed. Over the three-week period since the August 5, 2020 directive was issued, the spread of disease within the facility has not been contained and active outbreaks continue to spread, creating a public nuisance as defined by California Penal Code 370 and Civil Code 3479, and posing a great risk to the health and safety of Merced County residents and the surrounding counties. Given the current epidemiological data, the slowness in testing workers, and the time necessary to complete comprehensive contact tracing and quarantine those who are exposed, partial closure of the facility for timely, universal testing of all workers and sanitation is necessary.

WHEREAS, based on the increasing number of positive COVID-19 cases at the Foster Farms Livingston Facility, the mounting death rates, the delay in implementation of a comprehensive testing scheme, the need for comprehensive contact tracing and quarantine of those exposed, decisive intervention is essential to control the COVID-19 outbreak. It is imperative that the Merced County Health Officer issue this Order to protect and preserve the health of workers at the Facility and residents of Merced County, surrounding counties, and the State of California.

Under the authority of California Health and Safety Code Sections 101040, 101085, 120175; California Government Code Sections 8610, 8630, and 8634; Article XI of the California Constitution; Title 17 California Code of Regulations Section 2501; and Merced County Code Chapter 2.72, the Health Officer of the County of Merced ("Health Officer") Orders Foster Poultry Farms A Corp (Foster Farms):

1. **Livingston Plant (including, but not limited to, Food Service Operations, Livingston Plant 1, Livingston Plant 2, Livingston Retail Packaging, Livingston Weigh and Price, and Livingston Rotis Room)** located at 843 Davis St., Livingston, CA 95334: To cease all operations within twelve (12) hours of issuance of this Order including any and all on-site manufacturing, transportation, processing, food service, packing, administrative, and/or other similar operations within Livingston Plant for the purposes of deep cleaning and testing all workers (permanent, temporary, contract, volunteer, and other) for clearance (as defined as two (2) negative PCR COVID-19 tests taken at least three (3) days but no more than seven (7) days apart), and implementing other measures in compliance with this Order. Foster Farms is further required to direct its agents, employees, officers, and others acting on its behalf, as well as subsidiaries, affiliates, and other entities controlled by Foster Farms, in such a manner as to ensure the closure of the entire Livingston Plant and that Livingston Plant on-site operations cease and resume only in accordance with this Order.
    a. Once Foster Farms accomplishes the requirements of this Section to the satisfaction of the Merced County Public Health Officer and/or Health Officer designee (MCDPH contact), Foster Farms may be able to resume operations at the Livingston Plant facility.
    b. No worker may return to work at the Livingston Plant until they have received two (2) negative PCR COVID-19 tests taken at least three (3) days but no more than seven (7) days apart.

2. **NCDC 2** located at 843 Davis St., Livingston, CA 95334: will be allowed to remain open and operational despite active outbreak status due to the ability to maintain at least six (6) foot social distancing within the workplace and a lower worker density within the facility, if:
    a. Foster Farms enforces 6 feet of social distancing between workers at NCDC 2;
    b. The current break room(s) are closed and Foster Farms provides an alternative, appropriate break space that can accommodate and ensure social distancing (that is actively monitored); and
    c. Foster Farms to provides food provisions, accommodating dietary needs to its workers to preventing the need for kitchen facilities for all workers with the facility until outbreak is cleared from NCDC 2 facility;
    d. Items 2(b)-(c) shall remain in place until the facility is cleared, defined as <1% positivity rate of the entire workforce at the NCDC 2, tested same day, for 2 rounds of testing, three (3) days apart. If testing positivity rate is greater than 1%, testing must be continued every three (3) days until outbreak is cleared.

3. **All Other Facilities** located at 843 Davis St., Livingston, CA 95334 and 1000 Davis St., Livingston, CA 95334: can remain open and operational, if:
    a. All employees (permanent, temporary, contract, volunteer, and other) are tested immediately and every seven (7) days thereafter until Livingston Complex is cleared from outbreak. If testing positivity rate is greater than 1%, testing must be increased to every three (3) days.

4. Conduct a terminal cleaning of the entirety of the Livingston Complex through a qualified cleaning agency either during facility closure or within seven (7) days of the issuance of this Order. Ensure that high-traffic areas and high-touch areas are disinfected following CDC guidelines:
https://www.cdc.gov/coronavirus/2019-ncov/community/disinfecting-building-facility.html and
https://www.cdc.gov/coronavirus/2019-ncov/community/pdf/REopening_America_Guidance.pdf.

5. The following COVID-19 line lists of data, at a minimum and as required by MCDPH, shall be reported to the MCDPH contact directly in a format determined by MCDPH and at intervals determined by MCDPH, but at no time less often than two times each week on Tuesdays and Fridays by 12:00PM:
    a. Worker full name, date of birth, gender, race, phone number, county of residence, job title, location in facility/assigned department, unit/shift (e.g., day, night, swing), if the individual works in another facility/location and name of the other facility, positive test date, last day worked, symptom start date (note if asymptomatic), testing location, if worker was tested due to part of mandated response testing, type of test used (e.g., PCR, antigen), return to work date, if worker was hospitalized due to illness, hospitalization date, if worker died due to illness (if yes, immediately e-mail the MCDPH contact), date of death, number of close contacts sent home/teleworking due to exposure, and if the case was a close contact to another index/case in the facility.
    b. The full laboratory testing line list data (including on-site testing), at a minimum, shall be reported to the MCDPH contact directly in a format and at intervals determined by MCDPH, including worker full name, date of birth, phone number, address of residence, county of residence, test result, and test date. Submission via the CalREDIE system alone will not be accepted.

6. Immediately upon issuance of this Order, a COVID-19 Mitigation Plan for the entire Livingston Complex is required to be prepared and submitted to and approved by the MCDPH contact and shall include continued proper COVID-19 worker medical screening, symptom-based testing, and testing of new hires and temporary workers, including the following:
    a. Permanent employees, temporary workers, contract workers, and/or volunteers that present with a positive COVID-19 test result shall be sent home from work for the required quarantine period and follow MCDPH, California Department of Public Health (CDPH), and CDC requirements and guidance. Workers who refuse or are unable to be tested as directed by MCDPH should be quarantined at home for 14 days, and shall not be allowed to work during the isolation period as defined by CDC:
    https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-in-home-patients.html.
    b. Workplace contact tracing shall be conducted by Foster Farms within 24 hours of notification of a positive employee. Close contacts, is defined as being within six

(6) feet for more than 15 minutes during the case's infectious period to positive workers. Close contacts shall be sent home from work for a 14-day quarantine period. The infectious period begins 48 hours prior to development of symptoms. For the purposes of contact tracing of individual who were asymptomatic and tested positive, the infectious period commences 48 hours prior to the day the sample was collected.

c. Temporary workers, permanent employees, contract employees, and/or volunteers will not be allowed to begin work without submitting proof to Foster Farms of a COVID-19 negative point-of-care antigen or PCR test result dated same day before start of work up to 48 hours before the start date.

d. Symptom-based testing is required when a permanent employee, temporary worker, contract worker, and/or volunteer presents with any one of the COVID-19 symptoms described by the CDC in the following guidance: https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html. Immediately upon notice to or observation by Foster Farms of any one of the COVID-19 symptoms by any worker at the site, testing of the worker shall immediately occur by either PCR or point-of-care antigen testing, or other Health Officer approved testing method, and results shall be obtained within 24-48 hours.

e. When there is a COVID-19 outbreak of three (3) permanent employees, temporary workers, contract workers, and/or volunteers in any building, or area that shares the same air supply, all individuals who had worked in the area during the potential outbreak period (within 48 hours prior to the onset of symptoms of a positive employee throughout the duration of the outbreak) must be tested for COVID-19 by PCR immediately and every seven (7) days thereafter until the building reports zero additional cases for two consecutive weeks, or until universal testing of the building reveals less than 1% positivity rate within the workforce.

f. The employer is responsible for ensuring all workers, including temporary workers, permanent employees, contract employees, and/or volunteers, are offered and provided COVID-19 testing at no cost to the employee.

7. As soon as practical, but no less than 14 days of issuance of this Order, expand the on-site Occupational Health program and clinic, consisting of a designated licensed medical or nursing professional and liaison for MCDPH to ensure and oversee proper COVID-19 worker medical screening processes, contact tracing, case investigation and referral to health care provider as needed, accurate data collection and reporting of all workers tested, reporting of all COVID-19 positive results regardless of county of residence, immediate notification of COVID-19 related hospitalizations to the MCDPH contact and CalOSHA, immediate reporting of COVID-19 related deaths to the MCDPH contact and CalOSHA, data quality assurance verification protocol, and the implementation of adequate COVID-19 surveillance testing and reporting to the MCDPH contact, as approved by MCDPH. These requirements are subject to review and supervision by MCDPH to ensure adequate procedures and practices are implemented.

8. Foster Farms management shall ensure that all employees be informed of testing requirements, outbreaks that occur, areas affected, and trained on safety requirements, in English, Spanish, and Punjabi, working with the union as applicable.

9. Provide proper face coverings at no cost to all contract employees, permanent employees, temporary workers, and/or volunteers prior to each shift, and if a replacement is needed during a shift, and require use as directed in the Merced County Health Officer Order.

10. Foster Farms shall follow all State Orders, including State COVID-19 Industry Guidance for Food Packing and Processing: https://files.covid19.ca.gov/pdf/guidance-food-packing--en.pdf.

11. This Order is issued in accordance with, and incorporates by reference, the: March 4, 2020 Proclamation of a State of Emergency issued by Governor Gavin Newsom; March 12, 2020 Executive Order N-25-20 and March 19, 2020 Executive Order N-33-20, each issued by Governor Newsom ordering all state residents to heed any orders and guidance of state and local public health officials with respect to COVID-19; May 4, 2020 Executive Order N-60-20 issued by Governor Newsom ordering various protocols and reaffirming the existing authority of local health officers to establish public health measures that are more restrictive or additional to statewide directives; Government Code section 8567(a); the March 13, 2020 Declaration of Local Health Emergency in Merced County pursuant to Health and Safety Code section 101080; the March 13, 2020 Proclamation of Local Emergency pursuant to Government Code section 8630 and Merced County Code section 2.72.060; the March 16, 2020 Resolutions of the Board of Supervisors of the County of Merced ratifying the Local Emergency and Local Health Emergency; and the California Department of Public Health, Cal/OSHA, and the California Department of Food and Agriculture jointly issued Industry Guidance for Food Packing and Processing updated on July 29, 2020 and any future dated updates.

12. Violation of this Order by Foster Farms is a misdemeanor punishable by fines up to $1,000 per day, imprisonment of 90 days, or both. Violation also subjects Foster Farms to civil enforcement actions including injunctive relief, attorneys' fees and costs. A violation of this Order constitutes a public nuisance. (Health and Safety Code Sections 120275 and 120295; Penal Code Sections 19 and 370; Government Code Sections 25132 and 8665; Merced County Code 2.72.100)

13. Pursuant to Government Code Sections 26602 and 41601 and Health and Safety Code Sections 101029, the Health Officer requests that the Sheriff and all chiefs of police in the County ensure compliance with and enforce this Order.

14. Copies of this Order shall promptly be: (1) made available at the County Administration Building at 2222 M Street, Merced, California 95340; (2) and provided to any member of the public requesting a copy of this Order.

SO ISSUED AND ORDERED:

Salvador Sandoval

Salvador Sandoval, MD, MPH
Merced County Health Officer

Dated: August 26, 2020
Time: 2025 hr

NOTICE OF RIGHTS

1. If you object to this order, you have a right to arrange for your own legal representative.
2. You have a right to also file for judicial relief to seek release from the order.
3. All requests to contact the County Health Officer will be through Merced County Department of Public Health at 209-381-1203 during normal business hours.

Salvador Sandoval

Congress of the United States
Washington, DC 20515

May 1, 2020

The Honorable Sonny Perdue
Secretary
U.S. Department of Agriculture
1400 Independence Ave. SW
Washington, D.C. 20250

The Honorable Eugene Scalia
Secretary
U.S. Department of Labor
200 Constitution Ave. NW
Washington, D.C. 20210

The Honorable Alex M. Azar, II
Secretary
U.S. Department of Health and Human Services
200 Independence Ave. SW
Washington, D.C. 20201

Dear Secretary Perdue, Secretary Scalia, and Secretary Azar:

We write to follow up on the Executive Order signed by President Trump on April 28, 2020, invoking the Defense Production Act (DPA) to classify meat processing plants as critical infrastructure to keep them in operation during the coronavirus national emergency.[1]

Prior to issuance of the Executive Order, media reports indicated the government would provide personal protective equipment (PPE) and guidance for employees and employers on worker safety, and that the order would shield meat processing companies from legal liability against worker claims of inadequate protection.[2] However, neither the Executive Order nor the subsequent press release issued by the Department of Agriculture (USDA) contain information about coordination between federal agencies to provide PPE or plans to increase coronavirus testing for plant employees and the surrounding communities.[3]

Over 6,500 employees at meat processing plants have either tested positive or gone into self-quarantine, and 20 workers have died since the start of the pandemic, according to the United Food and Commercial Workers Union.[4] Continued operations at these plants and reopening currently closed facilities would require coordination between federal agencies, states, local communities, plant owners and workers, otherwise more workers will be at risk. To better understand federal efforts in this area, we request responses to the following by May 6, 2020:

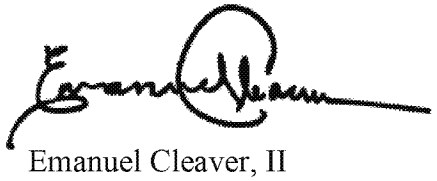
---

[1] https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/

[2] https://www.politico.com/news/2020/04/28/trump-to-order-meat-plants-to-stay-open-215555

[3] https://www.usda.gov/media/press-releases/2020/04/28/usda-implement-president-trumps-executive-order-meat-and-poultry

[4] https://www.bloomberg.com/news/articles/2020-04-28/trump-says-he-s-issuing-order-for-tyson-s-unique-liability



OSHA-002057

1) What guidance has been shared with meat processing plants regarding the steps they need to undertake to ensure worker health and safety before reopening or the steps they must undertake immediately to ensure worker health and safety if they are currently operating?
2) How is the federal government coordinating with meat companies, employees, state and local health departments, and local communities? How will each of these stakeholders be involved during the time the DPA is invoked?
3) What is the plan and timeline for distribution of PPE for all plant employees and will these supplies be sourced from the states' supply or the federal stockpile? Will there be continued deliveries of PPE while the DPA is invoked for these processing plants to ensure all employees are adequately protected?
4) As part of the DPA and any forthcoming guidance, will companies be required to retrofit plants and/or modify shifts and other practices in order to ensure compliance with the Center for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) recommended social distancing?
5) What enforcement mechanisms will be put in place to ensure OSHA and CDC guidance is adhered to at individual plants? Will teams from USDA's Food Safety and Inspection Service or OSHA regularly inspect these plants during the DPA?
6) Will there be a hotline or other mechanism for employees to report violations?
7) Will increased testing be provided at these plants for symptomatic and asymptomatic employees, including contact tracing? Is there sufficient testing capacity to regularly test all employees, whether or not they are symptomatic? What consultation have your agencies completed with the CDC and state and local health departments regarding testing capabilities in these states?
8) How will your agencies coordinate with the CDC to develop guidance regarding employees most at risk of developing COVID-19 complications? What is the timeline for release of that guidance? If such guidance has been developed, what actions does it recommend or require plants to undertake to protect these employees?

Maintaining our food supply chain is critical to the food security of all Americans, as well as our farmers and producers. however, it cannot be at the expense of worker health and safety,

Thank you for your prompt attention to this important issue. We look forward to receiving your response.

Congress of the United States
Washington, DC 20515

May 1, 2020

The Honorable Sonny Perdue
Secretary
U.S. Department of Agriculture
1400 Independence Ave. SW
Washington, D.C. 20250

The Honorable Eugene Scalia
Secretary
U.S. Department of Labor
200 Constitution Ave. NW
Washington, D.C. 20210

The Honorable Alex M. Azar, II
Secretary
U.S. Department of Health and Human Services
200 Independence Ave. SW
Washington, D.C. 20201

Dear Secretary Perdue, Secretary Scalia, and Secretary Azar:

We write to follow up on the Executive Order signed by President Trump on April 28, 2020, invoking the Defense Production Act (DPA) to classify meat processing plants as critical infrastructure to keep them in operation during the coronavirus national emergency.[1]

Prior to issuance of the Executive Order, media reports indicated the government would provide personal protective equipment (PPE) and guidance for employees and employers on worker safety, and that the order would shield meat processing companies from legal liability against worker claims of inadequate protection.[2] However, neither the Executive Order nor the subsequent press release issued by the Department of Agriculture (USDA) contain information about coordination between federal agencies to provide PPE or plans to increase coronavirus testing for plant employees and the surrounding communities.[3]

Over 6,500 employees at meat processing plants have either tested positive or gone into self-quarantine, and 20 workers have died since the start of the pandemic, according to the United Food and Commercial Workers Union.[4] Continued operations at these plants and reopening currently closed facilities would require coordination between federal agencies, states, local communities, plant owners and workers, otherwise more workers will be at risk. To better understand federal efforts in this area, we request responses to the following by May 6, 2020:

---

[1] https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/

[2] https://www.politico.com/news/2020/04/28/trump-to-order-meat-plants-to-stay-open-215555

[3] https://www.usda.gov/media/press-releases/2020/04/28/usda-implement-president-trumps-executive-order-meat-and-poultry

[4] https://www.bloomberg.com/news/articles/2020-04-28/trump-says-he-s-issuing-order-for-tyson-s-unique-liability

1) What guidance has been shared with meat processing plants regarding the steps they need to undertake to ensure worker health and safety before reopening or the steps they must undertake immediately to ensure worker health and safety if they are currently operating?
2) How is the federal government coordinating with meat companies, employees, state and local health departments, and local communities? How will each of these stakeholders be involved during the time the DPA is invoked?
3) What is the plan and timeline for distribution of PPE for all plant employees and will these supplies be sourced from the states' supply or the federal stockpile? Will there be continued deliveries of PPE while the DPA is invoked for these processing plants to ensure all employees are adequately protected?
4) As part of the DPA and any forthcoming guidance, will companies be required to retrofit plants and/or modify shifts and other practices in order to ensure compliance with the Center for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) recommended social distancing?
5) What enforcement mechanisms will be put in place to ensure OSHA and CDC guidance is adhered to at individual plants? Will teams from USDA's Food Safety and Inspection Service or OSHA regularly inspect these plants during the DPA?
6) Will there be a hotline or other mechanism for employees to report violations?
7) Will increased testing be provided at these plants for symptomatic and asymptomatic employees, including contact tracing? Is there sufficient testing capacity to regularly test all employees, whether or not they are symptomatic? What consultation have your agencies completed with the CDC and state and local health departments regarding testing capabilities in these states?
8) How will your agencies coordinate with the CDC to develop guidance regarding employees most at risk of developing COVID-19 complications? What is the timeline for release of that guidance? If such guidance has been developed, what actions does it recommend or require plants to undertake to protect these employees?

Maintaining our food supply chain is critical to the food security of all Americans, as well as our farmers and producers. however, it cannot be at the expense of worker health and safety,

Thank you for your prompt attention to this important issue. We look forward to receiving your response.

Sincerely,

Emanuel Cleaver, II

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

Updated October 20, 2020

Congressional Research Service
https://crsreports.congress.gov
R46288

CRS REPORT
Prepared for Members and
Committees of Congress

OSHA-002321

Congressional Research Service
Informing the legislative debate since 1914

SUMMARY

R46288

October 20, 2020

Scott D. Szymendera
Analyst in Disability Policy

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

The Occupational Safety and Health Administration (OSHA) does not currently have a specific standard that protects healthcare or other workers from airborne or aerosol transmission of disease or diseases transmitted by airborne droplets. Some in Congress, and some groups representing healthcare, meat and poultry processing, and other workers, are calling on OSHA to promulgate an emergency temporary standard (ETS) to protect workers from exposure to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). The Occupational Safety and Health Act of 1970 (OSH Act) gives OSHA the ability to promulgate an ETS that would remain in effect for up to six months without going through the normal review and comment process of rulemaking. OSHA, however, has rarely used this authority in the past—not since the courts struck down its ETS on asbestos in 1983.

The California Division of Occupational Safety and Health (Cal/OSHA), which operates California's state occupational safety and health plan, has had an aerosol transmissible disease (ATD) standard since 2009. This standard includes, among other provisions, the requirement that employers provide covered employees with respirators, rather than surgical masks, when these workers interact with ATDs, such as known or suspected COVID-19 cases. In addition, according to the Cal/OSHA ATD standard, certain procedures require the use of powered air purifying respirators (PAPR).

The Virginia state occupational safety and health plan (VOSH) and the Michigan state occupational safety and health plan (MIOSHA) have each promulgated emergency standards to specifically address COVID-19 in workplaces. Unlike the Cal/OSHA ATD standard, these emergency standards are in effect for only six months and apply to all employers.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020, would require OSHA to promulgate an ETS on COVID-19 that incorporates both the Cal/OSHA ATD standard and the Centers for Disease Control and Prevention's (CDC's) 2007 guidelines on occupational exposure to infectious agents in healthcare settings; similar provisions appear in S. 3475. The CDC's 2007 guidelines generally require stricter controls than its interim guidance on COVID-19 exposure. The provisions of H.R. 6139 were incorporated into the version of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The OSHA ETS provisions were not included in the House- and Senate-passed version of legislation that was signed into law as P.L. 116-127.

H.R. 6379, as introduced in the House, also would include a requirement for an OSHA ETS and permanent standard to address COVID-19 exposure; similar provisions appear in S. 3584. H.R. 6559 would include the requirements for an ETS and permanent standard, clarify the requirement that employers must report work-related COVID-19 cases, and expand protections for whistleblowers; similar provisions appear in S. 3677. The provisions of H.R. 6559 were included in H.R. 6800, The Heroes Act, passed by the House on May 15, 2020, and in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act passed by the House on October 1, 2020.

Through October 1, 2020, OSHA has issued COVID-19-related citations to employers at 62 work sites, with total proposed penalties of $913,133. These citations have been issued for violations of the OSH Act's General Duty Clause and other existing OSHA standards, such as those for respiratory protection, that may apply to COVID-19. Senators Elizabeth Warren and Cory A. Booker have raised concerns about the low amount of penalties being assessed for COVID-19-related violations.

Occupational Safety and Health Administration Standards

Section 6 of the Occupational Safety and Health Act of 1970 (OSH Act) grants the Occupational Safety and Health Administration (OSHA) of the Department of Labor (DOL) the authority to promulgate, modify, or revoke occupational safety and health standards that apply to private sector employers, the United States Postal Service, and the federal government as an employer.[1] In addition, Section 5(a)(1) of the OSH Act, commonly referred to as the General Duty Clause, requires that all employers under OSHA's jurisdiction provide workplaces free of "recognized hazards that are causing or are likely to cause death or serious physical harm" to their employees.[2] OSHA has the authority to enforce employer compliance with its standards and with the General Duty Clause through the issuance of abatement orders, citations, and civil monetary penalties. The OSH Act does not cover state or local government agencies or units. Thus, certain entities that may be affected by Coronavirus Disease 2019 (COVID-19), such as state and local government hospitals, local fire departments and emergency medical services, state prisons and county jails, and public schools, are not covered by the OSH Act or subject to OSHA regulation or enforcement.

State Plans

Section 18 of the OSH Act authorizes states to establish their own occupational safety and health plans and preempt standards established and enforced by OSHA.[3] OSHA must approve state plans if they are "at least as effective" as OSHA's standards and enforcement.[4] If a state adopts a state plan, it also must cover state and local government entities, such as public schools, not covered by OSHA. Currently, 21 states and Puerto Rico have state plans that cover all employers, and 5 states and the U.S. Virgin Islands have state plans that cover only state and local government employers not covered by the OSH Act.[5] In the remaining states, state and local government employers are not covered by OSHA standards or enforcement. State plans may incorporate OSHA standards by reference, or states may adopt their own standards that are at least as effective as OSHA's standards. State plans do not have jurisdiction over federal agencies and generally do not cover maritime workers and private-sector workers at military bases or other federal facilities.

Promulgation of OSHA Standards

OSHA may promulgate occupational safety and health standards on its own initiative or in response to petitions submitted to the agency by various government agencies, the public, or employer and employee groups.[6] OSHA is not required, however, to respond to a petition for a

[1] 29 U.S.C. §655. The provisions of the Occupational Safety and Health Act of 1970 (OSH Act) are extended to the legislative branch as an employer by the Congressional Accountability Act (P.L. 104-1).

[2] 29 U.S.C. §654(a)(1).

[3] 29 U.S.C. §667.

[4] For additional information on Occupational Safety and Health Administration (OSHA) state plans, see CRS Report R43969, *OSHA State Plans: In Brief, with Examples from California and Arizona*.

[5] Information on specific state plans is available from the OSHA website at https://www.osha.gov/stateplans.

[6] Per Section 6(b)(1) of the OSH Act [29 §655(b)(1)], a petition may be submitted by "an interested person, a representative of any organization of employers or employees, a nationally recognized standards-producing

standard or to promulgate a standard in response to a petition. OSHA may also consult with one of the two statutory standing advisory committees—the National Advisory Committee on Occupational Safety and Health (NACOSH) or the Advisory Committee on Construction Safety and Health (ACCSH)—or an ad-hoc advisory committee for assistance in developing a standard.[7]

Notice and Comment

OSHA's rulemaking process for the promulgation of standards is largely governed by the provisions of the Administrative Procedure Act (APA) and Section 6(b) of the OSH Act.[8] Under the APA informal rulemaking process, federal agencies, including OSHA, are required to provide notice of proposed rules through the publication of a Notice of Proposed Rulemaking in the *Federal Register* and provide the public a period of time to provide comments on the proposed rules.

Section 7(b) of the OSH Act mirrors the APA in that it requires notice and comment in the rulemaking process.[9] After publishing a proposed standard, the public must be given a period of at least 30 days to provide comments. In addition, any person may submit written objections to the proposed standard and may request a public hearing on the standard.

Statement of Reasons

Section 6(e) of the OSH Act requires OSHA to publish in the *Federal Register* a statement of the reasons the agency is taking action whenever it promulgates a standard, conducts other rulemaking, or takes certain additional actions, including issuing an order, compromising on a penalty amount, or settling an issued penalty.[10]

Other Relevant Laws and Executive Order 12866

In addition to the APA and OSH Act, other federal laws that generally apply to OSHA rulemaking include the Paperwork Reduction Act,[11] Regulatory Flexibility Act,[12] Congressional Review Act,[13] Information Quality Act,[14] and Small Business Regulatory Enforcement Fairness Act (SBREFA).[15] Also, Executive Order 12866, issued by President Clinton in 1993, requires

---

organization, the Secretary of Health and Human Services (HHS), the National Institute for Occupational Safety and Health, or a state or political subdivision."

[7] The National Advisory Committee on Occupational Safety and Health (NACOSH) was established by Section 7(a) of the OSH Act [29 U.S.C. §656(a)]. The Advisory Committee on Construction Safety and Health (ACCSH) was established by Section 107 of the Contract Work Hours and Safety Act (P.L. 87-581). Section 7(b) of the OSH Act provides OSHA the authority to establish additional advisory committees.

[8] The Administrative Procedure Act (APA) is codified at 5 U.S.C. §§500-596. For detailed information on federal agency rulemaking and the APA, see CRS Report RL32240, *The Federal Rulemaking Process: An Overview*.

[12] 5 U.S.C. §§601-612.

[13] 5 U.S.C. §§801-808.

[14] 44 U.S.C. §3516 note.

[15] 5 U.S.C. §601 note. For information on these additional laws that apply to OSHA rulemaking, see U.S. Government Accountability Office (GAO), *Workplace Safety and Health: Multiple Challenges Lengthen OSHA's Standard Setting*, GAO-12-330, April 2012, Appendix II, at https://www.gao.gov/products/GAO-12-330 (hereinafter cited as GAO-12-330, *Workplace Safety and Health*).

OSHA-002326

agencies to submit certain regulatory actions to the Office of Management and Budget (OMB) and Office of Information and Regulatory Affairs (OIRA) for review before promulgation.[16]

OSHA Rulemaking Time Line

OSHA rulemaking for new standards historically has been a relatively time-consuming process. In 2012, at the request of Congress, the Government Accountability Office (GAO) reviewed 59 significant OSHA standards promulgated between 1981 (after the enactments of the Paperwork Reduction Act and Regulatory Flexibility Act) and 2010.[17] For these standards, OSHA's average time between beginning formal consideration of the standard—either through publishing a Request for Information or Advance Notice of Proposed Rulemaking in the *Federal Register* or placing the rulemaking on its semiannual regulatory agenda—and promulgation of the standard was 93 months (7 years, 9 months). Once the Notice of Proposed Rulemaking was published for these 59 standards, the average time until promulgation of the standard was 39 months (3 years, 3 months).

In 2012, OSHA's Directorate of Standards and Guidance published a flowchart of the OSHA rulemaking process on the agency's website.[18] This flowchart includes estimated duration ranges for a variety of rulemaking actions, beginning with pre-rule activities—such as developing the idea for the standard and meeting with stakeholders—and ending with promulgation of the standard. The flowchart also includes an estimated duration range for post-promulgation activities, such as judicial review. The estimated time from the start of preliminary rulemaking to the promulgation of a standard ranges from 52 months (4 years, 4 months) to 138 months (11 years, 6 months). After a Notice of Proposed Rulemaking is published in the *Federal Register,* the estimated length of time until the standard is promulgated ranges from 26 months (2 years, 2 months) to 63 months (5 years, 3 months). **Table 1** provides OSHA's estimated time lines for six major pre-rulemaking and rulemaking activities leading to the promulgation of a standard.

Table 1. OSHA Rulemaking Process: Estimated Durations of Activities

Stage	Activities	Estimated Duration
1	Preliminary rulemaking activities	12-36 months
2	Developing the proposed rule	12-36 months
3	Publishing the Notice of Proposed Rulemaking (NPRM)	2-3 months
4	Developing and analyzing the rulemaking record, including public comments and hearings	6-24 months
5	Developing the final rule, including Office of Information and Regulatory Affairs (OIRA) submission	18-36 months
6	Publishing the final rule (promulgating the new standard)	2-3 months
Total estimated duration		52-138 months
Estimated duration from NPRM to final rule		26-63 months

OSHA-002327

Judicial Review

Both the APA and the OSH Act provide for judicial review of OSHA standards. Section 7(f) of the OSH Act provides that any person who is "adversely affected" by a standard may file, within 60 days of its promulgation, a petition challenging the standard with the U.S. Court of Appeals for the circuit in which the person lives or maintains his or her principal place of business.[19] A petition for judicial review does not automatically stay the implementation or enforcement of the standard. However, the court may order such a stay. OSHA estimates that post-promulgation activities, including judicial review, can take between 4 and 12 months after the standard is promulgated.[20]

Emergency Temporary Standards

Section 6(c) of the OSH Act provides the authority for OSHA to issue an Emergency Temporary Standard (ETS) without having to go through the normal rulemaking process. OSHA may promulgate an ETS without supplying any notice or opportunity for public comment or public hearings. An ETS is immediately effective upon publication in the *Federal Register*. Upon promulgation of an ETS, OSHA is required to begin the full rulemaking process for a permanent standard with the ETS serving as the proposed standard for this rulemaking. An ETS is valid until superseded by a permanent standard, which OSHA must promulgate within six months of publishing the ETS in the *Federal Register*.[21] An ETS must include a statement of reasons for the action in the same manner as required for a permanent standard. State plans are required to adopt or adhere to an ETS, although the OSH Act is not clear on how quickly a state plan must come into compliance with an ETS.

ETS Requirements

Section 6(c)(1) of the OSH Act requires that both of the following determinations be made in order for OSHA to promulgate an ETS:

- that employees are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful or from new hazards, and
- that such emergency standard is necessary to protect employees from such danger.

Grave Danger Determination

The term *grave danger*, used in the first mandatory determination for an ETS, is not defined in statute or regulation. The legislative history demonstrates the intent of Congress that the ETS process "not be utilized to circumvent the regular standard-setting process," but the history is unclear as to how Congress intended the term grave danger to be defined.[22]

OSHA-002328

In addition, although the federal courts have ruled on challenges to previous ETS promulgations, the courts have provided no clear guidance as to what constitutes a grave danger. In 1984, the U.S. Court of Appeals for the Fifth Circuit in *Asbestos Info. Ass'n v. OSHA* issued a stay and invalidated OSHA's November 1983 ETS lowering the permissible exposure limit for asbestos in the workplace.[23] In its decision, the court stated that "gravity of danger is a policy decision committed to OSHA, not to the courts."[24] The court, however, ultimately rejected the ETS, in part on the grounds that OSHA did not provide sufficient support for its claim that 80 workers would ultimately die because of exposures to asbestos during the six-month life of the ETS.

Necessity Determination

In addition to addressing a grave danger to employees, an ETS must also be *necessary* to protect employees from that danger. In *Asbestos Info. Ass'n*, the court invalidated the asbestos ETS for the additional reason that OSHA had not demonstrated the necessity of the ETS. The court cited, among other factors, the duplication between the respirator requirements of the ETS and OSHA's existing standards requiring respirator use. The court dismissed OSHA's argument that the ETS was necessary because the agency felt that the existing respiratory standards were "unenforceable absent actual monitoring to show that ambient asbestos particles are so far above the permissible limit that respirators are necessary to bring employees' exposure within the PEL of 2.0 f/cc."[25] The court determined that "fear of a successful judicial challenge to enforcement of OSHA's permanent standard regarding respirator use hardly justifies resort to the most dramatic weapon in OSHA's enforcement arsenal."[26]

Although OSHA has not promulgated an ETS since the 1983 asbestos standard, it has since determined the necessity of an ETS. In 2006, the agency considered a petition from the United Food and Commercial Workers (UFCW) and International Brotherhood of Teamsters (IBT) for an ETS on diacetyl. The UFCW and IBT petitioned OSHA for the ETS after the National Institute for Occupational Safety and Health (NIOSH) and other researchers found that airborne exposure to diacetyl, then commonly used as an artificial butter flavoring in microwave popcorn and a flavoring in other food and beverage products, was linked to the lung disease *bronchiolitis obliterans*, now commonly referred to as "popcorn lung."[27] According to GAO's 2012 report on OSHA's standard-setting processes, OSHA informed GAO that although the agency may have been able to issue an ETS based on the grave danger posed by diacetyl, the actions taken by the food and beverage industries, including reducing or removing diacetyl from products, made it less likely that the necessity requirement could be met.[28]

ETS Duration

Section 6(c)(2) of the OSH Act provides that an ETS is effective until superseded by a permanent standard promulgated pursuant to the normal rulemaking provisions of the OSH Act. Section 6(c)(3) of the OSH Act requires OSHA to promulgate a permanent standard within six months of

OSHA-002329

promulgating the ETS. As shown earlier in this report, six months is well outside of historical and currently expected time frames for developing and promulgating a standard under the notice and comment provisions of the APA and OSH Act, as well as under other relevant federal laws and executive orders. This dichotomy between the statutory mandate to promulgate a standard and the time lines that, based on historical precedent, other provisions in the OSH Act might realistically require for such promulgation raises the question of whether or not OSHA could extend an ETS's duration without going through the normal rulemaking process. The statute and legislative history do not clearly address this question.

OSHA has used its ETS authority sparingly in its history and not since the asbestos ETS promulgated in 1983. As shown in **Table A-1** in the Appendix, of the nine times OSHA has issued an ETS, the courts have fully vacated or stayed the ETS in four cases and partially vacated the ETS in one case.[29] Of the five cases that were not challenged or that were fully or partially upheld by the courts, OSHA issued a permanent standard either within the six months required by the statute or within several months of the six-month period and always within one year of the promulgation of the ETS.[30] Each of these cases, however, occurred before 1980, when a combination of additional federal laws and court decisions added additional procedural requirements to the OSHA rulemaking process. OSHA did not attempt to extend the ETS's expiration date in any of these cases.

Although the courts have not ruled directly on an attempt by OSHA to solely extend the life of an ETS, in 1974, the U.S. Court Appeals for the Fifth Circuit held in *Florida Peach Growers Ass'n v. United States Department of Labor* that OSHA was within its authority to amend an ETS without going through the normal rulemaking process.[31] The court stated that "it is inconceivable that Congress, having granted the Secretary the authority to react quickly in fast-breaking emergency situations, intended to limit his ability to react to developments subsequent to his initial response."[32] The court also recognized the difficulty OSHA may have in promulgating a standard within six months due to the notice and comment requirements of the OSH Act, stating that in the case of OSHA seeking to amend an ETS to expand its focus, "adherence to subsection (b) procedures would not be in the best interest of employees, whom the Act is designed to protect. Such lengthy procedures could all too easily consume all of the temporary standard's six months life."[33]

OSHA-002330

OSHA Standards Related to COVID-19

Current OSHA Standards

Currently, no OSHA standard directly covers exposure to airborne or aerosol diseases in the workplace. As a result, OSHA is limited in its ability to enforce protections for healthcare and other workers who may be exposed to SARS-CoV-2, the virus that causes COVID-19.[34]

OSHA may enforce the General Duty Clause in the absence of a standard, if it can be determined that an employer has failed to provide a worksite free of "recognized hazards" that are "causing or are likely to cause death or serious physical harm" to workers.[35] In addition, OSHA's standards for the use of personal protective equipment (PPE) may apply in cases in which workers require eye, face, hand, or respiratory protection against COVID-19 exposure.[36]

As of October 1, 2020, OSHA has issued citations related to COVID-19 to employers at 62 work sites resulting in a total of $913,133 in proposed civil penalties.[37] The majority of these citations were issued to healthcare, nursing, and long-term care providers, including two Department of Veterans Affairs facilities—a hospital in Indianapolis, Indiana, and a community living center in Queens, New York.[38] Two employers in the meat processing industry—Smithfield Packaged Foods, Inc. in Sioux Falls, South Dakota and JBS Foods, Inc. in Greeley, Colorado—were also cited.[39] In the two meat processing cases, citations were issued for General Duty Clause violations. Other citations were issued for violations of OSHA's respiratory protection, injury and illness reporting, and recordkeeping standards.

The highest amount of proposed penalties issued to a single employer for COVID-19-related violations was $28,070 to the Harborage nursing home operated by Hackensack Meridian Healthcare in New Jersey for four serious and one other than serious violations of the respiratory protection standard.[40] For two of the serious violations, OSHA issued the maximum allowable penalty of $13,494.[41] For the other two serious violations, OSHA issued citations but no monetary penalties. For the other than serious violation, OSHA issued a penalty of $1,082. The two meat processing employers were each assessed maximum penalties of $13,494 for serious violations of the General Duty Clause.

In a letter to OSHA, Senators Elizabeth Warren and Cory A. Booker raised concerns over the amount of penalties issued to these employers.[42] The Senators asked OSHA why these employers

[34] OSHA has a standard on blood-borne pathogens (29 C.F.R. §1910.1030) but does not have a standard on pathogens transmitted by airborne droplets.

[38] A list of all COVID-19-related citations issued by OSHA through October 1, 2020, is available at https://www.osha.gov/enforcement/covid-19-data/inspections-covid-related-citations.

[39] OSHA has the authority to issue citations to Executive Branch agencies, but does not have the authority to issue civil monetary penalties to these agencies.

[40] Detailed information on the citations issued to this employer is available at https://www.osha.gov/pls/imis/establishment.inspection_detail?id=1476465.015.

[41] OSHA citations are classified as "serious," "other than serious," "willful," or "repeated." The maximum amounts of OSHA penalties are subject to annual inflationary adjustments.

[42] Letter from Senators Elizabeth Warren and Cory A. Booker to Loren Sweatt, Principal Deputy Assistant Secretary of

OSHA-002331

were each cited for single serious violations of the General Duty Clause rather than multiple violations for each area of the facilities in which social distancing measures were not implemented. They also asked why OSHA did not issue penalties for willful or repeated violations that carry maximum penalties of $134,937 per violation. None of the employers cited for COVID-19-related violations were issued penalties for willful or repeated violations.

OSHA Respiratory Protection Standard

National Institute for Occupational Safety and Health Certification

The OSHA respiratory protection standard requires the use of respirators certified by NIOSH in cases in which engineering controls, such as ventilation or enclosure of hazards, are insufficient to protect workers from breathing contaminated air.[43] Surgical masks, procedure masks, and dust masks are not considered respirators. NIOSH certifies respirators pursuant to federal regulations.[44] For nonpowered respirators, such as filtering face piece respirators commonly used in healthcare and construction, NIOSH classifies respirators based on their efficiency at filtering airborne particles and their ability to protect against oil particles. Under the NIOSH classification system, the letter (N, R, or P) indicates the level of oil protection as follows: N—no oil protection; R—oil resistant; and P—oil proof. The number following the letter indicates the efficiency rating of the respirator as follows: 95—filters 95% of airborne particles; 97—filters 97% of airborne particles; and 100—filters 99.7% of airborne particles. Thus an N95 respirator, the most common type, is one that does not protect against oil particles and filters out 95% of airborne particles. An R or P respirator can be used in place of an N respirator.

A respirator that is past its manufacturer-designated shelf life is no longer considered to be certified by NIOSH. However, in response to potential shortages in respirators, NIOSH has tested and approved certain models of respirators for certified use beyond their manufacturer-designated shelf lives.[45]

Respirators designed for certain medical and surgical uses are subject to both certification by NIOSH (for oil protection and efficiency) and regulation by the Food and Drug Administration (FDA) as medical devices. In general, respirators with exhalation valves cannot be used in surgical and certain medical settings because, although the presence of an exhalation valve does not affect the respirator's protection afforded the user, it may allow unfiltered air from the user into a sterile field. On March 2, 2020, FDA issued an Emergency Use Authorization (EUA) to approve for use in medical settings certain NIOSH-certified respirators not previously regulated by FDA.[46]

Labor, Occupational Safety and Health Administration, September 22, 2020, https://www.warren.senate.gov/imo/media/doc/Letter%20from%20Senators%20Warren,%20Booker%20to%20OSHA%209-22-20.pdf.

OSHA-002332

CDC Interim Guidance on Respiratory Protection

On March 10, 2020, the Centers for Disease Control and Prevention (CDC) updated its interim guidance for the protection of healthcare workers against exposure to COVID-19 to permit healthcare workers caring for known or suspected COVID-19 cases to use "facemasks" when respirators are not available or are in limited supply.[47] This differs from the CDC's 2007 guidelines for control of infectious agents in healthcare settings, which required the use of respirators for treatment of known or suspected cases.[48] CDC states that respirators should be prioritized for use in medical procedures likely to generate respiratory aerosols. Before this interim guidance was released, Representative Bobby Scott, Chairman of the House Committee on Education and Labor, and Representative Alma Adams, Chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Health and Human Services (HHS) Alex M. Azar II expressing their opposition to this change in the interim standard.[49]

Medical Evaluation and Fit Testing

The OSHA respiratory protection standard requires that the employer provide a medical evaluation to the employee to determine if the employee is physiologically able to use a respirator. This medical evaluation must be completed before any fit testing. For respirators designed to fit tightly against the face, the specific type and model of respirator that an employee is to use must be fit tested in accordance with the procedures provided in Appendix A of the OSHA respiratory protection standard to ensure there is a complete seal around the respirator when worn.[50] Once an employee has been fit tested for a respirator, he or she is required to be fit tested annually or whenever the model of respirator, but not the actual respirator itself, is changed. Each time an individual uses a respirator, he or she is required to perform a check of the seal of the respirator to his or her face in accordance with the procedures provided in Appendix B of the standard.[51] On March 14, 2020, OSHA issued guidance permitting employers to suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator.

---

[47] Although the interim guidance does not specifically define the term *facemask*, it does differentiate between a facemask and a respirator such that any recommendation to use a facemask does not require the use of a respirator. CDC, *Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings*, updated March 10, 2020, at https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html.

OSHA-002333

Temporary OSHA Enforcement Guidance on the Respiratory Protection Standard

In response to shortages of respirators and other PPE during the national response to the COVID-19 pandemic, OSHA has issued three sets of temporary enforcement guidance to permit the following exceptions to the respiratory protection standard:

1. Employers may suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator;[52]
2. Employers may permit the use of expired respirators and the extended use or reuse of respirators, provided the respirator maintains its structural integrity and is not damaged, soiled, or contaminated (e.g., with blood, oil, or paint);[53] and
3. Employers may permit the use of respirators not certified by NIOSH, but approved under standards used by the following countries or jurisdictions, in accordance with the protection equivalency tables provided in Appendices A and B of the enforcement guidance document:
   - Australia,
   - Brazil,
   - European Union,
   - Japan,
   - Mexico,
   - People's Republic of China, and
   - Republic of Korea.[54]

California: Cal/OSHA Aerosol Transmissible Disease Standard

Although no OSHA standard specifically covers aerosol or airborne disease transmission, the California Division of Occupational Safety and Health (Cal/OSHA), under its state plan, promulgated its aerosol transmissible disease (ATD) standard in 2009.[55] The ATD standard covers most healthcare workers, laboratory workers, as well as workers in correctional facilities, homeless shelters, and drug treatment programs. Under the ATD standard, SARS-CoV-2, the virus that causes COVID-19, is classified as a disease or pathogen requiring airborne isolation. This classification subjects the virus to stricter control standards than diseases requiring only

[53] OSHA, *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-respiratory-protection-and-n95-shortage-due-coronavirus. Under this guidance, employers are required to address in their written respiratory protection plans when respirators are contaminated and not available for use or reuse.

[54] OSHA, *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-use-respiratory-protection-equipment-certified-under.

[55] Cal. Code Regs. tit. 8, §5199. The California state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers; workers on military bases and in national parks, monuments, memorials, and recreation areas; workers on federally recognized Native American reservations and trust lands; and U.S. Postal Service contractors.

OSHA-002334

droplet precautions, such as seasonal influenza.[56] The key requirements of the ATD standard include

- written ATD exposure control plan and procedures,
- training of all employees on COVID-19 exposure, use of PPE, and procedures if exposed to COVID-19,
- engineering and work practice controls to control COVID-19 exposure, including the use of airborne isolation rooms,
- provision of medical services to employees, including removal of exposed employees,
- specific requirements for laboratory workers, and
- PPE requirements.

Cal/OSHA Aerosol Transmissible Disease PPE Requirements

The Cal/OSHA ATD standard requires that employers provide employees PPE, including gloves, gowns or coveralls, eye protection, and respirators certified by NIOSH at least at the N95 level whenever workers

- enter or work in an airborne isolation room or area with a case or suspected case;
- are present during procedures or services on a case or suspected case;
- repair, replace, or maintain air systems or equipment that may contain pathogens;
- decontaminate an area that is or was occupied by a case or suspected case;
- are present during aerosol generating procedures on cadavers of cases or suspected cases;
- transport a case or suspected case within a facility or within a vehicle when the patient is not masked; and
- are working with a viable virus in the laboratory.[57]

In addition, a powered air purifying respirator (PAPR) with a high-efficiency particulate air (HEPA) filter must be used whenever a worker performs a *high-hazard procedure* on a known or suspected COVID-19 case.[58] High-hazard procedures are those in which "the potential for being exposed to aerosol transmissible pathogens is increased due to the reasonably anticipated generation of aerosolized pathogens"—they include intubation, airway suction, and caring for patients on positive pressure ventilation.[59] Emergency medical services (EMS) workers may use N100, R100, or P100 respirators in place of PAPRs.

[56] Cal. Code Regs. tit. 8, §5199 Appendix A.

[57] California Division of Occupational Safety and Health (Cal/OSHA), *Interim Guidance for Protecting Health Care Workers from Exposure to Coronavirus Disease (COVID-19)*, March 2020, at https://www.dir.ca.gov/dosh/Coronavirus-info.html.

[58] A PAPR uses a mechanical device to draw in room air and filter it before expelling that air over the user's face. In general, PAPRs do not require a tight seal to the user's face and do not need to be fit tested.

[59] Cal. Code Regs. tit. 8, §5199(b).

OSHA-002335

Cal/OSHA Interim Guidance on COVID-19

Cal/OSHA has issued interim guidance in response to shortages of respirators in the state due to the COVID-19 pandemic response.[60] Under this interim guidance, if the supply of N95 respirators or PAPRs are insufficient to meet current or anticipated needs, surgical masks may be used for low-hazard patient contacts that would otherwise require the use of respirators, and respirators may be used for high-hazard procedures that would otherwise require the use of PAPRs.

Virginia: VOSH COVID-19 ETS

On July 15, 2020, the Virginia Safety and Health Codes Board adopted an ETS to specifically protect employees from exposure to SARS-CoV-2, the virus that causes COVID-19.[61] This ETS, promulgated under Virginia's state occupational safety and health plan (VOSH) is the first state standard to specifically address COVID-19 in the workplace.[62] As an ETS, the VOSH standard expires within six months of its effective date, upon expiration of the Governor's State of Emergency, when superseded by a permanent standard, or when repealed by the Virginia Safety and Health Codes Board, whichever comes first. The ETS can be extended only through the normal state rulemaking process.

Unlike the Cal/OSHA ATD standard, the VOSH ETS applies to all state and local government agencies and all covered private-sector employees in the state. As part of a state plan, the VOSH ETS applies to state and local government entities, such as public schools, as employers. All covered employers in Virginia must comply with the following ETS requirements:

- exposure assessment and determination, notification of suspected cases and contacts with those cases, and employee access to their own exposure and medical records;
- return to work of employees known or suspected to have COVID-19 based on a duration of time since last symptoms or negative COVID-19 tests;[63]
- maintenance of physical distancing between employees while working and on paid breaks at the worksite, including restricted access to the worksite and common areas and break rooms;
- compliance with applicable existing PPE and respiratory protection standards when physical distancing between employees is not possible; and
- sanitation and disinfection requirements.

For all employers, if engineering, administrative, or work practice controls are not feasible or do not provide sufficient protection from SARS-CoV-2 transmission, then PPE, including respiratory PPE—such as respirators, if necessary—must be provided to employees.

---

[60] California Division of Occupational Safety and Health (Cal/OSHA), *Cal/OSHA Interim Guidance on COVID-19 for Health Care Facilities: Severe Respirator Supply Shortages*, March 28, 2020, at https://www.dir.ca.gov/dosh/coronavirus/Cal-OSHA-Guidance-for-respirator-shortages.pdf.

[61] *Infectious Disease Prevention: SARS-CoV-2 Virus That Causes COVID-19*, 16 Va. Admin. Code §25-220. This ETS is effective upon publication in a Richmond, VA, newspaper during the week of July 27, 2020.

[62] The Virginia state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S Postal Service contractors, workers at military bases or other federal enclaves in which the federal government has civil jurisdiction, workers at the U.S. Department of Energy's Southeastern Power Administration Kerr-Philpott System, and aircraft cabin crew members.

[63] A COVID-19 test for the purposes of determining if an employee can return to work must be paid for by the employer or offered such that the employee bears no cost for the test.

OSHA-002336

Hazard and Job Task Classification

The VOSH ETS requires that each employer assess its workplace for hazards and job tasks that potentially expose employees to the SARS-CoV-2 virus. Employers must classify each job task as having a "very high," "high," "medium," or "lower" risk level of exposure, according to the hazards to which employees are potentially exposed. The VOSH ETS provides the following examples of activities for the "very high" and "high" risk levels:

- "very high" risk activities include
  - using aerosol-generating procedures, such as intubation, on patients known or suspected to be infected with SARS-CoV-2;
  - collecting or handling specimens from patients known or suspected to be infected with SARS-CoV-2; and
  - performing an autopsy involving aerosol-generating procedures on the body of a person known or suspected to be infected with the SARS-CoV-2 virus at the time of death; and
- "high risk" activities include
  - health care services, including inpatient care, outpatient care, skilled nursing care, and nonmedical support services such as room cleaning, provided to patients known or suspected to be infected with SARS-CoV-2;
  - first responder and medical transport services to patients known or suspected to be infected with SARS-CoV-2; and
  - mortuary services to persons known or suspected to be infected with the SARS-CoV-2 virus at the time of death.

"Medium" risk activities are those that require employees to have more than minimal contact, within six feet of other employees, customers, or members of the public who are not known or suspected to be infected with SARS-CoV-2.[64] "Lower" risk activities are those that do not require contact with other persons within six feet or that are able to utilize the following types of engineering, administrative, or work practice controls to minimize contact between persons:

- installation of floor to ceiling barriers, such as barriers between cashiers and customers;
- telecommuting;
- staggered work shifts to reduce the number of workers at a site;
- delivering services remotely, including curbside pickup of retail purchases; and
- mandatory physical distancing of persons.

The use of face coverings other than respirators or medical or surgical masks, including cloth face coverings now required by several states, is not an acceptable method of minimizing physical contact between persons. However, the VOSH ETS requires the use of face coverings for brief contacts between persons within six feet of each other.

[64] Examples of "medium" risk work activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-30.

OSHA-002337

Engineering, Administrative, Work Practice, and PPE Requirements for "Very High," "High," and "Medium" Risk Activities

Employers with job tasks or activities in the "very high," "high," or "medium" risk classifications must adhere to specific engineering, administrative, work practice, and PPE requirements. For "very high" and "high" risk activities, engineering controls include the use of airborne infection isolation rooms (AIIR) for known or suspected COVID-19 patients and aerosol-generating procedures and Biosafety Level 3 (BSL-3) precautions for the handling of specimens from known or suspected COVID-19 patients.[65]

Employers with "very high" and "high" risk activities must implement administrative and work practice controls, including the prescreening of all employees to ensure that employees do not have signs or symptoms of COVID-19; enhanced medical screening of employees during COVID-19 outbreaks; and the use of flexible work arrangements, such as telecommuting, when feasible. In addition, all employers with "very high" or "high" risk activities must provide, to the extent feasible, psychological and behavioral support to address employee stress at no cost to the employee.

The standard also provides for engineering, administrative, and work practice controls for "medium" risk activities.[66]

PPE Requirements for "Very High" and "High" Risk Activities

Employers with "very high" and "high" risk activities, who are not already covered by the general OSHA PPE standards, are required to comply with the VOSH ETS requirements for PPE. An employer subject to these requirements must assess the workplace to determine if there are any COVID-19 hazards present or likely to be present that would require the use of PPE by employees. The employer must provide for the participation of employees and employee representatives in this assessment process and verify that this assessment has been conducted through a written certification.

If hazards that require PPE are identified, the employer must select and provide the appropriate PPE to each employee and ensure that PPE fits properly. If respiratory PPE, such as respirators or PAPR are used as PPE, the existing OSHA standards for respiratory PPE, which include medical evaluation of employees and fit testing, must be followed.

Unless contraindicated by the hazard and PPE assessment, when any employee is in contact within six feet of any person known or suspected to be infected with SARS-CoV-2, that employee must be provided with the following types of PPE:

- gloves,
- gown large enough to cover areas needing protection,
- face shield or goggles, and
- respirator.

---

[65] The VOSH ETS requires compliance with Biosafety Level 3 precautions provided in HHS, *Biosafety in Microbiological and Biomedical Laboratories. Fifth Edition*, HHS Publication no. (CDC) 21-1112, December 2009, at https://www.cdc.gov/labs/BMBL.html.

[66] Engineering, administrative, and work practice controls for "medium" risk activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-60.

While there are no specific PPE requirements for "medium" risk activities, PPE may be required based on an assessment of the hazards of these activities.

Infectious Disease Preparedness and Response Plan and Training

Infectious Disease Preparedness and Response Plan

All employers with "very high" and "high" risk activities, and employers with 11 or more employees and "medium" risk activities, must develop written infectious disease preparedness and response plans. These plans must be developed with input from employees. The deadline for the development of these plans is 60 days from the effective date of the ETS.

The infectious disease preparedness plan must include a consideration of the COVID-19 risks in the workplace, and to the extent possible and in compliance with medical privacy laws, the specific risks faced by employees with certain preexisting medical conditions. The plan must include contingency plans for continued operations during a COVID-19 outbreak and provide for the prompt identification and isolation of employees with known or suspected COVID-19 and a procedure for employees to notify the employer of COVID-19 signs or symptoms. The plan must also address interactions between the employer's worksite and other businesses, such as vendors and contractors to ensure employees of these businesses comply with the VOSH ETS and the employer's infectious disease preparedness and response plan.

Training

All employers with "very high," "high," or "medium" risk activities must provide training to all employees, including those employees whose work does not involve any COVID-19 risks. This training must teach employees to recognize the hazards of the SARS-CoV-2 virus, signs and symptoms of COVID-19, and the procedures to minimize SARS-CoV-2 hazards. If the employer has an infectious disease preparedness and response plan, training must be provided on this plan. Written certification of training must be prepared, and retraining must be provided when necessary.

Employers with only "lower" risk activities are not required to prepare a formal training plan but must provide oral or written communication on the hazards of SARS-CoV-2, the signs and symptoms of COVID-19, and measures to minimize SARS-CoV-2 exposure. VOSH is required to develop an information sheet that employers can use to satisfy this training requirement.

Training must be provided within 30 days of the effective date of the standard, except for training on the infectious disease preparedness and response plan, which must be completed within 60 days.

Whistleblower Protections

The VOSH ETS prohibits any employer from discharging or otherwise discriminating against any employee who does the following:

- exercises his or her rights under the ETS or existing whistleblower protection provisions, including the limited right of an employee to refuse work because of a reasonable fear of injury or death or serious injury;[67]

[67] To exercise this right, the employee must, if possible, have sought unsuccessfully to have the employer remedy the hazard, and there must be insufficient time to attempt to remedy the hazard through normal regulatory enforcement

- provides and wears his or her own PPE, provided the PPE does not create a greater hazard to the employee or create a serious hazard to other employees; or
- raises a reasonable concern about SARS-CoV-2 and COVID-19 infection control to the employer, the employer's agent, other employees, the government, or the public through any type of media including social media.

Michigan: MIOSHA COVID-19 Emergency Rules

On October 14, 2020, the director of the Michigan Department of Labor and Economic Opportunity, which operates Michigan's state occupational safety and health plan (MIOSHA), promulgated emergency rules to address workplace exposure to COVID-19.[68] These rules, which apply to all employers in the state, went into immediate effect and will remain in effect for six months. In addition to rules that apply to all employers, the emergency rules include specific provisions that apply to the following industries:

- construction;
- manufacturing;
- retail, libraries, and museums;
- restaurants and bars;
- healthcare;
- in-home services such as house cleaning and repair;
- personal care services such as hair styling and tattooing;
- public accommodations such as sports and entertainment venues;
- sports and exercise facilities;
- meat and poultry processing; and
- casinos.[69]

Exposure Determination

Rule 3 of the MIOSHA emergency rules requires all employers to evaluate all routine and anticipated job tasks and categorize these job tasks based on potential employee exposure to COVID-19 into one of the following four categories:

1. "Lower exposure risk" tasks are those that do not require contact with known or suspected COVID-19 cases or frequent close (within six feet) contact with the general public.
2. "Medium exposure risk" tasks are those that require frequent or close contact with persons who may be infected with COVID-19 but who are not known or suspected COVID-19 cases. In areas of the state without ongoing community

channels. This right is provided in the OSHA standards at 29 C.F.R. §1977.12(b)(2) and in the VOSH standards at 16 Va. Admin. Code §25-60-110.

[68] Department of Labor and Economic Opportunity, Michigan Occupational Safety and Health Administration (MIOSHA) Emergency Rules: Coronavirus 2019 (COVID-19), available at https://www.michigan.gov//documents/leo/Final_MIOSHA_Rules_705164_7.pdf. The Michigan state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S. Postal Service contractors, workers at businesses owned or operated by tribal members at Indian reservations, and aircraft cabin crew members.

[69] MIOSHA Emergency Rules: Coronavirus 2019 (COVID-19), Rule 11.

transmission of COVID-19, tasks that require frequent contact with persons travelling from areas with widespread COVID-19 transmission are included in this category. In areas with ongoing community transmission, tasks that involve contact with the general public are included in this category.

3. "High exposure risk" tasks are those with high potential for exposure to known or suspected COVID-19 cases. Licensed healthcare providers, medical first responders, nursing home workers, law enforcement and correctional officers, and mortuary workers are examples of types of workers that may perform tasks in this category.
4. "Very high exposure risk" tasks are those that involve the generation of aerosols during medical or mortuary procedures on known or suspected COVID-19 cases and the collection and handling of laboratory specimens from known or suspected COVID-19 cases.

Preparedness and Response Plan

Rule 4 of the MIOSHA emergency rules requires all employers to develop a written COVID-19 preparedness and response plan based on current CDC and OSHA guidance. This plan must detail measures the employer will take to protect employees from COVID-19 exposure and must be readily available to employees and their representatives.

Basic Infection Prevention Measures

Rule 5 of the MIOSHA emergency rules requires all employers to implement the following basic infection prevention measures:

- promote frequent hand-washing and provide hand-washing facilities or hand sanitizer to workers, customers, and visitors;
- require employees who are sick to not report to work or to report to an isolated location;
- prohibit workers from using other workers' desks, phones, and other equipment when possible;
- increase facility cleaning, especially of high-touch surfaces and shared equipment;
- establish procedures, consistent with CDC guidance, for disinfection of the worksite if a worker, customer, or visitor has a known case of COVID-19;
- use Environmental Protection Agency (EPA) approved disinfectants that are expected to effective against SARS-CoV-2;
- follow all manufacturer's guidelines for use of all cleaning and disinfectant products; and
- prohibit in-person work for employees whose work can be done remotely.

Health Surveillance

Rule 6 of the MIOSHA emergency rules requires all employers to implement a health surveillance system for the workplace. This system must include, at a minimum, a COVID-19 screening questionnaire for all employees and contractors entering the workplace. Employees must be directed to immediately report any signs or symptoms of COVID-19 to the employer and known and suspected COVID-19 cases must be isolated from the rest of the workforce. When an

employer learns of an employee, contractor, customer, or visitor to the worksite with a known case of COVID-19, the employer must immediately notify the local health department and, must notify, within 24 hours, any workers, contractors, or suppliers who may have come into contact with the infected person. When determining if an employee with a known or suspected case of COVID-19 may return to the workplace, the employer must follow CDC guidelines and health department quarantine and isolation orders.

Workplace Controls

Rule 7 of the MIOSHA emergency rules requires all employers to implement the following workplace controls:

- designate one or more worksite COVID-19 safety coordinators to implement, monitor, and report on COVID-19 control strategies developed by the employer and to remain on site at all times when employees are present;
- place posters in appropriate languages in the workplace that provide information on staying away from work while sick, cough and sneeze etiquette, and hand hygiene;
- keep all persons at least six feet from each other using signs, floor markings, and barriers appropriate for the worksite, to the extent possible;
- provide all employees with non-medical grade face coverings at no cost to the employees;
- require the use of face coverings when employees cannot maintain six feet of distance from other persons in the workplace, and consider the use of face shields when three feet of distance cannot be maintained;
- require face coverings in shared spaces, such as restrooms and hallways and during in-person meetings.

PPE

Rule 8 of the MIOSHA emergency rules requires that employers provide appropriate PPE, including respiratory protection, to employees based on the exposure risks of the job and current CDC and OSHA guidelines. All PPE must be properly fitted, inspected, maintained, cleaned, stored, and disposed of. In workplaces that provide medical treatment to known or suspected COVID-19 cases, employees with frequent or prolonged close contact with such patients must be provided with and wear, at a minimum, an N95 respirator, goggles or face shield, and gown.

Training Requirements

Rule 10 of the MIOSHA emergency rules requires all employers to provide training and communication, in languages common among the employees, on the following subjects:

- workplace infection-control practices;
- proper use of PPE;
- how to notify the employer of COVID-19 symptoms or diagnosis;
- how to report unsafe working conditions.

This training must be updated if the employer's COVID-19 preparedness and response plan changes or new information on COVID-19 transmission becomes available.

Recordkeeping Requirements

Rule 11 of the MIOSHA emergency rules requires that all employers maintain, for one year, records of employee training, the screening of persons entering the workplace, and any health surveillance notifications required by Rule 6.

OSHA Infectious Disease Standard Rulemaking

In 2010, OSHA published a Request for Information in the *Federal Register* seeking public comments on strategies to control exposure to infectious diseases in healthcare workplaces.[70] After collecting public comments and holding public meetings, OSHA completed the SBREFA process in 2014. Since then, however, no public actions have occurred on this rulemaking; since spring 2017, this rulemaking has been listed as a "long-term action" in DOL's semiannual regulatory agenda.

Congressional Activity to Require an OSHA Emergency Temporary Standard on COVID-19

On March 5, 2020, Representative Bobby Scott, chairman of the House Committee on Education and Labor, and Representative Alma Adams, chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Labor Eugene Scalia calling on OSHA to promulgate an ETS to address COVID-19 exposure among healthcare workers.[71] This letter followed a January 2020 letter requesting that OSHA reopen its rulemaking on the infectious disease standard and begin to formulate for possible future promulgation an ETS to address COVID-19 exposure.[72] Senator Patty Murray, ranking member of the Senate Committee on Health, Education, Labor, and Pensions and a group of Democratic Senators sent a similar letter to the Secretary of Labor calling for an OSHA ETS.[73]

In addition, in March 2020, David Michaels, who served as the Assistant Secretary of Labor for Occupational Safety and Health during the Obama Administration, wrote an op-ed in *The Atlantic* calling on OSHA to promulgate a COVID-19 ETS.[74] On March 6, 2020, the AFL-CIO and 22 other unions petitioned OSHA for an ETS on infectious diseases that would cover all workers with potential exposures.[75] OSHA formally denied the AFL-CIO petition on May 29, 2020, claiming that an ETS is not necessary to protect employees from infectious diseases generally, or

from COVID-19.[76] National Nurses United submitted a similar petition requesting that OSHA promulgate an ETS based largely on the Cal/OSHA ATD standard.[77] On May 4, 2020, the Center for Food Safety and Food Chain Workers Alliance submitted a petition requesting that OSHA promulgate an ETS to protect meat and poultry processing workers from COVID-19 exposure in the workplace.[78] On May 18, 2020, the AFL-CIO petitioned the U.S. Court of Appeals for the D.C. Circuit for a writ of mandamus to compel OSHA to promulgate a COVID-19 ETS.[79] The circuit court denied this petition on June 11, 2020.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020

On March 9, 2020, Representative Bobby Scott introduced H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020. This bill would require OSHA to promulgate a COVID-19 ETS within one month of enactment. The ETS would be required to cover healthcare workers and any workers in sectors determined by the CDC or OSHA to be at an elevated risk of COVID-19 exposure. The ETS would be required to include an exposure control plan provision and be, at a minimum, based on CDC's 2007 guidance and any updates to this guidance. The ETS would also be required to provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD standard, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS. Title II of the bill would provide that hospitals and skilled nursing facilities that receive Medicare funding and that are owned by state or local government units and not subject to state plans would be required to comply with the ETS. Similar provisions are included in S. 3475.

P.L. 116-127, the Families First Coronavirus Response Act

The provisions of H.R. 6139 were included as Division C of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The American Hospital Association (AHA) issued an alert to its members expressing its opposition to the OSHA ETS provisions in the bill.[80] Specifically, the AHA opposed the requirement that the ETS be based on the CDC's 2007 guidance. The AHA stated that unlike severe acute respiratory syndrome (SARS), which was transmitted through the air, COVID-19 transmission is through droplets and surface contacts. Thus, the requirement of the 2007 CDC guidance that N95 respirators, rather than surgical masks, be used for patient contact is not necessary to protect healthcare workers from COVID-19, and the use of surgical masks is consistent with World Health Organization guidance. The AHA also

[79] In re: American Federation of Labor and Congress of Industrial Organizations, D.C. Cir., No. 19-1158, May 18, 2020. This petition was filed in the U.S. Court of Appeals as Section 6(f) of the OSH Act [29 U.S.C. §655(f)] grants this court exclusive jurisdiction to provide judicial review of OSHA standards.

[80] Emily Kopp, "Hospitals want to kill a policy shielding nurses from COVID-19 because there aren't enough masks," *Roll Call*, March 3, 2020, at https://www.rollcall.com/2020/03/13/hospitals-want-to-kill-a-policy-shielding-nurses-from-covid-19-because-there-arent-enough-masks/. This alert is available to American Hospital Association (AHA) members on the AHA website at https://www.aha.org.

claimed that shortages of available respirators could reduce the capacity of hospitals to treat COVID-19 patients, due to a lack of respirators for staff. The OSHA ETS provisions were not included in the version of the legislation that was passed by the House and the Senate and signed into law as P.L. 116-127.

H.R. 6379, the Take Responsibility for Workers and Families Act

Division D of H.R. 6379, the Take Responsibility for Workers and Families Act, as introduced in the House on March 23, 2020, includes the requirement that OSHA promulgate an ETS on COVID-19 within seven days of enactment and a permanent COVID-19 standard within 24 months of enactment to cover healthcare workers, firefighters and emergency response workers, and workers in other occupations that CDC or OSHA determines to have an elevated risk of COVID-19 exposure. Division D of H.R. 6379 would amend the OSH Act, for the purposes of the ETS only, such that state and local government employers in states without state plans would be covered by the ETS. The provisions of Division D of H.R. 6379 were also included in S. 3584, the COVID-19 Workers First Protection Act of 2020, as introduced in the Senate.

This legislation would specifically provide that the ETS would remain in force until the permanent standard is promulgated and would explicitly exempt the ETS from the Regulatory Flexibility Act, Paperwork Reduction Act, and Executive Order 12866. OSHA would be granted enforcement discretion in cases in which it is not feasible for an employer to fully comply with the ETS (such as a case in which PPE is unavailable) if the employer is exercising due diligence to comply and implementing alternative means to protect employees.

Like the provisions in H.R. 6139 and the version of H.R. 6201 introduced in the House, the ETS and permanent standard under H.R. 6379 would be required to include an exposure control plan and provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS and permanent standard. Although the ETS provisions in H.R. 6139 and H.R. 6201 would require that the ETS be based on the 2007 CDC guidance, specific reference to the 2007 guidance is not included in this legislation. Rather, under H.R. 6379, the ETS and permanent standard would have to incorporate, as appropriate, "guidelines issued by the Centers for Disease Control and Prevention, and the National Institute for Occupational Safety and Health, which are designed to prevent the transmission of infectious agents in healthcare settings" and scientific research on novel pathogens.

States with occupational safety and health plans would be required to adopt the ETS, or their own ETS at least as effective as the ETS, within 14 days of the legislation's enactment.

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020, was introduced in the House by Representative Bobby Scott on April 21, 2020. This legislation includes the ETS and permanent standard provisions of Division D of H.R. 6379 and S. 3584 and would require that these standards cover healthcare workers, emergency medical responders, and "other employees at occupational risk" of COVID-19 exposure. This legislation also adds two provisions that would clarify the requirements for employers to record work-related COVID-19 infections and strengthen the protections against retaliation and discrimination offered to whistleblowers. Similar provisions are included in S. 3677 and were incorporated into H.R. 6800, the Heroes Act, as passed by the House.

COVID-19 Recordkeeping

Sections 8(c) and 24(a) of the OSH Act require employers to maintain records of occupational injuries and illnesses in accordance with OSHA regulations.[81] OSHA's reporting and recordkeeping regulations require that employers with 10 or more employees must keep records of work-related injuries and illnesses that result in lost work time for employees or that require medical care beyond first aid.[82] Employers must also report to OSHA, within 8 hours, any workplace fatality, and within 24 hours, any injury or illness that results in in-patient hospitalization, amputation, or loss of an eye. Employers in certain industries determined by OSHA to have lower occupational safety and health hazards are listed in the regulations as being exempt from the recordkeeping requirements but not the requirement to report to OSHA serious injuries, illnesses, and deaths.[83] Offices of physicians, dentists, other health practitioners, and outpatient medical clinics are included in the industries that are exempt from the recordkeeping requirements.

OSHA regulations require the employer to determine if an employee's injury or illness is related to his or her work and thus subject to the recordkeeping requirements.[84] The regulations provide a presumption that an injury or illness that occurs in the workplace is work-related and recordable, unless one of the exemptions provided in the regulations applies.[85] One of the listed exemptions is "The illness is the common cold or flu (Note: contagious diseases such as tuberculosis, brucellosis, hepatitis A, or plague are considered work-related if the employee is infected at work)."[86]

Because of the nature of COVID-19 transmission, which can occur in the community as well as the workplace, it can be difficult to determine the exact source of any person's COVID-19 transmission. Absent any specific guidance, this may make it difficult for employers to determine if an employee's COVID-19 is subject to the recordkeeping requirements.

Initial OSHA Recordkeeping Guidance

On April 10, 2020, OSHA issued enforcement guidance on how cases of COVID-19 should be treated under the recordkeeping requirements.[87] This guidance stated that COVID-19 cases were recordable if they were work-related.

Under this guidance, employers in the following industry groups were to fully comply with the recordkeeping regulations, including the requirement to determine if COVID-19 cases were work-related:

- healthcare;
- emergency response, including firefighting, emergency medical services, and law enforcement; and
- correctional institutions.

---

[81] 29 U.S.C. §§657(c) and 673(a).

[82] OSHA's reporting and recordkeeping regulations are at 29 C.F.R. Part 1904.

[83] The list of exempted industries is at 29 C.F.R. Subpart B, Appendix A. States with state occupational safety and health plans may require employers in these exempted industries to comply with the recordkeeping requirements.

[84] 29 C.F.R. §1904.5.

[85] 29 C.F.R. §1905.5(a).

[86] 29 C.F.R. §1904.5(b)(2)(viii).

[87] OSHA, *Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, April 10, 2020, at https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

For all other employers, OSHA required employers to determine if COVID-19 cases were work-related and subject to the recordkeeping requirements only if both of the following two conditions were met:

1. There was objective evidence that a COVID-19 case may have been work-related. This could have included, for example, a number of cases developing among workers who worked closely together without an alternative explanation.
2. The evidence of work-relatedness was reasonably available to the employer. For purposes of this guidance, examples of reasonably available evidence included information given to the employer by employees, as well as information that an employer learned regarding its employees' health and safety in the ordinary course of managing its business and employees.

Updated OSHA Recordkeeping Guidance

OSHA issued new guidance, effective May 26, 2020, on recordkeeping of COVID-19 cases.[88] This new guidance rescinds the previous guidance issued by OSHA on April 10, 2020. Under this new guidance, all employers, regardless of type of industry or employment, are subject to the recordkeeping and recording regulations for work-related cases of COVID-19. To determine if an employer has made a reasonable determination that a case of COVID-19 was work-related, OSHA says it will consider the following factors:

- the reasonableness of the employer's investigation of the COVID-19 case and its transmission to the employee;
- the evidence that is available to the employer; and
- the evidence that COVID-19 was contracted at work.

The guidance provides examples of evidence that can be used to demonstrate that a COVID-19 case was or was not work-related such as if an employee had frequent close contact with members of the public in an area with ongoing community transmission of COVID-19.

H.R. 6559

H.R. 6559 would require that the ETS and permanent standard established pursuant to the legislation include the requirement for the recording and reporting of all COVID-19 cases in accordance with OSHA regulations in place at the time of enactment. By referencing the regulations in place, this provision would serve to supersede OSHA's guidance from April 10, 2020, and apply the requirement, currently provided in the guidance effective May 26, 2020, to determine the work-relatedness of COVID-19 cases to all employers covered by the recordkeeping regulations.

Whistleblower Protections

Section 11(c) of the OSH Act prohibits any person from retaliating or discriminating against any employee who exercises certain rights provided by the OSH Act.[89] Commonly referred to as the

[88] OSHA, *Revised Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, May 19, 2020, at https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

[89] 29 U.S.C. §660(c). OSHA also enforces whistleblower provisions in 22 other federal statutes. Information on statutes with whistleblower provisions enforced by OSHA is at OSHA, *Whistleblower Statutes Summary Chart*, October 17, 2009, at https://www.whistleblowers.gov/sites/wb/files/2019-12/WB-Statute-Summary-Chart-10.8-Final.pdf.

whistleblower protection provision, this provision protects any employee who takes any of the following actions:

- files a complaint with OSHA related to a violation of the OSH Act;
- causes an OSHA proceeding, such as an investigation, to be instituted;
- testifies or is about to testify in any OSHA proceeding; and
- exercises on his or her own behalf, or on behalf of others, any other rights afforded by the OSH Act.[90]

Other rights afforded by the OSH Act that are covered by the whistleblower protection provision include the right to inform the employer about unsafe work conditions; the right to access material safety data sheets or other information required to be made available by the employer; and the right to report a work-related injury, illness, or death to OSHA.[91] In limited cases, the employee has the right to refuse to work if conditions reasonably present a risk of serious injury or death and there is not sufficient time to eliminate the danger through other means.[92]

H.R. 6559 would require that the ETS and permanent standard promulgated pursuant to the legislation expand the protections for whistleblowers. The following additional activities taken by employees would grant them protection from retaliation and discrimination from employers and agents of employers:

- reporting to the employer; a local, state, or federal agency; or the media; or on a social media platform; the following:
  - a violation of the ETS or permanent standard promulgated pursuant to the legislation;
  - a violation of the infectious disease control plan required by the ETS or permanent standard; or
  - a good-faith concern about an infectious disease hazard in the workplace;
- seeking assistance from the employer or a local, state, or federal agency with such a report; and
- using personally supplied PPE with a higher level of protection than offered by the employer.

H.R. 6800, The Heroes Act

The provisions of H.R. 6559, including the provisions relating to recordkeeping and whistleblower protections, were included as Title III of Division L of H.R. 6800, The Heroes Act. H.R. 6800 was passed by the House on May 15, 2020. In a letter to Speaker of the House Nancy Pelosi, the AHA expressed its opposition to the ETS provisions in The Heroes Act citing the potential for confusion that new regulations could bring and the "ongoing global lack of supplies, equipment and testing capability" faced by hospitals.[93] The AHA also stated that the provision

[90] 29 C.F.R. §1977.3. Public-sector employees, except employees of the United States Postal Service, are not protected by the whistleblower provision, but may be covered by whistleblower provisions in other federal and state statutes.

[91] For additional information on other rights covered by the whistleblower protection provision, see OSHA, January 9, 2019, *Investigator's Desk Aid to the Occupational Safety and Health Act (OSH Act) Whistleblower Protection Provision*, pp. 5-7, at https://www.osha.gov/sites/default/files/11cDeskAid.pdf.

[92] 29 C.F.R. §1977.12(b)(2).

[93] Letter from Thomas P. Nickels, executive vice president, American Hospital Association, to Hon. Nancy Pelosi,

that would require the ETS to be based on state standards "suggests that the federal government is surrendering its responsibility to appropriately regulate the nation to a state government agency without consideration of whether that state's decisions are appropriate for implementation anywhere and everywhere."

H.R. 925, The Heroes Act (Revised)

The provisions of H.R. 6559 and H.R. 6800 were included in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act, passed by the House on October 1, 2020.

Speaker, U.S. House of Representatives, May 14, 2020, at https://www.aha.org/system/files/media/file/2020/05/web-AHALettertoHouseonHEROESAct051420final.pdf.

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

The Occupational Safety and Health Administration (OSHA) does not currently have a specific standard that protects healthcare or other workers from airborne or aerosol transmission of disease or diseases transmitted by airborne droplets. Some in Congress, and some groups representing healthcare, meat and poultry processing, and other workers, are calling on OSHA to promulgate an emergency temporary standard (ETS) to protect workers from exposure to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). The Occupational Safety and Health Act of 1970 (OSH Act) gives OSHA the ability to promulgate an ETS that would remain in effect for up to six months without going through the normal review and comment process of rulemaking. OSHA, however, has rarely used this authority in the past—not since the courts struck down its ETS on asbestos in 1983.

The California Division of Occupational Safety and Health (Cal/OSHA), which operates California's state occupational safety and health plan, has had an aerosol transmissible disease (ATD) standard since 2009. This standard includes, among other provisions, the requirement that employers provide covered employees with respirators, rather than surgical masks, when these workers interact with ATDs, such as known or suspected COVID-19 cases. In addition, according to the Cal/OSHA ATD standard, certain procedures require the use of powered air purifying respirators (PAPR).

The Virginia state occupational safety and health plan (VOSH) and the Michigan state occupational safety and health plan (MIOSHA) have each promulgated emergency standards to specifically address COVID-19 in workplaces. Unlike the Cal/OSHA ATD standard, these emergency standards are in effect for only six months and apply to all employers.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020, would require OSHA to promulgate an ETS on COVID-19 that incorporates both the Cal/OSHA ATD standard and the Centers for Disease Control and Prevention's (CDC's) 2007 guidelines on occupational exposure to infectious agents in healthcare settings; similar provisions appear in S. 3475. The CDC's 2007 guidelines generally require stricter controls than its interim guidance on COVID-19 exposure. The provisions of H.R. 6139 were incorporated into the version of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The OSHA ETS provisions were not included in the House- and Senate-passed version of legislation that was signed into law as P.L. 116-127.

H.R. 6379, as introduced in the House, also would include a requirement for an OSHA ETS and permanent standard to address COVID-19 exposure; similar provisions appear in S. 3584. H.R. 6559 would include the requirements for an ETS and permanent standard, clarify the requirement that employers must report work-related COVID-19 cases, and expand protections for whistleblowers; similar provisions appear in S. 3677. The provisions of H.R. 6559 were included in H.R. 6800, The Heroes Act, passed by the House on May 15, 2020, and in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act passed by the House on October 1, 2020.

Through October 1, 2020, OSHA has issued COVID-19-related citations to employers at 62 work sites, with total proposed penalties of $913,133. These citations have been issued for violations of the OSH Act's General Duty Clause and other existing OSHA standards, such as those for respiratory protection, that may apply to COVID-19. Senators Elizabeth Warren and Cory A. Booker have raised concerns about the low amount of penalties being assessed for COVID-19-related violations.

Occupational Safety and Health Administration Standards

Section 6 of the Occupational Safety and Health Act of 1970 (OSH Act) grants the Occupational Safety and Health Administration (OSHA) of the Department of Labor (DOL) the authority to promulgate, modify, or revoke occupational safety and health standards that apply to private sector employers, the United States Postal Service, and the federal government as an employer.[1] In addition, Section 5(a)(1) of the OSH Act, commonly referred to as the General Duty Clause, requires that all employers under OSHA's jurisdiction provide workplaces free of "recognized hazards that are causing or are likely to cause death or serious physical harm" to their employees.[2] OSHA has the authority to enforce employer compliance with its standards and with the General Duty Clause through the issuance of abatement orders, citations, and civil monetary penalties. The OSH Act does not cover state or local government agencies or units. Thus, certain entities that may be affected by Coronavirus Disease 2019 (COVID-19), such as state and local government hospitals, local fire departments and emergency medical services, state prisons and county jails, and public schools, are not covered by the OSH Act or subject to OSHA regulation or enforcement.

State Plans

Section 18 of the OSH Act authorizes states to establish their own occupational safety and health plans and preempt standards established and enforced by OSHA.[3] OSHA must approve state plans if they are "at least as effective" as OSHA's standards and enforcement.[4] If a state adopts a state plan, it also must cover state and local government entities, such as public schools, not covered by OSHA. Currently, 21 states and Puerto Rico have state plans that cover all employers, and 5 states and the U.S. Virgin Islands have state plans that cover only state and local government employers not covered by the OSH Act.[5] In the remaining states, state and local government employers are not covered by OSHA standards or enforcement. State plans may incorporate OSHA standards by reference, or states may adopt their own standards that are at least as effective as OSHA's standards. State plans do not have jurisdiction over federal agencies and generally do not cover maritime workers and private-sector workers at military bases or other federal facilities.

Promulgation of OSHA Standards

OSHA may promulgate occupational safety and health standards on its own initiative or in response to petitions submitted to the agency by various government agencies, the public, or employer and employee groups.[6] OSHA is not required, however, to respond to a petition for a

[1] 29 U.S.C. §655. The provisions of the Occupational Safety and Health Act of 1970 (OSH Act) are extended to the legislative branch as an employer by the Congressional Accountability Act (P.L. 104-1).

[2] 29 U.S.C. §654(a)(1).

[3] 29 U.S.C. §667.

[4] For additional information on Occupational Safety and Health Administration (OSHA) state plans, see CRS Report R43969, *OSHA State Plans: In Brief, with Examples from California and Arizona*.

[5] Information on specific state plans is available from the OSHA website at https://www.osha.gov/stateplans.

[6] Per Section 6(b)(1) of the OSH Act [29 §655(b)(1)], a petition may be submitted by "an interested person, a representative of any organization of employers or employees, a nationally recognized standards-producing

standard or to promulgate a standard in response to a petition. OSHA may also consult with one of the two statutory standing advisory committees—the National Advisory Committee on Occupational Safety and Health (NACOSH) or the Advisory Committee on Construction Safety and Health (ACCSH)—or an ad-hoc advisory committee for assistance in developing a standard.[7]

Notice and Comment

OSHA's rulemaking process for the promulgation of standards is largely governed by the provisions of the Administrative Procedure Act (APA) and Section 6(b) of the OSH Act.[8] Under the APA informal rulemaking process, federal agencies, including OSHA, are required to provide notice of proposed rules through the publication of a Notice of Proposed Rulemaking in the *Federal Register* and provide the public a period of time to provide comments on the proposed rules.

Section 7(b) of the OSH Act mirrors the APA in that it requires notice and comment in the rulemaking process.[9] After publishing a proposed standard, the public must be given a period of at least 30 days to provide comments. In addition, any person may submit written objections to the proposed standard and may request a public hearing on the standard.

Statement of Reasons

Section 6(e) of the OSH Act requires OSHA to publish in the *Federal Register* a statement of the reasons the agency is taking action whenever it promulgates a standard, conducts other rulemaking, or takes certain additional actions, including issuing an order, compromising on a penalty amount, or settling an issued penalty.[10]

Other Relevant Laws and Executive Order 12866

In addition to the APA and OSH Act, other federal laws that generally apply to OSHA rulemaking include the Paperwork Reduction Act,[11] Regulatory Flexibility Act,[12] Congressional Review Act,[13] Information Quality Act,[14] and Small Business Regulatory Enforcement Fairness Act (SBREFA).[15] Also, Executive Order 12866, issued by President Clinton in 1993, requires

organization, the Secretary of Health and Human Services (HHS), the National Institute for Occupational Safety and Health, or a state or political subdivision."

[7] The National Advisory Committee on Occupational Safety and Health (NACOSH) was established by Section 7(a) of the OSH Act [29 U.S.C. §656(a)]. The Advisory Committee on Construction Safety and Health (ACCSH) was established by Section 107 of the Contract Work Hours and Safety Act (P.L. 87-581). Section 7(b) of the OSH Act provides OSHA the authority to establish additional advisory committees.

[8] The Administrative Procedure Act (APA) is codified at 5 U.S.C. §§500-596. For detailed information on federal agency rulemaking and the APA, see CRS Report RL32240, *The Federal Rulemaking Process: An Overview*.

[10] 29 U.S.C §655(e).

[11] 44 U.S.C. §§3501-3520.

[12] 5 U.S.C. §§601-612.

[13] 5 U.S.C. §§801-808.

[14] 44 U.S.C. §3516 note.

[15] 5 U.S.C. §601 note. For information on these additional laws that apply to OSHA rulemaking, see U.S. Government Accountability Office (GAO), *Workplace Safety and Health: Multiple Challenges Lengthen OSHA's Standard Setting*, GAO-12-330, April 2012, Appendix II, at https://www.gao.gov/products/GAO-12-330 (hereinafter cited as GAO-12-330, *Workplace Safety and Health*).

agencies to submit certain regulatory actions to the Office of Management and Budget (OMB) and Office of Information and Regulatory Affairs (OIRA) for review before promulgation.[16]

OSHA Rulemaking Time Line

OSHA rulemaking for new standards historically has been a relatively time-consuming process. In 2012, at the request of Congress, the Government Accountability Office (GAO) reviewed 59 significant OSHA standards promulgated between 1981 (after the enactments of the Paperwork Reduction Act and Regulatory Flexibility Act) and 2010.[17] For these standards, OSHA's average time between beginning formal consideration of the standard—either through publishing a Request for Information or Advance Notice of Proposed Rulemaking in the *Federal Register* or placing the rulemaking on its semiannual regulatory agenda—and promulgation of the standard was 93 months (7 years, 9 months). Once the Notice of Proposed Rulemaking was published for these 59 standards, the average time until promulgation of the standard was 39 months (3 years, 3 months).

In 2012, OSHA's Directorate of Standards and Guidance published a flowchart of the OSHA rulemaking process on the agency's website.[18] This flowchart includes estimated duration ranges for a variety of rulemaking actions, beginning with pre-rule activities—such as developing the idea for the standard and meeting with stakeholders—and ending with promulgation of the standard. The flowchart also includes an estimated duration range for post-promulgation activities, such as judicial review. The estimated time from the start of preliminary rulemaking to the promulgation of a standard ranges from 52 months (4 years, 4 months) to 138 months (11 years, 6 months). After a Notice of Proposed Rulemaking is published in the *Federal Register,* the estimated length of time until the standard is promulgated ranges from 26 months (2 years, 2 months) to 63 months (5 years, 3 months). **Table 1** provides OSHA's estimated time lines for six major pre-rulemaking and rulemaking activities leading to the promulgation of a standard.

Table 1. OSHA Rulemaking Process: Estimated Durations of Activities

Stage	Activities	Estimated Duration
1	Preliminary rulemaking activities	12-36 months
2	Developing the proposed rule	12-36 months
3	Publishing the Notice of Proposed Rulemaking (NPRM)	2-3 months
4	Developing and analyzing the rulemaking record, including public comments and hearings	6-24 months
5	Developing the final rule, including Office of Information and Regulatory Affairs (OIRA) submission	18-36 months
6	Publishing the final rule (promulgating the new standard)	2-3 months
Total estimated duration		52-138 months
Estimated duration from NPRM to final rule		26-63 months

Judicial Review

Both the APA and the OSH Act provide for judicial review of OSHA standards. Section 7(f) of the OSH Act provides that any person who is "adversely affected" by a standard may file, within 60 days of its promulgation, a petition challenging the standard with the U.S. Court of Appeals for the circuit in which the person lives or maintains his or her principal place of business.[19] A petition for judicial review does not automatically stay the implementation or enforcement of the standard. However, the court may order such a stay. OSHA estimates that post-promulgation activities, including judicial review, can take between 4 and 12 months after the standard is promulgated.[20]

Emergency Temporary Standards

Section 6(c) of the OSH Act provides the authority for OSHA to issue an Emergency Temporary Standard (ETS) without having to go through the normal rulemaking process. OSHA may promulgate an ETS without supplying any notice or opportunity for public comment or public hearings. An ETS is immediately effective upon publication in the *Federal Register*. Upon promulgation of an ETS, OSHA is required to begin the full rulemaking process for a permanent standard with the ETS serving as the proposed standard for this rulemaking. An ETS is valid until superseded by a permanent standard, which OSHA must promulgate within six months of publishing the ETS in the *Federal Register*.[21] An ETS must include a statement of reasons for the action in the same manner as required for a permanent standard. State plans are required to adopt or adhere to an ETS, although the OSH Act is not clear on how quickly a state plan must come into compliance with an ETS.

ETS Requirements

Section 6(c)(1) of the OSH Act requires that both of the following determinations be made in order for OSHA to promulgate an ETS:

- that employees are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful or from new hazards, and
- that such emergency standard is necessary to protect employees from such danger.

Grave Danger Determination

The term *grave danger*, used in the first mandatory determination for an ETS, is not defined in statute or regulation. The legislative history demonstrates the intent of Congress that the ETS process "not be utilized to circumvent the regular standard-setting process," but the history is unclear as to how Congress intended the term grave danger to be defined.[22]

[21] 29 U.S.C §655(c)(2).

[22] U.S. Congress, Senate Labor and Public Welfare, Subcommittee on Labor, *Legislative History of the Occupational Safety and Health Act of 1970 (S. 2193, P.L. 91-596)*, committee print, prepared by Subcommittee on Labor, 91st Cong., 1 sess., June 1971, 52-531 (Washington: GPO, 1971), p. 1218.

In addition, although the federal courts have ruled on challenges to previous ETS promulgations, the courts have provided no clear guidance as to what constitutes a grave danger. In 1984, the U.S. Court of Appeals for the Fifth Circuit in *Asbestos Info. Ass'n v. OSHA* issued a stay and invalidated OSHA's November 1983 ETS lowering the permissible exposure limit for asbestos in the workplace.[23] In its decision, the court stated that "gravity of danger is a policy decision committed to OSHA, not to the courts."[24] The court, however, ultimately rejected the ETS, in part on the grounds that OSHA did not provide sufficient support for its claim that 80 workers would ultimately die because of exposures to asbestos during the six-month life of the ETS.

Necessity Determination

In addition to addressing a grave danger to employees, an ETS must also be *necessary* to protect employees from that danger. In *Asbestos Info. Ass'n*, the court invalidated the asbestos ETS for the additional reason that OSHA had not demonstrated the necessity of the ETS. The court cited, among other factors, the duplication between the respirator requirements of the ETS and OSHA's existing standards requiring respirator use. The court dismissed OSHA's argument that the ETS was necessary because the agency felt that the existing respiratory standards were "unenforceable absent actual monitoring to show that ambient asbestos particles are so far above the permissible limit that respirators are necessary to bring employees' exposure within the PEL of 2.0 f/cc."[25] The court determined that "fear of a successful judicial challenge to enforcement of OSHA's permanent standard regarding respirator use hardly justifies resort to the most dramatic weapon in OSHA's enforcement arsenal."[26]

Although OSHA has not promulgated an ETS since the 1983 asbestos standard, it has since determined the necessity of an ETS. In 2006, the agency considered a petition from the United Food and Commercial Workers (UFCW) and International Brotherhood of Teamsters (IBT) for an ETS on diacetyl. The UFCW and IBT petitioned OSHA for the ETS after the National Institute for Occupational Safety and Health (NIOSH) and other researchers found that airborne exposure to diacetyl, then commonly used as an artificial butter flavoring in microwave popcorn and a flavoring in other food and beverage products, was linked to the lung disease *bronchiolitis obliterans*, now commonly referred to as "popcorn lung."[27] According to GAO's 2012 report on OSHA's standard-setting processes, OSHA informed GAO that although the agency may have been able to issue an ETS based on the grave danger posed by diacetyl, the actions taken by the food and beverage industries, including reducing or removing diacetyl from products, made it less likely that the necessity requirement could be met.[28]

ETS Duration

Section 6(c)(2) of the OSH Act provides that an ETS is effective until superseded by a permanent standard promulgated pursuant to the normal rulemaking provisions of the OSH Act. Section 6(c)(3) of the OSH Act requires OSHA to promulgate a permanent standard within six months of

[27] See, for example, Centers for Disease Control and Prevention (CDC): National Institute for Occupational Safety and Health (NIOSH), *NIOSH Alert: Preventing Lung Disease in Workers who Use or Make Flavorings*, DHHS (NIOSH) publication no. 2004–110, December 2003, at https://www.cdc.gov/niosh/docs/2004-110/.

[28] GAO-12-330, *Workplace Safety and Health*.

promulgating the ETS. As shown earlier in this report, six months is well outside of historical and currently expected time frames for developing and promulgating a standard under the notice and comment provisions of the APA and OSH Act, as well as under other relevant federal laws and executive orders. This dichotomy between the statutory mandate to promulgate a standard and the time lines that, based on historical precedent, other provisions in the OSH Act might realistically require for such promulgation raises the question of whether or not OSHA could extend an ETS's duration without going through the normal rulemaking process. The statute and legislative history do not clearly address this question.

OSHA has used its ETS authority sparingly in its history and not since the asbestos ETS promulgated in 1983. As shown in **Table A-1** in the Appendix, of the nine times OSHA has issued an ETS, the courts have fully vacated or stayed the ETS in four cases and partially vacated the ETS in one case.[29] Of the five cases that were not challenged or that were fully or partially upheld by the courts, OSHA issued a permanent standard either within the six months required by the statute or within several months of the six-month period and always within one year of the promulgation of the ETS.[30] Each of these cases, however, occurred before 1980, when a combination of additional federal laws and court decisions added additional procedural requirements to the OSHA rulemaking process. OSHA did not attempt to extend the ETS's expiration date in any of these cases.

Although the courts have not ruled directly on an attempt by OSHA to solely extend the life of an ETS, in 1974, the U.S. Court Appeals for the Fifth Circuit held in *Florida Peach Growers Ass'n v. United States Department of Labor* that OSHA was within its authority to amend an ETS without going through the normal rulemaking process.[31] The court stated that "it is inconceivable that Congress, having granted the Secretary the authority to react quickly in fast-breaking emergency situations, intended to limit his ability to react to developments subsequent to his initial response."[32] The court also recognized the difficulty OSHA may have in promulgating a standard within six months due to the notice and comment requirements of the OSH Act, stating that in the case of OSHA seeking to amend an ETS to expand its focus, "adherence to subsection (b) procedures would not be in the best interest of employees, whom the Act is designed to protect. Such lengthy procedures could all too easily consume all of the temporary standard's six months life."[33]

OSHA Standards Related to COVID-19

Current OSHA Standards

Currently, no OSHA standard directly covers exposure to airborne or aerosol diseases in the workplace. As a result, OSHA is limited in its ability to enforce protections for healthcare and other workers who may be exposed to SARS-CoV-2, the virus that causes COVID-19.[34]

OSHA may enforce the General Duty Clause in the absence of a standard, if it can be determined that an employer has failed to provide a worksite free of "recognized hazards" that are "causing or are likely to cause death or serious physical harm" to workers.[35] In addition, OSHA's standards for the use of personal protective equipment (PPE) may apply in cases in which workers require eye, face, hand, or respiratory protection against COVID-19 exposure.[36]

As of October 1, 2020, OSHA has issued citations related to COVID-19 to employers at 62 work sites resulting in a total of $913,133 in proposed civil penalties.[37] The majority of these citations were issued to healthcare, nursing, and long-term care providers, including two Department of Veterans Affairs facilities—a hospital in Indianapolis, Indiana, and a community living center in Queens, New York.[38] Two employers in the meat processing industry—Smithfield Packaged Foods, Inc. in Sioux Falls, South Dakota and JBS Foods, Inc. in Greeley, Colorado—were also cited.[39] In the two meat processing cases, citations were issued for General Duty Clause violations. Other citations were issued for violations of OSHA's respiratory protection, injury and illness reporting, and recordkeeping standards.

The highest amount of proposed penalties issued to a single employer for COVID-19-related violations was $28,070 to the Harborage nursing home operated by Hackensack Meridian Healthcare in New Jersey for four serious and one other than serious violations of the respiratory protection standard.[40] For two of the serious violations, OSHA issued the maximum allowable penalty of $13,494.[41] For the other two serious violations, OSHA issued citations but no monetary penalties. For the other than serious violation, OSHA issued a penalty of $1,082. The two meat processing employers were each assessed maximum penalties of $13,494 for serious violations of the General Duty Clause.

In a letter to OSHA, Senators Elizabeth Warren and Cory A. Booker raised concerns over the amount of penalties issued to these employers.[42] The Senators asked OSHA why these employers

[34] OSHA has a standard on blood-borne pathogens (29 C.F.R. §1910.1030) but does not have a standard on pathogens transmitted by airborne droplets.

[37] OSHA, *U.S. Department of Labor's OSHA Announces $913,133 in Coronavirus Violations*, OSHA National News Release, October 9, 2020, https://www.osha.gov/news/newsreleases/national/10092020.

[38] A list of all COVID-19-related citations issued by OSHA through October 1, 2020, is available at https://www.osha.gov/enforcement/covid-19-data/inspections-covid-related-citations.

[39] OSHA has the authority to issue citations to Executive Branch agencies, but does not have the authority to issue civil monetary penalties to these agencies.

[40] Detailed information on the citations issued to this employer is available at https://www.osha.gov/pls/imis/establishment.inspection_detail?id=1476465.015.

[41] OSHA citations are classified as "serious," "other than serious," "willful," or "repeated." The maximum amounts of OSHA penalties are subject to annual inflationary adjustments.

[42] Letter from Senators Elizabeth Warren and Cory A. Booker to Loren Sweatt, Principal Deputy Assistant Secretary of

OSHA-002363

were each cited for single serious violations of the General Duty Clause rather than multiple violations for each area of the facilities in which social distancing measures were not implemented. They also asked why OSHA did not issue penalties for willful or repeated violations that carry maximum penalties of $134,937 per violation. None of the employers cited for COVID-19-related violations were issued penalties for willful or repeated violations.

OSHA Respiratory Protection Standard

National Institute for Occupational Safety and Health Certification

The OSHA respiratory protection standard requires the use of respirators certified by NIOSH in cases in which engineering controls, such as ventilation or enclosure of hazards, are insufficient to protect workers from breathing contaminated air.[43] Surgical masks, procedure masks, and dust masks are not considered respirators. NIOSH certifies respirators pursuant to federal regulations.[44] For nonpowered respirators, such as filtering face piece respirators commonly used in healthcare and construction, NIOSH classifies respirators based on their efficiency at filtering airborne particles and their ability to protect against oil particles. Under the NIOSH classification system, the letter (N, R, or P) indicates the level of oil protection as follows: N—no oil protection; R—oil resistant; and P—oil proof. The number following the letter indicates the efficiency rating of the respirator as follows: 95—filters 95% of airborne particles; 97—filters 97% of airborne particles; and 100—filters 99.7% of airborne particles. Thus an N95 respirator, the most common type, is one that does not protect against oil particles and filters out 95% of airborne particles. An R or P respirator can be used in place of an N respirator.

A respirator that is past its manufacturer-designated shelf life is no longer considered to be certified by NIOSH. However, in response to potential shortages in respirators, NIOSH has tested and approved certain models of respirators for certified use beyond their manufacturer-designated shelf lives.[45]

Respirators designed for certain medical and surgical uses are subject to both certification by NIOSH (for oil protection and efficiency) and regulation by the Food and Drug Administration (FDA) as medical devices. In general, respirators with exhalation valves cannot be used in surgical and certain medical settings because, although the presence of an exhalation valve does not affect the respirator's protection afforded the user, it may allow unfiltered air from the user into a sterile field. On March 2, 2020, FDA issued an Emergency Use Authorization (EUA) to approve for use in medical settings certain NIOSH-certified respirators not previously regulated by FDA.[46]

Labor, Occupational Safety and Health Administration, September 22, 2020, https://www.warren.senate.gov/imo/media/doc/Letter%20from%20Senators%20Warren,%20Booker%20to%20OSHA%209-22-20.pdf.

The list of respirators approved under this Emergency Use Authorization (EUA) is in Appendix B to this letter, updated at https://www.fda.gov/media/135921/download.

CDC Interim Guidance on Respiratory Protection

On March 10, 2020, the Centers for Disease Control and Prevention (CDC) updated its interim guidance for the protection of healthcare workers against exposure to COVID-19 to permit healthcare workers caring for known or suspected COVID-19 cases to use "facemasks" when respirators are not available or are in limited supply.[47] This differs from the CDC's 2007 guidelines for control of infectious agents in healthcare settings, which required the use of respirators for treatment of known or suspected cases.[48] CDC states that respirators should be prioritized for use in medical procedures likely to generate respiratory aerosols. Before this interim guidance was released, Representative Bobby Scott, Chairman of the House Committee on Education and Labor, and Representative Alma Adams, Chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Health and Human Services (HHS) Alex M. Azar II expressing their opposition to this change in the interim standard.[49]

Medical Evaluation and Fit Testing

The OSHA respiratory protection standard requires that the employer provide a medical evaluation to the employee to determine if the employee is physiologically able to use a respirator. This medical evaluation must be completed before any fit testing. For respirators designed to fit tightly against the face, the specific type and model of respirator that an employee is to use must be fit tested in accordance with the procedures provided in Appendix A of the OSHA respiratory protection standard to ensure there is a complete seal around the respirator when worn.[50] Once an employee has been fit tested for a respirator, he or she is required to be fit tested annually or whenever the model of respirator, but not the actual respirator itself, is changed. Each time an individual uses a respirator, he or she is required to perform a check of the seal of the respirator to his or her face in accordance with the procedures provided in Appendix B of the standard.[51] On March 14, 2020, OSHA issued guidance permitting employers to suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator.

---

[47] Although the interim guidance does not specifically define the term *facemask*, it does differentiate between a facemask and a respirator such that any recommendation to use a facemask does not require the use of a respirator. CDC, *Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings*, updated March 10, 2020, at https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html.

OSHA-002365

Temporary OSHA Enforcement Guidance on the Respiratory Protection Standard

In response to shortages of respirators and other PPE during the national response to the COVID-19 pandemic, OSHA has issued three sets of temporary enforcement guidance to permit the following exceptions to the respiratory protection standard:

1. Employers may suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator;[52]
2. Employers may permit the use of expired respirators and the extended use or reuse of respirators, provided the respirator maintains its structural integrity and is not damaged, soiled, or contaminated (e.g., with blood, oil, or paint);[53] and
3. Employers may permit the use of respirators not certified by NIOSH, but approved under standards used by the following countries or jurisdictions, in accordance with the protection equivalency tables provided in Appendices A and B of the enforcement guidance document:
   - Australia,
   - Brazil,
   - European Union,
   - Japan,
   - Mexico,
   - People's Republic of China, and
   - Republic of Korea.[54]

California: Cal/OSHA Aerosol Transmissible Disease Standard

Although no OSHA standard specifically covers aerosol or airborne disease transmission, the California Division of Occupational Safety and Health (Cal/OSHA), under its state plan, promulgated its aerosol transmissible disease (ATD) standard in 2009.[55] The ATD standard covers most healthcare workers, laboratory workers, as well as workers in correctional facilities, homeless shelters, and drug treatment programs. Under the ATD standard, SARS-CoV-2, the virus that causes COVID-19, is classified as a disease or pathogen requiring airborne isolation. This classification subjects the virus to stricter control standards than diseases requiring only

[53] OSHA, *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-respiratory-protection-and-n95-shortage-due-coronavirus. Under this guidance, employers are required to address in their written respiratory protection plans when respirators are contaminated and not available for use or reuse.

[54] OSHA, *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-use-respiratory-protection-equipment-certified-under.

[55] Cal. Code Regs. tit. 8, §5199. The California state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers; workers on military bases and in national parks, monuments, memorials, and recreation areas; workers on federally recognized Native American reservations and trust lands; and U.S. Postal Service contractors.

OSHA-002366

droplet precautions, such as seasonal influenza.[56] The key requirements of the ATD standard include

- written ATD exposure control plan and procedures,
- training of all employees on COVID-19 exposure, use of PPE, and procedures if exposed to COVID-19,
- engineering and work practice controls to control COVID-19 exposure, including the use of airborne isolation rooms,
- provision of medical services to employees, including removal of exposed employees,
- specific requirements for laboratory workers, and
- PPE requirements.

Cal/OSHA Aerosol Transmissible Disease PPE Requirements

The Cal/OSHA ATD standard requires that employers provide employees PPE, including gloves, gowns or coveralls, eye protection, and respirators certified by NIOSH at least at the N95 level whenever workers

- enter or work in an airborne isolation room or area with a case or suspected case;
- are present during procedures or services on a case or suspected case;
- repair, replace, or maintain air systems or equipment that may contain pathogens;
- decontaminate an area that is or was occupied by a case or suspected case;
- are present during aerosol generating procedures on cadavers of cases or suspected cases;
- transport a case or suspected case within a facility or within a vehicle when the patient is not masked; and
- are working with a viable virus in the laboratory.[57]

In addition, a powered air purifying respirator (PAPR) with a high-efficiency particulate air (HEPA) filter must be used whenever a worker performs a *high-hazard procedure* on a known or suspected COVID-19 case.[58] High-hazard procedures are those in which "the potential for being exposed to aerosol transmissible pathogens is increased due to the reasonably anticipated generation of aerosolized pathogens"—they include intubation, airway suction, and caring for patients on positive pressure ventilation.[59] Emergency medical services (EMS) workers may use N100, R100, or P100 respirators in place of PAPRs.

[56] Cal. Code Regs. tit. 8, §5199 Appendix A.

[57] California Division of Occupational Safety and Health (Cal/OSHA), *Interim Guidance for Protecting Health Care Workers from Exposure to Coronavirus Disease (COVID-19)*, March 2020, at https://www.dir.ca.gov/dosh/Coronavirus-info.html.

[58] A PAPR uses a mechanical device to draw in room air and filter it before expelling that air over the user's face. In general, PAPRs do not require a tight seal to the user's face and do not need to be fit tested.

[59] Cal. Code Regs. tit. 8, §5199(b).

Cal/OSHA Interim Guidance on COVID-19

Cal/OSHA has issued interim guidance in response to shortages of respirators in the state due to the COVID-19 pandemic response.[60] Under this interim guidance, if the supply of N95 respirators or PAPRs are insufficient to meet current or anticipated needs, surgical masks may be used for low-hazard patient contacts that would otherwise require the use of respirators, and respirators may be used for high-hazard procedures that would otherwise require the use of PAPRs.

Virginia: VOSH COVID-19 ETS

On July 15, 2020, the Virginia Safety and Health Codes Board adopted an ETS to specifically protect employees from exposure to SARS-CoV-2, the virus that causes COVID-19.[61] This ETS, promulgated under Virginia's state occupational safety and health plan (VOSH) is the first state standard to specifically address COVID-19 in the workplace.[62] As an ETS, the VOSH standard expires within six months of its effective date, upon expiration of the Governor's State of Emergency, when superseded by a permanent standard, or when repealed by the Virginia Safety and Health Codes Board, whichever comes first. The ETS can be extended only through the normal state rulemaking process.

Unlike the Cal/OSHA ATD standard, the VOSH ETS applies to all state and local government agencies and all covered private-sector employees in the state. As part of a state plan, the VOSH ETS applies to state and local government entities, such as public schools, as employers. All covered employers in Virginia must comply with the following ETS requirements:

- exposure assessment and determination, notification of suspected cases and contacts with those cases, and employee access to their own exposure and medical records;
- return to work of employees known or suspected to have COVID-19 based on a duration of time since last symptoms or negative COVID-19 tests;[63]
- maintenance of physical distancing between employees while working and on paid breaks at the worksite, including restricted access to the worksite and common areas and break rooms;
- compliance with applicable existing PPE and respiratory protection standards when physical distancing between employees is not possible; and
- sanitation and disinfection requirements.

For all employers, if engineering, administrative, or work practice controls are not feasible or do not provide sufficient protection from SARS-CoV-2 transmission, then PPE, including respiratory PPE—such as respirators, if necessary—must be provided to employees.

---

[60] California Division of Occupational Safety and Health (Cal/OSHA), *Cal/OSHA Interim Guidance on COVID-19 for Health Care Facilities: Severe Respirator Supply Shortages*, March 28, 2020, at https://www.dir.ca.gov/dosh/coronavirus/Cal-OSHA-Guidance-for-respirator-shortages.pdf.

[61] *Infectious Disease Prevention: SARS-CoV-2 Virus That Causes COVID-19*, 16 Va. Admin. Code §25-220. This ETS is effective upon publication in a Richmond, VA, newspaper during the week of July 27, 2020.

[62] The Virginia state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S Postal Service contractors, workers at military bases or other federal enclaves in which the federal government has civil jurisdiction, workers at the U.S. Department of Energy's Southeastern Power Administration Kerr-Philpott System, and aircraft cabin crew members.

[63] A COVID-19 test for the purposes of determining if an employee can return to work must be paid for by the employer or offered such that the employee bears no cost for the test.

Hazard and Job Task Classification

The VOSH ETS requires that each employer assess its workplace for hazards and job tasks that potentially expose employees to the SARS-CoV-2 virus. Employers must classify each job task as having a "very high," "high," "medium," or "lower" risk level of exposure, according to the hazards to which employees are potentially exposed. The VOSH ETS provides the following examples of activities for the "very high" and "high" risk levels:

- "very high" risk activities include
  - using aerosol-generating procedures, such as intubation, on patients known or suspected to be infected with SARS-CoV-2;
  - collecting or handling specimens from patients known or suspected to be infected with SARS-CoV-2; and
  - performing an autopsy involving aerosol-generating procedures on the body of a person known or suspected to be infected with the SARS-CoV-2 virus at the time of death; and
- "high risk" activities include
  - health care services, including inpatient care, outpatient care, skilled nursing care, and nonmedical support services such as room cleaning, provided to patients known or suspected to be infected with SARS-CoV-2;
  - first responder and medical transport services to patients known or suspected to be infected with SARS-CoV-2; and
  - mortuary services to persons known or suspected to be infected with the SARS-CoV-2 virus at the time of death.

"Medium" risk activities are those that require employees to have more than minimal contact, within six feet of other employees, customers, or members of the public who are not known or suspected to be infected with SARS-CoV-2.[64] "Lower" risk activities are those that do not require contact with other persons within six feet or that are able to utilize the following types of engineering, administrative, or work practice controls to minimize contact between persons:

- installation of floor to ceiling barriers, such as barriers between cashiers and customers;
- telecommuting;
- staggered work shifts to reduce the number of workers at a site;
- delivering services remotely, including curbside pickup of retail purchases; and
- mandatory physical distancing of persons.

The use of face coverings other than respirators or medical or surgical masks, including cloth face coverings now required by several states, is not an acceptable method of minimizing physical contact between persons. However, the VOSH ETS requires the use of face coverings for brief contacts between persons within six feet of each other.

[64] Examples of "medium" risk work activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-30.

Engineering, Administrative, Work Practice, and PPE Requirements for "Very High," "High," and "Medium" Risk Activities

Employers with job tasks or activities in the "very high," "high," or "medium" risk classifications must adhere to specific engineering, administrative, work practice, and PPE requirements. For "very high" and "high" risk activities, engineering controls include the use of airborne infection isolation rooms (AIIR) for known or suspected COVID-19 patients and aerosol-generating procedures and Biosafety Level 3 (BSL-3) precautions for the handling of specimens from known or suspected COVID-19 patients.[65]

Employers with "very high" and "high" risk activities must implement administrative and work practice controls, including the prescreening of all employees to ensure that employees do not have signs or symptoms of COVID-19; enhanced medical screening of employees during COVID-19 outbreaks; and the use of flexible work arrangements, such as telecommuting, when feasible. In addition, all employers with "very high" or "high" risk activities must provide, to the extent feasible, psychological and behavioral support to address employee stress at no cost to the employee.

The standard also provides for engineering, administrative, and work practice controls for "medium" risk activities.[66]

PPE Requirements for "Very High" and "High" Risk Activities

Employers with "very high" and "high" risk activities, who are not already covered by the general OSHA PPE standards, are required to comply with the VOSH ETS requirements for PPE. An employer subject to these requirements must assess the workplace to determine if there are any COVID-19 hazards present or likely to be present that would require the use of PPE by employees. The employer must provide for the participation of employees and employee representatives in this assessment process and verify that this assessment has been conducted through a written certification.

If hazards that require PPE are identified, the employer must select and provide the appropriate PPE to each employee and ensure that PPE fits properly. If respiratory PPE, such as respirators or PAPR are used as PPE, the existing OSHA standards for respiratory PPE, which include medical evaluation of employees and fit testing, must be followed.

Unless contraindicated by the hazard and PPE assessment, when any employee is in contact within six feet of any person known or suspected to be infected with SARS-CoV-2, that employee must be provided with the following types of PPE:

- gloves,
- gown large enough to cover areas needing protection,
- face shield or goggles, and
- respirator.

---

[65] The VOSH ETS requires compliance with Biosafety Level 3 precautions provided in HHS, *Biosafety in Microbiological and Biomedical Laboratories. Fifth Edition*, HHS Publication no. (CDC) 21-1112, December 2009, at https://www.cdc.gov/labs/BMBL.html.

[66] Engineering, administrative, and work practice controls for "medium" risk activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-60.

While there are no specific PPE requirements for "medium" risk activities, PPE may be required based on an assessment of the hazards of these activities.

Infectious Disease Preparedness and Response Plan and Training

Infectious Disease Preparedness and Response Plan

All employers with "very high" and "high" risk activities, and employers with 11 or more employees and "medium" risk activities, must develop written infectious disease preparedness and response plans. These plans must be developed with input from employees. The deadline for the development of these plans is 60 days from the effective date of the ETS.

The infectious disease preparedness plan must include a consideration of the COVID-19 risks in the workplace, and to the extent possible and in compliance with medical privacy laws, the specific risks faced by employees with certain preexisting medical conditions. The plan must include contingency plans for continued operations during a COVID-19 outbreak and provide for the prompt identification and isolation of employees with known or suspected COVID-19 and a procedure for employees to notify the employer of COVID-19 signs or symptoms. The plan must also address interactions between the employer's worksite and other businesses, such as vendors and contractors to ensure employees of these businesses comply with the VOSH ETS and the employer's infectious disease preparedness and response plan.

Training

All employers with "very high," "high," or "medium" risk activities must provide training to all employees, including those employees whose work does not involve any COVID-19 risks. This training must teach employees to recognize the hazards of the SARS-CoV-2 virus, signs and symptoms of COVID-19, and the procedures to minimize SARS-CoV-2 hazards. If the employer has an infectious disease preparedness and response plan, training must be provided on this plan. Written certification of training must be prepared, and retraining must be provided when necessary.

Employers with only "lower" risk activities are not required to prepare a formal training plan but must provide oral or written communication on the hazards of SARS-CoV-2, the signs and symptoms of COVID-19, and measures to minimize SARS-CoV-2 exposure. VOSH is required to develop an information sheet that employers can use to satisfy this training requirement.

Training must be provided within 30 days of the effective date of the standard, except for training on the infectious disease preparedness and response plan, which must be completed within 60 days.

Whistleblower Protections

The VOSH ETS prohibits any employer from discharging or otherwise discriminating against any employee who does the following:

- exercises his or her rights under the ETS or existing whistleblower protection provisions, including the limited right of an employee to refuse work because of a reasonable fear of injury or death or serious injury;[67]

[67] To exercise this right, the employee must, if possible, have sought unsuccessfully to have the employer remedy the hazard, and there must be insufficient time to attempt to remedy the hazard through normal regulatory enforcement

- provides and wears his or her own PPE, provided the PPE does not create a greater hazard to the employee or create a serious hazard to other employees; or
- raises a reasonable concern about SARS-CoV-2 and COVID-19 infection control to the employer, the employer's agent, other employees, the government, or the public through any type of media including social media.

Michigan: MIOSHA COVID-19 Emergency Rules

On October 14, 2020, the director of the Michigan Department of Labor and Economic Opportunity, which operates Michigan's state occupational safety and health plan (MIOSHA), promulgated emergency rules to address workplace exposure to COVID-19.[68] These rules, which apply to all employers in the state, went into immediate effect and will remain in effect for six months. In addition to rules that apply to all employers, the emergency rules include specific provisions that apply to the following industries:

- construction;
- manufacturing;
- retail, libraries, and museums;
- restaurants and bars;
- healthcare;
- in-home services such as house cleaning and repair;
- personal care services such as hair styling and tattooing;
- public accommodations such as sports and entertainment venues;
- sports and exercise facilities;
- meat and poultry processing; and
- casinos.[69]

Exposure Determination

Rule 3 of the MIOSHA emergency rules requires all employers to evaluate all routine and anticipated job tasks and categorize these job tasks based on potential employee exposure to COVID-19 into one of the following four categories:

1. "Lower exposure risk" tasks are those that do not require contact with known or suspected COVID-19 cases or frequent close (within six feet) contact with the general public.
2. "Medium exposure risk" tasks are those that require frequent or close contact with persons who may be infected with COVID-19 but who are not known or suspected COVID-19 cases. In areas of the state without ongoing community

channels. This right is provided in the OSHA standards at 29 C.F.R. §1977.12(b)(2) and in the VOSH standards at 16 Va. Admin. Code §25-60-110.

[68] Department of Labor and Economic Opportunity, Michigan Occupational Safety and Health Administration (MIOSHA) Emergency Rules: Coronavirus 2019 (COVID-19), available at https://www.michigan.gov//documents/leo/Final_MIOSHA_Rules_705164_7.pdf. The Michigan state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S. Postal Service contractors, workers at businesses owned or operated by tribal members at Indian reservations, and aircraft cabin crew members.

[69] MIOSHA Emergency Rules: Coronavirus 2019 (COVID-19), Rule 11.

OSHA-002372

transmission of COVID-19, tasks that require frequent contact with persons travelling from areas with widespread COVID-19 transmission are included in this category. In areas with ongoing community transmission, tasks that involve contact with the general public are included in this category.

3. "High exposure risk" tasks are those with high potential for exposure to known or suspected COVID-19 cases. Licensed healthcare providers, medical first responders, nursing home workers, law enforcement and correctional officers, and mortuary workers are examples of types of workers that may perform tasks in this category.
4. "Very high exposure risk" tasks are those that involve the generation of aerosols during medical or mortuary procedures on known or suspected COVID-19 cases and the collection and handling of laboratory specimens from known or suspected COVID-19 cases.

Preparedness and Response Plan

Rule 4 of the MIOSHA emergency rules requires all employers to develop a written COVID-19 preparedness and response plan based on current CDC and OSHA guidance. This plan must detail measures the employer will take to protect employees from COVID-19 exposure and must be readily available to employees and their representatives.

Basic Infection Prevention Measures

Rule 5 of the MIOSHA emergency rules requires all employers to implement the following basic infection prevention measures:

- promote frequent hand-washing and provide hand-washing facilities or hand sanitizer to workers, customers, and visitors;
- require employees who are sick to not report to work or to report to an isolated location;
- prohibit workers from using other workers' desks, phones, and other equipment when possible;
- increase facility cleaning, especially of high-touch surfaces and shared equipment;
- establish procedures, consistent with CDC guidance, for disinfection of the worksite if a worker, customer, or visitor has a known case of COVID-19;
- use Environmental Protection Agency (EPA) approved disinfectants that are expected to effective against SARS-CoV-2;
- follow all manufacturer's guidelines for use of all cleaning and disinfectant products; and
- prohibit in-person work for employees whose work can be done remotely.

Health Surveillance

Rule 6 of the MIOSHA emergency rules requires all employers to implement a health surveillance system for the workplace. This system must include, at a minimum, a COVID-19 screening questionnaire for all employees and contractors entering the workplace. Employees must be directed to immediately report any signs or symptoms of COVID-19 to the employer and known and suspected COVID-19 cases must be isolated from the rest of the workforce. When an

employer learns of an employee, contractor, customer, or visitor to the worksite with a known case of COVID-19, the employer must immediately notify the local health department and, must notify, within 24 hours, any workers, contractors, or suppliers who may have come into contact with the infected person. When determining if an employee with a known or suspected case of COVID-19 may return to the workplace, the employer must follow CDC guidelines and health department quarantine and isolation orders.

Workplace Controls

Rule 7 of the MIOSHA emergency rules requires all employers to implement the following workplace controls:

- designate one or more worksite COVID-19 safety coordinators to implement, monitor, and report on COVID-19 control strategies developed by the employer and to remain on site at all times when employees are present;
- place posters in appropriate languages in the workplace that provide information on staying away from work while sick, cough and sneeze etiquette, and hand hygiene;
- keep all persons at least six feet from each other using signs, floor markings, and barriers appropriate for the worksite, to the extent possible;
- provide all employees with non-medical grade face coverings at no cost to the employees;
- require the use of face coverings when employees cannot maintain six feet of distance from other persons in the workplace, and consider the use of face shields when three feet of distance cannot be maintained;
- require face coverings in shared spaces, such as restrooms and hallways and during in-person meetings.

PPE

Rule 8 of the MIOSHA emergency rules requires that employers provide appropriate PPE, including respiratory protection, to employees based on the exposure risks of the job and current CDC and OSHA guidelines. All PPE must be properly fitted, inspected, maintained, cleaned, stored, and disposed of. In workplaces that provide medical treatment to known or suspected COVID-19 cases, employees with frequent or prolonged close contact with such patients must be provided with and wear, at a minimum, an N95 respirator, goggles or face shield, and gown.

Training Requirements

Rule 10 of the MIOSHA emergency rules requires all employers to provide training and communication, in languages common among the employees, on the following subjects:

- workplace infection-control practices;
- proper use of PPE;
- how to notify the employer of COVID-19 symptoms or diagnosis;
- how to report unsafe working conditions.

This training must be updated if the employer's COVID-19 preparedness and response plan changes or new information on COVID-19 transmission becomes available.

Recordkeeping Requirements

Rule 11 of the MIOSHA emergency rules requires that all employers maintain, for one year, records of employee training, the screening of persons entering the workplace, and any health surveillance notifications required by Rule 6.

OSHA Infectious Disease Standard Rulemaking

In 2010, OSHA published a Request for Information in the *Federal Register* seeking public comments on strategies to control exposure to infectious diseases in healthcare workplaces.[70] After collecting public comments and holding public meetings, OSHA completed the SBREFA process in 2014. Since then, however, no public actions have occurred on this rulemaking; since spring 2017, this rulemaking has been listed as a "long-term action" in DOL's semiannual regulatory agenda.

Congressional Activity to Require an OSHA Emergency Temporary Standard on COVID-19

On March 5, 2020, Representative Bobby Scott, chairman of the House Committee on Education and Labor, and Representative Alma Adams, chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Labor Eugene Scalia calling on OSHA to promulgate an ETS to address COVID-19 exposure among healthcare workers.[71] This letter followed a January 2020 letter requesting that OSHA reopen its rulemaking on the infectious disease standard and begin to formulate for possible future promulgation an ETS to address COVID-19 exposure.[72] Senator Patty Murray, ranking member of the Senate Committee on Health, Education, Labor, and Pensions and a group of Democratic Senators sent a similar letter to the Secretary of Labor calling for an OSHA ETS.[73]

In addition, in March 2020, David Michaels, who served as the Assistant Secretary of Labor for Occupational Safety and Health during the Obama Administration, wrote an op-ed in *The Atlantic* calling on OSHA to promulgate a COVID-19 ETS.[74] On March 6, 2020, the AFL-CIO and 22 other unions petitioned OSHA for an ETS on infectious diseases that would cover all workers with potential exposures.[75] OSHA formally denied the AFL-CIO petition on May 29, 2020, claiming that an ETS is not necessary to protect employees from infectious diseases generally, or

[75] Letter from Richard L. Trumka, president, AFL-CIO, to The Honorable Eugene Scalia, Secretary of Labor, March 6, 2020, at https://aflcio.org/statements/petition-secretary-scalia-osha-emergency-temporary-standard-infectious-disease.

from COVID-19.[76] National Nurses United submitted a similar petition requesting that OSHA promulgate an ETS based largely on the Cal/OSHA ATD standard.[77] On May 4, 2020, the Center for Food Safety and Food Chain Workers Alliance submitted a petition requesting that OSHA promulgate an ETS to protect meat and poultry processing workers from COVID-19 exposure in the workplace.[78] On May 18, 2020, the AFL-CIO petitioned the U.S. Court of Appeals for the D.C. Circuit for a writ of mandamus to compel OSHA to promulgate a COVID-19 ETS.[79] The circuit court denied this petition on June 11, 2020.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020

On March 9, 2020, Representative Bobby Scott introduced H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020. This bill would require OSHA to promulgate a COVID-19 ETS within one month of enactment. The ETS would be required to cover healthcare workers and any workers in sectors determined by the CDC or OSHA to be at an elevated risk of COVID-19 exposure. The ETS would be required to include an exposure control plan provision and be, at a minimum, based on CDC's 2007 guidance and any updates to this guidance. The ETS would also be required to provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD standard, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS. Title II of the bill would provide that hospitals and skilled nursing facilities that receive Medicare funding and that are owned by state or local government units and not subject to state plans would be required to comply with the ETS. Similar provisions are included in S. 3475.

P.L. 116-127, the Families First Coronavirus Response Act

The provisions of H.R. 6139 were included as Division C of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The American Hospital Association (AHA) issued an alert to its members expressing its opposition to the OSHA ETS provisions in the bill.[80] Specifically, the AHA opposed the requirement that the ETS be based on the CDC's 2007 guidance. The AHA stated that unlike severe acute respiratory syndrome (SARS), which was transmitted through the air, COVID-19 transmission is through droplets and surface contacts. Thus, the requirement of the 2007 CDC guidance that N95 respirators, rather than surgical masks, be used for patient contact is not necessary to protect healthcare workers from COVID-19, and the use of surgical masks is consistent with World Health Organization guidance. The AHA also

[79] In re: American Federation of Labor and Congress of Industrial Organizations, D.C. Cir., No. 19-1158, May 18, 2020. This petition was filed in the U.S. Court of Appeals as Section 6(f) of the OSH Act [29 U.S.C. §655(f)] grants this court exclusive jurisdiction to provide judicial review of OSHA standards.

[80] Emily Kopp, "Hospitals want to kill a policy shielding nurses from COVID-19 because there aren't enough masks," *Roll Call*, March 3, 2020, at https://www.rollcall.com/2020/03/13/hospitals-want-to-kill-a-policy-shielding-nurses-from-covid-19-because-there-arent-enough-masks/. This alert is available to American Hospital Association (AHA) members on the AHA website at https://www.aha.org.

claimed that shortages of available respirators could reduce the capacity of hospitals to treat COVID-19 patients, due to a lack of respirators for staff. The OSHA ETS provisions were not included in the version of the legislation that was passed by the House and the Senate and signed into law as P.L. 116-127.

H.R. 6379, the Take Responsibility for Workers and Families Act

Division D of H.R. 6379, the Take Responsibility for Workers and Families Act, as introduced in the House on March 23, 2020, includes the requirement that OSHA promulgate an ETS on COVID-19 within seven days of enactment and a permanent COVID-19 standard within 24 months of enactment to cover healthcare workers, firefighters and emergency response workers, and workers in other occupations that CDC or OSHA determines to have an elevated risk of COVID-19 exposure. Division D of H.R. 6379 would amend the OSH Act, for the purposes of the ETS only, such that state and local government employers in states without state plans would be covered by the ETS. The provisions of Division D of H.R. 6379 were also included in S. 3584, the COVID-19 Workers First Protection Act of 2020, as introduced in the Senate.

This legislation would specifically provide that the ETS would remain in force until the permanent standard is promulgated and would explicitly exempt the ETS from the Regulatory Flexibility Act, Paperwork Reduction Act, and Executive Order 12866. OSHA would be granted enforcement discretion in cases in which it is not feasible for an employer to fully comply with the ETS (such as a case in which PPE is unavailable) if the employer is exercising due diligence to comply and implementing alternative means to protect employees.

Like the provisions in H.R. 6139 and the version of H.R. 6201 introduced in the House, the ETS and permanent standard under H.R. 6379 would be required to include an exposure control plan and provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS and permanent standard. Although the ETS provisions in H.R. 6139 and H.R. 6201 would require that the ETS be based on the 2007 CDC guidance, specific reference to the 2007 guidance is not included in this legislation. Rather, under H.R. 6379, the ETS and permanent standard would have to incorporate, as appropriate, "guidelines issued by the Centers for Disease Control and Prevention, and the National Institute for Occupational Safety and Health, which are designed to prevent the transmission of infectious agents in healthcare settings" and scientific research on novel pathogens.

States with occupational safety and health plans would be required to adopt the ETS, or their own ETS at least as effective as the ETS, within 14 days of the legislation's enactment.

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020, was introduced in the House by Representative Bobby Scott on April 21, 2020. This legislation includes the ETS and permanent standard provisions of Division D of H.R. 6379 and S. 3584 and would require that these standards cover healthcare workers, emergency medical responders, and "other employees at occupational risk" of COVID-19 exposure. This legislation also adds two provisions that would clarify the requirements for employers to record work-related COVID-19 infections and strengthen the protections against retaliation and discrimination offered to whistleblowers. Similar provisions are included in S. 3677 and were incorporated into H.R. 6800, the Heroes Act, as passed by the House.

COVID-19 Recordkeeping

Sections 8(c) and 24(a) of the OSH Act require employers to maintain records of occupational injuries and illnesses in accordance with OSHA regulations.[81] OSHA's reporting and recordkeeping regulations require that employers with 10 or more employees must keep records of work-related injuries and illnesses that result in lost work time for employees or that require medical care beyond first aid.[82] Employers must also report to OSHA, within 8 hours, any workplace fatality, and within 24 hours, any injury or illness that results in in-patient hospitalization, amputation, or loss of an eye. Employers in certain industries determined by OSHA to have lower occupational safety and health hazards are listed in the regulations as being exempt from the recordkeeping requirements but not the requirement to report to OSHA serious injuries, illnesses, and deaths.[83] Offices of physicians, dentists, other health practitioners, and outpatient medical clinics are included in the industries that are exempt from the recordkeeping requirements.

OSHA regulations require the employer to determine if an employee's injury or illness is related to his or her work and thus subject to the recordkeeping requirements.[84] The regulations provide a presumption that an injury or illness that occurs in the workplace is work-related and recordable, unless one of the exemptions provided in the regulations applies.[85] One of the listed exemptions is "The illness is the common cold or flu (Note: contagious diseases such as tuberculosis, brucellosis, hepatitis A, or plague are considered work-related if the employee is infected at work)."[86]

Because of the nature of COVID-19 transmission, which can occur in the community as well as the workplace, it can be difficult to determine the exact source of any person's COVID-19 transmission. Absent any specific guidance, this may make it difficult for employers to determine if an employee's COVID-19 is subject to the recordkeeping requirements.

Initial OSHA Recordkeeping Guidance

On April 10, 2020, OSHA issued enforcement guidance on how cases of COVID-19 should be treated under the recordkeeping requirements.[87] This guidance stated that COVID-19 cases were recordable if they were work-related.

Under this guidance, employers in the following industry groups were to fully comply with the recordkeeping regulations, including the requirement to determine if COVID-19 cases were work-related:

- healthcare;
- emergency response, including firefighting, emergency medical services, and law enforcement; and
- correctional institutions.

---

[81] 29 U.S.C. §§657(c) and 673(a).

[82] OSHA's reporting and recordkeeping regulations are at 29 C.F.R. Part 1904.

[83] The list of exempted industries is at 29 C.F.R. Subpart B, Appendix A. States with state occupational safety and health plans may require employers in these exempted industries to comply with the recordkeeping requirements.

[84] 29 C.F.R. §1904.5.

[85] 29 C.F.R. §1905.5(a).

[86] 29 C.F.R. §1904.5(b)(2)(viii).

[87] OSHA, *Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, April 10, 2020, at https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

For all other employers, OSHA required employers to determine if COVID-19 cases were work-related and subject to the recordkeeping requirements only if both of the following two conditions were met:

1. There was objective evidence that a COVID-19 case may have been work-related. This could have included, for example, a number of cases developing among workers who worked closely together without an alternative explanation.
2. The evidence of work-relatedness was reasonably available to the employer. For purposes of this guidance, examples of reasonably available evidence included information given to the employer by employees, as well as information that an employer learned regarding its employees' health and safety in the ordinary course of managing its business and employees.

Updated OSHA Recordkeeping Guidance

OSHA issued new guidance, effective May 26, 2020, on recordkeeping of COVID-19 cases.[88] This new guidance rescinds the previous guidance issued by OSHA on April 10, 2020. Under this new guidance, all employers, regardless of type of industry or employment, are subject to the recordkeeping and recording regulations for work-related cases of COVID-19. To determine if an employer has made a reasonable determination that a case of COVID-19 was work-related, OSHA says it will consider the following factors:

- the reasonableness of the employer's investigation of the COVID-19 case and its transmission to the employee;
- the evidence that is available to the employer; and
- the evidence that COVID-19 was contracted at work.

The guidance provides examples of evidence that can be used to demonstrate that a COVID-19 case was or was not work-related such as if an employee had frequent close contact with members of the public in an area with ongoing community transmission of COVID-19.

H.R. 6559

H.R. 6559 would require that the ETS and permanent standard established pursuant to the legislation include the requirement for the recording and reporting of all COVID-19 cases in accordance with OSHA regulations in place at the time of enactment. By referencing the regulations in place, this provision would serve to supersede OSHA's guidance from April 10, 2020, and apply the requirement, currently provided in the guidance effective May 26, 2020, to determine the work-relatedness of COVID-19 cases to all employers covered by the recordkeeping regulations.

Whistleblower Protections

Section 11(c) of the OSH Act prohibits any person from retaliating or discriminating against any employee who exercises certain rights provided by the OSH Act.[89] Commonly referred to as the

[88] OSHA, *Revised Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, May 19, 2020, at https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

[89] 29 U.S.C. §660(c). OSHA also enforces whistleblower provisions in 22 other federal statutes. Information on statutes with whistleblower provisions enforced by OSHA is at OSHA, *Whistleblower Statutes Summary Chart*, October 17, 2009, at https://www.whistleblowers.gov/sites/wb/files/2019-12/WB-Statute-Summary-Chart-10.8-Final.pdf.

whistleblower protection provision, this provision protects any employee who takes any of the following actions:

- files a complaint with OSHA related to a violation of the OSH Act;
- causes an OSHA proceeding, such as an investigation, to be instituted;
- testifies or is about to testify in any OSHA proceeding; and
- exercises on his or her own behalf, or on behalf of others, any other rights afforded by the OSH Act.[90]

Other rights afforded by the OSH Act that are covered by the whistleblower protection provision include the right to inform the employer about unsafe work conditions; the right to access material safety data sheets or other information required to be made available by the employer; and the right to report a work-related injury, illness, or death to OSHA.[91] In limited cases, the employee has the right to refuse to work if conditions reasonably present a risk of serious injury or death and there is not sufficient time to eliminate the danger through other means.[92]

H.R. 6559 would require that the ETS and permanent standard promulgated pursuant to the legislation expand the protections for whistleblowers. The following additional activities taken by employees would grant them protection from retaliation and discrimination from employers and agents of employers:

- reporting to the employer; a local, state, or federal agency; or the media; or on a social media platform; the following:
  - a violation of the ETS or permanent standard promulgated pursuant to the legislation;
  - a violation of the infectious disease control plan required by the ETS or permanent standard; or
  - a good-faith concern about an infectious disease hazard in the workplace;
- seeking assistance from the employer or a local, state, or federal agency with such a report; and
- using personally supplied PPE with a higher level of protection than offered by the employer.

H.R. 6800, The Heroes Act

The provisions of H.R. 6559, including the provisions relating to recordkeeping and whistleblower protections, were included as Title III of Division L of H.R. 6800, The Heroes Act. H.R. 6800 was passed by the House on May 15, 2020. In a letter to Speaker of the House Nancy Pelosi, the AHA expressed its opposition to the ETS provisions in The Heroes Act citing the potential for confusion that new regulations could bring and the "ongoing global lack of supplies, equipment and testing capability" faced by hospitals.[93] The AHA also stated that the provision

[90] 29 C.F.R. §1977.3. Public-sector employees, except employees of the United States Postal Service, are not protected by the whistleblower provision, but may be covered by whistleblower provisions in other federal and state statutes.

[91] For additional information on other rights covered by the whistleblower protection provision, see OSHA, January 9, 2019, *Investigator's Desk Aid to the Occupational Safety and Health Act (OSH Act) Whistleblower Protection Provision*, pp. 5-7, at https://www.osha.gov/sites/default/files/11cDeskAid.pdf.

[92] 29 C.F.R. §1977.12(b)(2).

[93] Letter from Thomas P. Nickels, executive vice president, American Hospital Association, to Hon. Nancy Pelosi,

that would require the ETS to be based on state standards "suggests that the federal government is surrendering its responsibility to appropriately regulate the nation to a state government agency without consideration of whether that state's decisions are appropriate for implementation anywhere and everywhere."

H.R. 925, The Heroes Act (Revised)

The provisions of H.R. 6559 and H.R. 6800 were included in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act, passed by the House on October 1, 2020.

Speaker, U.S. House of Representatives, May 14, 2020, at https://www.aha.org/system/files/media/file/2020/05/web-AHALettertoHouseonHEROESAct051420final.pdf.

Subject: Troublesome even if not in R2

FYI- italics are mine

Iowa Republican legislators are fast-tracking a bill that would give meatpacking plants, nursing homes and other businesses broad immunity from coronavirus lawsuits despite criticism that it would also enable them to ignore workplace safety requirements.

The bill, which the state House passed Friday with only Republican support, is supported by groups that represent hospitals and doctors, restaurants, casinos, grocery stores, bankers, meat processors, truckers and insurance companies. The American Civil Liberties Union of Iowa, labor unions and the Iowa State Bar Association are among those who oppose the measure.
Republican Rep. Gary Carlson of Muscatine, who managed the bill in the House, said the owners of small businesses want to reopen but need certainty they can't be sued by their employees.

"They're trying to follow guidelines but are scared to death they're going to be sued by someone when they tried to do their best," he said.
Rep. Chris Hall, a Sioux City Democrat, said most businesses will work to protect customers and workers and deserve protection from frivolous lawsuits, but the broad protections in the bill also will help some hide the truth.
"Essentially, this means that companies have been given the privilege of legal protection without the responsibility to maintain a safe workplace to prevent further spread of a deadly disease in our state," he said.

The Iowa Association for Justice, a state organization of about 1,000 attorneys who fight for individual and civil rights, said more Iowans in nursing homes will die because of the bill and "and individual Iowans will have no power to seek accountability or answers."
"It's pathetic. Iowans are looking for leadership, and they expect better than this. If no one is accountable, no one is safe," the group's executive director, Brad Lint, said in a statement.

As in many states, the coronavirus struck Iowa nursing homes particularly hard, with nursing home residents accounting for half of the state's 622 COVID-19 deaths. The state reported Tuesday that 39 facilities have had outbreaks, with more than 1,560 residents testing positive for the virus since it arrived in Iowa. Many states have passed legislation limited to protecting healthcare and elderly care facilities from lawsuits related to coronavirus illnesses and deaths.

Iowa's bill offers protection against civil damage lawsuits for healthcare providers and manufacturers or distributors of household disinfecting or cleaning supplies. *It includes many other businesses by stating that anyone who wants to sue must first have been hospitalized or died, and that there must be an intent on the part of a business or employer to cause harm and actual malice.* The measure says anyone who is in substantial compliance with federal or state statues, regulations, orders or public health guidance cannot be sued for civil damages. The bill is retroactive to Jan. 1, 2020.

It also would protect owners of meatpacking plants, which also have been heavily affected by the virus, with thousands of workers sickened. The Iowa counties that have had the heaviest concentration of virus activity have been those with

meatpacking plants. Owners of a wide range of other businesses, including restaurants, hair salons and others who serve the public, expressed concern that they could be sued if someone claimed to have contracted the virus at their business. Oklahoma, Utah and Wyoming enacted similar laws in May that were signed by Republican governors. Several other states have bills pending or have attempted similar action. U.S. Senate Majority Leader Mitch McConnell proposed including nationwide liability protection in a coronavirus relief bill, but his efforts so far have not succeeded.

Louise Melling, ACLU deputy legal director, said she has concerns about the implications of shutting off people's ability to go to court to hold business owners accountable if they're not protecting workers.

"*What are we trying to protect and at the expense of whom?" she said. "What are we saying as a country about what we're going to insist on for the safety of workers?"*

The Iowa House approved the bill late Friday with only Republican support after ending debate by Democrats. It now shifts to the Senate, which is also controlled by Republicans. Senate Republican Leader Jack Whitver has said the bill is a priority for him.

Because the Senate passed a different version of the bill in February without the immunity language, the measure can gain final approval if the amended language get a majority vote. It then would go to Republican Gov. Kim Reynolds, who hasn't said if she would sign the measure.

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

The Occupational Safety and Health Administration (OSHA) does not currently have a specific standard that protects healthcare or other workers from airborne or aerosol transmission of disease or diseases transmitted by airborne droplets. Some in Congress, and some groups representing healthcare, meat and poultry processing, and other workers, are calling on OSHA to promulgate an emergency temporary standard (ETS) to protect workers from exposure to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). The Occupational Safety and Health Act of 1970 (OSH Act) gives OSHA the ability to promulgate an ETS that would remain in effect for up to six months without going through the normal review and comment process of rulemaking. OSHA, however, has rarely used this authority in the past—not since the courts struck down its ETS on asbestos in 1983.

The California Division of Occupational Safety and Health (Cal/OSHA), which operates California's state occupational safety and health plan, has had an aerosol transmissible disease (ATD) standard since 2009. This standard includes, among other provisions, the requirement that employers provide covered employees with respirators, rather than surgical masks, when these workers interact with ATDs, such as known or suspected COVID-19 cases. In addition, according to the Cal/OSHA ATD standard, certain procedures require the use of powered air purifying respirators (PAPR).

The Virginia state occupational safety and health plan (VOSH) and the Michigan state occupational safety and health plan (MIOSHA) have each promulgated emergency standards to specifically address COVID-19 in workplaces. Unlike the Cal/OSHA ATD standard, these emergency standards are in effect for only six months and apply to all employers.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020, would require OSHA to promulgate an ETS on COVID-19 that incorporates both the Cal/OSHA ATD standard and the Centers for Disease Control and Prevention's (CDC's) 2007 guidelines on occupational exposure to infectious agents in healthcare settings; similar provisions appear in S. 3475. The CDC's 2007 guidelines generally require stricter controls than its interim guidance on COVID-19 exposure. The provisions of H.R. 6139 were incorporated into the version of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The OSHA ETS provisions were not included in the House- and Senate-passed version of legislation that was signed into law as P.L. 116-127.

H.R. 6379, as introduced in the House, also would include a requirement for an OSHA ETS and permanent standard to address COVID-19 exposure; similar provisions appear in S. 3584. H.R. 6559 would include the requirements for an ETS and permanent standard, clarify the requirement that employers must report work-related COVID-19 cases, and expand protections for whistleblowers; similar provisions appear in S. 3677. The provisions of H.R. 6559 were included in H.R. 6800, The Heroes Act, passed by the House on May 15, 2020, and in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act passed by the House on October 1, 2020.

Through October 1, 2020, OSHA has issued COVID-19-related citations to employers at 62 work sites, with total proposed penalties of $913,133. These citations have been issued for violations of the OSH Act's General Duty Clause and other existing OSHA standards, such as those for respiratory protection, that may apply to COVID-19. Senators Elizabeth Warren and Cory A. Booker have raised concerns about the low amount of penalties being assessed for COVID-19-related violations.

Occupational Safety and Health Administration Standards

Section 6 of the Occupational Safety and Health Act of 1970 (OSH Act) grants the Occupational Safety and Health Administration (OSHA) of the Department of Labor (DOL) the authority to promulgate, modify, or revoke occupational safety and health standards that apply to private sector employers, the United States Postal Service, and the federal government as an employer.[1] In addition, Section 5(a)(1) of the OSH Act, commonly referred to as the General Duty Clause, requires that all employers under OSHA's jurisdiction provide workplaces free of "recognized hazards that are causing or are likely to cause death or serious physical harm" to their employees.[2] OSHA has the authority to enforce employer compliance with its standards and with the General Duty Clause through the issuance of abatement orders, citations, and civil monetary penalties. The OSH Act does not cover state or local government agencies or units. Thus, certain entities that may be affected by Coronavirus Disease 2019 (COVID-19), such as state and local government hospitals, local fire departments and emergency medical services, state prisons and county jails, and public schools, are not covered by the OSH Act or subject to OSHA regulation or enforcement.

State Plans

Section 18 of the OSH Act authorizes states to establish their own occupational safety and health plans and preempt standards established and enforced by OSHA.[3] OSHA must approve state plans if they are "at least as effective" as OSHA's standards and enforcement.[4] If a state adopts a state plan, it also must cover state and local government entities, such as public schools, not covered by OSHA. Currently, 21 states and Puerto Rico have state plans that cover all employers, and 5 states and the U.S. Virgin Islands have state plans that cover only state and local government employers not covered by the OSH Act.[5] In the remaining states, state and local government employers are not covered by OSHA standards or enforcement. State plans may incorporate OSHA standards by reference, or states may adopt their own standards that are at least as effective as OSHA's standards. State plans do not have jurisdiction over federal agencies and generally do not cover maritime workers and private-sector workers at military bases or other federal facilities.

Promulgation of OSHA Standards

OSHA may promulgate occupational safety and health standards on its own initiative or in response to petitions submitted to the agency by various government agencies, the public, or employer and employee groups.[6] OSHA is not required, however, to respond to a petition for a

[1] 29 U.S.C. §655. The provisions of the Occupational Safety and Health Act of 1970 (OSH Act) are extended to the legislative branch as an employer by the Congressional Accountability Act (P.L. 104-1).

[2] 29 U.S.C. §654(a)(1).

[3] 29 U.S.C. §667.

[4] For additional information on Occupational Safety and Health Administration (OSHA) state plans, see CRS Report R43969, *OSHA State Plans: In Brief, with Examples from California and Arizona*.

[5] Information on specific state plans is available from the OSHA website at https://www.osha.gov/stateplans.

[6] Per Section 6(b)(1) of the OSH Act [29 §655(b)(1)], a petition may be submitted by "an interested person, a representative of any organization of employers or employees, a nationally recognized standards-producing

standard or to promulgate a standard in response to a petition. OSHA may also consult with one of the two statutory standing advisory committees—the National Advisory Committee on Occupational Safety and Health (NACOSH) or the Advisory Committee on Construction Safety and Health (ACCSH)—or an ad-hoc advisory committee for assistance in developing a standard.[7]

Notice and Comment

OSHA's rulemaking process for the promulgation of standards is largely governed by the provisions of the Administrative Procedure Act (APA) and Section 6(b) of the OSH Act.[8] Under the APA informal rulemaking process, federal agencies, including OSHA, are required to provide notice of proposed rules through the publication of a Notice of Proposed Rulemaking in the *Federal Register* and provide the public a period of time to provide comments on the proposed rules.

Section 7(b) of the OSH Act mirrors the APA in that it requires notice and comment in the rulemaking process.[9] After publishing a proposed standard, the public must be given a period of at least 30 days to provide comments. In addition, any person may submit written objections to the proposed standard and may request a public hearing on the standard.

Statement of Reasons

Section 6(e) of the OSH Act requires OSHA to publish in the *Federal Register* a statement of the reasons the agency is taking action whenever it promulgates a standard, conducts other rulemaking, or takes certain additional actions, including issuing an order, compromising on a penalty amount, or settling an issued penalty.[10]

Other Relevant Laws and Executive Order 12866

In addition to the APA and OSH Act, other federal laws that generally apply to OSHA rulemaking include the Paperwork Reduction Act,[11] Regulatory Flexibility Act,[12] Congressional Review Act,[13] Information Quality Act,[14] and Small Business Regulatory Enforcement Fairness Act (SBREFA).[15] Also, Executive Order 12866, issued by President Clinton in 1993, requires

organization, the Secretary of Health and Human Services (HHS), the National Institute for Occupational Safety and Health, or a state or political subdivision."

[7] The National Advisory Committee on Occupational Safety and Health (NACOSH) was established by Section 7(a) of the OSH Act [29 U.S.C. §656(a)]. The Advisory Committee on Construction Safety and Health (ACCSH) was established by Section 107 of the Contract Work Hours and Safety Act (P.L. 87-581). Section 7(b) of the OSH Act provides OSHA the authority to establish additional advisory committees.

[8] The Administrative Procedure Act (APA) is codified at 5 U.S.C. §§500-596. For detailed information on federal agency rulemaking and the APA, see CRS Report RL32240, *The Federal Rulemaking Process: An Overview*.

[12] 5 U.S.C. §§601-612.

[13] 5 U.S.C. §§801-808.

[14] 44 U.S.C. §3516 note.

[15] 5 U.S.C. §601 note. For information on these additional laws that apply to OSHA rulemaking, see U.S. Government Accountability Office (GAO), *Workplace Safety and Health: Multiple Challenges Lengthen OSHA's Standard Setting*, GAO-12-330, April 2012, Appendix II, at https://www.gao.gov/products/GAO-12-330 (hereinafter cited as GAO-12-330, *Workplace Safety and Health*).

agencies to submit certain regulatory actions to the Office of Management and Budget (OMB) and Office of Information and Regulatory Affairs (OIRA) for review before promulgation.[16]

OSHA Rulemaking Time Line

OSHA rulemaking for new standards historically has been a relatively time-consuming process. In 2012, at the request of Congress, the Government Accountability Office (GAO) reviewed 59 significant OSHA standards promulgated between 1981 (after the enactments of the Paperwork Reduction Act and Regulatory Flexibility Act) and 2010.[17] For these standards, OSHA's average time between beginning formal consideration of the standard—either through publishing a Request for Information or Advance Notice of Proposed Rulemaking in the *Federal Register* or placing the rulemaking on its semiannual regulatory agenda—and promulgation of the standard was 93 months (7 years, 9 months). Once the Notice of Proposed Rulemaking was published for these 59 standards, the average time until promulgation of the standard was 39 months (3 years, 3 months).

In 2012, OSHA's Directorate of Standards and Guidance published a flowchart of the OSHA rulemaking process on the agency's website.[18] This flowchart includes estimated duration ranges for a variety of rulemaking actions, beginning with pre-rule activities—such as developing the idea for the standard and meeting with stakeholders—and ending with promulgation of the standard. The flowchart also includes an estimated duration range for post-promulgation activities, such as judicial review. The estimated time from the start of preliminary rulemaking to the promulgation of a standard ranges from 52 months (4 years, 4 months) to 138 months (11 years, 6 months). After a Notice of Proposed Rulemaking is published in the *Federal Register,* the estimated length of time until the standard is promulgated ranges from 26 months (2 years, 2 months) to 63 months (5 years, 3 months). **Table 1** provides OSHA's estimated time lines for six major pre-rulemaking and rulemaking activities leading to the promulgation of a standard.

Table 1. OSHA Rulemaking Process: Estimated Durations of Activities

Stage	Activities	Estimated Duration
1	Preliminary rulemaking activities	12-36 months
2	Developing the proposed rule	12-36 months
3	Publishing the Notice of Proposed Rulemaking (NPRM)	2-3 months
4	Developing and analyzing the rulemaking record, including public comments and hearings	6-24 months
5	Developing the final rule, including Office of Information and Regulatory Affairs (OIRA) submission	18-36 months
6	Publishing the final rule (promulgating the new standard)	2-3 months
Total estimated duration		52-138 months
Estimated duration from NPRM to final rule		26-63 months

Judicial Review

Both the APA and the OSH Act provide for judicial review of OSHA standards. Section 7(f) of the OSH Act provides that any person who is "adversely affected" by a standard may file, within 60 days of its promulgation, a petition challenging the standard with the U.S. Court of Appeals for the circuit in which the person lives or maintains his or her principal place of business.[19] A petition for judicial review does not automatically stay the implementation or enforcement of the standard. However, the court may order such a stay. OSHA estimates that post-promulgation activities, including judicial review, can take between 4 and 12 months after the standard is promulgated.[20]

Emergency Temporary Standards

Section 6(c) of the OSH Act provides the authority for OSHA to issue an Emergency Temporary Standard (ETS) without having to go through the normal rulemaking process. OSHA may promulgate an ETS without supplying any notice or opportunity for public comment or public hearings. An ETS is immediately effective upon publication in the *Federal Register*. Upon promulgation of an ETS, OSHA is required to begin the full rulemaking process for a permanent standard with the ETS serving as the proposed standard for this rulemaking. An ETS is valid until superseded by a permanent standard, which OSHA must promulgate within six months of publishing the ETS in the *Federal Register*.[21] An ETS must include a statement of reasons for the action in the same manner as required for a permanent standard. State plans are required to adopt or adhere to an ETS, although the OSH Act is not clear on how quickly a state plan must come into compliance with an ETS.

ETS Requirements

Section 6(c)(1) of the OSH Act requires that both of the following determinations be made in order for OSHA to promulgate an ETS:

- that employees are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful or from new hazards, and
- that such emergency standard is necessary to protect employees from such danger.

Grave Danger Determination

The term *grave danger*, used in the first mandatory determination for an ETS, is not defined in statute or regulation. The legislative history demonstrates the intent of Congress that the ETS process "not be utilized to circumvent the regular standard-setting process," but the history is unclear as to how Congress intended the term grave danger to be defined.[22]

---

[19] 29 U.S.C. §655(f).

[20] OSHA, Directorate of Standards and Guidance, *The OSHA Rulemaking Process*, October 15, 2012, at https://www.osha.gov/OSHA_FlowChart.pdf.

[21] 29 U.S.C §655(c)(2).

[22] U.S. Congress, Senate Labor and Public Welfare, Subcommittee on Labor, *Legislative History of the Occupational Safety and Health Act of 1970 (S. 2193, P.L. 91-596)*, committee print, prepared by Subcommittee on Labor, 91st Cong., 1 sess., June 1971, 52-531 (Washington: GPO, 1971), p. 1218.

In addition, although the federal courts have ruled on challenges to previous ETS promulgations, the courts have provided no clear guidance as to what constitutes a grave danger. In 1984, the U.S. Court of Appeals for the Fifth Circuit in *Asbestos Info. Ass'n v. OSHA* issued a stay and invalidated OSHA's November 1983 ETS lowering the permissible exposure limit for asbestos in the workplace.[23] In its decision, the court stated that "gravity of danger is a policy decision committed to OSHA, not to the courts."[24] The court, however, ultimately rejected the ETS, in part on the grounds that OSHA did not provide sufficient support for its claim that 80 workers would ultimately die because of exposures to asbestos during the six-month life of the ETS.

Necessity Determination

In addition to addressing a grave danger to employees, an ETS must also be *necessary* to protect employees from that danger. In *Asbestos Info. Ass'n*, the court invalidated the asbestos ETS for the additional reason that OSHA had not demonstrated the necessity of the ETS. The court cited, among other factors, the duplication between the respirator requirements of the ETS and OSHA's existing standards requiring respirator use. The court dismissed OSHA's argument that the ETS was necessary because the agency felt that the existing respiratory standards were "unenforceable absent actual monitoring to show that ambient asbestos particles are so far above the permissible limit that respirators are necessary to bring employees' exposure within the PEL of 2.0 f/cc."[25] The court determined that "fear of a successful judicial challenge to enforcement of OSHA's permanent standard regarding respirator use hardly justifies resort to the most dramatic weapon in OSHA's enforcement arsenal."[26]

Although OSHA has not promulgated an ETS since the 1983 asbestos standard, it has since determined the necessity of an ETS. In 2006, the agency considered a petition from the United Food and Commercial Workers (UFCW) and International Brotherhood of Teamsters (IBT) for an ETS on diacetyl. The UFCW and IBT petitioned OSHA for the ETS after the National Institute for Occupational Safety and Health (NIOSH) and other researchers found that airborne exposure to diacetyl, then commonly used as an artificial butter flavoring in microwave popcorn and a flavoring in other food and beverage products, was linked to the lung disease *bronchiolitis obliterans*, now commonly referred to as "popcorn lung."[27] According to GAO's 2012 report on OSHA's standard-setting processes, OSHA informed GAO that although the agency may have been able to issue an ETS based on the grave danger posed by diacetyl, the actions taken by the food and beverage industries, including reducing or removing diacetyl from products, made it less likely that the necessity requirement could be met.[28]

ETS Duration

Section 6(c)(2) of the OSH Act provides that an ETS is effective until superseded by a permanent standard promulgated pursuant to the normal rulemaking provisions of the OSH Act. Section 6(c)(3) of the OSH Act requires OSHA to promulgate a permanent standard within six months of

[28] GAO-12-330, *Workplace Safety and Health*.

promulgating the ETS. As shown earlier in this report, six months is well outside of historical and currently expected time frames for developing and promulgating a standard under the notice and comment provisions of the APA and OSH Act, as well as under other relevant federal laws and executive orders. This dichotomy between the statutory mandate to promulgate a standard and the time lines that, based on historical precedent, other provisions in the OSH Act might realistically require for such promulgation raises the question of whether or not OSHA could extend an ETS's duration without going through the normal rulemaking process. The statute and legislative history do not clearly address this question.

OSHA has used its ETS authority sparingly in its history and not since the asbestos ETS promulgated in 1983. As shown in **Table A-1** in the Appendix, of the nine times OSHA has issued an ETS, the courts have fully vacated or stayed the ETS in four cases and partially vacated the ETS in one case.[29] Of the five cases that were not challenged or that were fully or partially upheld by the courts, OSHA issued a permanent standard either within the six months required by the statute or within several months of the six-month period and always within one year of the promulgation of the ETS.[30] Each of these cases, however, occurred before 1980, when a combination of additional federal laws and court decisions added additional procedural requirements to the OSHA rulemaking process. OSHA did not attempt to extend the ETS's expiration date in any of these cases.

Although the courts have not ruled directly on an attempt by OSHA to solely extend the life of an ETS, in 1974, the U.S. Court Appeals for the Fifth Circuit held in *Florida Peach Growers Ass'n v. United States Department of Labor* that OSHA was within its authority to amend an ETS without going through the normal rulemaking process.[31] The court stated that "it is inconceivable that Congress, having granted the Secretary the authority to react quickly in fast-breaking emergency situations, intended to limit his ability to react to developments subsequent to his initial response."[32] The court also recognized the difficulty OSHA may have in promulgating a standard within six months due to the notice and comment requirements of the OSH Act, stating that in the case of OSHA seeking to amend an ETS to expand its focus, "adherence to subsection (b) procedures would not be in the best interest of employees, whom the Act is designed to protect. Such lengthy procedures could all too easily consume all of the temporary standard's six months life."[33]

OSHA Standards Related to COVID-19

Current OSHA Standards

Currently, no OSHA standard directly covers exposure to airborne or aerosol diseases in the workplace. As a result, OSHA is limited in its ability to enforce protections for healthcare and other workers who may be exposed to SARS-CoV-2, the virus that causes COVID-19.[34]

OSHA may enforce the General Duty Clause in the absence of a standard, if it can be determined that an employer has failed to provide a worksite free of "recognized hazards" that are "causing or are likely to cause death or serious physical harm" to workers.[35] In addition, OSHA's standards for the use of personal protective equipment (PPE) may apply in cases in which workers require eye, face, hand, or respiratory protection against COVID-19 exposure.[36]

As of October 1, 2020, OSHA has issued citations related to COVID-19 to employers at 62 work sites resulting in a total of $913,133 in proposed civil penalties.[37] The majority of these citations were issued to healthcare, nursing, and long-term care providers, including two Department of Veterans Affairs facilities—a hospital in Indianapolis, Indiana, and a community living center in Queens, New York.[38] Two employers in the meat processing industry—Smithfield Packaged Foods, Inc. in Sioux Falls, South Dakota and JBS Foods, Inc. in Greeley, Colorado—were also cited.[39] In the two meat processing cases, citations were issued for General Duty Clause violations. Other citations were issued for violations of OSHA's respiratory protection, injury and illness reporting, and recordkeeping standards.

The highest amount of proposed penalties issued to a single employer for COVID-19-related violations was $28,070 to the Harborage nursing home operated by Hackensack Meridian Healthcare in New Jersey for four serious and one other than serious violations of the respiratory protection standard.[40] For two of the serious violations, OSHA issued the maximum allowable penalty of $13,494.[41] For the other two serious violations, OSHA issued citations but no monetary penalties. For the other than serious violation, OSHA issued a penalty of $1,082. The two meat processing employers were each assessed maximum penalties of $13,494 for serious violations of the General Duty Clause.

In a letter to OSHA, Senators Elizabeth Warren and Cory A. Booker raised concerns over the amount of penalties issued to these employers.[42] The Senators asked OSHA why these employers

[38] A list of all COVID-19-related citations issued by OSHA through October 1, 2020, is available at https://www.osha.gov/enforcement/covid-19-data/inspections-covid-related-citations.

[39] OSHA has the authority to issue citations to Executive Branch agencies, but does not have the authority to issue civil monetary penalties to these agencies.

[40] Detailed information on the citations issued to this employer is available at https://www.osha.gov/pls/imis/establishment.inspection_detail?id=1476465.015.

[41] OSHA citations are classified as "serious," "other than serious," "willful," or "repeated." The maximum amounts of OSHA penalties are subject to annual inflationary adjustments.

[42] Letter from Senators Elizabeth Warren and Cory A. Booker to Loren Sweatt, Principal Deputy Assistant Secretary of

were each cited for single serious violations of the General Duty Clause rather than multiple violations for each area of the facilities in which social distancing measures were not implemented. They also asked why OSHA did not issue penalties for willful or repeated violations that carry maximum penalties of $134,937 per violation. None of the employers cited for COVID-19-related violations were issued penalties for willful or repeated violations.

OSHA Respiratory Protection Standard

National Institute for Occupational Safety and Health Certification

The OSHA respiratory protection standard requires the use of respirators certified by NIOSH in cases in which engineering controls, such as ventilation or enclosure of hazards, are insufficient to protect workers from breathing contaminated air.[43] Surgical masks, procedure masks, and dust masks are not considered respirators. NIOSH certifies respirators pursuant to federal regulations.[44] For nonpowered respirators, such as filtering face piece respirators commonly used in healthcare and construction, NIOSH classifies respirators based on their efficiency at filtering airborne particles and their ability to protect against oil particles. Under the NIOSH classification system, the letter (N, R, or P) indicates the level of oil protection as follows: N—no oil protection; R—oil resistant; and P—oil proof. The number following the letter indicates the efficiency rating of the respirator as follows: 95—filters 95% of airborne particles; 97—filters 97% of airborne particles; and 100—filters 99.7% of airborne particles. Thus an N95 respirator, the most common type, is one that does not protect against oil particles and filters out 95% of airborne particles. An R or P respirator can be used in place of an N respirator.

A respirator that is past its manufacturer-designated shelf life is no longer considered to be certified by NIOSH. However, in response to potential shortages in respirators, NIOSH has tested and approved certain models of respirators for certified use beyond their manufacturer-designated shelf lives.[45]

Respirators designed for certain medical and surgical uses are subject to both certification by NIOSH (for oil protection and efficiency) and regulation by the Food and Drug Administration (FDA) as medical devices. In general, respirators with exhalation valves cannot be used in surgical and certain medical settings because, although the presence of an exhalation valve does not affect the respirator's protection afforded the user, it may allow unfiltered air from the user into a sterile field. On March 2, 2020, FDA issued an Emergency Use Authorization (EUA) to approve for use in medical settings certain NIOSH-certified respirators not previously regulated by FDA.[46]

Labor, Occupational Safety and Health Administration, September 22, 2020, https://www.warren.senate.gov/imo/media/doc/Letter%20from%20Senators%20Warren,%20Booker%20to%20OSHA%209-22-20.pdf.

The list of respirators approved under this Emergency Use Authorization (EUA) is in Appendix B to this letter, updated at https://www.fda.gov/media/135921/download.

CDC Interim Guidance on Respiratory Protection

On March 10, 2020, the Centers for Disease Control and Prevention (CDC) updated its interim guidance for the protection of healthcare workers against exposure to COVID-19 to permit healthcare workers caring for known or suspected COVID-19 cases to use "facemasks" when respirators are not available or are in limited supply.[47] This differs from the CDC's 2007 guidelines for control of infectious agents in healthcare settings, which required the use of respirators for treatment of known or suspected cases.[48] CDC states that respirators should be prioritized for use in medical procedures likely to generate respiratory aerosols. Before this interim guidance was released, Representative Bobby Scott, Chairman of the House Committee on Education and Labor, and Representative Alma Adams, Chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Health and Human Services (HHS) Alex M. Azar II expressing their opposition to this change in the interim standard.[49]

Medical Evaluation and Fit Testing

The OSHA respiratory protection standard requires that the employer provide a medical evaluation to the employee to determine if the employee is physiologically able to use a respirator. This medical evaluation must be completed before any fit testing. For respirators designed to fit tightly against the face, the specific type and model of respirator that an employee is to use must be fit tested in accordance with the procedures provided in Appendix A of the OSHA respiratory protection standard to ensure there is a complete seal around the respirator when worn.[50] Once an employee has been fit tested for a respirator, he or she is required to be fit tested annually or whenever the model of respirator, but not the actual respirator itself, is changed. Each time an individual uses a respirator, he or she is required to perform a check of the seal of the respirator to his or her face in accordance with the procedures provided in Appendix B of the standard.[51] On March 14, 2020, OSHA issued guidance permitting employers to suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator.

---

[47] Although the interim guidance does not specifically define the term *facemask*, it does differentiate between a facemask and a respirator such that any recommendation to use a facemask does not require the use of a respirator. CDC, *Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings*, updated March 10, 2020, at https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html.

[51] 29 C.F.R. §1910.134 Appendix B.

Temporary OSHA Enforcement Guidance on the Respiratory Protection Standard

In response to shortages of respirators and other PPE during the national response to the COVID-19 pandemic, OSHA has issued three sets of temporary enforcement guidance to permit the following exceptions to the respiratory protection standard:

1. Employers may suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator;[52]
2. Employers may permit the use of expired respirators and the extended use or reuse of respirators, provided the respirator maintains its structural integrity and is not damaged, soiled, or contaminated (e.g., with blood, oil, or paint);[53] and
3. Employers may permit the use of respirators not certified by NIOSH, but approved under standards used by the following countries or jurisdictions, in accordance with the protection equivalency tables provided in Appendices A and B of the enforcement guidance document:
   - Australia,
   - Brazil,
   - European Union,
   - Japan,
   - Mexico,
   - People's Republic of China, and
   - Republic of Korea.[54]

California: Cal/OSHA Aerosol Transmissible Disease Standard

Although no OSHA standard specifically covers aerosol or airborne disease transmission, the California Division of Occupational Safety and Health (Cal/OSHA), under its state plan, promulgated its aerosol transmissible disease (ATD) standard in 2009.[55] The ATD standard covers most healthcare workers, laboratory workers, as well as workers in correctional facilities, homeless shelters, and drug treatment programs. Under the ATD standard, SARS-CoV-2, the virus that causes COVID-19, is classified as a disease or pathogen requiring airborne isolation. This classification subjects the virus to stricter control standards than diseases requiring only

[53] OSHA, *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-respiratory-protection-and-n95-shortage-due-coronavirus. Under this guidance, employers are required to address in their written respiratory protection plans when respirators are contaminated and not available for use or reuse.

[54] OSHA, *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-use-respiratory-protection-equipment-certified-under.

[55] Cal. Code Regs. tit. 8, §5199. The California state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers; workers on military bases and in national parks, monuments, memorials, and recreation areas; workers on federally recognized Native American reservations and trust lands; and U.S. Postal Service contractors.

OSHA-002501

droplet precautions, such as seasonal influenza.[56] The key requirements of the ATD standard include

- written ATD exposure control plan and procedures,
- training of all employees on COVID-19 exposure, use of PPE, and procedures if exposed to COVID-19,
- engineering and work practice controls to control COVID-19 exposure, including the use of airborne isolation rooms,
- provision of medical services to employees, including removal of exposed employees,
- specific requirements for laboratory workers, and
- PPE requirements.

Cal/OSHA Aerosol Transmissible Disease PPE Requirements

The Cal/OSHA ATD standard requires that employers provide employees PPE, including gloves, gowns or coveralls, eye protection, and respirators certified by NIOSH at least at the N95 level whenever workers

- enter or work in an airborne isolation room or area with a case or suspected case;
- are present during procedures or services on a case or suspected case;
- repair, replace, or maintain air systems or equipment that may contain pathogens;
- decontaminate an area that is or was occupied by a case or suspected case;
- are present during aerosol generating procedures on cadavers of cases or suspected cases;
- transport a case or suspected case within a facility or within a vehicle when the patient is not masked; and
- are working with a viable virus in the laboratory.[57]

In addition, a powered air purifying respirator (PAPR) with a high-efficiency particulate air (HEPA) filter must be used whenever a worker performs a *high-hazard procedure* on a known or suspected COVID-19 case.[58] High-hazard procedures are those in which "the potential for being exposed to aerosol transmissible pathogens is increased due to the reasonably anticipated generation of aerosolized pathogens"—they include intubation, airway suction, and caring for patients on positive pressure ventilation.[59] Emergency medical services (EMS) workers may use N100, R100, or P100 respirators in place of PAPRs.

[56] Cal. Code Regs. tit. 8, §5199 Appendix A.

[57] California Division of Occupational Safety and Health (Cal/OSHA), *Interim Guidance for Protecting Health Care Workers from Exposure to Coronavirus Disease (COVID-19)*, March 2020, at https://www.dir.ca.gov/dosh/Coronavirus-info.html.

[58] A PAPR uses a mechanical device to draw in room air and filter it before expelling that air over the user's face. In general, PAPRs do not require a tight seal to the user's face and do not need to be fit tested.

[59] Cal. Code Regs. tit. 8, §5199(b).

Cal/OSHA Interim Guidance on COVID-19

Cal/OSHA has issued interim guidance in response to shortages of respirators in the state due to the COVID-19 pandemic response.[60] Under this interim guidance, if the supply of N95 respirators or PAPRs are insufficient to meet current or anticipated needs, surgical masks may be used for low-hazard patient contacts that would otherwise require the use of respirators, and respirators may be used for high-hazard procedures that would otherwise require the use of PAPRs.

Virginia: VOSH COVID-19 ETS

On July 15, 2020, the Virginia Safety and Health Codes Board adopted an ETS to specifically protect employees from exposure to SARS-CoV-2, the virus that causes COVID-19.[61] This ETS, promulgated under Virginia's state occupational safety and health plan (VOSH) is the first state standard to specifically address COVID-19 in the workplace.[62] As an ETS, the VOSH standard expires within six months of its effective date, upon expiration of the Governor's State of Emergency, when superseded by a permanent standard, or when repealed by the Virginia Safety and Health Codes Board, whichever comes first. The ETS can be extended only through the normal state rulemaking process.

Unlike the Cal/OSHA ATD standard, the VOSH ETS applies to all state and local government agencies and all covered private-sector employees in the state. As part of a state plan, the VOSH ETS applies to state and local government entities, such as public schools, as employers. All covered employers in Virginia must comply with the following ETS requirements:

- exposure assessment and determination, notification of suspected cases and contacts with those cases, and employee access to their own exposure and medical records;
- return to work of employees known or suspected to have COVID-19 based on a duration of time since last symptoms or negative COVID-19 tests;[63]
- maintenance of physical distancing between employees while working and on paid breaks at the worksite, including restricted access to the worksite and common areas and break rooms;
- compliance with applicable existing PPE and respiratory protection standards when physical distancing between employees is not possible; and
- sanitation and disinfection requirements.

For all employers, if engineering, administrative, or work practice controls are not feasible or do not provide sufficient protection from SARS-CoV-2 transmission, then PPE, including respiratory PPE—such as respirators, if necessary—must be provided to employees.

---

[60] California Division of Occupational Safety and Health (Cal/OSHA), *Cal/OSHA Interim Guidance on COVID-19 for Health Care Facilities: Severe Respirator Supply Shortages*, March 28, 2020, at https://www.dir.ca.gov/dosh/coronavirus/Cal-OSHA-Guidance-for-respirator-shortages.pdf.

[61] *Infectious Disease Prevention: SARS-CoV-2 Virus That Causes COVID-19*, 16 Va. Admin. Code §25-220. This ETS is effective upon publication in a Richmond, VA, newspaper during the week of July 27, 2020.

[62] The Virginia state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S Postal Service contractors, workers at military bases or other federal enclaves in which the federal government has civil jurisdiction, workers at the U.S. Department of Energy's Southeastern Power Administration Kerr-Philpott System, and aircraft cabin crew members.

[63] A COVID-19 test for the purposes of determining if an employee can return to work must be paid for by the employer or offered such that the employee bears no cost for the test.

OSHA-002503

Hazard and Job Task Classification

The VOSH ETS requires that each employer assess its workplace for hazards and job tasks that potentially expose employees to the SARS-CoV-2 virus. Employers must classify each job task as having a "very high," "high," "medium," or "lower" risk level of exposure, according to the hazards to which employees are potentially exposed. The VOSH ETS provides the following examples of activities for the "very high" and "high" risk levels:

- "very high" risk activities include
  - using aerosol-generating procedures, such as intubation, on patients known or suspected to be infected with SARS-CoV-2;
  - collecting or handling specimens from patients known or suspected to be infected with SARS-CoV-2; and
  - performing an autopsy involving aerosol-generating procedures on the body of a person known or suspected to be infected with the SARS-CoV-2 virus at the time of death; and
- "high risk" activities include
  - health care services, including inpatient care, outpatient care, skilled nursing care, and nonmedical support services such as room cleaning, provided to patients known or suspected to be infected with SARS-CoV-2;
  - first responder and medical transport services to patients known or suspected to be infected with SARS-CoV-2; and
  - mortuary services to persons known or suspected to be infected with the SARS-CoV-2 virus at the time of death.

"Medium" risk activities are those that require employees to have more than minimal contact, within six feet of other employees, customers, or members of the public who are not known or suspected to be infected with SARS-CoV-2.[64] "Lower" risk activities are those that do not require contact with other persons within six feet or that are able to utilize the following types of engineering, administrative, or work practice controls to minimize contact between persons:

- installation of floor to ceiling barriers, such as barriers between cashiers and customers;
- telecommuting;
- staggered work shifts to reduce the number of workers at a site;
- delivering services remotely, including curbside pickup of retail purchases; and
- mandatory physical distancing of persons.

The use of face coverings other than respirators or medical or surgical masks, including cloth face coverings now required by several states, is not an acceptable method of minimizing physical contact between persons. However, the VOSH ETS requires the use of face coverings for brief contacts between persons within six feet of each other.

[64] Examples of "medium" risk work activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-30.

Engineering, Administrative, Work Practice, and PPE Requirements for "Very High," "High," and "Medium" Risk Activities

Employers with job tasks or activities in the "very high," "high," or "medium" risk classifications must adhere to specific engineering, administrative, work practice, and PPE requirements. For "very high" and "high" risk activities, engineering controls include the use of airborne infection isolation rooms (AIIR) for known or suspected COVID-19 patients and aerosol-generating procedures and Biosafety Level 3 (BSL-3) precautions for the handling of specimens from known or suspected COVID-19 patients.[65]

Employers with "very high" and "high" risk activities must implement administrative and work practice controls, including the prescreening of all employees to ensure that employees do not have signs or symptoms of COVID-19; enhanced medical screening of employees during COVID-19 outbreaks; and the use of flexible work arrangements, such as telecommuting, when feasible. In addition, all employers with "very high" or "high" risk activities must provide, to the extent feasible, psychological and behavioral support to address employee stress at no cost to the employee.

The standard also provides for engineering, administrative, and work practice controls for "medium" risk activities.[66]

PPE Requirements for "Very High" and "High" Risk Activities

Employers with "very high" and "high" risk activities, who are not already covered by the general OSHA PPE standards, are required to comply with the VOSH ETS requirements for PPE. An employer subject to these requirements must assess the workplace to determine if there are any COVID-19 hazards present or likely to be present that would require the use of PPE by employees. The employer must provide for the participation of employees and employee representatives in this assessment process and verify that this assessment has been conducted through a written certification.

If hazards that require PPE are identified, the employer must select and provide the appropriate PPE to each employee and ensure that PPE fits properly. If respiratory PPE, such as respirators or PAPR are used as PPE, the existing OSHA standards for respiratory PPE, which include medical evaluation of employees and fit testing, must be followed.

Unless contraindicated by the hazard and PPE assessment, when any employee is in contact within six feet of any person known or suspected to be infected with SARS-CoV-2, that employee must be provided with the following types of PPE:

- gloves,
- gown large enough to cover areas needing protection,
- face shield or goggles, and
- respirator.

---

[65] The VOSH ETS requires compliance with Biosafety Level 3 precautions provided in HHS, *Biosafety in Microbiological and Biomedical Laboratories. Fifth Edition*, HHS Publication no. (CDC) 21-1112, December 2009, at https://www.cdc.gov/labs/BMBL.html.

[66] Engineering, administrative, and work practice controls for "medium" risk activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-60.

While there are no specific PPE requirements for "medium" risk activities, PPE may be required based on an assessment of the hazards of these activities.

Infectious Disease Preparedness and Response Plan and Training

Infectious Disease Preparedness and Response Plan

All employers with "very high" and "high" risk activities, and employers with 11 or more employees and "medium" risk activities, must develop written infectious disease preparedness and response plans. These plans must be developed with input from employees. The deadline for the development of these plans is 60 days from the effective date of the ETS.

The infectious disease preparedness plan must include a consideration of the COVID-19 risks in the workplace, and to the extent possible and in compliance with medical privacy laws, the specific risks faced by employees with certain preexisting medical conditions. The plan must include contingency plans for continued operations during a COVID-19 outbreak and provide for the prompt identification and isolation of employees with known or suspected COVID-19 and a procedure for employees to notify the employer of COVID-19 signs or symptoms. The plan must also address interactions between the employer's worksite and other businesses, such as vendors and contractors to ensure employees of these businesses comply with the VOSH ETS and the employer's infectious disease preparedness and response plan.

Training

All employers with "very high," "high," or "medium" risk activities must provide training to all employees, including those employees whose work does not involve any COVID-19 risks. This training must teach employees to recognize the hazards of the SARS-CoV-2 virus, signs and symptoms of COVID-19, and the procedures to minimize SARS-CoV-2 hazards. If the employer has an infectious disease preparedness and response plan, training must be provided on this plan. Written certification of training must be prepared, and retraining must be provided when necessary.

Employers with only "lower" risk activities are not required to prepare a formal training plan but must provide oral or written communication on the hazards of SARS-CoV-2, the signs and symptoms of COVID-19, and measures to minimize SARS-CoV-2 exposure. VOSH is required to develop an information sheet that employers can use to satisfy this training requirement.

Training must be provided within 30 days of the effective date of the standard, except for training on the infectious disease preparedness and response plan, which must be completed within 60 days.

Whistleblower Protections

The VOSH ETS prohibits any employer from discharging or otherwise discriminating against any employee who does the following:

- exercises his or her rights under the ETS or existing whistleblower protection provisions, including the limited right of an employee to refuse work because of a reasonable fear of injury or death or serious injury;[67]

[67] To exercise this right, the employee must, if possible, have sought unsuccessfully to have the employer remedy the hazard, and there must be insufficient time to attempt to remedy the hazard through normal regulatory enforcement

- provides and wears his or her own PPE, provided the PPE does not create a greater hazard to the employee or create a serious hazard to other employees; or
- raises a reasonable concern about SARS-CoV-2 and COVID-19 infection control to the employer, the employer's agent, other employees, the government, or the public through any type of media including social media.

Michigan: MIOSHA COVID-19 Emergency Rules

On October 14, 2020, the director of the Michigan Department of Labor and Economic Opportunity, which operates Michigan's state occupational safety and health plan (MIOSHA), promulgated emergency rules to address workplace exposure to COVID-19.[68] These rules, which apply to all employers in the state, went into immediate effect and will remain in effect for six months. In addition to rules that apply to all employers, the emergency rules include specific provisions that apply to the following industries:

- construction;
- manufacturing;
- retail, libraries, and museums;
- restaurants and bars;
- healthcare;
- in-home services such as house cleaning and repair;
- personal care services such as hair styling and tattooing;
- public accommodations such as sports and entertainment venues;
- sports and exercise facilities;
- meat and poultry processing; and
- casinos.[69]

Exposure Determination

Rule 3 of the MIOSHA emergency rules requires all employers to evaluate all routine and anticipated job tasks and categorize these job tasks based on potential employee exposure to COVID-19 into one of the following four categories:

1. "Lower exposure risk" tasks are those that do not require contact with known or suspected COVID-19 cases or frequent close (within six feet) contact with the general public.
2. "Medium exposure risk" tasks are those that require frequent or close contact with persons who may be infected with COVID-19 but who are not known or suspected COVID-19 cases. In areas of the state without ongoing community

channels. This right is provided in the OSHA standards at 29 C.F.R. §1977.12(b)(2) and in the VOSH standards at 16 Va. Admin. Code §25-60-110.

[68] Department of Labor and Economic Opportunity, Michigan Occupational Safety and Health Administration (MIOSHA) Emergency Rules: Coronavirus 2019 (COVID-19), available at https://www.michigan.gov//documents/leo/Final_MIOSHA_Rules_705164_7.pdf. The Michigan state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S. Postal Service contractors, workers at businesses owned or operated by tribal members at Indian reservations, and aircraft cabin crew members.

[69] MIOSHA Emergency Rules: Coronavirus 2019 (COVID-19), Rule 11.

transmission of COVID-19, tasks that require frequent contact with persons travelling from areas with widespread COVID-19 transmission are included in this category. In areas with ongoing community transmission, tasks that involve contact with the general public are included in this category.

3. "High exposure risk" tasks are those with high potential for exposure to known or suspected COVID-19 cases. Licensed healthcare providers, medical first responders, nursing home workers, law enforcement and correctional officers, and mortuary workers are examples of types of workers that may perform tasks in this category.
4. "Very high exposure risk" tasks are those that involve the generation of aerosols during medical or mortuary procedures on known or suspected COVID-19 cases and the collection and handling of laboratory specimens from known or suspected COVID-19 cases.

Preparedness and Response Plan

Rule 4 of the MIOSHA emergency rules requires all employers to develop a written COVID-19 preparedness and response plan based on current CDC and OSHA guidance. This plan must detail measures the employer will take to protect employees from COVID-19 exposure and must be readily available to employees and their representatives.

Basic Infection Prevention Measures

Rule 5 of the MIOSHA emergency rules requires all employers to implement the following basic infection prevention measures:

- promote frequent hand-washing and provide hand-washing facilities or hand sanitizer to workers, customers, and visitors;
- require employees who are sick to not report to work or to report to an isolated location;
- prohibit workers from using other workers' desks, phones, and other equipment when possible;
- increase facility cleaning, especially of high-touch surfaces and shared equipment;
- establish procedures, consistent with CDC guidance, for disinfection of the worksite if a worker, customer, or visitor has a known case of COVID-19;
- use Environmental Protection Agency (EPA) approved disinfectants that are expected to effective against SARS-CoV-2;
- follow all manufacturer's guidelines for use of all cleaning and disinfectant products; and
- prohibit in-person work for employees whose work can be done remotely.

Health Surveillance

Rule 6 of the MIOSHA emergency rules requires all employers to implement a health surveillance system for the workplace. This system must include, at a minimum, a COVID-19 screening questionnaire for all employees and contractors entering the workplace. Employees must be directed to immediately report any signs or symptoms of COVID-19 to the employer and known and suspected COVID-19 cases must be isolated from the rest of the workforce. When an

employer learns of an employee, contractor, customer, or visitor to the worksite with a known case of COVID-19, the employer must immediately notify the local health department and, must notify, within 24 hours, any workers, contractors, or suppliers who may have come into contact with the infected person. When determining if an employee with a known or suspected case of COVID-19 may return to the workplace, the employer must follow CDC guidelines and health department quarantine and isolation orders.

Workplace Controls

Rule 7 of the MIOSHA emergency rules requires all employers to implement the following workplace controls:

- designate one or more worksite COVID-19 safety coordinators to implement, monitor, and report on COVID-19 control strategies developed by the employer and to remain on site at all times when employees are present;
- place posters in appropriate languages in the workplace that provide information on staying away from work while sick, cough and sneeze etiquette, and hand hygiene;
- keep all persons at least six feet from each other using signs, floor markings, and barriers appropriate for the worksite, to the extent possible;
- provide all employees with non-medical grade face coverings at no cost to the employees;
- require the use of face coverings when employees cannot maintain six feet of distance from other persons in the workplace, and consider the use of face shields when three feet of distance cannot be maintained;
- require face coverings in shared spaces, such as restrooms and hallways and during in-person meetings.

PPE

Rule 8 of the MIOSHA emergency rules requires that employers provide appropriate PPE, including respiratory protection, to employees based on the exposure risks of the job and current CDC and OSHA guidelines. All PPE must be properly fitted, inspected, maintained, cleaned, stored, and disposed of. In workplaces that provide medical treatment to known or suspected COVID-19 cases, employees with frequent or prolonged close contact with such patients must be provided with and wear, at a minimum, an N95 respirator, goggles or face shield, and gown.

Training Requirements

Rule 10 of the MIOSHA emergency rules requires all employers to provide training and communication, in languages common among the employees, on the following subjects:

- workplace infection-control practices;
- proper use of PPE;
- how to notify the employer of COVID-19 symptoms or diagnosis;
- how to report unsafe working conditions.

This training must be updated if the employer's COVID-19 preparedness and response plan changes or new information on COVID-19 transmission becomes available.

Recordkeeping Requirements

Rule 11 of the MIOSHA emergency rules requires that all employers maintain, for one year, records of employee training, the screening of persons entering the workplace, and any health surveillance notifications required by Rule 6.

OSHA Infectious Disease Standard Rulemaking

In 2010, OSHA published a Request for Information in the *Federal Register* seeking public comments on strategies to control exposure to infectious diseases in healthcare workplaces.[70] After collecting public comments and holding public meetings, OSHA completed the SBREFA process in 2014. Since then, however, no public actions have occurred on this rulemaking; since spring 2017, this rulemaking has been listed as a "long-term action" in DOL's semiannual regulatory agenda.

Congressional Activity to Require an OSHA Emergency Temporary Standard on COVID-19

On March 5, 2020, Representative Bobby Scott, chairman of the House Committee on Education and Labor, and Representative Alma Adams, chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Labor Eugene Scalia calling on OSHA to promulgate an ETS to address COVID-19 exposure among healthcare workers.[71] This letter followed a January 2020 letter requesting that OSHA reopen its rulemaking on the infectious disease standard and begin to formulate for possible future promulgation an ETS to address COVID-19 exposure.[72] Senator Patty Murray, ranking member of the Senate Committee on Health, Education, Labor, and Pensions and a group of Democratic Senators sent a similar letter to the Secretary of Labor calling for an OSHA ETS.[73]

In addition, in March 2020, David Michaels, who served as the Assistant Secretary of Labor for Occupational Safety and Health during the Obama Administration, wrote an op-ed in *The Atlantic* calling on OSHA to promulgate a COVID-19 ETS.[74] On March 6, 2020, the AFL-CIO and 22 other unions petitioned OSHA for an ETS on infectious diseases that would cover all workers with potential exposures.[75] OSHA formally denied the AFL-CIO petition on May 29, 2020, claiming that an ETS is not necessary to protect employees from infectious diseases generally, or

[75] Letter from Richard L. Trumka, president, AFL-CIO, to The Honorable Eugene Scalia, Secretary of Labor, March 6, 2020, at https://aflcio.org/statements/petition-secretary-scalia-osha-emergency-temporary-standard-infectious-disease.

from COVID-19.[76] National Nurses United submitted a similar petition requesting that OSHA promulgate an ETS based largely on the Cal/OSHA ATD standard.[77] On May 4, 2020, the Center for Food Safety and Food Chain Workers Alliance submitted a petition requesting that OSHA promulgate an ETS to protect meat and poultry processing workers from COVID-19 exposure in the workplace.[78] On May 18, 2020, the AFL-CIO petitioned the U.S. Court of Appeals for the D.C. Circuit for a writ of mandamus to compel OSHA to promulgate a COVID-19 ETS.[79] The circuit court denied this petition on June 11, 2020.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020

On March 9, 2020, Representative Bobby Scott introduced H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020. This bill would require OSHA to promulgate a COVID-19 ETS within one month of enactment. The ETS would be required to cover healthcare workers and any workers in sectors determined by the CDC or OSHA to be at an elevated risk of COVID-19 exposure. The ETS would be required to include an exposure control plan provision and be, at a minimum, based on CDC's 2007 guidance and any updates to this guidance. The ETS would also be required to provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD standard, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS. Title II of the bill would provide that hospitals and skilled nursing facilities that receive Medicare funding and that are owned by state or local government units and not subject to state plans would be required to comply with the ETS. Similar provisions are included in S. 3475.

P.L. 116-127, the Families First Coronavirus Response Act

The provisions of H.R. 6139 were included as Division C of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The American Hospital Association (AHA) issued an alert to its members expressing its opposition to the OSHA ETS provisions in the bill.[80] Specifically, the AHA opposed the requirement that the ETS be based on the CDC's 2007 guidance. The AHA stated that unlike severe acute respiratory syndrome (SARS), which was transmitted through the air, COVID-19 transmission is through droplets and surface contacts. Thus, the requirement of the 2007 CDC guidance that N95 respirators, rather than surgical masks, be used for patient contact is not necessary to protect healthcare workers from COVID-19, and the use of surgical masks is consistent with World Health Organization guidance. The AHA also

[79] In re: American Federation of Labor and Congress of Industrial Organizations, D.C. Cir., No. 19-1158, May 18, 2020. This petition was filed in the U.S. Court of Appeals as Section 6(f) of the OSH Act [29 U.S.C. §655(f)] grants this court exclusive jurisdiction to provide judicial review of OSHA standards.

[80] Emily Kopp, "Hospitals want to kill a policy shielding nurses from COVID-19 because there aren't enough masks," *Roll Call*, March 3, 2020, at https://www.rollcall.com/2020/03/13/hospitals-want-to-kill-a-policy-shielding-nurses-from-covid-19-because-there-arent-enough-masks/. This alert is available to American Hospital Association (AHA) members on the AHA website at https://www.aha.org.

claimed that shortages of available respirators could reduce the capacity of hospitals to treat COVID-19 patients, due to a lack of respirators for staff. The OSHA ETS provisions were not included in the version of the legislation that was passed by the House and the Senate and signed into law as P.L. 116-127.

H.R. 6379, the Take Responsibility for Workers and Families Act

Division D of H.R. 6379, the Take Responsibility for Workers and Families Act, as introduced in the House on March 23, 2020, includes the requirement that OSHA promulgate an ETS on COVID-19 within seven days of enactment and a permanent COVID-19 standard within 24 months of enactment to cover healthcare workers, firefighters and emergency response workers, and workers in other occupations that CDC or OSHA determines to have an elevated risk of COVID-19 exposure. Division D of H.R. 6379 would amend the OSH Act, for the purposes of the ETS only, such that state and local government employers in states without state plans would be covered by the ETS. The provisions of Division D of H.R. 6379 were also included in S. 3584, the COVID-19 Workers First Protection Act of 2020, as introduced in the Senate.

This legislation would specifically provide that the ETS would remain in force until the permanent standard is promulgated and would explicitly exempt the ETS from the Regulatory Flexibility Act, Paperwork Reduction Act, and Executive Order 12866. OSHA would be granted enforcement discretion in cases in which it is not feasible for an employer to fully comply with the ETS (such as a case in which PPE is unavailable) if the employer is exercising due diligence to comply and implementing alternative means to protect employees.

Like the provisions in H.R. 6139 and the version of H.R. 6201 introduced in the House, the ETS and permanent standard under H.R. 6379 would be required to include an exposure control plan and provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS and permanent standard. Although the ETS provisions in H.R. 6139 and H.R. 6201 would require that the ETS be based on the 2007 CDC guidance, specific reference to the 2007 guidance is not included in this legislation. Rather, under H.R. 6379, the ETS and permanent standard would have to incorporate, as appropriate, "guidelines issued by the Centers for Disease Control and Prevention, and the National Institute for Occupational Safety and Health, which are designed to prevent the transmission of infectious agents in healthcare settings" and scientific research on novel pathogens.

States with occupational safety and health plans would be required to adopt the ETS, or their own ETS at least as effective as the ETS, within 14 days of the legislation's enactment.

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020, was introduced in the House by Representative Bobby Scott on April 21, 2020. This legislation includes the ETS and permanent standard provisions of Division D of H.R. 6379 and S. 3584 and would require that these standards cover healthcare workers, emergency medical responders, and "other employees at occupational risk" of COVID-19 exposure. This legislation also adds two provisions that would clarify the requirements for employers to record work-related COVID-19 infections and strengthen the protections against retaliation and discrimination offered to whistleblowers. Similar provisions are included in S. 3677 and were incorporated into H.R. 6800, the Heroes Act, as passed by the House.

COVID-19 Recordkeeping

Sections 8(c) and 24(a) of the OSH Act require employers to maintain records of occupational injuries and illnesses in accordance with OSHA regulations.[81] OSHA's reporting and recordkeeping regulations require that employers with 10 or more employees must keep records of work-related injuries and illnesses that result in lost work time for employees or that require medical care beyond first aid.[82] Employers must also report to OSHA, within 8 hours, any workplace fatality, and within 24 hours, any injury or illness that results in in-patient hospitalization, amputation, or loss of an eye. Employers in certain industries determined by OSHA to have lower occupational safety and health hazards are listed in the regulations as being exempt from the recordkeeping requirements but not the requirement to report to OSHA serious injuries, illnesses, and deaths.[83] Offices of physicians, dentists, other health practitioners, and outpatient medical clinics are included in the industries that are exempt from the recordkeeping requirements.

OSHA regulations require the employer to determine if an employee's injury or illness is related to his or her work and thus subject to the recordkeeping requirements.[84] The regulations provide a presumption that an injury or illness that occurs in the workplace is work-related and recordable, unless one of the exemptions provided in the regulations applies.[85] One of the listed exemptions is "The illness is the common cold or flu (Note: contagious diseases such as tuberculosis, brucellosis, hepatitis A, or plague are considered work-related if the employee is infected at work)."[86]

Because of the nature of COVID-19 transmission, which can occur in the community as well as the workplace, it can be difficult to determine the exact source of any person's COVID-19 transmission. Absent any specific guidance, this may make it difficult for employers to determine if an employee's COVID-19 is subject to the recordkeeping requirements.

Initial OSHA Recordkeeping Guidance

On April 10, 2020, OSHA issued enforcement guidance on how cases of COVID-19 should be treated under the recordkeeping requirements.[87] This guidance stated that COVID-19 cases were recordable if they were work-related.

Under this guidance, employers in the following industry groups were to fully comply with the recordkeeping regulations, including the requirement to determine if COVID-19 cases were work-related:

- healthcare;
- emergency response, including firefighting, emergency medical services, and law enforcement; and
- correctional institutions.

---

[81] 29 U.S.C. §§657(c) and 673(a).

[82] OSHA's reporting and recordkeeping regulations are at 29 C.F.R. Part 1904.

[83] The list of exempted industries is at 29 C.F.R. Subpart B, Appendix A. States with state occupational safety and health plans may require employers in these exempted industries to comply with the recordkeeping requirements.

[84] 29 C.F.R. §1904.5.

[85] 29 C.F.R. §1905.5(a).

[86] 29 C.F.R. §1904.5(b)(2)(viii).

[87] OSHA, *Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, April 10, 2020, at https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

For all other employers, OSHA required employers to determine if COVID-19 cases were work-related and subject to the recordkeeping requirements only if both of the following two conditions were met:

1. There was objective evidence that a COVID-19 case may have been work-related. This could have included, for example, a number of cases developing among workers who worked closely together without an alternative explanation.
2. The evidence of work-relatedness was reasonably available to the employer. For purposes of this guidance, examples of reasonably available evidence included information given to the employer by employees, as well as information that an employer learned regarding its employees' health and safety in the ordinary course of managing its business and employees.

Updated OSHA Recordkeeping Guidance

OSHA issued new guidance, effective May 26, 2020, on recordkeeping of COVID-19 cases.[88] This new guidance rescinds the previous guidance issued by OSHA on April 10, 2020. Under this new guidance, all employers, regardless of type of industry or employment, are subject to the recordkeeping and recording regulations for work-related cases of COVID-19. To determine if an employer has made a reasonable determination that a case of COVID-19 was work-related, OSHA says it will consider the following factors:

- the reasonableness of the employer's investigation of the COVID-19 case and its transmission to the employee;
- the evidence that is available to the employer; and
- the evidence that COVID-19 was contracted at work.

The guidance provides examples of evidence that can be used to demonstrate that a COVID-19 case was or was not work-related such as if an employee had frequent close contact with members of the public in an area with ongoing community transmission of COVID-19.

H.R. 6559

H.R. 6559 would require that the ETS and permanent standard established pursuant to the legislation include the requirement for the recording and reporting of all COVID-19 cases in accordance with OSHA regulations in place at the time of enactment. By referencing the regulations in place, this provision would serve to supersede OSHA's guidance from April 10, 2020, and apply the requirement, currently provided in the guidance effective May 26, 2020, to determine the work-relatedness of COVID-19 cases to all employers covered by the recordkeeping regulations.

Whistleblower Protections

Section 11(c) of the OSH Act prohibits any person from retaliating or discriminating against any employee who exercises certain rights provided by the OSH Act.[89] Commonly referred to as the

[88] OSHA, *Revised Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, May 19, 2020, at https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

[89] 29 U.S.C. §660(c). OSHA also enforces whistleblower provisions in 22 other federal statutes. Information on statutes with whistleblower provisions enforced by OSHA is at OSHA, *Whistleblower Statutes Summary Chart*, October 17, 2009, at https://www.whistleblowers.gov/sites/wb/files/2019-12/WB-Statute-Summary-Chart-10.8-Final.pdf.

whistleblower protection provision, this provision protects any employee who takes any of the following actions:

- files a complaint with OSHA related to a violation of the OSH Act;
- causes an OSHA proceeding, such as an investigation, to be instituted;
- testifies or is about to testify in any OSHA proceeding; and
- exercises on his or her own behalf, or on behalf of others, any other rights afforded by the OSH Act.[90]

Other rights afforded by the OSH Act that are covered by the whistleblower protection provision include the right to inform the employer about unsafe work conditions; the right to access material safety data sheets or other information required to be made available by the employer; and the right to report a work-related injury, illness, or death to OSHA.[91] In limited cases, the employee has the right to refuse to work if conditions reasonably present a risk of serious injury or death and there is not sufficient time to eliminate the danger through other means.[92]

H.R. 6559 would require that the ETS and permanent standard promulgated pursuant to the legislation expand the protections for whistleblowers. The following additional activities taken by employees would grant them protection from retaliation and discrimination from employers and agents of employers:

- reporting to the employer; a local, state, or federal agency; or the media; or on a social media platform; the following:
  - a violation of the ETS or permanent standard promulgated pursuant to the legislation;
  - a violation of the infectious disease control plan required by the ETS or permanent standard; or
  - a good-faith concern about an infectious disease hazard in the workplace;
- seeking assistance from the employer or a local, state, or federal agency with such a report; and
- using personally supplied PPE with a higher level of protection than offered by the employer.

H.R. 6800, The Heroes Act

The provisions of H.R. 6559, including the provisions relating to recordkeeping and whistleblower protections, were included as Title III of Division L of H.R. 6800, The Heroes Act. H.R. 6800 was passed by the House on May 15, 2020. In a letter to Speaker of the House Nancy Pelosi, the AHA expressed its opposition to the ETS provisions in The Heroes Act citing the potential for confusion that new regulations could bring and the "ongoing global lack of supplies, equipment and testing capability" faced by hospitals.[93] The AHA also stated that the provision

[90] 29 C.F.R. §1977.3. Public-sector employees, except employees of the United States Postal Service, are not protected by the whistleblower provision, but may be covered by whistleblower provisions in other federal and state statutes.

[91] For additional information on other rights covered by the whistleblower protection provision, see OSHA, January 9, 2019, *Investigator's Desk Aid to the Occupational Safety and Health Act (OSH Act) Whistleblower Protection Provision*, pp. 5-7, at https://www.osha.gov/sites/default/files/11cDeskAid.pdf.

[92] 29 C.F.R. §1977.12(b)(2).

[93] Letter from Thomas P. Nickels, executive vice president, American Hospital Association, to Hon. Nancy Pelosi,

OSHA-002515

that would require the ETS to be based on state standards "suggests that the federal government is surrendering its responsibility to appropriately regulate the nation to a state government agency without consideration of whether that state's decisions are appropriate for implementation anywhere and everywhere."

H.R. 925, The Heroes Act (Revised)

The provisions of H.R. 6559 and H.R. 6800 were included in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act, passed by the House on October 1, 2020.

Speaker, U.S. House of Representatives, May 14, 2020, at https://www.aha.org/system/files/media/file/2020/05/web-AHALettertoHouseonHEROESAct051420final.pdf.

Subject: Region 7 Daily Report 5.12.2020

Below is the COVID-19 Daily Report for Region 7

Administrative Actions, Waivers, and Other Programmatic Changes that Impact Agency Provision of Service or Mission Delivery (Externally Facing)

- Nothing new to report

Guidance, Communication and Outreach with Stakeholders

- Nothing new to report

Actions That Affect Federal Facilities and Personnel

- Nothing new to report

Other Notable Responses

Region 7

- Media reports and unreleased White House report identifies the top ten areas of recorded surges of 72.4 percent or greater. Des Moines, Iowa is among the ten.
- The report includes a separate list of "locations to watch" that include: Kansas City, Missouri; Omaha and Lincoln, Nebraska. The rates of new cases in Kansas City represented an increase of more than 200 percent over the previous week.
-

Missouri

- St Louis County has stated it will be filing a lawsuit after a gym re-opened in violation of the county stay-at-home order.

- The St Louis area coronavirus task is reporting a downward trend in hospitalizations while acknowledging that the area has twice the number of cases as Kansas City and three times the deaths.
- Rep. Maxine Waters sister has died of coronavirus in a St. Louis hospital.
- Masks will be required to ride mass transit in the St. Louis area.

Nebraska

- Nebraska's American Civil Liberties Union issued a four page plea to three health department directors and the state's labor commissioner requesting them to mandate safety policies in meat packing plants…The ACLU memo requests health officials to mandate federal guidelines to do the following:… KETV Newswatch 7 reached out to Gov. Pete Ricketts for a response to the ACLU's plea. "Apparently, the ACLU in their press release is saying the facilities aren't following OSHA's guidelines," said Ricketts. "That's really OSHA's business to enforce, not the state of Nebraska."
- Thousands of meatpacking workers across the country were recently ordered back to work in plants that have seen massive outbreaks of COVID-19… President Trump's recent executive order hasn't stopped more plants from closing down due to COVID-19 concerns, but 14 are slated to reopen this week, spiking fears among some workers that they will inevitably catch the virus. And while Agriculture Secretary Sonny Perdue has promised the agency is "working round the clock" to implement OSHA's recent pandemic safety guidelines for meatpackers, many are concerned those policies don't go far enough to reduce the risk of transmission in plants nationwide… A few days later, after coping with another week of more sick coworkers and the lack of communication around the near closure, dozens of employees, advocates and their families felt they had no choice left but to protest pandemic conditions at the plant. In the age of COVID, that means weekly drive-by demonstrations.

Iowa

- State leaders are closely watching Iowa's meat packing facilities, including Tyson's pork processing plant in Perry. The Perry plant had at least 730 workers test positive for COVID-19. KCCI's Lauren Donovan interviewed a woman who tested positive at the plant. Referred to Iowa OSHA.
- The Friendship Village Retirement Community is reporting that as of May 11th, 20 employees are reported positive due to COVID-19. Referred to Iowa OSHA.
- After reports of an uptick in COVID-19 cases, a strike team tested more than 400 employees at a Postville kosher beef plant. Rumors of COVID-19 at the plant have been circulating for weeks in the community of about 2,100 on the Allamakee-Clayton County border about 85 miles north of Cedar Rapids, Mayor Leigh Rekow said. Referred to Iowa OSHA.
- West Liberty Foods an Iowa turkey plant that is the site of a coronavirus outbreak said Friday that hundreds of employees will be furloughed this fall due to the nation's economic collapse... The company confirmed Friday that 136 employees have tested positive for coronavirus, after mass testing at the West Liberty plant last week. Referred to Iowa OSHA.

Kansas

- The Wichita Area Office is investigation three worker COVID deaths at National Beef, Dodge City, KS.

Please let me know if you have questions.

UFCW v. USDA, No. 19-2660, Dkt. No. 24 (D. Minn.) 10

I. INTRODUCTION

Plaintiffs seek a straightforward and uncontroversial remedy: an order from this Court that pursuant to Missouri's "stay at home" order, Defendants Smithfield Foods, Inc. and Smithfield Fresh Meats Corp. (together, "Smithfield") must operate their Milan, Missouri plant (the "Plant") consistent with Centers for Disease Control ("CDC") guidance, including guidance issued by the CDC this weekend regarding the operation of slaughterhouses and meatpacking plants during the COVID-19 pandemic, Dkt. No. 29-5 (collectively, "CDC guidance"). Consistent with the purpose of that guidance, and with the support of a range of public health experts, Plaintiffs argue that Smithfield's failure to comply with this guidance poses an urgent and ongoing threat to Plant workers, their community, and to the nation, including the food supply, which would be threatened further if the Plant experienced an outbreak like those that have emerged at other Smithfield plants.

Smithfield's Motion to Dismiss ("Smithfield Br."), Dkt. No. 29, does not argue that Plaintiffs have not pled the elements of their state law claims for public nuisance and breach of the duty to provide a reasonably safe workplace. Smithfield also does not argue they are somehow free to ignore Missouri's "stay at home" order or the CDC guidance that it incorporates. Instead, Smithfield asks this Court to step back and wait to adjudicate this case and protect public health and safety because it is possible that the federal Occupational Safety and Health Administration ("OSHA") or the Missouri Department of Health and Senior Services ("MDHSS") may, at some future point, decide to step in.

No law or doctrine prohibits this Court from addressing the urgent risks posed by Smithfield's operation of the Plant in a manner inconsistent with CDC guidance. Missouri courts have long allowed private plaintiffs to go to court to seek abatement of public nuisances that may cause harm to the public health, *Scheurich v. Sw. Missouri Light Co.*, 84 S.W. 1003, 1007 (Mo.

OSHA-002645

Ct. App. 1905), and to seek injunctions for breaches of the duty to provide a reasonably safe workplace, *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 13 (Mo. Ct. App. 1982). This case is consistent with those bedrock principles of Missouri tort law. The doctrines of primary jurisdiction and *Burford* abstention do nothing to change that tradition.

There is also nothing to wait for. OSHA and MDHSS have already acted by pointing to the CDC guidelines as the standards that employers should follow to prevent further spread of COVID-19. Those standards have recently become even more specific and undeniable pursuant to recommendations issued by CDC and OSHA to protect workers at poultry and meat processing facilities from the disease. *See* Dkt. No. 29-5.[1] Plaintiffs allege that Smithfield's failure to follow those guidelines violates Missouri common law and requires injunctive relief. The Court need not defer to agencies who have said all they need to say on this matter to resolve Plaintiffs' claims. This is all the more true because neither OSHA nor the MDHSS is engaged in enforcement of the CDC guidance within the Milan plant and OSHA and Missouri's public statements establish they will not enforce these essential rules.

This litigation and the Court's Order of April 26, which required Smithfield to comply with CDC guidance pending a hearing on Plaintiffs' motion for a preliminary injunction, *see* Dkt. No. 20, have already resulted in concrete improvements at the Milan Plant. New social distancing protocols and mask-wearing requirements, announced for the first time on April 27, are already making workers and the surrounding community safer than they were before. Supplemental Declaration of Jane Doe ("Second Doe Decl.") ¶¶ 6-8. These changes also put the

---

[1] Importantly, this new guidance calls for many of the same reforms recommended in Dr. Robert Harrison's declaration in support of Plaintiffs' Motion for Preliminary Injunction. Dkt. No. 3-4.

OSHA-002646

lie to Smithfield's prior representations to the Court that they were already in compliance when Plaintiffs filed suit. Smithfield Br. 3.

There remains much more that Smithfield must do to comply with the CDC guidance and ensure the Plant can remain open without the disastrous spread of COVID-19 that has forced other plants to close. Dismissing this action now in hopes of enforcement by OSHA and/or MDHSS, when both have indicated enforcement action is *not* forthcoming, undermines basic rights and threatens the safety of the Nation. Neither law nor logic suggests such a result.

II. FACTUAL BACKGROUND

Smithfield's argument that the Court need not order the requested relief because, so far, there are no *confirmed* cases of COVID-19 among workers at the Plant and relatively low numbers of cases in surrounding counties compared to other parts of the state misses the point. Smithfield Br. 3-4. Most importantly, "confirmed cases" is a peculiar standard on which to rely, because workers have already shown symptoms, Dkt. No. 3-5 ¶ 4 ("First Doe Decl.") (identifying at least 8 workers with symptoms), and Smithfield continues to refuse to offer the workers testing, Second Doe Decl. ¶ 13. A public health and slaughterhouse expert explains to the Court that without the relief requested here, spread of the disease in the Plant is "inevitable." *E.g.*, Declaration of Dr. Melissa Perry ("Perry Decl.") ¶¶ 9-10, 32.

Without Court intervention, Milan will likely join a long line of slaughterhouses around the country to become the source of a virus cluster. This morning, Smithfield's packing facility in Clinton, North Carolina reported two new positive cases.[2] Just this past Monday, Crete, Nebraska officials stated Smithfield's plant there would be closed because of an outbreak

[2] Chris Berendt, *Virus cases at Smithfield rise to seven*, THE SAMPSON INDEPENDENT (Apr. 29, 2020), https://www.clintonnc.com/news/48498/virus-casesat-smithfieldrise-to-seven.

OSHA-002647

(although it now appears Smithfield may be keeping that plant open despite the health and safety concerns).[3] Last week, a report examining meat and poultry plants determined that 150 such plants are located in counties that have an infection rate higher than 75% of the United States.[4] Plaintiffs filed this suit seeking solely injunctive relief to bring the Plant into compliance with existing public health guidance so that it could remain in operation, and so that the residents of the surrounding counties would not join the list of other rural areas that have turned into COVID-19 hot spots because they are home to meat processing facilities.

Plaintiffs' efforts to enforce Missouri law appear to be working already. In response to the suit, this Court Ordered Smithfield on April 26 to "comply with all guidance from CDC and other public authorities." Dkt. No. 20, at 3. Then, on April 27, a new sign appeared in the plant stating that masks must be worn at all times. Second Declaration of Axel Fuentes ("Fuentes Decl.") ¶¶ 4-5 & Ex. A. That same day, another new sign provided an updated protocol for clock-in and -out procedures to permit greater social distancing. *Id* ¶ 6; Second Doe Decl. ¶ 7.

However, Smithfield's Milan workers remain without some basic protections. They continue to stand shoulder-to-shoulder on the line. Second Doe Decl. ¶ 5. Hallways, restrooms, and break areas remain crowded, with workers "regularly closer than 6-feet apart." *Id.* ¶ 9. Smithfield has failed to provide handwashing breaks or allow workers to step off the line to blow

Many more are at risk. Operators may have to choose between worker health or meat in stores*, USA TODAY (Apr. 22, 2020), https://www.usatoday.com/in-depth/news/investigations/2020/04/22/meat-packing-plants-covid-may-force-choice-worker-health-food/2995232001/.

OSHA-002648

their noses. *Id.* ¶ 10. Smithfield's actual enforcement of its stated mask policy appears non-existent. *Id.* ¶¶ 3-4. Smithfield provides no paid sick leave and encourages workers to come in sick. *Id.* ¶¶ 12, 15. And Smithfield has not provided for testing or any system of contact tracing. *Id.* ¶ 13. These facts remain contrary to what Dr. Robert Harrison, Dr. Melissa Perry, and the CDC explain is necessary to keep the Plant from becoming an incubator for disease. *See* Declaration of Dr. Robert Harrison ("Harrison Decl.), Dkt. No. 3-4. In fact, Dr. Perry explains that immediately correcting these conditions is both practical and essential. Perry Decl. ¶¶ 8-32.

III. ARGUMENT

A. The Court Should Not Exercise Its Discretion to Apply the Primary Jurisdiction Doctrine Where the Relevant Federal Guidance Has Already Been Issued and the Only Question Is Its Enforcement, Which OSHA Has Disclaimed.

Primary jurisdiction "is to be 'invoked sparingly, as it often results in added expense and delay.'" *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005) (quoting *Red Lake Bank of Chippewa Indians v. Barlow*, 846 F.2d 474, 477 (8th Cir. 1988)). The district court should dismiss a case and refer a matter to a federal agency pursuant to the primary jurisdiction doctrine only where "the parties would not be unfairly disadvantaged." *Reiter v. Cooper*, 507 U.S. 258, 268-69 (1993). This is not such a case.

Here, Jane Doe and her coworkers, including many Rural Community Workers Alliance ("RCWA") members, as well as the communities where they live, have already benefitted from the changes instituted at the Plant in response to this Court's Order. Plaintiffs would be unfairly disadvantaged if the Court withdrew its supervisory presence, which ensures that Smithfield will continue complying with applicable OSHA and CDC guidance. This is particularly the case where Smithfield relies entirely on an "informal" letter they have received from OSHA, that cannot and—based on OSHA's statements—will not result in federal enforcement. Declaration

of Dr. David Michaels ("Michaels Decl.") ¶¶ 13-14; Declaration of Ann Rosenthal ("Rosenthal Decl.") ¶¶ 12-14.

1. Plaintiffs' Claims Do Not Involve OSHA Expertise.

The Eighth Circuit explains that a core objective of this prudential doctrine is to take advantage of "agency expertise," *Alpharma*, 411 F.3d at 938, but here, Plaintiffs ask the Court to consider claims that call for judicial, not administrative, resolution. Plaintiffs' public nuisance claims seek a remedy against business operations that cause a harm to the public generally. OSHA's jurisdiction focuses on the workplace. It has no authority to promulgate standards to protect the general public. *Steel Inst. of N.Y. v. City of New York*, 716 F.3d 31, 33 (2d Cir. 2013) ("the Act does not protect the general public, but applies only to employers and employees in workplaces"); *accord* Michaels Decl. ¶ 8; Rosenthal Decl. ¶ 5. And although Missouri's cause of action for violation of the right to a safe workplace certainly relates to occupational safety, that claim has long formed the basis for injunctive relief in court, even subsequent to the creation of OSHA in 1970. *See, e.g.*, *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 12-13 (Mo. App. 1982).[5] Plaintiffs bring claims under state common law doctrines that OSHA's regulatory scheme does not displace, and there is no reason for this Court to defer to the primary jurisdiction of OSHA before resolving those claims. *See* 29 U.S.C. § 653(b)(4); *United Steelworkers of America v. Marshall*, 647 F.2d 1189, 1235-36 (D.C. Cir. 1980) (OSHA leaves "state schemes wholly intact as a legal matter"). In fact, primary jurisdiction is not applicable where plaintiffs do not seek to

[5] The Missouri court expressly rejected an argument that it should defer and allow OSHA to address the problem because it could not identify an "OSHA standard which would appear to cover tobacco smoke." *Smith*, 643 S.W.2d at 14. Similarly, OSHA "has not adopted a specific standard that protects employees from the risks of infectious disease like COVID-19." Michaels Decl. ¶ 10.

enforce a federal statute or regulation but bring "an independent state law cause of action for negligence and strict liability." *Ryan v. Chemlawn Corp.*, 935 F.2d 129, 132 (7th Cir. 1991).

Allowing Plaintiffs claims to proceed will also further national "consistency"—the other rationale for primary jurisdiction—because any relevant OSHA activity has already occurred, and the Court already has the benefit of the agency's "expertise." *See Alpharma*, 411 F.3d at 938. In particular, OSHA, in conjunction with the CDC, has published detailed guidelines on how to mitigate the spread of COVID-19 in meat processing facilities. Dkt. No. 29-5 (guidance). Plaintiffs simply request that the Court require Smithfield to comply with those guidelines, as Drs. Harrison and Perry recommend. Eighth Circuit precedent instructs that courts should not defer to agencies under the primary jurisdiction doctrine when the court is asked to analyze what an agency has already done, not substitute its judgment as to what an agency might or should do in the future. *Alpharma*, 411 F.3d at 939 ("The question of whether Pennfield's BMD has been approved as safe and effective is much different from the question of whether Pennfield's BMD should be approved as safe and effective, and it is only the latter that requires the FDA's scientific expertise."); *see also Illinois Pub. Interest Research Grp. v. PMC, Inc. Through PMC Specialties Grp.*, 835 F. Supp. 1070, 1076 (N.D. Ill. 1993) (declining to defer to agency's primary jurisdiction where the court was not being asked to set standards but merely "to enforce existing standards"); *Segedie v. Hain Celestial Grp., Inc.*, No. 14-5029, 2015 WL 2168374, at *13 (S.D.N.Y. May 7, 2015) (declining to defer to agency's primary jurisdiction where the "claims seek to hold Defendant to existing regulations, not proposed regulations").

2. There Are No Relevant OSHA Proceedings.

Further, there is no administrative activity to which the Court could defer—as is necessary for the primary jurisdiction doctrine to apply. *See, e.g., Natural Res. Def. Council v.*

Metro. Water Reclamation Dist. of Greater Chi., No. 11-02937, 2016 WL 1298124, at *4 (N.D. Ill. Mar. 31, 2016) (holding primary jurisdiction doctrine does not apply because defendant did "not identify with precision any relevant proceedings to which this Court should defer for the resolution of the question presented."). Smithfield argues that an April 22 letter from OSHA's regional administrator suggests that "OSHA is already in the process of exercising its jurisdiction at the Plant." Smithfield Br. 1. But that letter responds to a specific workplace injury that occurred on April 15 and says nothing about COVID-19. Dkt. No. 29-2. The sole reference to the virus appears in a generic COVID-19 questionnaire following a more specific questionnaire addressing the April 15 incident. *Id.*

Moreover, the April 22 letter represents an inquiry, not an inspection, and does not suggest an inspection is imminent. It is conceivable that under OSHA's regulatory regime this written exchange of information, called an investigation, could lead OSHA to request an in-person inspection. Michaels Decl. ¶¶ 15-16. However, the interim guidance OSHA has issued for its administrators during the pandemic makes this unlikely; OSHA has expressly stated its policy is *not* to inspect meat packing plants. Michaels Decl. ¶¶ 13-14; Rosenthal Decl. ¶ 13; *see also* Dkt. No. 29-4 (guidance).[6] An inspection is ***a prerequisite*** to any OSHA action that could require a workplace to abate unsafe conditions. 29 U.S.C. § 658(a); *see also* Michaels Decl. ¶ 15; Rosenthal Decl. ¶ 14. Furthermore, if such an inspection did occur, it could in turn lead to a

---

[6] Indeed, Dr. Michaels, the longest serving head of OSHA in its history, and a current scholar on its practices states that throughout the crisis "OSHA has failed to enforce any of its limited requirements that could conceivably protect meatpacking workers from illness." Michaels Decl. ¶ 8; *see also id.* ¶¶ 10, 12 (explaining OSHA's only potentially applicable standards leave their implementation to the discretion of the employer and that OSHA has not taken any steps to make them mandatory in response to COVID-19). *See also* Rosenthal Decl. ¶¶ 10-12 (stating substantially the same).

citation issued anytime in the next six months, which would then be reviewable by the independent Occupational Safety and Health Review Commission before it could be enforced. 29 U.S.C. § 658(c), 659(c); *see also* Michaels Decl. ¶¶ 16-17; Rosenthal Decl. ¶¶ 15-17.

Dr. Michaels and Anne Rosenthal, both of whom served long stints within high levels of OSHA, are of the opinion that written investigation letters like the one sent to Smithfield on April 22 rarely, if ever, lead to citations, enforcement actions, or penalties, particularly in light of OSHA's stated non-enforcement policy against meat packing plants. Michaels Decl. ¶¶ 13-16. Rosenthal Decl. ¶¶ 11-3. Michaels and Rosenthal also opine that even if the letter did lead to an inspection and to any kind of enforcement on a reasonable timeline, none of the specific OSHA standards spelled out on page 13 of Smithfield's motion would be sufficiently strong to allow OSHA to enforce the CDC guidelines, even the guidelines that OSHA has helped to promulgate. Michaels Decl. ¶¶ 10-12; Rosenthal Decl. ¶¶ 8-9.

Smithfield argues that the Department of Labor could seek an emergency injunction to enforce OSHA standards even absent an inspection, but that argument is belied by statute and Supreme Court and Eighth Circuit law. 29 U.S.C. § 662(c) (noting that the Secretary of Labor will request an injunction only in response to a recommendation from an in-person inspector); *Whirlpool Corp. v. Marshall*, 445 U.S. 1, 8-9 (1980) (explaining that OSHA's emergency injunction process begins with an inspection); *N.L.R.B. v. Tamara Foods, Inc.*, 692 F.2d 1171, 1181 (8th Cir. 1982) (same). Furthermore, Smithfield points to no case where this power was actually used. Plaintiffs could locate only two in the entire country, neither of which was decided in the past 25 years. *Reich v. Dayton Tire, a Div. of Bridgestone/Firestone, Inc.*, 853 F. Supp. 376, 378-79 (W.D. Okla. 1994) (Secretary issued request for injunction following multiple inspections over an eleven-month period); *Marshall v. Daniel Const. Co., Inc.*, 563 F.2d 707,

710-15 (5th Cir. 1977) (noting that employee's right under OSH Act is limited to requesting an inspection, and inspector's right is limited to recommending that the Secretary seek an emergency injunction from the court in the event that dangerous conditions are found).[7]

Finally, Smithfield attempts to frighten this Court with claims that the injunctive relief Plaintiffs are seeking is "truly unprecedented" because it gives Plaintiffs' experts too much control over crafting a remedy. Smithfield Br. 14. Although some courts have declined to issue preliminary injunctive relief responding to emergency conditions caused by COVID-19, many other courts have granted such relief, even when it required detailed changes to facility operations recommended by plaintiffs and their experts. *See, e.g.*, *Fraihat v. U.S. Immigration & Customs Enf't*, No. 19-1546, 2020 WL 1932570, at *21-*29 (C.D. Cal. Apr. 20, 2020) (granting preliminary injunction mandating that ICE revisit custody determinations, including considering release for all persons in ICE detention whose age or health conditions place them at increased risk due to the COVID-19 pandemic); *Esshaki v. Whitmer*, No. 20-10831-, 2020 WL 1910154, at

---

[7] Last night, the President issued an Executive Order stating that the United States Department of Agriculture ("USDA") would be protecting worker health and safety at meat packing plants. *See* "Executive Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19," The White House (April 28, 2020), https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/. This order does not impact these proceedings. Importantly, twice in the last six months USDA expressly disclaimed that its Food Safety and Inspection Service, which is its division that works in the plants, has *any* role to play in worker safety and thus any expertise on how to protect workers. USDA Brief, *UFCW v. USDA*, No. 19-2660, Dkt. No. 16, at 29 (D. Minn.) ("[N]or are issues of workplace safety reasonably related to FSIS's food safety mission" (citing *Dawkins ex rel. Estate of Dawkins v. United States*, 226 F. Supp. 2d 750, 757 (M.D.N.C. 2002)); USDA Reply, *UFCW v. USDA*, No. 19-2660, Dkt. No. 24, at 15 (D. Minn.) ("[W]orker safety falls outside FSIS's regulatory authority" and therefore USDA defers to OSHA). Moreover, the Executive Order references OSHA guidance—not USDA promulgating any new standard—confirming that the Court already has before it whatever expertise the government can provide.

*1 (E.D. Mich. Apr. 20, 2020) (granting preliminary injunction reducing Michigan signature requirement for inclusion on ballot by 50% in light of COVID-19 pandemic); *Cameron v. Bouchard*, No. 20-10949, 2020 WL 1929876, at *2 (E.D. Mich. Apr. 17, 2020), modified on reconsideration, No. 20-10949, 2020 WL 1952836 (E.D. Mich. Apr. 23, 2020) (granting TRO requiring jail to implement certain minimum measures to protect against spread of COVID-19, including ensuring access to no-cost soap and hand sanitizer, ensuring staff wash hands and wear PPE, conduct testing, and provide for "adequate spacing of six feet or more between people incarcerated, to the maximum extent possible, so that social distancing can be accomplished").

Here, where Plaintiffs' experts' recommendations track closely if not completely CDC guidance, including recent guidance specific to the meat processing industry, Court action will not be radical. Plaintiffs merely request the Court extend the Order it already issued and allow an inspection by Plaintiffs' designated expert to determine whether the guidelines are being followed and if additional measures may be necessary given the particular feature of the Plant. In light of the certain crisis that will result if Smithfield continues to delay protecting its workers, it is Smithfield's request the Court decline to act that is extraordinary. *See generally* Perry Decl.

B. The Court Should Not Exercise Its Discretion to Defer to State and County Health Departments That Expressly Embrace the Same CDC Guidance Plaintiffs Seek to Enforce.

With its primary jurisdiction argument, Smithfield suggests that the workplace safety issues at stake in this case are so uniquely committed to the expertise of federal OSHA that this Court should dismiss the matter and defer to OSHA. With its *Burford* abstention argument, Smithfield makes the entirely contradictory suggestion that the matters at stake here are so bound up with the *state* public health regulatory scheme that the federal courts should defer to the State of Missouri, its agencies, and its courts in this matter. Smithfield's self-defeating *Burford* argument provides no basis to dismiss Plaintiffs' claims.

With respect to *Burford* abstention, the Supreme Court has instructed that "federal courts have a strict duty to exercise the jurisdiction conferred upon them by Congress" and may decline to do so only "under exceptional circumstances." *Quackenbush v. Allstate Ins. Co.*, 517 U.S. 706, 716 (1996) (citations and internal quotations omitted). The Eighth Circuit has likewise stated "*Burford* abstention applies when a state has established a complex regulatory scheme supervised by state courts and serving important state interests, and when resolution of the case demands specialized knowledge and the application of complicated state laws." *Bilden v. United Equitable Ins. Co.*, 921 F.2d 822, 825 (8th Cir. 1990). *Burford* applies only where the state has developed a centralized "system of thorough judicial review" specific to the complex regulatory scheme at issue. *Burford v. Sun Oil Co.*, 319 U.S. 315, 325 (1943); *see also United States v. Morros*, 268 F.3d 695, 705 (9th Cir. 2001) (applying *Burford* abstention only when a state has consolidated all disputes regarding the regulatory scheme at issue into a single, designated court). This balancing of interests "only rarely favors abstention." *Quackenbush*, 517 U.S. at 728. Where, as here, federal court jurisdiction is conferred by diversity of citizenship, even if there were "difficult or uncertain" questions of state law (and there are not) the Supreme Court has made clear that *Burford* supplies no basis to relinquish the jurisdiction Congress has conferred. *Meredith v. City of Winter Haven*, 320 U.S. 228, 234 (1943).

In lieu of actually meeting the doctrine, Smithfield suggests vaguely that "this matter should be handled by state and county public health agencies." Smithfield Br. 17. But the fact that state and local health agencies have the authority, in theory, to enforce public health rules does not amount to a centralized "system for thorough judicial review" of disputes relating to the common law rights that Plaintiffs assert here. Instead, to enforce their rights, Plaintiffs must rely on their time-honored ability to petition a court, including a federal court where federal

jurisdiction otherwise lies. *See, e.g.*, *Jackson v. City of Blue Springs*, 904 S.W.2d 324, 329 (Mo. App. 1995); *K.C. 1986 Ltd. P'ship v. Reade Mfg.*, 33 F. Supp. 2d 1143, 1156 (W.D. Mo. 1998). The alternative to federal courts exercising their jurisdiction over cases like these is that these cases will go to state court where they are just as likely to be heard by courts without public health expertise in these matters and just as likely to yield inconsistent outcomes. *Compare Burford*, 319 U.S. at 326 ("To prevent the confusion of multiple review of the same general issues, the [Texas] legislature provided for concentration of all direct review of the Commission's orders in the State district courts of Travis County.").

Furthermore, although state courts may have jurisdiction to hear Plaintiffs' claims, *Burford* abstention is only appropriate "[w]here timely and adequate state-court review is available." *New Orleans Pub. Serv., Inc. v. Council of City of New Orleans*, 491 U.S. 350, 361 (1989); *Univ. of Maryland at Baltimore v. Peat Marwick Main & Co.*, 923 F.2d 265, 271 (3d Cir. 1991). In this case, remanding this issue to state court would require delay that Plaintiffs and the public generally cannot afford.

The Court's exercise of its jurisdiction here likewise "would [not] disrupt a state administrative process." *Heartland Hosp. v. Stangler*, 792 F. Supp. 670, 672 (W.D. Mo. 1992) (quoting *Cty of Allegheny v. Frank Mashuda Co.*, 360 U.S. 185, 189 (1959)). It may be true that public health agencies in Missouri have expertise regarding public health matters and have a responsibility for exercising public enforcement. But the "exceptional circumstances" warranting abstention apply only where the party seeking abstention can point to a specific state administrative process that will be disrupted by the federal proceedings. *Caranchini v. Kozeny &*

OSHA-002657

McCubbin, LLC, No. 11-0464, 2011 WL 5921364, at *5 (W.D. Mo. Nov. 28, 2011) (Kays, J.). Smithfield identifies no such process here.[8]

Assuming there was a special forum to which the Court could defer (and there is not), there is also no reason to defer as nothing in Missouri's law of public nuisance or its right to a safe workplace tort is "particularly complicated," and the Court's exercise of its jurisdiction here would not frustrate Missouri's interest in managing public health issues. *Doe v. McCulloch*, 835 F.3d 785, 788 (8th Cir. 2016) (declining to apply *Burford* abstention to question of Missouri state law). Aside from general principles of Missouri tort law, the only state law at issue here is the "stay at home" order issued by the Governor in March. That already-promulgated order provides a relatively straightforward mandate. It includes multiple references to "CDC guidance," Dkt. No. 29-1 ("stay at home" order), and makes the same recommendations regarding social distancing, even for essential businesses that must remain open, that the CDC and OSHA have emphasized in their guidance documents, including guidance documents specific to the meat processing industry, *see* Dkt. No. 29-4. An established state regime that actually relies on federal guidance, which is what Plaintiffs seek to enforce, is not a basis for *Burford* abstention.

Smithfield seeks to manufacture a complex question by pointing to language in the "stay at home" order that designates meatpacking Plants as essential operations that should stay open

---

[8] It bears mentioning that Missouri's attorney general saw no need to oforgo litigation or even to litigate in state court because of the "active[] involve[ment]" of state and local public health agencies, *See* Smithfield Br. 17. He filed a lawsuit in federal district court against the People's Republic of China, asserting Missouri common law claims of public nuisance. *Missouri v. The People's Republic of China*, No. 20-99, Compl., Dkt. No. 1 (E.D. Mo.). The chief law enforcement officer of the state properly concluded that the federal interests in "in affording foreign litigants a neutral forum for the adjudication of state law claims against them" outweigh any state law interests regarding coherent application of its public nuisance doctrine. *See Cleveland Hous. Renewal Project v. Deutsche Bank Tr. Co.*, 621 F.3d 554, 568 (6th Cir. 2010).

OSHA-002658

and suggesting Plaintiffs' request that Smithfield provide for social distancing would prevent Smithfield from operating. Smithfield Br. 17. Not so. Plaintiffs do not seek to close the Plant. Smithfield and its workers can continue operations while complying with social distancing requirements. In fact, that may be the *only* way that Smithfield can operate the Plant safely. Dr. Perry, an occupational health and safety professor and past president of the American College of Epidemiology, states that in her professional opinion, workers on meat production lines must stand at least six feet apart in order to perform their jobs safely during the current pandemic. If they do not, disease *will* spread in the Plant and into the surrounding community. Perry Decl. ¶¶ 9-13 ("Without social distancing, it is my expert opinion that the spread of COVID-19 in slaughterhouses and meat packing plants is inevitable."). Requiring social distancing in this case, therefore, would not be "disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern," *Wolfson v. Mutual Benefit Life Ins.*, 51 F.3d 141, 144 (8th Cir. 1995). Smithfield fails "to prove that the exercise of federal jurisdiction would in any way frustrate the state's interests on the facts of this case" as is necessary for *Burford* abstention. *Melahn v. Pennock Ins., Inc.*, 965 F.2d 1497, 1507 (8th Cir. 1992).

IV. CONCLUSION

For the foregoing reasons, Plaintiffs respectfully request that the Court deny Smithfield's motion to dismiss.

April 29, 2020

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

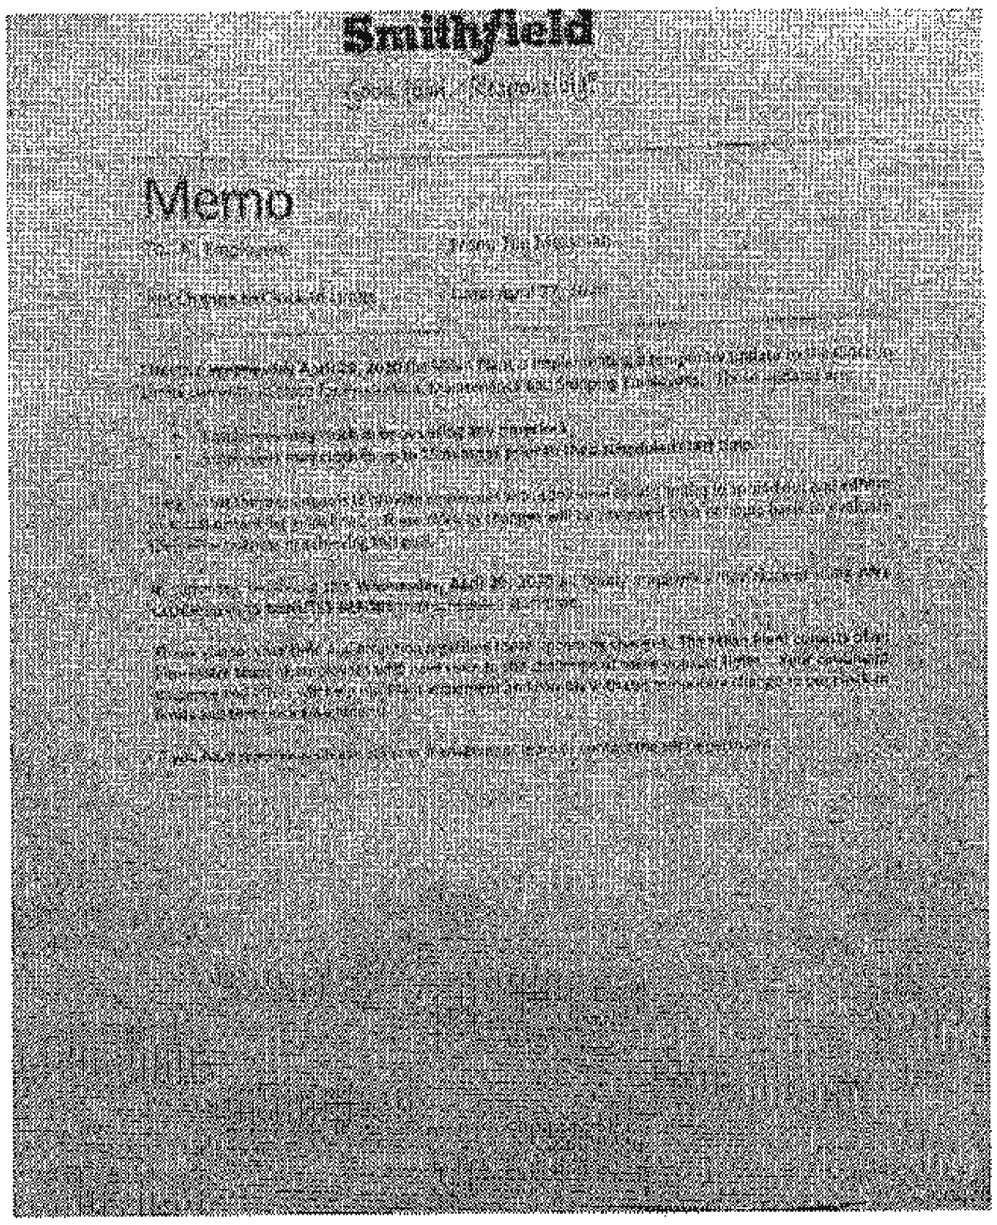
Defendants.

Declaration of Jane Doe

I, Jane Doe, hereby declare as follows:

1. I previously submitted a declaration in support of this case.

2. I submit this declaration to describe additional things I have witnessed since I submitted my first declaration.



3. In the afternoon following me filing this suit, a new supervisor appeared at the Milan plant (the "Plant") to check if employees were wearing masks. That new supervisor or another new supervisor has been there in the mornings and afternoons since last Thursday to see if employees are wearing masks.

4. However, I have witnessed employees without masks on in front of these supervisors and those employees were not instructed to put their masks back on.

5. Workers remain as close together on the line as they were previously, still standing shoulder-to-shoulder.

6. Starting Monday (April 27, 2020), I noticed Smithfield had changed some of the dividers between workers to make them sturdier, but it has not yet done so for all of the dividers.

7. I took the photo of the memo shown below. The memo is dated April 27, 2020. It appeared for the first time this week, and states that we will have a grace period to clock in, and can use any clock to clock in or out, to reduce crowding.

Smithfield

Memo

8. On Monday (April 27, 2020), I also noticed that Smithfield had added an additional tent outside the cafeteria to allow workers to sit during their lunch break.

9. However, the hallways, restrooms, and break areas remain crowded. We are regularly closer than 6-feet apart.

10. We have not been provided any additional breaks to wash our hands, or tissues to blow our noses.

11. Smithfield continues to send a worker to the line to spray our gloves with sanitizer as we work, but that worker will not spray our hands.

12. There have been no new announcements about paid sick leave.

13. No worker that I know of has been offered a test for COVID-19 and, although I know workers who have had symptoms, no worker I know of has been told by Smithfield they have been in contact with another worker who has had symptoms.

14. Starting today, Tuesday, April 28, 2020, Smithfield has reduced the number of hogs it is slaughtering at the plant, but it has also said it will reduce our hours.

15. It has informed us that we will receive an extra $5/hour because of the reduced hours, but has also said if we take a personal day we will be paid the standard hourly rate, not the increased rate.

16. I have been told that Smithfield said in this case that if I believe the statements I have made and that workers at the Plant are at risk for contracting COVID-19 I would put my name on this case.

17. I am aware of other workers who have sued the Plant and made their name public. Only one still works at the Plant. She is regularly tracked by supervisors looking to write-up her conduct.

18. I myself have been harassed by my supervisor when I have raised much more minor concerns than those I raise here.

19. I greatly fear for the health and safety of me and my family, but I also fear what Smithfield will do to me for making these facts public.

I declare under penalty of perjury the foregoing is true and correct.

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

Defendants.

Declaration of Melissa J. Perry, Sc.D., M.H.S.

I, Dr. Melissa J. Perry, declare as follows:

1. I am currently Professor and Chair of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University, in Washington, D.C.

2. I am co-chair of the National Academies Standing Committee on Use of Emerging Science for Environmental Health Decisions.

3. I am a past President of the American College of Epidemiology; a recent-past Chair of the Board of Scientific Counselors for the National Center for Environmental Health/Agency for Toxic Substances and Disease Registry of the Centers for Disease Control and Prevention ("CDC"); and have serve as a standing member of the National Institute for Occupational Safety and Health research grant review panel.

4. Of particular relevance to this matter, I began studying slaughterhouses and meat packing facilities in 2004. I have published six peer-reviewed scientific journal articles on worker health and safety at those facilities.

DocuSign Envelope ID: 712EE506-5277-4809-8473-C04AFDB20D45

5. As part of that work, I visited four meat processing plants, collected surveys and interviews from 400-500 workers in those facilities, and spoke with engineers regarding the organizational structure of pork processing plants and how they can be redesigned to further worker health and safety.

6. A full copy of my current CV is attached as Exhibit A.

7. In this declaration, I respond to Defendants' claim that it is consistent with Missouri's "stay at home order" for slaughterhouses to require workers to work closer than 6-feet apart, because their "job duties require contact with other people closer than six feet."

8. To the contrary, in my expert opinion, it is fully possible to space workers more than 6-feet apart on these facilities' production line, as the CDC guidelines—which are incorporated into Missouri's "stay at home order"—recommend.

9. In fact, it is my expert opinion that such social distancing, along with other requests Plaintiffs make in this case (*e.g.*, rest breaks, paid leave), not only can be implemented in ways that allow the plants to continue to operate, but they are absolutely necessary so the facilities can continue to operate, as intended by Missouri's designation of them as "essential businesses."

10. Without social distancing, it is my expert opinion that the spread of COVID-19 in slaughterhouses and meat packing plants is inevitable and they will be forced to shutter, as we have seen throughout the country, including with Defendants' facilities.

11. Slaughterhouses and meat packing plants operate using a production line on which workers are stationed. In departments including slaughter, eviscerate, debone,

DocuSign Envelope ID: 712EE506-5277-4809-8473-C04AFDB20D45

smoke, cut and pack, workers repeatedly perform the same task to take apart the animals and produce products as the meat goes by. Frequently multiple workers are stationed next to each other performing the same cuts on alternating pieces of meat.

12. If meat is moving down the line more slowly, the plants will be able to remove some workers who were performing the same task, which will allow for adequate distancing between workers, consistent with Missouri's "stay at home" order and CDC guidance.

13. While a slower line speed may reduce the overall volume of meat produced in any given day, in my expert opinion the spacing it would facilitate is the only way the plant will be able to continue to produce meat at all.

14. If plants fail to implement social distancing, COVID-19 will eventually spread through the workforce, forcing the plants and other essential businesses that rely on them to close.

15. In other words, while the daily volume of meat may drop, overall production continuity will not be hindered by spacing, because the plants will be able to maintain operations, whereas without distancing they will quickly be forced to close.

16. Without ensuring, at a bare minimum, six feet of space between workers, plants will quickly spread coronavirus transmission and foster COVID-19 disease outbreaks.

17. The failure to protect plant workers will not only lead to the closure of those facilities, but other essential businesses. The meat industry is highly concentrated and integrated. If a plant closes, that likely means surrounding farmers will have no place to deliver their animals for slaughter, transportation workers will no longer be employed

DocuSign Envelope ID: 712EE506-5277-4809-8473-C04AFDB20D45

carrying those animals, and workers for grocery chains will be out of jobs because they will not have products to pick up and distribute. Put another way, maintaining the health and safety of slaughterhouse and meat packing workers is essential to a broad array of "essential businesses," not just those of Defendants.

18. Plaintiffs also ask the Court to ensure that workers be allowed to take additional breaks to wash their hands and maintain their personal health and hygiene. That too is both necessary to keep plants operational and can be easily implemented.

19. If a plant slows the line to allow for social distancing, as it must, then it will be able to use its existing workforce to rotate workers on and off the line. In other words, with less workers on the line, there will be more replacement workers, allowing for regular breaks. Those breaks will ensure proper self-care, which, in my expert opinion and based on CDC guidelines, is core to stopping the spread of COVID-19.

20. Further, by slowing the line, the plants will be able to alter their pay structure and leave policies to ensure that sick workers are sent home and workers are compensated for time out while they are sick, as Plaintiffs request.

21. The CDC states, and I agree, that such changes to leave policies are an absolutely essential step to reducing transmission.

22. If there is any pressure or incentive for workers to show up with symptoms of COVID-19, the disease will spread, which will result in the closure of the plants and the related businesses, harming production more than what would occur from reduced speeds.

23. However, by reducing the line speed, workers will be able to take sick leave when needed without meaningfully impacting a plant's operations.

DocuSign Envelope ID: 712EE506-5277-4809-8473-C04AFDB20D45

24. While it should go without saying, for the avoidance of any doubt, in my expert opinion the other immediate relief requested by Plaintiffs, namely providing handwashing stations and tissues, and implementing a protocol to clean high-touch surfaces is both fully within the capabilities of the slaughterhouses and meat packing plants and would not prevent them from operating.

25. I also agree that such protections are necessary to prevent the spread of COVID-19 at the plants, as the CDC has made clear.

26. While Defendants state providing tissues could somehow be problematic for USDA guidelines, workers can and should be provided the opportunity step away from the line to blow their nose, sneeze or cough in order to protect them and public health. If the line speed is slowed, as it should be, replacement workers will be available to step in as need be.

27. Finally, I agree with Plaintiffs that it is necessary for experts to be able to access the plant to determine what other steps are required and feasible to protect worker health and safety at a particular facility in addition to those outlines above. While I wish there was an independent agency engaged in such activities, I have been tracking the work of the Occupational Safety and Health Administration, CDC, and other federal agencies in response to the pandemic and have not seen any one of them take the necessary steps to enforce worker health and safety standard.

28. My understanding is that the CDC has engaged in some tours of meatpacking plants, but I am only aware of such inspections occurring after plants have been closed due to the spread of COVID-19.

DocuSign Envelope ID: 712EE506-5277-4809-8473-C04AFDB20D45

29. To protect against the spread of disease and ensure that plants can stay open and continue producing meat, it is essential that such inspections occur before an outbreak.

30. Thus, I would recommend Plaintiffs' expert be allowed to visit Defendants' Milan, Missouri plant and provide the Court additional recommendations of what is necessary to keep its workers safe and the plant open.

31. I am prepared to visit the plant if Defendants will provide me access or the Court will require them to do so.

32. For the reasons stated above, I strongly disagree with Defendants' assertion that the relief requested in this suit is contrary to keeping Defendants' facilities operating. In my opinion, while it is unfortunate that it has required legal action, because of the inaction of the federal government, the requested interventions are the only way to correct unsafe conditions that, if not corrected, will inevitably lead to the spread of COVID-19 and plants' closures.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

EDUCATION:

Date	Discipline	Degree	Institution
1988	Psychology	BA	University of Vermont
1990	Public Health	MHS	The Johns Hopkins University School of Hygiene and Public Health
1993	Public Health	ScD	The Johns Hopkins University School of Hygiene and Public Health

POSTDOCTORAL TRAINING:

Research Fellowships:

Dates	Field of Research	Place
1997-99	Cancer Prevention	Harvard School of Public Health
2003	Molecular Biology	Woods Hole Marine Biological Laboratory

ACADEMIC APPOINTMENTS:

Dates	Title	Department	Institution
2017-18	Interim Associate Dean for Research	Office of the Dean	Milken Institute School of Public Health
2011-present	Professor	Department of Environmental and Occupational Health	Milken Institute School of Public Health
	Professor	Epidemiology and Biostatistics	Milken Institute School of Public Health

	Professor	Biochemistry and Molecular Biology	School of Medicine and Health Sciences The George Washington University
2011-present	Chair	Department of Environmental and Occupational Health	Milken Institute School of Public Health The George Washington University
2011-2012	Adjunct Associate Professor of Occupational Epidemiology	Environmental Health	Harvard School of Public Health
2007-10	Associate Professor of Occupational Epidemiology	Environmental Health	Harvard School of Public Health
2002-07	Assistant Professor of Occupational Epidemiology	Environmental Health	Harvard School of Public Health
1999-2002	Instructor	Environmental Health	Harvard School of Public Health
1995-99	Assistant Professor	Health Policy Institute Epidemiology Division	Medical College of Wisconsin
1997-99	Visiting Scientist	Environmental Health	Harvard School of Public Health
1992-95	Research Assistant Professor	Psychology	University of Vermont

HONORS AND DISTINCTIONS:

2019-present	Fellow, The *Hedwig van Ameringen* Executive Leadership in Academic Medicine (ELAM) Fellowship
2018-present	Board Member, Frontiers in Reproduction, Woods Hole Marine Biological Laboratory
2017	Frontiers in Reproduction Distinguished Alumni Award, Woods Hole Marine Biological Laboratory
2016-present	Co-Chair, National Academies of Sciences, Engineering, and Medicine Committee on Emerging Science
2015-present	Fellow, The *Collegium Ramazzini*
2015	Mentor, SPHHS EOH Culminating Experience Award, George Washington University
2015-present	Chair, Board of Scientific Counselors, Center for Environmental Health/Agency for Toxic Substances and Disease Registry, Centers fror Disease Control
2015-present	Founding Chair, DC Area Colleges and Universities Environmental and Occupational Health Consortium
2014-15	President, American College of Epidemiology
2012	Mentor, SPHHS EOH Culminating Experience Award, George Washington University
2011	Alumni Inductee, *Delta Omega* Honorary Society, Alpha Chapter, Johns Hopkins University
2009-present	Fellow, American College of Epidemiology
2007	Mentor, Laurance S. Rockefeller Thesis Prize, Harvard College

2003	Frontiers in Reproduction Fellowship, Woods Hole Marine Biological Laboratory
1997	National Cancer Institute Postdoctoral Fellowship
1990	National Institute of Mental Health Predoctoral Fellowship
1988	*Alpha Kappa Delta* International Sociology Honor Society
1988	Vermont Conference on Primary Prevention Award for Prevention Research
1988	*Phi Beta Kappa*

Recent Invited Presentations (No honorarium was received)

1) Speaker, The Human Health Effects of Neonicotinoids. International Task Force on Systemic Pesticides. Centre de Biophysique Moleculaire, Orleans, France, April 10-11, 2019.

2) Speaker, Organochlorines in Cord Blood and Risk for Sperm Aberrations. Center for Occupational and Environmental Health, Univeristy of Cape Town, South Africa, November 12-15, 2018

3) Speaker, Associations between Environmental Chemicals, Spermatogenesis and Non Disjunction. Environmental Mutagenesis and Genomics Society, San Antonio, Texas, September 22-26, 2018

4) Chair, Reproductive Functions. PPTox V1 Conference, Faroe Islands, Denmark, May 27-30, 2018.

5) Presenter, Sperm Aneuploidy in a Birth Cohort of Faroese Men Exposed to p,p'-DDE and PCB Pollutants.PPTox VI Conference, Faroe Islands, Denmark, May 27-30, 2018.

6) Endocrine Disruptors in Water in the Potomac River Valley. Cedar Lane Unitarian Church March Forum, March 30th, 2014.

7) Environmental Endocrine Disruptors and Male Reproductive Health. Johns Hopkins University Environmental Health Engineering Seminar Series, Johns Hopkins University, April 21st, 2014.

8) Expert Speaker, GW's "The World on a Plate: How Food Shapes Civilizations" class, The George Washington University, Washington, DC, April 2014.

9) Keynote address at Pesticides and the Chesapeake Bay Watershed Project 8th Annual Meeting. Hosted by the Maryland Organic Food & Farming Association, October 6th, 2014.

10) The Future of Public Health Education. Dean's Invited Speaker, Texas A&M University School of Public Health, October 28, 2014.

11) Speaker, 1st Annual Food Tank Summit. Hosted by GW and Food Tank, The George Washington University, Washington, DC, January 21, 2015.

12) Endocrine Disruptors in the Potomac. Presented as speaker in The York River and Small Coastal Basin Roundtable and the Chesapeake Bay National Estuarine Research Reserve in Virginia: Bees, Beetles and the Bay: Pesticide Impacts on Aquatic and Human Health and Pollinator Protection for a Healthy Chesapeake, Virginia Institute of Marine Science, Gloucester Point, VA, March 25, 2015.

13) Using Epidemiology to Prevent Occupational Injuries and Environmental Exposures. University of Pittsburgh Bioengineering Seminars 2015, Pittsburgh, PA, April 2, 2015.

14) White House Roundtable on Climate Change. White House, Washington, DC, April 9, 2015.

15) Host and Opening Remarks, USGCRP and GW Climate Change and Human Health Symposium. Washington, DC, April 20, 2015.

16) Pesticides: What is on the Occupational Medicine Horizon? Speaker, Annual American Occupational Health Conference Session 223: Updates on Epigenetic and Exposure Data on Pesticide and Herbicide for the Occupational Health Clinician, TRACK: Environmental Health and Risk Management. American College of Occupational and Environmental Medicine, Baltimore, MD, May 4, 2015.

17) Investigating the impacts of endocrine disrupting compounds on sperm health: a new potential effect biomarker. Presented at the 2015 International Congress on Rural Health & IV International Conference Ragusa Safety Health and Welfare in Agro-Food Systems, held in Lodi, Italy, September 8-11, 2015.

18) What Have You Done for Epidemiology Lately? The Role of Epidemiologists in Funding Biomedical Education and Research. Presidential Address at the American College of Epidemiology, delivered at the organization's annual meeting in Atlanta GA, September 29, 2015.

19) Opening remarks, Grading of Recommendations Assessment, Development and Evaluation (GRADE) working group. Washington, DC, May 2, 2016.

20) Public Health Education for the 21st Century. Dean's Lecture Series, University of Maryland School of Public Health. College Park, MD, May 10, 2016.

21) The New EDC Frontier: What Is Known About the Endocrine Disrupting Properties of Neonicotinoid Pesticides? Environmental Endocrine Disruptors Gordon Research Conference. Newry ME. June 19-24, 2016.

22) Moderator, Workshop on Personal Environmental Exposure Measurements. Making Sense and Making Use of Emerging Capabilities. National Academies of Sciences, Washington, DC November 16-17, 2016.

23) Health effects of neonicotinoid pesticides. North Carolina Pesticide Board, December 12, 2016.

24) Environmental chemicals and male reproductive impacts. Boston University School of Public Health, Boston MA, February 22, 2017.

Western District of Missouri

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

Defendants.

Second Declaration of Axel Fuentes

I, Axel Fuentes, hereby declare as follows:

1. I am the Executive Director of the Rural Community Workers Alliance ("RCWA") based in Milan, Missouri.

2. I previously submitted a declaration in this matter and submit this declaration to provide additional information regarding developments since my prior declaration.

3. On the Saturday after we filed suit (April 25, 2020), RCWA members informed me that Smithfield sent workers into the Milan, Missouri plant (the "Plant") to alter the Plexiglas dividers installed on the processing lines. The dividers are hung from above, and RCWA members informed me that Smithfield added bars to them to make them steadier. Moreover, while Smithfield had originally failed to take into account the height of workers so the dividers did not cover the faces of all workers, it adjusted the height of some of the dividers. My understanding is this occurred on the "ham line" on Saturday, and workers expect similar adjustments to be made on other lines later.

DocuSign Envelope ID: A05159A9-1468-4BA6-B86A-BFB5EF4D981B

4. On Monday, April 27, 2020, RCWA members sent me the photos attached as Exhibit A.

5. The first photo shows signs stating that workers are required to wear masks at all time throughout the Plant. It is my understanding no similar signs had previously existed.

6. The second photo is of a memo posted on Monday (April 27, 2020) that announces workers will be given a 15 minute grace period to clock in. That memo also states workers many use any clock to clock in and out, whereas, previously, workers had to clock in and out using a specific clock. I believe this is Smithfield's effort to reduce crowding around the clock.

7. On Tuesday (April 28, 2020), a worker confirmed for me that workers could use any clock to clock in and out.

8. Nonetheless, the memo in the second photo attached as Exhibit A states the grace period does not begin until Wednesday (April 29, 2020). The workers were offered no explanation for the delay.

9. I also heard from workers that Smithfield announced starting Tuesday (April 28, 2020) it would be reducing the amount of hogs slaughtered at the facility: the Plant would only be slaughtering around 5,000 hogs per day, down from 10,500.

10. If the workers continued to work the same number of hours, the reduced number of hogs would allow for slower line speeds.

11. However, I spoke to a worker Tuesday night (April 28, 2020) who said that some workers would be working reduced hours, particularly workers on the kill floor. That worker confirmed Smithfield was slaughtering fewer hogs starting Tuesday.

DocuSign Envelope ID: A05159A9-1468-4BA6-B86A-BFB5EF4D981B

12. Finally, I have been told that Smithfield has offered workers a $5/hour raise starting in May, but this will not apply to overtime. Workers have seen this pay increase advertised on a screen that previously advertised the $500 "responsibility bonus" offered to workers who did not call in sick in April. This has led some workers to believe that the raise will only apply to workers who do not call in sick in May.

13. Separate and apart from recent changes at Plant, I am aware that Smithfield has suggested a worker would put their name on this case if the statements in if were true. However, I know of multiple incidents in which Smithfield retaliated against workers. In one incident, a worker who raised health and safety concerns was fired after she brought the issue to the company's attention. I have also heard of Smithfield harassing both workers, and even one worker's spouse who also worked at the Plant, because the workers raised concerns.

I declare under penalty of perjury that the foregoing is true and correct.

Memo

Para: Todos los Empleados

De: Tim Messman

Re: Cambio a los Límites de Ingresar (Ponchar)

Fecha: 27 de abril, 2020

Efectivo **miércoles 29 de abril, 2020** la planta de Milan está implementando una actualización temporal de los límites de entrada en vigor para los empleados de producción, mantenimiento y envío/shipping. Estas actualizaciones son:

- Empleados **pueden ingresar o salir usando cualquier reloj.**
- Empleados **pueden ingresar hasta 15 minutos antes de la hora de inicio programada.**

El objetivo de estos cambios es proporcionar a los empleados oportunidades adicionales para extenderse y adherirse a las pautas de distanciamiento social. Estos cambios de reloj se revisarán periódicamente para evaluar su efectividad en el logro de este objetivo.

En resumen, a partir de este **miércoles 29 de abril de 2020**, todos los empleados por hora pueden registrarse usando **CUALQUIER RELOJ** hasta **15 MINUTOS ANTES** de su hora de inicio programada.

Gracias por su tiempo y atención con respecto a estos próximos cambios. La planta de Milan está compuesta por un impresionante equipo de empleados que se han enfrentado al desafío de estos tiempos inusuales. Su continua diligencia y esfuerzo ayudarán a nuestra Planta a implementar y cumplir con este cambio temporal a nuestros límites de reloj y asignaciones de reloj.

Si tiene preguntas, consulte a su equipo de administración o comuníquese con el Departamento de Recursos Humanos.

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

Defendants.

Declaration of David Michaels, PhD, MPH

I, David Michaels, declare as follows:

1. I am currently a Professor of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University, in Washington, D.C.

2. I am an epidemiologist with expertise in the study and prevention of occupational injuries and illnesses.

3. From 2009 until January 2017, I served as Assistant Secretary for the Occupational Safety and Health Administration ("OSHA") of the U.S. Department of Labor, the longest serving Administrator in OSHA's history.

4. In addition, from 1998 to 2001, I served as Assistant Secretary of Energy for Environment, Safety and Health.

5. I have published studies on work-related injuries and illnesses in numerous peer-reviewed scientific publications, and I have received numerous awards and recognition for my work. I have served or currently serve on international panels

addressing occupational safety and health, including ones focused on the collection and disclosure of work-related injury and illness data.

6. My complete, current CV is attached as Exhibit A.

7. The following draws from my experience at OSHA and an expert on occupational safety and health regulation. Since the beginning of the COVID-19 pandemic, I have been closely monitoring OSHA's activity – or lack thereof – as part of my academic work.

8. OSHA has limited tools to protect workers at slaughterhouses and meatpacking plants during the COVID-19 pandemic, including Defendants "Smithfield." Based on my observation, throughout this crisis—dating back more than three months—OSHA has failed to enforce any of its limited requirements that could conceivably protect meatpacking workers from illness. And, OSHA is not authorized to cite employers who fail to protect members of the community from infectious disease. In my expert opinion, OSHA has been missing in action during the pandemic.

9. The Occupational Safety & Health Act imposes two enforceable duties on employers. Employers are required to comply with OSHA standards. 29 USC § 654(a)(2). And, employers are required to comply with the OSH Act's general duty clause which requires employers to provide their employees "with employment and places of employment free from recognized hazards." 29 USC § 654(a)(1).

10. OSHA has not adopted a specific standard that protects employees from the risk of infectious diseases like COVID-19. Existing OSHA regulations, such as those governing sanitation, and personal protective equipment, 29 CFR §§1910.132,134, require minimal effort by employers. Under these regulations, employers are left to

identify which "hazards" require protection. On April 26, OSHA issued guidance advising employers in the meatpacking industry on how these regulations apply during the current pandemic. Such guidance is not binding.

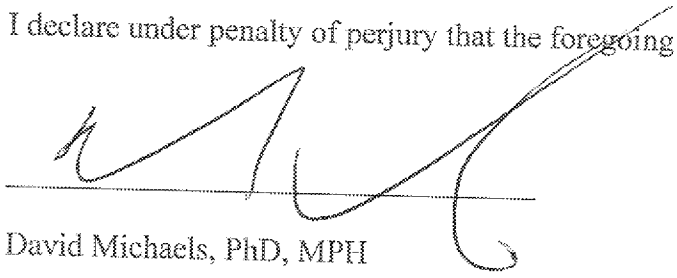
11. When OSHA has not issued a standard regulating a hazard, it may rely on the general duty clause to protect employees from "recognized hazards." General duty clause citations require a higher degree of proof than do citations alleging violations of OSHA standards, are resource intensive for OSHA to document and justify, and have little effect on improving workplaces generally. OSHA has not issued any such citations to protect against the novel coronavirus causing COVID-19.

12. Moreover, while OSHA could announce its intent to cite employers for failure to follow that guidance, it has not done so. In other words, parroting CDC, OSHA, has made *recommendations* regarding how meat packing plants should operate, but those statements, including the one issued April 26, 2020, are *voluntary*. OSHA has not indicated that it will cite employers who fail to comply with its recommendations.

13. Instead, OSHA has issued guidance advising its inspectors to exercise "enforcement discretion" when addressing complaints relating to COVID-19. https://www.osha.gov/memos/2020-04-13/interim-enforcement-response-plan-coronavirus-disease-2019-covid-19 Based on my years of experience with the agency and Department of Labor, I interpret this guidance to mean that OSHA will not cite employers in the meat industry for violations of the OSH Act relating to COVID 19 risks.

14. OSHA's guidance indicates that it likely will not even conduct inspections in "medium" risk facilities, such as meatpacking plants. Instead, OSHA's guidance indicates that when they learn of potentially hazardous conditions in a meatpacking plant,

they will send a letter to the employer seeking information. Such inquiries are informal, they do not require an employer to take action to abate hazards, and do not lead to citations. In other words, informal letters from OSHA do not impose an enforceable duty on an employer.



15. If OSHA determines that an employer's response to its informal inquiry is not adequate, OSHA may initiate an on-site inspection. https://www.osha.gov/memos/2020-04-13/interim-enforcement-response-plan-coronavirus-disease-2019-covid-19. Under existing OSHA procedures, OSHA will not cite an employer without an on-site inspection.

16. Furthermore, OSHA citations are not issued immediately after an inspection is completed. In the case of COVID 19, OSHA has advised its area offices that any proposed citations must be reviewed in the National Office before being issued. *Id.* In my experience, such National office review makes it far less likely that citations will be issued – even if OSHA finds that an employer is exposing its workers to serious risk of contracting COVID-19 – for several months at least.

17. Even if OSHA were to issue a citation several months from now, under the OSH Act an employer has no duty to abate the hazards OSHA has identified until a final order of the Occupational Safety & Health Review Commission issues. 29 U.S.C.§659(b). Such a final order is deemed to have been issued 15 days after OSHA issues a citation if the employer does not contest it. However, if the employer contests the citations, an employer has no duty to abate the hazard OSHA has cited until proceedings before OSHRC have concluded. In my experience, OSHRC proceedings usually delay abatement for several years, at least.

18. Under section 13 of the OSH Act, OSHA has the authority to file suit in federal court to enjoin an imminent danger. During my tenure as the head of OSHA, the Agency did not file any imminent danger suits. To the best of my knowledge, OSHA has not filed such an action since the mid-1990s. Further still, OSHA procedures require that the Agency conduct an inspection prior to filing an imminent danger suit. I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

I declare under penalty of perjury that the foregoing is true to the best of my knowledge

In the United States District Court
Western District of Missouri

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

Defendants.

Declaration of Ann Rosenthal

I, Ann Rosenthal, declare as follows:

1. From 1988 until June, 2018, I worked as a managing attorney in the Office of the United States Solicitor of Labor, Division of Occupational Safety and Health. At the time of my retirement in 2018, I was Associate Solicitor for Occupational Safety and Health, the chief lawyer for the Occupational Safety and Health Administration ("OSHA").

2. My experience at OSHA included providing legal advice on both enforcement and regulatory activities, as well as managing OSHA litigation in Federal district and appellate courts and before the Occupational Safety and Health Review Commission. My office was a necessary participant in all of OSHA's activities in these areas, and was required to approve its relevant policies.

3. Drawing on that background and experience I state as follows.

4. OSHA has extremely limited tools to protect slaughterhouse and meat packing workers during the COVID-19 pandemic and, based on my observation, OSHA has not been using even those tools.

5. Moreover, OSHA has no authority to cite employers who fail to protect members of the community from infectious disease.

6. The Occupational Safety & Health Act imposes two types of duties on employers. Employers are required to comply with OSHA standards. 29 U.S.C. § 654(a)(2). And, employers are required to comply with the OSH Act's general duty clause, which requires employers to provide their employees "with employment and places of employment free from recognized hazards." 29 U.S.C. § 654(a)(1).

7. Regarding the first type of duty, no OSHA standard addresses the risk of infectious diseases like COVID-19.

8. To the extent any OSHA standards could conceivably protect workers from anything related to COVID-19 they are extraordinarily weak, such as those governing sanitation and housekeeping 29 C.F.R. §§ 1910.22, 141, which require minimal effort by employers to protect their workers by keeping the workers and their workplaces clean; OSHA's personal protective equipment standard 29 C.F.R. § 1910. 132,134, which applies when an employer determines its employees face a "hazard." Because these standards require an employer to determine what type of protective equipment *they* think workers need, they are difficult to enforce. Several of these regulatory provisions date from the 1970s and none were drafted to protect workers from the spread of infectious diseases.

9. OSHA could theoretically issue guidance advising employers on when and how to implement these regulations during the current pandemic. It has done no more than issue non-binding statements that it believes these standards may apply. The recent

guidance OSHA published with the Centers for Disease Control (CDC) relating to the meatpacking industry are an example of general, non-binding statements by OSHA.

10. I have been examining OSHA's steps during the pandemic and it has taken no steps that I am aware of to enforce its standards.

11. When OSHA has not issued a standard regulating a hazard, it may rely on the general duty clause to protect employees from "recognized hazards." In the case of the COVID-19 pandemic, OSHA could announce its intent to cite employers under the general duty clause if they do not implement appropriate protective measures, such as those recommended by the Centers for Disease Control guidance and OSHA itself. To issue a general duty clause citation, OSHA must have evidence that workers are exposed to a hazard that is likely to cause death or serious physical harm, that the hazard is "recognized," either by the individual employer or by its industry, and that there is a feasible way to abate the hazard. OSHA cannot enforce the guidelines; however it can use them as evidence that the hazard which the guidelines address is "recognized," and that there are feasible methods to abate it. Currently, OSHA is not using the general duty clause to require that employers outside the health care and emergency response sectors follow such guidelines. See OSHA Interim Enforcement Response Plan for Coronavirus Disease-2019-Covid-19

12. Instead, OSHA has issued guidance advising its inspectors to exercise "enforcement discretion" when addressing complaints relating to COVID-19 outside the health care and emergency response sectors. *Ibid.; see also* OSHA Enforcement Discretion when Considering Employers Good Faith Efforts During the Covid-19 Pandemic. Based on my experience at the agency, I know that "enforcement discretion"

is a term OSHA uses it to describe situations where it will not take enforcement action. I interpret this guidance to mean that OSHA will not cite employers involved in food processing for violations of the OSH Act relating to COVID 19 risks.

13. Moreover, OSHA's guidance indicates that it likely will not even conduct inspections in "medium" risk facilities, such as meatpacking plants. Instead, OSHA's guidance indicates that when its Area Offices learn of potentially hazardous conditions in a meatpacking plant, they are to respond informally ("non-formal phone/fax" in OSHA parlance). This means that OSHA will notify the employer of what it has learned and ask the employer to respond. OSHA also uses the term Rapid Response Investigation (RRI) to describe this practice, but this term should not be interpreted as OSHA conducting any kind of investigation itself. OSHA's notification to the employer does not require the employer to take any action to abate hazards. In other words, these informal letters from OSHA do not impose an enforceable duty on an employer.

14. If OSHA determines that an employer's response to its informal inquiry is not adequate, OSHA may initiate an on-site inspection. I have checked OSHA's online inspection database and it shows that OSHA has not initiated an inspection at Smithfield's Milan facility. In my experience, OSHA will not cite such a facility for violations of the general duty clause or the Agency's sanitation or personal protective equipment standards without first conducting an on-site inspection.

15. OSHA citations are not issued immediately after an inspection is completed.

16. In the case of COVID 19, OSHA has advised its area offices that any proposed citations must be reviewed in the National Office before being issued. In my

experience from working at the agency, such National Office review means that no citations will be issued—even if OSHA finds that an employer is exposing its workers to serious risk of contracting COVID-19—for several months at least, and usually closer to six months.

17. Even if OSHA were to issue a citation several months from now, an employer has no duty to abate the hazards OSHA has identified until there is a final order of the Occupational Safety & Health Review Commission. 29 U.S.C. § 659(b). Such a final order is deemed to have been issued 15 days after OSHA issues a citation, if the employer does not contest the citation. However, if the employer contests the citations, an employer has no duty to abate the hazard OSHA has cited until proceedings before OSHRC have concluded. In my experience, OSHRC proceedings can delay abatement for several years, at least, and more than a decade at most. *See, e.g., Dayton Tire v. Secretary*, 671 F.3d 1249 (D.C. Cir. 2012).

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Executed April 28, 2020 in Bethesda, MD.

Ann Rosenthal

Dated

In the United States District Court
Western District of Missouri

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

Defendants.

Declaration of David Michaels, PhD, MPH

I, David Michaels, declare as follows:

1. I am currently a Professor of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University, in Washington, D.C.

2. I am an epidemiologist with expertise in the study and prevention of occupational injuries and illnesses.

3. From 2009 until January 2017, I served as Assistant Secretary for the Occupational Safety and Health Administration ("OSHA") of the U.S. Department of Labor, the longest serving Administrator in OSHA's history.

4. In addition, from 1998 to 2001, I served as Assistant Secretary of Energy for Environment, Safety and Health.

5. I have published studies on work-related injuries and illnesses in numerous peer-reviewed scientific publications, and I have received numerous awards and recognition for my work. I have served or currently serve on international panels

addressing occupational safety and health, including ones focused on the collection and disclosure of work-related injury and illness data.

6. My complete, current CV is attached as Exhibit A.

7. The following draws from my experience at OSHA and an expert on occupational safety and health regulation. Since the beginning of the COVID-19 pandemic, I have been closely monitoring OSHA's activity – or lack thereof – as part of my academic work.

8. OSHA has limited tools to protect workers at slaughterhouses and meatpacking plants during the COVID-19 pandemic, including Defendants "Smithfield." Based on my observation, throughout this crisis—dating back more than three months—OSHA has failed to enforce any of its limited requirements that could conceivably protect meatpacking workers from illness. And, OSHA is not authorized to cite employers who fail to protect members of the community from infectious disease. In my expert opinion, OSHA has been missing in action during the pandemic.

9. The Occupational Safety & Health Act imposes two enforceable duties on employers. Employers are required to comply with OSHA standards. 29 USC § 654(a)(2). And, employers are required to comply with the OSH Act's general duty clause which requires employers to provide their employees "with employment and places of employment free from recognized hazards." 29 USC § 654(a)(1).

10. OSHA has not adopted a specific standard that protects employees from the risk of infectious diseases like COVID-19. Existing OSHA regulations, such as those governing sanitation, and personal protective equipment, 29 CFR §§1910.132,134, require minimal effort by employers. Under these regulations, employers are left to

identify which "hazards" require protection. On April 26, OSHA issued guidance advising employers in the meatpacking industry on how these regulations apply during the current pandemic. Such guidance is not binding.

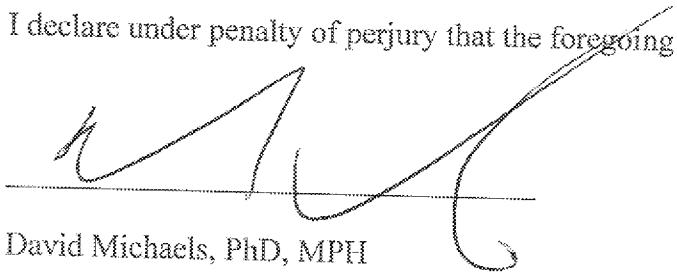
11. When OSHA has not issued a standard regulating a hazard, it may rely on the general duty clause to protect employees from "recognized hazards." General duty clause citations require a higher degree of proof than do citations alleging violations of OSHA standards, are resource intensive for OSHA to document and justify, and have little effect on improving workplaces generally. OSHA has not issued any such citations to protect against the novel coronavirus causing COVID-19.

12. Moreover, while OSHA could announce its intent to cite employers for failure to follow that guidance, it has not done so. In other words, parroting CDC, OSHA, has made *recommendations* regarding how meat packing plants should operate, but those statements, including the one issued April 26, 2020, are *voluntary*. OSHA has not indicated that it will cite employers who fail to comply with its recommendations.

13. Instead, OSHA has issued guidance advising its inspectors to exercise "enforcement discretion" when addressing complaints relating to COVID-19. https://www.osha.gov/memos/2020-04-13/interim-enforcement-response-plan-coronavirus-disease-2019-covid-19 Based on my years of experience with the agency and Department of Labor, I interpret this guidance to mean that OSHA will not cite employers in the meat industry for violations of the OSH Act relating to COVID 19 risks.

14. OSHA's guidance indicates that it likely will not even conduct inspections in "medium" risk facilities, such as meatpacking plants. Instead, OSHA's guidance indicates that when they learn of potentially hazardous conditions in a meatpacking plant,

they will send a letter to the employer seeking information. Such inquiries are informal, they do not require an employer to take action to abate hazards, and do not lead to citations. In other words, informal letters from OSHA do not impose an enforceable duty on an employer.



15. If OSHA determines that an employer's response to its informal inquiry is not adequate, OSHA may initiate an on-site inspection. https://www.osha.gov/memos/2020-04-13/interim-enforcement-response-plan-coronavirus-disease-2019-covid-19. Under existing OSHA procedures, OSHA will not cite an employer without an on-site inspection.

16. Furthermore, OSHA citations are not issued immediately after an inspection is completed. In the case of COVID 19, OSHA has advised its area offices that any proposed citations must be reviewed in the National Office before being issued. *Id.* In my experience, such National office review makes it far less likely that citations will be issued – even if OSHA finds that an employer is exposing its workers to serious risk of contracting COVID-19 – for several months at least.

17. Even if OSHA were to issue a citation several months from now, under the OSH Act an employer has no duty to abate the hazards OSHA has identified until a final order of the Occupational Safety & Health Review Commission issues. 29 U.S.C.§659(b). Such a final order is deemed to have been issued 15 days after OSHA issues a citation if the employer does not contest it. However, if the employer contests the citations, an employer has no duty to abate the hazard OSHA has cited until proceedings before OSHRC have concluded. In my experience, OSHRC proceedings usually delay abatement for several years, at least.

18. Under section 13 of the OSH Act, OSHA has the authority to file suit in federal court to enjoin an imminent danger. During my tenure as the head of OSHA, the Agency did not file any imminent danger suits. To the best of my knowledge, OSHA has not filed such an action since the mid-1990s. Further still, OSHA procedures require that the Agency conduct an inspection prior to filing an imminent danger suit. I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

I declare under penalty of perjury that the foregoing is true to the best of my knowledge

The United States Department of Energy

Assistant Secretary for Environment, Safety and Health	1998-2001

The City University of New York Medical School
Department of Community Health and Social Medicine

Professor	1996-2001
Acting Chairperson	1992, 1996-7
Associate Professor	1990-1995

Montefiore Medical Center/Albert Einstein College of Medicine
Department of Epidemiology and Social Medicine

Director, Division of Public Health	1988-1990
Director, Program in Occupational Health	1981-1988
Curriculum Coordinator	1979-1981
Research Associate	1977-1979

Additional Academic Appointments

The Icahn School of Medicine at Mount Sinai
Department of Environmental Medicine and Public Health

Adjunct Professor	2001-present
Adjunct Associate Professor	1993-2000
The Albert Einstein College of Medicine	
Department of Epidemiology and Population Health	
Visiting Associate Professor	1991-2008
Associate Professor	1990-1991
Assistant Professor	1981-1990
Instructor	1980-1981

EDUCATION

The City College of New York	1977	BA	History (cum laude)
Columbia University	1981	MPH	Epidemiology
	1987	PhD	Sociomedical Sciences

ADDITIONAL POST-GRADUATE TRAINING

Quantitative Methods in Cancer Epidemiology. The International Agency for Research on Cancer, Lyon, France, 1985.

FELLOWSHIPS AND RESIDENCIES

World Health Organization Travel Fellowship, 1992
Robert Wood Johnson Foundation Health Policy Fellowship, Washington, DC 1993-1994
Rockefeller Foundation Bellagio Center Residency, Bellagio, Italy 2018

AWARDS, HONORS & ELECTED MEMBERSHIPS

Jay S. Drotman Memorial Award, American Public Health Association, 1984
Bicentary Keynote Lecturer, Sydney Hospital, Sydney, Australia, 1988
Samuel Gompers Award, International Assoc. of Industrial Accident Boards & Commissions, 2000
National Academy of Social Insurance, 2000-2009, 2017-Present
Meritorious Service Award, United States Department of Energy, 2001
Honorary Kentucky Colonel, 2001
Honorary Duke of Paducah (Kentucky), 2001
David P. Rall Award for Advocacy in Public Health, American Public Health Association, 2001
Collegium Ramazzini (Fellow), 2003-2009, 2017-present
Scientific Freedom and Responsibility Award, American Association for the Advancement of Science, 2005
Delta Omega (Honorary Society in Public Health), 2007-present
John P. McGovern Science and Society Award, Sigma Xi, 2009
Environmental Hero of the Year, Environmental Relief Center, 2009

ASPH/Pfizer Public Health Academy of Distinguished Teachers, 2009-present
Jeffrey S. Lee Lecture, American Industrial Hygiene Conference, Toronto, Canada, 2009
Robert Wood Johnson Heath Policy Fellowship Program, Lifetime Achievement Award, 2010
Isidore I. Benrubi Lecture, Columbia University School of Public Health, 2010
Clara Lemlich Public Service Award, Triangle Shirtwaist Factory Fire Memorial, 2011
Allan Rosenfield Alumni Award for Excellence, Columbia Univ. School of Public Health, 2012
Inaugural Cancer and Society Lecture, International Agency for Research on Cancer, Lyon, France, 2012
John T. Dunlop Memorial Forum, Harvard Law School, 2013
William Steiger Memorial Award, American Conference of Governmental Industrial Hygienists (ACGIH), 2013
Paul Robeson Award, District 1199C American Federation of State, County and Municipal Employees, 2013
Jorma Rantanen Award, Finnish Institute of Occupational Health, Helsinki, Finland, 2013
J. William Lloyd Award, United Steelworkers, 2018
William D. Wagner Award, American Conference of Governmental Industrial Hygienists (ACGIH), 2018

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,

Plaintiffs,

v.

SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,

Defendants.

Declaration of Ann Rosenthal

I, Ann Rosenthal, declare as follows:

1. From 1988 until June, 2018, I worked as a managing attorney in the Office of the United States Solicitor of Labor, Division of Occupational Safety and Health. At the time of my retirement in 2018, I was Associate Solicitor for Occupational Safety and Health, the chief lawyer for the Occupational Safety and Health Administration ("OSHA").

2. My experience at OSHA included providing legal advice on both enforcement and regulatory activities, as well as managing OSHA litigation in Federal district and appellate courts and before the Occupational Safety and Health Review Commission. My office was a necessary participant in all of OSHA's activities in these areas, and was required to approve its relevant policies.

3. Drawing on that background and experience I state as follows.

4. OSHA has extremely limited tools to protect slaughterhouse and meat packing workers during the COVID-19 pandemic and, based on my observation, OSHA has not been using even those tools.

5. Moreover, OSHA has no authority to cite employers who fail to protect members of the community from infectious disease.

6. The Occupational Safety & Health Act imposes two types of duties on employers. Employers are required to comply with OSHA standards. 29 U.S.C. § 654(a)(2). And, employers are required to comply with the OSH Act's general duty clause, which requires employers to provide their employees "with employment and places of employment free from recognized hazards." 29 U.S.C. § 654(a)(1).

7. Regarding the first type of duty, no OSHA standard addresses the risk of infectious diseases like COVID-19.

8. To the extent any OSHA standards could conceivably protect workers from anything related to COVID-19 they are extraordinarily weak, such as those governing sanitation and housekeeping 29 C.F.R. §§ 1910.22, 141, which require minimal effort by employers to protect their workers by keeping the workers and their workplaces clean; OSHA's personal protective equipment standard 29 C.F.R. § 1910. 132,134, which applies when an employer determines its employees face a "hazard." Because these standards require an employer to determine what type of protective equipment *they* think workers need, they are difficult to enforce. Several of these regulatory provisions date from the 1970s and none were drafted to protect workers from the spread of infectious diseases.

9. OSHA could theoretically issue guidance advising employers on when and how to implement these regulations during the current pandemic. It has done no more than issue non-binding statements that it believes these standards may apply. The recent

guidance OSHA published with the Centers for Disease Control (CDC) relating to the meatpacking industry are an example of general, non-binding statements by OSHA.

10. I have been examining OSHA's steps during the pandemic and it has taken no steps that I am aware of to enforce its standards.

11. When OSHA has not issued a standard regulating a hazard, it may rely on the general duty clause to protect employees from "recognized hazards." In the case of the COVID-19 pandemic, OSHA could announce its intent to cite employers under the general duty clause if they do not implement appropriate protective measures, such as those recommended by the Centers for Disease Control guidance and OSHA itself. To issue a general duty clause citation, OSHA must have evidence that workers are exposed to a hazard that is likely to cause death or serious physical harm, that the hazard is "recognized," either by the individual employer or by its industry, and that there is a feasible way to abate the hazard. OSHA cannot enforce the guidelines; however it can use them as evidence that the hazard which the guidelines address is "recognized," and that there are feasible methods to abate it. Currently, OSHA is not using the general duty clause to require that employers outside the health care and emergency response sectors follow such guidelines. See OSHA Interim Enforcement Response Plan for Coronavirus Disease-2019-Covid-19

12. Instead, OSHA has issued guidance advising its inspectors to exercise "enforcement discretion" when addressing complaints relating to COVID-19 outside the health care and emergency response sectors. *Ibid.; see also* OSHA Enforcement Discretion when Considering Employers Good Faith Efforts During the Covid-19 Pandemic. Based on my experience at the agency, I know that "enforcement discretion"

is a term OSHA uses it to describe situations where it will not take enforcement action. I interpret this guidance to mean that OSHA will not cite employers involved in food processing for violations of the OSH Act relating to COVID 19 risks.

13. Moreover, OSHA's guidance indicates that it likely will not even conduct inspections in "medium" risk facilities, such as meatpacking plants. Instead, OSHA's guidance indicates that when its Area Offices learn of potentially hazardous conditions in a meatpacking plant, they are to respond informally ("non-formal phone/fax" in OSHA parlance). This means that OSHA will notify the employer of what it has learned and ask the employer to respond. OSHA also uses the term Rapid Response Investigation (RRI) to describe this practice, but this term should not be interpreted as OSHA conducting any kind of investigation itself. OSHA's notification to the employer does not require the employer to take any action to abate hazards. In other words, these informal letters from OSHA do not impose an enforceable duty on an employer.

14. If OSHA determines that an employer's response to its informal inquiry is not adequate, OSHA may initiate an on-site inspection. I have checked OSHA's online inspection database and it shows that OSHA has not initiated an inspection at Smithfield's Milan facility. In my experience, OSHA will not cite such a facility for violations of the general duty clause or the Agency's sanitation or personal protective equipment standards without first conducting an on-site inspection.

15. OSHA citations are not issued immediately after an inspection is completed.

16. In the case of COVID 19, OSHA has advised its area offices that any proposed citations must be reviewed in the National Office before being issued. In my

experience from working at the agency, such National Office review means that no citations will be issued—even if OSHA finds that an employer is exposing its workers to serious risk of contracting COVID-19—for several months at least, and usually closer to six months.

17. Even if OSHA were to issue a citation several months from now, an employer has no duty to abate the hazards OSHA has identified until there is a final order of the Occupational Safety & Health Review Commission. 29 U.S.C. § 659(b). Such a final order is deemed to have been issued 15 days after OSHA issues a citation, if the employer does not contest the citation. However, if the employer contests the citations, an employer has no duty to abate the hazard OSHA has cited until proceedings before OSHRC have concluded. In my experience, OSHRC proceedings can delay abatement for several years, at least, and more than a decade at most. *See, e.g., Dayton Tire v. Secretary*, 671 F.3d 1249 (D.C. Cir. 2012).

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Executed April 28, 2020 in Bethesda, MD.

California Agriculture Businesses Fight Covid-19 Protection Rule

Dec. 31, 2020, 3:39 PM

- Asks judge to halt enforcement of Cal/OSHA rule
- Workplace protection measure took effect Nov. 30

California agriculture organizations are challenging in court the state emergency rule intended to protect workers from on-the-job coronavirus infections.

Six groups, including the California Farm Bureau Federation, the Western Growers Association, and the California Business Roundtable, said the lawsuit was filed Thursday in Los Angeles County Superior Court. The case wasn't available on the court website and the filing couldn't be independently confirmed.

California regulators "imposed unrealistic, unfounded and economically harmful standards in total disregard of these realities," Dave Puglia, president of Western Growers, said in a written statement. "We have no choice but to seek judicial relief."

The groups want a judge to order the California Division of Occupational Safety and Health to cease enforcement of the standard, which took effect on Nov. 30, or at the least enforcement of the rule's provisions related to no-cost testing during working hours.

The standard requires employers to implement workplace infection prevention programs that include offering free testing to workers who may have been exposed to the virus at work. Several provisions specifically address farm operations, such as restrictions on how many employees can share a van taking them to work and requiring that in employer-provided housing beds be at least six feet apart.

A spokesman for the California Department of Industrial Relations, which includes Cal/OSHA, said the department doesn't discuss ongoing litigation.

The lawsuit is at least the second to ask a state court to overturn the rule. On Dec. 16, the National Retail Federation and others asked a judge to issue an injunction stopping enforcement of the rule and to eventually vacate the standard. The court hasn't ruled on the federation's request.

The case is W. Growers Ass'n v. Cal. Occupational Safety and Health Standards Bd., Cal. Super. Ct., 12/31/20.

Petitioners and Plaintiffs Western Growers Association, California Farm Bureau Federation, California Business Roundtable, Grower Shipper Association of Central California, California Association of Winegrape Growers, and Ventura County Agricultural Association (collectively "Plaintiffs") for their Verified Petition and Complaint allege as follows:

I. INTRODUCTION

1. This action challenges an "emergency temporary standard," or "ETS," promulgated on November 30, 2020 by the California Occupational Safety and Health Standards Board ("**Board**") in response to the COVID-19 pandemic. (Cal. Code Regs, tit. 8, §§ 3205 *et seq.*, hereinafter referred to as "**ETS Regs.**") These "emergency" regulations exceed the authority of the Board and undermine existing laws, regulations, and enforceable guidance intended to prevent or slow the spread of COVID-19 in the workplace.

2. While no one doubts that the COVID-19 pandemic constitutes a public health emergency, the Board failed to provide substantial evidence or a reasoned explanation as to why these "emergency regulations" are necessary to avert immediate and serious workplace harm, why the Board delayed, for months, before deciding that there was an urgent need to promulgate the ETS on five working days' notice, or why the ETS was even needed at all. In fact, the staff of the Board advised its members to reject the request for an ETS, as additional COVID-19 related workplace rules would do little to protect workers, and would create needless confusion as to employers' compliance obligations under existing law.

3. Plaintiffs are general business industry and agricultural trade associations representing California farmers, packers, shippers, processors and distributors, all of whom—together with their employees—are essential to maintaining a critical infrastructure sector and the nation's food supply chain. These organizations have a compelling need to obtain a judgment of this Court as to their members' obligations under

the ETS, particularly given the regulation's unique burdens on California farmers, packers, and shippers.

4. While the ETS places unprecedented financial and operational costs on all employers in this state, it imposes unique threats to the agricultural industry, including:

a) **Mandatory "no cost" testing "during working hours"** for employees with "potential COVID-19 exposure," (ETS Regs., § 3205(c)(3)(B)(4)), and continuing rounds of testing for all employees in an "exposed workplace" should three or more employees test positive, regardless of the size of the workplace or the number and location of the workers (*id.*, §§ 3205.1(b) and 3205.2(b)), without considering whether agricultural employers can meet this *en masse* testing mandate, especially in rural communities already straining to obtain and ration a finite number of test kits, lab services, and professional resources to those most at risk.

b) **Mandatory workplace exclusion** requiring employers to remove, with ten days' paid leave and benefits, any worker claiming "COVID-19 exposure," whether they tested positive, tested negative, or were not tested at all. At the same time, the ETS prohibits employers from requiring a negative test before that worker is cleared to return to work (*id.*, §§ 3205(c)(10)-(11), 3205.1(c), 3205.2(c));

c) **Mandatory capacity restrictions on employer-provided housing,** including "[p]hysical distancing and controls" on occupancy, without considering the availability of housing in already scarce housing markets, the potential loss of workers due to the inability to provide them with affordable housing, or the increased risk that the mandated occupancy restrictions will force employers to relocate some workers to rooms that had been set aside to isolate workers should they test positive or be COVID-19 symptomatic (*id.*, § 3205.3(c) & (h)(1)-(3));

d) **Mandatory "[p]hysical distancing" in employer-provided transportation**, thereby cutting capacity by (at least) fifty percent (50%), without considering the availability (and cost) of additional buses that meet current emissions standards for farm labor transportation, whether there are sufficient certified, licensed bus drivers, or the impact on work schedules in time-sensitive agricultural operations in particular (*id.*, § 3205.4).

5. The ETS does not solve a crisis as much as it creates one. Until now, the agricultural industry, like other critical infrastructure sectors, followed state and local public health directives, and guidance from the Centers for Disease Control and Prevention ("**CDC**"), which permitted essential employees, including agricultural workers, "to continue work following potential exposure to COVID-19, provided they remain

asymptomatic and additional precautions are implemented."[1] But the ETS uses "COVID-19 exposure" as a *per se* metric to **exclude workers from the workplace**, regardless of whether exposure was indoors or outdoors, the duration and proximity of exposure, whether the infected person was coughing, singing, or shouting, whether the infected person displayed symptoms (thus increasing the likelihood of viral shedding), or whether the employees were wearing masks, respirators, face shields, or other PPE.

6. The Board concedes that "employers in California are already required to have a written and effective Injury and Illness Prevention Program ("**IIPP**") that complies with existing guidance that "already apply to the hazard of COVID-19." The Board nevertheless justifies the ETS on the basis that the public "would benefit from a specific set" of "easy to understand" regulation or that the emergency regulations would strengthen "enforcement efforts related to the hazard of COVID-19 in workplaces." By law, convenience or expedience cannot justify emergency regulations.

7. The Board never suggests that there is a systemic failure of compliance with existing COVID-19 workplace safety guidance, or that the lack of new COVID-19 related regulations has hobbled the ability of Defendant Division of Occupational Safety and Health ("**Division**" or "**Cal/OSHA**") to enforce standards requiring employers to take all appropriate and necessary measures to mitigate the spread of the virus in the workplace. To the contrary, the Division and the DIR told the Board that they are providing guidance, consultation, and education to employers, and have been inspecting workplaces, issuing citations, and conducting follow-up visits to ensure compliance with existing standards applicable to COVID-19 prevention and mitigation.

---

[1] *See* CDC, *Interim Guidance for Implementing Safety Practices for Critical Infrastructure Workers Who May Have Had Exposure to a Person with Suspected or Confirmed COVID-19* <https://www.cdc.gov/coronavirus/2019-ncov/downloads/critical-workers-implementing-safety-practices.pdf> [as of December 30, 2020]; CDC, *COVID-19 Critical Infrastructure Sector Response Planning* <https://www.cdc.gov/coronavirus/2019-ncov/community/critical-infrastructure-sectors.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2F2019-ncov%2Fcommunity%.> [as of December 30, 2020].

8. The Board's failure to consider the ETS's disastrous impacts on essential industries such as agriculture, food processing and distribution, illustrates the extent to which this agency inserted itself into areas far beyond its competence or authority to regulate. The Board has no expertise in H-2A housing, Class B licensing requirements for farm labor transportation, or complex epidemiological, serological, or testing capacity considerations for which public health officers are responsible. Its justifications for the ETS are entitled to little, if any, deference by this Court.

9. Beginning as of January 1, 2021, the ETS will define an "exposed workplace" to include "the building, store, facility, agricultural field, or other location where a worker worked during the infectious period." (ETS Regs., § 3205(b).) This means that every farmworker who is now harvesting strawberries or citrus or milking dairy cows or feeding livestock, or indeed any employee who works in any one of the vital links in the food supply chain may potentially be excluded from work (with ten days' paid leave and benefits). The resulting labor shortages in an already scarce farm labor market could have catastrophic consequences across every part of this critical infrastructure sector.

10. "Exposed workplace," as defined, is unworkable for large, complex operations where employees work in different "workplaces," such as warehouses or production floors that can encompass hundreds of thousands of square feet. In the case of agricultural operations, several different farm labor crews could work in the same "agricultural field," as they move across hundreds of acres during harvesting, as is happening right now in Imperial Valley (where winter vegetables are being picked), Ventura County (where strawberries are being picked), and in Fresno, Tulare, and Kings Counties (where citrus is being picked).

11. The ETS will not only impact the ability of grocery stores to provide fresh milk, meat, and produce. In-store pharmacies have been designated by the U.S. Department of Health and Human Services to administer COVID-19 immunization, starting with essential workers, first responders, and older Americans as part of the first

phase of a broad and rapid rollout of the coronavirus vaccine.[2] Grocery stores that operate in-store pharmacies were chosen because they have (to quote one analyst) "much larger and existing storage areas, whether we're talking in the backroom or on the sales floor."[3] The ETS would consider these "exposed workplaces," along with store aisles, check-out counters, loading docks, parking lots, and in-store pharmacies. It is not difficult to imagine the consequences of enforcing the ETS's mandatory workplace exclusion of essential employees, including pharmacy workers, even if they test negative or may have acquired immunity, whether through vaccination or prior exposure to COVID-19.

12. Employers and workers in critical infrastructure sectors, such as those represented by Plaintiffs, had no choice but to remain open and bear the brunt of COVID-19 during the first half of the year, when the entire nation was learning about the virus, how it is transmitted, and how it may be slowed. In many ways agriculture was a leader in developing best practices based on actual experience. Perhaps the most misguided aspect of the ETS is that, as the Board staff warned against, the Board turned its back on what **was** working, including its own performance-based, objective criteria standards implemented through employer IIPPs based on what made sense for specific businesses and industries.

13. On behalf of their members, Plaintiffs respectfully request the Court declare the ETS invalid, or, in the alternative, invalidate and sever those provisions enumerated in Paragraph 4, *supra*. These regulations conflict with existing local and state public health directives, exceed the Board's authority, and violate the California Administrative Procedure Act ("**APA**"), the Bagley-Keene Open Meeting Act ("**Bagley-Keene Act**"), and the Due Process Clauses of the California and U.S. Constitutions.

14. Because there is no "plain, speedy, and adequate remedy" at law to prevent the likelihood of irreparable harm or the certainty that Plaintiffs' members will, as a result of the ETS, incur non-compensable damages, preliminary injunctive relief, including the issuance of a peremptory writ of mandate, is appropriate and necessary.

II. STATEMENT OF THE CASE

15. Over the last nine months, our state, county, and local authorities have issued unprecedented and sweeping orders, rules, and guidelines in response to the global COVID-19 pandemic. Beginning on March 19, 2020, Governor Newsom directed all residents to comply with current public health directives and to stay home unless needed to maintain continuity of operations of critical infrastructure sectors.[4] Those designated as "essential" included employees in the agricultural sector and related production, processing, and delivery systems critical to maintaining our nation's food supply chain.[5]

16. Among the earliest guidance issued by the California Department of Public Health ("**CDPH**") was a March 11, 2020 memorandum addressing "Coronavirus Disease 2019 (COVID-19) and the Food Supply Chain."[6] This was the first of many COVID-19 public health and occupational safety guidelines issued by Cal/OSHA, CDPH, the California Department of Housing and Community Development ("**CDHCD**"), and the California Department of Food and Agriculture ("**CDFA**").

17. On August 30, 2020, California became the first state in the nation to enact legislation specifically addressing COVID-19 protections for farm workers. Among the bills included in the "California COVID-19 Farmworker Relief Package" is the Agricultural Workplace Health and Safety Act (AB 2043), which funds a targeted

---

[5] *Essential workforce* (December 3, 2020) <https://covid19.ca.gov/essential-workforce/> [as of December 30, 2020].

[6] CDPH, *Coronavirus Disease 2019 (COVID-19) and the Food Supply Chain* (March 11, 2020) <https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/COVID19andtheFoodSupplyChain.aspx> [as of December 30, 2020].

bilingual outreach campaign to educate agricultural workers on Cal/OSHA COVID-19 workplace guidance and enforcement activities, and directs Cal/OSHA to track and report COVID-19 investigations related to the agricultural industry. Other bills provide for COVID-19-related paid sick leave and workers compensation benefits.[7] A number of these legislative enactments were the result of initiatives created and sponsored by California agricultural associations, including "Housing for the Harvest," modeled on a program spearheaded by Plaintiff Grower-Shipper Association of Central California ("**GSACC**"). This program offers temporary hotel housing (and related medical and food services) to agricultural workers who need to isolate due to COVID-19.

18. Well before AB 2043 was enacted, employers were relying on state and local agency guidance to formulate and update their IIPPs to reflect best practices in curbing workplace spread of COVID-19. Cal/OSHA wielded considerable powers to investigate the adequacy of, and compliance with, an employer's COVID-19-related IIPP. On July 16, 2020, Cal/OSHA's Deputy Chief of Health told the Board that Cal/OSHA was "doing many [COVID-19 related] investigations and issuing citations" under existing Cal/OSHA regulations, including those governing the control of harmful exposures or aerosol transmissible diseases in certain workplace sectors, such as meat processing and packing.[8]

---

[7] Governor Newsom also signed into law another urgency statute, AB 1867, which codified his Executive Order N-51-20 requiring employers to provide supplemental paid sick leave to food sector workers unable to work due to specified reasons relating to COVID-19, and SB 1159, which creates a rebuttable presumption, for purposes of workers' compensation, that an employee contracted COVID-19 in the workplace if certain circumstances are met.

[8] The July 16, 2020 Board Meeting Minutes are attached as Exhibit 4, and also available at <https://www.dir.ca.gov/oshsb/documents/minutesJul2020.pdf> [as of December 30, 2020].

A failure to comply with these regulations could result in sanctions and considerable penalties.[9]

19. Given the relatively low number of COVID-19 citations against agricultural employers reported by Cal/OSHA to date,[10] there does not appear be a systemic breakdown in compliance or an urgent need for new regulations. To the contrary, all employers, including those in critical infrastructure sectors such as agriculture, are highly motivated to maintain a safe and healthy workforce and continue to expend substantial resources to protect workers from infection in the workplace and to pay for leave when a worker tests positive for COVID-19.

20. An August 10, 2020 evaluation by the Board's staff supports this conclusion.[11] Board staff could not identify a need to supplant or augment existing COVID-19 guidance or regulations, concluding: "**Cal/OSHA is enforcing existing COVID-19 protections** and providing consultative outreach to employers with exposed employees. **Board staff is unable to find evidence that the vast majority of California workplaces are not already in compliance with COVID-19 requirements and guidelines.**" Board staff further advised the Board that new COVID-19 regulations "**would place additional regulatory burden on California businesses that are already compliant with California's COVID-19 requirements and guidelines.**" Accordingly, Board staff advised that the Petitioners' emergency request was unnecessary and recommended that the Petition be "DENIED." (Exh. 2, p. 9 [emphasis added].)

---

[9] Cal/OSHA, *COVID-19 Infection Prevention for Agricultural Employers and Employees* (October 27, 2020) <https://www.dir.ca.gov/dosh/Coronavirus/COVID-19-Infection-Prevention-in-Agriculture.pdf> [as of December 30, 2020].

[10] DIR, *Citations for COVID-19 Related Violations* <https://www.dir.ca.gov/dosh/COVID19citations.html> [as of December 30, 2020].

[11] The Board Staff Evaluation is attached as Exhibit 2, and also available at <https://www.dir.ca.gov/oshsb/documents/petition-583-staffeval.pdf> [as of December 30, 2020].

21. This staff evaluation was in response to a May 20, 2020 Petition submitted to the Board by the National Lawyers Guild (Labor and Employment Committee) and Worksafe ("**Worksafe/NLG Petition**" or "**Petition 583**").[12] Worksafe is a California nonprofit corporation, describing itself as "focused on ensuring the occupational safety and health rights of workers through policy advocacy, capacity and coalition building, and impact litigation." Immediately prior to becoming Chief of Cal/OSHA in August, 2019, Defendant Douglas L. Parker was the Executive Director of Worksafe.

22. The Worksafe/NLG Petition requested that the Board immediately promulgate an "emergency temporary standard" to address COVID-19 issues and "a permanent standard to protect all workers from current and future infectious diseases, including novel pathogens." (Exh. 2, p. 1.) The Board did not dispute the staff's finding that many of the regulatory additions requested by the Petition were already required by existing title 8 regulations and enforceable agency guidance.[13] Without providing any reasoned response to the staff's specific and documented concerns, the Board determined that emergency regulations were required to address an urgent, unmet need, without identifying that unmet need or the reasons for urgency.

23. Thus, on November 19, 2020, more than nine months after Governor Newsom declared a state of emergency, the Board approved "emergency" regulations based on a petition pending before the Board for six months. Although complex, prescriptive, and unprecedented regulations of this nature should have been publicly vetted through the APA's notice and comment procedures, the Board did not make its first (and only) version of the ETS publicly available until November 12, 2020—one week before the Board adopted the ETS. The first time the Board heard public comments on the proposed ETS was the day it adopted the new standard. The Board did not change one

word in response to a myriad of concerns expressed by representatives from essential industries, including agriculture.

24. Some of the ETS's rules border on the absurd, such as the requirement that employers "ensure that unwashed dishes, drinking glasses, cups, eating utensils, and similar items are not shared" by workers living in employer-provided housing. (ETS Regs., § 3205.3(c)(2).) Some requirements, e.g., continuous testing of workers (*id.*, § 3205.1(b)), are unrealistic for employers in remote areas, such as dairy farmers in Madera and Stanislaus Counties, where there is limited access to COVID-19 testing services. Other ETS requirements contradict existing guidance of county public health officers. As one example of the ETS's problematic one-size-fits-all approach, the Los Angeles County Public Health Officer permits bunk beds in employer-provided housing, but the ETS forbids them. Employers are thus forced to try and find additional housing (in an already scarce affordable housing market), or potentially forfeit their ability to comply with guest worker visa programs, such as the federal government's H-2A program. Worse, by directing employers to cut room occupancy in half, housing set aside by employers to isolate workers who test positive may no longer be available, thus compounding the risk of COVID-19 spread rather than alleviating the problem.

25. Employers are now being forced to try and find additional housing (in already scarce housing markets) for existing guest workers, or to potentially forfeit their ability to comply with the federal government's H-2A guest worker program for future visas. The H-2A guest worker program is critical to many growers, because they time the hiring of these workers to coincide with when they are most needed. The California Employment Development Department ("**EDD**") is charged with certifying the ability of employers to provide mandatory free housing before visa applications can be submitted. If growers cannot guarantee sufficient housing, then visa applications will certainly be held up, and could even be denied. As one example, the EDD is currently holding up certifications for winegrape growers in need of labor for winter pruning.

26. The ETS testing provisions are impractical, confusing, and do harm to the extent that they have any material impact on the workplace. The ETS directs employers to pay for testing regardless of whether state and county public health officials are already providing community-wide access to free testing. It also requires employers to continuously test, and retest, whenever three or more employees test positive over a fourteen-day rolling period, until there are no positive tests for two weeks. This rule applies, whether the employer has thirty or three-hundred in the "workplace." (ETS Regs., § 3205(b).) Because the Board did not conduct any feasibility or cost-benefit analysis, it never determined whether employers would be able to locate enough test kits or laboratory capacity to comply with the ETS testing mandates, or whether the turnaround time for FDA-approved testing—in some agricultural communities it could take at least two to five days to get results—would have any utility.

27. At the same time, the ETS requires employers to provide ten days' paid leave and benefits for employees "exposed" to a "COVID-19 case," without requiring a test to determine whether that employee is infected at the time they are excluded from the workforce (ETS Regs., § 3205(c)(10)(B)), or at the time they return to work. (*Id.*, § 3205(c)(11)(C).) The ETS's continuous testing mandate requires that all employers provide testing for their entire workforces—potentially hundreds of tests over a multi-week period. Yet, it does not require an employee take that test, or to demonstrate that COVID-19 related "exposure" occurred at the workplace to be paid leave and provided benefits.

28. These rigid directives were made without stakeholder input, expert testimony, or any opportunity to hear from agencies with authority to regulate housing, transportation, and testing, or to protect public health from the spread of COVID-19, and without any consideration of "the latest available scientific data in the field, the reasonableness of the standards, and experience gained under this and other health and safety laws," as is required under the Board's enabling statute. (Lab. Code, § 144.6.)

29. The California Supreme Court has articulated why the APA provisions for notice, comment, initial and final agency reasons, response to comments, regulatory cost/benefit analysis, and Office of Administrative Law ("**OAL**") review are essential in order "to ensure that those persons or entities whom a regulation will affect have a voice in its creation … as well as notice of the law's requirements so that they can conform their conduct accordingly":

> The Legislature wisely perceived that the party subject to regulation is often in the best position, and has the greatest incentive, to inform the agency about possible unintended consequences of a proposed regulation. Moreover, public participation in the regulatory process directs the attention of agency policymakers to the public they serve, thus providing some security against bureaucratic tyranny.

(*Tidewater Marine Western, Inc. v. Bradshaw* (1996) 14 Cal. 4th 557, 569 [59 Cal.Rptr.2d 186] [(internal citations omitted].)

30. Given the chance, employers would have explained why, in the absence of substantial evidence that existing regulations, agency guidance, and employers' IIPPs were not working, there is no need, urgent or otherwise, to promulgate new—and counterproductive—COVID-19 "emergency regulations." But these employers were not given that chance because the Board invoked its authority to promulgate the ETS as an "emergency regulation," thereby eliminating any opportunity by the public to inform itself and the Board of the consequences of the regulation **before** it was adopted.

31. The Board sidestepped these due process safeguards by claiming that the COVID-19 pandemic requires "immediate action to avoid serious harm to the public peace, health, safety, or general welfare." (Gov. Code, § 11342.545.) This claim was, at best, fanciful, given the Board's months long delay and Cal/OSHA's concession that many provisions of the ETS would "complement and augment" or "provide clear guidance" for existing law and regulation, rather than filling an urgent, unmet need to protect workers from serious harm.

32. No one, least of all employers responsible for maintaining the nation's food supply chain, would dispute the pandemic is an unprecedented, global crisis. For purposes

of demonstrating the need for "emergency" regulations under the California Government Code, the question before the Board was not whether COVID-19 is a **public health** emergency. Clearly it is. The question is whether COVID-19 presents an **occupational health** emergency necessitating immediate enforcement of new rules in order to avoid serious and imminent injury. The Board did not and cannot satisfy this test. In addition, the Board must explain the justification for promulgating "emergency" regulations with minimal stakeholder input nine months into an ongoing public health threat.

33. First, by attempting to act as the arbiter of private businesses' financial responsibility to address a public health crisis, the Board failed to recognize the limits of its authority to regulate workplace safety hazards. Cal/OSHA is responsible for occupational safety, not regulating public health in general or employee housing, transportation, workers' compensation, or wage and hour requirements. Cal/OSHA may not invade the jurisdiction of those state agencies authorized to regulate in these areas, just as it may not overstep or contradict the directives of local public health officials who bear primary responsibility for making public health decisions, including whether a person exposed to COVID-19 should be tested, isolated, or quarantined, or permitted to return to school or work.

34. Second, rather than offer any substantial evidence that could support the required link between the immediate harm to be averted and the proposed regulations, the Board's Finding of Emergency largely confines itself to a discussion of the COVID-19 crisis, without explaining how the ETS would protect workers from serious **workplace harm** due to **working conditions** at the place of employment. And while the Board asserts that "[e]mployers and employees would benefit from a specific set of regulations related to COVID-19 in all workplaces," convenience or expedience are not synonymous with urgency and exigency.

35. Yet the best evidence of the lack of any "emergency" is the Board's post hoc attempt to paper over the lack of substantial evidence and deficiencies in the record by purporting to amend the Finding of Emergency **after the regulation was already in force.**

Although this "Addendum #1" is dated November 19, 2020, it appears to have been created on December 3, 2020, and did not appear on the Cal/OSHA website until two weeks after the Board adopted the ETS—or anywhere on the agenda, minutes, or materials made public before the Board's decision to adopt the ETS.

36. To permit meaningful judicial review, an agency must disclose the basis of its action **before** it takes that action. As Chief Justice Roberts explained last term when another, powerful government agency sought to contrive an explanation:

> The reasoned explanation requirement of administrative law, after all, is meant to ensure that agencies offer genuine justifications for important decisions, reasons that can be scrutinized by courts and the interested public. Accepting contrived reasons would defeat the purpose of the enterprise.

(*Department of Commerce v. New York* (2019) 588 U.S. ---, 139 S.Ct. 2551, 2575, 204 L.Ed.2d 978.) This Court "cannot ignore the disconnect between the decision made and the explanation given." (*Ibid.*)

37. These *ultra vires* "emergency" findings still fail to justify the necessity or urgency requirements which the Board was required to demonstrate by specific facts. At a minimum, the remedy is to declare the ETS void, remand the matter with directions that the Board invalidate its decision, provide proper notice to both the public and the OAL (which appears to have not been told about Addendum #1 at the time it reviewed and approved the regulations on November 30, 2020), and reopen the record, so all interested parties are aware of these events and are provided an opportunity to respond to the Board's pretextual justifications to impose rules which could potentially jeopardize the ability of farmers to bring their crops to market. More broadly, the deeply flawed process, and the patently inadequate record, cannot support promulgation of the ETS.

38. Employers have no recourse to obtain a variance or exemption from the Division or the Board before compliance with the ETS imposes massive, non-recoverable costs and depletes their labor supply. The sloppy and secretive way in which the ETS was thrown together shows a failure to appreciate that the Board's hard and fast prescriptions,

to the extent they work at all, fail to account for differences in workplaces in general, and in particular the unique nature of essential industries, such as agriculture.

39. The hard reality of agriculture, like COVID-19, is that it does not wait. California farmers provide over a third of the country's vegetables and two-thirds of the fruits and nuts grown in the United States.[14] In 2019, its top producing commodity—dairy products and milk—is also one of its most perishable. Cows must be milked daily, winter pruning of grape vines must begin, and strawberries and winter vegetables must be picked, now, before spoilage, organisms and lack of care threaten the entire crop—there must be a steady supply of skilled workers to do all of that. Now that the citrus season is in full swing, growers do not have an indefinite amount of time to bring in the fruit before frost overtakes the harvest. This will not happen if, as a result of its enforcement, the ETS puts any part of the agricultural labor force on the bench.

40. Employers now face the choice between implementing impracticable, costly, or unworkable requirements, or risk substantial penalties for non-compliance,[15] and in some cases a real threat of going out of business. Across this State, small businesses and small farmers and new businesses and new farmers, including farmers of color who comprise the majority of vendors in big city outdoor farmers' markets, are particularly at

[14] CDFA, *California Agricultural Production Statistics* <https://www.cdfa.ca.gov/Statistics/#:~:text=California%27s%20agricultural%20abundance%20includes%20more,the%20nation%27s%20total%20agricultural%20value> [as of December 30, 2020].

[15] Violations of Cal/OSHA's regulations can result in penalties ranging from a minimum of $18,000 up to $25,000 per violation for "Serious Violations." (Cal. Code Regs., tit. 8, § 336.) Because Cal/OSHA has determined COVID-19 exposure in the workplace could result in death or serious physical harm, a violation of the ETS will likely be deemed a "Serious Violation." (Cal. Code Regs, tit. 8, § 334(1) ("There shall be a rebuttable presumption that a 'serious violation' exists in a place of employment if the division demonstrates that there is a realistic possibility that death or serious physical harm could result from the actual hazard created by the violation.").) If employers do not rectify violations by the compliance date given by Cal/OSHA, they face additional daily penalties of up to $15,000. (Cal. Code Regs, tit. 8, § 336(f).)

risk. Many are not eligible for federal relief, such as Paycheck Protection Program loans or the Coronavirus Food Assistance Program payments, which excludes those who rely on direct-to-consumer sales.[16]

41. It seems unimaginable that we might see, as we did during the Great Depression, fields of unpicked lettuce, orchards of rotting fruit, or dairy farms dumping milk because it was no longer economically rational to deliver products to market. But this is already happening in California and other parts of the country.[17] Reduced demand has led farmers to plow under healthy crops or euthanize livestock. Due to a lack of agricultural labor, farmers are breaking eggs rather than raising their chicks for market, while millions of unemployed people across the nation wait in line for hours to obtain a week's worth of groceries.[18] The ETS can only exacerbate and accelerate this tragedy.

42. All those in the agricultural sector recognize that emergency situations may require emergency measures. Given what we know (or do not know) about the impact, duration, velocity and mutability of the novel coronavirus, it is no longer plausible to call the ETS an "emergency" measure to address a "temporary" exigency. The Board all but concedes this by announcing at the time of its promulgation that these regulations remain in force until at least October 1, 2021, and may become permanent should the Board decide to follow the notice-and-comment procedures it dispensed with when it promulgated the ETS.

43. The ETS provides no streamlined (or any) process whereby an employer may obtain relief from immediate compliance. Employers have no "plain, speedy, and

adequate remedy, in the course of law" (Code Civ. Pro., § 1086), to avoid the confiscatory threat posed by these regulations. Under the facts and law presented by this case, this Court may not only declare the ETS invalid, in part or in whole, but also may issue a preemptory writ to command the Board "to do the act required to be performed" (Code Civ. Pro., § 1088), and to comply with its obligations under the Labor Code, the APA, and the safeguards of due process.

III. PARTIES

44. Plaintiff Western Growers Association, founded in 1926, is a nonprofit association representing local and regional family farmers in California, Arizona, Colorado and New Mexico. Western Growers members grow, pack, and ship over half of the nation's fresh produce, including nearly a third of America's fresh organic produce. Western Growers member companies are dedicated to providing a great variety of safe and healthy fresh fruits, vegetables and tree nuts to consumers. With offices and dedicated staff in Sacramento, California and Washington, D.C., Western Growers is a leading public policy advocate for the fresh produce industry and has a longstanding interest in employment and labor and employee health and safety matters.

45. Plaintiff California Farm Bureau Federation ("CFBF") is an incorporated nonprofit trade association. Organized in 1919 and headquartered in Sacramento, CFBF is the largest organization of its kind in California. CFBF's members consist of 53 county Farm Bureau organizations—each an incorporated trade association—covering 56 California counties, with more than 31,700 members, including more than 23,000 agricultural (i.e., voting) members. CFBF's purposes include representing and protecting the economic interests of California's farmers and ranchers, and it has done so in many legislative and regulatory proceedings involving workplace safety and health.

46. Plaintiff California Business Roundtable is a nonpartisan organization comprised of the senior executive leadership of major employers throughout the State of California, with a combined workforce of over 750,000 employees. For more than forty

years, the Roundtable has identified the issues critical to a healthy business climate and provided the leadership needed to strengthen California's economy and create jobs.

47. Plaintiff Grower-Shipper Association of Central California ("GSACC") is a regional trade association, offering advocacy, programs and services to over 300 members. Founded in 1930, today the organization's membership consists primarily of growers, shippers, handlers, and processors of vegetables and fruits produced in the Central Coast region of California, encompassing Monterey, Santa Cruz, San Benito and Santa Clara Counties. The mission statement of GSACC is to advance solutions benefitting families, food and farming on the Central Coast. As such, GSACC is dedicated to providing programs and services covering diverse areas, including active crisis management and action, and has created a renowned COVID-19 housing, testing, and education program; implemented large scale personal protective equipment acquisition and distribution efforts to support employer-driven protective efforts; and advanced solutions that address the technical, legal, scientific, and economic basis of challenges with a disproportionate effect onto the region covering water quality and the environment, worker protection, food safety and security, and pest and disease management and prevention.

48. Plaintiff California Association of Winegrape Growers ("CAWG"), established in 1974, serves a unique role as the only statewide organization focused specifically on California winegrape growers. CAWG helps to ensure the implementation of sound public policies through monitoring and advocating on state and federal legislation, advancing safe and sustainable farming practices, and promoting education and research to enhance the California winegrape industry.

49. Plaintiff Ventura County Agricultural Association is a non-profit business trade association representing the interests of over two-hundred agricultural and related employers in Ventura and Santa Barbara Counties since 1970. Its membership includes virtually all of the major agricultural employers, cooperatives, packinghouses, farm labor contractors, trucking businesses and agricultural-related support industries. The Association routinely represents the interests of many of the above employers before the

Department of Industrial Relations ("**DIR**"). The Association has been deeply involved in the COVID-19 pandemic through its partnerships with many local farmers, worker advocacy groups, the County Agricultural Commissioner and the County Public Health Department in i) preparing COVID-19 guidance documents; ii) disseminating federal, state and local COVID-19 guidance documents, workplace training and posters to its membership; and iii) providing consultation on workplace issues involving workers who have contracted or have been exposed to the COVID-19 virus.

50. Defendant California Occupational Safety and Health Standards Board, i.e., "the Board," is charged with adopting, amending, and repealing standards governing occupational health and safety in the State of California. It is "the only agency in the state authorized to adopt occupational safety and health standards." (Lab. Code, § 142.3(a)(1).) The Board is comprised of up to seven members, appointed by the Governor. The Board also responds to petitions for new or revised standards.[19]

51. Defendants David Thomas, Chris Laszcz-Davis, Laura Stock, Barbara Burgel, David Harrison, and Nola J. Kennedy, in their official capacities, are appointed members of the Board who approved, by unanimous vote, the ETS.

52. Defendant Christina Shupe, in her official capacity, is Executive Officer of the Board.

53. Defendant California Division of Occupational Safety and Health, i.e., Cal/OSHA or the "Division," is the governmental agency responsible for overseeing workplace safety in California and enforcing health and safety standards promulgated by the Board.

54. Defendant Douglas L. Parker, in his official capacity, is Chief of the California Division of Occupational Safety and Health, responsible for enforcement of the ETS.

IV. JURISDICTION, VENUE, AND STANDING

---

[19] *See* DIR, *Occupational Safety & Health Standards Board (OSHSB)* <https://www.dir.ca.gov/oshsb/oshsb.html> [as of December 30, 2020].

55. This Court has jurisdiction over this action pursuant to Government Code section 11350 and Code of Civil Procedure sections 526, 1085, and 1060.

56. Venue is proper in the County of Los Angeles pursuant to Code of Civil Procedure section 401 because the California Attorney General maintains an office in the County of Los Angeles.

57. Plaintiffs have standing to bring this action: (a) Plaintiffs' members are directly impacted by the Defendants' conduct and would have standing on their own to seek the relief requested herein; (b) the case is germane to Plaintiffs' organizational purpose of advocating for the interests of their members; and (c) the case does not require the participation of Plaintiffs' individual members because this case does not involve a question driven by individualized factors, but rather involves the overarching questions of whether Defendants had the authority to promulgate the ETS (at all or on an emergency basis) and whether the ETS violate the Labor Code, the APA and the California and U.S. Constitutions.

58. Plaintiffs are "interested persons" under Government Code section 11350(a), and therefore may obtain a judicial declaration as to the validity of the ETS based on its "substantial failure to comply" with the requirements of the APA, or "upon the ground that the facts recited in the finding of emergency . . . do not constitute an emergency" under Government Code section 11346.1.

V. FACTUAL ALLEGATIONS

A. The State of Emergency and the Governor's Declaration of the Agricultural Industry as a "Critical Infrastructure Sector"

59. In response to the novel coronavirus, i.e., COVID-19, Governor Newsom declared a "State of Emergency" on March 4, 2020, followed by a Stay-at-Home Order on March 19. That order indefinitely prohibited "non-essential businesses" from operating.[20] Governor Newsom specified that California's response to the coronavirus pandemic "must

[20] *See* Governor's Exec. Order No. N-33-20 (March 19, 2020).

be done using a gradual, science-based and data-driven framework."[21] Agricultural sector businesses were designated as "essential" and its employees were exempted from the Stay-at-Home Order.

60. All non-essential businesses remained closed until May 4, 2020, when Governor Newsom issued Executive Order N-60-20.[22] That Executive Order delegated to the State Public Health Officer the authority "to take any action she deems necessary to protect public health in the face of the threat posed by COVID-19," including whether a business would be deemed "essential," and allowed to remain operating.

61. Businesses deemed "essential" were allowed to remain open. Food and agriculture businesses were designated "essential" by the State Public Health Officer, in accordance with Governor Newsom's March 19, 2020 Executive Order N-33-20, and remain classified as "essential" businesses.[23] This designation recognizes the paramount importance of maintaining the integrity of the food supply chain.[24]

---

[21] *See Governor Newsom Outlines Six Critical Indicators the State will Consider Before Modifying the Stay-at-Home Order and Other COVID-19 Interventions* (April 14, 2020) <https://www.gov.ca.gov/2020/04/14/governor-newsom-outlines-six-critical-indicators-the-state-will-consider-before-modifying-the-stay-at-home-order-and-other-covid-19-interventions> [as of December 30, 2020].

[22] *See* Governor's Exec. Order No. N-60-20 (May 4, 2020).

[23] *See Essential workforce* (December 3, 2020) <https://covid19.ca.gov/essential-workforce/> [as of December 30, 2020].

[24] In a rare moment of national consensus, both the state and the federal government agreed that employees in "critical infrastructure industr[ies]," including food and agricultural workers, have a "special responsibility" to continue providing food during the national emergency. (The White House, *30 Days to Slow The Spread* <https://www.whitehouse.gov/wp-content/uploads/2020/03/03.16.20_coronavirus-guidance_8.5x11_315PM.pdf> [as of December 30, 2020].) On April 28, 2020, President Trump issued Executive Order 13917, entitled "Delegating Authority Under the Defense Production Act with Respect to the Food Supply Chain Resources During the National Emergency," which directed certain food and agriculture industries, such as meat and poultry producers, to "continue operating and fulfilling orders" to the extent possible. (Exec. Order No. 13603, 85 Fed.Reg. 26313 (April 28, 2020).) The Executive Order stated that the nation's interest in the "continued supply of protein for Americans" had

B. California Issues COVID-19 Guidelines as Part of Mandating Updates to Employer Injury and Illness Prevention Programs

62. Industries throughout California, and in particular critical infrastructure sectors such as food and agriculture, collaborated with elected officials, state and county regulatory agencies, and public health and occupational safety authorities, including the CDC, CDPH, CDHCD and Cal/OSHA, to develop industry-specific guidelines to assist employers in developing and updating their IIPP to incorporate evolving public health, scientific and medical understanding of the virus, and best practices to contain the spread of COVID-19.

63. State agencies began promulgating detailed COVID-19 guidance specific to agriculture shortly after the March 19, 2020 Stay-at-Home Order and throughout the year. As early as March 20, 2020, the industry was working with state, county and local jurisdictions to formulate guidance for agriculture.[25] Subsequent guidance addressed employer-provided housing for migrant farmworkers,[26] detailed social distancing restrictions for migrant farmworker contractors,[27] guidance on cleaning and disinfecting procedures for COVID-19 gathered from the CDC,[28] a COVID-19 general checklist jointly

---

been jeopardized by "recent actions in some States" that "have led to the complete closure of some large processing facilities." (*Id.*)

prepared by Cal/OSHA and CDPH for agricultural employers, which covered the requirements of a worksite specific plan, worker training topics, screening measures, cleaning and disinfecting protocols, physical distancing guidelines,[29] revised guidance issued two weeks later by Cal/OSHA,[30] joint "Industry Guidance" from CDPH, CDFA and Cal/OSHA for agriculture and livestock industries, and guidance for food packing and processing industries "to support a safe, clean environment for workers."[31] As already noted (paragraph 17 *supra*), AB 2043 directed Cal/OSHA to disseminate, in English and Spanish, all "Guidance Documents" relating to COVID-19 in the food and agricultural sector.[32]

C. Industry Implements State-Directed Mandates for COVID-19 Workplace Safety

64. At the outset, all employers faced two, related challenges: First, how to immediately implement mitigation and prevention measures to slow the spread of COVID-19 in their workplace, while at the same time adjusting strategies as more was learned

---

19%20guidance%20for%20cleaning%20and%20disinfecting%20ada.pdf> [as of December 30, 2020].

[29] CDPH, *COVID-19 General Checklist for Agriculture and Livestock Employers* (July 2, 2020) <https://files.covid19.ca.gov/pdf/checklist-agriculture.pdf> [as of December 30, 2020].

[30] DIR, *Cal/OSHA COVID-19 Daily Checklist for Agricultural Employers* (July 21, 2020) <https://www.dir.ca.gov/dosh/Coronavirus/COVID-19-Daily-Checklist-Employers.pdf> [as of December 30, 2020].

[31] *COVID-19 Industry Guidance: Food Packing and Processing* (July 29, 2020) <https://files.covid19.ca.gov/pdf/guidance-food-packing.pdf> [as of December 30, 2020].

[32] *See* Lab. Code, § 6725(a)(2) (identifying "Guidance Documents" to include Cal/OSHA Interim General Guidelines on Protecting Workers from COVID-19 (dated May 14, 2020), Cal/OSHA Safety and Health Guidance: COVID-19 Infection Prevention for Agricultural Employers and Employees (dated October 27, 2020), COVID-19 Industry Guidance: Food Packing and Processing, issued by the division, the State Department of Public Health, and the Department of Food and Agriculture (dated July 29, 2020), COVID-19 Industry Guidance: Agriculture and Livestock, issued by the division, the State Department of Public Health, and the Department of Food and Agriculture (dated July 29, 2020), and "any other guidance or guidelines made available on the division's internet website pertaining to novel coronavirus (COVID-19) infection prevention for agricultural employees").

about the transmission and effects of the virus. Second, to reconcile the myriad of rapidly-changing state and local Executive Orders, agency directives and guidance, and federal, state, county, and municipal laws and ordinances.

65. Various industries, through trade associations and other organizations, worked with various state and federal regulators to promulgate guidelines that were sufficiently categorical to inform employers how to update and comply with their legal requirements to implement an IIPP which would appropriately address COVID-19 workplace risks without prescribing arbitrary rules or benchmarks. Agriculture provides an example of the coordination that took place.

66. Agriculture is already one of the most heavily-regulated sectors in California. It is also one of the most diverse, given that the state produces about four-hundred different agricultural products grown or harvested in different seasons and localities, and with different labor needs and resources. It is not unusual, for example, for one agricultural employer to operate in several counties, if not in more than one state, thus requiring them to comply with potentially different sets of rules. In addition to promulgating clear, timely, and actionable guidance, it was critical that every state actor with aspects of agricultural oversight had to insure that they were operating within the scope of their statutory authority.

67. Section 144.6 of the Labor Code directs the Board to promulgate performance-based standards "expressed in terms of objective criteria and of the performance desired," rather than rigid, or prescriptive metrics which make no allowance for differences across workplaces and industries. Although the IIPP has a specific framework, Cal/OSHA uses a performance-based standard that requires an employer to develop an IIPP that, ideally, is tailored to their company's operations. (*See generally* Cal. Code Regs., tit. 8, § 3203 (describing performance-based standards for IIPPs).)

68. The IIPP is mandated under section 3203 of Cal/OSHA's Title 8 regulations. Section 3203 specifies every major programmatic category—from developing a hazard response plan, investigating workplace illnesses, and providing training concerning

workplace hazards, to protocols for communications with employees, law enforcement, and public health officers. In order to comply with Cal/OSHA's requirement that employers "establish, implement, and maintain an effective Injury and Illness Protection Program" (Cal. Code Regs., tit. 8, § 3203(a)), all California employers above a certain size must develop an IIPP to prevent, mitigate, and slow the spread of COVID-19 in the workplace.

69. As discussed (Part V.G. *infra*), the Board staff told the Board that COVID-19 workplace regulations proposed by Petition 583 were not advisable, in part because California's performance-based IIPP standard would better allow employers to respond to rapidly evolving worker protection guidelines issued by various agencies, including Cal/OSHA. In the case of agriculture, best practices may depend on where, when, and how crops are cultivated and harvested, including how to retrofit or reconfigure the worksite to provide for social distancing, physical barriers, mask wearing, and so on.[33] For many agricultural-related industries, including packing and processing of perishable products, safety and hygiene protocols are not new. Masks, eyewear, hand sanitation, protective garments, disposable gloves, and rigorous separation of food handling for food safety purposes are imbedded practices.

70. The agriculture industry's long familiarity with farmworker needs also led to COVID-19 related innovations. For example, agricultural employers in Monterey County created an employer-funded, "wrap around housing" program to provide facilities for isolating and quarantining farmworkers, whether or not these workers were residing in

employer-provided housing. Administered by the GSACC and coordinated with the County, any one of the participating employers' employees who tested positive or exhibited symptoms would be moved to at a hotel or motel at the industry's expense. In addition to housing, the program offered three meals a day and daily visits by nurses for up to fourteen days for those in self-isolation. To qualify, the employee must work in agriculture and have tested positive or been exposed to COVID-19.[34] It was the model for a program sponsored jointly by the state and FEMA, called Housing for the Harvest.[35]

71. As another example, the agricultural industry recommended incorporating into IIPPs worker "cohorting." Worker "cohorting" involves grouping workers or crews such that they live, transport, and work together, effectively creating a "COVID bubble" that minimizes the chance of infections from outside affecting the cohort and the chance of an infection within a cohort from spreading to those outside.

72. In addition to agency guidance, agricultural employers were required to adapt their COVID-19 compliance program to the unique circumstances of their businesses. For example:

a) Because their work force is seasonal and fluid, IIPP compliance could include repeated trainings, in multiple languages and dialects, to educate and train employees about workplace mitigation and prevention of COVID-19, including basic information such as what COVID-19 is, how workers are exposed, etc.;

b) Tailoring social and physical distancing requirements to comply, wherever feasible, with CDC and CDPH guidance, while taking into account the realities of cultivation and harvesting, as well as the differences between picking row crops, such as lettuce and strawberries, versus vine and tree fruits;

c) Because agricultural communities are remote, and tend to be underserved with testing and medical facilities, to assist by providing free access to medical professionals, such as Teledoc services with insurance companies, or bringing physicians out to working crews (often dozens of them), so that

[34] CA.gov, *Housing for agricultural workers* (November 25, 2020) https://covid19.ca.gov/housing-for-agricultural-workers/ [as of December 30, 2020].

[35] *See* Western Growers, *Governor Newsom Announces Housing for the Harvest Program* (July 28, 2020) <https://www.wga.com/blog/governor-newsom-announces-housing-harvest-program> [as of December 30, 2020].

employees could speak directly with such health care providers about COVID-19;

d) Conducting daily screenings whereby employees must answer specific questions about their health and potential exposure to COVID-19, and/or take temperatures, before entering the workplace;

e) Many agricultural employers—particularly those with larger, more complex, or vertically-integrated operations—have developed sophisticated and aggressive contact tracing protocols, the data from which they have agreed to provide to county health officials trying to develop their own databases for reporting purposes;

f) In connection with employer provided transportation, implementing some or all of the following measures: proactively limiting the number of passengers on vehicles, requiring screenings before entering the vehicles, requiring handwashing before and after transportation on vehicles, wearing masks at all times on the vehicle, requiring windows to remain open (unless extreme hot or cold weather in effect, during which time ventilation measure were taken), requiring seating charts for the day or longer, transporting cohorted employees together, installing barriers between workers on the bus, and/or installing barriers between passengers and the bus driver (to keep the driver safe); and

g) In connection with employer-provided housing, and aside from the wrap-around housing program discussed above, implementing some of all of the following measures: proactively limiting the number of individuals in units, testing workers before placing them into housing, providing additional cleaning and sanitation supplies, closing and prohibiting congregation in certain common areas and making other common areas (such as laundry rooms) subject to appointments or other scheduling limitations, enhanced cleaning and sanitation of common or high-use areas, and/or housing cohorted employees together.

73. Because agricultural employers work closely with local health, agricultural, housing, and occupational safety agencies, certain agricultural communities, such as Ventura County, have been able to track positivity rates based on various demographic and occupational characteristics. As of December 23, 2020, the County reported 506 cases where farmworkers tested positive. Roughly half of these cases traced back to two major outbreaks in the first half of 2020. The downward trend is reflected by the fact that only 1.5 percent of total Ventura County cases reported involved farmworkers, as compared to other essential workers or vulnerable populations, such as long-term care and skilled nursing (2.7%), healthcare workers (2.8%), those 65+ (9.2%) or those with underlying

health conditions (11.5%).[36] Workers in the grocery and food service section amounted to 1.1% of the total cases. The Ventura County statistics strongly suggest that the agriculture, grocery, and food services industries have learned from experience, and adjusted best practices in dealing with COVID-19.

74. Employers have continuing obligations to ensure that all workers provided with employer housing, including H-2A guest workers, are provided with a safe place to live and work. The H-2A program requires, as a condition of the grant of a work visa, employers are able to secure safe and habitable living quarters for every guest worker. Such housing must be in place before an employer even applies for visas. The compliance standards under this program are rigorous, comprehensive, and detailed, as are the guidelines for worker housing promulgated by the CDHCD and EDD. Any departure from the requirements imposed by state and federal agencies or a finding of non-compliance could jeopardize an employer's ability to secure critically needed guest workers through the H-2A program. Because these requirements mandate that each worker is provided with 100 square feet of living space, crowding conditions, such as those seen in unregulated housing arrangements (where many workers may cram into one apartment), is avoided.

D. Cal/OSHA's Enforcement Response to the COVID-19 Pandemic

75. Prior to the onset of COVID-19, Cal/OSHA had the ability to regulate "Control of Harmful Exposure to Employees" and "Aerosol Transmissible Diseases" ("**ATD**") in workplaces where employees are exposed to infectious diseases that spread by inhalable particles and droplets. (Cal. Code Regs., tit. 8, §§ 5141, 5199 & 5199.1) Employees protected by the ATD regulations include health care workers and first responders, as well as those who work in certain agricultural sectors, such as animal and poultry farms, slaughterhouses, meat packing plants, and transportation of livestock. (*Id.*, § 5199.1(a)(1)(A)(4)-(5).)

---

[36] Ventura County Recovers, *County of Ventura, COVID-19 Information* <https://www.venturacountyrecovers.org/> [updated as of December 30, 2020].

76. Cal/OSHA had, in addition to the ATD standard, a number of other standards, including the IIPP standard under section 3203 of Cal/OSHA's Title 8 regulations, to regulate COVID-19 compliance.

77. Cal/OSHA has authority to ensure that employers have an up-to-date, written, and comprehensive COVID-19 compliance and prevention plan, and may investigate and enforce any violation of the IIPP requirements under section 3203. On May 14, 2020, Cal/OSHA explicitly required employers "to determine if COVID-19 infection is a hazard in their workplace . . . For most California workplaces, adopting changes to their IIPP is mandatory since COVID-19 is widespread in the community."[37] This guidance details COVID-19 prevention information that should be included in every employer's IIPP to maintain compliance. (*Id.*)

78. On July 16, 2020, the Deputy Chief of Health for Cal/OSHA, Eric Berg, briefed the Board on Cal/OSHA's current enforcement of employers' requirements to establish, implement, update, and monitor compliance with COVID-19 prevention and mitigation protocols under their IIPPs. Deputy Chief Berg stated that "the Division is doing many investigations and issuing citations under the ATD standard where it applies, and for situations where it does not apply, the Division is citing under Sections 3203 and 5141." (Exh. 4, pp. 5-6.)

79. During that same Board meeting, Katie Hagen, Director of the DIR, informed the Board as to its efforts to ensure that employers are acting on agency COVID-19 related guidance:

> The Division is doing workplace visits and inspections, issuing citations after the investigation is complete, and conducting follow-up visits as needed, in addition to providing guidance, consultation, and education. The Division of Labor Standards Enforcement (DLSE) is assisting with these things as well. The Division is providing outreach to employers via mass email to various industries, and has also set up a call center that reaches 1,200 callers per day to provide assistance.

[37] DIR, *Cal/OSHA Interim General Guidelines on Protecting Workers from COVID-19* (May 14, 2020) <https://www.dir.ca.gov/dosh/coronavirus/General-Industry.html> [as of December 30, 2020].

(Exh. 4, p. 6.)

80. AB 2043 directs Cal/OSHA to routinely compile and report the subject matter, findings, and results of any investigation "relating to practices or conditions prescribed in the Guidance Documents or a COVID-19 illness or injury at a workplace of agricultural employees." (Lab. Code, § 6725(d).) Although AB 2043's reporting requirements went into effect on or about September 28, 2020, Cal/OSHA had already been investigating and citing employers for failure to comply with their IIPPs.

81. For example, on September 4, 2020, Cal/OSHA Chief Douglas L. Parker issued a press release where he reported Cal/OSHA "has cited 11 employers for not protecting employees from COVID-19 exposure during inspections of industries where workers have an elevated risk of exposure. The industries include food processing, meatpacking, health care, agriculture and retail." [38] Chief Parker also stated that Cal/OSHA has "identified these industries as priorities in our strategic enforcement efforts to make sure employers have adequate COVID-19 infection prevention procedures in place," and that "[t]hese are industries where workers have been disproportionately affected, and these citations are the first of many to be issued in the coming weeks and months."

82. Six of the eleven companies cited were in the "Agriculture" sector. Each involved outdoor workplace activities. Five of the six companies were cited for "failure to provide sufficient shade to enable employees using the shade during breaks/means to maintain a physical distance from co-workers of at least six feet in all directions." One company was cited for failing to ensure workers wore face coverings "while weeding strawberries in close proximity to one another," while another was cited for "failure to provide handwashing facilities within five minutes of a crew working in a field roguing

[38] DIR, *Cal/OSHA Issues Citations to Multiple Employers for COVID-19 Violations* (September 4, 2020) <https://www.dir.ca.gov/DIRNews/2020/2020-76.html> [as of December 30, 2020].

[i.e., removing plants with undesirable characteristics] sunflowers." The fines ranged from $4,050 to $11,700.[39]

83. Cal/OSHA updates on a weekly basis its webpage reporting citations for COVID-19 related violations. As of December 22, 2020, Cal/OSHA reported a total of ninety-two (92) COVID-19 related citations—none of these citations is based on a violation of the newly-promulgated ETS. Fourteen of the COVID-19 citations related to employers in the agriculture—planting, cultivating, harvesting, postharvest crop activities, cattle ranching, poultry processing, and animal slaughtering.[40] The majority of proposed penalties against these agricultural employers were for under $10,000.00.[41]

84. Five of the ninety-two citations related to food processors, including frozen specialty food manufacturing and perishable prepared food manufacturing.[42] Of the thirteen COVID-19 citations with substantial proposed penalties (over $50,000), six were issued to health care employers (one relating to a correctional facility), two were issued to animal slaughterers, three to frozen food processors, one to a restaurant company, and one to a temporary help services employer. This relatively narrow collection of employer

categories does not support any inference of a compliance problems with employers in general.

E. Worksafe/NLG Petitions for a COVID-19 "Emergency" Standard

85. The Board has the authority to initiate proceedings to consider whether existing standards are inadequate to address changing or novel workplace health or safety issues. At no point did the Board consider the need for a COVID-19 standard, let alone its promulgation on an emergency basis and without the opportunity for public participation, until September 17, 2020—four months after receiving the Workspace/NLG Petition—when the Board decided, against the recommendation of the Board's staff, that emergency regulations were needed.

86. On May 20, 2020, WorkSafe and the National Lawyers Guild filed Petition 583 with the Board, requesting the Board promulgate a "temporary emergency standard" governing COVID-19 related workplace safety. (Exh. 1.) The petitioners also requested that, following promulgation of the standard on expedited basis, the Board conduct notice and comment proceedings, pursuant to the rulemaking provisions of the APA (Gov. Code, § 11340 et seq.), to adopt a permanent standard.

87. The standard proposed in the Worksafe/NLG Petition largely mirrored existing guidance from various state agencies, including Cal/OSHA and, in fact, was already an essential part of any COVID-19 related IIPP that must comply with pre-existing Cal/OSHA standards under section 3203. This included the designation of a "competent person" to create, implement, and maintain "effective written infection control procedures to control the risk of transmission," i.e., a "Compliance Action Plan" for COVID-19 prevention and mitigation.[43] But the Worksafe/NLG Petition said nothing about paid leave for employees who test positive for COVID-19 or who have been "exposed" to COVID-

[43] Citing the need to issue regulations to "protect employees in any facility, service category, or operation who may be exposed to SARS-CoV-2 [Covid-19], and who are not within the scope" of the aerosol transmissible diseases standards (Cal. Code Regs., tit. 8, §§ 5199 & 5199.1), Petitioners requested that the Board promulgate COVID-19 regulations as an emergency temporary standard and ultimately permanent standard.

19. It was also silent as to requiring employers to conduct, at their cost, worksite-wide and repeated COVID-19 testing. It did not mention restrictions on employer-provided housing or transportation to reduce exposure or minimize the spread of COVID-19.

88. Notwithstanding the Worksafe/NLG Petition's claim of urgency, the Board did not expedite consideration of the matter. During the July 16, 2020 Board meeting, one Board member made a motion "that petition 583 be heard, discussed, and voted on at the August 2020 Board Meeting."[44] The motion was not seconded, and therefore failed. Although the Board agreed to bring the Worksafe/NLG Petition before the Board at the August 20, 2020 Board meeting "for consideration," no action was taken at that meeting.

F. Cal/OSHA Recommends Adoption of the Worksafe/NLG Petition

89. Under Labor Code section 147.1(d), Cal/OSHA was required to evaluate the proposed "occupational health" standard and submit a report to the Board within 60 days of the Board's receipt of the Workplace/NLG Petition. As of the July 16, 2020 Board meeting, Cal/OSHA still had not provided its report to the Board, and would not do so until July 30, 2020.

90. On July 30, 2020, Cal/OSHA issued a Memorandum recommending the Board "grant Petition 583, in part, by requesting Cal/OSHA to develop and promulgate a proposed emergency temporary standard for the consideration of the Standards Board."[45]

91. Cal/OSHA's analysis of the Worksafe/NLG Petition did not suggest that Petition 583 was breaking new ground or proposing any material change to existing workplace guidance or standards applicable to COVID-19, or that existing guidance or standards were ineffective as to current needs. Cal/OSHA rationalized the need for a new,

---

[44] Occupational Safety and Health Standards Board, *Public Meeting and Business Meeting* (July 16, 2020) <https://www.dir.ca.gov/oshsb/documents/minutesJul2020.pdf> [as of December 30, 2020].

[45] The Memorandum is attached as Exhibit 3, and also available at <https://www.dir.ca.gov/oshsb/documents/petition-583-dosheval.pdf> [as of December 30, 2020].

emergency temporary standard because it would "**complement and augment** the existing rules and provide **clear guidance** to employers and workers":

> If COVID-19-specific protections similar to the [COVID-19-specific] guidelines were spelled out in the Title 8 standards, Cal/OSHA could more easily enforce requirements that would be specific, detailed, and more protective of workers . . . . A specific COVID-19 emergency regulation in Title 8 would provide clear instructions to employers and employees on what needs to be done to protect workers from COVID-19, eliminating any confusion and enhancing compliance.

(Exh. 3, pp. 22-23.)

92. Cal/OSHA also stated that "it is essential that Cal/OSHA have all available tools to protect workers from COVID-19 illness and death," but did not identify what tools it believed were missing, or why the tools available were inadequate to protect workers. While claiming that "COVID-19 is an occupational health emergency causing more deaths in less time than any other workplace crisis in the nearly fifty-year existence of Cal/OSHA," and speculating that the "COVID-19 public health crisis is exactly the type of catastrophe that the legislature intended an emergency regulation to address," Cal/OSHA did not support these claims by any citation to evidence. (Exh. 3, p. 21.)

93. Cal/OSHA justified the need for emergency regulation by stating "[t]here is no existing Title 8 regulation that comprehensively addresses an employer's responsibility to protect Non-5199 Workers from infectious diseases." (Exh. 3, p. 22.)[46] The Division does not explain why there is an urgent need for a "comprehensive" standard to address infectious diseases, or why that need necessarily follows because of the current crisis concerning a unique infectious disease.[47]

---

[46] Although the Worksafe/NLG Petition excluded workers covered by Title 8's Aerosol Transmissible Disease standard in sections 5199 (primarily health care and related facilities) **and** 5199.1 (facilities and services involving animals), Cal/OSHA decided to exclude only "Non-5199 Workers."

[47] Title 17, section 2500 of the California Code of Regulations lists over 80 communicable diseases, ranging from anthrax, lime disease, botulism, to rabies and Middle East Respiratory Syndrome. Of these, section 5199 specifically addresses one—tuberculosis—as it relates to *occupational exposure*, i.e., "exposure from *work activity* or *working*

94. Nevertheless, the Division cited numerous Cal/OSHA standards currently being used by the Board to initiate investigations and enforcement proceedings. (*Id.*, pp. 6-20.) Cal/OSHA acknowledged "these general provisions provide Cal/OSHA a regulatory basis for requiring employers to take measures to protect workers from COVID-19." (*Id.*, p. 22.).

G. The Board Staff Concludes Proposed Emergency Regulations Are Not Necessary and Recommends the Worksafe/NLG Petition Be Denied

95. On August 10, 2020, the Board staff issued its evaluation of the Worksafe/NLG Petition. (Exh. 2.) The Board staff concluded that the emergency request was not "necessary" and recommended that the Worksafe/NLG Petition be denied. (Exh. 2, p. 9.) The findings and rationale upon which Board staff based its conclusion included the following:

a) Board staff is unable to find evidence that the vast majority of California workplaces are not already in compliance with COVID-19 requirements and guidelines.

b) Board staff cautions that a new regulation would place additional regulatory burden on California businesses that are already compliant with California's COVID-19 requirements and guidelines.

c) Unnecessarily creating an offshoot of the IIPP, without substantial evidence of need, can harm the existing protective nature of the regulation and its benefit to California workplaces by diluting its capacity to serve as the primary regulation requiring employers to address newly discovered hazards.

d) Attempting to codify some of those requirements will no doubt result in confusion when the updated guidelines conflict with the written regulation.

e) Relying on California's performance-based IIPP allows employers to respond to updated worker protection guidelines in a more efficient and responsive manner. which translates into more-effective employee protections.

f) Instead of directing limited resources to create new regulations to prescriptively require what is already required by the existing IIPP performance regulation, enforcement and consultative efforts could continue to focus on businesses in specific parts of the state, such as Los Angeles County, where about 40% of the cases and 50% of the deaths in California have occurred, or on specific industries identified as having disproportionately high incidents of infection. Developing an ETS and a

---

conditions" in facilities where exposure is "reasonably anticipated" based on the nature of the workplace itself, in this case health care facilities, services, or operations listed in the standard. (*Id.*, sec. 5199 (a)(1)(A).)

follow-up permanent regulation for the entire state may not be the most effective use of California's limited Cal/OSHA and Board resources.

g) Board staff is not aware of any California studies or data showing that employers are lacking the information necessary to provide employee protections from COVID-19 hazards, nor that the vast majority of employers are not already doing as much as they are able to keep their employees, customers, and businesses functioning safely in accordance with federal, state, and local requirements.

h) Board staff is of the opinion that while the risk of exposure to SARS-CoV-2 is significant, new regulations, whether in the form of an emergency or permanent regulation, are not likely to significantly improve employee outcomes, Employers have ready access to credible information to combat exposure to SARS-CoV-2 and are already required to effectively address such challenges in their workplace. Continued enforcement of existing regulations and consultative outreach is a more efficient and likely effective use of the Cal/OSHA's limited resources.

(Exh. 2, pp. 5-9.)

96. The first time the Board had an opportunity to publicly discuss Cal/OSHA's Memorandum and Board Staff's evaluation took place at the Board's monthly meeting on August 20, 2020. One Board member, commenting on Cal/OSHA's evaluation of the Worksafe/NLG Petition, stated: "It is important to note that the Division has recommended undertaking emergency rulemaking in this case, **but they have not made it clear what the gap is that needs to be addressed**." (Exh. 5, p. 8 [emphasis added].)

97. Another Board member stated "several standards have been developed out of need for additional regulation, such as the ATD and heat illness standards" and "[a]lthough the Division has conducted many inspections pertaining to COVID-19 exposure in the workplace, no citations have been issued yet." (*Id.*, p. 7.)

H. The Board Rejects the Staff Evaluation and Recommendations and Directs the Division to Draft and Submit an Emergency COVID-19 Regulatory Proposal

98. On September 17, 2020, four months after the Worksafe/NLG Petition was first submitted, the Board decided that emergency COVID-19 regulations were necessary. It based this decision largely on Cal/OSHA's unsubstantiated claim that an emergency regulation "would enhance worker safety," and its "assertion that an emergency regulation would strengthen, rather than complicate, the Division's enforcement efforts." At this September 17, 2020 Board meeting, Eric Berg, Deputy Chief for Health, Cal/OSHA, was

asked to provide responses to questions posed by Board Member Kennedy following the July 16, 2020, Board meeting, including whether, "[o]f the numerous inspections that the Division has conducted, are there any situations were identified COVID-19-related workplace problems could **not** be cited under Section 3203 [the IIPP standard] or the ATD standard?" (Exh. 6, at p.9 [emphasis added].) [48]

99. According to the minutes, Deputy Chief Berg did not identify any situations where a lack of regulatory standards prevented the Division from citing employers:

> Mr. Berg stated that the Division is conducting inspections into COVID-19-related hazards in response to complaints, outbreaks, and clusters. The Division is focusing its inspection efforts on industries that have vulnerable populations, increased rates of COVID, and that are having significant outbreaks and clusters.
>
> Mr. Berg stated that in cases where employers do not fall under the requirements of the ATD standard, **Sections 3203 and 5144 provide a regulatory basis that requires employers to protect workers from exposure to COVID-19 in the workplace.** However, the Division feels that a regulation specific to COVID-19 would greatly increase their efficiency, effectiveness, and success in protecting workers.

(*Id*. at pp. 9-10 [emphasis added].)

100. By unanimous vote, the Board voted to adopt the Worksafe/NLG Petition. It directed Cal/OSHA to "draft and submit an emergency regulatory proposal for consideration of adoption by the Board no later than the November 19, 2020 Board Meeting." The Board further instructed the Division to work with Board staff "to convene an advisory committee at four-month intervals to review and recommend amendments to the emergency standard," and to consider the need for a permanent regulation "[a]fter the COVID-19 pandemic subsides." (Exh. 6., at p. 9.)

---

[48] The September 17, 2020 minutes are attached as Exhibit 6, and also available at <https://www.dir.ca.gov/oshsb/documents/minutesSep2020.pdf> [as of December 30, 2020].

I. The Board Adopts the Emergency Temporary Standard on November 19, 2020

101. At least five working days before submitting an emergency regulation to OAL, the Board must send notice of the proposed emergency action to every person who has filed a request for notice of regulatory action. (Gov. Code, § 11346.1(a)(2).) OAL has to review emergency regulations within ten calendar days after they are submitted to OAL. (Gov. Code, § 11349.6(b); Cal. Code. Regs., tit. 8, § 56(a)(1).) After OAL posts emergency regulations on its website, it shall allow five calendar days for written comments to be submitted.

102. On November 12, 2020, the Board made public its "Notice of Proposed Emergency Action," which included the proposed ETS.[49] The first time for any opportunity for public comment was on November 19, 2020, at the Board's monthly meeting. In other words, the Board gave the public the minimum notice required under the APA, and no more.

103. Given the minimal notice and the complexity of the 21-page emergency standard, a thoughtful, written presentation from stakeholders was out of the question. The Board adopted the standard on the same day stakeholders first had a chance to comment publicly on the proposed standard.

104. Under the APA's non-emergency rulemaking process, the Board must do all of the following:

a) prepare an extensive initial statement of reasons for the proposed regulatory action setting forth the "specific purpose" and "rationale" for the regulations, an "economic impact assessment" or "regulatory impact analysis," a "description of reasonable alternatives," and "facts, evidence, documents, testimony, or other evidence on which the agency relies to support an initial determination that the action will not have a significant adverse economic impact on business." (Gov. Code, § 11346.2(b)(1)-(5));

b) provide at least 45 days-notice to allow for public comment prior to a public hearing on the regulation (*id.*, § 11346.4);

---

[49] The Notice of Proposed Emergency Action is attached as Exhibit 7, and also available at <https://www.dir.ca.gov/oshsb/documents/noticeNov2020-COVID-19-Prevention-Emergency.pdf> [as of December 30, 2020].

c) allow any interested party to voice their concerns through oral or written statements at a public hearing requested by any interested party (*id.*, § 11346.8(a));

d) provide a "final statement of reasons" to "update" the initial reasons and to include a "summary of each objection or recommendation," a "determination with supporting information that no alternative considered by the agency would be more effective in carrying out the purpose for which the regulation is proposed, would be as effective and less burdensome to affected private persons than the adopted regulation, or would be more cost effective to affected private persons and equally effective in implementing the statutory policy or other provision of law," an "explanation setting forth the reasons for rejecting any proposed alternatives that would lessen the adverse economic impact on small businesses" (*id.*, § 11346.9(a)(1), (3)-(5)); and

e) submit an extensive rulemaking record for final review to the OAL (*id.*, § 11347.3).

105. By invoking emergency rulemaking procedures, the Board avoided these requirements. Instead, the Board was only required to provide five working days' notice of the language of the ETS before submission to OAL for approval. (Gov. Code, § 11346.1(a)(2).) This allowed the Board to reveal for the first time complex and controversial proposals, not included in the Worksafe/NLG Petition and never before shown to or considered by the public, including regulations relating to no-cost testing, paid leave, and employer-provided housing and transportation. (*See* Section V.I. *infra*.)

106. The Board also would have been required to comply with the requirements for a "major regulation," including providing a standardized regulatory impact analysis. (Gov. Code, §§ 11346.2(b)(2)(B) & 11346.3(c).) A "major regulation" is any regulation that would have an economic impact on California business enterprises or individuals in an amount exceeding fifty million dollars ($50,000,000). (*Id.*, § 11342.548.)

107. As reflected in the minutes of the August 20, 2020 Board meeting, the Board was aware of this requirement when it considered the Worksafe/NLG Petition: "This regulation will also affect every employer in the state of California, so the costs will cross the $50 million threshold and result in the regulation having to go through a standardized regulatory impact analysis (SRIA)." (Exh. 5, p. 3.)

J. The Board's Flawed and Speculative "Finding of Emergency"

108. Government Code section 11346.1(b)(2) requires that a "finding of emergency" must:

a) describe "the specific facts demonstrating the existence of an emergency and the need for immediate action";

b) demonstrate, by substantial evidence, "the need for the proposed regulation to effectuate the statute being implemented, interpreted, or made specific and to address only the demonstrated emergency";

c) "identify each technical, theoretical, and empirical study, report, or similar document, if any, upon which the agency relies"; and

d) include facts explaining the failure to address the situation through the normal rulemaking process where the "emergency situation" was known to the agency and could have been addressed in sufficient time through nonemergency regulations.

109. The Board's November 19, 2020 "Finding of Emergency"[50] rests almost entirely rest on conjecture, speculation, or unsubstantiated conclusions rather than evidence.

1. The Finding Fails to Establish the Existence of a COVID-19 Workplace Emergency

110. The Board admits that "[d]ata for the number of cases of COVID-19 infection and number of deaths attributable to workplace exposure is not currently available; however, the numbers are likely substantial." (Exh. 8, p. 4.) Speculation is not adequate to demonstrate the existence of an emergency. (Gov. Code. Sec. 11346.1(b)(2).)

111. The Finding states that the ETS is "necessary to preserve worker safety and health," "to combat the spread of COVID-19," or "to strengthen the Division's enforcement efforts," again without substantial evidence that the spread of COVID-19 remains unchecked in the workplace due to lack of enforceable or ineffective Cal/OSHA guidance, that employers are not complying with their legal obligations to maintain and update their IIPPs, or that there has been a breakdown in the ability of the Division to enforce these mandates.

---

[50] The Finding of Emergency is attached as Exhibit 8, and also available at <https://www.dir.ca.gov/oshsb/documents/COVID-19-Prevention-Emergency-FOE.pdf> [as of December 30, 2020].

112. Other evidence is contradicted by Cal/OSHA's publicly available data. For example, the Board states that Cal/OSHA received over 6,937 COVID-19-related complaints over a nine-month period through the end of September 2020, without mentioning that, as of December 28, 2020, Cal/OSHA reported less than 100 cases which resulted in enforcement citations and proposed penalties.

113. The only purported evidence presented by the Board relating specifically to agricultural workers is taken from two news articles describing COVID-19 outbreaks in farmworker housing. While the Finding asserts "that many of these workers live in compact, dorm-like housing facilities provided by employers," and attributes the "overrepresentation of migrant temporary farmworkers testing positive" to these living arrangements, the Finding does not actually identify what percentage of these workers live in employer-provided housing, or why these two incidents—which took place six months before the Board decided to promulgate the ETS—constituted substantial evidence of a serious, and unremedied, problem. Although these articles were cited to justify the need for regulation of employer-provided housing, the Findings do not discuss whether employer-provided housing materially contributes to the spread of COVID-19 at the workplace. Moreover, one of the articles reports that the number of confirmed cases for H-2A employees represents a little under two percent of all guest workers in California.[51]

114. According to the EDD, the California agricultural industry employed over 400,000 workers, whether via direct hire or though farm labor contractors over the last twelve months ending on September 30, 2020. During this same twelve-month period, California employers housed a total number of 25,453 H-2A guest workers—less than seven percent (7%) of all California agricultural workers.

---

[51] *See* The Californian, *COVID-19 rips through California motel rooms of guest workers who pick nation's produce*, dated August 26, 20020. <https://www.thecalifornian.com/story/news/2020/08/17/california-motel-guest-farm-workers-coronavirus-case-outbreak/5475182002/> [as of December 30, 2020], cited in Finding of Emergency (Exh. 8), p. 5 ¶6 nn. 8 & 10, p. 43 ¶56.

115. Setting aside the Board's failure to cite any empirical or technical studies or reports that might support a finding of emergency, what evidence it does provide undercuts the suggestion that there is any substantial nexus between **employer-provided** housing and COVID-19 outbreaks. The Board states, for example, that "one California health officer noted that 'farmworkers face the greatest infection risk not at work, but at home.'" (Exh. 8, p. 3.) That article goes on to note that, based on an analysis of federal records, California guest workers sleep on average five to a room. The H-2A program requires that each worker be provided with no less than fifty square feet of space in their sleeping quarters and no less than fifty square feet of common area space. (29 C.F.R. 1910.142(b)(2).) Given the rigorous inspections of these facilities by CDHCD and other authorities, it is unthinkable that any responsible employer would jeopardize its ability to obtain H-2A guest workers by failing to comply with the occupancy restrictions.

116. In fact, there is no basis whatsoever to infer that employer-provided housing, as opposed to communal living arrangements outside of the employer's control, are more likely to cause COVID-19 spread. For example, a large farm labor contractor ("**FLC**") providing H-2A guest workers throughout the United States, including California, has performed rigorous contact tracing and found that the vast majority of new infections originated from domestic workers living in their own private housing, not H-2A guest workers residing in employer-provided housing. Similarly, a large grower, shipper, and distributor in Salinas Valley has had only 256 positive cases in California, and has not confirmed any as occurring in or arising from the workplace; rather, they have all originated elsewhere, such as in personal carpool situations, in close quarter living situations, or as a result of community spread activities (e.g., holiday get-togethers) outside the workplace.

2. The Findings Fail to Identify How the ETS Is Necessary to Address a COVID-19 "Emergency" in the Workplace

117. The Board's claimed necessity for the ETS is "to combat the spread of COVID-19 in California workers," stating the proposed regulation would "significantly reduce the number of COVID-19-related illnesses, disabilities and deaths in California's

workforce." (Exh. 8, p. 5.) To the extent the Board offered any evidence, it goes no further than to demonstrate that the virus is a health hazard and that the spread of COVID-19 in the state of California constitutes a public health emergency. It does not, however, provide any substantial evidence that the ETS's specific requirements will prevent or significantly slow the spread of the virus in the workplace, or that it is necessary for employees with potential exposure to be excluded from work for fourteen days, even after receiving negative test results.

118. The Finding essentially confines itself to justifications having no connection with the "demonstrated emergency," i.e, that "[e]mployers and employees would benefit from a specific set of regulations related to COVID-19 prevention in all workplaces," (Exh. 8, at. p. 5), or that its adoption would make existing regulations "specific to COVID-19 and easy to understand" (*id.*). By statute, these justifications are insufficient to warrant an emergency regulation. (Gov. Code § 11346.1(b)(2) ["A finding of emergency based only upon expediency, convenience, best interest, general public need, or speculation, shall not be adequate to demonstrate the existence of an emergency."].)

119. In fact, it took less than two weeks to demonstrate that the perceived "benefit" of the ETS's prescriptive set of regulations would require its own emergency modification. On December 14, 2020, the Governor suspended the ETS regulations to the extent they conflicted with changes in CDC and CDPH guidelines concerning the duration of quarantine periods. This underscores the extent to which Board's hastily-contrived rules caused needless confusion and placed unnecessary burdens on employers and public health officials, just as the Board staff predicted.[52]

---

[52] Executive Order N-84-20, effective "immediately," among other things, "suspended" the employee "exclusion periods" in the ETS (ETS Regs., tit. 8, § 3205(c)(10), (11)) "to the extent they exceed the longer of" any "applicable quarantine or isolation period recommended" by CDPH or "recommended or ordered" by a local health officer with jurisdiction over the workplace. (*See* Governor's Exec. Order No. N-84-20 (December 14, 2020).) CDPH currently recommends a ten-day quarantine or isolation period.

120. The Finding of Emergency presented no substantial evidence to establish the necessity of requiring employers to provide company-wide, repeated testing at their expense, during working hours, and regardless of the ability of employers to pay for or to locate enough test kits to comply with the ETS's massive testing mandate. Although California state and local health agencies offer free testing and COVID-19 screening, the Board offered no substantial evidence that there presently exists an urgent need to shift testing allocation decisions and costs onto private employers, or one that could justify the added strain on limited public health resources in agricultural communities caused by the ETS's forced reallocation of test kits and laboratory capacity.

121. The Board justifies this massive shifting of costs based on the claim that "[o]ffering COVID-19 testing at no cost to employees . . . will encourage these employees to get tested for COVID-19 and also to not report to work following a COVID-19 exposure." Under the ETS, employees must be removed from the workplace, with pay, if they state they were exposed to COVID-19 while at work. This does not encourage testing, since testing isn't a requirement before an employer must remove a worker or, apparently, before a worker decides to make that decision for the employer.

122. The Finding also states that "[m]aintaining employees' earnings and benefits when they are excluded from the workplace is important in ensuring that employees will notify their employers if they test positive for COVID-19 or have an exposure to COVID-19, and stay away from the workplace during the high-risk exposure period when they may be infectious." Under the ETS, an employee is not required to submit to any test, or to test positive, in order to require the employer to maintain their wages and benefits. As to those who do present symptoms, or who do test positive, earnings and benefits are already provided under existing law. Moreover, even if regulation of wage and hour benefits were within the authority of Cal/OSHA—and it is not—there is no evidence whatsoever suggesting that employers are refusing to maintain pay and benefits for workers who test positive, or any evidence suggesting under what circumstances workers would get tested, or report results to their employers.

123. In fact, the ETS's per se rule actually cuts against the Findings. The regulation requires removal of any worker who had "COVID-19 exposure," whether or not that exposure took place at work. Those employees who were exposed **outside** of work are **not** eligible for 10-days' paid leave and benefits. For many farmworkers, the ETS's exclusion rule presents real financial hardship, and therefore a reason **not** to report COVID-19 exposure outside of work, or to be tested, since a negative test result would not alter the employer's legal obligation under the ETS to send that worker home, albeit without requiring pay. In fact, the ETS would encourage employees to overreport workplace exposure, in order to qualify for paid leave, even if the exposure took place outside the workplace.

3. The Board's After-the-Fact Attempt to Cure its Inability to Justify an Emergency Standard Nine Months After the COVID-19 Pandemic Disrupted All California Employers

124. Since the March 4, 2020 declaration of a State of Emergency, Cal/OSHA was issuing and updating guidance, enforcing compliance, and publicly reporting on their successes in bringing enforcement proceedings, with substantial penalties against employers in essential industries, including agriculture. The Board makes no effort to avoid the undeniable fact that the COVID-19 pandemic, and its implications for workplace safety, was not a new, unforeseen, or unforeseeable eventuality. In fact, the Board says nothing that could reconcile its claimed need for immediate action months after employers had fully implemented COVID-19 compliance and mitigation as part of their IIPPs.

125. On the evening of November 30, 2020, OAL approved the proposed ETS, to be effective "immediately."[53] The most recent statement on Cal/OSHA's website states that employers "must" comply as of November 30, 2020, "the day the Office of

[53] *See* DIR, *Cal/OSHA Emergency Regulations to Protect Workers from COVID-19 in Effect* (December 1, 2020) <https://www.dir.ca.gov/DIRNews/2020/2020-99.html> [as of December 30, 2020].

Administrative Law approved the ETS."[54] According to the DIR website, the ETS remain in effect until October 2, 2021.[55]

126. Sometime after November 19, 2020, the date the Finding of Emergency was issued and the date on which the Board adopted the ETS, Cal/OSHA published on its website "Addendum #1 to the Finding of Emergency."[56] The metadata of Addendum #1, as published on the Cal/OSHA website, reveals the document was not created until **December 3, 2020**, several days **after** the ETS became effective, and two weeks after it was adopted.

127. There is no public record as to the circumstances relating to the promulgation of these "addended findings." There was no notice of a public hearing, no notice of the publication of these new findings, and no indication that the Board approved or voted on them, or that it had reopened the record, after OAL signed off on the Finding of Emergency, to augment its decision.

128. This was a significant breach of a basic due process safeguard under the APA. Section 11346.1 of the APA requires that, no less than five days before submitting an emergency regulation to the OAL, the Board must provide notice of the intent to adopt the proposed emergency action, and the finding of emergency. The reason for this is particularly important where the process invoked by the Board largely dispenses with any opportunity for public participation or notice and comment.

129. Addendum #1 purports to add additional justification for the ETS, stating: "Guidance is not sufficient to address the present increase in cases and the risk of

---

[54] *See* DIR, *COVID-19 Emergency Temporary Standards Frequently Asked Questions* (December 1, 2020) <https://www.dir.ca.gov/dosh/coronavirus/COVID19FAQs.html> [as of December 30, 2020].

[55] *See* DIR, *COVID-19 Prevention* <https://www.dir.ca.gov/OSHSB/COVID-19-Prevention-Emergency.html> [as of December 30, 2020].

[56] Addendum #1 is attached as Exhibit 9, and also available at <https://www.dir.ca.gov/OSHSB/documents/COVID-19-Prevention-Emergency-addendum.pdf> [as of December 30, 2020].

occupational spread." (Exh. 9, p. 2.) But it also attempts to back into an explanation as to why the Board delayed so long in promulgating these regulations, or why it could not have done so through non-emergency rulemaking. The Addendum #1 suggests that, while COVID-19 was understood from the outset to be an emergency and public health crisis of unparalleled dimension, the urgency associated with regulating COVID-19 related workplace safety somehow abated during the summer, but took on new immediacy in October or November, when the rate of COVID-19 positivity began to rise.

130. This post hoc rationalization was pretextual. There was no articulable basis that justifies issuing the ETS as an emergency regulation, and no legal or good faith basis that would permit the Board to use an *ultra vires*, backdated document to manufacture such a justification.

K. The ETS Provisions

1. Section 3205 Written COVID-19 Prevention Program

131. Section 3205, entitled "COVID-19 Prevention," has three subdivisions. Subdivision (a) states the scope, excluding employees covered by the Aerosol Transmissible Disease standard (Cal. Code Regs., tit. 8, § 5199), one-person places of employment, and employees working from home. Subdivision (b) contains definitions. Subdivision (c) sets forth eleven mandatory elements for a COVID-19 Prevention Program ("Prevention Program"): (1) "[s]ystem for communicating"; (2) "[i]dentification and evaluation of COVID-19 hazards"; (3) "[i]nvestigating and responding to COVID-19 cases in the workplace"; (4) "[c]orrection of COVID-19 hazards"; (5) "[t]raining and instruction"; (6) "[p]hysical distancing"; (7) "[f]ace coverings"; (8) "[o]ther engineering controls, administrative controls, and personal protective equipment"; (9) "[r]eporting, recordkeeping, and access"; (10) "[e]xclusion of COVID-19 cases"; and (11) "[r]eturn to work criteria."

132. Many of these requirements are largely duplicative of (and in some cases word-for-word identical to) pre-existing guidance. As the attached "Comparison of Emergency Temporary Standards with Cal/OSHA Guidance" chart illustrates, the ETS

does not "clarify" the guidance, as the Finding of Emergency claims. (Exh. 10.) It **codifies** what was intended to be flexible guidance intended to be tailored to the specific considerations of each employer's individual IIPP into rigid, prescriptive regulations.

133. This is contrary to what the Legislature had in mind when it created section 3203 (governing IIPPs) to be performance-based standards. More particularly, the ETS flies in the face of the Legislature's decision this session not to codify Cal/OSHA guidance documents. As originally proposed, AB 2043 would have required that a designated collection of "Guidance Documents" be incorporated by reference into the Labor Code as enforceable OSHA standards. This provision was removed based on the same concerns articulated by the Board staff when it recommended that the Board deny the Worksafe/NLG Petition.

134. The Board, in effect, did what the Legislature expressly chose not to do, and did so via a process that made public scrutiny next to impossible.

135. There are significant new obligations imposed on employers discussed below.

a. No-Cost Testing

136. The Prevention Program requires that employers offer testing "at no cost to employees during their working hours **to all employees who had potential COVID-19 exposure in the workplace**." (ETS Regs., § 3205(c)(3)(B)(4.) [emphasis added].) While the ETS defines "COVID-19 exposure" as "being within six feet of a COVID-19 case for a cumulative total of 15 minutes or greater in any 24-hour period within or overlapping with the 'high-risk' exposure period" (*id.*, § 3205(b)(3)),[57] the standard does not define what is a "potential" COVID-19 exposure.

b. Employee Exclusion and Paid Leave

137. The "[e]xclusion of COVID-19 cases" element provides:

---

[57] The "'high-risk' exposure period" varies depending on whether a person has developed COVID-19 symptoms or tests positive but never develops symptoms. (ETS Regs., § 3205(b)(9)(A) & (B).)

> (A) Employers **shall ensure that COVID-19 cases are excluded from the workplace** until the return to work requirements of subsection (c)(11) are met.
>
> (B) Employers **shall exclude employees with COVID-19 exposure from the workplace for 14 days** after the last known COVID-19 exposure to a COVID-19 case.
>
> (C) **For employees excluded from work** under subsection (c)(10) and otherwise able and available to work, **employers shall continue and maintain an employee's earnings**, seniority, and all other employee rights and benefits, including the employee's right to their former job status, as if the employee had not been removed from their job….

(ETS Regs., § 3205(c)(10)(A)-(C) [emphasis added].)[58]

138. Although the fourteen-day exclusion period was modified by Governor Newsom to conform with the latest CDC guidance, the Governor's order does nothing to bring the ETS into line with other, critically important CDC guidance, which does **not** impose a per se exclusionary rule for COVID-19 exposure, but rather adopted a fact-specific analysis, taking into account the nature of the interaction and when it occurred. Moreover, the ETS does not comply with CDC guidance concerning COVID-19 exposure in critical infrastructure industries, and thus fails to reflect the reality that it is not practicable to impose rigid exclusion rules, especially where essential workers are concerned.

139. There are two exceptions to the paid leave requirement: (1) where the employee is unable to work for reasons other than COVID-19; and (2) "where the employer demonstrates that the COVID-19 exposure is not work related." (§ 3205(c)(10)(C).)

140. The "[r]eturn to work criteria" element provides:

---

[58] A COVID-19 "case" is a person who has a "positive 'COVID-19 test,'" is subject to a COVID-19-related order to isolate issued by a local or state health official, or who has died "due to COVID-19." (ETS Regs., § 3205(b)(2)(A)].) A person is no longer a "case" "when a licensed health care professional determines that the person does not have COVID-19." (*Id.*, § 3205(b)(2)(B)].)

> (A) COVID-19 cases with COVID-19 symptoms shall not return to work until:
>
> 1. At least 24 hours have passed since a fever of 100.4 or higher has resolved without the use of fever-reducing medications;
>
> 2. COVID-19 symptoms have improved; and
>
> 3. At least 10 days have passed since COVID-19 symptoms first appeared.
>
> (B) COVID-19 cases who tested positive but never developed COVID-19 symptoms shall not return to work until a minimum of 10 days have passed since the date of specimen collection of their first positive COVID-19 test.
>
> (C) **A negative COVID-19 test shall not be required for an employee to return to work.**

(ETS Regs., § 3205(c)(11)(A)-(C) [emphasis added].)

141. Requiring employers to provide no-cost testing and paid leave for employees excluded from the workplace who are not sick is not authorized by the statutory authority cited for these regulations — Labor Code sections 142.3 and 144.6 have nothing to do with employee benefits. Other regulatory schemes cover worker benefits. (*See* paragraphs 234-237 *infra*.)

142. The exclusion requirement contains two presumptions: (1) a de jure irrebuttable presumption that an "exposed" worker is infectious, since an exposed worker must be excluded from the workplace regardless of whether they tested negative or positive or were tested at all; and (2) a de facto irrebuttable presumption that an excluded worker is entitled to paid leave, since, as a practical matter, it would be virtually impossible for an employer to show that "COVID-19 exposure is not work related."

143. Even if an employer could show that exposure was not work-related, the exclusion of persons "exposed" fails to take into account the labor shortages and supply chain disruptions that would result, especially in time-sensitive industries with perishable products like agriculture. (*See* paragraphs 160-182 *infra*.)

144. The return to work criteria, by not requiring a negative COVID-19 test, does not seem designed to prevent COVID-19 transmission. The ETS also sets up a conflict

with other agricultural employers (farms producing animals and slaughterhouses) regulated by a different Cal/OSHA standard, the Aerosol Transmissible Standard in section 5199.1 of Title 8.

2. Multiple COVID-19 Infections and COVID-19 Outbreaks

145. Section 3205.1 imposes obligations on employers when the place of employment has been identified by a local health department as the "location of a COVID-19 outbreak or when there are three or more COVID-19 cases in an exposed workplace within a 14-day period," which apply "until there are no new COVID-19 cases detected in a workplace for a 14-day period." (ETS Regs., § 3205.1(a)(1) & (2).) Among other things, extensive, continuous no-cost COVID-19 testing is required (*id.*, § 3205.1(b)) and "cases" and "exposed" employees must be excluded from the workplace in accordance with the Prevention Program's exclusion period and any applicable local health officer orders (*Id.*, § 3205.1(c)). Defining an "outbreak" based on "three or more COVID-19 cases" regardless of the size of the workplace is arbitrary.

3. Major COVID-19 Outbreaks

146. Section 3205.2 imposes obligations on employers when "there are 20 or more COVID-19 cases in an exposed workplace within a 30-day period," and applies "until there are no new COVID-19 cases detected in a workplace for a 14-day period." (ETS Regs., § 3205.2(a)(1), (2).) Among other things, extensive no-cost COVID-19 testing is required (*id.*, § 3205.1(b)) and "cases" and "exposed" employees must be excluded from the workplace in accordance with the Prevention Program's exclusion period and any applicable local health officer orders (*id.*, § 3205.1(c)). Defining an "outbreak" based on the number of "cases" regardless of the size of the workplace is arbitrary. Employers are required to "evaluate whether to halt some or all operations at the workplace until COVID-19 hazards have been corrected." (*Id.*, § 3205.2(e)(3).) But the ETS is vague regarding what an employer must do to satisfy this requirement.

4. COVID-19 Related Regulation of Employer-Provided Housing

147. Section 3205.3 applies to "employer-provided housing"—"housing that is arranged for or provided by an employer," which includes a "labor camp" and housing maintained in "hotels and motels," but excludes housing provided for "emergency response," where the employer is a "government entity," or where persons "maintained a household together prior to residing in employer-provided housing." (ETS Regs., § 3205.3(a)(1) & (2).) Subdivision (c) requires employers to:

> (1) Ensure the premises are of sufficient size and layout to permit at least six feet of physical distancing between residents in housing units, common areas, and other areas of the premises.
>
> (2) Ensure beds are spaced at least six feet apart in all directions and positioned to maximize the distance between sleepers' heads. For beds positions next to each other, i.e., side by side, the beds shall be arranged so that the head of one bed is next to the foot of the next bed. For beds positioned across from each other, i.e., end to end, the beds shall not be arranged so that the foot of one bed is closest to the foot of the next bed. Bunk beds shall not be used.
>
> (3) In housing units, maximize the quantity and supply of outdoor air and increase filtration efficiency to the highest level compatible with the existing ventilation system.

(*Id.*, § 3205.3(c)(1)-(3).)

148. Other provisions address assignment of housing, face coverings, cleaning and disinfecting, "screening" (i.e., "encourag[ing] residents to report COVID-19 symptoms to the employer"), and testing. (ETS Regs., § 3205.3(b) & (d)-(g).)

149. Subdivision (h) addresses "[i]solation of COVID-19 cases and persons with COVID-19 exposure":

> (1) Employers shall effectively **isolate** COVID-19 exposed residents from all other occupants. Effective **isolation** shall include providing COVID-19 exposed residents with a private bathroom, sleeping area, and cooking and eating facility.
>
> (2) Employers shall effectively **isolate** COVID-19 cases from all occupants who are not COVID-19 cases. Effective **isolation** shall include housing COVID-19 cases only with other COVID-19 cases, and providing COVID-19 case occupants with a sleeping area, bathroom, and cooking and eating facility that is not shared by non-COVID-19 case occupants.
>
> * * *

> (4) Employers shall end **isolation** in accordance with subsections 3205(c)(10) and (c)(11) and any applicable local or state health officers orders.

(ETS Regs., § 3205.3(h)(1), (2) & (4) [emphasis added].)

150. Labor Code sections 142.3 and 144.6 say nothing about the authority of the Board to regulate employer-provided housing; other agencies, such as the CDHCD, have jurisdiction in this area. Isolation of persons infected or exposed to infected persons is within the purview of state and local public health officers, and not the Board or Cal/OSHA. (*See* paragraphs 254-256 *infra*.) And as a practical matter, ETS section 3205.3 does not account for the housing shortages the physical distancing and isolation requirements would cause, particularly in rural and remote areas. (*See* paragraphs 183-185 *infra*.)

5. COVID-19 Related Regulation of Employer-Provided Transportation

151. Section 3205.4 applies to "employer-provided motor vehicle transportation to and from work," with exceptions where the driver and all passengers are from the same household, and the transportation is necessary for emergency response. (ETS Regs., § 3205.4 (a)(1) & (2).) Provisions address assignment of transportation, physical distancing and face coverings, screening, cleaning and disinfecting, ventilation, and hand hygiene. (*Id.*, § 3205.4(b)-(f).) The physical distancing provision requires the "vehicle operator and any passengers are separated by at least three feet in all directions during the operation of the vehicle, regardless of the vehicle's normal capacity." (*Id.*, § 3205.4(c)(2).)

152. Labor Code sections 142.3 and 144.6 do not authorize regulation of worker transportation; other regulatory schemes do cover worker transportation. (*See* paragraphs 242-253 *infra*.). The physical distancing requirement fails to take into account the impracticality of "three feet in all directions" for most vehicles.

L. The ETS Presents Unique, Grave and Immediate Risks of Irreparable Harm to All Critical Infrastructure Sectors, and in Particular to Agricultural Employers

1. The ETS Imposes One Set of Rules for All Employers Regardless of Vastly Different Circumstances

153. The ETS places all employers in all sectors at risk, but its failure to even take into account significant differences between hardware stores or factories and orange groves or dairy farms has devastating consequences for agriculture. While the arbitrary and rigid requirements of the ETS also harm employers in other industries, perhaps no industry is more vulnerable than agriculture to labor shortages, transportation strikes, and even weather. Unlike a factory where production can be shut down, put on hold, and then started up again, animals, fields, and orchards must be continually managed, crops are perishable (often with very short windows of harvest), and produce cannot be stored indefinitely.

154. Even within the agriculture industry, the ETS treats all employers the same, regardless of (a) variations in geography, season, product, perishability of product, or how product is harvested, (b) whether workers work outdoors (e.g., crop care workers or harvesters) or indoors (e.g., cold room packers or food processors), (c) the availability of local or employer-provided housing, or (d) whether a particular employer is already complying with all other public health and safety requirements in an effort to keep workers safe and healthy.

2. Effect of Testing Rules

155. The ETS requires an employer to "offer" free testing "during working hours" to "all employees who had potential COVID-19 exposure in the workplace" and requires mandatory testing when there is an "outbreak." Both requirements fail to grasp the realities of agriculture.

156. Under the ETS, an "outbreak" is arbitrarily defined as three positive COVID-19 cases within a rolling two week period without regard to the size of the workforce (e.g., three cases in a workforce of twenty versus 1,000 employees) or location (e.g., in one building or in a 200-acre field). In the event of an "outbreak," all employees in the same "workplace" — as of January 21, 2021 "the building, store, facility, **agricultural field**, or other location where a worker worked during the infectious period" (Lab. Code § 6409.6(d)(5) [emphasis added]) must be "immediately" tested. (ETS Regs., §

3205.1(b)(2)(A).) As a result, growers will be required to provide COVID-19 testing to all employees in an agricultural field — regardless of size — when there are three or more COVID-19 cases within a 14-day period. Testing is mandatory regardless of whether an employee was anywhere near an employee who tested positive or those who worked in close proximity to the person who tested positive. The ETS seems to presume that the workplace is static. This is untrue in agriculture. Farm labor crews move from one facility or agricultural field to another, hugely expanding what constitutes the "exposed workplace."

157. It is also uncertain that employers will be able to secure sufficient tests for large workplaces given the shortages of tests in some rural communities, especially when all employers are under an obligation to test large numbers of employees. Further, it is unclear how those tests can be "immediately" provided to employees who are in fields, which are sometimes hours away from the employer's offices. It is also unclear whether qualified personnel would be available to administer tests, and whether field tests are even possible.

158. Dairy farms are located in rural areas of the State. These areas have limited access to COVID-19 testing services, which causes delays in receiving test results and limit the number of available tests. Receiving test results in these rural areas can take up to fourteen days. In addition, it is impracticable for dairy farms to gain access to provide enough tests for all of their employees on a weekly basis in the event of a COVID-19 "outbreak" or "potential exposure" to a COVID-19 case. These restraints on the availability of COVID-19 tests in rural areas make it impossible for dairy farmers to comply with the ETS.

159. Logistics and scarcity issues aside, employers must bear the costs of testing. For example, an employer with 80 employees, seeking to provide tests at $127 per test would incur $11,600 the first week, and then a similar cost per week until there are no additional positive cases. Such costs would repeat anytime there is an "outbreak" of three

or more within the workforce, which is statistically likely to recur, depending on the workforce size and pervasiveness of COVID-19 in surrounding communities.

3. Effect of Exclusion Rules

160. While both the ETS and the CDC use the same metric for their definitions of "exposure" (the CDC uses the term "close contact") — fifteen cumulative minutes of exposure at a distance of six feet or less over a 24-hour period — the CDC uses this as an "operational definition for contact investigation." In contrast, the ETS uses it as a per se rule, regardless of environmental factors, such as whether exposure was indoors or outdoors, the duration and proximity of exposure, whether the infected person was coughing, singing, or shouting, or whether the infected person displayed symptoms.

161. The CDC recommends testing be among the first tools in preventing or containing the spread of COVID-19. The ETS does not require a positive test to be excluded from the workplace or a negative test to return to work. In fact, the ETS does not permit employers to consider the results of testing or medical examination at all. Once "exposed" and thus excluded, the ETS creates a conclusive (or irrebuttable) presumption that the employee cannot return to work for ten days.[59]

162. Based on guidance promulgated by federal, state, and local authorities (including Cal/OSHA agricultural-specific guidelines first issued on May 14, 2020), many growers have conducted contact tracing whenever an employee tests positive, in addition to reporting the case to county health officers. The ETS presumes that anyone "exposed" may be presumed to be infected and therefore must be excluded from the workplace, thus raising the question as to why it is necessary to do contact tracing in the first place. This mandatory exclusion is not consistent with contact tracing procedures, and may in fact

---

[59] As previously noted, this aspect of the ETS is not consistent with CDC guidance regarding non-symptomatic persons in critical infrastructure jobs. Such workers are not required to be per se excluded from the workplace. (*See* CDC, *Interim Guidance for Implementing Safety Practices for Critical Infrastructure Workers Who May Have Had Exposure to a Person with Suspected or Confirmed COVID-19* <https://www.cdc.gov/coronavirus/2019-ncov/downloads/critical-workers-implementing-safety-practices.pdf> [as of December 30, 2020].)

contradict directives of local public health officers, who have the legal authority to order isolation and quarantine based on their definition of "close contact" with an infected person.

163. The ETS, by prescribing exclusion and return to work criteria, regardless of individual circumstances, puts employers in a no-win situation. Because testing expressly cannot be required for an employee to return to work, co-workers will reasonably ask their employer for assurances that it is safe to readmit an "exposed" employee to the worksite. Because the employer cannot know whether the returning worker may have actually contracted COVID-19 after being "exposed" to a COVID-19 case in the workplace or after being excluded from the workplace and cannot know whether the worker may still be contagious, it will be impossible for the employer to give employees any assurances.

164. The ETS requirement that "exposed" employees be "excluded," as a result of not only an "outbreak," but even a single positive "case," coupled with employer-paid testing and paid leave, triggers a cascade of events that can have devastating financial and operational consequences for employers in the agricultural industry. These consequences arise from the direct costs to implement testing requirements and paid leave and the loss of income, crops, and produce caused by labor shortages.

165. The costs of testing are compounded by the costs of paid leave for all "exposed" employees, who must per se be "excluded" for ten days. For example, an employer with 80 employees who has an "outbreak" of three cases in the "workplace" must pay excluded employees at a minimum rate of $12 for ten days, for a total of $76,800 per each such "outbreak," which is statistically likely to recur given the workforce size and pervasiveness of COVID-19 in surrounding communities.[60]

[60] Many employers in the agricultural industry already have robust programs to identify, manage, and trace positive COVID-19 cases. Not surprisingly, given the pervasiveness of COVID-19 in communities, employers have repeatedly traced positive cases to employees' activities outside the workplace, when employees are not within the employer's control, such as gatherings during holidays, parties, and shared meals.

166. In addition to direct costs of testing and paid leave, agricultural employers will likely experience crop and produce losses, which in turn results in financial losses. Because crops are perishable, and often have short windows for harvesting and require continuous management, they cannot simply be ignored while crews are excluded from the workplace. When harvesting, packing, processing, cooling, shipping and distribution are delayed, crops and produce must be ploughed under or otherwise destroyed, which means financial losses for employers. This disruption to the food supply chain is especially worrying during a pandemic.

167. Strawberry harvesting provides one example of the consequences of the ETS conclusive presumption requiring exclusion of employees. Growers are currently harvesting strawberries in the Santa Maria Valley in Santa Barbara and San Luis Obispo Counties. Compared to other crops, strawberries are very labor intensive. Workers examine every plant and pick only the ripe berries, leaving non-ripe berries on the plant to be picked later. The pickers go back every three days to pick newly ripened berries. If this process gets disrupted, the results can be catastrophic for the plants. If ripe berries are left on the plant, they quickly become overripe and spoil. Fungi and spoilage organisms can then infect and insects infest the plant. The whole plant can be lost. Leaving berries unpicked can also condition the plant into "believing" its production cycle is ending, potentially making the plant significantly less productive going forward. Thus, an inability to manage large numbers of plants due to sidelined crews can lead to loss of entire crops for the 16-month life cycle of strawberry plants.

168. As the above photograph illustrates, strawberries are grown in rows, typically four feet apart. As crews go through the fields, it is impracticable to stagger them in a way that ensures they will remain more than six feet apart at all times. Should one member of a strawberry crew of 20 workers test positive, there is a strong likelihood that, under the ETS definition of "COVID-19 exposure," the entire crew may have to be excluded for ten days. The loss of crews that size could have consequences well beyond the cost of paid leave, including long-term harm to plants and operations, as well as supply chain disruption.

169. Seasonal crops, such as strawberries, present unique challenges, including conditions beyond the grower's control, such as heat wave, rainstorm, frost, or hailstorm, all with the potential to ruins crops. These weather conditions require immediate action – workers must quickly salvage as much of the undamaged fruit and remove as much of the damaged fruit as possible. A labor shortage caused by the ETS mandatory employee exclusion, even if employees test negative, would have devastating consequences.

170. The unavailability of certain employees, such as those involved in plant management, can affect the long-term production of crops. For example, one grower of

various commodities, including lettuce, spinach, broccoli, carrots, onions, and strawberries, in Salinas Valley, hires crews of eighteen to thirty workers to manage crops, including by thinning and weeding. The majority are domestic workers who have their own housing and transportation, outside the company's control, but who also visit outside the workplace and share rides to work. If any of them contracted COVID-19, the ETS would require the company to exclude them from work with paid leave. Their unavailability to perform critical work in managing crops could reduce yield by up to thirty to forty percent.

171. The California dairy industry could also face detrimental consequences from compliance with the ETS. The dairy industry is highly interconnected, and depends on the timely functioning of various components to operate properly. Delays in any part of the dairy supply chain could lead to spoilage and waste of milk and milk products.

172. Dairy farming requires the work of laborers who cannot be replaced on short notice. For example, workers milking cows are highly skilled and work in small teams, usually of three to four workers at a time. Each of the workers plays a critical role in the milking process. If even a single worker is exposed to COVID-19, the ETS requires that worker to be excluded from the dairy farm even if they test negative or show no symptoms of COVID-19. Mission critical employees, such as dairy truck drivers, who cannot be easily replaced would have to be removed from the workplace should they have any "COVID-19 exposure," thus creating a bottleneck preventing milk from being delivered. Loss of a single worker will cause delays in the milking process, which could have a catastrophic impact on the health and productivity of the cows, which must be milked on a strict schedule. Dairy farmers in this situation who must milk their cows will face the terrible choice of either violating the ETS to allow the exposed worker to continue working or violating other labor laws by requiring the other workers to work overtime to compensate for the excluded worker's lost labor.

173. As with other row crops, picking lettuces, cabbage, cauliflower, bok choy, and other leafy produce requires a crew to move systematically through the agricultural field.

174. As the above photograph illustrates, farmworkers necessarily work in relatively close quarters when they pick lettuce. It is not practical or economically feasible to separate workers by leaving every other row unharvested for a variety number of reasons that go beyond cost and inefficiency. In fact, one grower of leafy greens tried alternate row harvesting to maintain social distancing. The experiment concluded when the grower determined, based on contact tracing and crew monitoring, that physically separating crews in this manner did not have any appreciable impact on the spread of COVID-19 within these crews.

175. As the photograph below illustrates, other growers have used plastic barriers on their harvesting equipment as an alternative to social distancing.

176. These barriers may or may not slow the spread of COVID-19. For purposes of the ETS's per se rules, it would not matter, because the workers likely would be deemed to have been "exposed" because they were working within six feet of one another, even though they are working outdoors and wearing masks. The barriers simply are not part of that calculus, just as other safety measures or environmental factors are also deemed irrelevant under the ETS.

177. Because agricultural fields are large and spread out over miles, growers must transport workers to the "workplace," in trucks, vans, or other farm labor personnel carriers. This means that, for at least the duration of that trip, workers will be in close proximity while being moved from field to field, even if those workers were not on the same crew picking lettuce with the COVID-19 case.

178. In other words, the ETS's mandatory removal provisions could result in losing not only an entire crew, but other workers "exposed" in the agricultural field, break room, bathroom, or parking lot to a positive case, including drivers, crew bosses,

inspectors, and other critical workers. This mandatory rule is not consistent with the CDC guidance for essential workers potentially exposed to a COVID-19 case. It is also completely irrational, given the realities of how perishable crops must be picked.

179. These losses are not limited to farmers and growers. Cooling facilities are used to store produce, such as leafy greens, prior to shipment. It is a critical link in the food supply chain. Should a worker in a cooling facility test positive, it is possible that others who work around that employee could be "exposed," as that term is defined in the ETS. In that event, it is possible, if not likely, that due to the loss of trained cooling facility employees, the entire facility may have to close. But even the temporary removal of some of these critical workers would have the effect of reducing the capacity of the cooling facility for lack of manpower. This will have a domino effect on both sides of the supply chain.

180. First, it will mean that fewer pallets of produce can be brought into the facility. Thus, the operator of the cooling facility will have to ration the amount of produce each grower may be able to store in the facility. Second, it means that less produce will be available to go to customers when needed, thus limiting supply to wholesalers, institutional food suppliers, and grocery stores.

181. A loss of crops due to a shortage of available workers caused by exclusion under the ETS can have even more of a ripple effect. For example, if a grower cannot meet contractual commitments to those downstream in the supply chain such as food wholesalers, wholesalers will have to buy products on the open market, potentially at higher prices to satisfy their own contractual obligations to grocery stores and restaurants, causing even more financial losses.

182. For most agricultural employers –whether growers, shippers, farm labor contractors, processors or distributors – the lack of labor that would necessarily be caused by the per se exclusion rules of the ETS could be devastating, even if they are not required to remove workers under the regulation's per se exclusion rule. If other employer "links" in the food supply chain suffer a major disruption due to a labor shortage – especially in a

region with especially acute shortages – there will be inevitable ripple effects. While some employers may be able to pass on cost increases, such as farm labor contractors, others may not be able to pass on price increases. Some growers may be contractually locked into pricing. Some purchasers may have options to buy seasonal vegetables elsewhere if faced with higher prices. In combination with other, additional direct expenses imposed by the ETS, such as testing, paid leave, transportation and housing (assuming housing or transportation may be had), this could prove financially ruinous to many employers.

4. Effect of Employer-Provided Housing Rules

a. The Farm Labor Housing Shortage

183. There is a historic shortage of available housing for agricultural workers. This is especially true in coastal counties with high populations of agricultural workers, such as Monterey County, Santa Barbara County, and Ventura County. Even before COVID-19, agricultural growers all struggled to find adequate housing for their employees, and some even opted to construct employee housing to provide housing that was otherwise unavailable to their employees. Employers have also opted to use a wide variety of housing, including dormitories, motels, hotels, and apartments. It is very difficult to find additional housing on a short term basis, because there is simply not enough housing or real estate to house all agricultural workers, especially in coastal areas.

184. There are also housing shortages in rural communities in California. For example, in the Santa Maria Valley there is a severe housing shortage. Growers have encountered push-back about housing guest workers in homes in various neighborhoods. The City of Santa Maria has therefore asked them to house guest workers in hotels and motels; however, there are not enough hotels and motels in the area to accommodate all guest workers. The additional housing restrictions imposed by the ETS have only compounded the problem, leaving growers scrambling to find and competing for a shrinking pool of additional replacement housing to comply with the ETS. Even if available, costs will be significantly increased for one-third more units at likely higher rates.

185. Employers in the agricultural industry often use employer-provided housing, either as an optional benefit or a mandatory requirement for foreign national "guest" workers, in order to secure sufficient labor to meet their needs. This is often true of FLCs, who recruit, hire, furnish and supervise seasonal or temporary agricultural laborers for a fee. They most often enter into contracts with growers to provide a labor workforce to harvest and pack crops. FLCs can have laborers numbering in the hundreds or thousands, contractually committing their workers year- round, moving from one grower and field to another, based on crop, season, and other factors.

b. H-2A Guest Worker Housing

186. FLCs frequently rely on the H-2A visa program to obtain guest workers and, as a result, are required by law to provide housing (though they may also provide housing as a benefit to some domestic workers). Growers may also offer employer-provided housing, either as a benefit for domestic workers or as a legal requirement when they directly hire guest workers.

187. Given the well-recognized, chronic labor shortage for agricultural workers, including laborers who work in the field, FLCs and growers must often resort to using the H-2A guest worker program, bringing in foreign nationals on temporary visas, to satisfy their labor needs. The need for such labor has continually increased over the years. This year presented a particular shortage of domestic workers. There are a limited number of people in the domestic labor force willing to do field work, and increasing wages only ends up taking employees from other growers, who will then suffer their own labor shortages.

188. The H-2A visa program allows a foreign national worker into the United States for temporary agricultural work. The employer must apply for visas to bring in enough guest workers to meet their temporary labor needs. The employer also has to have in place, before the application, certified, housing for the guest workers. To demonstrate this, the employer must first submit an application to EDD for job orders, at least 60 to 75 days before date of need, identifying the specific housing intended to be used for the guest workers. Then EDD (or, alternatively, DCHCD and the appropriate county agency) will

initiate inspection of the housing to determine whether it satisfies strict and specific state and federal standards. Concurrently, and at least 45 days before date of need, the employer must also file an application with the federal Department of Labor ("**U.S. DOL**"), incorporating the EDD application and job order, which identifies the specific housing to be used. If the application is incomplete, for example if the EDD does not certify the number of people in the housing that the employer requested, the U.S. DOL's certification will be delayed until all issues are resolved. Once the U.S. DOL application is complete, the U.S. DOL will provide certification – historically at least 30 days ahead of need. Finally, the certification will be provided to U.S. Citizenship and Immigration Services for visa approvals, and the employer will go to the consulate for issuance of the visas. The process usually takes two to three months.

189. Employer-provided housing may take various forms, from permanent apartment-style housing built by the employer, to leased properties to hotel and motel rooms. Regardless of the type of housing, H-2A regulations impose various requirements on housing for guest workers. If three workers are housed together, each has to have fifty square feet of sleeping space. (29 C.F.R. 1910.142(b)(2).) Employers have necessarily contracted for housing meeting that standard. The ETS upends this. Under the ETS, no occupant or bed can be within six feet of another, which results in no more than two persons per room. This new, diminished capacity forces employers to either find local housing for the third person or lose that person for the season.

190. Grape growers in Northern California must begin winter pruning in January 2021. Due to a shortage of domestic farm labor (particularly in Sonoma and Napa Counties), employers rely on the H-2A program to meet their labor requirements. Northern California growers submitted their applications to the H-2A program well before the Board disclosed the ETS mandated restrictions on occupancy for employer-provided housing.

191. EDD has recently declined to certify employers' requests for H-2A workers because the housing obtained based on the number of workers requested does not comply

with ETS capacity restrictions, largely due to the ETS prohibition on the use of bunkbeds and the requirement of six-feet distance from bed-corner-to-bed-corner.[61]

192. Because U.S. DOL certification of H-2A worker applications hinges on prior EDD approval, the U.S. DOL has delayed certification pending resolution of this issue with the EDD. Due to this uncertainty, some employers have agreed to accept a smaller number of workers just to get their U.S. DOL certification.

193. Pruning must take place during a specific time window – generally speaking, roughly four months after harvest but before budbreak. The timing as to when pruning should occur depends on the grape varietal, as well as factors not within the control of growers, such as frost, spring rains, and variations in local weather. If there is not a sufficient number of H-2A workers available at the time when pruning must occur, crop yield and quality will be impacted.

c. Agricultural Employers Have Implemented Effective Protocols to Mitigate or Prevent the Spread of the Virus in Employer-Provided Housing

194. A large grower, shipper, and distributer who employs 2,800 employees at any given time, with California operations in Monterey and Imperial Counties, is also facing housing obstacles created by the ETS. This company has spent millions of dollars to build permanent housing for 800 of its workers. The housing is primarily designed to accommodate eight people per unit, divided into two rooms and common space (including a living room, television, WiFi and kitchen). The units are provided to guest workers at no cost, but also to domestic workers at a modest cost ($125/month) as a benefit. At the start of the COVID-19 pandemic, the company drastically cut down the occupancy of its units in an effort to protect workers. However, the new ETS rules, which categorically prohibit bunkbeds (regardless of space or engineering controls) and require six-feet distance from

[61] In fact, on December 29, 2020, EDD advised H-2A employers that it "will be following the new Emergency Temporary Standards with an emphasis on the Housing Inspections to ensure compliance within the H-2A Program." (*See* Exh. 12.)

bed corner to bed corner (as a practical matter often resulting in nine or more feet between occupants), will require the company to cut housing capacity by half or more.

195. Similar housing obstacles are faced by FLCs. One midsize FLC in business since 1950 provides labor to growers eight months of the year in California, largely to harvest leafy greens and vegetables. It hires 6,500 workers per year, with 900 to 1,200 workers available at any given time, and has increasingly relied on the H-2A program as domestic labor has become less and less available. This FLC has spent millions to build an apartment-style housing complex for its workers, consisting of two units (each with four beds and a dedicated bathroom) connected by a common area (living room, television, and kitchen). The units are largely provided to H-2A guest workers, but also as a benefit to a small percentage of domestic workers. In light of the new ETS restrictions, this FLC will have to cut its housing capacity by at least half.

196. The ETS housing restrictions will also have negative effects on larger FLCs. One FLC has provided H-2A guest workers in several states, including California, Arizona, Nevada, Oregon, Texas, Colorado, and Florida, for almost forty years. This FLC serves most of the major brands in the produce section of local grocery stores that feed the nation its leafy greens, berries, citrus, garlic, pears, tomatoes, and various other commodities.

197. Throughout the year, this FLC employs approximately 5,000 to 6,000 workers. Because agricultural work is seasonal, the company hires workers for varying lengths of time to fit the seasonal labor needs of the commodity being handled. At any given moment, the company employs approximately 2,000 workers, with fluctuation depending on demand for domestic labor, which takes priority over H-2A workers for available job opportunities. Approximately 90% of the workforce are on H-2A visas. The other 10% are domestic workers who live in the areas near worksites.

198. In May 2020, this FLC adopted a rigorous COVID-19 prevention protocol in order to minimize the spread of COVID-19 in its workplaces. This included strict protocols for monitoring employee symptoms, sanitizing work and living areas,

engineering controls for minimizing employee exposure, and education for workers. The company has spent approximately $3 million on these protocols since May.

199. One of this FLC's most successful protocols was adopting a three-pronged system of monitoring, quarantining, and isolating employees with potential exposure to COVID-19. Employees who show symptoms of COVID-19 or have been exposed to someone with COVID-19 are given a questionnaire that asks about various factors, including their symptoms, how long they have had symptoms, who they have been in contact with, who their roommates are, what medical care—if any—they have received, and more. If the employee shows at least 3 symptoms of COVID-19, they are placed in "quarantine housing," single-occupant rooms specifically set aside for workers with COVID-19 to stay away from coworkers. These quarantine housing units are provided in addition to the housing units generally provided to other employees. Quarantined employees are not allowed to work for the first three days to confirm whether symptoms develop. Workers in quarantine housing are monitored for symptoms based on temperature checks and their responses to questions about their symptoms. If symptoms develop, they are tested for COVID-19.

200. Workers who test positive for COVID-19 are placed in "isolation housing." Like quarantine housing, isolation housing is separate from the general housing provided to employees. Unlike quarantine housing, isolation housing includes "wrap around care," including nursing visits, food delivery, laundry delivery, and other services. Workers providing wrap around care are given PPE. These wrap around care protocols minimize contact between the employee and other workers. After isolation, employees are allowed to return to work if they test negative for COVID-19, or if they are symptom-free for ten days, have gone at least 24 hours without a fever without fever-reducing medication, and other symptoms of COVID-19 are improving.

201. This FLC's COVID-19 prevention protocol has been highly effective. On average, between May and December 2020, **less than 0.57% of its total workforce tested positive for COVID-19**. The rate of infection was highest when the protocol was first

adopted in May and June, with positivity rates of 1.65% and 1.02%, respectively. The positivity rate quickly declined to 0.88% in July, 0.30% in August, and 0.00% in September. Only one employee has tested positive for COVID-19 in December to date, accounting for 0.06% of the current total workforce.

202. This FLC also performs rigorous contact tracing. As a result, it has found that the vast majority of infections originated with domestic workers living in their own private housing, not H-2A guest workers residing in employer-provided housing.

d. The ETS Housing Requirements Will Severely Harm Agricultural Employers and Employees

203. The effect of cutting housing capacity for agricultural employers by half has a devastating ripple effect.

204. Since H-2A workers cannot be brought to the United States unless free employer-provided housing is in place, the ETS puts employers in a dilemma. Employers are forced either to secure more housing for guest workers – substantially increasing their costs (as much as doubling) if additional housing is even available – or bring in far fewer workers, causing a labor shortage. A labor shortage, in turn, leads to the negative consequences discussed above, including rotting and loss of perishable crops, costs of destroying crops, inability to store and ship produce, lost income, potential long-term productivity decreases, liability for failure to meet contractual obligations, etc. Labor shortages are particularly devastating because the process for obtaining guest workers takes 60 to 90 days.

205. Even where employers are inclined or able to absorb a doubling of their housing costs, such housing cannot always be found. For example, in Monterey where these employers have operations, there is well-known housing shortage. Many individuals, including those working in agriculture, are already not living in secure and safe places, e.g., in overcrowded houses sleeping in closets, on couches, or on the floor. There are not enough apartments or hotel and motel rooms to accommodate the drastically increased need for housing, especially if all agricultural employers suddenly need more housing to comply with the ETS in communities with existing shortages.

206. If employers must suddenly cut their housing capacity by half, they will have to provide all available housing to H-2A workers, who must by law be provided employer-arranged housing. This means that domestic workers who currently enjoy housing benefits will lose their housing, and be forced to seek housing in a market experiencing a shortage. Domestic workers would thus need to seek housing with no employer oversight, and may be left with no alternative but to share overcrowded units. It is inexcusable to create rules that oust workers from well-maintained and regulated housing into uncertain or insecure housing in the midst of a pandemic.

207. Forcing employers to cut their housing capacity by half will also undermine existing COVID-19 prevention protocols adopted by employers who have established separate housing units to allow workers to quarantine or isolate without contact with other employees. If these employers are forced to find additional housing units to comply with the ETS, they will be forced to convert their quarantine and isolation housing into general housing for their employees. Employers will have no available housing for employees infected with COVID-19, forcing them to 1) isolate in the same general housing units as other employees, potentially infecting other employees; 2) find housing outside of the employer-provided housing units, which may be impossible in light of housing scarcities; or 3) return to their homes, risking infection to others they travel with and their families.

208. The ETS is having an immediate and irreparable effect on employers with H-2A workers in the country when the ETS went into effect. Those guest workers would either have to be removed from their housing to comply with the ETS, which would violate the employer's obligation to the U.S. DOL, or the employer would have to let those guest workers remain in their housing, which would violate the ETS. It is a cruel choice imposed on both the employer and worker. And even if an employer is inclined to send the guest worker back to his or her home country, the employer is still obligated to pay that

guest worker 75% of his or her remaining contract, under what is commonly known as the "three-quarter guarantee."[62]

209. The ETS housing regulations do not allow for alternatives, such as installing plexiglass or other barriers between existing worker sleeping spaces, to address social distancing guidelines. They also do not allow employers to calculate six feet between occupants (as opposed to bed-corner-to-bed-corner), or to arrange occupants such that they can measure six feet from head-to-toe, as other regulations – such as those enforced by the Los Angeles County Public Health Officer permit. The ETS's strict and unyielding requirements effectively guarantee that **all** existing housing certified under the H-2A program is inadequate, regardless of any other measures agricultural employers take to mitigate COVID-19 exposure.

210. The strict rules of the ETS are irrational as well as harmful. For example, the regulations require but do not explain how employers are supposed to comply with the requirement that they "ensure that unwashed dishes, drinking glasses, cups, eating utensils, and similar items are not shared." (ETS Regs., § 3205.3(e)(2).) Nor do they explain how employers are required to guarantee the cleanliness of common spaces **inside** residential units in which workers reside (as opposed to cleaning common areas outside of such units, e.g., shared laundry space). Though employers provide cleaning supplies, this does not "guarantee" cleanliness. The only way to do so would be to hire cleaning crews to enter workers' residences, which itself raises a host of issues including (a) the cost of hiring crews, (b) violation of privacy rights of residents, and (c) perhaps most important, putting in danger both cleaning crews and residents by introducing new people into the living environment and creating new contacts, especially when most workers are "cohorts" living, transporting and working in COVID-19 bubbles. The Board never explains how

---

[62] As a requirement of the H-2A program, employers must enter into written contracts with each guest worker, and each such contract guarantees a certain amount of work per week and number of weeks. If an employer is unable to satisfy that requirement, the guest worker must be paid 75% of any remaining obligation at the minimum hourly rate of $14.77 per hour.

these strict requirements of the ETS protect employees in the workplace when they do not in any way regulate domestic employees' housing situations. Domestic employees live in their own housing, often overcrowded, and often travel together. Employers cannot control and the ETS does not regulate any of this. Such employees can have more significant exposure to COVID-19, bringing COVID-19 "cases" into the workplace regardless of employer compliance with costly ETS strictures on employer-provided housing.

5. Effect of Employer-Provided Transportation Rules

211. Transporting employees from their residence to the fields is an important though not mandatory benefit for employees. While it is a legal requirement for H-2A guest workers, it is not otherwise a condition of employment. Employers who have built permanent H-2A-compliant permanent housing for their H-2A guest workers must offer transport for workers from their residences to the fields. Many workers still choose to carpool.

212. To transport guest workers, employers use private vans or buses, or a limited number of public carpooling systems that charge employers on a per mile basis.

213. Many growers have purchased buses to transport workers, which have limited seating capacity. These buses are often custom-made by manufacturers in order to comply with California vehicle emissions standards. In response to COVID-19, growers have taken measures to reduce COVID-19 transmission, e.g., making sure windows are left open and everyone on board wears a mask, installing hand cleaning stations, and cleaning between each use.

214. Notwithstanding the numerous safety measures and engineering controls already put in place by employers, the ETS mandates at least three feet between each person in a vehicle, which can reduce capacity by two-thirds in a bus with a seventy-two person capacity and by half in a bus with a forty person capacity. Thus, complying with the ETS requires employers to acquire more vehicles. If they cannot afford to do so, they will

need to make multiple trips, and stagger crews, which is disruptive to operations, especially since round trips (from housing to fields and back) can sometimes take hours.

215. Initially, double or more trips will cost double or more to transport H-2A workers from their housing or pick-up point to the field or other work location. Similarly, if the employer uses a public carpooling system, double the trips means double the per-mile fee.

216. Even if employers were able to absorb this additional cost, it is unlikely that sufficient transportation would be available. There is a shortage of qualified bus drivers for such work. Bus drivers for farm labor transportation must have a class B driver's license and certified qualification for farm labor transportation from the California Highway Patrol ("**CHP**"). The tests for these bus driver qualifications are difficult to pass, and drivers must be recertified periodically. These qualification requirements limit the number of available drivers, which were already scarce before COVID-19 and the ETS. Buses that comply with California emissions requirements are also scarce. To avoid staggering of transportation schedules, employers would be forced to purchase additional buses, but buses may take up to two years after being ordered to be manufactured and delivered. The most prevalent third party carpooling system available, Cal Vans, has already stated its capacity is quickly filling up, advising employers to reserve spaces well in advance. This capacity problem is only exacerbated by agricultural employers required to double their transportation requirements to comply with the ETS. If unable to secure sufficient transportation, employers will face daily labor shortages.

217. Even where transportation can be arranged and costs absorbed, the staggering of workers during multiple trips, starting at different times, will lead to other negative consequences. For example, employers would need to have some workers taken to the field, while others await the bus; and those waiting in the fields would wait for those who come on the next bus so they can complete a crew and start working. This is problematic as some round trips can take hours, and some crews, such as broccoli harvesters, cannot start working until the whole team is there, given the nature of the team,

equipment, and work. Meanwhile, all the waiting time would be compensable, adding to the ever increasing costs for the employer; and the delays would likely require overtime work, which would further increase costs. This can also lead to a stressed and overworked workforce, which can actually result in a less safe workplace.

218. Staggering workers could also run afoul of H-2A requirements, since H-2A workers have written contracts with certain guaranteed hours per week, and weeks per season. To avoid giving H-2A less hours than contractually promised, employers would have to take guest workers out to the fields first, while domestic workers waited for the next bus. But that would result in domestic employees being disfavored by receiving fewer hours than H-2A workers, which the law does not permit. (8 U.S.C. § 1188(a)(1).)

FIRST CAUSE OF ACTION

DECLARATORY RELIEF

(Against All Defendants)

219. Plaintiffs incorporate by reference and reallege each allegation set forth above.

220. Code of Civil Procedure section 1060 authorizes this Court to render a declaratory judgment in cases of actual controversy relating to the legal rights and duties of the respective parties.

221. Government Code section 11350(a) authorizes this Court to render a declaratory judgment as to the validity of the ETS based on its "substantial failure to comply" with the requirements of the APA, or "upon the ground that the facts recited in the finding of emergency . . . do not constitute an emergency" under Government Code section 11346.1.

222. Defendants have promulgated and are enforcing standards in a manner that interferes with Plaintiffs' and their members' rights and violates California statutory law and the California and U.S. Constitutions.

223. An actual and substantial controversy exists between Plaintiffs and Defendants as to the parties' respective rights and responsibilities. A judicial determination

of the parties' rights and the constitutionality of the ETS, as applied to Plaintiffs and their members, will give relief from the uncertainty and insecurity giving rise to this controversy.

224. Plaintiffs seek a declaration as to whether the ETS was promulgated in violation of the APA, exceeds the Defendants' statutory authority, violates the California Constitution, and/or violates the U.S. Constitution.

SECOND CAUSE OF ACTION

WRIT OF TRADITIONAL MANDATE

(Against All Defendants)

225. Plaintiffs incorporate by reference and reallege each allegation set forth above.

226. Plaintiffs seek a writ of traditional mandamus under Code of Civil Procedure section 1085, which provides that a writ of traditional mandamus is available to compel public agencies to perform acts required by law, for failure to perform a mandatory duty, or for review of quasi-legislative action by a local agency. A writ of traditional mandamus "may be issued by any court to any inferior tribunal, corporation, board, or person, to compel the performance of an act which the law specially enjoins, as a duty resulting from an office, trust, or station, or to compel the admission of a party to the use and enjoyment of a right or office to which the party is entitled, and from which the party is unlawfully precluded by that inferior tribunal, corporation, board, or person." (Code Civ. Pro., § 1085(a).) The procedure set forth in section 1085 is used to review adjudicatory decisions when the agency is not required by law to hold an evidentiary hearing. (*Scott B. v. Bd. Of Trustees of Orange Cty. High Sch. Of the Arts* (2013) 217 Cal.App.4th 117, 122-23 [158 Cal.Rptr.3d 173].) A decision that was "arbitrary, capricious, or entirely lacking in evidentiary support" will not be upheld. (*Ibid.*)

227. Plaintiffs have a clear, present, and direct beneficial interest in, and right to, Defendants' performance of their legal duty to find legitimate means of addressing COVID-19 in the workplace, which includes a duty not to exceed the authority delegated

to Cal/OSHA by the Legislature, a duty to find an emergency and the need to promulgate emergency regulations to address an emergency based only on satisfying the legal requirements for doing so, and a duty to rely on science and experience and to act reasonably when promulgating regulations.

228. At all times relevant to this action, Defendants have had the ability to perform the duties set forth herein, and have failed and refused to do so. Defendants have acted arbitrarily, capriciously, and without legal basis in refusing to carry out or discharge their mandatory duties as set forth herein.

229. Unless compelled by this Court to perform those acts and duties and to refrain from acts as required by law, Defendants will continue to refuse to perform said duties and continue to violate the law, and Plaintiffs and their members will be injured as a result.

THIRD CAUSE OF ACTION

VIOLATION OF THE CALIFORNIA OCCUPATIONAL SAFETY AND HEALTH ACT

(Lab. Code § 6300, et seq.)

(Against All Defendants)

(No Statutory Authority)

230. Plaintiffs incorporate by reference and reallege each allegation set forth above.

231. The Legislature's "intent" is that "the occupational safety and health standards and orders promulgated under [the Labor Code]," are applicable to "**employers for the exclusive purpose of maintaining and enforcing employee safety**." (Lab. Code, § 6304.5 [emphasis added].) The Board's authority to set standards is limited by Cal/OSHA's jurisdiction. (*United Air Lines, Inc. v. Occupational Safety and Health Appeals Bd.* (1982) 32 Cal.3d 762, 768 [654 P.2d 157, 187 Cal.Rptr. 387].) Cal/OSHA "has the power, jurisdiction, and supervision over every **employment and place of employment** in this state, which is necessary adequately to enforce and administer all laws

and lawful standards and orders, or special orders **requiring such employment and palace of employment to be safe**, and requiring the protection of the life, safety, and health of every employee **in such employment or place of employment**." (Lab. Code, § 6307 [emphasis added].)[63] Cal/OSHA's jurisdiction, however, does not extend to "a place where the health and safety jurisdiction is **vested by law in, and actively exercised by**, any state or federal agency other than the division." (Lab. Code, § 6303(a) [emphasis added].)

232. The Board is "the only agency in the state authorized to adopt occupational safety and health standards." (Lab. Code, § 142.3(a)(1).) The Board is only authorized to adopt occupational safety and health standards enforced by Cal/OSHA. (Lab. Code, §§ 142 & 142.3(a)(1)).)

233. The Legislature's intent is for the Board and Cal/OSHA to regulate hazards created by the nature of the workplace. The ETS, however, improperly seeks to regulate outside the area of workplace safety and with respect to a hazard that does not originate in the workplace and is not caused by employers, but that exists outside and may be brought into the workplace. The Board has not established any nexus between COVID-19 and workplaces generally, and merely concluded, without supporting scientific data or studies, that COVID-19 presented a workplace emergency that employers were failing to address.

234. Defendants' overreach disregards the statutory structure of the Labor Code, the Legislature's intent, and the jurisdiction of other agencies, including the Division of Labor Standards Enforcement ("**DLSE**"), DHCD, CHP, Public Utilities Commission ("**PUC**"), CDPH, and U.S. DOL.

---

[63] "'Place of employment' means any place, and the premises appurtenant thereto, **where employment is carried on**, except a place where the health and safety jurisdiction is vested by law in, and actively exercised by, any state or federal agency other than the division." (Lab. Code, § 6303(a) [emphasis added].) "'Employment' includes the carrying on of any trade, enterprise, project, industry, business, occupation, or work, including all excavation, demolition, and construction work, or any process or operation in any way related thereto, in which any person is engaged or permitted to work for hire, except household domestic service." (Lab. Code, § 6303(b).)

235. The Board had no authority to adopt and Cal/OSHA has no authority to enforce the following regulations:

- ETS section 3205(c)(10)(C) (paid leave for "exposed" workers and "cases") (Cal. Code Regs., tit. 8, § 3205(c)(10)(C));
- ETS section 3205.3 (distancing and other mandates for employer-provided housing) (Cal. Code Regs., tit. 8, § 3205.3);
- ETS section 3205.4 (distancing and other mandates for employer-provided transportation to and from work) (Cal. Code Regs., tit. 8, § 3205.4);
- ETS section 3205.3(h)(1)-(3) (requiring employers to "isolate" "exposed residents" and "cases" in employer-provided housing) (Cal. Code Regs., tit. 8, § 3205(h)(1)-(3));
- ETS section 3205(c)(3)(B)(4.) ("no cost" testing of workers with "potential" "exposure") (Cal. Code Regs., tit. 8, § 3205(c)(3)(B)(4)).

ETS sections 3205(c)(10)(C), 3205.1(c), 3205.2(c) (paid leave for "exposed" workers and "cases")

236. The structure of the Labor Code demonstrates the Board's legislatively-delegated authority over occupational safety and health does not extend to job security and employment benefits, including the circumstances under which an employee may be entitled to paid leave due to safety and health concerns. The DIR has separate divisions, including the Division of Occupational Safety and Health (i.e., Cal/OSHA) and the Division of Labor Standards Enforcement (i.e., DLSE). (Lab. Code, § 56.) Cal/OSHA administers and enforces Part 1 (Occupational Safety and Health) of Division 5 (Safety in Employment) of the Labor Code. (Lab. Code, § 60.5.) DLSE administers and enforces Chapter 1 (Wages, Hours, and Working Conditions), of Part 4 of Division 2 (Employment Regulation and Supervision) of the Labor Code. (Lab. Code, § 61.) The Board is only authorized to adopt occupational safety and health standards enforced by Cal/OSHA. (Lab. Code, §§ 142 & 142.3(a)(1)).)

237. The Legislature has directly exercised its authority with respect to paid leave, for example, through the "Healthy Workplaces, Healthy Families Act of 2014." (Lab.

Code, §§ 245 – 249.) In response to COVID-19, the Legislature expanded the rights of workers to obtain supplemental paid leave. (*Id.*, § 248.1.) The Labor Commissioner (not Cal/OSHA) enforces these provisions. (*Id.*, § 248.5.)

238. There is no statutory authority for the ETS provision that workers be removed from the workplace with paid leave. No statute expressly authorizes the Board to enact paid leave laws with respect to COVID-19. The only authority for removing workers from the workplace with paid leave is based on the express statutory requirement that the Board promulgate regulations based on federal regulations concerning occupational exposure to lead. (*See* Cal. Code Regs., tit. 8, §§ 1532.1 & 5198; 29 C.F.R.§ 1910.1025(k); *see also* Lab. Code, § 142.3(a)(2) ("The board shall adopt standards at least as effective as the federal standards for all issues for which federal standards have been promulgated").)

239. Since the ETS paid leave provision applies regardless of whether a worker has a positive or negative COVID-19 test (Cal. Code Regs., tit. 8, § 3205(c)(11)(C), it is not even tailored to its purported "purpose" of "limit[ing] transmission of COVID-19 in the workplace." (Cal. Code Regs., tit. 8, § 3205(c)(10).)

240. Defendants' actions in exceeding their authority create confusion regarding the interaction of the ETS and various state and federal mandates regarding paid leave.

241. Based on the above, the Board lacked authority to adopt the ETS paid leave regulations, which renders them invalid.

ETS sections 3205.3 and 3205.4 (distancing and other mandates for employer-provided housing and transportation to and from work)

242. Under Labor Code sections 6303 and 6307, the Board has jurisdiction over the health and safety conditions in any "place of employment" except where the health and safety jurisdiction over that place of employment is "vested by law in, and actively exercised by" any other state or federal agency.

243. Health and safety jurisdiction over a place of employment is "vested by law" in a federal or state agency when the agency has been specifically mandated to protect

worker safety. (*United Air Lines, Inc. v. Occupational Safety and Health Appeals Bd.* (1982) 32 Cal.3d 762, 768 [187 Cal.Rptr. 387].)

244. Section 6303's "actively exercised" element requires "at least some degree of enforcement by another agency in order to divest [Cal/OSHA] of jurisdiction," which is determined by analyzing whether the agency has promulgated a body of rules directly addressing the health and safety of the place of employment, and whether the agency has undertaken systematic enforcement of those safety measures. (*United Air Lines, supra*, 32 Cal.3d at 777.)

245. State agencies other than Cal/OSHA regulate worker housing and transportation pursuant to express statutory authority.

246. Vehicle Code section 31401 grants the CHP authority to adopt regulations designed to promote the safe operation of farm labor vehicles, including, but not limited to, vehicular design, equipment, passenger safety, and seating, and authorizes the CHP to inspect farm labor vehicles to ensure compliance. The definition of farm labor vehicle exempts vehicles carrying only members of the driver's immediate family, or vehicles regulated by the PUC. (Veh. Code, § 322.)

247. The CHP actively exercises jurisdiction by requiring that farm labor vehicles be inspected and certified annually "to ensure their safe operation" and encourages the public to report farm labor vehicles "being operated without certification or in an unsafe condition."[64]

248. The PUC has authority to prescribe health and safety rules for common carriers, including charter buses and similar services commonly relied upon by agricultural employers. (*See* Pub. Util. Code, §§ 701 et seq., 1033 & 5381.) The PUC has issued a resolution requiring carriers under its jurisdiction to follow CDC and CDPH guidance to

---

[64] *See* CHP, *Farm Labor Vehicle Program* <https://www.chp.ca.gov/programs-services/programs/commercial-vehicle-section/farm-labor-vehicle-program> [as of December 30, 2020].

protect "the safety of carriers' employees, their passengers and anyone they come in contact with."[65]

249. Labor Code section 1682.7 expressly authorizes the Labor Commissioner to regulate farm labor contractors, and specifically applies to "day haulers," defined as any person employed or contracted by a farm labor contractor to provide transportation services to workers.

250. The federal Migrant and Seasonal Agricultural Worker Protection Act ("MSPA") (29 U.S.C. § 1801, *et seq.*) grants the U.S. DOL authority to regulate health and safety conditions related to the transportation and housing of agricultural employees. The MSPA requires that all persons providing employee housing and transportation to migrant agricultural workers register with the U.S. DOL and obtain specific authorization from the U.S. DOL before providing housing or transportation.[66]

251. California's Employee Housing Act specifically authorizes the CDHCD to promulgate and enforce health and safety regulations governing employee housing. (*See* Health & Saf. Code, § 17050.) The CDHCD has promulgated regulations governing employee housing, issues permits related to employee housing, and enforces its regulations through inspections and investigations.[67]

252. The CDHCD also maintains an Office of Migrant Services which has issued and revised health and safety guidance specific to migrant farmworker contractors since

---

[65] P.U.C. Res. TL-19131 (August 6, 2020) <https://docs.cpuc.ca.gov/PublishedDocs/Published/G000/M344/K842/344842850.PDF> [as of December 30, 2020].

[66] *See* U.S. Dept. of Lab., *Fact Sheet #49: The Migrant and Seasonal Agricultural Worker Protection Act* (July 2008) <https://www.dol.gov/sites/dolgov/files/WHD/legacy/files/whdfs49.pdf> [as of December 30, 2020].

[67] *See* Dept. of Housing and Community Development, *Employee Housing Program* <https://www.hcd.ca.gov/building-standards/employee-housing/index.shtml#employee-housing-enforcement> [as of December 30, 2020].

the onset of the COVID-19 pandemic.[68] The only reference to employer provided housing in Cal/OSHA regulations prior to the enactment of the ETS recognizes the authority of CDHCD to regulate employee housing:

> Every employer operating a labor camp under the provisions of the California Employee Housing Act shall obtain a valid permit issued by the Department of Housing and Community Development or by a local governmental agency authorized to issue such permits by the Department. The employer shall either post or have available a valid and current permit.

(Cal. Code Regs., tit. 8, § 3350 ("Labor Camp Permits").)

253. The U.S. DOL also regulates the health and safety of migrant agricultural workers under the H-2A visa program. Section 218 of the Immigration and Nationality Act authorizes the lawful admission into the United States of temporary, nonimmigrant workers, defined as H-2A workers, to perform agricultural labor or services of a temporary or seasonal nature. The H-2A visa program establishes standards related to housing and transportation for employers of H-2A workers.[69]

ETS section 3205.3(h) (requiring employers to "isolate" "exposed residents" and "cases" in employer-provided housing)

254. The ETS provision addressing housing, entitled COVID-19 Prevention in Employer-Provided Housing, provides that employers "effectively **isolate** COVID-19

---

[68] *See* Dept. of Housing and Community Development, *COVID-19 Guidance on Social Distancing* (April 27, 2020) <https://www.hcd.ca.gov/coronavirus19/docs/oms-memo-covid-19-guidance-on-social-distancing.pdf> [as of December 30, 2020]; Dept. of Housing and Community Development, *Attachment A – Social Distancing Protocols and Enforcement* <https://www.hcd.ca.gov/coronavirus19/docs/attachment-a-social-distancing-protocols-and-enforcement.pdf> [as of December 30, 2020]; Dept. of Housing and Community Development, *Attachment B – State of Emergency Addendum* <https://www.hcd.ca.gov/coronavirus19/docs/attachment-b-state-of-emergency-addendum.pdf> [as of December 30, 2020]; Dept. of Housing and Community Development, *Guidance on Cleaning and Disinfecting Procedures for COVID-19* (May 15, 2020) <https://www.hcd.ca.gov/grants-funding/active-no-funding/docs/oms%20covid-19%20guidance%20for%20cleaning%20and%20disinfecting%20ada.pdf> [as of December 30, 2020].

[69] U.S. Department of Labor, *Agricultural Employment* <https://www.dol.gov/agencies/whd/agriculture> [as of December 30, 2020].

exposed residents" and "cases." (ETS Regs., § 3205.3(h) [emphasis added].) To the extent the ETS address quarantine and isolation standards outside the workplace, that is clearly within the province of the CDPH.

255. The California Legislature has granted CDPH **specific authority** to respond to public health threats, including epidemiological events. The Health and Safety Code confers authority on the CDPH to "quarantine, isolate, inspect, and disinfect persons … [and] places … [if] the action is necessary to protect or preserve the public health." (Health & Saf. Code, § 120145; *see also* Health & Saf. Code, § 120130(d).)

256. The Health and Safety Code confers authority for CDPH to promulgate regulations concerning isolation or quarantine procedures. (Health & Saf. Code, § 120130(c).) And CDPH may establish "places for quarantine or **isolation**." (Health & Saf. Code, § 120135.) The Health and Safety Code confers authority for CDPH to destroy property if it cannot be disinfected. (Health & Saf. Code, § 120150.) The Health and Safety Code confers authority for CDPH to "take measures as are necessary to ascertain the nature of the disease and prevent its spread" such as taking control of "the body of any living person, or the corpse of any deceased person." (Health & Saf. Code, § 120140.)

ETS sections 3205(c)(3)(B)(4.), 3205.1(b) and 3205.2(b) ("no cost" testing of potentially exposed and exposed workers)

257. The ETS requires employers to "[o]ffer COVID-19 testing at no cost to employees during working hours to all employees who had potential COVID-19 exposure in the workplace." (ETS Regs., § 3205(c)(3)(B)(4).) And if there is an "outbreak" repeated rounds of "no cost" testing are required. (*Id.*, §§ 3205.1(b) & 3205.2(b).) These provisions are related to the paid leave and housing and transportation provisions, as the requirements of those provisions would be triggered upon a positive test, or even a negative test if the employee had "exposure." Since the Board has no authority to regulate paid leave and housing and transportation, it has no authority to enact the derivative no cost testing provision. Moreover, the no cost testing provisions are not tethered to workplace safety and health at all. There is no requirement an employee take a COVID-19

test, much less test negative, to remain at or return to the workplace. (ETS Regs., § 3205(c)(11)(C).) Therefore, this provision of the ETS is invalid.

258. Defendants' actions in excess of their authority are "void." (*See American Federation of Labor v. Unemployment Ins. Appeals Bd.* (1996) 13 Cal.4th 1017, 1042 [56 Cal.Rptr.2d 109]) ("An administrative agency must act within the powers conferred upon it by law and may not act in excess of those powers. Actions exceeding those powers are void, and administrative mandate will lie to nullify the void acts.").)

259. Plaintiffs request declaratory and injunctive relief to nullify California Code of Regulations, Title 8, sections 3205(c)(3)(B)(4), 3205(c)(10)-(11), 3205.1(b) & (c), 3205.2(b) & (c), and 3205.3, and 3205.4, and to enjoin Defendants from attempting to enforce them.

FOURTH CAUSE OF ACTION

VIOLATION OF THE CALIFORNIA OCCUPATIONAL SAFETY AND HEALTH ACT

(Lab. Code § 6300, et seq.)

(Against All Defendants)

(Unlawful Irrebuttable Presumption)

260. Plaintiffs incorporate by reference and reallege each allegation set forth above.

261. ETS section 3205(c)(10)(C) EXCEPTION 2 states that the paid leave requirement does not apply where the employer "demonstrates that the COVID-19 exposure is not work related."

262. The Labor Code does not permit the Board or Cal/OSHA to shift the burden to the employer to prove exposure was **not** work-related. Defendants' grant of legislative authority does not permit them to, in effect, pronounce that COVID-19 exposure is a prima facie occupational hazard. The Legislature has the authority to create and has created rebuttable presumptions regarding workplace exposure. (*See, e.g.,* Lab. Code, § 77.8 (amending existing law "creat[ing] a disputable presumption that specified injuries

sustained in the course of employment of a specified member of law enforcement or a specified first responder arose out of and in the course of the employment" to include "illness or death resulting from" COVID-19 "under specified circumstances"). The Legislature did not extend this rebuttable presumption to other types of workers.

263. The exclusion requirement contains two presumptions: (1) a de jure irrebuttable presumption that an "exposed" worker is infectious, since an exposed worker must be excluded from the workplace regardless of whether they test negative or positive or at all; and (2) a de facto irrebuttable presumption that an excluded worker is entitled to paid leave, since, as a practical matter, it would be virtually impossible for an employer to show that "COVID-19 exposure is not work related."

264. These presumptions are also irrational, arbitrary, and unreasonable. First, given how widespread COVID-19 now is in the community, any presumption it is an occupational hazard is not grounded in reality. With respect to employees generally, COVID-19 also does not fit within the Labor Code's definition of "exposure." (Lab. Code, § 6370 defining "exposure" as "any situation **arising from work operation** where an employee may ingest, inhale, absorb through the skin or eyes, or otherwise come into contact with a hazardous substance") [emphasis added].)

265. Second, there is no basis to conclude an employee who is "exposed" (but never tested positive) must still be removed from the workplace, no matter how many times he takes a COVID-19 test and receives a negative diagnosis. Under the ETS, it is conclusively presumed this employee may pose a risk to workers, whether or not he contracted the virus in the first place.

266. Third, there is no reason why a conclusive presumption should attach after 10 days of exclusion from the workplace that he may safely return without endangering workers. Under either scenario, no public health purpose can be served by treating a healthy person as unsafe to return, whether or not that person obtains a negative test. At the same time, confidence in the integrity of the employer's COVID-19 safety protocols

will be called into question by other employees, who want (but may not receive) any objective assurance that a worker isolated for 10 days is safe to return.

267. Defendants' actions in excess of their authority are "void." (*See generally American Federation of Labor*, *supra*, 13 Cal.4th at 1042 ("An administrative agency must act within the powers conferred upon it by law and may not act in excess of those powers. Actions exceeding those powers are void, and administrative mandate will lie to nullify the void acts.").)

268. Plaintiffs request declaratory and injunctive relief to nullify California Code of Regulations, Title 8, section 3205(c)(10)(C), and to enjoin Defendants from attempting to enforce it.

FIFTH CAUSE OF ACTION

VIOLATION OF THE CALIFORNIA ADMINISTRATIVE PROCEDURE ACT

(Gov. Code § 11340, et seq.)

(Against All Defendants)

(Invalid Emergency Rulemaking)

269. Plaintiffs incorporate by reference and reallege each allegation set forth above.

270. "'Emergency' means a situation that calls for immediate action to avoid serious harm to the public peace, health, safety, or general welfare." (Gov. Code, § 11342.545.) This is a revised definition added in 2006 by Assembly Bill 1302. (Stats. 2006, ch. 713.) The prior definition allowed emergency adoption of regulations whenever the agency found that the regulations were "necessary for the immediate preservation of the public peace, health and safety or general welfare." (*Ibid.*)

271. Legislative history confirms that the amendment was intended to tighten the emergency standard. In an August 30, 2006 letter, Assembly Member Jerome E. Horton, lead author of the bill, stated: "AB 1302 modifies language that determines when a state agency may adopt emergency regulations. **Because emergency regulations restrict public notice and participation, they should be permitted only in limited**

circumstances. … **This standard clarifies and augments the demonstration that a state agency must make to justify the use of emergency regulations**." (Assem. J. (2005–2006 Reg. Sess.) pp. 7634–7635 [emphasis added]; *see also* 1 Michael Asimow, et al., California Practice Guide: Administrative Law ¶ 26:155 (2020).)

272. Case law prior to the revised definition recognized that, in the context of emergency regulations:

> [A]n emergency must have a substantial likelihood that serious harm will be experienced unless immediate action is taken. The anticipation that harm will occur if such action is not taken must have a basis firmer than simple speculation. Emergency is not synonymous with expediency, convenience, or best interests, and it imports more than merely a general public need. Emergency comprehends a situation of grave character and serious moment.

(*Sonoma County Organization of Public/Private Employees v. County of Sonoma* (1991) 1 Cal.App.4th 267, 270, 277-78 [1 Cal.Rptr.2d 850].)

273. The APA imposes procedural requirements on agencies adopting emergency regulations.

274. The Finding of Emergency published with the proposed ETS failed to satisfy the requirements of the APA. (Gov. Code, § 11346.1(b)(2).)

275. The Finding of Emergency stated: "The objective of the proposed emergency standard is to reduce employee exposure to the virus that causes COVID-19 and therefore reduce COVID-19 illness and transmission." (Exh. 8, p. 1.) However, a close reading of the Finding of Emergency reveals that the specific issue addressed by the ETS is not simply employee exposure to COVID-19, but rather, the purported lack of adequate regulatory protections against the spread of COVID-19 in the workplace.

276. The Finding of Emergency failed to demonstrate that the existing guidance and regulations of various federal and state agencies were inadequate to address the spread of COVID-19 in California workplaces.

277. The Finding of Emergency also failed to cite actual evidence, e.g., scientific data or research, demonstrating the extent to which COVID-19 spreads in the workplace. Without any such evidence in support, the Finding of Emergency simply makes the claim

that "[c]lusters and outbreaks of COVID-19 have occurred in workplaces throughout California, including in food manufacturing, agricultural operations, and warehouses." (Exh. 8, p. 4, ¶8.)

278. The Finding of Emergency does not explain the Board's delay in adopting the ETS. It does not explain, as required by the APA (Gov. Code, §11346.1(b)(2)), why the Board failed to address the spread of COVID-19 in the workplace through nonemergency regulations.

279. While COVID-19 is a public emergency, the Board has failed to demonstrate, as it must, why its draconian prescriptions are necessary to address an emergency purportedly arising from working conditions.

280. The ETS were enacted despite evidence that Cal/OSHA's more general regulations and guidance were already successful in securing employer compliance. The ETS are either duplicative of those general regulations and guidance, or not based on statutorily mandated criteria.

281. The Board is required to promulgate standards based on the following criteria:

> In promulgating standards dealing with toxic materials or harmful physical agents, the board shall adopt that standard which most adequately assures, to the extent feasible, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to a hazard regulated by such standard for the period of his working life. Development of standards under this section **shall be based upon research, demonstrations, experiments, and such other information as may be appropriate.** In addition to the attainment of the highest degree of health and safety protection for the employee, **other considerations shall be the latest available scientific data in the field, the reasonableness of the standards, and experience gained under this and other health and safety laws. Whenever practicable, the standard promulgated shall be expressed in terms of objection criteria and of the performance desired.**

(Lab. Code, § 144.6 [emphasis added].)

282. Labor Code section 144.6's requirement that the Board consider scientific data, experience, and reasonableness of the standards means: (1) objective criteria and performance-based standards, as opposed to prescriptive mandates; (2) experience

obtained through consultation with experts and stakeholders; and (3) reasonableness demonstrated by performing cost-benefit analysis or trade-offs. There is no indication in the record the Board considered any of this. And particularly with respect to the four challenged provisions, there is no science, experience, or reasonableness to support their enactment.

283. The Board justifies its emergency action by claiming existing enforceable guidance (including its own) "varies between federal and state agencies and contains some contradictory information." (Exh. 8, p.5.) Assuming the ETS could resolve these variances or harmonize these contradictions (and it cannot), a general public need to reconcile state and federal regulations calls for a meeting among the regulators, not a set of cramdown prescriptions which impose substantial burdens on **all** California employers, and unique, substantial burdens on the agricultural industry.

SIXTH CAUSE OF ACTION

VIOLATION OF THE CALIFORNIA ADMINISTRATIVE PROCEDURE ACT

(Gov. Code, § 11340, et seq.)

(Against All Defendants)

(Underground Rulemaking)

284. Plaintiffs incorporate by reference and reallege each allegation set forth above.

285. The Board published Addendum #1 at some point on or after December 3, 2020 without a public meeting.

286. The Board did not provide notice of any public meeting concerning the issuance of Addendum #1.

287. By failing to provide notice of the of a meeting to publish Addendum #1, the Board denied plaintiffs and other interested parties the opportunity to provide input on the content of Addendum #1.

288. The APA requires the agency make a finding the regulatory action is "necessary to address an emergency." (Gov. Code, § 11346.1(b)(1).) That finding must be made before the agency acts to adopt the proposed emergency regulation.

289. The finding of emergency must contain "a description of the **specific facts** demonstrating the existence of an emergency and the need for immediate action, and demonstrating, by **substantial evidence**, the need for the proposed regulation to effectuate the statute being implemented, interpreted, or made specific and to address only the demonstrated emergency." (Gov. Code, § 11346.1(b)(2) [emphasis added].) The APA requires, at least five working days before submitting an emergency regulation to OAL, an agency must send notice of the proposed emergency action to every person who has filed a request or notice of regulatory action with the agency. The notice must contain the specific language to be adopted and the required finding of emergency. (Gov. Code, § 11346.1(a)(2).)

290. Under the APA, the Board is required to provide notice and an opportunity to comment on all Findings of Emergency before the Board acts to adopt an emergency regulation based on those findings. The Board failed to do these things, leading to one of two conclusions, neither of which are mutually exclusive: Either the Board approved the Addendum #1, via "serial communications" with other Board members, in violation of the Bagley-Keene Act (Gov. Code, § 11122.5.) and the APA's prohibition against "underground regulations," or the Board contrived to add Addendum #1 to the record after the close of rulemaking proceedings, because it concluded (correctly) that the November 19, 2020 Finding of Emergency failed to meet the statutory requirements to demonstrate the existence of an emergency.

291. Under either scenario, the Board violated its duties under the APA.

292. Under the APA, any challenge to a regulation adopted by a state agency on procedural or substantial grounds is through a declaratory judgment action. (Gov. Code, § 11350(a).) In such an action, the record is "closed," meaning the rulemaking file is treated as the exclusive record for purposes of judicial review. (Gov. Code,

§ 11350(d)(1).) The agency may not add any material to a rulemaking proceeding after the public hearing or comment period closes, unless the agency complies with the APA provisions or adding material to the rulemaking file.

293. The rulemaking file is treated as the exclusive record for purposes of OAL review. (Gov. Code, § 11349.1(a).) While an agency may add items inadvertently omitted from the file (Gov. Code, § 11349.2), it cannot create documents after the fact, and then claim they were inadvertently omitted. There is no exception under the APA that would permit an agency to insert a finding of fact, after the fact, and without disclosing it to the Office of Administrative Law.

294. Addendum #1 is an essential part of the emergency rulemaking process because it purports to supplement and justify the Board's decision to adopt the ETS. Accordingly, the Board was required to provide Plaintiffs (as well as the OAL) the opportunity to comment on this addendum before the Board voted to adopt the ETS. (Gov. Code, § 11346(a)(2).) Thus, publishing any portion of the Finding of Emergency—including Addendum #1—without a public hearing requires the Court to declare the ETS null and void.

SEVENTH CAUSE OF ACTION

VIOLATION OF THE BAGLEY-KEENE OPEN MEETING ACT

(Gov. Code, § 11120, et seq.)

(Against Board Defendants)

295. Plaintiffs incorporate by reference and reallege each allegation set forth above.

296. The California Constitution provides that "[t]he people have the right of access to information concerning the conduct of the people's business, and, therefore, the meetings of public bodies and the writings of public officials and agencies shall be open to public scrutiny." (Cal. Const., art. I, § 3(b)(1).) The Bagley-Keene Act requires that all meetings of a state body "be open and public and all persons shall be permitted to attend any meeting of a state body except as otherwise provided in this article." (Gov. Code,

§ 11123.) Its purpose is to facilitate accountability and transparency of government activities and to protect the rights of citizens to participate in state government deliberations. These constitutional and statutory safeguards require that state agencies, such as the board, comply with the rigorous open meeting requirements. The state body must also provide notice of a meeting on the Internet at least 10 days in advance of the meeting. (Gov. Code, § 11125.) As a multimember state body, the Board is subject to the public meeting requirements of the Bagley-Keene Act. (Gov. Code, § 11121.)

297. Any interested party can commence an action by mandamus, injunction or declaratory relief to obtain a judicial determination that an action taken by a state body was in violation of Government Code sections 11123 or 11125. (Gov. Code, § 11130.3(a).) Plaintiffs are "interested parties," as that term is broadly construed. (*See McKee v. Orange Unified School Dist.* (2003) 110 Cal.App.4th 1310, 1316 [2 Cal.Rptr.3d 774] (taxpayer, as citizen of State, was "interested person" under the Ralph M. Brown Act and thus had standing to sue school district for violations of Act even though taxpayer was not resident or taxpayer of school district).)[70]

298. The challenged action by the Board which Plaintiffs are seeking to declare null and void occurred on or about November 19, 2020, November 30, 2020, and December 3, 2020. (Gov. Code, § 11130.3(a).) By these actions, Plaintiffs were denied access to a Finding of Emergency, or access to any meeting of a public body where Addendum # 1 was discussed, and/or where, on information and belief, it was discussed and voted on in a meeting subject to Government Code section 1112. (*See North Pacifica*

---

[70] Because both the Bagley-Keene and Brown Acts address the common topic of open and public meetings for state and local bodies, respectively, courts frequently rely on cases decided under the Brown Act to construe similar provisions of Bagley-Keen and vice versa. (*See, e.g., Southern Calif. Edison Co. v. Peevey* (2003) 31 Cal.4th 781, 798-99 [3 Cal.Rptr.3d 703] (relying on Brown Act precedent to construe closed-session provisions of Bagley-Keene); *Travis v. Board of Trustees of Calif. State Univ.* (2008) 161 Cal.App.4th 335, 342 [73 Cal.Rptr.3d 854] (Bagley-Keene and Brown Acts employ "a virtually identical open meeting scheme," making cases construing Brown Act's personnel exception applicable to Bagley-Keene as well).)

LLC v. California Coastal Com. (2008) 166 Cal.App.4th 1416, 1433-1435 [83 Cal.Rptr.3d 636].) Pursuant to Government Code section 11130.3(b)(3), the Board failed to substantially comply with its obligation to ensure that state actions taken and deliberations made at such meetings are open to the public. (*North Pacifica LLC*, *supra*, 166 Cal.App.4th at 1432.)

299. The Finding of Emergency was approved by the Board in a public meeting when the Board voted to adopt the ETS. That vote took place on November 19, 2020. Addendum #1 is a Finding of Emergency by the Board. Although Addendum #1 is dated November 19, 2020, no notice of the Finding of Emergency contained in Addendum #1 was given so as to advise the public and the OAL of the existence of this document.

300. The Board violated the Bagley-Keene Act by promulgating Addendum #1 without a public meeting. Addendum #1 was published on the DIR website at some date on or after December 3, 2020, as shown by the metadata of the document showing that the document was created on December 3, 2020. No other document in the ETS rulemaking record, including any Board meeting minutes, discusses Addendum #1.[71]

301. Pursuant to Government Code section 11130.5, a court may award court costs and reasonable attorney's fees to the plaintiff in an action brought pursuant to section 11130 or 11130.3 where it is found that a state body has violated the provisions of the Bagley-Keene Act.

/ / /

---

[71] As of December 30, the Board had not posted Addendum # 1 with its electronic packet of documents, including its 57-page Finding of Emergency, as part of the monthly meeting file. *See* Dept. of Industrial Relations, *Occupational Safety and Health Standards Board 2020 Meeting Schedule* <https://www.dir.ca.gov/oshsb/mtgsch2020.html> [as of December 30, 2020].

EIGHTH CAUSE OF ACTION

VIOLATION OF DUE PROCESS CLAUSE OF THE FOURTEENTH AMENDMENT

(U.S. Const. amend. XIV, §2)

(Against All Defendants)

302. Plaintiffs incorporate by reference and reallege each allegation set forth above.

303. Under the Due Process Clause of the Fourteenth Amendment, no State shall "deprive any person of life, liberty, or property, without due process of law."

304. Under *Birkenfeld v. City of Berkeley* (1976) 17 Cal.3d 129, 165 [130 Cal. Rptr. 465, 550 P.2d 1001], "a regulation may be invalid on its face when its terms will not permit those who administer it to avoid confiscatory results in its application to the complaining parties."

305. The ETS threatens ruinous consequences for employers. For example, the mandatory exclusion rules of the ETS could force some employers to lose a significant portion of their workforce, forcing them to close critical portion of their businesses. If agricultural growers are forced to exclude a significant portion of their workforce, they risk significant delays in harvesting crops. Delaying harvests by even a few days could cause a loss of crops, which would be financially devastating to growers. Other requirements of the ETS threaten similar economic devastation to employers.

306. The ETS applies to "all employees and places of employment," except for places of employment with only one employee, employees working from home, and employees covered by § 5199. (*See* ETS Regs., § 3205(a)(1).) The ETS does not provide for any means of obtaining variances or exceptions from strict compliance.

307. Cal/OSHA's procedures for requesting variances to regulations are inadequate to provide timely relief from confiscatory results of the ETS. The Board is empowered to grant a permanent variance to employers (Lab. Code, § 143(a)), and Cal/OSHA is empowered to grant temporary variances to employers (Lab. Code, § 6450).

However, obtaining a permanent or temporary variance takes at least several months. Neither of these procedures are realistic or viable to avoid the immediate consequences of the ETS.

308. Plaintiffs request declaratory and injunctive relief to nullify California Code of Regulations, Title 8, sections 3205(c)(3)(B)(4), 3205(c)(10)-(11), 3205.1(b) & (c), 3205.2(b) & (c), and 3205.3, and 3205.4, and to enjoin Defendants from attempting to enforce them.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray:

1. For a declaration that the ETS is invalid because it violates the Board's statutory authority, the APA, the Bagley-Keene Act, the California Constitution, and/or the U.S. Constitution;

2. That a peremptory writ of mandate issue commanding Defendants to rescind and immediately cease all enforcement of the ETS, or, in the alternative, at least the provisions relating to "no cost" testing "during working hours" for employees with "potential COVID-19 exposure" or who were at an "exposed workplace" regardless of the size or location of the workforce (Cal. Code Regs., tit. 8, §§ 3205(c)(3)(B)(4), 3205.1(b), 3205.2(b)), mandatory paid leave for workers "exposed" to COVID-19 (Cal. Code Regs., tit. 8, §§ 3205(c)(10)-(11), 3205.1(c), 3205.2(c)), and COVID-19 related regulation of employer-provided housing (Cal. Code Regs., tit. 8, § 3205.3) and transportation (Cal. Code Regs., tit. 8, § 3205.4);

4. For a temporary and permanent injunction restraining Defendants from unconstitutionally enforcing the ETS, or, in the alternative, at least the provisions relating to "no cost" testing "during working hours" for employees with "potential COVID-19 exposure" or who were at an "exposed workplace" regardless of the size or location of the workforce (Cal. Code Regs., tit. 8, §§ 3205(c)(3)(B)(4), 3205.1(b), 3205.2(b)), mandatory paid leave for workers "exposed" to COVID-19 (Cal. Code Regs., tit. 8, §§ 3205(c)(10)-(11), 3205.1(c), 3205.2(c)), and COVID-19 related regulation of employer-provided

housing (Cal. Code Regs., tit. 8, § 3205.3) and transportation (Cal. Code Regs., tit. 8, § 3205.4);

5. For costs and attorney fees, under Code of Civil Procedure section 1021.5 and Government Code section 11120 et seq., incurred herein; and

6. For such other and further relief as this Court deems just and proper.

Dated: December 30, 2020

Re: **Petition for an emergency temporary standard** to protect workers from Covid-19
Petition for a permanent standard to protect workers from infectious diseases including novel pathogens

Dear Members of the OSH Standards Board:

On behalf of all workers not currently protected by the Aerosolized Transmissible Disease (ATD) standard, 8 CCR 5199, and in consultation with labor and community organizations throughout California, this petition for two standards is submitted by the Labor & Employment Committee of National Lawyers Guild and Worksafe. We are seeking regulatory protection for those currently working as "essential" workers; those who are working although not deemed essential workers; those working because they must work to support their families; those working because if they refuse unsafe work they will suffer retaliation – permanently lose their jobs and may not be eligible for unemployment insurance; and those who will fearfully be returning to work as the economy opens up.

Since 1937 the National Lawyers Guild has provided legal support to movements for social change, principally on a volunteer basis. The Labor & Employment Committee (L&EC) focuses on struggles for economic and social justice. In the 1930s the Guild focused on workers' rights supporting New Deal legislation to assist working people and the unemployed; in the 1950s the Guild defended labor leaders and others attacked for their progressive political views. Then and now, the Guild L&EC actively supports progressive labor and employment law struggles. The L&EC is comprised of close to 1,000 labor and employment attorneys across the country.

1736 Franklin Street, Suite 500 · Oakland, CA 94612
P: 510 922 8075 · www.worksafe.org

Worksafe is California's only statewide nonprofit focused on ensuring the occupational safety and health (OSH) rights of vulnerable workers through policy advocacy, capacity and coalition building, and impact litigation. We are a leader in engaging and convening worker advocates, legal aid organizations, academic institutions, and government agencies to prevent workplace injury, illness, and death by bringing justice to the workplace. We achieve this by focusing our efforts on the low-income, immigrant, and workers of color who bear a disproportionate burden of exposure to workplace hazards.

With respect to the request for an emergency temporary standard to protect employees in any facility, service category, or operation who may be exposed to SARS-CoV-2 [Covid-19], and who are not within the scope of 8 CCR 5199 or 5199.1, time is of the essence. An emergency temporary standard is necessary for the immediate protection of the public peace, health, or safety within the meaning of Article IV of the California Constitution and as such, must be issued as soon as possible and take immediate effect. Such will protect the lives not only of employees who in the course of their employment may be exposed to Covid-19, a deadly infectious pathogen, but also protect the lives of their families and those in the communities in which they live.

Without specific occupational health and safety measures to protect essential workers, to protect workers currently working but not necessarily deemed essential workers, and to protect those who will in the future return to work to revitalize the economy of the State of California, **Californians will die unnecessarily.**

With respect to the request for a permanent standard to protect workers from infectious diseases including novel pathogens, this petition is submitted pursuant to Labor Code Section 142.2. Petitioners also reference Labor Code Section 142.3(c) which requires standards to include specific warnings to ensure that employees are apprised of all hazards to which they are exposed. It also requires suitable protective equipment and procedures necessary to control those hazards. Medical monitoring is also prescribed where appropriate.

With respect to the request for both the emergency regulation to protect workers from Covid-19 and the permanent regulation to protect workers from infectious diseases, Labor Code Section 144.6 requires that in promulgating standards dealing with toxic materials or harmful physical agents, which petitioners contend applies to Covid-19 and infectious diseases:

> *the board shall adopt that standard which most adequately assures, to the extent feasible, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to a hazard regulated by such standard for the period of his working life. Development of standards under this section shall be based upon research, demonstrations,*

experiments, and such other information as may be appropriate. In addition to the attainment of the highest degree of health and safety protection for the employee, other considerations shall be the latest available scientific data in the field, the reasonableness of the standards, and experience gained under this and other health and safety laws. Whenever practicable, the standard promulgated shall be expressed in terms of objective criteria and of the performance desired.

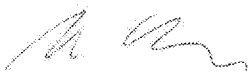
We respectfully ask the Board to consider the enclosed draft of an emergency temporary standard as guidance. We understand that the Board will apply its expertise in developing the emergency temporary standard and this is offered simply as a compilation of best practices that have been developed by a number of different worker representatives. We hope this draft will be of assistance in moving forward with the temporary standard with all deliberate speed given the ongoing pandemic conditions impacting the state's workers, employers, and economy.

The Covid-19 pandemic is not going away anytime soon. And other novel pathogens may threaten this state and the world in the future. As more and more workers are brought back, their lives and livelihoods are pitted against each other. In order to protect the lives and health of workers and their families, in the face of this public health emergency, clarity is required.

The draft we share is a hybrid of a performance-based and specification-based standard. The performance-based dictates of 8 CCR 3203 combined with a small number of more specific standards have not been adequate. Lives are being lost and will continue to be lost without consistent rules as a starting point for our state's workplaces that allow employers some flexibility with respect to individual needs in their places of employment.

In brief, the proposed regulation is divided into subsections that parallel the framework of the Injury and Illness Prevention Program (8 CCR 3203), and add specifics that are helpful:

a. Requires minimizing the risk of transmission of Covid-19 to employees from other employees or from the public. Requires:
    1. Identification of a competent employer representative to develop and administer a written Compliance Action Plan to protect employees (sets timelines and requires employer to share with workers / unions)
    2. Procedures to identify and evaluate Covid-19 workplace hazards
    3. Procedures to control the hazard (engineering controls, work practices, PPE, etc.)
    4. Identification of job categories, tasks, procedures where employees exposed
    5. Procedures to respond to three categories of employees
        A. Employee who has been diagnosed with Covid-19
        B. Employee who has symptoms of Covid-19



C. Employee who has been exposed to a person who has been diagnosed with Covid-19

b. Job Hazard Analysis to identify modes of transmission and adopt and implement feasible preventive measures to minimize transmission risk, including but not limited to:
    1. Specific measures to assure social distancing
    2. Ventilation systems to reduce airborne exposure to Covid-19
    3. Personal hygiene and workplace maintenance measures to reduce exposure to Covid-19
    4. PPE, including appropriate respirators with appropriate training and fit testing
c. Employee training
d. Recordkeeping per 8 CCR 3203(b)

Thank you in advance for your prompt attention to our request for an emergency temporary standard, and for a timely response to our request for a permanent standard to protect workers from infectious disease including novel pathogens. We look forward to continuing to work with the Board on this matter in order to protect the health and safety of all Californians during the Covid-19 pandemic and in anticipation of future pandemics.

Sincerely,

/s

DRAFT of Emergency Temporary Standard to Protect Workers from Covid-19

(a) Every employer shall minimize the risk of transmission of Covid-19 during work among employees who may be exposed to other employees or the public with Covid-19 or who may expose other employees. The procedures shall include the following elements:

(1) Identification of a person or persons as a "competent person" with authority and responsibility for the establishment, implementation and maintenance of effective written infection control procedures to control the risk of transmission of Covid-19, to wit, a **Compliance Action Plan**. The **Compliance Action Plan** shall be prepared or updated within 10 business days of any new state or local law, regulation or order, including any guidance document issued by DOSH or CDPH. A competent person shall have the authority to perform this function and shall be knowledgeable in infection control principles as they apply specifically to the facility, service or operation. When a competent person is not on site, there shall be a designated competent site representative with full authority to act on his or her behalf. The name, position, and contact information for the competent person and any competent site representative shall be posted at the site of each work operation covered by this subsection. The written **Compliance Action Plan** shall be made available for inspection and copying by any employee or employee representative within five business days of a written request, at no cost to the employee or representative.

(2) Procedures for identifying and evaluating workplace hazards that may expose any employee to Covid-19. Procedures shall include, but not be limited to, scheduled periodic inspections to identify and evaluate hazards.

(3) Methods and/or procedures for controlling employee exposure and correcting unsafe or unhealthy conditions. These shall include engineering controls, work practices and procedures, and personal protective equipment [PPE], including respiratory protection, as required by Title 8 California Code of Regulations.

(4) Procedures to respond to:

(A) an employee report that he or she has been diagnosed by a physician with Covid-19. Such procedures shall include, but not be limited to:

(i) immediately sending employee home or instructing the employee who is already at home to stay home, until a medical provider authorized return to work;

(ii) implementing work policies that do not penalize workers for missing work as a result of being diagnosed by a physician with Covid-19;

(iii) written notice within 24 hours to all employees who may have been exposed to the employee with a physician confirmed diagnosis of Covid-19. Employees to be notified shall include those who may have worked during the same shift or on an adjacent shift in the same or adjacent work areas of, or may have shared equipment with, the diagnosed employee. Employees to be notified shall also include individuals who may have been close contacts: to wit, have been within 6 feet of the diagnosed employee for more than 10 minutes during the period when the employee was potentially contagious, which is from 48 hours before symptoms first appeared, or from the date of their positive lab test if they did not have symptoms.

(iv) filing a report with the Division of Occupational Safety and Health by telephone. email, or via a specified online mechanism, within one business day of the

employer obtaining knowledge of the diagnosis, whether or not it is work- related as defined in 8 CCR 14300.5. Each report of diagnosis shall indicate the social security number of the diagnosed employee.

(v) filing a report or amended report with the Division of Occupational Safety and Health by telephone, email, or via a specified online mechanism, immediately upon the employer obtaining knowledge of the hospitalization or death of an employee, whether or not it is work-related as defined in 8 CCR 14300.5. Each report of hospitalization or death shall indicate the social security number of the diagnosed employee.

(vi) filing a report with the local county, and where applicable city, health authorities, within one business day of the employer obtaining knowledge o the diagnosis. Each report of diagnosis shall indicate the social security number of the diagnosed employee; the employer name and address, EIN, and Contractors' State License Board number if applicable; the diagnosed employee's work assignments, actual work locations and job sites, and actual work periods beginning two weeks prior to the date of the physician's diagnosis; and

(vii) procedures immediately to close and deep clean all areas, surfaces and equipment that may have been in contact with the diagnosed employee.

(B) an employee report of symptoms of Covid-19. Such procedures shall include, but not be limited to:

(i) encouraging sick workers to go or stay home by implementing work policies that do not penalize workers for missing work; and

(ii) immediately sending employees with acute respiratory illness symptoms home or to medical care.

(C) an employee report that he or she has been exposed to a person who has been diagnosed by a physician with Covid-19 or has learned from his or her employer pursuant to subsection (A) that he or she has been exposed to an employee who has been diagnosed by a physician with Covid-19. Such procedures shall include, but not be limited to,

(i) immediately sending such employee to home quarantine, and

(ii) implementing work policies that do not penalize workers for missing work as a result of being quarantined.

(b) Employers shall conduct a Job Hazard Analysis to identify any potential modes of Covid-19 transmissions and adopt and implement feasible preventive measures to eliminate or minimize the risk of transmission. The competent person shall provide a written list of these measures to each employee. These measures shall include, but not be limited to, the following:

(1) Identification in writing of the job categories, tasks or procedures in which employees may have occupational exposure to Covid-19.

(2) Implementing measures to assure social distancing including but not limited to:

(A) changing work stations, work area arrangements, and work flow or pace of work to ensure physical distancing of 6 feet, at a minimum, at all times:

(i) among employees at all work stations,

(ii) among employees in all other work areas,

(iii) among employees in areas not utilized for work such as areas for breaks and meals, and

(iv) between employees and the public, including but not limited to:

(a) use of barriers between employees and the public;

(b) limiting the number of the public in the facility, marking distances in areas where the public may congregate;

(c) ensuring that where employees interact with customers at less than 6 feet, employees are provided with access to N-95 respirators (or filtering facepieces) and face shields;

(B) ensuring seating in areas where employees may take a break or eat meals face forward so that employees are not facing each other;

(C) ensuring limits are set for employees to occupy common areas such as locker or break rooms, dining facilities, training or conference rooms, so that all present can maintain a social distance of 6 feet;

(D) scheduling shifts and breaks to assure distancing in non-work areas;

(3) Installing ventilation systems designed to reduce employee exposure to the airborne virus;

(4) Implementing measures to assure personal hygiene including but not limited to:

(A) providing hand sanitizer that is at least 60% alcohol in multiple locations,

(B) providing time and materials and accessible locations for regular hand washing,

(C) adjusting operating procedures such as pace of work to assure that work assignments and requirements do not interfere with hygiene measures;

(5) Immediate cleaning of all shared materials before another employee handles that material, and regularly scheduled frequent cleaning and disinfection of areas and surfaces that may become contaminated and pose an infection risk to employees, including but not limited to:

(A) work areas accessible surfaces, vehicles, equipment and tools,

(B) shared non-work areas where employees congregate, including but not limited to: break, lunch, locker and rest rooms,

(C) high-touch surfaces throughout the workplace including but not limited to: doorknobs, stair railings, access keypads, light switches, shared items such as common water sources, microwaves, etc.,

(6) implementing other procedures to minimize the likelihood the public may contaminate workers, such as providing employees with personal protective equipment, including but not limited to:

(A) hand protection so employees do not handle items already handled by the public;

(B) requiring members of the public to cover their nose and mouth with face coverings while in the facility to minimize the transmission of airborne pathogens to employees.

(c) Employers shall provide employees with the tools, operating equipment and PPE necessary to comply fully with public health orders, regulations and laws. These shall be provided by the employer to employees at no cost. PPE shall be assessed and certified as required by 8 CCR 3380.f.1 and f.2 for the hazard of exposure to Covid-19 risk, and employees shall be trained on the proper use of PPE required for potential exposure to Covid-19. Employees who provide their own PPE that meets or exceeds the PPE required by the Division shall not suffer any adverse action by the employer. All employees who are directed by their employer to wear compliant PPE shall be provided with a medical evaluation to assure

compliance with 5144.e. Employee respiratory protection designed to protect employees exposed to airborne pathogen hazards shall comply with 8 CCR 5144, including but not limited to subsections 5144.a.2, b, c, d, e, h, k, l and m, including filtering facepieces as defined in 5144.b.

(d) Employers shall train employees regarding and assure compliance with the **Compliance Action Plan**, and provide each employee with a copy of the Plan and the full list of compliance measures which apply to the employee's specific operations, jobs and tasks, including the names of and how to contact persons responsible for implementation of the plan. Training shall occur upon initial assignment, when site conditions change, and when hazards are newly introduced or newly recognized. Training shall be appropriate in content and vocabulary for the educational level, literacy, and language of employees.

(e) In addition to any specific recordkeeping or reporting requirements set forth in this regulation or state and local laws, regulations and orders, employers shall maintain records of the **Compliance Action Plan** according to the recordkeeping requirements in 8 CCR 3203 (b).

PETITION FILE NO. 583

BOARD STAFF EVALUATION

Submitted by: David Kernazitskas, MSPH, CIH, CSP

Senior Safety Engineer

August 10, 2020

OSHSB Petition File No. 583
Board Staff Review, August 10, 2020

INTRODUCTION

Petition File No. 583 (Petition) was submitted by the Labor and Employment Committee of National Lawyers Guild and Worksafe (Petitioners) on May 20, 2020. The Petition seeks two Board actions to minimize the exposure of employees to SARS-CoV-2, the virus that causes COVID-19.

REQUESTED ACTION

The Petitioners' first request is for an emergency temporary standard (ETS) to immediately place into effect protections from COVID-19 for employees, who are not covered by Title 8 CCR 5199 or 5199.1 (Aerosol Transmissible Diseases and Aerosol Transmissible Diseases – Zoonotic, respectively). The second request is for a permanent standard to protect all workers from current and future infectious diseases, including novel pathogens.

PETITIONER'S ASSERTIONS

The Petitioners assert:

- "With respect to the request for an emergency temporary standard...time is of the essence."
- The emergency temporary standard "will protect the lives not only of employees...[but also] of their families [and communities]."
- "Without specific occupational health and safety measures...Californians will die unnecessarily."
- COVID-19 and infectious diseases are "toxic materials or harmful physical agents" covered by Labor Code 144.6, which requires the Board to: "*adopt that standard which most adequately assures, to the extent feasible, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to a hazard regulated by such standard for the period of his working life.*"
- "The COVID-19 pandemic is not going away anytime soon. And other novel pathogens may threaten this state and the world in the future. As more and more workers are brought back, their lives and livelihoods are pitted against each other. In order to protect the lives and health of workers and their families, in the face of this public health emergency, clarity is required."
- With regard to protecting employees from COVID-19, Title 8 Section 3203 (Injury and Illness Prevention Program (IIPP)) and "a small number of more specific standards have not been adequate. Lives are being lost and will continue to be lost without consistent rules as a starting point."

STAFF EVALUATION

In support of their request, the Petitioners provide draft language for a proposed ETS, which follows the general outline of the existing IIPP standard (i.e. identify a person responsible for

implementing the plan, develop procedures for identifying and evaluating COVID-19 workplace hazards, develop procedures to control the hazard using hierarchy of controls, etc.). They propose some additional specific requirements to be included with the IIPP-like requirements, which they deem helpful to employers seeking to protect employees from exposure to COVID-19.

The proposed temporary standard aims to require employers to minimize the risk of COVID-19 transmission to employees from coworkers and the public. The suggested text requires employers to identify "a competent employer representative to develop and administer a written Compliance Action Plan [CAP] to protect employees." The text proposes timelines for updating the CAP and requires the employer to share the information with workers and labor representatives.

Further, the text includes requirements for procedures to identify, evaluate, and control COVID-19 workplace hazards. The proposal also requires identification of job categories and tasks where employees can be exposed to COVID-19, as well as procedures to respond to employees exposed to, exhibiting symptoms of, or diagnosed with the illness. Finally, the proposal outlines requirements for performing job hazard analyses, social distancing, employee training and recordkeeping.

Relevant Standards

Federal Standards

Federal OSHA regulations do not specifically address employee protections against COVID-19. Generally applicable standards that apply to controlling employee exposures to the virus include OSHA's PPE standards (29 CFR 1910 Subpart I), which require gloves, eye and face protection, and respiratory protection. The General Duty Clause, which requires employers to furnish employees a workplace free from recognized hazards that cause or are likely to cause death or serious physical harm, applies to the presence of SARS-CoV-2 in the workplace. Finally, OSHA's Bloodborne Pathogens standard (29 CFR 1910.1030) may be helpful in providing a framework for controlling potential virus exposure from bodily fluids expressed via respiratory secretions[1].

The American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) brought suit against federal OSHA in the United States Court of Appeals for the District of Columbia Circuit, attempting to compel OSHA to create an ETS to provide specific employee protections against COVID-19 risks. In the suit, the AFL-CIO alleges that the guidance documents produced by OSHA do not carry the weight of enforceable standards and are therefore insufficient to protect employees from COVID-19 hazards.

In a May 29, 2020, federal OSHA response to the action, OSHA claims:

[1] "Guidance on Preparing Workplaces for COVID-19." U.S. Department of Labor, Occupational Safety and Health Administration. https://www.osha.gov/Publications/OSHA3990.pdf. Accessed 7/24/20.

> Petitioner [AFL-CIO] fails to demonstrate that any employer has or would forgo compliance with any of the potential standards to which Petitioner alludes, simply because they are not set forth in an ETS. Nor could Petitioner do so, because the standards Petitioner seeks are largely already mandatory and enforceable either through existing OSHA requirements or the veritable gamut of non-OSHA public safety requirements enacted by federal, state, and local officials in response to the pandemic.[2]

The court ruled in favor of federal OSHA, stating:

> In light of the unprecedented nature of the COVID-19 pandemic, as well as the regulatory tools that the OSHA has at its disposal to ensure that employers are maintaining hazard-free work environments..., the OSHA reasonably determined that an ETS is not necessary at this time.[3]

California Standards

Cal/OSHA's Aerosol Transmissible Diseases (ATD) standard (Title 8, Section 5199) directly applies to novel viruses such as SARS-Cov-2, but the scope of the standard is limited mostly to medical offices, certain laboratories, correctional facilities, homeless shelters, drug treatment programs, and any other employer that Cal/OSHA informs in writing that they must comply with the ATD standard. Employers not included in the scope of the ATD standard have generally applicable requirements, which include the Injury and Illness Prevention Program (IIPP, Section 3203), Washing facilities (Sections 1527, 3366, 3457, and 8397.4), PPE (Section 3380), Respiratory Protection (Section 5144), Sanitation (Article 9), and Control of Harmful Exposures (Section 5141).

Additionally, Cal/OSHA recommends that employers not covered by the ATD standard comply with the recommendations from the Centers for Disease Control (CDC) "Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19)." Cal/OSHA provides a number of documents with guidance for specific industry sectors, as well as model ATD plans and programs[4]. Several Cal/OSHA guidance documents point out that updating the employer's IIPP to address exposure to SARS-Cov-2 is "mandatory in most California workplaces since COVID-19 is widespread in the community."[5]

Consensus and Other Standards

A variety of sources exist which provide information on reducing potential employee exposure to SARS-CoV-2. In general, the sources provide information on reducing transmission among employees, maintaining healthy business operations, and maintaining a healthy work environment. The CDC, the World Health Organization (WHO), the American Industrial Hygiene Association, and the California Department of Public Health are examples of the many organizations that provide such information.

The state of Virginia, which has a state-run OSHA program (VOSH), adopted an ETS on July 15, 2020, "designed to establish requirements for employers to control, prevent, and mitigate the spread of SARS-CoV-2."[6] The standard is the first of its kind in the nation and is "designed to supplement and enhance existing VOSH laws, rules, regulations, and standards applicable [to COVID-19]." The standard allows businesses to comply with CDC guidelines, instead of VOSH regulations, where the CDC guidelines are more protective. In general, the VOSH program mandates compliance with many of the recommended practices found in guidelines from a variety of credible occupational safety and health organizations.

The state of Oregon has also started the process of developing regulations to protect employees in healthcare settings and in general industry. A timeline for such actions anticipates emergency regulations to be in place by September 1, 2020, and permanent regulations to be in place, at least in part, by March 1, 2021[7].

Position of Division (Cal/OSHA)

In its July 30, 2020, evaluation of Petition 583, Cal/OSHA recommends that the Standards Board grant the petition, in part, by requesting Cal/OSHA to develop a proposed emergency temporary standard for the consideration of the Standards Board. Cal/OSHA also recommends that the Board request Cal/OSHA to convene a future advisory committee to determine whether a permanent regulation should be promulgated to protect Non-5199 Workers from infectious diseases, including novel pathogens.

In support of the recommendation, the evaluation states,

> If COVID-19-specific protections similar to the [COVID-19-specific] guidelines were spelled out in the Title 8 standards, Cal/OSHA could more easily enforce requirements that would be specific, detailed, and more protective of workers...A specific COVID19 emergency regulation in Title 8 would provide clear instructions to employers and

> employees on what needs to be done to protect workers from COVID-19, eliminating any confusion and enhancing compliance.

Analysis

As the Board is aware, the WHO declared the COVID-19 outbreak a pandemic on March 11, 2020.[8] On March 19, 2020, Governor Newsom signed Executive Order N-33-20[9], requiring all residents of California to shelter in place, except as needed to maintain critical infrastructure sectors.

The Petitioners assert that employees not covered by one of California's ATD standards, which would include the majority of California workers, are not sufficiently protected by existing regulations and are at risk of death from COVID-19 without their proposed ETS or another enforceable standard. They state:

> Lives are being lost and will continue to be lost without consistent rules as a starting point for our state's workplaces that allow employers some flexibility with respect to individual needs in their places of employment.

Cal/OSHA's webpage for COVID-19 guidance to employers contains the following statement:

> Workplace safety and health regulations in California require employers to take steps to protect workers exposed to infectious diseases like the Novel Coronavirus (COVID-19), which is widespread in the community. Cal/OSHA has posted guidance to help employers comply with these requirements and to provide workers information on how to protect themselves and prevent the spread of the disease. (Emphasis added.)[10]

Eric Berg, Deputy Chief of Health for Cal/OSHA has recently testified to the Board that Cal/OSHA is enforcing existing COVID-19 protections and providing consultative outreach to employers with exposed employees. Board staff is unable to find evidence that the vast majority of California workplaces are not already in compliance with COVID-19 requirements and guidelines.

A Nevada OSHA press release on July 17, 2020 reported that an average of 80%-90% of Nevada businesses from a variety of sectors are in compliance with the state's guidelines for employee COVID-19 protections. The release states:

> Follow up visits have been conducted at 192 businesses where Nevada OSHA officials found that 93 percent of those locations are now in compliance.

[10] Cal/OSHA and Statewide Industry Guidance on COVID-19. https://www.dir.ca.gov/dosh/coronavirus/Health-Care-General-Industry.html. Accessed 7/27/2020.

> Since initial observations to determine compliance with mandated health and safety measures began, Division of Industrial Relations officials have visited 2,257 business establishments in northern and southern Nevada. As of July 15, the overall compliance rate for all business sectors statewide stood at 82 percent, with an 86 percent compliance rate in northern Nevada, and 80 percent in the south.[11]

Board staff cautions that a new regulation would place additional regulatory burden on California businesses that are already compliant with California's COVID-19 requirements and guidelines. Some employers exhibit a lack of regard for Cal/OSHA regulations and continue to do so despite robust efforts on the part of regulatory agencies and employer and labor groups. It is the opinion of Board staff that during the pandemic crisis, Cal/OSHA's limited resources should continue to be focused on enforcement and consultation outreach specifically targeted at employers and sectors of the economy with deficient COVID-19 protections, as this is more likely to be effective at ensuring employee protections.

The Petitioners' effort to prescribe specific requirements in conjunction with an IIPP-like framework may contradict the legislative intent described in Government Code Section 11340.1(a):

> It is the intent of the Legislature that agencies shall actively seek to reduce the unnecessary regulatory burden on private individuals and entities by substituting performance standards for prescriptive standards wherever performance standards can be reasonably expected to be as effective and less burdensome, and that this substitution shall be considered during the course of the agency rulemaking process. (Emphasis added.)

California's IIPP regulation is a performance standard that has been used successfully since its effective date in 1991 to require employers to identify and address workplace hazards in accordance with the referenced legislative intent. Unnecessarily creating an offshoot of the IIPP, without substantial evidence of need, can harm the existing protective nature of the regulation and its benefit to California workplaces by diluting its capacity to serve as the primary regulation requiring employers to address newly discovered hazards.

Because of the novel nature of the COVID-19 virus, guidelines for employers to reference for assistance in protecting employees frequently change. Attempting to codify some of those requirements will no doubt result in confusion when the updated guidelines conflict with the written regulation. Although the Petitioners suggest a requirement for employers to update their programs within 10 days of new information, current regulations require employers address hazards "in a timely manner based on the severity of the hazard". As it would be

[11] "DIVISION OF INDUSTRIAL RELATIONS ANNOUNCES CITATIONS, INDUSTRY-LEVEL COMPLIANCE RATES WITH COVID-19 HEALTH AND SAFETY REQUIREMENTS." Division of Business and Industry. Las Vegas, NV. July 17, 2020. http://business.nv.gov/News_Media/Press_Releases/2020/Industrial_Relations_COVID-19/Division_of_Industrial_Relations_announces_citations,_industry-level_compliance_rates_with_COVID-19_health_and_safety_requirements/. Accessed 7/27/2020.

improper for employers to delay 10 days prior to addressing some hazards, the Petitioners' proposal would be less protective than current regulations. It is already the responsibility of employers to be aware of new information, and regulations setting specific prescriptive requirements are likely to become quickly outdated in the rapidly evolving crisis, creating a potential for wasteful enforcement actions.

For example, the state of Virginia's recently adopted ETS would encounter conflicts with the Petitioners' proposal for updating the program. VOSH allows employers to follow CDC guidance instead of state law where the CDC guidance is more protective, without providing information for determining the effectiveness of the protective measures. VOSH also requires employers to screen employees for signs or symptoms of COVID-19 before each shift. Updated guidance now recommends employees self-screen at home before coming to work[12]. Relying on California's performance-based IIPP allows employers to respond to updated worker protection guidelines in a more efficient and responsive manner, which translates into more-effective employee protections.

As of July 26, 2020, at 11:00am, the https://covid19.ca.gov/ website for California's COVID-19 data, says that there are 453,659 cases in the state and that 8,416 people have died from the illness. As pointed out by several observers, the Latino population in California has been disproportionately affected by the virus. The following figures are reproduced from the COVID-19.ca.gov website:

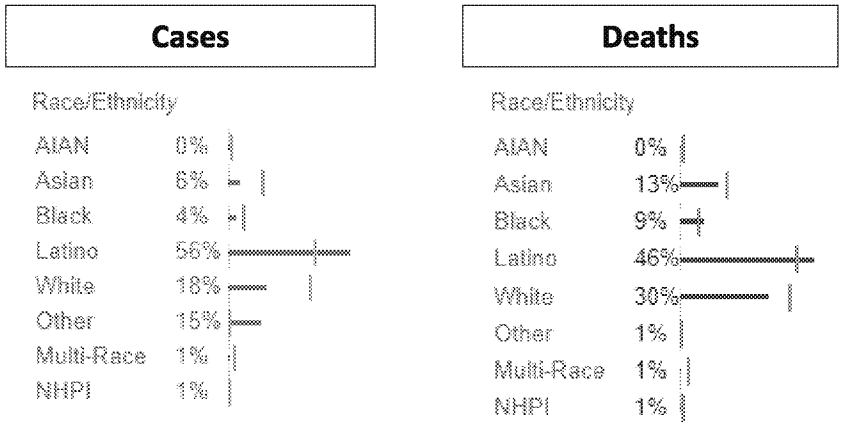

Figure 1. California data indicating that 56% of the identified COVID-19 cases and 46% of the deaths have occurred in the Latino population. The vertical gray lines indicate the percentage of the population for each Race/Ethnicity.

[12] Interim Guidance for Businesses and Employers Responding to Coronavirus Disease 2019 (COVID-19), May 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-business-response.html#more-changes. Accessed 8/5/2020.

The same website also provides the number of cases and deaths by county:

Positive Cases by County (Updated 7/25/2020)		
Los Angeles	172,611	38%
Riverside	34,921	8%
Orange	33,978	7%
San Bernardino	29,265	6%
San Diego	26,703	6%
Kern	16,910	4%
Fresno	12,866	3%
Alameda	10,361	2%
San Joaquin	10,347	2%
Santa Clara	8,767	2%

Deaths by County (Updated 7/25/2020)		
Los Angeles	4,351	52%
Riverside	637	8%
Orange	562	7%
San Diego	533	6%
San Bernardino	372	4%
Santa Clara	184	2%
Imperial	181	2%
Alameda	178	2%
Tulare	168	2%
Kern	123	1%

Figure 2. California data showing that Los Angeles County has more COVID-19 cases than the next seven counties combined and more deaths than the next nine counties combined.

Public health experts are at a loss for an explanation of the disproportionate impact on the Latino communities. The phenomenon has appeared in several other states, including Arizona, Florida, North Carolina, Texas, Washington, and Wisconsin. In an attempt to explain the data, a New York Times article says that contact tracers have found large spikes in the number of cases associated with large family gatherings both in the United States and in Latin American countries. The article also states that:

> During the lockdown, millions of Latino workers kept a bare-bones economy running: at the cutting tables of food-processing plants, as farmhands, as hospital orderlies, food preparers, supermarket workers and in many other jobs deemed essential. And they brought the virus home to often cramped living quarters, compounding the spread.[13]

Instead of directing limited resources to create new regulations to prescriptively require what is already required by the existing IIPP performance regulation, enforcement and consultative efforts could continue to focus on businesses in specific parts of the state, such as Los Angeles County, where about 40% of the cases and 50% of the deaths in California have occurred, or on specific industries identified as having disproportionately high incidents of infection. Developing an ETS and a follow-up permanent regulation for the entire state may not be the most effective use of California's limited Cal/OSHA and Board resources.

[13] Shawn Hubler, Thomas Fuller, Anjali Singhvi and Juliette Love. "Many Latinos Couldn't Stay Home. Now Virus Cases Are Soaring in Their Communities." New York Times. Published June 26, 2020. Updated June 28, 2020. https://www.nytimes.com/2020/06/26/us/corona-virus-latinos.html. Accessed 7/27/2020.

The Petitioners have identified a concern in that the tragic effects of the COVID-19 pandemic disproportionately affect people of generally lower-income and socio-economic status, but they have provided no evidence that their proposed statewide ETS, which is necessarily limited to workers, will remedy this concern. Alternatively, the State's approach to date has utilized tactics learned from emergency management, focusing finite resources asymmetrically to provide containment and abatement. Crowded public places and inadequate social distancing and face-covering provide opportunities for virus transmission not limited to workplaces. Cal/OSHA's continued coordination of efforts with other State agencies, including the California Department of Public Health, is more likely to be effective in addressing the need in disproportionately impacted communities.

Board staff is not aware of any California studies or data showing that employers are lacking the information necessary to provide employee protections from COVID-19 hazards, nor that the vast majority of employers are not already doing as much as they are able to keep their employees, customers, and businesses functioning safely in accordance with federal, state, and local requirements. Cal/OSHA enforcement officers are able to cite employers who flout worker protection regulations. Employers who fail to properly address the hazard to employees presented by COVID-19 incur risks of being shut down, fined, having licenses revoked, and a damaged reputation in the public forum.

After reviewing the Petition and existing regulations governing the concerns raised by the Petitioners, Board staff is of the opinion that while the risk of exposure to SARS-CoV-2 is significant, new regulations, whether in the form of an emergency or permanent regulation, are not likely to significantly improve employee outcomes. Employers have ready access to credible information to combat exposure to SARS-CoV-2 and are already required to effectively address such challenges in their workplace. Continued enforcement of existing regulations and consultative outreach is a more efficient and likely effective use of the Cal/OSHA's limited resources.

STAFF RECOMMENDATION

Consistent with the foregoing discussion, Board staff does not believe that the Petitioners' emergency request is necessary and recommends that Petition File No. 583 be DENIED.

State of Califor a
Department of Industr al Re ations
Division of Occupational Safety and Health

Memorandum

Date: July 30, 2020

To: Christina Shupe, Executive Officer
Occupational Safety and Health Standards Board

From: Douglas L. Parker, Chief
Division of Occupational Safety and Health

Re: Evaluation of Petition 583 to Adopt an Emergency Regulatio to Protect Workers from COVID-19, and a Permanent Regulation to Protect Workers from Infectious Diseases

---

1.0 INTRODUCTION

On May 20, 2020, the Division of Occupational Safety and Health (Cal/OSHA) received a petition from Frances C. Schreiberg, National Lawyers Guild, and Stephen Knight, Worksafe (Petitioners). Petitioners propose that the Occupationa Safety and Health Standards Board (Standards Board) amend the California Code of Regulations, title 8 (Title 8) as follows:

- Adopt a new emergency regulation[1] to protect employees in any facility, service category, or operation from SARS-CoV-2 (the virus that causes COVID-19) who are not covered by the Aerosol Transmissible Disease standard at Title 8, sections 5199 or 5199.1 ("Non-5199 Workers"); and
- Adopt a permanent regulation to protect employees from infectious diseases, including those caused by novel pathogens.

Labor Code section 142.2 permits interested persons to propose new or revised standards concerning occupational safety and health and requires the Occupational Safety and Health Standards Board (Standards Board) to consider such proposals and render a decision no later than six months following receipt. California Governor Gavin Newsom, in recognition of the State of Emergency that exists in California as a result of the threat of COVID-19, extended this time

---

[1] Petitioners use the term "emergency temporary standard" to refer to an emergency regulation.

period by 120 days in Executive Order N-71-20 (modifying extension in Executive Order N-63-20).

Further, as required by Labor Code section 147, any proposed occupational safety or health standard received by the Standards Board from a source other than Cal/OSHA must be referred to Cal/OSHA for evaluation. Cal/OSHA has 60 days after receipt to submit a report to the Standards Board on the proposal. The Governor has also extended this time period an additional 120 days.

For the reasons discussed below, Cal/OSHA recommends that the Standards Board grant the petition, in part, by requesting Cal/OSHA to develop a proposed emergency temporary standard for the consideration of the Standards Board. The Board should also request Cal/OSHA to convene a future advisory committee to determine whether a permanent regulation should be promulgated to protect Non-5199 Workers from infectious diseases, including novel pathogens.

2.0 REGULATORY CHANGES REQUESTED BY THE PETITIONER

Petitioners propose to amend Title 8, through the adoption of an emergency regulation to require employers to take specific steps to protect Non-5199 Workers from COVID-19.

Specifically, Petitioners request that a temporary emergency regulation be adopted that requires employers to:

a. Minimize the risk of transmission of COVID-19 to employees from other employees or from the public, through procedures that shall include the following elements:

    1. Identification of a competent employer representative to establish, implement, and maintain an effective written Compliance Action Plan (Plan) to protect employees and requires employers to share the Plan with employees and employee representatives;

    2. Procedures to identify and evaluate workplace hazards that may expose employees to COVID-19;

    3. Methods and/or procedures to control employee exposure to COVID-19 and correcting unsafe of unhealthy conditions. These shall include engineering controls, work practices and procedures, and personal protective equipment (PPE); and

4. Procedures to respond to an employee report that:

   A. The employee has been diagnosed with COVID-19;

   B. The employee has symptoms of COVID-19; or

   C. The employee has been exposed to a person who has been diagnosed with COVID-19.

b. Conduct a Job Hazard Analysis to identify potential modes of COVID-19 transmission and adopt and implement feasible preventive measures to eliminate or minimize transmission risk. A written list of these measures shall be provided to each employee, and shall include at least the following:

   1. Identification of job categories, tasks, and procedures in which employees may have occupational exposure to COVID-19;

   2. Specific measures to ensure social distancing of at least six (6) feet between employees and other persons: measures to be used to protect employees interacting with the public include the use of barriers between employees and the public, limiting the number of members of the public in the facility, marking distances in areas where the public may congregate, and ensuring that where employees interact with the public at a distance of less than six (6) feet, employees are provided with access to N-95 or filtering facepiece respirators and face shields;

   3. Installing ventilation systems to reduce employee exposure to airborne COVID-19 virus;

   4. Implementing measures to ensure personal hygiene;

   5. Immediate cleaning of all shared materials before another employee handles that material and regularly scheduled frequent cleaning and disinfection of areas and surfaces that may become contaminated and pose an infection risk to employees; and

   6. Implementing other procedures to minimize the likelihood the public may contaminate employees, such as providing employees with PPE, *e.g.*, gloves, and requiring members of the public to cover their noses and mouths with face coverings while in the facility to minimize the transmission of airborne pathogens to employees.

c. Provide employees with the tools, operating equipment, and PPE necessary to comply fully with public health orders, regulations, and laws, at no cost to employees. PPE shall be assessed and certified as required by Title 8, section 3380, subdivision (f) for the hazard of exposure to COVID-19, and employees shall be trained on the proper use of PPE required for potential exposure to COVID-19. Employees who provide their own PPE that meets or exceeds the PPE required by Cal/OSHA shall not suffer any adverse action by the employer. Further, all employees who are directed by their employer to wear compliant PPE shall be provided with a medical evaluation in accordance with Title 8, section 5144, subdivision (e). Employee respiratory protection, including filtering facepiece respirators, designed to protect employees exposed to airborne pathogen hazards, shall comply with Title 8, section 5144.

d. Train employees on the Plan, ensure compliance with the Plan, and provide each employee with a copy of the Plan, along with the full list of relevant compliance measures.

e. Maintain records of the Plan, in accordance with Title 8, section 3203, subdivision (b).

In addition, Petitioners propose to amend the California Code of Regulations, title 8, through the adoption of a permanent regulation intended to protect all workers from infectious diseases, including novel pathogens. Petitioners have not provided suggested regulatory language for a permanent regulation.

3.0 HAZARDS ASSOCIATED WITH EXPOSURE TO COVID-19

COVID-19 is widespread in the community and is transmitted easily from person to person. Routes of exposure include:

- **Airborne transmission**: An infected person (with or without symptoms) sheds virus in small particles when breathing, talking, coughing, sneezing, etc. The contaminated particles are suspended in the air. A susceptible person is infected when inhaling the contaminated particles.
- **Droplet transmission**: An infected person expels droplets containing the virus when talking, coughing, and sneezing. A susceptible person is infected when the droplets contact that person's conjunctivae or the mucous membranes of the nose, mouth, or eyes.

- **Surface transmission:** An infected person coughs or sneezes and sheds virus onto a surface or object. A susceptible person is infected when they touch the contaminated surface or object and then touch their own mouth, nose, or eyes.

The airborne transmission is the dominant route for the spread of COVID-19.[2] Surface transmission is believed to be less common than airborne and droplet transmission.[3] Transmission can occur from an infected person who is asymptomatic or presymptomatic.[4]

Infection with COVID-19 may result in a serious illness that includes difficulty breathing, pneumonia, and hospitalization. In some cases, the disease progresses, and organ failure and death may result. Approximately 14% of COVID-19 patients are hospitalized, 2% are admitted to an intensive care unit, and 5% die based on data through May 30, 2020. Hospitalizations are six times higher and deaths are 12 times higher among patients with a reported underlying health condition (cardiovascular disease, diabetes, and chronic lung disease)

compared with those without reported underlying conditions.[5]

There are no established safe exposure limits to an infectious pathogen such as SARS-CoV-2. It is unknown how many infectious particles are needed to cause infection and disease.

4.0 APPLICABLE TITLE 8 REGULATIONS

The following are Title 8 regulations that are be applicable to protecting Non-5199 Workers from COVID-19. Section 5199 is not discussed as the petition is specific to Non-5199 Workers.

As discussed below, while the following standards require protections against COVID-19, they are not specific to this virus and generally do not identify the particular measures or controls that employers must take to prevent workplace spread of COVID-19. For these reasons, as explained in section 7.0, Cal/OSHA recommends the adoption of an emergency regulation, which would complement and augment the existing rules and provide clear guidance to employers and workers. Given the unprecedented nature of the current pandemic, it is essential that Cal/OSHA have all available tools to protect workers from COVID-19 illness and death.

4.2.1 Section 3203. Injury and Illness Prevention Program.

Title 8, section 3203 applies to nearly all California workplaces and requires employers to establish, implement, and maintain an effective written Injury and Illness Prevention Program (IIPP) to protect their employees, and to keep records of the steps taken to implement and maintain the IIPP. Its requirements are general in nature, and as such it requires employers to address all workplace hazards, including those that are not specifically addressed by other Cal/OSHA regulations.

4.2.1.1 Title 8, section 3203, subdivision (a)(4), identifying and evaluating workplace hazards

---

[5] Stokes EK, Zambrano LD, Anderson KN, et al. Coronavirus Disease 2019 Case Surveillance — United States, January 22–May 30, 2020. MMWR Morb Mortal Wkly Rep 2020;69:759–765. DOI: http://dx.doi.org/10.15585/mmwr.mm6924e2external icon

Section 3203, subdivision (a)(4) requires employers to implement procedures for identifying and evaluating workplace hazards. Due to the widespread transmission of COVID-19 in California, this subdivision requires employers to evaluate COVID-19-transmission hazards and risks in their workplaces.

Section 3203, subdivision (a)(4) reads, in pertinent part, as follows:

> Include procedures for identifying and evaluating work place hazards including scheduled periodic inspections to identify unsafe conditions and work practices.
> (A) When the Program is first established;
> * * * *
> (B) Whenever new substances, processes, procedures, or equipment are introduced to the workplace that represent a new occupational safety and health hazard; and
> (C) Whenever the employer is made aware of a new or previously unrecognized hazard.

4.2.1.2 Title 8, section 3203, subdivision (a)(5), investigating occupational injury or occupational illness

Section 3203, subdivision (a)(5) requires employers to implement procedures to investigate occupational illnesses. If an employer learns of an employee (or employees) who has or is suspected to have COVID-19, the employer must investigate to determine if the transmission was work related and, if it was work-related, how it was transmitted in the workplace.

> Section 3203, subdivision (a)(5) reads as follows: Include a procedure to investigate occupational injury or occupational illness.

4.2.1.3 Title 8, section 3203, subdivision (a)(6), correcting unsafe or unhealthy conditions, work practices, and work procedures

Section 3203, subdivision (a)(6) requires employers to implement methods and/or procedures for correcting unsafe or unhealthy conditions, work practices, and work procedures in a timely manner. It requires employers to take measures to effectively reduce COVID-19-transmission hazards that exist in their workplaces as identified through implementation of subdivisions (a)(4) and (a)(5).

However, section 3203, subdivision (a)(6) does not specify how employers are to correct unsafe workplaces (*i.e.*, engineering controls, administrative controls, personal protective equipment (PPE)). Instead, it puts the responsibility on employers, given their intimate knowledge of the hazards at issue and the workings of the place of employment, to devise such methods or procedures.

Section 3203, subdivision (a)(6) reads as follows:

> Include methods and/or procedures for correcting unsafe or unhealthy conditions, work practices and work procedures in a timely manner based on the severity of the hazard:
> (A) When observed or discovered; and,
> (B) When an imminent hazard exists which cannot be immediately abated without endangering employee(s) and/or property, remove all exposed personnel from the area except those necessary to correct the existing condition. Employees necessary to correct the hazardous condition shall be provided the necessary safeguards.

4.2.1.4 Title 8, section 3203, subdivision (a)(7), providing training and instruction

Subdivision (a)(7) requires employers to train their employees on workplace hazards and their prevention. Due to the widespread transmission of COVID-19 in California, employers must train employees on the transmission hazards of COVID-19 in their workplace, what measures the employer has implemented to reduce the hazard, and what actions employees need to take to help reduce transmission.

Section 3203, subdivision (a)(7) reads, in pertinent part, as follows:

> Provide training and instruction:
> (A) When the program is first established;
> *****
> (B) To all new employees;
> (C) To all employees given new job assignments for which training has not previously been received;

> (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard;
> (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and,
> (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed.

4.3 Title 8, section 5141. Control of Harmful Exposure to Employees

Section 5141 requires employers to control harmful exposures to employees. Under section 5140, harmful exposure is defined as:

> An exposure to dusts, fumes, mists, vapors, or gases:
> (a) In excess of any permissible limit prescribed by Section 5155; or
> (b) Of such a nature by inhalation as to result in, or have a probability to result in, injury, illness, disease, impairment, or loss of function.

Exposure to COVID-19 is a harmful exposure, as exposure to aerosols (in the breath of infected persons) containing SARS-CoV-2 has a probability to result in illness, disease, impairment, or loss of function.

4.3.1 Title 8 subsection 5141, subdivision (a), Engineering Controls

Section 5141, subdivision (a) requires employers to control harmful exposures using feasible engineering controls. Although section 5141 does not specify the controls that must be implemented for any particular hazard, examples of engineering controls for COVID-19 include physical barriers, ventilation, air filtration, source controls (universal masking), etc.

Subsection 5141, subdivision (a) reads, in pertinent part, as follows:

> Engineering Controls. Harmful exposures shall be prevented by engineering controls whenever feasible.

4.3.2 Title 8, section 5141, subdivision (b), Administrative Controls

Section 5141, subdivision (b) requires employers to use practicable administrative controls when engineering controls are not feasible or do not fully

prevent harmful exposure. While not specified in the rule, examples of administrative controls to help prevent transmission of COVID-19 include remote work, physical distancing, changing schedules, reducing the number of persons in spaces, etc.

Section 5141, subdivision (b) reads as follows:

> Administrative Controls. Whenever engineering controls are not feasible or do not achieve full compliance, administrative controls shall be implemented if practicable.

4.3.3 Title 8, section 5141, subdivision (c), Control by Respiratory Protective Equipment

Section 5141, subdivision (c) requires employers to use respiratory protective equipment to prevent harmful exposures when engineering controls and administrative controls are not sufficient to prevent harmful exposures. Given the nature of COVID-19, all California employers unable to control COVID-19 with engineering and administrative controls would need to provide respiratory protection in order to comply with section 5141, subdivision (c) during the current pandemic, but that is not possible due to current respirator supply constraints.

Section 5141, subdivision (c) reads as follows:

> Control by Respiratory Protective Equipment. Respiratory protective equipment, in accordance with Section 5144, shall be used to prevent harmful exposures as follows:
> (1) During the time period necessary to install or implement feasible engineering controls;
> (2) Where feasible engineering controls and administrative controls fail to achieve full compliance; and
> (3) In emergencies.

4.4 Title 8, section 5144. Respiratory Protection

Similar to section 5141, subdivision (c), section 5144 requires respirators be used to protect the health of employees when effective engineering controls to prevent harmful atmospheres are not feasible. Again, compliance with this section for all California workplaces where there are COVID-19 transmission hazards despite

engineering and administrative controls has not been possible during the current pandemic due to respirator supply constraints.

Section 5144 reads, in pertinent part, as follows:

> § 5144. Respiratory Protection.
> (a) Permissible practice.
> (1) In the control of those occupational diseases caused by breathing air contaminated with harmful dusts, fogs, fumes, mists, gases, smokes, sprays, or vapors, the primary objective shall be to prevent atmospheric contamination. This shall be accomplished as far as feasible by accepted engineering control measures (for example, enclosure or confinement of the operation, general and local ventilation, and substitution of less toxic materials). When effective engineering controls are not feasible, or while they are being instituted, appropriate respirators shall be used pursuant to this section.
> (2) Respirators shall be provided by the employer when such equipment is necessary to protect the health of the employee. The employer shall provide the respirators which are applicable and suitable for the purpose intended. The employer shall be responsible for the establishment and maintenance of a respiratory protection program which shall include the requirements outlined in subsection (c).
> *****
> (d) Selection of respirators. This subsection requires the employer to evaluate respiratory hazard(s) in the workplace, identify relevant workplace and user factors, and base respirator selection on these factors...
> (1) General requirements.
> (A) The employer shall select and provide an appropriate respirator based on the respiratory hazard(s) to which the worker is exposed and workplace and user factors that affect respirator performance and reliability.

(B) The employer shall select a NIOSH-certified respirator. The respirator shall be used in compliance with the conditions of its certification.
(C) The employer shall identify and evaluate the respiratory hazard(s) in the workplace; this evaluation shall include a reasonable estimate of employee exposures to respiratory hazard(s) and an identification of the contaminant's chemical state and physical form. Where the employer cannot identify or reasonably estimate the employee exposure, the employer shall consider the atmosphere to be IDLH.
(D) The employer shall select respirators from a sufficient number of respirator models and sizes so that the respirator is acceptable to, and correctly fits, the user.
*****

4.5 Title 8 section 3362. General Requirements (Sanitation)

Section 3362, subdivision (a) requires that workplaces be kept clean and in sanitary condition. It also requires that buildings be cleaned and maintained to prevent harmful exposures (defined in section 5140 – see part 4.3 above). Thus, under this rule, employers must perform workplace cleaning to prevent exposure to COVID-19. For example, SARS-CoV-2 can remain viable on surfaces and objects for up to seven days.[6] There are products known to effectively disinfect surfaces from the virus. Thus, use of those products is required by this subdivision where there is a risk of surface contamination.

Section 3362, subdivision (b) requires cleaning and sweeping be done in a manner that does not create a harmful exposure to COVID-19. For example, dry sweeping of floors may aerosolize SARS-CoV-2 and thus is prohibited by this subsection where there is a likelihood of viral contamination.

---

[6] Alex Chin, Julie Chu, Mahen Perera, Kenrie Hui, Hui-Ling Yen, Michael Chan, Malik Peiris, Leo Poon. Stability of SARS-CoV-2 in different environmental conditions. The Lancet Microbe. 2 April 2020. https://www.thelancet.com/action/showPdf?pii=S2666-5247%2820%2930003-3

However, like sections 3203 and 5141, section 3362 does not identify specific sanitation measures that must be taken to protect workers from COVID-19.

Section 3362, subdivisions (a) and (b) read as follows:

> (a) To the extent that the nature of the work allows, workplaces, storerooms, personal service rooms and passageways shall be kept clean, orderly and in a sanitary condition. The interiors, exteriors and environs of buildings that contribute to a hazard to which these orders apply shall be cleaned and maintained in such conditions as will not give rise to harmful exposure, as defined in Section 5140.
>
> (b) Cleaning and sweeping shall be done in such a manner as to minimize the contamination of the air and, insofar as is practicable, shall be performed at such time and in such a manner that will avoid harmful exposures as defined in Section 5140.

4.6 Title 8 section 3366. Washing Facilities

Section 3366, subdivision (a) requires that washing facilities be reasonably accessible to all employees. The section, however, does not specifically require measures to ensure that employees are able to maintain personal hygiene, such as the provision of hand sanitizer by the employer.

Section 3366, subdivision (a) reads as follows:

> Washing facilities for maintaining personal cleanliness shall be provided in every place of employment. These facilities shall be reasonably accessible to all employees.

4.7 Title 8 section 3380. Personal Protective Devices

Section 3380 contains general requirements for PPE. Requirements of this section include that: PPE be labeled, be used in accordance with the manufacturer's instructions, be maintained in a safe and sanitary condition, and fit adequately. The section also requires employers to properly train employees on the use of PPE.

Section 3380, subdivision (f)(1) requires employers to assess the workplace for hazards and select the appropriate PPE. Subdivision (f)(2) requires written documentation that certifies that a workplace-hazard assessment has been performed. Subdivision (f)(4) requires the employer to provide training to employees on the proper use of required PPE.

These subdivisions, however, apply only to PPE required by sections 3381 (head protection), 3382 (eye protection), 3384 (hand protection), and 3385 (foot protection). As explained in parts 4.8 and 4.9 of this evaluation below, none of these sections require PPE to help prevent the transmission of COVID-19. Construction and mining employers are also exempt from section 3380, subdivision (f), which reads, in pertinent part, as follows:

> Hazard assessment and equipment selection.
> (1) The employer shall assess the workplace to determine if hazards are present, or are likely to be present, which necessitate the use of personal protective equipment (PPE). If such hazards are present, or likely to be present, the employer shall:
> (A) Select, and have each affected employee use, the types of PPE that will protect the affected employee from the hazards identified in the hazard assessment;
> (B) Communicate selection decisions to each affected employee; and,
> (C) Select PPE that properly fits each affected employee.
> *****
> (2) The employer shall verify that the required workplace hazard assessment has been performed through a written certification that identifies the workplace evaluated; the person certifying that the evaluation has been performed; the date(s) of the hazard assessment; and, which identifies the document as a certification of hazard assessment.
> *****
> (4) Training. The employer shall provide training to each employee who is required by this section to use PPE. Each such employee shall be trained to know at least the following:

(A) When PPE is necessary;
(B) What PPE is necessary;
(C) How to properly don, doff, adjust, and wear PPE;
(D) The limitations of the PPE; and,
(E) The proper care, maintenance, useful life and disposal of the PPE.
*****
(8) Subsections (f)(1) and (2) and (f)(4) through (7) of this section apply only to Sections 3381, 3382, 3384 and 3385 of these Orders. Subsections (f)(1) and (2) and (f)(4) through (7) of this section do not apply to Section 5144 of these Orders and Section 2940.6 of the High Voltage Electrical Safety Orders. Subsection (f) does not apply to workplace operations regulated by the Construction Safety Orders or the Mine Safety Orders.

4.8 Title 8 section 3382. Eye and Face Protection

Section 3382 contains requirements for the provision and use of eye and face protection. Section 3382, subdivision (a) requires eye and face protection only to protect against acute eye injuries. It does not require eye protection to prevent infectious diseases. COVID-19 is believed to be transmissible through the eyes, mouth, and nose, and eye and face protection may help prevent infections.[7]

Section 3382, subdivision (a) reads as follows:

> Employees working in locations where there is a risk of receiving eye injuries such as punctures, abrasions, contusions, or burns as a result of contact with flying particles, hazardous substances, projections or injurious light rays which are inherent in the work or environment, shall be safeguarded by means of face or eye protection. Suitable screens or shields isolating the hazardous

[7] Christian J. Kähler, Rainer Hain, Fundamental protective mechanisms of face masks against droplet infections, Journal of Aerosol Science, Volume 148, 2020.
https://www.sciencedirect.com/science/article/pii/S0140673620311429

> exposure may be considered adequate safeguarding for nearby employees.

4.9 Title 8 section 3384. Hand Protection

Section 3384 contains requirements for the provision and use of hand protection. Section 3384, subdivision (a) requires hand protection from exposures to harmful substances that absorb through the skin, cuts or lacerations, abrasions, punctures, chemical burns, thermal burns, radioactive materials, and harmful temperature extremes.

Subdivision (a) does not require hand protection when the hands of employees may contact a surface contaminated with SARS-CoV-2 because SARS-CoV-2 does not penetrate the skin, but rather infects persons after they touch their eyes, nose, or mouth with contaminated hands.

Section 3384, subdivision (a) reads as follows:

> Employers shall select, provide and require employees to use appropriate hand protection when employee's hands are exposed to hazards such as those from skin absorption of harmful substances, cuts or lacerations, abrasions, punctures, chemical burns, thermal burns, radioactive materials, and harmful temperature extremes.

4.10 Title 8 section 5193. Bloodborne Pathogens

Section 5193 applies to all occupational exposure to blood or "*other potentially infectious materials*" (the construction industry is exempted). Other potentially infectious materials" is defined in the regulation as follows:

"Other Potentially Infectious Materials" is defined, in pertinent part, as follows:

> The following human body fluids: semen, vaginal secretions, cerebrospinal fluid, synovial fluid, pleural fluid, pericardial fluid, peritoneal fluid, amniotic fluid, saliva in dental procedures, any other body fluid that is visibly contaminated with blood such as saliva or vomitus, and all body fluids in situations where it is difficult or impossible to differentiate between body fluids such as emergency response

*****

Although SARS-CoV-2 is not likely transmitted through parenteral contact with blood and other potentially infections materials,[8] it is likely transmitted when infected blood or other potentially infectious materials are aerosolized and are inhaled or contact the eyes, nose, or mouth. This occurs most frequently in settings generally subject to section 5199, the Aerosol Transmissible Disease standard. For workplaces not covered by section 5199 where aerosolization of blood and other potentially infectious materials occurs (such as dentistry and other medical specialties that meet exemptions in 5199), section 5193 contains requirements to reduce the risk of COVID-19 transmission, including requirements for engineering controls, cleaning practices, personal hygiene practices, and personal protective equipment.

Some of the relevant requirements in section 5193 are the following:

> (d)(1) ... Universal precautions shall be observed to prevent contact with blood or OPIM [*Other potentially infectious materials*]. Under circumstances in which differentiation between body fluid types is difficult or impossible, all body fluids shall be considered potentially infectious materials.
> * * * *
> (d)(2)(A) ... Engineering and work practice controls shall be used to eliminate or minimize employee exposure.
> * * * *
> (d)(3)(D) All procedures involving blood or OPIM shall be performed in such a manner as to minimize splashing, spraying, spattering, and generation of droplets of these substances.
> * * * *
> (d)(3)(H)(2)a. Contaminated Work Surfaces. Contaminated work surfaces shall be cleaned and decontaminated with an appropriate disinfectant

[8] National Institute of Environmental Health Sciences. Can SARS-CoV-2, the Virus that Causes COVID-19 Disease, Be Spread by Blood? 2020. https://tools.niehs.nih.gov/wetp/public/hasl_get_blob.cfm?ID=11981

immediately or as soon as feasible when:
i. Surfaces become overtly contaminated;
ii. There is a spill of blood or OPIM;
iii. Procedures are completed; and
iv. At the end of the work shift if the surface may have become contaminated since the last cleaning.
* * * *
(d)(3)(I) Hygiene.
1. Employers shall provide handwashing facilities which are readily accessible to employees.
2. When provision of handwashing facilities is not feasible, the employer shall provide either an appropriate antiseptic hand cleanser in conjunction with clean cloth/paper towels or antiseptic towelettes. When antiseptic hand cleansers or towelettes are used, hands shall be washed with soap and running water as soon as feasible.
3. Employers shall ensure that employees wash their hands immediately or as soon as feasible after removal of gloves or other personal protective equipment.
4. Employers shall ensure that employees wash hands and any other skin with soap and water, or flush mucous membranes with water immediately or as soon as feasible following contact of such body areas with blood or OPIM.
* * * *
(d)(4) Personal Protective Equipment.
(d)(4) (A) Provision. Where occupational exposure remains after institution of engineering and work practice controls, the employer shall provide, at no cost to the employee, appropriate personal protective equipment such as, but not limited to, gloves, gowns, laboratory coats, face shields or masks and eye protection, and mouthpieces, resuscitation bags, pocket masks, or other ventilation devices. Personal protective equipment will be considered "appropriate" only if it does not permit blood or OPIM to pass through to or reach the employee's work clothes, street clothes, undergarments, skin, eyes, mouth, or other mucous membranes under normal conditions of use and for the

duration of time which the protective equipment will be used.

* * * *

(d)(4)(G) Gloves. Gloves shall be worn when it can be reasonably anticipated that the employee may have hand contact with blood, OPIM, mucous membranes, and non-intact skin; when performing vascular access procedures except as specified in subsection (d)(4)(G)4.; and when handling or touching contaminated items or surfaces. These requirements are in addition to the provisions of Section 3384.

1. Disposable (single use) gloves such as surgical or examination gloves, shall be replaced as soon as practical when contaminated or as soon as feasible if they are torn, punctured, or when their ability to function as a barrier is compromised.

* * * *

(d)(4)(H) Masks, Eye Protection, Face Shields, and Respirators.

1. Masks in combination with eye protection devices, such as goggles or glasses with solid side shields, or chin-length face shields, shall be worn whenever splashes, spray, spatter, or droplets of blood or OPIM may be generated and eye, nose, or mouth contamination can be reasonably anticipated. These requirements are in addition to the provisions of Section 3382.

2. Where respiratory protection is used, the provisions of Sections 5144 and 5147 are required as applicable.

* * * *

(d)(4)(I) Gowns, Aprons, and Other Protective Body Clothing.

1. Appropriate protective clothing such as, but not limited to, gowns, aprons, lab coats, clinic jackets, or similar outer garments shall be worn in occupational exposure situations. The type and characteristics will depend upon the task and degree of exposure anticipated. These requirements are in addition to the provisions of Section 3383.

5.0 FEDERAL OSHA REGULATIONS

Federal OSHA standards contain many of the same requirements as Title 8. The foremost exceptions are:

- The IIPP, required by Title 8, has no similar federal regulatory mandate.
- The definition of "harmful exposure." In Title 8, a *harmful exposure* is defined as exposure to any airborne substance that can cause injury, illness, disease, impairment, or loss of function. This includes SARS-CoV-2. The federal regulations do not have such a broad definition, and they limit regulation of harmful airborne exposures to specific substances listed in title 29 Code of Federal Regulations Subpart Z "Toxic and Hazardous Substances," which does not include SARS-CoV-2. Thus, protections against SARS-CoV-2 are not required by those federal regulations.

However, while there is no federal regulation governing airborne exposure to substances such as SARS-CoV-2, federal OSHA does have the "General Duty Clause" in section 5(a)(1) of the Occupational Safety and Health Act of 1970. The clause states the following:

> Each employer shall furnish to each of his [*sic*] employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees;

The General Duty Clause is used by federal OSHA to address conditions that are not subject to other Federal OSHA regulations. As such, it can be used by Federal OHA to require employers to protect employees from harmful airborne pathogens, such as SARS-CoV-2.

Other federal regulations such as those governing respiratory protection, sanitation, washing facilities, personal protective equipment, and bloodborne pathogens are similar to their counterpart regulations in the California Code of Regulations, title 8, discussed above.

6.0 PETITIONERS AND THEIR BASIS FOR NEW REGULATIONS

Petitioners assert that without specific occupational health and safety regulation to protect workers from COVID-19, Californians will become sick and die

unnecessarily. They request regulatory protection for workers not currently protected by the Aerosol Transmissible Disease standard, title 8 section 5199 ("Non-5199 Workers"). Petitioners seek to add both an emergency regulation to immediately protect Non-5199 Workers from COVID-19, and a permanent regulation to protect Non-5199 Workers in the long-term from infectious diseases in general, including novel pathogens such as COVID-19.

Petitioners assert that an emergency regulation to protect Non-5199 Workers from COVID-19 must be issued as soon as possible and take immediate effect. They state that the California economy is in the process of opening back up, and employees currently working, or who will be returning to work in the future, need an emergency regulation now. Many more workers will be exposed to COVID-19 as the economy opens back up. Petitioners contend an emergency regulation is necessary, not only to protect the employees' health and safety, but also the health and safety of their families and communities.

Petitioners assert that the COVID-19 pandemic is not diminishing and will persist for some time, and in the face of this public health emergency, clarity is required for both employers and employees. They state that the performance-based requirements of Title 8, section 3203, combined with a small number of other regulations, are not adequate in protecting employees from COVID-19.

Thus, Petitioners propose language for a draft emergency regulation to protect Non-5199 Workers standard from COVID-19 and ask the Standards Board to consider their draft as guidance in developing an emergency regulation. They also propose the adoption of a permanent regulation to protect employees from infectious diseases, including those caused by novel pathogens.

7.0 ANALYSIS OF THE PROPOSAL

Cal/OSHA agrees with Petitioners that COVID-19 is a workplace emergency. SARS-CoV-2 is a highly infectious, easily transmissible, and virulent pathogen. It has killed hundreds of workers in California and sickened thousands, and workers will continue to become ill and die until the pandemic subsides. COVID-19 is an occupational health emergency causing more deaths in less time than any other workplace crisis in the nearly fifty-year existence of Cal/OSHA. The COVID-19 public health crisis is exactly the type of catastrophe that the legislature intended an emergency regulation to address.

Cal/OSHA also agrees that an emergency regulation is warranted. Although section 5199 provides specific protections for novel pathogens such as COVID-19, it does not protect all workers. Many Non-5199 Workers are affected by major outbreaks of COVID-19 including workers in the following industries: meat and poultry processing, food processing, agriculture, garment manufacturing, warehousing, public transportation, and retail stores.

There is no existing Title 8 regulation that comprehensively addresses an employer's responsibility to protect Non-5199 Workers from infectious diseases. While many of the regulations discussed above require employers to take steps to protect workers against COVID-19, these standards are not specific to infectious diseases, including COVID,-19 and do not necessarily identify specific measures that must be taken to fight the spread of any infectious disease. In the absence of a specific set of mandatory infection-control requirements that employers clearly must implement, there is no assurance that all Non-5199 Workers will be protected from infectious diseases like COVID-19.

Guidance exists on how employers can protect workers from COVID-19. There are a large number of COVID-19 prevention guidelines from myriad government agencies (including federal OSHA and Cal/OSHA), universities, non-profit organizations, business associations, and others. And employers should follow these guidelines to protect Non-5199 Workers from COVID-19 in order to comply with general regulations such as sections 3203, 3362, 3366, 5141, 5144, But these standards themselves do not prescribe specific steps that employers must take to protect workers from COVID-19. Thus, while these general provisions provide Cal/OSHA a regulatory basis for requiring employers to take measures to protect workers from COVID-19, Cal/OSHA's enforcement efforts could be streamlined and strengthened through regulatory mandates specific to preventing the spread of infectious diseases. In addition, the PPE regulations (sections 3380 through 3385) do not apply to infectious-disease prevention and section 5193, which contains applicable PPE requirements, only applies to a very small number of Non-5199 Workplaces.

If COVID-19-specific protections similar to the guidelines were spelled out in the Title 8 standards, Cal/OSHA could more easily enforce requirements that would be specific, detailed, and more protective of workers. Given the unprecedented nature of the COVID-19 pandemic, a new standard that will enhance Cal/OSHA's

ability to protect workers is essential to keep workplaces safe. A specific COVID-19 emergency regulation in Title 8 would provide clear instructions to employers and employees on what needs to be done to protect workers from COVID-19, eliminating any confusion and enhancing compliance.

8.0 CONCLUSION

Pursuant to Labor Code section 147.1, Cal/OSHA has determined there is a necessity for an emergency regulation to protect all Non-5199 Workers from COVID-19. Due to the current COVID-19 pandemic, it is important that a regulation be promulgated as soon as possible to protect employees from exposure to the virus.

Cal/OSHA recommends that the Standards Board grant petition 583, and that an emergency regulation be promulgated to protect employees from exposure to COVID-19. In addition, Cal/OSHA recommends that an advisory committee be convened by Cal/OSHA after the COVID-19 pandemic subsides to determine whether a permanent regulation should be promulgated to protect Non-5199 Workers from infectious diseases, including novel pathogens.

SUMMARY
PUBLIC MEETING AND BUSINESS MEETING
July 16, 2020
Teleconference in Sacramento, California

I. PUBLIC MEETING

A. CALL TO ORDER AND INTRODUCTIONS

Chairman Dave Thomas called the Public Meeting of the Occupational Safety and Health Standards Board (Board) to order at 10:00 a.m., July 16, 2020, in Suite 350 of the Occupational Safety and Health Standards Board Office, Sacramento, California, via teleconference at 844-992-4726 and via Webex at www.webex.com.

ATTENDANCE

Board Members Present at OSHSB Office
Dave Thomas

Board Members Absent
NONE

Board Members Present via Teleconference and/or Webex
Barbara Burgel
Dave Harrison
Nola Kennedy
Chris Laszcz-Davis
Laura Stock

Board Staff Present at OSHSB Office
Christina Shupe, Executive Officer
Michael Nelmida, Senior Safety Engineer
Sarah Money, Executive Assistant

Division of Occupational Safety and Health Staff Present via Teleconference and/or Webex
Eric Berg, Deputy Chief of Health

Board Staff Present via Teleconference and/or Webex
Mike Manieri, Principal Safety Engineer
Lara Paskins, Staff Services Manager
David Kernazitskas, Senior Safety Engineer
Jennifer White, Staff Services Analyst

Others Present via Teleconference and/or Webex
Michael Donlon, Construction Employers Association
Eric Conn, Conn Maciel Carey
Mirella Deniz-Zaragoza, Warehouse Worker Resource Center
Jennifer Wysick, Truebeck Construction
Edward Flores, University of CA, Merced
Stan Santos, Fresno Madera Tulare Kings Central Labor Council
Eric Frumin, Change to Win
Ramón Castellblanch, CA Alliance for Retired Americans
Stephen Knight, Worksafe
Cassie Hilaski, Nibbi Brothers General

Anne Katten, CA Rural Legal Assistance Foundation
Robert Moutrie, CA Chamber of Commerce
Dan Leacox, Leacox and Associates
Raul Pickett, Central Valley Response Task Force
Frances Schreiberg, National Lawyers Guild - Labor & Employment Committee (NLG – L&EC)
Contractors
Julie Rey, San Joaquin Valley Air Pollution Control District
Frank Belio, International Union of Elevator Constructors Local 18
Elizabeth Treanor, Phylmar Regulatory Roundtable
Kevin Riley, University of CA, Los Angeles, Labor Occupational Safety and Health Program

Mr. Thomas indicated that this portion of the Board's meeting is open to any person who is interested in addressing the Board on any matter concerning occupational safety and health or to propose new or revised standards or the repeal of standards as permitted by Labor Code Section 142.2.

Steven Knight, Worksafe, commented in support of the petition that his organization and the National Lawyers Guild - Labor and Employment Committee (NLG L&EC) submitted in May to address COVID-19 exposure in the workplace (Petition 583). He asked when the petition will be put before the Board for consideration and vote.

Eric Conn, Conn Maciel Carey, representing the Coalition for Uniformity in COVID-19 Recordkeeping, stated that his organization is concerned about the fact that recordkeeping requirements in the Division's COVID-19 guidance differs substantially from federal OSHA's.

- The Division's guidance document says that while a positive test is considered determinative of recordability, a positive test result is not necessary. This directly contradicts federal OSHA's recordkeeping requirements for COVID-19 and guarantees that some cases will be recordable on the 300 logs in California that are not being recorded on 300 logs in other states.

- Federal OSHA requires employers to find work-relatedness for COVID-19 recordkeeping only where it is more likely than not that an illness was caused by an exposure in the workplace based on reasonably available evidence and in the absence of an equally or more likely alternative non-work explanation for the ailment. The Division's guidance document has created a presumption of work-relatedness and provided no guidance as to whether or not non-work exposures can be considered that may have been likely to have caused the illness.

He asked the Division to reexamine its guidance and either revise it to match federal OSHA's standards or withdraw it. **Elizabeth Treanor, Phylmar Regulatory Roundtable,** echoed Mr. Conn's comments.

Michael Donlon, Construction Employers Association, stated that the regulations petition 583 is seeking to promulgate are duplicative of the public health orders that have already been issued and will create confusion for employers. The public health orders are able to be modified much easier and quicker than the new standard that petition 583 seeks to implement. **Robert Moutrie, CA Chamber of Commerce,** echoed Mr. Donlon's comments.

Eric Fruman, Change to Win, commented in support of petition 583. He said that the existing regulations are inadequate, so a clearly applicable standard is needed. He also stated that COVID-19 is a workplace hazard that needs to be addressed, and the Division has the ability to deal with it better than public health authorities because the Division understands the problem from an employer/employee standpoint.

Raul Pickett, Central Valley Response Task Force, commented in support of petition 583. He also provided the following suggestions:

- Work plans need to be required at worksites and must contain specific language regarding infection control standards.
- There needs to be a central location where infection control data is collected and disseminated.
- It is important to identify and establish specific infection thresholds levels that clearly define when an outbreak has occurred.

Mr. Pickett also said that this petition is needed because many essential workers are immigrants and low-wage workers who do not have access to healthcare and have preexisting medical conditions, which puts them at greater risk of getting infections such as COVID-19. They also do not have union representation and no worksite protections. This petition will help to keep those workers healthy and will save lives.

Ramón Castellblanch, CA Alliance for Retired Americans, stated that the CDC guidelines to protect workers from exposure to COVID-19 are clearly not working. They need to be updated and turned into permanent standards. That is why petition 583 is needed right now.

Mirella Deniz-Zaragosa, Warehouse Worker Resource Center, stated that employers are not doing enough to protect workers from exposure to COVID-19. They are not doing adequate reporting and contact tracing around confirmed cases and they are not cleaning and sanitizing work areas. Proper physical distancing and regular handwashing by employees is not taking place because employees are hurrying to meet relentless quotas and production speeds that are set by their employer. **Stan Santos, Fresno Madera Tulare Kings Central Labor Council,** echoed this comment. Ms. Deniz-Zaragosa stated that the guidance protocols that the Division has issued are not the same as a mandatory standard that specifically addresses COVID-19 hazards, so an emergency standard is needed.

Elizabeth Treanor, Phylmar Regulatory Roundtable, asked the Board staff and Division to take into account the fluidity of the medical research and technological innovations and make requirements that are adaptable to changing situations, as they consider petition 583. She said that keeping the requirements simple will ensure that more employers comply. She also encouraged the Division to continue its work providing guidance documents to help employers comply.

Robert Moutrie, CA Chamber of Commerce, stated that petition 583 takes away the Division's ability to update guidance documents quickly and address new science as it comes along, and most of the issues that are being brought up are being addressed through the Governor's actions and the Division's guidance documents. Petition 583 also requires the

inclusion of a competent person, which means that employers will need to hire a person that is experienced in infectious disease control, which may not be feasible for some employers.

Cassie Hilaski, Nibbi Brothers, stated that the Division has managed to effectively develop and implement guidance documents, conduct enforcement of current regulations, and issue citations to employers who refuse to protect their workers from exposure to COVID-19 despite not having an emergency standard in place that is specific to COVID-19, so a standard for COVID-19 exposure is not needed. Additional regulation will not make bad actors comply and will not provide employees with any additional protections.

Frances Schreiberg, National Lawyers Guild – Labor & Employment Committee (NLG – L&EC), stated that an emergency regulation is needed to address COVID-19 exposure because more needs to be done than just relying on the Division for enforcement action. The emergency regulation needs to have flexible aspects to it so that employers can make it fit with their workplace, but it also needs to give workers clear guidance and specifics on what their rights are. Having an emergency regulation in place will allow unions to enforce the regulation through collective bargaining agreements or by taking direct action, and it will provide direction for workers who do not have a union.

The following individuals also commented in support of petition 583:

- **Edward Flores, University of CA, Merced**
- **Kevin Riley, University of CA, Los Angeles, Labor Occupational Safety and Health**
- **Stan Santos, Fresno Madera Tulare Kings Central Labor Council**

Jennifer Wysick, Truebeck Construction, stated that additional regulation is not necessary to address COVID-19 exposure because the guidance documents that have been issued are specific to each county, and that is sufficient to address COVID-19 exposure in the workplace.

B. ADJOURNMENT

Mr. Thomas adjourned the Public Meeting at 11:20 a.m.

Mr. Thomas called for a break at 11:20 a.m. and reconvened the meeting at 11:25 a.m.

II. BUSINESS MEETING

Mr. Thomas called the Business Meeting of the Board to order at 11:25 a.m., July 16, 2020, in Suite 350 of the Occupational Safety and Health Standards Board Office, Sacramento, California, via teleconference at 844-992-4726, and via Webex at www.webex.com.

A. PROPOSED VARIANCE DECISIONS FOR ADOPTION

1. Consent Calendar

Ms. Shupe stated that there is a minor clerical error on the consent calendar regarding item L. Item L is incorrectly listed on the consent calendar as OSHSB File No 20-V-078. The correct file number is 20-V-178. With that clerical correction, she is aware of no unresolved procedural issues regarding the items on the consent calendar, and she believes that those

items are ready for the Board's decision on the question of adoption.

MOTION

A motion was made by Ms. Laszcz-Davis and seconded by Mr. Harrison to adopt the consent calendar as modified.

A roll call was taken, and all members present voted "aye." The motion passed.

B. OTHER

1. DOSH Update

Mr. Berg provided updates on the following Division projects:

- Indoor Heat: Going through the Standardized Regulatory Impact Analysis (SRIA) process.
- Workplace Violence in General Industry: Working on an updated draft to be posted for comments. This project is on hold due to COVID-19.
- Evaluation of Petition 583: Evaluation has been completed and is undergoing review.

Mr. Berg also responded to a previous question about recordkeeping as it pertains to COVID-19 cases in the workplaces. He said that the Division has posted its guidelines for recordkeeping on its website. They are consistent with the Division's recordkeeping regulations and are the same as those of federal OSHA.

Ms. Stock stated that it is clear that the existing regulations are not sufficiently addressing COVID-19 exposure in the workplace. It is also very confusing to navigate the multitude of guidance documents available. She asked the Division and Board staff about what needs to be done to get Petition 583 on the agenda for next month's meeting, and how the Board can help accelerate it once it comes up for a vote. She also asked how each of the guidance documents intersect with each other, and how they are being enforced. **Mr. Berg** stated that the evaluation for petition 583 is complete and has been submitted to the Department of Industrial Relations (DIR) for review. He will communicate the urgency of the petition to DIR. He asked Ms. Shupe what the deadline will be by which the Division will need to get its review to the Board staff in time to put petition 583 on the August agenda. **Ms. Shupe** stated that she did not have a deadline to share at the moment, but will find out and get the deadline to him by tomorrow. She also stated that the Board staff has not seen the Division's evaluation, and once the Board staff receives it, the Board staff needs time to review it and prepare a legally defensible proposed decision before the petition can be placed on the agenda for adoption.

MOTION

A motion was made by Ms. Burgel that petition 583 be heard, discussed, and voted on at the August 2020 Board Meeting. Motion not seconded. Motion failed.

Ms. Laszcz-Davis stated that she understands the urgency, but the Division should do a brief evaluation that takes into consideration the regulations that are already in place and what it

would take to upgrade or strengthen them to provide the protection that is needed. Communication and education regarding these regulations also needs to be much better.

Ms. Stock stated that the situation regarding workplace protections from COVID-19 exposure is the same as the situation was when the aerosol transmissible disease (ATD) standard was passed for healthcare. The injury and illness prevention plan (IIPP) provides basic requirements to protect workers, but additional industry-specific regulations are needed to address COVID-19 exposure, just like the additional requirements in the ATD standard were needed for healthcare. The ATD standard only applies to healthcare workers, but there are similar situations with COVID-19 that are occurring in non-healthcare workplaces, and those workers need to be protected. If the Board votes on the petition in August and moves it forward, the evaluation that Ms. Laszcz-Davis suggested can still take place as part of the process.

Mr. Thomas asked Mr. Berg how the Division is currently citing and enforcing regulations regarding COVID-19 exposure. **Mr. Berg** stated that the Division is doing many investigations and issuing citations under the ATD standard where it applies, and for situations where it does not apply, the Division is citing under Sections 3203 and 5141. **Ms. Stock** asked Mr. Berg how many citation have been issued under standards other than the ATD standard. **Mr. Berg** stated that he is unsure. **Ms. Stock** stated that she has heard of only one or two at the most, which is concerning.

Katie Hagen, Director for the Department of Industrial Relations, stated that the Division is doing workplace visits and inspections, issuing citations after the investigation is complete, and conducting follow-up visits as needed, in addition to providing guidance, consultation, and education. The Division of Labor Standards Enforcement (DLSE) is assisting with these things as well. The Division is providing outreach to employers via mass email to various industries, and has also set up a call center that reaches 1,200 callers per day to provide assistance.

Ms. Shupe stated that the Board staff and Division both understand the urgency and unprecedented need for worker protection against COVID-19, but it is important to review and evaluate petition 583 without rushing it so as to avoid making any mistakes.

Mr. Thomas stated that petition 583 will probably not be ready for the Board until at least the September meeting. He also stated that it is important for everyone to do their part to control the spread of COVID-19. He said that workers are forced to come to work when they're sick, and employers do not properly report cases of COVID-19 to the authorities.

Ms. Kennedy had the following questions for Mr. Berg:

- How are sites for inspections determined?
    - In response to complaints?
    - In response to outbreak clusters?
    - Is the Division targeting industries with increased case rates?
    - Is the Division focusing on vulnerable populations?
- Are there any situations where a COVID-19 outbreak is due to workplace exposure where the Division cannot cite under the IIPP or ATD standards?

Mr. Berg asked Ms. Kennedy to submit her questions in writing to him, and he will look into getting answers to those questions.

MOTION

A motion was made by Ms. Burgel and seconded by Ms. Stock that the proposed decision for petition 583 be brought before the Board at the August 2020 Board Meeting for consideration.

A roll call was taken, and all members present voted "aye." The motion passed.

2. Legislative Update

Ms. Shupe provided updates on the following bills:

- AB 2043
- AB 2092
- AB 2028
- AB 2537
- AB 3056
- SB 275
- SB 1257

3. Executive Officer's Report

Ms. Shupe stated that on June 30, the Governor issued Executive Order N-71-20, which modifies the 60-day extension for deadlines listed in Labor Code Sections 147 and 142.2 that were provided in Executive Order N-63-20. N-71-20 replaces the 60-day extension with a 120-day extension. This order applies to petitions already in progress with the Standards Board and to any future incoming petitions until the order is lifted. The order extends the petition deadline from within 6 months of submission of the petition to within 10 months of submission.

4. Board Member Comments and Future Agenda Items

No future agenda items were mentioned.

C. CLOSED SESSION

Pursuant to Government Code Sections 11126(e)(1) and 11126(a)(1), the Board conferred with counsel regarding the pending litigation matters listed on the agenda and consideration of personnel matters. Closed Session began at 12:13 p.m.

D. RETURN TO OPEN SESSION

1. Report on any Closed Session Action

Closed Session ended at 12:36 p.m. A roll call was taken to ensure all Board Members had returned to the teleconference and Webex meeting. All Board Members were present.

No action was taken during the Closed Session.

E. ADJOURNMENT

Mr. Thomas adjourned the Business Meeting at 12:37 p.m.

Mr. Thomas indicated that this portion of the Board's meeting is open to any person who is interested in addressing the Board on any matter concerning occupational safety and health or to propose new or revised standards or the repeal of standards as permitted by Labor Code Section 142.2.

Mr. Thomas called for a break at 10:08 a.m. to resolve some technical issues with the meeting audio and reconvened the meeting at 10:09 a.m.

Dan Leacox, Leacox and Associates, stated that the emergency regulation that petition 583 is seeking to establish is not necessary because there are plenty of rules that the Division has successfully enforced to protect employees from exposure to COVID-19. He also stated that the process to create emergency regulations does not always include meaningful engagement with the regulated community, and without that meaningful engagement, the resulting regulation can be unrealistic, put unjustified burdens on the employer, and can result in a rule that is not fully vetted. **Cassie Hilaski, Nibbi Brothers General Contractors,** echoed this comment. Mr. Leacox stated that COVID-19 is a public health issue, and controlling it through the employment relationship can result in overreaching requirements, such as:

- The petition requires employers to collect and disseminate personal information about employees. **Cassie Hilaski, Nibbi Brothers General Contractors,** echoed this comment.

- The petition requires employers to establish, implement, and maintain an effective written compliance plan. This may result in employers being cited if just one employee gets sick.

- The petition requires the rule to include certain wage and hour provisions.

This regulation will also affect every employer in the state of California, so the costs will cross the $50 million threshold and result in the regulation having to go through a standardized regulatory impact analysis (SRIA).

Lorena Perea Elox, Fight for $15 and a Union, stated that her employer, McDonald's, has failed to protect workers from exposure to COVID-19. She said that McDonald's is not being honest with its employees about who has COVID-19 and who has been exposed to an employee with COVID-19. She is also not sure if her store is being properly sanitized between shifts to prevent exposure. Workers are forced to come in when they are sick because if they don't, their shifts get cut or changed. This was an issue prior to the COVID-19 pandemic. The Los Angeles County Health Department has failed to act on any complaints filed by the store employees. The current regulations are not working, so they need to be rewritten.

Maggie Robbins, Worksafe, stated that the lack of evidence of employer non-compliance with the COVID-19 guidance documents and standards does not mean that employers are complying. There is no data, such as inspections done by the Division, to support this contention. However, there are plenty of reports from the media and from workers of worksite outbreaks, workers remaining at work when they are sick, no social distancing, no handwashing access, and no worksite cleaning that indicate employers are not complying. There may be a lack of data as to how many of the COVID-19 illnesses and fatalities are due to exposure in the workplace, but no matter how big or small the percentage is of them that can be attributed to COVID-19, the illnesses and deaths from COVID-19 outnumber those caused by other means. **Anne Katten, CA Rural Legal Assistance Foundation,** echoed Ms. Robbins's comments.

Elizabeth Treanor, Phylmar Regulatory Roundtable, stated that developing an emergency regulation to address COVID-19 is not the best course of action for the Board to take, and the existing regulations sufficiently address COVID-19 exposure in the workplace. **Rosa Trevizo, Associated General Contractors of CA,** echoed this comment. Ms. Treanor stated the injury and illness prevention program (IIPP) standard encompasses all hazards, including COVID-19, and is comprehensive enough, and the other existing regulations and guidance do work. The Division's time would be better spent targeting employers who are not complying with the existing regulations through inspections and enforcement rather than on emergency rulemaking. She asked the Board to step back and assess the consequences that will come with adopting an emergency regulation, and to review the prescriptive and overreaching requirements in petition 583. **Kevin Bland, Ogletree Deakins, representing the CA Framing Contractors Association, the Residential Contractors Association, and the Western Steel Council,** echoed Ms. Treanor's comments.

Edith Aburto, Fight for $15 and a Union, stated that her employer, McDonald's in Berkeley, has not closed for proper cleaning and sanitizing even though many of the workers have tested positive for COVID-19. McDonald's has asked the employees to do surface cleaning in the bathrooms and kitchen, but they are not the professional cleaners that are needed to properly clean the store following a COVID-19 outbreak. The employees have reported this to the city officials, but no action has been taken, and the management has retaliated against them by cutting their hours.

Michael Donlon, Construction Employers Association, stated that it is impossible for employers to comply with the wildfire smoke regulation because there are no N95 masks available and the Division has not found an adequate alternative. The Governor issued an order asking employers to give their N95 masks to healthcare workers, and now employers are being cited and fined for not having them. This is what happens when an emergency regulation is passed too quickly.

Mr. Donlon also stated that petition 583 is very duplicative of the public health orders that have been issued and will not make the workplace any safer than following the existing guidelines. A regulation to address COVID-19 exposure would also not be able to remain consistent with public health orders because public health orders are constantly changing. It will also lack consistency with the Health Insurance Portability and Accountability Act (HIPAA) laws because employers are not allowed to disclose that kind of information to other employees. The petition also requires that employers hire a competent person to implement this plan, and most employers do not have someone on staff who is qualified to do this.

Margarita Tomas, Fight for $15 and a Union, stated that her employer, McDonald's in Oakland, told their employees to wear their disposable masks for several days and gave them gloves to wear that broke easily. There is no social distancing being implemented by her employer, and as a result, several workers have tested positive for COVID-19 and they have had to go to court to get their employer to comply.

Dr. Robert Blink stated that he supports petition 583 because Section 3203 does not apply to many industries, but it is important to address the concerns that have been raised so that employers are not unnecessarily burdened by the regulation. The new regulation will need to have a lot of built-in flexibility to accommodate the new incoming information and the rapidly changing circumstances surrounding the COVID-19 pandemic. He also recommended including a provision for getting input from local health officers in each jurisdiction.

Bryan Little, CA Farm Bureau Federation, stated that it will be difficult for most employers to find a person with the expertise needed to fulfill the "competent person" requirement that is listed in petition 583. He also said that N95 respirators are difficult to obtain because they are being given to healthcare workers to protect them against COVID-19 exposure, so employers need to have other alternatives. As a result, outdoor employers can only comply with the emergency wildfire smoke standard by implementing feasible engineering controls and practicable administrative controls, but these do not exist for many of those employers. As a result, outdoor employers are forced to either cease operations or to continue operating out of compliance. He asked the Board to consider the unintended consequences that have resulted from the emergency wildfire smoke standard because there may be unintended consequences if petition 583 is adopted.

Lisa Prince, The Prince Firm, stated that the Division is conducting many inspections related to COVID-19 exposure in the workplace, and there are regulations under which the Division can cite employers. **Rosa Trevizo, Associated General Contractors of CA,** echoed this comment. Ms. Prince said that adding an additional regulation like that mentioned in petition 583 will not help. She is concerned that some of the requirements in the petition, such as having a competent person on staff and updating an employer's written program, will take the focus away from safety and compliance. Also, the reporting requirements in the petition require employers to report positive COVID-19 cases to both the Division and the local public health department, regardless of whether or not the exposure occurred in the workplace. This is duplicative of the system that is already in place to report positive cases to the public health and contact tracing departments. The petition also creates problems when it comes to employee privacy. It will result in more fear and less communication in the employer/employee relationship.

Len Welsh, Western Steel Council, stated that it is important for the Division to focus its limited resources on where it will do the most good. The Division has been in compliance assistance mode since the beginning of this pandemic, and that has been the most helpful to employers. It has allowed the Division to reach more employers, explain what needs to be done to comply and why, and helped gain more trust from employers. It is best to allow the Division to continue to work in compliance assistance mode with employers to address COVID-19 exposure in the workplace because it gives the Division and employers the flexibility to change things quickly when new information becomes available instead of having to go through the process outlined in the Administrative Procedures Act (APA) to change a regulation. It also allows the Division to better target non-compliant employers and industries.

Bruce Wick, CA Professional Association of Specialty Contractors, stated that it would be good to find out from the Division the following:

- How have employers assessed the industry-specific guidance and used it to protect their employees from exposure to COVID-19?

- Are most of the citations being issued because employers are not following the industry guidance?

Mr. Wick also stated that employers who are not complying with the existing regulations will not comply with the new regulation, so it is better for the Division to focus its resources on enforcement and targeting non-compliant employers. **Rosa Trevizo, Associated General Contractors of CA, Cassie Hilaski, Nibbi Brothers General Contractors, and Michael Miiller, CA Association of Winegrape Growers,** echoed this comment.

Mr. Thomas called for a break at 12:00 p.m. and reconvened the meeting at 12:15 p.m.

Anne Katten, CA Rural Legal Assistance Foundation, stated that it is important to find alternatives to N95 masks for workers working outdoors when wildfire smoke is present. KN95's could be used, as well as valved N95's for socially distanced work outdoors and slightly expired N95's that could provide adequate protection. Employers also have the option to limit exposure to wildfire smoke by relocating or rescheduling the outdoor work if possible. It is very important to limit exposure to wildfire smoke because it can increase the risk of a worker getting COVID-19.

Stephen Knight, Worksafe, stated that an emergency regulation is needed right away to address COVID-19 exposure in the workplace because the ATD standard is limited in scope to only apply to healthcare workplaces. The Division has also indicated in its evaluation of petition 583 that an emergency temporary standard is needed so that the Division has all of the tools that it needs to ensure that workers are protected.

Robert Moutrie, CA Chamber of Commerce, stated that employers need to know what to do to comply with the wildfire smoke regulation in light of the fact that there is a lack of N95's available and there are no alternatives allowed. It appears that the only option for outdoor employers is to shut down when they are unable to get N95's. This is not a feasible option, especially for the indoor workplaces that have had to move their operations outdoors due to COVID-19 requirements.

Mr. Moutrie also stated that moving too quickly to develop an emergency regulation to address COVID-19 is not a good idea and could result in a regulation being developed that is not feasible. The regulation could also become outdated very quickly when science changes. **Cassie Hilaski, Nibbi Brothers General Contractors, and Michael Miiller, CA Association of Winegrape Growers,** echoed this comment. Mr. Moutrie also said that a rise in the number of COVID-19 cases does not indicate that the current regulations aren't working, and anecdotal stories from workers do not demonstrate that there is a need for additional regulation.

Michael Miiller, CA Association of Winegrape Growers, stated that many employers gave their N95 masks to healthcare workers at the beginning of this pandemic, and as a result, they don't have any to give to their workers because there is a shortage. Many winegrape growers are afraid that they will miss the harvest because they don't have N95 masks and there is no other alternative except to shut down. He asked the Division to coordinate with other agencies as soon as possible to come up with a solution. He also asked the Board to ensure that a complete fiscal analysis is done on each regulation that comes before it so that the true costs of each regulation are known before the regulation is adopted.

Katherine Hughes, Service Employees International Union Nurse Alliance of CA, stated that when it comes to talking with employees about work-related exposure incidents to COVID-19, employers cannot claim HIPAA protections or violations as a reason not to communicate this information with them. She said that further regulation is needed to address COVID-19, and though it may take a while, all employers will eventually comply with the new regulation. She stated that some employers continue to lock up and ration out personal protective equipment (PPE) to their workers or require their workers to reuse PPE that is not designed to be reused.

The following individuals also commented in support of petition 583:

- **Johanna Bernal, Service Employees International Union, United Service Workers West**
- **Ramón Castellblanch, CA Alliance for Retired Americans**
- **Mirella Deniz-Zaragosa, Warehouse Worker Resource Center**
- **Alice Berliner, Southern CA Coalition for Occupational Safety and Health (SoCalCOSH)**
- **Alexis Perez-Nava, Koreatown Immigrant Workers Alliance** [Mr. Perez-Nava provided a written statement to Alice Berliner of SoCalCOSH, and she read his statement into the record]
- **Michael Young, CA Federation of Teachers**

B. ADJOURNMENT

Mr. Thomas adjourned the Public Meeting at 12:49 p.m.

II. BUSINESS MEETING

Mr. Thomas called the Business Meeting of the Board to order at 12:49 p.m., August 20, 2020, in Suite 350 of the Occupational Safety and Health Standards Board Office, Sacramento, California, via teleconference at 844-992-4726, and via Webex at www.webex.com.

A. PROPOSED VARIANCE DECISIONS FOR ADOPTION

1. Consent Calendar

Ms. Shupe stated that she is aware of no unresolved procedural issues regarding the items A-P on the consent calendar, and she believes that those items are ready for the Board's consideration and vote.

MOTION

A motion was made by Ms. Laszcz-Davis and seconded by Mr. Harrison to adopt the consent calendar as proposed.

A roll call was taken, and all members present voted "aye." The motion passed.

B. OTHER

1. Legislative Update

Ms. Shupe provided updates on the following bills:

- AB 685
- AB 2092
- AB 2537
- SB 275
- SB 1257

2. Executive Officer's Report

Ms. Shupe stated that the Board staff is preparing the proposed decision for petition 583. The proposed decision for petition 583 will be voted on at the September 17th Board Meeting. It will be posted on the Board's website no later than September 10th.

Ms. Stock stated that several standards have been developed out of need for additional regulation, such as the ATD and heat illness standards. Although the Division has conducted many inspections pertaining to COVID-19 exposure in the workplace, no citations have been issued yet. She asked Mr. Berg about the value that the ATD standard has provided since it was promulgated. **Mr. Berg** stated that the ATD standard has provided very valuable protection for the workers in healthcare, but it contains specifics that would be difficult to apply to all employers through the IIPP.

Ms. Burgel asked Mr. Berg if notification requirements similar to those in the ATD standard exist somewhere in the General Industry Safety Orders or the IIPP standard and pertain to infectious disease. **Mr. Berg** stated that there aren't any notification requirements outside of Section 5199 and 5199.1 that pertain to hazard communication.

Mr. Harrison stated that the total number of COVID-19-related deaths is already more than twice the number of fatalities in agriculture and construction combined, so an emergency standard is needed. He said that several Board Members have requested information from the Division regarding how many citations have been issued regarding COVID-19 exposure in the

workplace, and under what standards the Division is citing, but the Division has yet to provide this information. He asked the Board and Division staff to move forward with petition 583 and develop an emergency standard that is COVID-19-specific.

Ms. Laszcz-Davis stated that developing rulemaking does not guarantee that employers will comply, so if an emergency regulation is developed, there needs to be enough tension between the rulemaking and the compliance that will make a difference. It is important to note that the Division has recommended undertaking emergency rulemaking in this case, but they have not made it clear what the gap is that needs to be addressed. It is also important that if emergency regulation is undertaken, the process to develop the regulation needs to be much better than it was for developing the emergency wildfire smoke regulation so that everyone is on the same page. The resulting regulation needs to be simple, clear, understandable, and easy to implement.

Ms. Stock stated that there have been some situations, such as heat illness and wildfire smoke, where an emergency regulation has been issued due to the urgent need for one, followed by a process to refine it allowing further input from stakeholders. The language in the petition is a starting point, and she hopes that if the petition is adopted, that further discussion with stakeholders will take place. It is especially important for them to discuss how the emergency regulation can be refined in light of new science that is discovered regarding COVID-19.

3. Board Member Comments and Future Agenda Items

No future agenda items were mentioned.

C. CLOSED SESSION

The need did not develop for the Board to hold a closed session at this time.

D. ADJOURNMENT

Mr. Thomas adjourned the Business Meeting at 1:11 p.m.

TATE OF CAL FO NIA AVIN NEWSOM, *Governor*

DEPARTMENT OF INDUSTRIAL RELATIONS
Occupational Safety and Health Standards Board
2520 Venture Oaks Way, Suite 350
Sacramento, CA 95833

SUMMARY
PUBLIC MEETING AND BUSINESS MEETING
September 17, 2020
Teleconference in Sacramento, California

I. PUBLIC MEETING

A. CALL TO ORDER AND INTRODUCTIONS

Chairman Dave Thomas called the Public Meeting of the Occupational Safety and Health Standards Board (Board) to order at 10:00 a.m., September 17, 2020, , via Webex/teleconference, in accordance with Executive Order N-29-20.

ATTENDANCE

Board Members Present at OSHSB Office
Dave Thomas

Board Members Absent
NONE

Board Members Present via Teleconference and/or Webex
Barbara Burgel
Dave Harrison
Nola Kennedy
Chris Laszcz-Davis
Laura Stock

Board Staff Present at OSHSB Office
Christina Shupe, Executive Officer
Michael Nelmida, Senior Safety Engineer
Sarah Money, Executive Assistant

Division of Occupational Safety and Health Staff Present via Teleconference and/or Webex
Eric Berg, Deputy Chief of Health

Board Staff Present via Teleconference and/or Webex
Mike Manieri, Principal Safety Engineer
Lara Paskins, Staff Services Manager
David Kernazitskas, Senior Safety Engineer
Jennifer White, Staff Services Analyst

Others Present via Teleconference and/or Webex
Elizabeth Treanor, Phylmar Regulatory Roundtable
Len Welsh, Western Steel Council
Olivia Gallegos Murillo, CLEAN Carwash Campaign
Eric Frumin, Change to Win
Shane Gusman, Broad & Gusman
Zenaida Perez Fuentes, Southern CA Coalition for Occupational Safety and Health
Maggie Robbins, Worksafe
Michael Young, CA Federation of Teachers
Silvia Hernandez, CLEAN Carwash Campaign
Isabel Urbano, Fight for $15 and a Union
Kevin Bland, Ogletree Deakins

Christian Ramirez, Service Employees International Union – United Service Workers West
Stasha Lampert, Service Employees International Union Local 2015
Michael Donlon, Construction Employers Association
Jonathan Vick, Atkinson, Andelson, Loya, Ruud & Romo
Dr. Robert Blink, Western Occupational and Environmental Medicine Association
Veronica Perez, Líderes Campesinas, Farmworker Packing House
Irene de Barraicua, Líderes Campesinas
Bryan Little, CA Farm Bureau Federation
Sylvia Alvarado, Service Employees International Union
Erin Guerrero, CA Attractions and Parks Association
Michael Miiller, CA Association of Winegrape Growers
Edward Flores, UC Merced Community and Labor Center
Jovana Morales, Leadership Counsel for Justice and Accountability
Andrew Gross Gaitan, Service Employees International Union – United Service Workers West
Rick Nils, former Amazon and Martinez On Time Parcel worker
Carmen, Líderes Campesinas, Farm Worker
Natasha Castro, Los Angeles Alliance for a New Economy
Mitch Steiger, CA Labor Federation
Mirella Deniz-Zaragoza, Warehouse Worker Resource Center
Gabriel Salazar, resident of Merced County
Ramón Castellblanch, CA Alliance for Retired Americans
Fred Walter, Conn Maciel Carey
Veronica Perez, Primex Farms
Steve McCarthy, CA Retailers Association
Mishaal Gill, CA Immigrant Policy Centers
Salvador Sandoval, Merced County Health Officer
Robert Moutrie, CA Chamber of Commerce
Bruce Wick, CA Professional Association of Specialty Contractors
Sheng Xiong, Leadership Counsel for Justice and Accountability
Katherine Hughes, Service Employees International Nurse Alliance of CA
Maria Maldonado, Fight for $15 and a Union
Cassie Hilaski, Nibbi Brothers General Contractors
Eric McClaskey, International Union of Elevator Constructors
Jeff Eldridge, Chevron North America Exploration and Production

Mr. Thomas indicated that this portion of the Board's meeting is open to any person who is interested in addressing the Board on any matter concerning occupational safety and health or to propose new or revised standards or the repeal of standards as permitted by Labor Code Section 142.2.

Elizabeth Treanor, Phylmar Regulatory Roundtable (PRR), asked the Board to consider the alternative language that her organization submitted in response to petition 583. The alternative language is performance-based, has flexibility, and provides scientifically-based protective measures to address COVID-19 exposure in the workplace. Prescriptive measures such as those listed in petition 583 are impossible to apply to all workplaces due to the uniqueness of some jobs, tasks, and operations where they are not feasible.

Her organization is also concerned that the Board has implemented a deadline of November 19 by which to draft the text for the regulation, the Finding of Emergency, and the economic impact statement. Rushing to meet this deadline will cause errors, and it is dangerous to issue an emergency rule with the intent to fix the problems later. She asked the Board to extend the deadline one month so that outreach can occur and stakeholders can provide input to make the emergency regulation the best that it can be.

The following individuals echoed Ms. Treanor's comments:

- **Steve McCarthy, CA Retailers Association**
- **Robert Moutrie, CA Chamber of Commerce**
- **Erin Guerrero, CA Attractions and Parks Association**
- **Bryan Little, CA Farm Bureau Federation**
- **Michel Miiller, CA Association of Winegrape Growers**

Zenaida Perez Fuentes, Southern CA Coalition for Occupational Safety and Health, encouraged the Board to adopt petition 583 because swift action is needed to protect workers from exposure to COVID-19, and an emergency standard is needed to hold employers accountable. Some employers are not providing their employees with personal protective equipment (PPE) and proper training, and not allowing employees to maintain proper social distancing, thereby putting their employees at risk of getting COVID-19. **Rick Nils, former worker for Amazon and Martinez On Time Parcel,** echoed Ms. Perez Fuentes's comments.

Olivia Gallegos Murillo, CLEAN Carwash Campaign, stated that her employer is not protecting workers from exposure to COVID-19. As a result, several employees have contracted COVID-19, and there have been no changes in working conditions or proper disinfection taking place in the workplace. More training is needed, especially for management, and the proper precautions need to be taken to protect employees.

Michael Young, CA Federation of Teachers, stated that it is important to ensure that teachers, students, and others in education are protected from COVID-19 exposure. He said that many children have been diagnosed with COVID-19 and can transmit it to others, and it is important to consider that as schools and colleges reopen.

Len Welsh, Western Steel Council, stated that there are provisions in the injury and illness prevention plan (IIPP) that cover COVID-19 exposure, so it would be a better use of the Division's resources to continue with the compliance assistance mode to identify and address noncompliant employers. However, if the Board decides to adopt petition 583 and have the Division develop an emergency regulation, it needs to be kept simple. **Robert Moutrie, CA Chamber of Commerce, Bryan Little, CA Farm Bureau Federation, and Kevin Bland, Ogletree Deakins, representing the CA Framing Contractors Association, the Residential Contractors Association, and the Western Steel Council,** echoed Mr. Welsh's comments.

Eric Frumin, Change to Win, stated that there is too much misinformation going around to employers about how to protect their employees from COVID-19, so an emergency standard is needed. It needs to be a standard that the Division can quickly enforce and will cover employers that are not currently covered by the aerosol transmissible disease (ATD) standard.

Natasha Castro, Los Angeles Alliance for a New Economy, stated that her organization supports petition 583 because there are employers who are not following the public health orders. Many retail employers are not regulating the number of customers allowed in their stores at one time, and therefore, there is no social distancing taking place. There is also no access to cleaning supplies, and following a COVID-19 outbreak among employees, stores are not being deep cleaned.

Mitch Steiger, CA Labor Federation, stated that his organization supports petition 583 and is looking forward to participating in the advisory committee process. However, it is important that the emergency standards does not weaken the existing standards. There is a lot of confusion and conflicting guidance going around, but there are also some good strong protections that need to remain in place.

Stasha Lampert, Service Employees International Union Local 2015, stated that her organization supports petition 583 because there are healthcare workers who are still facing inadequate safety protocols to protect them during the pandemic, even though the ATD standard is in place. She read supporting testimonies into the record from Maria Carmen Vasquez, Nicole Marzano, and Devin Wood, who are nursing home workers.

Mirella Deniz-Zaragoza, Warehouse Worker Resource Center, stated that her organization supports petition 583 because the existing regulations do not address specific preventative measures necessary to prevent exposure to COVID-19 in the workplace. It is also important to expand the ATD standard so that it covers all employers.

Mr. Thomas called for a break at 11:20 a.m. and reconvened the meeting at 11:30 a.m.

Michael Donlon, Construction Employers Association, stated that the emergency regulation petition 583 seeks to establish is duplicative of existing regulations in the IIPP, and the Division has been able to easily cite employers under those existing regulations. The Division has also provided dozens of industry-specific guidance documents to assist employers. There are two main issues with the language in petition 583:

- It requires an employer to hire a competent person knowledgeable in infection control principles. This will be problematic for small employers who do not have the resources to comply with this regulation.

- It requires employers to update their compliance action plan within 10 days of a new order or regulation being issued. The Administrative Procedures Act (APA) does not allow regulations that automatically update without public comment and following Americans with Disabilities Act (ADA) procedures.

If the Board chooses to undertake emergency rulemaking in response to this petition, the language needs to be clear, concise, and consistent with other laws and regulations, including AB 685. It is important to not push it through too quickly so that there aren't any unintended consequences like there have been for the emergency wildfire smoke regulation.

The following individuals echoed Mr. Donlon's comments:

- **Robert Moutrie, CA Chamber of Commerce**
- **Erin Guerrero, CA Attractions and Parks Association**
- **Bryan Little, CA Farm Bureau Federation**
- **Cassie Hilaski, Nibbi Brothers General Contractors**

Gabriel Salazar, resident of Merced County, stated that he is concerned that it took the Foster Farms plant in his area two months to respond to local health and safety orders following a COVID-19 outbreak at the facility before temporarily shutting down. Workers at the plant need protection from COVID-19, and there needs to be stricter enforcement of

regulations to keep this from happening again.

Maggie Robbins, Worksafe, stated that her organization is pleased to see that the proposed decision for petition 583 strikes a balance between getting public input and getting an emergency standard in place quickly to address COVID-19 exposure in the workplace. A temporary standard will address COVID-19 and having an advisory committee meeting after it is adopted is a good idea so that changes can be made if necessary.

Jonathan Vick, Atkinson, Andelson, Loya, Ruud & Romo, also representing the Engineering Contractors Association, the Tilt-Up Concrete Contractors Association, United General Contractors, and the Southern CA Scaffolding Association, stated that the Division is successfully enforcing the existing rules that are designed to protect workers from exposure to COVID-19, and additional regulation will further confuse employers. The guidance documents that the Division has issued are helpful and sufficient for employers. The language in petition 583 requires employers to collect personally identifiable information from employees, which would trigger provisions in the CA Consumer Protection Act. He asked the Board to consider the proposed language from PRR if the Board chooses to move forward with developing an emergency regulation. **Bryan Little, CA Farm Bureau Federation,** echoed Mr. Vick's comments.

Dr. Robert Blink, Western Occupational and Environmental Medicine Association, stated that stronger regulations are needed to address COVID-19 exposure in the workplace because not all employers are covered under the ATD standard and the IIPP standard is not sufficient to cover them. He said that if the Board chooses to develop an emergency temporary standard, the following provisions should be included:

- Employers must properly report an outbreak to the local health officer. After that, any subsequent cases should be reported to the local health officer within a week of occurrence.

- Employers experiencing an outbreak should be required to submit a COVID-19 prevention plan to their employees detailing the control measures that are to be used, such as handwashing, cleaning procedures, social distancing, and training on these measures.

- Employers who refuse to comply with orders from the local health officer should be considered to be in violation of this regulation.

- Upon direction from the local health officer, employers should arrange with a local healthcare provider to do contact tracing.

- In the event of ongoing transmission despite implementing early steps to prevent it, employers should require employees to wear N95 masks, eye protection, and any other protection recommended by a healthcare professional.

His organization realizes that these regulations may be difficult for smaller workplaces to implement, so provisions should be made for them as well.

Steve McCarthy, CA Retailers Association, stated that a prescriptive emergency temporary standard to address COVID-19 is not necessary and will add an additional set of regulations for retailers to follow, creating further confusion. The Division has the capabilities to enforce, cite, and shut down noncompliant employers with the guidance documents that it has issued, which is more appropriate. His organization has several concerns with the proposed language in petition 583:

- The reporting language conflicts with the language in AB 685 and should be deleted.
- Confrontations with customers who refuse to wear masks do escalate to violence, so enforcement of mask mandates should remain with local law enforcement. The regulation should be limited to signage and state that companies will not be penalized because a customer refuses to wear a mask. **Andrew Gross Gaitan, Service Employees International Union – United Service Workers West,** echoed this comment.
- Employers cannot guarantee that employees will always maintain proper social distancing at all times.
- The language in petition 583 allows employees to bring their own PPE, but this could be problematic in some industries, so employers should retain the right to require their employees to wear only the PPE that the employer provides.
- The language in petition 583 requires a medical evaluation that is not required in any other COVID-19-related guidance documents.
- The language in petition 583 requires employers to retrain employees when site conditions change. This should be limited to when new hazards are recognized.

Erin Guerrero, CA Attractions and Parks Association, echoed Mr. McCarthy's comments.

Mr. Thomas called for a break at 12:25 p.m. and reconvened the meeting at 12:30 p.m. **Shane Gusman, Broad & Gusman, representing the CA Teamsters Public Affairs Council,** stated that his organization supports petition 583 because workers are being forced to come to work when sick or face disciplinary action. Other workers are forced to work next to people who are sick and are retaliated against for complaining. Some employers are also deliberately not following the guidance given to them because they know they won't get in trouble for doing so.

Bruce Wick, CA Professional Association of Specialty Contractors, stated that it is best for the Division to continue focusing its resources on enforcing the current regulations, but if the Board decides to move forward with an emergency regulation, it should consider the version that has been proposed by the PRR. If the Board decides to use PRR's version, his organization feels that the rule should relate only to guidance issued by the Division and bear in mind the fact that this guidance has not been vetted by stakeholders.

Mr. Thomas called for a break at 12:57 p.m. due to technical issues and reconvened the meeting at 1:05 p.m.

Michel Miiller, CA Association of Winegrape Growers, stated that an emergency regulation to address COVID-19 is unnecessary and will violate the APA. He said that there are already plenty of existing regulations and guidance documents that cover the same things that the emergency regulation is intended to address. Developing more regulations will not force bad actors to comply, and the Division should be conducting stringent enforcement actions against them. **Kevin Bland, Ogletree Deakins, representing the CA Framing Contractors Association, the Residential Contractors Association, and the Western Steel Council, and Cassie Hilaski, Nibbi Brothers General Contractors,** echoed Mr. Miiller's comments.

Mr. Thomas called for a break at 1:49 p.m. due to technical issues and reconvened the meeting at 2:00 p.m.

Cassie Hilaski, Nibbi Brothers General Contractors, stated that an emergency regulation is not needed to address COVID-19 exposure in the workplace. However, if the Board feels that the IIPP and ATD standards are not doing a sufficient job to address COVID-19, her organization recommends issuing a directive that mandates that all employers must follow their local shelter-in-place orders, or CDC guidelines in the rare instances where shelter-in-place orders do not exist, and then pick a date by which employers must follow them. If they refuse to follow them by that date, then they would be in violation of those orders and subject to enforcement action.

Andrew Gross Gaitan, Service Employees International Union – United Service Workers West, stated that janitors who are providing more frequent and deeper cleaning of buildings are not being given the proper training, disinfecting procedures, and protective equipment to do their jobs safely during the COVID-19 pandemic. Many of these workers are subcontracted, so it is unclear as to who must provide them with training, procedures, and PPE. There is also no current standard, including AB 685,that requires property managers to inform subcontracted janitors and security guards of a potential exposure at their workplace. That is why an emergency regulation is needed to address COVID-19 exposure in the workplace.

The following individuals also commented in support of petition 583:

- **Silvia Hernandez, CLEAN Carwash Campaign**
- **Maria Maldonado, Fight for $15 and a Union**
- **Christian Ramirez, Service Employees International Union – United Service Workers West**
- **Ramón Castellblanch, CA Alliance for Retired Americans**
- **Veronica Perez, Primex Farms**
- **Anjolie Rodriguez, Fight for $15 and a Union** [Ms. Rodriguez provided a written statement to Isabel Urbano of Fight for $15 and a Union, who read Ms. Rodriguez's statement into the record]
- **Mishaal Gill, CA Immigrant Policy Center**
- **Sylvia Alvarado, Service Employees International Union**
- **Carmen, Líderes Campesinas, Farm Worker**
- **Irene de Barraicua, Líderes Campesinas**
- **Katherine Hughes, SEIU Nurse Alliance of CA**
- **Edward Flores, UC Merced Community and Labor Center**

B. ADJOURNMENT

Mr. Thomas adjourned the Public Meeting at 2:25 p.m.

II. BUSINESS MEETING

Mr. Thomas called the Business Meeting of the Board to order at 2:25 p.m., September 17, 2020, in Suite 350 of the Occupational Safety and Health Standards Board Office, Sacramento, California, via teleconference at 844-992-4726, via Webex/teleconference, in accordance with Executive Order N-29-20..

A. PROPOSED PETITION DECISIONS FOR ADOPTION

1. Stephen Knight, Executive Director, Worksafe
   Frances C. Schreiberg, Labor & Employment Committee of the National Lawyers Guild
   Petition File No. 583

   Petitioners request to amend Title 8 standards to create two new regulations. The first, a temporary emergency standard that would provide specific protections to California employees who may have exposure to COVID-19, but who are not protected by the Aerosol Transmissible Diseases standards (Sections 5199 and 5199.1). The second standard would be a permanent rulemaking effort to protect workers from infectious diseases including novel pathogens (e.g. COVID-19).

Ms. Shupe summarized the history and purpose of petition 583, and stated that the proposed decision is to grant the petition in part with a three-pronged approach:

1. The Division shall draft and submit an emergency regulatory proposal for consideration of adoption by the Board no later than the November 19, 2020 Board Meeting.

2. Subsequent to the adoption of an emergency regulation, the Division shall work with the Board staff to convene an advisory committee at four-month intervals to review and recommend amendments to the emergency standard.

3. After the COVID-19 pandemic subsides, the Division shall convene a representative advisory committee to consider the necessity for a permanent regulation to protect workers not covered by Section 5199, including novel pathogens.

MOTION

A motion was made by Mr. Harrison and seconded by Ms. Stock that the Board adopt the petition decision.

Ms. Stock stated that there is clearly a need for the Board to take action to help protect workers from exposure to COVID-19 in the workplace, especially since the Division has indicated in its evaluation of the petition that an emergency regulation is needed. Developing an emergency regulation will address a lot of the confusion that employers have been facing regarding the multitude of guidance documents that have been issued. She urged the Board Members to join her in voting "aye".

Ms. Laszcz-Davis stated that the testimony today proves there is a need for further regulation to address COVID-19 in the workplace, but the regulation needs to be performance-based, leverage the existing industry guidelines and best practices that are currently working, and allow some flexibility. She also recommended that the Board delay taking action for a month or two to allow time for stakeholder input and consideration of existing regulations.

Mr. Harrison recommended that the Board move the petition forward as presented.

Ms. Burgel stated that she hopes the process for this emergency standard will be robust and time-sensitive and will result in a performance-based standard that will focus on hierarchy of controls. She also hopes that there is greater focus on ventilation and design, with not too much reliance on PPE.

A roll call was taken, and all members present voted "aye." The motion passed.

B. PROPOSED VARIANCE DECISIONS FOR ADOPTION

1. Consent Calendar

Ms. Shupe stated that she is aware of no unresolved procedural issues regarding the items A-U on the consent calendar, and she believes that those items are ready for the Board's decision on the question of adoption.

MOTION

A motion was made by Ms. Laszcz-Davis and seconded by Mr. Harrison to adopt the consent calendar.

A roll call was taken, and all members present voted "aye." The motion passed.

C. OTHER

1. DOSH Update

Ms. Kennedy had submitted the following questions to Mr. Berg via the OSHSB email account following the July 16, 2020, Board Meeting:

- Is the Division investigating COVID-related hazards in response to complaints?
- Is the Division investigating COVID-related hazards in response to outbreaks or clusters?
- Is the Division targeting industries with increased COVID case rates?
- Is the Division focusing on populations that are most vulnerable to COVID?
- Of the numerous inspections that the Division has conducted, are there any situations where identified COVID-19-related workplace problems could not be cited under Section 3203 or the ATD standard?

Mr. Berg stated that the Division is conducting inspections into COVID-19-related hazards in response to complaints, outbreaks, and clusters. The Division is focusing its inspection efforts on industries that have vulnerable populations, increased rates of COVID, and that are having significant outbreaks and clusters.

Mr. Berg stated that in cases where employers do not fall under the requirements of the ATD standard, Sections 3203 and 5144 provide a regulatory basis that requires employers to protect workers from exposure to COVID-19 in the workplace. However, the Division feels that a regulation specific to COVID-19 would greatly increase their efficiency, effectiveness, and success in protecting workers.

2. Legislative Update

Ms. Shupe provided updates on the following bills:

- AB 2658
- AB 1512
- AB 2537
- AB 2043
- SB 1257
- SB 275
- AB 2092
- AB 685

3. Executive Officer's Report

Ms. Shupe stated that the Board staff has contracted with a company to help provide meeting support and expand public access to the Board Meetings. In addition to the Webex and teleconference options for attending Board Meetings, the meetings are now being broadcast live in English and Spanish, and audio-only streams are also available in both languages.

Ms. Shupe stated that during next month's meeting, the Board will consider the proposed decision for petition 579, and there will be a report on any enrolled bills that have been adopted by the Governor.

4. Board Member Comments and Future Agenda Items

No future agenda items were mentioned.

D. CLOSED SESSION

The need did not develop for the Board to hold a closed session at this time.

E. ADJOURNMENT

Mr. Thomas adjourned the Business Meeting at 3:00 p.m.

TATE OF CAL FO NIA AVIN NEWSOM, *Governor*

DEPARTMENT OF INDUSTRIAL RELATIONS
Occupational Safety and Health Standards Board
2520 Venture Oaks Way, Suite 350
Sacramento, CA 95833
Tel: (916) 274-5721 Fax: (916) 274-5743

NOTICE OF PROPOSED EMERGENCY ACTION BY THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS BOARD REGARDING PROPOSED CHANGES TO CALIFORNIA CODE OF REGULATIONS, TITLE 8, NEW SECTIONS 3205; 3205.1; 3205.2; 3205.3; and 3205.4

COVID-19 PREVENTION

NOTICE IS HEREBY GIVEN that the Occupational Safety and Health Standards Board (Board) is proposing to take the action described in the Informative Digest as included in the Finding of Emergency. The emergency filing will adopt new sections 3205; 3205.1; 3205.2; 3205.3; and 3205.4, COVID-19 Prevention, under the California Code of Regulations, Title 8, Division 1, Chapter 4, of the General Industry Safety Orders (GISO).

Government Code Section 11346.1(a)(2) requires that, at least five (5) working days prior to submission of the proposed emergency action to the Office of Administrative Law (OAL), the adopting agency provide a notice of the proposed emergency action to every person who has filed a request for notice of regulatory action with the agency. After submission of the proposed emergency regulation to OAL, OAL shall allow interested persons five (5) calendar days to submit comments on the proposed emergency regulation as set forth in Government Code Section 11349.6(b). For further information on the emergency rulemaking process, access the OAL website at: www.oal.ca.gov or contact the OAL reference attorney: (916) 323-6815 / staff@oal.ca.gov.

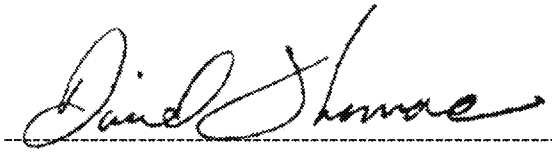
This proposed emergency action to adopt new sections 3205; 3205.1; 3205.2; 3205.3; and 3205.4 of the GISO has been placed on the agenda of the November 2020 Board Meeting:

November 19, 2020 at 10:00 a.m.
The physical meeting location has been cancelled. Remote attendance options below:

Video Conference: www.webex.com (meeting information 268 984 996)

Teleconference: (844) 992-4726 (access code 268 984 996, attendee ID #)

Live video/audio stream (English/Spanish): https://videobookcase.com/california/oshsb/



Prior to any action by the Board to adopt the proposal, the public will be given an opportunity to comment on the proposal. **You are advised, however, that comments made at this Board meeting or submitted to the Board in writing regarding this proposal will NOT be forwarded to OAL; therefore, such comments directed to the Board are NOT comments submitted to OAL in accordance with Government Code Section 11349.6.**

If this emergency proposal is adopted by the Board, the proposal will be submitted to OAL. Upon submission, OAL will have ten (10) calendar days within which to review and make a decision on the proposed emergency regulation. If approved, OAL will file the emergency regulation with the Secretary of State, and the emergency regulation will become effective for 180 days, with possible extensions[1]. Within the 180-day effective period, the Board may proceed with a regular rulemaking action, including a public comment period.

Attached to this Notice are: (1) the specific new language proposed to be adopted, and (2) the Finding of Emergency required by Government Code Section 11346.1(b). You may also review the proposed regulatory language and the Finding of Emergency on the Board's website: www.dir.ca.gov/oshsb/emergencyregulations.html.

If you have any questions regarding this proposed emergency action, please contact Christina Shupe, Executive Officer, at (916) 274-5721.

OCCUPATIONAL SAFETY AND HEALTH
STANDARDS BOARD

DAVE THOMAS, Chairman

[1] Pursuant to Governor Newsom's Executive Order N-40-20, the timelines for filing, refiling, certification and/or review of regulations and emergency regulations are extended for a period of 60 calendar days. These timelines are further extended for 60 days by Executive Order N-66-20.

TITLE 8, DIVISION 1, CHAPTER 4

Subchapter 7. General Industry Safety Orders

Amend Section 3205 to read:

§ 3205. ~~"Shall" and "Should." [Repealed]~~ COVID-19 Prevention.

(a) Scope.

(1) This section applies to all employees and places of employment, with the following exceptions:

(A) Places of employment with one employee who does not have contact with other persons.

(B) Employees working from home.

(C) Employees when covered by section 5199.

(2) Nothing in this section is intended to limit more protective or stringent state or local health department mandates or guidance.

(b) Definitions. The following definitions apply to this section and to sections 3205.1 through 3205.4.

"COVID-19" means coronavirus disease, an infectious disease caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

"COVID-19 case" means a person who:

(1) Has a positive "COVID-19 test" as defined in this section;

(2) Is subject to COVID-19-related order to isolate issued by a local or state health official; or

(3) Has died due to COVID-19, in the determination of a local health department or per inclusion in the COVID-19 statistics of a county.

A person is no longer a "COVID-19 case" in this section when a licensed health care professional determines that the person does not have COVID-19, in accordance with recommendations made by the California Department of Public Health (CDPH) or the local health department pursuant to authority granted under the Health and Safety Code or title 17, California Code of Regulations to CDPH or the local health department.

"COVID-19 exposure" means being within six feet of a COVID-19 case for a cumulative total of 15 minutes or greater in any 24-hour period within or overlapping with the "high-risk exposure period" defined by this section. This definition applies regardless of the use of face coverings.

TITLE 8, DIVISION 1, CHAPTER 4

"COVID-19 hazard" means exposure to potentially infectious material that may contain SARS-CoV-2, the virus that causes COVID-19. Potentially infectious materials include airborne droplets, small particle aerosols, and airborne droplet nuclei, which most commonly result from a person or persons exhaling, talking or vocalizing, coughing, sneezing, or procedures performed on persons which may aerosolize saliva or respiratory tract fluids, among other things. This also includes objects or surfaces that may be contaminated with SARS-CoV-2.

"COVID-19 symptoms" means fever of 100.4 degrees Fahrenheit or higher, chills, cough, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, or diarrhea, unless a licensed health care professional determines the person's symptoms were caused by a known condition other than COVID-19.

"COVID-19 test" means a viral test for SARS-CoV-2 that is:

(1) Approved by the United States Food and Drug Administration (FDA) or has an Emergency Use Authorization from the FDA to diagnose current infection with the SARS-CoV-2 virus; and

(2) Administered in accordance with the FDA approval or the FDA Emergency Use Authorization as applicable.

"Exposed workplace" means any work location, working area, or common area at work used or accessed by a COVID-19 case during the high-risk period, including bathrooms, walkways, hallways, aisles, break or eating areas, and waiting areas. The exposed workplace does not include buildings or facilities not entered by a COVID-19 case.

Effective January 1, 2021, the "exposed workplace" also includes but is not limited to the "worksite" of the COVID-19 case as defined by Labor Code section 6409.6(d)(5).

"Face covering" means a tightly woven fabric or non-woven material with no visible holes or openings, which covers the nose and mouth.

"High-risk exposure period" means the following time period:

(1) For persons who develop COVID-19 symptoms: from two days before they first develop symptoms until 10 days after symptoms first appeared, and 24 hours have passed with no fever, without the use of fever-reducing medications, and symptoms have improved; or

(2) For persons who test positive who never develop COVID-19 symptoms: from two days before until ten days after the specimen for their first positive test for COVID-19 was collected.

(c) Written COVID-19 Prevention Program. Employers shall establish, implement, and maintain an effective, written COVID-19 Prevention Program, which may be integrated into the

employer's Injury and Illness Program required by section 3203, or be maintained in a separate document. The written elements of a COVID-19 Prevention Program shall include:

(1) System for communicating. The employer shall do all of the following in a form readily understandable by employees:

(A) Ask employees to report to the employer, without fear of reprisal, COVID-19 symptoms, possible COVID-19 exposures, and possible COVID-19 hazards at the workplace.

(B) Describe procedures or policies for accommodating employees with medical or other conditions that put them at increased risk of severe COVID-19 illness.

(C) Provide information about access to COVID-19 testing. If testing is required under this section, section 3205.1, or section 3205.2, the employer shall inform affected employees of the reason for the COVID-19 testing and the possible consequences of a positive test.

(D) In accordance with subsection (c)(3)(B)3., communicate information about COVID-19 hazards and the employer's COVID-19 policies and procedures to employees and to other employers, persons, and entities within or in contact with the employer's workplace.

NOTE: See subsections (c)(3)(C) and (c)(3)(D) for confidentiality requirements for COVID-19 cases.

(2) Identification and evaluation of COVID-19 hazards.

(A) The employer shall allow for employee and authorized employee representative participation in the identification and evaluation of COVID-19 hazards.

(B) The employer shall develop and implement a process for screening employees for and responding to employees with COVID-19 symptoms. The employer may ask employees to evaluate their own symptoms before reporting to work. If the employer conducts screening at the workplace, the employer shall ensure that face coverings are used during screening by both screeners and employees and, if temperatures are measured, that non-contact thermometers are used.

(C) The employer shall develop COVID-19 policies and procedures to respond effectively and immediately to individuals at the workplace who are a COVID-19 case to prevent or reduce the risk of transmission of COVID-19 in the workplace.

(D) The employer shall conduct a workplace-specific identification of all interactions, areas, activities, processes, equipment, and materials that could potentially expose employees to COVID-19 hazards. Employers shall treat all persons, regardless of symptoms or negative COVID-19 test results, as potentially infectious.

TITLE 8, DIVISION 1, CHAPTER 4

1. This shall include identification of places and times when people may congregate or come in contact with one another, regardless of whether employees are performing an assigned work task or not, for instance during meetings or trainings and including in and around entrances, bathrooms, hallways, aisles, walkways, elevators, break or eating areas, cool-down areas, and waiting areas.
2. This shall include an evaluation of employees' potential workplace exposure to all persons at the workplace or who may enter the workplace, including coworkers, employees of other entities, members of the public, customers or clients, and independent contractors. Employers shall consider how employees and other persons enter, leave, and travel through the workplace, in addition to addressing fixed work locations.

(E) For indoor locations, the employer shall evaluate how to maximize the quantity of outdoor air and whether it is possible to increase filtration efficiency to the highest level compatible with the existing ventilation system.

(F) The employer shall review applicable orders and guidance from the State of California and the local health department related to COVID-19 hazards and prevention, including information of general application and information specific to the employer's industry, location, and operations.

(G) The employer shall evaluate existing COVID-19 prevention controls at the workplace and the need for different or additional controls. This includes evaluation of controls in subsections (c)(4), and (c)(6) through (c)(8).

(H) The employer shall conduct periodic inspections as needed to identify unhealthy conditions, work practices, and work procedures related to COVID-19 and to ensure compliance with employers' COVID-19 policies and procedures.

(3) Investigating and responding to COVID-19 cases in the workplace.

(A) Employers shall have an effective procedure to investigate COVID-19 cases in the workplace. This includes procedures for verifying COVID-19 case status, receiving information regarding COVID-19 test results and onset of COVID-19 symptoms, and identifying and recording COVID-19 cases.

(B) The employer shall take the following actions when there has been a COVID-19 case at the place of employment:

1. Determine the day and time the COVID-19 case was last present and, to the extent possible, the date of the positive COVID-19 test(s) and/or diagnosis, and the date the

TITLE 8, DIVISION 1, CHAPTER 4

COVID-19 case first had one or more COVID-19 symptoms, if any were experienced.

2. Determine who may have had a COVID-19 exposure. This requires an evaluation of the activities of the COVID-19 case and all locations at the workplace which may have been visited by the COVID-19 case during the high-risk exposure period.

   Note: See subsection (c)(10) for exclusion requirements for employees with COVID-19 exposure.

3. Give notice of the potential COVID-19 exposure, within one business day, in a way that does not reveal any personal identifying information of the COVID-19 case, to the following:

   a. All employees who may have had COVID-19 exposure and their authorized representatives.

   b. Independent contractors and other employers present at the workplace during the high-risk exposure period.

4. Offer COVID-19 testing at no cost to employees during their working hours to all employees who had potential COVID-19 exposure in the workplace and provide them with the information on benefits described in subsections (c)(5)(B) and (c)(10)(C).

5. Investigate whether any workplace conditions could have contributed to the risk of COVID-19 exposure and what could be done to reduce exposure to COVID-19 hazards.

(C) Personal identifying information of COVID-19 cases or persons with COVID-19 symptoms shall be kept confidential. All COVID-19 testing or related medical services provided by the employer under this section and sections 3205.1 through 3205.4 shall be provided in a manner that ensures the confidentiality of employees.

EXCEPTION to subsection (c)(3)(C): Unredacted information on COVID-19 cases shall be provided to the local health department, CDPH, the Division, the National Institute for Occupational Safety and Health (NIOSH), or as otherwise required by law immediately upon request.

(D) The employer shall ensure that all employee medical records required by this section and sections 3205.1 through 3205.4 are kept confidential and are not disclosed or

TITLE 8, DIVISION 1, CHAPTER 4

reported without the employee's express written consent to any person within or outside the workplace.

EXCEPTION 1 to subsection (c)(3)(D): Unredacted medical records shall be provided to the local health department, CDPH, the Division, NIOSH, or as otherwise required by law immediately upon request.

EXCEPTION 2 to subsection (c)(3)(D): This provision does not apply to records that do not contain individually identifiable medical information or from which individually identifiable medical information has been removed.

(4) Correction of COVID-19 hazards. Employers shall implement effective policies and/or procedures for correcting unsafe or unhealthy conditions, work practices, policies and procedures in a timely manner based on the severity of the hazard. This includes, but is not limited to, implementing controls and/or policies and procedures in response to the evaluations conducted under subsections (c)(2) and (c)(3) and implementing the controls required by subsection (c)(6) through (c)(8).

(5) Training and instruction. The employer shall provide effective training and instruction to employees that includes the following:

(A) The employer's COVID-19 policies and procedures to protect employees from COVID-19 hazards.

(B) Information regarding COVID-19-related benefits to which the employee may be entitled under applicable federal, state, or local laws. This includes any benefits available under workers' compensation law, the federal Families First Coronavirus Response Act, Labor Code sections 248.1 and 248.5, Labor Code sections 3212.86 through 3212.88, local governmental requirements, the employer's own leave policies, and leave guaranteed by contract.

(C) The fact that COVID-19 is an infectious disease that can be spread through the air when an infectious person talks or vocalizes, sneezes, coughs, or exhales; that COVID-19 may be transmitted when a person touches a contaminated object and then touches their eyes, nose, or mouth, although that is less common; and that an infectious person may have no symptoms.

(D) Methods of physical distancing of at least six feet and the importance of combining physical distancing with the wearing of face coverings.

(E) The fact that particles containing the virus can travel more than six feet, especially indoors, so physical distancing must be combined with other controls, including face coverings and hand hygiene, to be effective.

TITLE 8, DIVISION 1, CHAPTER 4

(F) The importance of frequent hand washing with soap and water for at least 20 seconds and using hand sanitizer when employees do not have immediate access to a sink or hand washing facility, and that hand sanitizer does not work if the hands are soiled.

(G) Proper use of face coverings and the fact that face coverings are not respiratory protective equipment.

(H) COVID-19 symptoms, and the importance of not coming to work and obtaining a COVID-19 test if the employee has COVID-19 symptoms.

(6) Physical distancing.

(A) All employees shall be separated from other persons by at least six feet, except where an employer can demonstrate that six feet of separation is not possible, and except for momentary exposure while persons are in movement. Methods of physical distancing include: telework or other remote work arrangements; reducing the number of persons in an area at one time, including visitors; visual cues such as signs and floor markings to indicate where employees and others should be located or their direction and path of travel; staggered arrival, departure, work, and break times; and adjusted work processes or procedures, such as reducing production speed, to allow greater distance between employees.

(B) When it is not possible to maintain a distance of at least six feet, individuals shall be as far apart as possible.

(7) Face coverings.

(A) Employers shall provide face coverings and ensure they are worn by employees over the nose and mouth when indoors, when outdoors and less than six feet away from another person, and where required by orders from the CDPH or local health department. Employers shall ensure face coverings are clean and undamaged. Face shields are not a replacement for face coverings, although they may be worn together for additional protection. The following are exceptions to the face coverings requirement:

1. When an employee is alone in a room.

2. While eating and drinking at the workplace, provided employees are at least six feet apart and outside air supply to the area, if indoors, has been maximized to the extent possible.

3. Employees wearing respiratory protection in accordance with section 5144 or other title 8 safety orders.

4. Employees who cannot wear face coverings due to a medical or mental health condition or disability, or who are hearing-impaired or communicating with a hearing-impaired person.

TITLE 8, DIVISION 1, CHAPTER 4

5. Specific tasks which cannot feasibly be performed with a face covering. This exception is limited to the time period in which such tasks are actually being performed, and the unmasked employee shall be at least six feet away from all other persons unless unmasked employees are tested at least twice weekly for COVID-19.

   NOTE: CDPH has issued guidance for employers that identifies examples when wearing a face covering is likely not feasible.

(B) Employees exempted from wearing face coverings due to a medical condition, mental health condition, or disability shall wear an effective non-restrictive alternative, such as a face shield with a drape on the bottom, if their condition or disability permits it.

(C) Any employee not wearing a face covering, face shield with a drape or other effective alternative, or respiratory protection, for any reason, shall be at least six feet apart from all other persons unless the unmasked employee is tested at least twice weekly for COVID-19. Employers may not use COVID-19 testing as an alternative to face coverings when face coverings are otherwise required by this section.

(D) No employer shall prevent any employee from wearing a face covering when not required by this section, unless it would create a safety hazard, such as interfering with the safe operation of equipment.

(E) Employers shall implement measures to communicate to non-employees the face coverings requirements on their premises.

(F) The employer shall develop COVID-19 policies and procedures to minimize employee exposure to COVID-19 hazards originating from any person not wearing a face covering, including a member of the public.

(8) Other engineering controls, administrative controls, and personal protective equipment.

(A) At fixed work locations where it is not possible to maintain the physical distancing requirement at all times, the employer shall install cleanable solid partitions that effectively reduce aerosol transmission between the employee and other persons.

(B) For buildings with mechanical or natural ventilation, or both, employers shall maximize the quantity of outside air provided to the extent feasible, except when the United States Environmental Protection Agency (EPA) Air Quality Index is greater than 100 for any pollutant or if opening windows or letting in outdoor air by other means would cause a hazard to employees, for instance from excessive heat or cold.

(C) Employers shall implement cleaning and disinfecting procedures, which require:

1. Identifying and regularly cleaning and disinfecting frequently touched surfaces and objects, such as doorknobs, elevator buttons, equipment, tools, handrails, handles, controls, bathroom surfaces, and steering wheels. The employer shall inform

TITLE 8, DIVISION 1, CHAPTER 4

employees and authorized employee representatives of cleaning and disinfection protocols, including the planned frequency and scope of regular cleaning and disinfection.

2. Prohibiting the sharing of personal protective equipment and to the extent feasible, items that employees come in regular physical contact with such as phones, headsets, desks, keyboards, writing materials, instruments, and tools. When it is not feasible to prevent sharing, sharing shall be minimized and such items and equipment shall be disinfected between uses by different people. Sharing of vehicles shall be minimized to the extent feasible, and high touch points (steering wheel, door handles, seatbelt buckles, armrests, shifter, etc.) shall be disinfected between users.

3. Cleaning and disinfection of areas, material, and equipment used by a COVID-19 case during the high-risk exposure period.

NOTE: Cleaning and disinfecting must be done in a manner that does not create a hazard to employees. See Group 2 and Group 16 of the General Industry Safety Orders for further information.

(D) To protect employees from COVID-19 hazards, the employer shall evaluate its handwashing facilities, determine the need for additional facilities, encourage and allow time for employee handwashing, and provide employees with an effective hand sanitizer. Employers shall encourage employees to wash their hands for at least 20 seconds each time. Provision or use of hand sanitizers with methyl alcohol is prohibited.

(E) Personal protective equipment.

1. Employers shall evaluate the need for personal protective equipment to prevent exposure to COVID-19 hazards, such as gloves, goggles, and face shields, and provide such personal protective equipment as needed.

2. Employers shall evaluate the need for respiratory protection in accordance with section 5144 when the physical distancing requirements in subsection (c)(6) are not feasible or are not maintained.

3. Employers shall provide and ensure use of respirators in accordance with section 5144 when deemed necessary by the Division through the Issuance of Order to Take Special Action, in accordance with title 8 section 332.3.

4. Employers shall provide and ensure use of eye protection and respiratory protection in accordance with section 5144 when employees are exposed to procedures that

may aerosolize potentially infectious material such as saliva or respiratory tract fluids.

NOTE: Examples of work covered by subsection (c)(8)(E)4. include, but are not limited to, certain dental procedures and outpatient medical specialties not covered by section 5199.

(9) Reporting, recordkeeping, and access.

(A) The employer shall report information about COVID-19 cases at the workplace to the local health department whenever required by law, and shall provide any related information requested by the local health department.

(B) The employer shall report immediately to the Division any COVID-19-related serious illnesses or death, as defined under section 330(h), of an employee occurring in a place of employment or in connection with any employment.

(C) The employer shall maintain records of the steps taken to implement the written COVID-19 Prevention Program in accordance with section 3203(b).

(D) The written COVID-19 Prevention Program shall be made available at the workplace to employees, authorized employee representatives, and to representatives of the Division immediately upon request.

(E) The employer shall keep a record of and track all COVID-19 cases with the employee's name, contact information, occupation, location where the employee worked, the date of the last day at the workplace, and the date of a positive COVID-19 test. Medical information shall be kept confidential in accordance with subsections (c)(3)(C) and (c)(3)(D). The information shall be made available to employees, authorized employee representatives, or as otherwise required by law, with personal identifying information removed.

Note: Subsection (c)(9)(E) does not alter the right of employees or their representatives to request and obtain an employer's Log of Work-Related Injuries and Illnesses (Log 300), without redaction, or to request and obtain information as otherwise allowed by law.

(10) Exclusion of COVID-19 cases. The purpose of this subsection is to limit transmission of COVID-19 in the workplace.

TITLE 8, DIVISION 1, CHAPTER 4

(A) Employers shall ensure that COVID-19 cases are excluded from the workplace until the return to work requirements of subsection (c)(11) are met.

(B) Employers shall exclude employees with COVID-19 exposure from the workplace for 14 days after the last known COVID-19 exposure to a COVID-19 case.

(C) For employees excluded from work under subsection (c)(10) and otherwise able and available to work, employers shall continue and maintain an employee's earnings, seniority, and all other employee rights and benefits, including the employee's right to their former job status, as if the employee had not been removed from their job. Employers may use employer-provided employee sick leave benefits for this purpose and consider benefit payments from public sources in determining how to maintain earnings, rights and benefits, where permitted by law and when not covered by workers' compensation.

EXCEPTION 1: Subsection (c)(10)(C) does not apply to any period of time during which the employee is unable to work for reasons other than protecting persons at the workplace from possible COVID-19 transmission.

EXCEPTION 2: Subsection (c)(10)(C) does not apply where the employer demonstrates that the COVID-19 exposure is not work related.

(D) Subsection (c)(10) does not limit any other applicable law, employer policy, or collective bargaining agreement that provides for greater protections.

(E) At the time of exclusion, the employer shall provide the employee the information on benefits described in subsections (c)(5)(B) and (c)(10)(C).

EXCEPTION to subsection (c)(10): Employees who have not been excluded or isolated by the local health department need not be excluded by the employer, if they are temporarily reassigned to work where they do not have contact with other persons until the return to work requirements of subsection (c)(11) are met.

(11) Return to work criteria.

(A) COVID-19 cases with COVID-19 symptoms shall not return to work until:

1. At least 24 hours have passed since a fever of 100.4 or higher has resolved without the use of fever-reducing medications;
2. COVID-19 symptoms have improved; and
3. At least 10 days have passed since COVID-19 symptoms first appeared.

(B) COVID-19 cases who tested positive but never developed COVID-19 symptoms shall not return to work until a minimum of 10 days have passed since the date of specimen collection of their first positive COVID-19 test.

TITLE 8, DIVISION 1, CHAPTER 4

(C) A negative COVID-19 test shall not be required for an employee to return to work.

(D) If an order to isolate or quarantine an employee is issued by a local or state health official, the employee shall not return to work until the period of isolation or quarantine is completed or the order is lifted. If no period was specified, then the period shall be 10 days from the time the order to isolate was effective, or 14 days from the time the order to quarantine was effective.

(E) If there are no violations of local or state health officer orders for isolation or quarantine, the Division may, upon request, allow employees to return to work on the basis that the removal of an employee would create undue risk to a community's health and safety. In such cases, the employer shall develop, implement, and maintain effective control measures to prevent transmission in the workplace including providing isolation for the employee at the workplace and, if isolation is not possible, the use of respiratory protection in the workplace.

Note: Authority cited: Section 142.3, Labor Code. Reference: Sections 142.3 and 144.6, Labor Code.

TITLE 8, DIVISION 1, CHAPTER 4

Add new section 3205.1 to read:

§ 3205.1. Multiple COVID-19 Infections and COVID-19 Outbreaks.

(a) Scope.

(1) This section applies to a place of employment covered by section 3205 if it has been identified by a local health department as the location of a COVID-19 outbreak or when there are three or more COVID-19 cases in an exposed workplace within a 14-day period.

(2) This section shall apply until there are no new COVID-19 cases detected in a workplace for a 14-day period.

(b) COVID-19 testing.

(1) The employer shall provide COVID-19 testing to all employees at the exposed workplace except for employees who were not present during the period of an outbreak identified by a local health department or the relevant 14-day period(s) under subsection (a), as applicable. COVID-19 testing shall be provided at no cost to employees during employees' working hours.

(2) COVID-19 testing shall consist of the following:

(A) Immediately upon being covered by this section, all employees in the exposed workplace shall be tested and then tested again one week later. Negative COVID-19 test results of employees with COVID-19 exposure shall not impact the duration of any quarantine period required by, or orders issued by, the local health department.

(B) After the first two COVID-19 tests required by (b)(2)(A), employers shall provide continuous COVID-19 testing of employees who remain at the workplace at least once per week, or more frequently if recommended by the local health department, until this section no longer applies pursuant to subsection (a)(2).

(C) Employers shall provide additional testing when deemed necessary by the Division through the Issuance of Order to Take Special Action, in accordance with title 8 section 332.3.

(c) Exclusion of COVID-19 cases. Employers shall ensure COVID-19 cases and employees who had COVID-19 exposure are excluded from the workplace in accordance with subsections 3205(c)(10) and (c)(11) and local health officer orders if applicable.

(d) Investigation of workplace COVID-19 illness. The employer shall immediately investigate and determine possible workplace related factors that contributed to the COVID-19 outbreak in accordance with subsection 3205(c)(3).

(e) COVID-19 Investigation, review and hazard correction. In addition to the requirements of subsection 3205(c)(2) and 3205(c)(4), the employer shall immediately perform a review of

TITLE 8, DIVISION 1, CHAPTER 4

potentially relevant COVID-19 policies, procedures, and controls and implement changes as needed to prevent further spread of COVID-19. The investigation and review shall be documented and include:

(1) Investigation of new or unabated COVID-19 hazards including the employer's leave policies and practices and whether employees are discouraged from remaining home when sick; the employer's COVID-19 testing policies; insufficient outdoor air; insufficient air filtration; and lack of physical distancing.

(2) The review shall be updated every thirty days that the outbreak continues, in response to new information or to new or previously unrecognized COVID-19 hazards, or when otherwise necessary.

(3) The employer shall implement changes to reduce the transmission of COVID-19 based on the investigation and review required by subsections (e)(1) and (e)(2). The employer shall consider moving indoor tasks outdoors or having them performed remotely, increasing outdoor air supply when work is done indoors, improving air filtration, increasing physical distancing as much as possible, respiratory protection, and other applicable controls.

(f) Notifications to the local health department.

(1) The employer shall contact the local health department immediately but no longer than 48 hours after the employer knows, or with diligent inquiry would have known, of three or more COVID-19 cases for guidance on preventing the further spread of COVID-19 within the workplace.

(2) The employer shall provide to the local health department the total number of COVID-19 cases and for each COVID-19 case, the name, contact information, occupation, workplace location, business address, the hospitalization and/or fatality status, and North American Industry Classification System code of the workplace of the COVID-19 case, and any other information requested by the local health department. The employer shall continue to give notice to the local health department of any subsequent COVID-19 cases at the workplace.

(3) Effective January 1, 2021, the employer shall provide all information to the local health department required by Labor Code section 6409.6.

Note: Authority cited: Section 142.3, Labor Code. Reference: Sections 142.3 and 144.6, Labor Code.

TITLE 8, DIVISION 1, CHAPTER 4

Add new section 3205.2 to read:

§ 3205.2. Major COVID-19 Outbreaks.

(a) Scope.

(1) This section applies to any place of employment covered by section 3205 when there are 20 or more COVID-19 cases in an exposed workplace within a 30-day period.

(2) This section shall apply until there are no new COVID-19 cases detected in a workplace for a 14-day period.

(b) COVID-19 testing. Employers shall provide twice a week COVID-19 testing, or more frequently if recommended by the local health department, to all employees present at the exposed workplace during the relevant 30-day period(s) and who remain at the workplace. COVID-19 testing shall be provided at no cost to employees during employees' working hours.

(c) Exclusion of COVID-19 cases. Employers shall ensure COVID-19 cases and employees with COVID-19 exposure are excluded from the workplace in accordance with subsections 3205(c)(10) and (c)(11) and any relevant local health department orders.

(d) Investigation of workplace COVID-19 illnesses. The employer shall comply with the requirements of subsection 3205(c)(3).

(e) COVID-19 hazard correction. In addition to the requirements of subsection 3205(c)(4), the employer shall take the following actions:

(1) In buildings or structures with mechanical ventilation, employers shall filter recirculated air with Minimum Efficiency Reporting Value (MERV) 13 or higher efficiency filters if compatible with the ventilation system. If MERV-13 or higher filters are not compatible with the ventilation system, employers shall use filters with the highest compatible filtering efficiency. Employers shall also evaluate whether portable or mounted High Efficiency Particulate Air (HEPA) filtration units, or other air cleaning systems would reduce the risk of transmission and shall implement their use to the degree feasible.

(2) The employer shall determine the need for a respiratory protection program or changes to an existing respiratory protection program under section 5144 to address COVID-19 hazards.

(3) The employer shall evaluate whether to halt some or all operations at the workplace until COVID-19 hazards have been corrected.

(4) Any other control measures deemed necessary by the Division through the Issuance of Order to Take Special Action, in accordance with title 8 section 332.3.

TITLE 8, DIVISION 1, CHAPTER 4

(f) Notifications to the local health department. Employers shall comply with the requirements of section 3205.1(f).

Note: Authority cited: Section 142.3, Labor Code. Reference: Sections 142.3 and 144.6, Labor Code.

TITLE 8, DIVISION 1, CHAPTER 4

Add new section 3205.3 to read:

§ 3205.3. COVID-19 Prevention in Employer-Provided Housing.

(a) Scope. This section applies to employer-provided housing. Employer-provided housing is any place or area of land, any portion of any housing accommodation, or property upon which a housing accommodation is located, consisting of: living quarters, dwelling, boardinghouse, tent, bunkhouse, maintenance-of-way car, mobile home, manufactured home, recreational vehicle, travel trailer, or other housing accommodations. Employer-provided housing includes a "labor camp" as that term is used in title 8 of the California Code of Regulations or other regulations or codes. The employer-provided housing may be maintained in one or more buildings or one or more sites, including hotels and motels, and the premises upon which they are situated, or the area set aside and provided for parking of mobile homes or camping. Employer-provided housing is housing that is arranged for or provided by an employer, other person, or entity to workers, and in some cases to workers and persons in their households, in connection with the worker's employment, whether or not rent or fees are paid or collected.

The following exceptions apply:

(1) This section does not apply to housing provided for the purpose of emergency response, including firefighting, rescue, and evacuation, and support activities directly aiding response such as utilities, communications, and medical operations, if:

(A) The employer is a government entity; or

(B) The housing is provided temporarily by a private employer and is necessary to conduct the emergency response operations.

(2) Subsections (c), (d), (e), (f), and (h) do not apply to occupants who maintained a household together prior to residing in employer-provided housing, such as family members, when no other persons outside the household are present.

(b) Assignment of housing units. Employers shall ensure that shared housing unit assignments are prioritized in the following order:

(1) Residents who usually maintain a household together outside of work, such as family members, shall be housed in the same housing unit without other persons.

(2) Residents who work in the same crew or work together at the same worksite shall be housed in the same housing unit without other persons.

(3) Employees who do not usually maintain a common household, work crew, or worksite shall be housed in the same housing unit only when no other housing alternatives are possible.

TITLE 8, DIVISION 1, CHAPTER 4

(c) Physical distancing and controls. Employers shall:

(1) Ensure the premises are of sufficient size and layout to permit at least six feet of physical distancing between residents in housing units, common areas, and other areas of the premises.

(2) Ensure beds are spaced at least six feet apart in all directions and positioned to maximize the distance between sleepers' heads. For beds positioned next to each other, i.e. side by side, the beds shall be arranged so that the head of one bed is next to the foot of the next bed. For beds positioned across from each other, i.e. end to end, the beds shall be arranged so that the foot of one bed is closest to the foot of the next bed. Bunk beds shall not be used.

(3) In housing units, maximize the quantity and supply of outdoor air and increase filtration efficiency to the highest level compatible with the existing ventilation system.

(d) Face coverings. Employers shall provide face coverings to all residents and provide information to residents on when they should be used in accordance with state or local health officer orders or guidance.

(e) Cleaning and disinfecting.

(1) Employers shall ensure that housing units, kitchens, bathrooms, and common areas are effectively cleaned and disinfected at least once a day to prevent the spread of COVID-19. Cleaning and disinfecting shall be done in a manner that protects the privacy of residents.

(2) Employers shall ensure that unwashed dishes, drinking glasses, cups, eating utensils, and similar items are not shared.

(f) Screening. The employer shall encourage residents to report COVID-19 symptoms to the employer.

(g) COVID-19 testing. The employer shall establish, implement, and maintain effective policies and procedures for COVID-19 testing of occupants who had a COVID-19 exposure, who have COVID-19 symptoms, or as recommended by the local health department.

(h) Isolation of COVID-19 cases and persons with COVID-19 exposure.

(1) Employers shall effectively isolate COVID-19 exposed residents from all other occupants. Effective isolation shall include providing COVID-19 exposed residents with a private bathroom, sleeping area, and cooking and eating facility.

(2) Employers shall effectively isolate COVID-19 cases from all occupants who are not COVID-19 cases. Effective isolation shall include housing COVID-19 cases only with other COVID-19 cases, and providing COVID-19 case occupants with a sleeping area,

TITLE 8, DIVISION 1, CHAPTER 4

bathroom, and cooking and eating facility that is not shared by non-COVID-19 case occupants.

(3) Personal identifying information regarding COVID-19 cases and persons with COVID-19 symptoms shall be kept confidential in accordance with subsections 3205(c)(3)(C) and 3205(c)(3)(D).

(4) Employers shall end isolation in accordance with subsections 3205(c)(10) and (c)(11) and any applicable local or state health officer orders.

Note: Authority cited: Section 142.3, Labor Code, Section 1708, Health and Safety Code. Reference: Sections 142.3 and 144.6, Labor Code.

TITLE 8, DIVISION 1, CHAPTER 4

Add new section 3205.4 to read:

§ 3205.4. COVID-19 Prevention in Employer-Provided Transportation to and from Work.

(a) Scope. This section applies to employer-provided motor vehicle transportation to and from work, which is any transportation of an employee, during the course and scope of employment, provided, arranged for, or secured by an employer including ride-share vans or shuttle vehicles, car-pools, and private charter buses, regardless of the travel distance or duration involved. Subsections (b) through (g) apply to employer-provided transportation. The following exceptions apply:

(1) This section does not apply if the driver and all passengers are from the same household outside of work, such as family members.

(2) This section does not apply to employer-provided transportation when necessary for emergency response, including firefighting, rescue, and evacuation, and support activities directly aiding response such as utilities, communications, and medical operations.

(b) Assignment of transportation. Employers shall prioritize shared transportation assignments in the following order:

(1) Employees residing in the same housing unit shall be transported in the same vehicle.

(2) Employees working in the same crew or worksite shall be transported in the same vehicle.

(3) Employees who do not share the same household, work crew or worksite shall be transported in the same vehicle only when no other transportation alternatives are possible.

(c) Physical distancing and face coverings. Employers shall ensure that:

(1) Physical distancing and face covering requirements of subsection 3205(c)(6) and (c)(7) are followed for employees waiting for transportation.

(2) The vehicle operator and any passengers are separated by at least three feet in all directions during the operation of the vehicle, regardless of the vehicle's normal capacity.

(3) The vehicle operator and any passengers are provided and wear a face covering in the vehicle as required by subsection 3205(c)(7).

(d) Screening. Employers shall develop, implement, and maintain effective procedures for screening and excluding drivers and riders with COVID-19 symptoms prior to boarding shared transportation.

(e) Cleaning and disinfecting. Employers shall ensure that:

TITLE 8, DIVISION 1, CHAPTER 4

(1) All high-contact surfaces (door handles, seatbelt buckles, armrests, etc.) used by passengers are cleaned and disinfected before each trip.

(2) All high-contact surfaces used by drivers, such as the steering wheel, armrests, seatbelt buckles, door handles and shifter, shall be cleaned and disinfected between different drivers.

(3) Employers shall provide sanitizing materials and ensure they are kept in adequate supply.

(f) Ventilation. Employers shall ensure that vehicle windows are kept open, and the ventilation system set to maximize outdoor air and not set to recirculate air. Windows do not have to be kept open if one or more of the following conditions exist:

(1) The vehicle has functioning air conditioning in use and the outside temperature is greater than 90 degrees Fahrenheit.

(2) The vehicle has functioning heating in use and the outside temperature is less than 60 degrees Fahrenheit.

(3) Protection is needed from weather conditions, such as rain or snow.

(4) The vehicle has a cabin air filter in use and the U.S. EPA Air Quality Index for any pollutant is greater than 100.

(g) Hand hygiene. Employers shall provide hand sanitizer in each vehicle and ensure that all drivers and riders sanitize their hands before entering and exiting the vehicle. Hand sanitizers with methyl alcohol are prohibited.

Note: Authority cited: Section 142.3, Labor Code. Reference: Sections 142.3 and 144.6, Labor Code.

TATE OF CAL FO NIA AVIN NEWSOM, *Governor*
DEPARTMENT OF INDUSTRIAL RELATIONS
Occupational Safety and Health Standards Board
2520 Venture Oaks Way, Suite 350
Sacramento, CA 95833
Tel: (916) 274-5721 Fax: (916) 274-5743

FINDING OF EMERGENCY
GOVERNMENT CODE SECTION 11346.1
OCCUPATIONAL SAFETY AND HEALTH STANDARDS BOARD
PROPOSED EMERGENCY REGULATION
TITLE 8, CALIFORNIA CODE OF REGULATIONS
GENERAL INDUSTRY SAFETY ORDERS
CHAPTER 4, SUBCHAPTER 7, NEW SECTIONS
3205; 3205.1; 3205.2; 3205.3; and 3205.4

COVID-19 Prevention

The objective of the proposed emergency standard is to reduce employee exposure to the virus that causes COVID-19 and therefore reduce COVID-19 illness and transmission.

Government Code (GC) section 11346.1 requires a finding of emergency to include a written statement with the information required by paragraphs (2), (3), (4), (5) and (6) of subdivision (a) of section 11346.5 and a description of the specific facts demonstrating the existence of an emergency and showing the need for immediate action.

GC section 11346.1(a)(2) requires that, at least five working days prior to submission of the proposed emergency action to the Office of Administrative Law (OAL), the adopting agency provide a notice of the proposed emergency action to every person who has filed a request for notice of regulatory action with the agency. After submission of the proposed emergency regulation to the OAL, the OAL shall allow interested persons five calendar days to submit comments on the proposed emergency regulations as set forth in GC section 11349.6(b), unless the emergency situation clearly poses such an immediate serious harm that delaying action to allow public comment would be inconsistent with the public interest.

The Occupational Safety and Health Standards Board (Board) finds that the adoption of this proposed emergency standard is necessary to address an emergency pursuant to GC section 11346.1(b)(1). The Board finds that immediate action must be taken to avoid serious harm to the public peace, health, safety, or general welfare, for the reasons stated below.

FINDING OF EMERGENCY

Basis for the Finding of Emergency

1. On March 4, 2020, Governor Gavin Newsom proclaimed a State of Emergency to exist in California in response to the outbreak of respiratory illness due to the novel coronavirus, known as COVID-19[1].

2. COVID-19 is a pandemic disease, found in every county in California, every state in the United States and nearly every country in the world. While a high percentage of individuals affected by COVID-19 will experience mild to moderate flu-like symptoms, some will have more serious symptoms and will require hospitalization, particularly individuals who are elderly or have underlying medical conditions.[2] Serious symptoms of COVID-19 include shortness of breath, difficulty breathing, pneumonia, and organ failure, and can result in death.[3] The virus can damage the lungs, heart and brain and can cause long-term health problems.[4]

3. On March 19, 2020, Governor Newsom issued Executive Order N-33-20, a stay-at-home order to protect Californians and slow the spread of COVID-19. The order prohibited operations at all but essential businesses and workplaces.[5]

4. As of May 4, 2020, Governor Newsom allowed a number of lower-risk business sectors to reopen.[6]

5. On May 6, 2020, Governor Newsom issued Executive Order N-62-20[7], which provides that under certain circumstances it is presumed that workers who contract a COVID-19-related illness between March 19, 2020, and July 5, 2020, have done so at work and are thus eligible

for workers' compensation benefits. The Executive Order declares that "employees who report to their places of employment are often exposed to an increased risk of contracting COVID-19, which may require medical treatment, including hospitalization" and that "employees who report to work while sick increase health and safety risks for themselves, their fellow employees, and others with whom they come into contact."

6. There has been an overrepresentation of migrant temporary farmworkers testing positive for COVID-19 in California compared to workers in any other industry.[8] Many of these workers live in compact, dorm-like housing facilities provided by employers.[9] One California health officer noted that "farmworkers face the greatest infection risk not at work, but at home."[10] Indeed, in Ventura County, almost 190 workers living in employer-provided housing tested positive for COVID-19 out of 216 people tested.[11] In recognition of the need to control against the spread of COVID-19 among farmworkers, on July 24, 2020, Governor Newsom unveiled the Housing for the Harvest program, which provides 14 paid days of temporary hotel rooms for California farmworkers who have been exposed to, or tested positive for, COVID-19 but are unable to adequately quarantine at home.[12] In addition, the federal Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control (CDC) have published COVID-19 prevention guidance documents encouraging employers to adopt various workplace control measures for workers residing in communal living arrangements, including employer-furnished housing, and workers traveling to and from work in shared motor vehicles.[13]

Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/shared-congregate-house/guidance-shared-congregate-housing.html

7. As of October 2020, the majority of California workplaces are allowed to engage in on-site work operations despite the continuing spread of COVID-19. Millions of California workers face potential exposure to COVID-19 on the job.

8. Clusters and outbreaks of COVID-19 have occurred in workplaces throughout California, including in food manufacturing, agricultural operations, and warehouses.

9. As of October 14, 2020, there have been 858,401 cases of COVID-19 infection and 16,757 deaths reported in California.[14] Data for the number of cases of COVID-19 infection and number of deaths attributable to workplace exposure to COVID-19 is not currently available; however, the numbers are likely substantial, particularly among essential workers, due to workers' exposure to persons outside of those in one's household, along with the close proximity between persons required in some industries.

10. Employees infected with COVID-19 at work can transmit the infection to persons in their homes and communities, resulting in an increase in infection rates.

11. Emergency rulemaking is required to address the immediate threat to employees from COVID-19. The nature of the threat has been characterized by the occupational health and medical community as both acute and chronic adverse health effects which can manifest as serious illness, permanent incapacitation, or death. Regular rulemaking cannot be completed in time to address these significant and ongoing risks to workers presented by the COVID-19 pandemic.

12. The Division of Occupational Safety and Health's (Division) Aerosol Transmissible Diseases standard, title 8, section 5199, provides important protections to workers in specified work settings from exposure to novel pathogens, including COVID-19, particularly in health care and corrections. However, the scope of section 5199 is limited. Thus, the majority of California workers are not covered by the protections afforded by section 5199.

13. During its September 17, 2020, meeting, the Board considered Petition 583, which requested an emergency rulemaking to address the potential harm posed to workers by COVID-19. The Petition sought adoption of an emergency standard that would apply to employees in any facility, service category, or operation not covered by title 8, sections 5199 or 5199.1. In addition, the Petition sought a permanent regulation to protect employees from infectious diseases, including those caused by novel pathogens.

---

[14] CDPH. COVID-19 by the Numbers; accessed October 15, 2020. https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/Immunization/ncov2019.aspx#COVID-19%20by%20the%20Numbers

14. The Board voted to grant Petition 583 in part, agreeing that "COVID-19 is a hazard to working people" and that "an emergency regulation would enhance worker safety." The Board requested the Division draft an emergency rulemaking proposal to protect all workers not covered by section 5199 from COVID-19 exposure in the workplace, for consideration no later than the November 19, 2020, Board meeting.[15]

15. Between February 1, 2020, and September 27, 2020, the Division received over 6,937 complaints alleging inadequate protections for and potential exposure to COVID-19 in workplaces.

16. Occupational safety and health standards within title 8 of the California Code of Regulations (CCR) protect workers from hazards in general. However, other than those employees who are covered under section 5199, there is currently no specific regulation that protects all workers from exposure to infectious diseases such as COVID-19.

17. Guidance currently exists from a number of different authorities—including the federal CDC, federal OSHA, the California Department of Public Health (CDPH) and the Division—on how employers can best protect workers from COVID-19. However, guidance varies between federal and state agencies and contains some contradictory information. Employers and employees would benefit from a specific set of regulations related to COVID-19 prevention in all workplaces.

18. Adoption of the proposed emergency action is necessary to preserve worker safety and health by making existing general requirements, such as sections 3203, 3362, 3366, 5141, and 5144, specific to COVID-19 and easy to understand.

19. The proposed emergency action is necessary to combat the spread of COVID-19 in California workers. The proposed regulation would significantly reduce the number COVID-19 related illnesses, disabilities and deaths in California's workforce.

20. Adoption of the proposed emergency regulation is necessary to strengthen the Division's enforcement efforts related to the hazard of COVID-19 in workplaces, through regulatory mandates specific to preventing the spread of the virus.

AUTHORITY AND REFERENCE CITATIONS

These regulations are submitted pursuant to the Occupational Safety and Health Standards Board's authority under Labor Code section 142.3.

---

[15] Occupational Safety and Health Standards Board; Petition File No. 583; Adopted Decision; September 17, 2020. https://www.dir.ca.gov/oshsb/documents/petition-583-adopteddecision.pdf

California Labor Code section 142.3 establishes that the Board may adopt, amend, or repeal occupational safety and health standards or orders. Section 142.3 permits the Board to prescribe suitable protective equipment and control or technological procedures to be used in connection with occupational hazards and to provide for monitoring or measuring employee exposure for the protection of employees.

Additionally, California Labor Code section 144.6 requires the Board, when dealing with standards for toxic materials and harmful physical agents, to "adopt that standard which most adequately assures, to the extent feasible, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to a hazard regulated by such standard for the period of his working life." Section 144.6 also requires that the Board base standards on research, demonstrations, experiments and other appropriate information, taking into consideration the latest scientific literature, the reasonableness of the standards, and the experience gained under the health and safety laws.

Authority: Labor Code section 142.3.

INFORMATIVE DIGEST OF PROPOSED ACTION/ POLICY STATEMENT OVERVIEW

Summary of Existing Regulations and the Effect of the Proposed Regulation

Labor Code (LC) sections 60.5 and 6308 provide that the Division is charged with the administration and enforcement of the provisions of the California Occupational Safety and Health Act, commencing with LC section 6300, as well as other provisions of law affecting the health and safety of employees in the State of California.

Existing law, title 8, section 342, "Reporting Work-Connected Fatalities and Serious Injuries," requires employers to report immediately to the Division any serious injury or illness, or death, of an employee occurring in a place of employment or in connection with any employment.

Existing law, title 8, section 3203, "Injury and Illness Prevention Program," establishes a general framework for the identification, evaluation, and correction of unsafe or unhealthy work conditions and practices; communication with employees; and employee safety and health training.

Existing law, title 8, section 3380, "Personal Protective Devices," contains general requirements for personal protective equipment (PPE). Requirements for specific types of PPE are given in existing law, title 8, sections 3381 (Head Protection), 3382 (Eye and Face Protection), 3383

(Body Protection), 3384 (Hand Protection), and 3385 (Foot Protection). However, none of these sections require PPE to help prevent the transmission of COVID-19.

Existing law, title 8, section 5140, "Definitions," states that a "harmful exposure" is an "exposure to dusts, fumes, mists, vapors, or gases" which are either "(a) In excess of any permissible limit prescribed by section 5155; or (b) Of such a nature by inhalation as to result in, or have a probability to result in, injury, illness, disease, impairment, or loss of function." There is no permissible exposure limit prescribed by section 5155 for SARS-CoV-2, the virus that causes COVID-19; however, inhalation of the virus does have a probability to result in injury, illness, disease, impairment, or loss of function. Exposure to COVID-19 is considered a harmful exposure, as exposure to aerosols (in the breath of infected persons) containing SARS-CoV-2 has the probability to result in illness, disease, impairment, or loss of function.

Existing law, title 8, section 5141, "Control of Harmful Exposure to Employees," lists the hierarchy of controls that employers shall follow to address employee exposure to harmful air contaminants. Employers shall first rely on engineering controls whenever feasible, but if engineering controls are not feasible or do not achieve full compliance, administrative controls shall be implemented "if practicable." When engineering and administrative controls fail to achieve full compliance, then respiratory protective equipment shall be used.

Existing law, title 8, section 5144, "Respiratory Protection," requires respirators be used to protect the health of employees when effective engineering controls to prevent harmful atmospheres are not feasible.

Existing law, title 8, section 5199, "Aerosol Transmissible Diseases," requires specific protections for novel pathogens such as COVID-19; however, it does not protect all workers. Its scope is limited to work in specified health care facilities, services, or operations, as well as in specified non-health care facilities, services, or operations. The majority of workers not covered by section 5199 are at risk for COVID-19 infection.

Existing law, title 8, section 3350, "Labor Camp Permits," requires that every employer operating a labor camp under the provisions of the California Employee Housing Act obtain a valid permit issued by the Department of Housing and Community Development or by a local governmental agency authorized to issue such permits by the Department. The employer shall either post or have available a valid and current permit.

Existing law, title 8, section 3362, "General Requirements" (Sanitation), requires that workplaces are kept in a clean and sanitary condition. It also requires that buildings be cleaned and maintained to prevent harmful exposures (defined in section 5140 – see above).

Existing law, title 8, section 3366, "Washing Facilities," requires that washing facilities be reasonably accessible to all employees. However, the section does not specifically require measures to ensure that employees are able to maintain personal hygiene, such as allowing time for employee handwashing, and the provision of hand sanitizer by the employer.

Federal Regulations and Statutes

While there is no federal regulation governing airborne exposure to infectious disease such as SARS-CoV-2, federal OSHA has the "General Duty Clause" in section 5(a)(1) of the Occupational Safety and Health Act of 1970. The clause states the following:

> Each employer shall furnish to each of his [sic] employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees;

The General Duty Clause is used by federal OSHA to address conditions that are not subject to other federal OSHA regulations. As such, it can be used by federal OSHA to require employers to protect employees from harmful airborne pathogens, such as SARS-CoV-2.

Other federal OSHA regulations, such as those governing respiratory protection (29 Code of Federal Regulations (CFR) section 1910.134), sanitation and washing facilities (29 CFR section 1910.141), and PPE (29 CFR sections 1910.132, 1910.133, and 1910.138), are similar to their counterpart regulations in the CCR, title 8, discussed above. The federal OSHA regulation governing temporary labor camps (29 CFR section 1920.142) is more detailed than its counterpart regulation in title 8, section 3350, discussed above.

No federal law or regulations exist or have been promulgated that specifically address occupational exposure to COVID-19.

Amended Section 3205. COVID-19 Prevention.

This proposed emergency regulation would amend section 3205, which has a current title of "Shall" and "Should." [Repealed], by replacing the current title with a new title of "COVID-19 Prevention." It would be in Subchapter 7. General Industry Safety Orders; Introduction; directly after section 3204. Access to Employee Exposure and Medical Records. The regulation would include the following specific requirements.

New Subsection 3205(a). Scope.

Proposed subsection (a)(1) establishes the application of the proposed regulation to all workplaces, with three exceptions: (A) places of employment with one employee who does not

have contact with other persons; (B) employees working from home; and (C) employees when covered by section 5199.

The subsection is necessary to establish the places of employment for which employers will be required to comply with the proposed regulation and take action to protect employees from exposure to COVID-19.

Proposed subsection (a)(2) clarifies that nothing in this section is intended to limit state or local health department mandates or guidance that are more protective or stringent than this section.

This subsection is necessary because state or local health department mandates or guidance may be more stringent than this section, and it is important that such mandates or guidance are not in any way limited by the provisions of this section.

New Subsection 3205(b). Definitions.

Proposed subsection (b) provides definitions for the terms "COVID-19," "COVID-19 case," "COVID-19 exposure," "COVID-19 hazard," "COVID-19 symptoms," "COVID-19 test," "exposed workplace," "face covering," and "high-risk exposure period," as used in sections 3205 through 3205.4.

The subsection is necessary to clarify the application and meanings of terms used in the proposed regulations.

New Subsection 3205(c). Written COVID-19 Prevention Program.

Proposed subsection (c) requires employers to establish, implement, and maintain an effective, written COVID-19 Prevention Program (Program). The subsection allows the written Program to be integrated into the employer's written Injury and Illness Prevention Program (IIPP), required by section 3203, or kept as a separate document. Subsection (c) establishes the basic elements that an employer is responsible for including in their Program. They are as follows:

New Subsection 3205(c)(1). System for communicating.

Proposed subsection (c)(1) requires employers to take the actions described in subsections (c)(1)(A) through (c)(1)(D). These actions are designed to ensure that employers have methods in place, and use those methods, to exchange information with employees about COVID-19. Subsection (c)(1)(A), asks employees to provide information to their employers about COVID-19 symptoms, possible COVID-19 exposures, and possible COVID-19 hazards at the workplace without the fear of reprisal. Subsection (c)(1)(B) would require employers to provide information to its employees about accommodating employees with medical or other conditions that put them

at increased risk of severe COVID-19 illness. Subsection (c)(1)(C) would require employers to provide information about access to COVID-19 testing. If testing is required under this section, section 3205.1, or section 3205.2, the employer shall inform affected employees of the reason for the testing and the possible outcome of a positive test. Subsection (c)(1)(D) would require employers to communicate information about COVID-19 hazards to employees and to other employers, persons, and entities in or in contact with the employer's workplace, along with the employer's COVID-19 policies and procedures.

These subsections are necessary, as communicating information, from employees to their employers, and from employers to their employees and others, is critical in preventing the spread of COVID-19 in workplaces.

New Subsection 3205(c)(2). Identification and evaluation of COVID-19 hazards.

Proposed subsection (c)(2) requires employers to take the actions described in subsections (c)(2)(A) through (c)(2)(H). These actions are designed to ensure that employers have methods in place, and use those methods, to identify and evaluate COVID-19 hazards.

The subsection is necessary, as identifying and evaluating COVID-19 hazards in the workplace is critical in preventing the spread of COVID-19 in workplaces.

Proposed subsection (c)(2)(A) requires employers to allow employees and authorized employee representatives to participate in the identification and evaluation of COVID-19 hazards.

This subsection is necessary because it is important to include employees and employee representatives in the process of identifying and evaluating COVID-19 hazards, due to their intimate knowledge of specific work practices and workplace conditions.

Proposed subsection (c)(2)(B) requires employers to develop and implement a process for screening employees for and responding to employees with COVID-19 symptoms. It allows the employer to ask employees to evaluate their own symptoms before reporting to work. If the employer conducts the screening at the workplace, the employer must ensure that face coverings are used during screening by both screeners and employees and, if temperatures are measured, that non-contact thermometers are used.

This subsection is necessary, as it is important for employers to have a process to screen employees for potential symptoms of COVID-19, and effectively respond to those symptoms, to prevent or reduce the risk of transmission of COVID-19 in the workplace. Allowing employers to ask employees to evaluate whether or not they have symptoms of COVID-19 before reporting would prevent ill employees from coming to work, thus reducing the potential spread of COVID-19. Requiring the use of face coverings and non-contact thermometers during screening would

minimize possible exposure to COVID-19 to screening employees and employees being screened.

Proposed subsection (c)(2)(C) requires employers to develop policies and procedures to effectively respond to individuals at the workplace who are a COVID-19 case.

This subsection is necessary, as it is important for employers to effectively respond to individuals at the workplace who are COVID-19 cases, to prevent or reduce the risk of transmission of COVID-19.

Proposed subsection (c)(2)(D) requires employers to conduct a workplace-specific identification of all interactions, areas, activities, processes, equipment, and materials that could potentially expose employees to COVID-19 hazards. The proposed subsection requires employers to treat all persons, regardless of symptoms or negative COVID-19 test results, as potentially infectious. Proposed subsection (c)(2)(D)1. requires employers to include in their workplace assessment the identification of places and times when people may congregate or come in contact with one another, regardless of whether employees are performing an assigned work task or not. Proposed subsection (c)(2)(D)2. requires an evaluation of employees' potential workplace exposure to all persons at the workplace or who may enter the workplace. Further, it requires employers to consider how employees and other persons enter, leave, and travel through the workplace, in addition to addressing fixed work locations.

These subsections are necessary, as conducting a thorough evaluation and identifying and evaluating COVID-19 hazards is critical in preventing the spread of COVID-19 in the workplace. It is important to assume that all persons are potentially infectious for COVID-19, as many infectious persons have no symptoms of COVID-19, and some may test negative for the virus.

Proposed subsection (c)(2)(E) requires, for indoor locations, the employer to evaluate how to maximize the quantity of outdoor air and whether it is possible to increase filtration efficiency to the highest level compatible with the existing ventilation system.

This subsection is necessary as increased ventilation in indoor locations and increased filtration of indoor air dilutes the concentration of any infectious COVID-19 virus in the air, thus reducing the potential for employee exposure to the virus.

Proposed subsection (c)(2)(F) requires employers to review applicable orders and guidance from the State of California and the local health department related to COVID-19 hazards and prevention.

This subsection is necessary, as it is important for employers to become familiar with the information in such orders and guidance documents to reduce the risk of transmission in the workplace.

Proposed subsection (c)(2)(G) requires employers to evaluate existing COVID-19 prevention controls at the workplace and the need for different or additional controls.

This subsection is necessary as it is important to evaluate COVID-19 prevention controls to determine if they are effective at minimizing employee exposure to COVID-19 in the workplace.

Proposed subsection (c)(2)(H) requires employers to conduct periodic inspections to identify unhealthy conditions, work practices, and work procedures related to COVID-19, and to ensure compliance with employers' COVID-19 policies and procedures.

This subsection is necessary to evaluate conditions that may change over time, and to identify and correct situations where employers' policies and procedures are not adhered to.

New Subsection 3205(c)(3). Investigating and responding to COVID-19 cases in the workplace.

Proposed subsection (c)(3) requires employers to take the actions described in subsections (c)(3)(A) through (c)(3)(D). These actions are designed to ensure that employers have methods in place, and use those methods, to investigate and respond to COVID-19 cases in the workplace.

The subsection is necessary, as investigating and responding to COVID-19 cases is critical in preventing the spread of COVID-19 in the workplace.

Proposed subsection (c)(3)(A) requires employers to have effective procedures to investigate COVID-19 cases in the workplace. This includes procedures for verifying COVID-19 case status, receiving information regarding COVID-19 test results and onset of COVID-19 symptoms, and identifying and recording COVID-19 cases.

This subsection is necessary, as it is important to have procedures in place to gather information needed to investigate and respond to COVID-19 cases in the workplace.

Proposed subsection (c)(3)(B) requires employers to take specified actions when there has been a COVID-19 case at the place of employment. These actions include: 1. determining the day and time the COVID-19 case was last at work, and, to the extent possible, the date of the positive test(s) and/or diagnosis, and the date the COVID-19 case first had one or more COVID-19 symptoms, if any; 2. determining who may have had a COVID-19 exposure; 3. giving notice of the potential COVID-19 exposure, within one business day, in a way that does not reveal any

personal identifying information of the COVID-19 case, to specified individuals; 4. offering testing at no cost during the employee's working hours to all employees who had potential COVID-19 exposure in the workplace, and providing employees with information on benefits described in subsections (c)(5)(B) and (c)(10(C); and 5. investigating whether any workplace conditions could have contributed to the risk of COVID-19 exposure and what could be done to reduce exposure to COVID-19 hazards.

This subsection is necessary to ensure that employers do a thorough investigation of any COVID-19 cases in the workplace and to ensure that employees, independent contractors and other employers are informed about potential exposure during the high-risk exposure period. Offering COVID-19 testing at no cost to employees following a potential exposure to COVID-19 in the workplace and providing information about benefits available to them will encourage these employees to get tested for COVID-19 and also to not report to work following a COVID-19 exposure. These steps are necessary to prevent the spread of COVID-19 in the workplace when there has been a COVID-19 case present at the place of employment.

Proposed subsection (c)(3)(C) requires employers to keep personal identifying information of COVID-19 cases or persons with COVID-19 symptoms confidential. All COVID-19 testing or related medical services provided by the employer under sections 3205 through 3205.4 shall be provided in a manner that ensures the confidentiality of employees. An exception is given for information on COVID-19 cases provided to the local health department, CDPH, the Division, and the National Institute for Occupational Safety and Health (NIOSH), or as otherwise required by law immediately upon request.

This subsection is necessary to ensure that personal identifying information with regard to COVID-19 is kept confidential, as required by various state and federal regulations.
Proposed subsection (c)(3)(D) requires employers to ensure that all employee medical records required by sections 3205 through 3205.4 are kept confidential and not disclosed or reported without the employee's express written consent to any person within or outside the workplace. Exceptions are given for medical records provided to the local health department, CDPH, the Division, or NIOSH; or if the records do not contain individually identifiable medical information.

This subsection is necessary to ensure that employees' medical records are kept confidential, as required by various state and federal regulations.

New Subsection 3205(c)(4). Correction of COVID-19 hazards.

Proposed subsection (c)(4) requires employers to implement effective policies and/or procedures to correct unsafe or unhealthy conditions, work practices, and procedures related to COVID-19 in a timely manner based on the severity of the hazard.

The subsection is necessary, as correcting unsafe or unhealthy conditions, work practices, and procedures related to COVID-19 in a timely manner is critical in preventing the spread of COVID-19 in the workplace.

New Subsection 3205(c)(5). Training and instruction.

Proposed subsection (c)(5) requires employers to provide training and instruction to employees on the topics described in subsections (c)(5)(A) through (c)(5)(H). Required topics include the employer's COVID-19 policies and procedures to protect employees from COVID-19 hazards (subsection (c)(5)(A)); information on benefits to which an employee may be entitled (subsection (c)(5)(B)); how COVID-19 is spread, and that an infectious person may have no symptoms (subsection (c)(5)(C)); methods of physical distancing of at least six feet and the importance of combining physical distancing with the wearing of face coverings (subsection (c)(5)(D)); that particles containing the virus can travel more than six feet, especially indoors, so physical distancing must be combined with other controls, including face coverings and hand hygiene to be effective (subsection (c)(5)(E)); information about hand washing and using hand sanitizer (subsection (c)(5)(F)); proper use of face coverings (subsection (c)(5)(G)); and COVID-19 symptoms, and the importance of not coming to work and obtaining a COVID-19 test, if the employee has COVID-19 symptoms (subsection (c)(5)(H)).

The subsection is necessary, as providing employees with knowledge about the hazards of exposure to COVID-19, including how it is spread, along with methods used in the workplace to minimize exposure to COVID-19, and the importance of not coming to work and obtaining a COVID-19 test, if the employee has COVID-19 symptoms, is critical in preventing the spread of COVID-19 in the workplace.

New Subsection 3205(c)(6). Physical distancing.

Proposed subsection (c)(6) requires employers to take the actions described in subsections (c)(6)(A) and (c)(6)(B).

These actions are designed to ensure that employees maintain a minimum distance between themselves and others in the workplace.

Proposed subsection (c)(6)(A) requires that all employees in the workplace be separated from other persons by at least six feet, except where an employer can demonstrate that six feet of separation is not possible and except for momentary exposure while persons are in movement. The subsection includes a listing of some methods of physical distancing.

This subsection is necessary to ensure that exposure to COVID-19 is minimized through adequate physical distancing between employees and others in the workplace. In particular, ensuring that employees are separated, when feasible, by at least six feet from other persons is critical in preventing the spread of COVID-19 in the workplace.

Proposed subsection (c)(6)(B) requires that when it is not feasible to maintain a distance of at least six feet, individuals shall be as far apart as possible.

This subsection is necessary to ensure that even when it is not feasible to maintain a distance of at least six feet between individuals, exposure to COVID-19 is minimized by maintaining the greatest physical distance possible between employees and others at the workplace.

New Subsection 3205(c)(7). Face coverings.

Proposed subsection (c)(7) requires employers to take the actions described in subsections (c)(7)(A) through (c)(7)(F). These actions are designed to ensure that employees are provided with and use face coverings in the workplace.

The subsection is necessary, as the use of face coverings is recommended to reduce the transmission of COVID-19[16].

Proposed subsection (c)(7)(A) requires employers to ensure that employees wear clean and undamaged face coverings over the nose and mouth when they are indoors, when they are outdoors and less than six feet away from another person, and where required by orders from CDPH or local health department. The subsection states that face shields are not a replacement for face coverings, but may be worn with face coverings for additional protection. The subsection also provides exceptions to the requirements given in subsection (c)(7)(A). The exceptions to the requirements are given for conditions under which the risk of transmission of COVID-19 is minimal; the wearing of a face covering is incompatible with the employee wearing respiratory protection; the employee has a medical or mental health condition, disability or is hearing impaired or communicating with a hearing-impaired person; or specific tasks cannot feasibly be performed while the employee is wearing a face covering. Under this last exception, the unmasked employee shall be at least six feet away from all other persons, unless unmasked employees are tested at least twice weekly for COVID-19.

This subsection is necessary, as it sets parameters for when face coverings are required, and also takes into account the increased likelihood of transmission of COVID-19 in indoor spaces compared to outdoor spaces. Evidence exists that infectious virus particles can travel more than

[16] CDPH; Face Covering Guidance issued on June 18, 2020, available at: https://www.cdph.ca.gov/Programs/CID/DCDC/CDPH%20Document%20Library/COVID-19/Guidance-for-Face-Coverings_06-18-2020.pdf

six feet through the air[17], and face coverings reduce the amount of particles that are emitted into the air from an infected person.[18]

Proposed subsections (c)(7)(B) addresses situations where an employee is unable to wear a face covering, e.g., due to a medical condition.

This subsection is necessary to ensure that procedures are in place to provide adequate protection from COVID-19 to employees working in an area where another employee is unable to wear a face covering.

Proposed subsections (c)(7)(C) requires that any employee not wearing a face covering or an acceptable alternative shall be at least six feet apart from all other persons unless the unmasked employee is tested at least twice weekly for COVID-19. It also states that COVID-19 testing cannot be used as an alternative to face coverings.

This subsection is necessary to ensure that procedures are in place to provide adequate protection from COVID-19 to employees who are unable to wear a face covering.

Proposed subsection (c)(7)(D) explicitly prohibits employers from preventing any employee from wearing a face covering when not required by this section, unless it would create a safety hazard.

This subsection is necessary to ensure that employees are permitted to wear face coverings when they choose to do so, even when not required by this section.

Proposed subsection (c)(7)(E) requires employers to implement measures to communicate to non-employees the requirements for the use of face coverings on their premises.

This subsection is necessary to ensure that non-employees are made aware of the requirements to wear face coverings when in the particular workplace. The required communication with non-employees will minimize COVID-19 exposure to employees by increasing the likelihood that non-employees will wear face coverings when in the workplace.

Proposed subsection (c)(7)(F) requires that when there may be a person not wearing a face covering, including a member of the public, in the workplace, the employer shall have policies

---

[17] CDC; How COVID-19 Spreads, Updated October 28, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/how-covid-spreads.html

[18] Lindsley WG, Blachere FM, Law BF, Beezhold DH, Noti JD. Efficacy of face masks, neck gaiters and face shields for reducing the expulsion of simulated cough-generated aerosols. Health Effects Laboratory Division, National Institute for Occupational Safety and Health, CDC, October 7, 2020. https://www.medrxiv.org/content/10.1101/2020.10.05.20207241v1.full.pdf

and procedures to minimize employee exposure to COVID-19 hazards originating from that person.

This subsection is necessary to ensure that procedures are in place to provide adequate protection from COVID-19 to employees working in an area where another person is not wearing a face covering.

New Subsection 3205(c)(8). Other engineering controls, administrative controls, and personal protective equipment.

Proposed subsection (c)(8) requires employers to take the actions described in subsections (c)(8)(A) through (c)(8)(E). These actions are designed to ensure appropriate control measures are implemented to minimize employee exposure to COVID-19 hazards in the workplace. The subsection is necessary, as the implementation of control methods is important in minimizing employee exposure to COVID-19.
Subsection (c)(8)(A) requires employers to install cleanable solid partitions at fixed work locations where it is not possible to maintain the physical distancing requirement at all times that effectively reduce aerosol transmission between the employee and other persons.
The subsection is necessary to reduce employee exposure to potentially infectious material that may contain the virus that causes COVID-19. Potentially infectious material most commonly results from person(s) exhaling, vocalizing, coughing, or sneezing.

Subsection (c)(8)(B) requires employers to maximize the quantity of outside air provided to the extent feasible, for buildings with mechanical or natural ventilation, except in cases when the United States EPA Air Quality Index is greater than 100 for any air pollutant, or if letting in outdoor air would cause a hazard to employees.

This subsection is necessary to reduce employee exposure to COVID-19 in the workplace, as increased ventilation reduces the concentration of potentially infectious material in the indoor air.

Subsection (c)(8)(C) requires employers to implement cleaning and disinfecting procedures in their workplace.

This subsection is necessary to reduce employee exposure to COVID-19, as potentially infectious material may be present on surfaces that have not been cleaned and disinfected. The provisions of this subsection are designed to reduce transmission of COVID-19 that may occur after an employee touches a contaminated surface, then touches their eyes, nose, or mouth.

Subsection (c)(8)(D) requires employers to evaluate its handwashing facilities and policies.

This subsection is necessary to protect employees from COVID-19 hazards by encouraging and allowing time for employee handwashing, and providing employees with hand sanitizer. The provisions of this subsection are designed to reduce transmission of COVID-19 that may occur after an employee touches a contaminated surface, then touches their eyes, nose, or mouth.

Proposed subsection (c)(8)(E) requires employers to take the actions described in subsections (c)(8)(E)1. through (c)(8)(E)4. These actions are designed to ensure that appropriate PPE is made available and used to minimize employee exposure to COVID-19 hazards in the workplace.

Subsection (c)(8)(E)1. requires employers to evaluate the need for PPE to protect employees from exposure to COVID-19, and provide such equipment as needed. Subsection (c)(8)(E)2. requires employers to evaluate the need for respiratory protection in accordance with section 5144 when the physical distancing requirements in subsection (c)(6) are not feasible or are not maintained. Subsection (c)(8)(E)3. requires employers to provide and ensure the use of respirators in accordance with section 5144 when deemed necessary by the Division through Issuance of Order to Take Special Action, in accordance with section 332.3. Subsection (c)(8)(E)4. requires employers to provide and ensure use of eye protection and respiratory protection in accordance with section 5144 when employees are exposed to procedures that may aerosolize potentially infectious material such as saliva or respiratory tract fluids.

These subsections are necessary to minimize employee exposure to COVID-19 by ensuring appropriate PPE will be provided and used, and respirators are provided and used when required by this subsection. As described in this subsection, PPE is designed to protect employees from exposure to potentially infectious material they may come into contact with, either on surfaces or in the air, while respirators are designed to protect employees from potentially infectious material in the air they breathe. When employees are exposed to procedures that may aerosolize potentially infectious material such as saliva or respiratory tract fluids, a respirator worn in accordance with the requirements of section 5144 is needed to provide adequate respiratory protection.

New Subsection 3205(c)(9). Reporting, recordkeeping, and access.

Proposed subsection (c)(9) requires employers to take the actions described in subsections (c)(9)(A) through (c)(9)(E). These actions are designed to ensure that employers report information about COVID-19 cases at the workplace to the local health department (subsection (c)(9)(A)), and serious illnesses from COVID-19 to the Division, as required (subsection (c)(9)(B)). In addition, subsection (c)(9)(C) requires employers to maintain records of the steps taken to implement the written COVID-19 Prevention Program in accordance with section 3203(b), while subsection (c)(9)(D) requires the COVID-19 Prevention Program to be made available at the worksite to employees, authorized employee representatives, and to representatives of the Division immediately upon request. Finally, subsection (c)(9)(E) requires

the employer to keep a record of and track all COVID-19 cases at the workplace, including specified information about the employee and their presence at the worksite. The subsection requires medical information to be kept confidential, and to be made available upon request to employees, their designated representatives, and the local public health department, with identifiable medical information removed.

These subsections are necessary to ensure that important information about COVID-19 cases in the workplace is maintained and reported to the appropriate agency, to be used in the event that further surveillance or investigation is needed. In addition, access to employees and employee representatives to information on COVID-19 cases, as well as to the employer's written COVID-19 Prevention Program is important to ensure that employers are taking the steps needed to minimize employee exposure to COVID-19 in the workplace.

New Subsection 3205(c)(10). Exclusion of COVID-19 cases.

Proposed subsection (c)(10) requires employers to take the actions described in subsections (c)(10)(A) through (c)(10)(D). These actions are designed to ensure that per subsection (c)(10)(A), COVID-19 cases are excluded from the workplace until the return to work requirements of subsection (c)(11) are met, and that per subsection (c)(10)(B), employees with COVID-19 exposure are excluded from the workplace for 14 days after the last known COVID-19 exposure to a COVID-19 case. Subsection (c)(10)(C) requires that for employees excluded from work under subsection (c)(10) and otherwise able and available to work, employers maintain an employee's earnings, seniority, and all other employee rights and benefits, including the employee's right to their former job status, as if the employee had not been removed from their job. Exception 1 to subsection (c)(10)(C) does not apply to any period of time during which the employee is unable to work for reasons other than protecting persons at the workplace from possible COVID-19 transmission. Exception 2 to subsection (c)(10)(C) does not apply where the employer demonstrates that the COVID-19 exposure is not work related. Subsection (c)(10)(D) does not limit any other applicable law, employer policy, or collective bargaining agreement that provides for greater protection. In addition, subsection (c)(10)(E) requires that at the time of exclusion, the employer shall provide the employee the information on benefits described in this section. An exception to subsection (c)(10) allows that employees who have not been excluded or isolated by the local health department need not be excluded by the employer, if they are temporarily reassigned to work where they do not have contact with other persons until the return to work requirements of subsection (c)(11) are met.

This subsection is necessary to limit transmission of COVID-19 in the workplace. Toward this end, it is important that employees who are COVID-19 cases or who had exposure to COVID-19 do not come to work. Maintaining employees' earnings and benefits when they are excluded from the workplace is important in ensuring that employees will notify their employers if they

test positive for COVID-19 or have an exposure to COVID-19, and stay away from the workplace during the high-risk exposure period when they may be infectious.

New Subsection 3205(c)(11). Return to work criteria.

Proposed subsection (c)(11) specifies when employees who are COVID-19 cases, with or without symptoms, may return to work. Specifications are given in subsections (c)(11)(A) through (c)(11)(E).

The subsection is necessary to inform employers and employees of the conditions under which an employee may return to work following exclusion, and to ensure that employees do not return to work until they do not pose a significant risk of exposing others to COVID-19 in the workplace.

Proposed subsection (c)(11)(A) specifies three criteria that must be met before a COVID-19 case with COVID-19 symptoms may return to work.

This subsection is necessary to maintain consistency with criteria established by CDPH.

Proposed subsection (c)(11)(B) specifies criteria that must be met before a COVID-19 case who tested positive but never developed COVID-19 symptoms may return to work.

This subsection is necessary to maintain consistency with criteria established by CDPH.

Proposed subsection (c)(11)(C) clarifies that a negative COVID-19 test shall not be required for an employer to return to work.

This subsection is necessary because polymerase chain reaction (PCR) tests can remain positive long after an individual is no longer infectious, so proof of a negative test must not be required prior to an individual returning to the workplace after a documented COVID infection. Requiring a negative test before returning to work could impermissibly discriminate against employees who have previously tested positive for COVID-19.

Proposed subsection (c)(11)(D) specifies criteria that must be met before an employee who was issued an order to isolate or quarantine for COVID-19 may return to work.

This subsection is necessary to maintain consistency with criteria established by CDPH.

Proposed subsection (c)(11)(E) specifies criteria under which the Division may, upon request, allow employees to return to work on the basis that the removal of an employee would create undue risk to a community's health and safety.

This subsection is necessary to ensure that control measures are in place to prevent COVID-19 transmission in the workplace before allowing any such employees to return to work.

New Section 3205.1. Multiple COVID-19 Infections and COVID-19 Outbreaks.

This proposed emergency regulation, new section 3205.1, would be in Subchapter 7. General Industry Safety Orders; directly after proposed section 3205. COVID-19 Prevention. The regulation would include the following specific requirements.

New Subsection 3205.1(a). Scope.

This proposed subsection (a)(1) establishes the application of the proposed regulation to a workplace covered by section 3205 if the local health department has identified it as a location of a COVID-19 outbreak or when there are three or more COVID-19 cases in an exposed workplace within a 14-day period.

The subsection is necessary to establish the conditions in which employers will be required to comply with the proposed regulation and to take action to reduce the further spread of COVID-19 at the workplace.

Proposed subsection (a)(2) sets forth the requirement to comply with this section until there are no new COVID-19 cases detected in the workplace for a 14-day period.

The subsection is necessary to ensure that all COVID-19 cases associated with a COVID-19 outbreak are identified and reported to the local health department.

New Subsection 3205.1(b). COVID-19 testing.

Proposed subsection (b)(1) requires employers to provide COVID-19 testing to all employees at the exposed workplace. An exception is provided for employees who were not present during the period of an outbreak identified by a local health department or the relevant 14-day period(s) under subsection(a). It further establishes that COVID-19 testing be provided at no cost to employees during employees' working hours.

The subsection is necessary to provide employees who were present during the period of an outbreak identified by a local health department or the relevant 14-day period(s) the opportunity to get tested for COVID-19 without being deterred by cost or feasibility and for the employer to identify additional COVID-19 cases. With testing, employees who test positive and have symptoms can get care earlier. Contacts can be traced and self-isolation or quarantine can be started sooner to help stop the spread of the virus.

Proposed subsection (b)(2) establishes specific timeframes for which all employees covered by this section are tested. In proposed subsection (b)(2)(A), it provides that all employees in the exposed workplace are immediately tested upon being covered by this section, and then again one week later. It further establishes that negative COVID-19 test results of employees with COVID-19 exposure shall not impact the duration of any quarantine period required by orders issued by the local health department.

The subsection is necessary to ensure that employers follow the specific instructions of their local health department on managing the COVID-19 outbreak.

Subsection (b)(2)(B) establishes that after the first two COVID-19 tests required by (b)(2)(A), employers provide continuous COVID-19 testing of employees who remain at the workplace at least once per week, or more frequently if recommended by the local health department, until this section no longer applies pursuant to subsection (a)(2). Further, subsection (b)(2)(C) requires employers to provide additional testing when deemed necessary by the Division through the Issuance of Order to Take Special Action, in accordance with title 8 section 332.3.

The subsection is necessary to ensure that employers provide all additional COVID-19 testing as instructed by the local health department and the Division.

New Subsection 3205.1(c). Exclusion of COVID-19 cases.

This proposed subsection establishes the requirement that employers exclude from the workplace COVID-19 cases and employees who had COVID-19 exposure in accordance with subsections 3205(c)(10) and (c)(11), and in accordance with any applicable local health officer orders.

The subsection is necessary to make sure employees who are COVID-19 cases and employees who had COVID-19 exposure do not remain at work and will therefore help prevent further spread of COVID-19 in the exposed workplace.

New Subsection 3205.1(d). Investigation of workplace COVID-19 illness.

This proposed subsection requires that the employer immediately investigate and determine possible workplace related factors that contributed to the COVID-19 outbreak in accordance with subsection 3205(c)(3).

The subsection is necessary to ensure the employer follows its procedures for verifying COVID-19 case status, receiving information regarding COVID-19 test results and onset of symptoms, and identifying and recording COVID-19 cases.

New Subsection 3205.1(e). COVID-19 Investigation, review and hazard correction.

This proposed subsection requires that following a COVID-19 outbreak, the employer immediately perform a review of potentially relevant COVID-19 policies, procedures, and controls and implement changes as needed to prevent further spread of COVID-19.

The subsection is necessary to ensure that a thorough investigation is conducted and review of COVID-19 hazards are identified and corrected to control and prevent further spread of the disease in the exposed workplace.

Subsection (e)(1) establishes the elements of the investigation of new or unabated COVID-19 hazards to include the employer's leave policies and practices, whether employees are discouraged from remaining home when sick, and the employer's COVID-19 testing policies. The subsection further requires the employer to identify and evaluate specific conditions in the exposed workplace that the employer would need to control to prevent further COVID-19 transmission.

This subsection is necessary to ensure that employers review their leave policies and practices and working environment to ensure they identify conditions that contribute to the transmission of COVID-19.

Subsection (e)(2) establishes the review be updated every thirty days that the outbreak continues, in response to new information or to new or previously unrecognized COVID-19 hazards, or when otherwise necessary.

The subsection is necessary to allow time for the employer's improvements to take effect. It is also necessary that the employer update the review after responding to any new information or to new or previously unrecognized COVID-19 hazards that an employer is likely to identify or be made aware of should an outbreak continue to occur, or when otherwise necessary.

Subsection (e)(3) establishes that the employers implement changes to reduce the transmission of COVID-19 based on the investigation and review required by subsections (e)(1) and (e)(2). The employer shall consider moving indoor tasks outdoors or having them performed remotely, increasing outdoor air supply when work is done indoors, improving air filtration, increasing physical distancing as much as possible, respiratory protection, and other applicable controls.

The subsection is necessary to ensure that the employer implement changes for COVID-19 hazards identified by the investigation and review. The employer is required to consider specific measures that will help to control and prevent further COVID-19 transmission.

New Subsection 3205.1(f). Notifications to the local health department.

Proposed subsection (f)(1) establishes the requirement of the employer to contact the local health department immediately but no longer than 48 hours after the employer knows, or with diligent inquiry would have known, of three or more COVID-19 cases for guidance on preventing the further spread of COVID-19 within the workplace.

The subsection is necessary so that the employer is provided guidance and is made aware about the local health department's requirements for isolation or quarantine, possible testing, and when it is appropriate for COVID-19 cases to return to work.

Proposed subsection (f)(2) further requires the employer to provide to the local health department the total number of COVID-19 cases and for each COVID-19 case, the name, contact information, occupation, workplace location, business address, the hospitalization and/or fatality status, and North American Industry Classification System (NAICS) code of the worksite of the COVID-19 case, and any other information requested by the local health department. It also requires the employer to continue to give notice to the local health department of any subsequent COVID-19 cases at the worksite. Subsection (f)(3) sets forth January 1, 2021, as the effective date the employer shall provide all information to the local health department required by Labor Code section 6409.6.

These subsections are necessary to ensure that employers meet their reporting obligations to the local health department and are intended to be consistent with Labor Code section 6409.6.

New Section 3205.2. Major COVID-19 Outbreaks.

This proposed emergency regulation, new section 3205.2, would be in Subchapter 7. General Industry Safety Orders; Introduction; directly after proposed section 3205.1. Multiple COVID-19 Infections and COVID-19 Outbreaks. The regulation would include the following specific requirements.

New Subsection 3205.2.(a). Scope.

This proposed subsection (a)(1) establishes the application of the proposed regulation to a workplace covered by section 3205 when there are 20 or more COVID-19 cases in an exposed workplace within a 30-day period.

The subsection is necessary to establish the conditions in which employers will be required to comply with the proposed regulation and to take action to reduce the further spread of COVID-19 during a major outbreak at the workplace.

Proposed subsection (a)(2) sets forth the requirement to comply with this section until there are no new COVID-19 cases detected in the workplace for a 14-day period.

The subsection is necessary to ensure that all COVID-19 cases associated with a major COVID-19 outbreak are identified and reported to the local health department.

New Subsection 3205.2(b). COVID-19 testing.

This proposed subsection requires employers to provide twice a week COVID-19 testing, or more frequently if recommended by the local health department, to all employees present at the exposed workplace during the relevant 30-day period(s) and who remain at the workplace. This subsection additionally requires employers to provide COVID-19 testing at no cost to employees during employees' working hours.

The subsection is necessary to provide employees who were present during the relevant 30-day period(s) the opportunity to get tested for COVID-19 without being deterred by cost or feasibility and for the employer to identify additional COVID-19 cases. With testing, employees who test positive and have symptoms can get care earlier. Contacts can be traced and self-isolation or quarantine can be started sooner to help stop the spread of the virus.

New Subsection 3205.2(c). Exclusion of COVID-19 cases.

This proposed subsection establishes the requirement that employers exclude from the workplace employees who are COVID-19 cases and employees with COVID-19 exposure in accordance with subsections 3205(c)(10) and (c)(11) and any relevant local health department orders.

The subsection is necessary to make sure employees who are COVID-19 cases and employees with COVID-19 exposures do not remain at work and, will therefore help to prevent further spread of COVID-19 in the exposed workplace.

New Subsection 3205.2(d). Investigation of workplace COVID-19 illnesses.

This proposed subsection establishes the requirement the employer comply with section 3205(c)(3), which is to immediately investigate and determine possible worksite related factors that contributed to the outbreak.

The subsection is necessary to ensure the employer follow its procedures for verifying COVID-19 case status, receiving information regarding COVID-19 test results and onset of symptoms, and identifying and recording COVID-19 cases.

New Subsection 3205.2(e). COVID-19 hazard correction.

This proposed subsection requires that in addition to the requirements of subsection 3205(c)(4) to investigate and respond to COVID-19 cases in the workplace, the employer take specific actions to correct hazards during a major COVID-19 outbreak.

Proposed subsection (e)(1) sets forth the requirement that in buildings or structures with mechanical ventilation, employers filter recirculated air with Minimum Efficiency Reporting Value (MERV)-13 or higher efficiency filters if compatible with the ventilation system. If MERV-13 or higher filters are not compatible with the ventilation system, employers shall use filters with the highest compatible filtering efficiency. Employers shall also evaluate whether portable or mounted High Efficiency Particulate Air (HEPA) filtration units or other air cleaning systems would reduce the risk of transmission and shall implement their use to the degree feasible.

Proposed subsection (e)(2) sets forth the requirement that the employer determine the need for a respiratory protection program or changes to an existing respiratory protection program under section 5144 to address COVID-19 hazards.

Proposed subsection (e)(3) sets forth the requirement for the employer to evaluate whether to halt some or all operations at the workplace until COVID-19 hazards have been corrected.

Proposed subsection (e)(4) sets forth the requirement that the employer implement any other control measures deemed necessary by the Division through the Issuance of Order to Take Special Action, in accordance with title 8 section 332.3.
These subsections are necessary to establish additional measures employers will be required to comply with in order to reduce the further spread of COVID-19 at the workplace.

New Subsection 3205.2(f). Notifications to the local health department.

This proposed subsection requires employers to comply with the notification requirements of section 3205.1(f), which is to contact the local health department immediately but no longer than 24 hours after the employer knows or with diligent inquiry would have known of three or more COVID-19 cases within the workplace. It establishes that the employer provide to the local health department the total number of COVID-19 cases and for each COVID-19 case, the name, contact information, occupation, workplace location, business address, and the hospitalization and/or fatality status, and NAICS code of the workplace of the COVID-19 case, and any other information requested by the local health department. It further requires the employer to continue to give notice to the local health department of any subsequent COVID-19 cases at the workplace. The subsection sets forth January 1, 2021, as the effective date the employer shall provide all information to the local health department required by Labor Code section 6409.6.

The subsection is necessary so that, during a major COVID-19 outbreak, the employer is provided guidance and is made aware about the local health department's requirements for isolation or quarantine, possible testing, and when it is appropriate for COVID-19 cases to return to work.

New Section 3205.3. COVID-19 Prevention in Employer-Provided Housing.

This proposed emergency regulation, new section 3205.3 would be in Subchapter 7. General Industry Safety Orders; Introduction; directly after section 3205.2. Major COVID-19 Outbreaks. The regulation would include the following specific requirements.

New Subsection 3205.3(a). Scope.

Proposed subsection (a) establishes the application of the proposed regulation to employer-provided housing.

The purpose of the definition is to inform the regulated community of the type of housing covered by the regulation.

The purpose of subsection (a)(1) is to exempt the applicability of the proposed regulation for the purpose of emergency response, where either (A) the employer is a government entity; or (B) the housing is provided temporarily by a private employer and is necessary to conduct the emergency response operations. This exemption recognizes that the imminent risks associated with an emergency response operation supersede the risks associated with not enforcing the proposed housing requirements in emergency-response operations.

The purpose of subsection (a)(2) is to exempt the applicability of subsections (c), (d), (e), (f), and (h) to employer-provided housing where the occupants maintained a household together prior to residing in employer-provided housing, such as family members, when no other persons outside the household are present. This exemption is necessary as individuals who maintain a household together are assumed to spend time in close proximity to one another within their household.

These subsections are necessary to specify the types of employer-provided housing for which employers will be required to comply with the proposed regulation and take action to protect employees from exposure to COVID-19. Shared worker housing presents unique challenges for preventing and controlling the spread of COVID-19. Consistent application of the proposed regulatory requirements can help reduce the COVID-19 exposure risk among workers in shared housing.

New Subsection 3205.3(b). Assignment of housing units.

The purpose of the proposed subsection is to establish a prioritization order for employers to use when assigning employees to shared housing units. The prioritization order is necessary to limit the number of persons coming in contact with employees residing in employer-provided housing, and is consistent with CDC recommendations for preventing and controlling the spread of COVID-19 in shared worker housing.

The purpose of proposed subsection (b)(1) in requiring employers to first prioritize shared-housing units by assigning residents who usually maintain a household together outside of work, such as family members, to the same housing unit without other persons is to limit the number of persons coming in contact with employees residing in employer-provided housing, and is necessary to reduce the spread of COVID-19.

The purpose of proposed subsection (b)(2) in requiring employers to next prioritize shared-housing units by assigning residents who work in the same crew or work together at the same worksite to the same housing unit without other persons is to limit the number of persons coming in contact with employees residing in employer-provided housing, and is necessary to reduce the spread of COVID-19.

The purpose of proposed subsection (b)(3) is to provide employers with an option to assign employees who do not usually maintain a common household, work crew, or worksite to the same housing unit in situations where no other housing alternatives are possible. This subsection is necessary to ensure housing for all employees requiring shared housing.

The above subsections governing housing assignment prioritization are necessary to reduce the spread of COVID-19 transmission in both the workplace and employer-provided housing by minimizing the number of different individuals who come into close contact with each other.[19]

New Subsection 3205.3(c). Physical distancing and controls.

Proposed subsection (c) requires employers to take the actions described in subsections (c)(1), (c)(2) and (c)(3).

These actions are designed to ensure that resident employees maintain a minimum distance between themselves and others in the employer-provided shared housing unit, and maximize the quantity and supply of outdoor air and increase the filtration efficiency to the highest level compatible with the existing ventilation system to minimize resident employee exposure to COVID-19 hazards.

---

[19] CDC. Agriculture Workers and Employers, Updated November 6, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html

Proposed subsection (c)(1) requires employers to ensure that the premises of employer-provided shared housing units are of sufficient size and layout to permit at least six feet of physical distancing between residents in housing units, common areas, and other areas of the premises.[20]

This subsection is necessary to ensure that exposure to COVID-19 is minimized through adequate physical distancing between resident employees in employer-provided shared housing units. Evidence exists that infectious virus particles can travel more than six feet through the air.[21]

The purpose of proposed subsection (c)(2) is to require employers to ensure beds in employer-provided shared housing units are spaced at least six feet apart in all directions and positioned to maximize the distance between sleepers' heads and prohibits the use of bunk beds.[22]

This subsection is necessary to ensure that employee exposure to COVID-19 is minimized through adequate physical distancing between residents in the employer-provided shared sleeping quarters. Evidence exists that infectious virus particles can travel more than six feet through the air.[23]

The purpose of proposed subsection (c)(3) is to require employers to maximize the quantity and supply of outdoor air and increase the filtration efficiency to the highest level compatible with the existing ventilation system.

This subsection is necessary to reduce the indoor concentration of the virus, thereby reducing the risk of employee exposure to COVID-19 in each employer-provided housing unit. Evidence exists that increased ventilation, when used along with the other control measures required in this section, such as physical distancing, face coverings, and cleaning, can reduce risk from airborne transmission of COVID-19.[24] Federal OSHA recommends that employers work with building maintenance staff to determine if the building ventilation system can be modified to increase

---

ventilation rates and/or the percentage of outdoor air (as close to 100% as possible) that circulates in the system.[25]

New Subsection 3205.3(d). Face coverings.

The purpose of this proposed subsection is to require employers to provide face coverings to all residents and provide information to residents on when they should be used in accordance with state or local health officer orders or guidance.

The subsection is necessary, as the use of face coverings has been demonstrated to reduce the transmission of COVID-19.[26]

New Subsection 3205.3(e). Cleaning and disinfecting.

This proposed subsection requires employers to implement cleaning and disinfecting procedures in their employer-provided shared housing units. Transmission of COVID-19 may occur after an employee touches a contaminated surface, then touches their eyes, nose, or mouth.

Proposed subsection (e)(1) requires employers to ensure shared housing units, kitchens, bathrooms, and common areas are effectively cleaned and disinfected at least once a day to prevent the spread of COVID-19.Such cleaning and disinfecting shall be done in a manner that protects the privacy of residents.

Proposed subsection (e)(2) requires employers ensure that unwashed dishes, drinking glasses, cups, eating utensils, and similar items are not shared.

These subsections are necessary to reduce employee exposure to COVID-19, as potentially infectious material may be present on surfaces that have not been cleaned and disinfected.[27]

New Subsection 3205.3(f). Screening.

This proposed subsection requires employers to encourage residents to report COVID-19 symptoms.

This subsection is necessary, as it is important for employers to know which residents are experiencing potential symptoms of COVID-19 so the employer may effectively respond to such symptoms to prevent or reduce the risk of transmission of COVID-19 in the workplace and employer-provided shared housing units.

New Subsection 3205.3(g). COVID-19 testing.

This proposed subsection requires employers to establish, implement and maintain effective policies and procedures for COVID-19 testing of occupants who had a COVID-19 exposure, who have COVID-19 symptoms, or as recommended by the local health department.

The subsection is necessary to minimize the transmission of COVID-19 in employer-provided housing because diagnostic testing identifies which residents are infected and in need of isolation to prevent further spread to employees and residents.

New Subsection 3205.3(h). Isolation of COVID-19 cases and persons with COVID-19 exposure.

Proposed subsection (h) requires that employers ensure that COVID-19 cases are isolated from all occupants who are not COVID-19 cases, and that persons with COVID-19 exposure are effectively isolated from all other occupants in the employer-provided shared housing unit.

Proposed subsection (h)(1) requires employers to effectively isolate COVID-19 exposed residents from all other occupants. Subsection (h)(1) defines effective isolation to include providing COVID-19 exposed residents with a private bathroom, sleeping area, and a cooking and eating facility.

Proposed subsection (h)(2) requires employers to effectively isolate COVID-19 cases from all occupants who are not COVID-19 cases. Subsection (h)(2) defines effective isolation to include housing COVID-19 cases only with other COVID-19 cases, and providing COVID-19 case occupants with a sleeping area, bathroom, cooking and eating facility that is not shared by non-COVID-19 case occupants.

These subsections are necessary to limit transmission of COVID-19 in the workplace and employer-provided housing. Toward this end, it is critically important that employees who are

COVID-19 cases or who had exposure to COVID-19 isolate to further prevent the spread to other employees and residents.

Proposed subsection (h)(3) requires employers to keep confidential personal identifying information regarding COVID-19 cases and persons with COVID-19 symptoms in accordance with subsections 3205(c)(3)(C) and 3205(c)(3)(D).

This subsection is necessary to ensure compliance with state and federal privacy laws.

Proposed subsection (h)(4) requires employers to end isolation in accordance with subsections 3205(c)(10) and (c)(11) and any applicable local or state health officer orders.

This subsection is necessary to limit transmission of COVID-19 in the workplace and employer-provided housing. Toward this end, it is critically important that employees who are COVID-19 cases or who had exposure to COVID-19 do not expose other residents.

New Section 3205.4. COVID-19 Prevention in Employer-Provided Transportation to and from Work.

This proposed emergency regulation, new section 3205.4 would be in Subchapter 7. General Industry Safety Orders, Introduction; directly after section 3205.3. COVID-19 Prevention in Employer-Provided Housing.

The regulation would include the following specific requirements.

New Subsection 3205.4(a). Scope.

Proposed subsection (a) establishes the application of the proposed regulation to employer-provided motor vehicle transportation to and from work.

The purpose of this subsection is to inform the regulated community of the type of employer-provided transportation covered by the regulation.

Proposed subsection (a)(1) exempts the applicability of the proposed regulation in employer-provided transportation where the driver and all passengers are from the same household outside of work, such as family members.

This exemption is necessary as individuals who maintain a household together are assumed to spend time in close proximity to one another within their household.

Proposed subsection (a)(2) exempts the applicability of the proposed regulation in employer-provided transportation when necessary for emergency response, including firefighting, rescue, and evacuation, and support activities directly aiding response such as utilities, communications, and medical operations.

This exemption recognizes that the imminent risks associated with an emergency response operation supersede the risks associated with not enforcing the proposed transportation requirements in transporting employees for emergency response.

These subsections are necessary to specify the types of employer-provided transportation for which employers will be required to comply with the proposed regulation.

New Subsection 3205.4(b). Assignment of transportation.

This proposed subsection establishes a prioritization order for employers to use when assigning employees to shared vehicles.

Proposed subsection (b)(1) requires employers to first prioritize shared-transportation by assigning employees residing in the same housing unit to the same shared vehicle.

The prioritization order is necessary to reduce the number of persons coming in contact with employees, and thus, reduce employee exposure to COVID-19. The proposed prioritization order is consistent with CDC recommendations for preventing and controlling the spread of COVID-19 in employer-provided transportation.[28]

Proposed subsection (b)(2) requires employers to next prioritize shared transportation by assigning employees who work in the same crew or worksite to the same shared vehicle.

The prioritization order is necessary to reduce the number of persons coming in contact with employees, and thus, reduce employee exposure to COVID-19. The proposed prioritization order is consistent with CDC recommendations for preventing and controlling the spread of COVID-19 in employer-provided transportation.[29]

Proposed subsection (b)(3) requires employers to assign employees who do not share the same household, work crew, or worksite to the same shared vehicle only when no other transportation alternatives are possible. This last option is necessary to ensure employees receive safe transportation to and from work when no other alternatives are available.

---

[28] CDC. Agriculture Workers and Employers, Updated November 6, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html
[29] CDC. Agriculture Workers and Employers, Updated November 6, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html

The above subsections are necessary to reduce the spread of COVID-19 transmission in the workplace by minimizing the number of different individuals who come into close contact with each other while using employer-provided transportation.[30]

New Subsection 3205.4(c). Physical distancing and face coverings.

Proposed subsection (c) requires employers to take the actions described in subsections (c)(1), (c)(2) and (c)(3).

These actions are necessary to ensure that employees use face coverings and maintain a minimum distance between themselves and others in employer-provided shared transportation to minimize employee exposure to COVID-19 hazards.

Proposed subsection (c)(1) requires employers to ensure that physical distancing and face covering requirements of subsection 3205(c)(6) and (c)(7) are followed for employees waiting for transportation.

This subsection is necessary to minimize employee exposure to COVID-19 while waiting for transportation through adequate physical distancing between employees and the use of face coverings. Evidence exists that infectious virus particles can travel more than six feet through the air.[31]

Proposed subsection (c)(2) requires employers ensure the vehicle operator and any passengers are separated by at least three feet during the operation of the vehicle, regardless of the vehicle's normal capacity.

This subsection is necessary to minimize employee exposure to COVID-19 in employer-provided transportation through adequate physical distancing between passengers.

Proposed subsection (c)(3) requires employers ensure the vehicle operator and any passengers are provided and wear face coverings in the vehicle as required by subsection 3205(c)(7).[32]

---

[30] CDC. Agriculture Workers and Employers, Updated November 6, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html
[31] CDC. How COVID-19 Spreads, Updated October 28, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/how-covid-spreads.html
[32] CDC. Agriculture Workers and Employers, Updated November 6, 2020. Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html

The subsection is necessary, as the use of face coverings has been demonstrated to reduce the transmission of COVID-19.[33]

New Subsection 3205.4(d). Screening.

This proposed subsection requires employers to develop, implement, and maintain effective procedures for screening and excluding drivers and riders with COVID-19 symptoms prior to boarding shared transportation.

This subsection is necessary, as it is important for employers to screen drivers and riders of employer-provided transportation for potential symptoms of COVID-19, and effectively respond to those symptoms to prevent or reduce the risk of transmission of COVID-19 in the workplace.

New Subsection 3205.4(e). Cleaning and disinfecting.

This proposed subsection requires employers to implement cleaning and disinfecting procedures in employer-provided transportation. Transmission of COVID-19 may occur after an employee touches a contaminated surface, then touches their eyes, nose, or mouth.

Proposed subsection (e)(1) requires employers to ensure that all high-contact surfaces (door handles, seatbelt buckles, armrests, etc.) used by passengers are cleaned and disinfected before each trip.

Proposed subsection (e)(2) requires employers to ensure that all high-contact surfaces used by drivers, such as the steering wheel, armrests, seatbelt buckles, door handles and shifter, are cleaned and disinfected between different drivers.

Proposed subsection (e)(3) requires employers to provide sanitizing materials and ensure that they are kept in adequate supply.

These subsections are necessary to reduce employee exposure to COVID-19, as potentially infectious material may be present on surfaces that have not been cleaned and disinfected.[34]

[34] CDC; Cleaning and Disinfection for Non-emergency Transport Vehicles; Accessed on October 15, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/disinfecting-transport-vehicles.html

New Subsection 3205.4(f). Ventilation.

This proposed subsection requires employers to ensure, that when transporting employees, the vehicle windows are kept open, and the ventilation system is set to maximize outdoor air rather than to recirculate air.

Proposed subsection (f)(1) exempts the applicability of the proposed regulation in employer-provided transportation when the vehicle has functioning air conditioning in use and the outside temperature is greater than 90 degrees Fahrenheit.

Proposed subsection (f)(2) exempts the applicability of the proposed regulation in employer-provided transportation when the vehicle has functioning heating in use and the outside temperature is less than 60 degrees Fahrenheit.

Proposed subsection (f)(3) exempts the applicability of the proposed regulation in employer-provided transportation when protection is needed from weather conditions, such as rain or snow.

Proposed subsection (f)(4) exempts the applicability of the proposed regulation in employer-provided transportation when the vehicle has a cabin air filter in use and the United States EPA Air Quality Index for any pollutant is greater than 100.

These subsections are necessary to reduce employee exposure to COVID-19, as increased ventilation has been demonstrated to reduce the concentration of potentially infectious material in the indoor air.[35] The exemptions are necessary to relieve an employer from compliance with subsection (f) when weather and/or air quality hazards pose a greater and immediate risk to employee health than the transmission of COVID-19.[36]

New Subsection 3205.4(g). Hand hygiene.

This proposed subsection requires employers to provide hand sanitizer without methyl alcohol in each vehicle and ensure that all drivers and riders sanitize their hands before entering and exiting the vehicle.

Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/php/cleaner-air-shelters.html; CDC. Employer Information for Heat Stress Prevention during the COVID-19 Pandemic, Updated August 26, 2020; Accessed on November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/heat-stress-employers.html

This subsection is necessary to protect employees from COVID-19 hazards by providing drivers and riders with hand sanitizer and requiring them to sanitize their hands before entering and exiting shared vehicles. Hand hygiene has been demonstrated to reduce the transmission of COVID-19 and is an important part of the United States response to the international emergence of COVID-19.[37]

Policy Statement and Anticipated Benefits

The Board is proposing these emergency regulations, title 8, new sections 3205 through 3205.4, to preserve worker health and safety and to clarify employers' existing obligations, making compliance easier and more straightforward.

Emergency rulemaking is required in this matter to address the immediate potential threat to employees from exposure to COVID-19. Infection with COVID-19 may result in a serious illness that can include difficulty breathing, pneumonia, and hospitalization. In some cases, the disease can progress, and organ failure and death may result. COVID-19 symptoms can sometimes persist for months. The virus can damage the lungs, heart, and brain, which increases the risk of long-term health problems. Regular rulemaking, which requires a fiscal analysis and approval from the Department of Finance, cannot be completed in time to address the risks to workers presented by the current pandemic.

As COVID-19 continues to infect workers, the proposed regulation will reduce the number of COVID-19 infections in the workplace. This in turn will reduce the financial costs caused by medical care and lost workdays, costs that may be borne by employees, their families, employers, insurers, and public benefits programs.

Thus, the benefits of the proposed regulation are two-fold:

1) Monetary benefits, including lowered costs to employers, insurers, employees, their families and public benefits programs; and

2) Non-monetary benefits, including a reduction in the pain and suffering associated with COVID-19 illnesses and deaths for those affected, directly or indirectly, by COVID-19.

These emergency regulations are also proposed in response to the Board's September 17, 2020, Petition Decision to partially grant Petition 583, to protect employees from exposure to COVID-19.

---

[37] CDC. Hand Hygiene Recommendations, Updated May 17, 2020; Accessed on October 15, 2020 and November 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/hcp/hand-hygiene.html

Current regulations are not sufficiently specific as to what employers are required to do during the COVID-19 pandemic. This results in confusion on behalf of both employers and employees, leaving many employees unprotected.

This confusion also causes the Division to expend staff resources to respond to questions that would be answered by title 8, new sections 3205 through 3205.4.

Controlling the spread of COVID-19 is a challenge. A person who is infected with COVID-19 may have no obvious symptoms, or no symptoms at all, yet still be infectious to others[38]. Therefore, the proposed regulations require, in some cases, employers to implement multiple methods of protection from exposure to COVID-19 at its workplace. These include identifying and controlling COVID-19 hazards in the workplace; investigating and responding to COVID-19 exposures and illnesses; training its employees; ensuring physical distancing and the use of face coverings; implementing engineering and administrative controls; providing and ensuring the use of PPE; and excluding COVID-19 cases from the workplace.

Many public health jurisdictions require that face coverings be worn when it is not possible to maintain a distance of at least six feet from another person. Evidence exists, however, that infectious virus particles can travel more than six feet through the air[39]. Further, there is an increased likelihood of transmission of COVID-19 in indoor spaces compared to outdoor spaces[40]. Therefore, proposed section 3205(c)(7)(A) requires employers to ensure that employees wear face coverings when they are indoors (with several exceptions), or outdoors and less than six feet from other persons.

The emergency regulations, COVID-19 Prevention, title 8, new sections 3205 through 3205.4, will provide clear and specific requirements to employers so that they may better protect employees from the harmful effects of COVID-19.

Following the adoption of these emergency regulations, at the direction of the Board, the Division will convene a representative advisory committee to review the emergency COVID-19 rulemaking(s), for the purpose of establishing if there exist any reasonable and necessary improvements to the emergency regulation required to avoid serious harm, as further guidance on the prevention of workplace transmission and exposure of COVID-19 becomes available.

Evaluation of Inconsistency/Incompatibility with Existing State Regulations

Under California Labor Code 142.3, the Occupational Safety and Health Standards Board is the only agency in the state authorized to adopt occupational safety and health standards. The Board has reviewed existing regulations on this topic and has concluded that the proposed regulations are not inconsistent or incompatible with existing state regulations.

These documents are available for review BY APPOINTMENT Monday through Friday, from 8:00 a.m. to 4:30 p.m., at the Standards Board's office at 2520 Venture Oaks Way, Suite 350, Sacramento, California 95833. Appointments can be scheduled via email at oshsb@dir.ca.gov or by calling (916) 274-5721.

MANDATE ON LOCAL AGENCIES OR SCHOOL DISTRICTS

The Board has determined that proposed sections 3205 through 3205.4 do not impose a mandate on local agencies or school districts requiring reimbursement by the State pursuant to Part 7 of Division 4 of the Government Code (commencing with section 17500).

COST ESTIMATES OF PROPOSED ACTION

Costs or Savings to State Agencies

The majority of the requirements in the proposal are consistent with guidance and orders from the CDPH and are thus already followed by state employers. For all parts of this analysis, the Division has used the average wage for the first quarter of 2020, the most recent data available. According to EDD, this wage is $30.22 per hour.[41]

Subsection 3205(c) [Written COVID-19 Prevention Program]
Under existing section 3203, employers in California are already required to have a written and effective Injury and Illness Prevention Plan that expressly requires, among other things, a system for ensuring that employees comply with safe and healthy work practices; a system for communicating with employees on matters relating to occupational safety and health; procedures for identifying and evaluating workplace hazards including scheduled periodic inspections; a procedure to investigate and respond to occupational injury or occupational illness; methods and/or procedures for correcting unsafe or unhealthy conditions; and training and instruction.

All these requirements already apply to the hazard of COVID-19; indeed, the Division has issued COVID-19-related citations to employers based on section 3203. The Division has also issued guidance and done outreach to warn employers that COVID-19 is a workplace hazard under section 3203.

Proposed section 3205(c) provides information about how to apply section 3203 in the specific context of COVID-19. Much of that subsection makes explicit actions that are already required by existing section 3203, such as creating COVID-19 prevention policies, and/or includes

[41] EDD, Occupational Employment (May 2019) & Wage (2020 1st Quarter) Data, released June 2020, available at https://www.labormarketinfo.edd.ca.gov/data/oes-employment-and-wages.html#OES (State of California 2020 1st Quarter).

requirements which are already mandated by local government entities. Additional quantified and unquantified costs have been identified as follows.

Reviewing and updating written COVID-19 Prevention Program for the elements below: The Division believes that all state agencies already have comprehensive written COVID-19 prevention programs, which are very unlikely to need revision as a result of this regulation. Executive Orders issued by Governor Newsom order all residents to follow the guidance of state and local health officials, which in turn require such plans.
The proposed section 3205 corresponds to public health orders and guidance, thus it should require no alteration of state entity employers' written policies.[42]

Nonetheless, state employers will likely review their plans to ensure compliance with this regulation, but this cost cannot be quantified. The speed of review will vary significantly depending on the size of the state workface covered by a particular program, the nature of the state entity's operations, and what units within the entity (if any) have their own distinct policies and plans. To provide some idea of the number of establishments involved, in the first quarter of 2020 there were 13,607 state entity establishments, according to EDD.[43] However, in all or nearly all cases, changes to the actual policies should not be required.

Subsections 3205(c)(1) [System for communicating] and (c)(2) [Identification and evaluation of COVID-19 hazards]
The proposal requires employers to allow employees and their authorized representatives to participate in the identification and evaluation of COVID-19 hazards. The particular hazard of an infectious virus requires employee participation in order to be addressed effectively. This should not be a significant issue for state employers; they have unionized workplaces and therefore already have methods of allowing employee participation in safety and health matters.

The remaining requirements in these subsections should already be provided by the employer under existing section 3203(a)(3) and (a)(4), including the most time-intensive tasks such as the worksite specific evaluation of COVID-19 hazards and updating written policies and procedures. It is not possible to evaluate COVID-19 hazards, as required by section 3203, without doing so in a manner specific to the employer's operations at the worksite, after reviewing government-provided information about the virus. Similarly, the items in the proposed 3205(c)(1) are necessary in order to have an effective "system for communicating with employees," about COVID-19 as required by existing section 3203(a)(3). A virus, unlike some safety hazards, requires communication about matters beyond the existence of the hazard and how to avoid it—

[42] Executive Order N-25-20 (March 4, 2020) https://www.gov.ca.gov/wp-content/uploads/2020/03/3.12.20-EO-N-25-20-COVID-19.pdf, and Executive Order N-33-20 (March 19, 2020) https://covid19.ca.gov/img/Executive-Order-N-33-20.pdf.
[43] EDD; Quarterly Census of Employment and Wages, California – Statewide, 2020 – First Quarter, accessed 10/13/20 from https://www.labormarketinfo.edd.ca.gov/qcew/cew-select.asp

for instance, communication would not be "effective" if employees at particular risk of severe illnesses were unaware of what they should do, or if workers did not know how to get tested.

State entities are already reviewing public health orders and guidance in compliance with "California's Plan for Reducing COVID-19 and Adjusting Permitted Sector Activities to Keep Californians Healthy and Safe," also titled the "Blueprint for a Safer Economy."[44]

Employers are required to evaluate how to maximize outdoor air and use any existing filtration system for indoor workplaces most efficiently, but they are not required to update any ventilation systems. This will simply mean opening windows and confirming that the filters being used in any existing systems are the correct type and properly maintained/replaced as appropriate. This minimal evaluation is already required by the existing section 3203. As for screening, this regulation allows employers to ask employees to evaluate their own symptoms before reporting to work, which should have minimal cost. To the Board's knowledge, this is already being performed by state agencies.

Subsection 3205(c)(3) [Investigating and responding to COVID-19 illness in the workplace]
The California Department of Public Health (CDPH) data from October 14, 2020 shows that there have been 675,889 confirmed cases among Californians over 18 and under 65.[45] Although people outside this age range certainly work, the CDPH category for people "65+" has not been included because the high proportion of retirees within that group makes it less representative of the working population. DOF population estimates for 2020 show 24,854,968 residents in the selected age group.[46] Dividing cases by population, that gives a confirmed COVID-19 case rate of about 0.02719.

Please note that past infections are not necessarily a reflection of future infections. Among many factors, a vaccine may be developed, broad population testing and contract testing may increase or decrease, compliance with protective measures within the general population may change, and aspects of the virus itself might lead to spikes or declines. This number of past cases also reflects a period of less than twelve months. However, given that the Division cannot predict the course of the virus, this provides a basis for estimating COVID-19 cases among employees in the coming year.

---

[45] CDPH "California COVID-19 By the Numbers," October 15, 2020, numbers as of October 14, 2020, accessed from https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/Immunization/ncov2019.aspx#COVID-19%20by%20the%20Numbers on October 15, 2020.
[46] DOF, "Total Estimated and Projected Population of California by Age: July 1, 2010 to July 1, 2060 in 1-year Increments," available at http://www.dof.ca.gov/forecasting/demographics/Projections/, accessed Oct. 2020.

According to EDD data, in the first quarter of 2020 (the last quarter available), there were 476,242 employees working in state government in California.[47] The following state employees were likely not covered the proposal:

State Government Employees Not Covered by Proposal

NAICS	Industry	Employees, Q1 2020	Assumed % not covered by proposal	Reasoning	Employees not covered
54	Professional and Technical Services	4,229	50%	Remote or solo work during pandemic	2,115
62	Healthcare and Social Service[48]	65,392	80%	Covered by 5199	52,314
921	Executive, Legislative, & Gen Government	34,590	15%	Remote or solo work during pandemic	5,189
922	Justice, Public Order, and Safety Activities[49]	71,780	70%	Covered by 5199	50,246
923	Administration of Human Resource Program	33,876	20%	Remote or solo work during pandemic	6,775
925	Community and Housing Program Admin	962	10%	Covered by 5199	96
926	Administration of Economic Programs	43,250	20%	Remote or solo work during pandemic	8,650
				TOTAL	**125,385**

Subtracting the total number of state government employees not covered by the proposal, 125,385, from a total of 476,242 state government employees shows that **350,857 state government employees are covered by the proposal.** Applying the estimated COVID-19 rate for persons 18-64 of 0.02719 (as described above), this provides an estimate of 9,540 cases.

The existing section 3203 already requires effective procedures to investigate workplace illnesses. In the case of COVID-19, this necessarily requires employers to determine the infected

[47] EDD projections for 2021, used elsewhere in this analysis, could not be used for this purpose or for state cost estimates, because they did not include sufficient detail about public employment. See footnote 42 for source.
[48] Of these, 56,428 work in hospitals.
[49] Of these, 48,805 work in correctional institutions.

person's exposure to other people at the worksite, alert all potentially exposed persons so that they can take the necessary precautions, and investigate whether any workplace condition contributed to the illness. Without these steps, an investigation will not be adequate because it will not aid the employer in its efforts to arrest the spread of the virus.

With regard to the notice requirements for people exposed to COVID-19, in addition to existing requirements under section 3203 and local government requirements, starting January 1, 2021, AB 685 will require employers to give notice of COVID-19 cases to employees, including employees of subcontractors, those employees' exclusive representatives (i.e. unions), and other employers onsite.[50]

Furthermore, a statewide order of the Public Health Officer requires counties to adhere to "California's Plan for Reducing COVID-19 and Adjusting Permitted Sector Activities to Keep Californians Healthy and Safe," also titled the "Blueprint for a Safer Economy, which includes the CDPH document "Responding to COVID-19 in the Workplace for Employers."[51] To the Division's knowledge all local jurisdictions have requirements consistent with, or more stringent than, the requirements set forth in that document. It requires "contract tracing…of close contacts of confirmed cases," notification to workers who may have been exposed, and maintenance of confidentiality for employees with known or suspected COVID-19 cases.[52]

Proposed subsection (c)(3) primarily describes how to perform this investigation and contact tracing effectively, rather than add new requirements—for example, an effective investigation cannot be performed without determining when/where the COVID-19 case was present and which individuals may have been exposed. However, the Division recognizes that employers may become more systematic in their investigations as a result of the specificity of the proposed subsection, which will slow down their investigations slightly to ensure that all of the activities of the person with COVID-19 have been considered, all potentially exposed persons have been given notice, etc. To account for the specificity of 3205(c)(3), the Division estimates that **each confirmed case will require an additional .5 work hours** under the proposal. This does not mean that each investigation will require only half an hour, rather that the proposed subsection may increase the level of detail during investigations that should already be occurring under existing law.

This subsection also requires employers to offer testing to COVID-19 exposed employees. This should already be covered by public employees' workers' compensation insurance or their health insurance. Nonetheless, the Division requested information about testing costs from the CDPH

---

[50] Labor Code 6409.6 (added by AB 685, chaptered 9/17/20, effective 1/1/21). The Division cannot determine the exact extent to which the statute will overlap with the proposed regulation, because the statute refers to CDPH definitions that have not been promulgated by that agency by regulation. However, the Division believes its proposal is currently consistent with definitions published by CDPH. Please note that the statute imposes some requirements not included in the proposed regulation. These include requiring employers to provide notice of COVID-19 cases *in writing*.

[51] Statewide Public Health Officer Order, August 28, 2020, available at https://www.cdph.ca.gov/Programs/CID/DCDC/CDPH%20Document%20Library/COVID-19/8-28-20_Order-Plan-Reducing-COVID19-Adjusting-Permitted-Sectors-Signed.pdf. "Responding to COVID-19 in the Workplace for Employers," released June 16, 2020, revised September 18, 2020, available at https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/Workplace-Outbreak-Employer-Guidance.aspx.

[52] The CDPH uses "close contacts" in a manner consistent with "COVID-19 exposure" as defined in this proposal.

Occupational Health Branch, in October 2020. The Division was told that, based on information from the CDPH Testing Task Force, the cost of a PCR testing for SARS-CoV-2 can range from $80 - $250 per person, depending on the test. The cost of antigen testing can range from $5 - $40 per person. The proposed regulation does not specify PCR or antigen testing.

To the extent that a state agency incurs some part of these costs, that cannot be quantified. Even if the above estimate of future infections turned out to be correct, there is no way to estimate the number of individuals who might be exposed, as defined in this proposal, for every given confirmed case. A COVID-19 case will generate few exposures if the infected person is able to practice physical distancing at work. But if the infected person regularly spends 15 minutes or more within six feet of a large number of different people, perhaps because they work in a small space with many other individuals or travel to multiple workstations where physical distancing is impossible, then more potential exposures will result. The Division is unaware of any estimate of how many close contacts of this kind occur to the average state worker or workers in general, since the number will vary by workplace and may even change from day to day.

Subsection 3205(c)(4) [Correction of COVID-19 hazards]
Correction of unsafe or unhealthy conditions is already expressly required by existing section 3203(a)(6).

Subsection 3205(c)(5) [Training and instruction]
Employers are already required to provide training and instruction regarding COVID-19 hazards and prevention under section 3203(a)(7), and the specifics listed in the proposed subsection can be incorporated into employers' existing COVID-19 related training. The Division believes that most employers are already implementing all or most of the training requirements, such as handwashing and face covering information. Because employers will have to have specific benefits information on hand in order to meet the requirements of Labor Code section 6409.6(a)(3) on January 1, 2021, and must provide that information to employees as specified in that section, compiling that information will not incur any additional costs for the purposes of this regulation.

Subsections 3205(c)(6) [Physical distancing] and (c)(7) [Face coverings]
Based on its COVID-19 inspections and related research, the Division believes that all counties already require face coverings and social distancing of at least six feet when it is possible to do so, and that state entities are following these requirements both under local requirements and in accordance with CDPH guidance and the Blueprint for a Safer Economy.

3205(c)(8) [Other engineering controls, administrative controls, and personal protective equipment]
This subsection requires cleanable solid partitions when physical distancing cannot be maintained. Evaluating the need for such partitions is already required under section 3203, and many state employers will have sufficient space for physical distancing and will not need any partitions. Though state agencies are likely to have already installed partitions where necessary, for those that have not, the cost of installation cannot be determined. This is a performance

standard; employers are free to determine the size/shape/material best suited to their business, so the ease of installation will depend on each individual workplace. Even if it were possible to establish an average cost, the Division is not aware of any basis for determining the total number of work areas in state places of employment in which it is impossible to maintain six feet of distance, or the number of employees working under those conditions.

Counties already require the handwashing and cleaning/disinfection protocols required here, including the prohibition on sharing personal items such as gloves, goggles, and other personal protective equipment, and state agencies should be in compliance.

This subsection requires employers to maximize the quantity of outside air unless it creates a hazard or is above a certain pollution level. This essentially mean keeping windows open more often and/or continuing to use existing ventilation systems, so the Division has not estimated additional costs.

For the requirement related to aerosolizing activities, the majority of such activities are covered by the existing section 5199 and therefore exempt from proposed section 3205. This provision mainly applies to dental offices that meet the requirements necessary to be exempt from 5199. Such offices are already required to provide the specified respiratory protection under existing section 5144, but this subsection allows all COVID-19 requirements to be located in the same part of Title 8.

Subsection 3205(c)(9) [Reporting, recordkeeping and access]
Reporting to CDPH and the Division will not take more time than existing requirements that employers take to report to those agencies.

Existing section 3203 already requires employers to maintain illness records and records of steps taken to implement COVID-19 hazard correction. Because this proposed subsection specifies particular information to be collected by the employer, employers will have to ask for and record additional information such as the workers' last day at the site and the date of any positive COVID-19 test. This does not require extensive questions, but since it will require a few more questions and some additional data entry, the Division estimates that will require **an additional .2 hours per COVID-19 case**, as indicated in the table below.

Subsections 3205(c)(10) [Exclusion of COVID-19 cases] and (c)(11) [Return to work criteria]
Exclusion of confirmed cases in accordance with accepted medical and public health practices is necessarily required under existing section 3203 in order to correct a significant occupational hazard, namely transmission of COVID-19 between employees. Although the proposed subsection provides for pay for excluded workers who are otherwise able to work, the cost of this cannot be determined because the Division cannot determine how many excluded state employees are likely to have exhausted all available paid time off related to COVID-19. Nothing

in this provision prevents employers from requiring employees to exhaust existing leave during the exclusion period.

Ensuring that employees are excluded pursuant to this subsection is a performance standard but presumably requires alerting employees to the fact that they cannot immediately return to work, which will sometimes require a phone call, email, or some other kind of communication to the infected person. Employers will also have to provide the excluded employee with the required information regarding benefits (which, as described above, employers must compile for reasons other than the proposed regulation). Although employers can meet these obligations with a quick email, the Division recognizes that, in many cases, employers will spend a few minutes discussing these issues with the employee, especially given the potential seriousness of a COVID-19 illness. The Division has therefore estimated an **average cost of .3 employee hours per COVID-19 case.**

Sections 3205.1 [Multiple COVID-19 Infections and COVID-19 Outbreaks] and 3205.2 [Major COVID-19 Outbreaks]

This section applies to employers covered by proposed section 3205 only when there are three or more infections in a 14-day period within a workplace. CDPH informed the Division that, as of September 30, 2020, the department was aware of nearly 400 COVID-19 outbreaks in settings in California that were not covered by existing section 5199. This is likely an undercount, since CDPH relied on reporting from other entities, including heavily burdened local health departments, and the fact that employers in some counties were not obliged to report outbreaks to their local health department until September 18, 2020.[53]

The Division is aware that the government employers most likely to experience "major COVID-19 outbreaks" as defined in this proposal are hospitals, residential nursing centers (including those for the elderly), other medical facilities, homeless shelters, and correctional facilities. These are circumstances covered by section 5199 and would be exempt from this proposal. Major outbreak costs have thus not been estimated for state or local government entities.

The information provided by CDPH did not distinguish between public and private employers. Thus, for incidents involving three COVID-19 cases in 14 days (i.e. a COVID-19 outbreak) and meeting the requirements of proposed section 3205.1, the Division does not have information about how many state entities have had such an incident. In the absence of evidence, the Division will err on the side of overestimating these incidents by presuming that 10 is a reasonable estimate, each one requiring ten hours of response. Given that only 400 outbreaks not covered by existing section 5199 have been recorded by CDPH for the entire state, 10 is likely an

[53] "Responding to COVID-19 in the Workplace for Employers," released June 16, 2020, revised September 18, 2020, available at https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/Workplace-Outbreak-Employer-Guidance.aspx.

overestimate, given that the majority of outbreaks in state workplaces have occurred in situations covered by 5199.

In locations covered by this proposed section, the employer would have to provide additional COVID-19 testing, the cost of which cannot be quantified (see above), and additional review/correction of its COVID-19 policies and prevention methods, which is estimated to require 10 hours per outbreak.

It is possible that a state entity employer could have to repeat this reevaluation, if the outbreak continued for more than 30 days. However, the Division cannot presently quantify this cost, because the agency lacks data about the length of outbreaks. Though CDPH has provided information about the number of outbreaks to which this section would apply, it did not provide information about the number of days each incident continued to qualify as an outbreak.

Sections 3205.3 [COVID-19 Prevention in Employer-Provided Housing] and 3205.4 [COVID-19 Prevention in Employer-Provided Transportation]
No housing or transportation costs have been estimated. The Division is aware that the Department of Forestry and Fire Protection (CalFire) maintains employer-provided housing, but that housing is exempted, along with transportation to and from such locations, since that housing and transportation serves firefighting purposes.

Quantifiable annual costs of proposal (State Government)

Subsection 3205(c)(3): Employer response to COVID-19 cases in the workplace ($30.22 * .5 hours * 9,540 cases)	$144,149
Subsection 3205(c)(9): Recordkeeping for COVID-19 cases ($30.22 * .2 hours * 9,540 cases)	$57,660
Subsection 3205(c)(10): Exclusion of employees with COVID-19 cases ($30.22 * .3 hours * 9,540 cases)	$86,490
Section 3205.1: Multi-infection incidents ($30.22 * 10 hours * 10 cases)	$3,022
Total	**$291,321**

As described in detail above, please note that **these are only the quantifiable costs**.

The primarily savings to state agencies would come from reduced COVID-19 occupational transmission and thus fewer COVID-19 illnesses. The amount of this reduction is unknown and depends on the course of the pandemic. The proportion of any future reduction that could be attributed to the proposal, as opposed to other state or local mandates, cannot be determined in advance.

Savings would result not only from improved health among state employees, but also from an overall reduction in the statewide COVID-19 transmission rate, which would lead to a reduction in the costs associated with publicly-provided medical care and benefits.

The benefit from reduced COVID-19 infections is unquantifiable, but could result in fewer deaths, hospitalizations, and long-term injuries including harm to patients' pulmonary systems, respiratory systems, and neurological function.

A reduction in the spread of COVID-19 will also allow for increased reopening of businesses and public services. This would increase employment and the overall economy.

The Division expects that it would receive fewer queries about COVID-19 if proposed sections 3205 through 3205.4 are enacted. The proposed regulations would also make it easier and faster for Division staff to respond to questions. However, this is unlikely to lead to any fiscal savings. Those staff who have been diverted from their usual duties in response to COVID-19-related issues would simply be returned to their usual enforcement activities.

Costs to Any Local Agency or School District Which Must be Reimbursed in Accordance with Government Code Sections 17500 through 17630:

None.

Other Nondiscretionary Cost or Savings Imposed on Local Agencies:

The above analysis for state agencies' costs and savings applies to local agencies as well. Costs have been estimated in the same manner as above.

Given that local government entities are particularly likely to be aware of—and comply with—the requirements of their own counties, the Division does not believe that changes are likely to be needed in local government entities' current COVID-19 prevention policies. As described above with regard to state employers, the Division is aware that local entities will still review their existing COVID-19 prevention programs to ensure compliance with this regulation, but the time required will vary dramatically between public agencies and cannot be quantified. The speed of review will depend on the size of the agency, the nature of its operations, and what units within the entity (if any) have their own distinct policies and plans. To provide some idea of the number of establishments involved, there were 19,380 local government establishments in the first quarter of 2020, according to EDD.[54]

[54] EDD Quarterly Census of Employment and Wages, California – Statewide, 2020 – First Quarter, accessed 10/13/20 from https://www.labormarketinfo.edd.ca.gov/qcew/cew-select.asp.

According to EDD data, in the first quarter of 2020 (the last quarter available), there were 1,829,639 employees working in local government in California.[55] The following local government employees were likely not covered the proposal:

Local Government Employees Not Covered by Proposal

NAICS	Industry	Employees, Q1 2020	Assumed % not covered by proposal	Reasoning	Employees not covered
488	Support Activities for Transportation	11,787	5%	Remote or solo work during pandemic	589
51	Information	14,495	30%	Remote or solo work during pandemic	4,349
52	Finance and Insurance	3,810	30%	Remote or solo work during pandemic	1,143
54	Professional and Technical Services	1,430	50%	Remote or solo work during pandemic	715
62	Health Care and Social Assistance[56]	114,367	80%	Covered by 5199	91,494
921	Executive, Legislative, & Gen Government	182,635	15%	Remote or solo work during pandemic	27,395
922	Justice, Public Order, and Safety Activities[57]	186,011	70%	Covered by 5199	130,208

[55] EDD projections for 2021, used elsewhere in this analysis, could not be used for this purpose or for state cost estimates, because they did not include sufficient detail about public employment. See footnote 42 for source.
[56] Of these, the majority (95,567) worked in hospitals.
[57] This includes police, corrections, and public health administration, among other things. The exact amount of corrections-related employment is suppressed from public EDD data, but it reasonably assumed that this constitutes a significant portion of this category.

923	Administration of Human Resource Program	98,016	20%	Remote or solo work during pandemic	19,603
925	Community and Housing Program Admin	5,460	10%	Covered by 5199	546
926	Administration of Economic Programs	15,964	20%	Remote or solo work during pandemic	3,193
				TOTAL	**279,235**

Subtracting the total number of local government employees not covered by the proposal, 279,235 from 1,829,639 local government employees in the first quarter of 2020 gives a total of **1,550,404 local government employees covered by the proposal.** Applying the estimated COVID-19 rate for persons 18-64 of 0.02719 (as described above), this provides an **estimate of 42,155 cases.**

Local government employers most likely to experience "major COVID-19 outbreaks" as defined in this proposal are hospitals, residential nursing centers (including those for the elderly), other medical facilities, homeless shelters, and correctional facilities. These are circumstances covered by section 5199 and would be exempt from this proposal. Major outbreak costs have thus not been estimated for local government entities.

As described above, CDPH information on the 400 outbreaks not covered by 5199 does not distinguish between public and private employers. In the absence of data, the Division has estimated 30 such outbreaks would covered by the proposed section 3205.2 for local entities, even though that is likely to be a significant overestimate.

Local government employers have been exempted from the employer-provided housing and transportation requirements while conducting emergency operations. For instance, public employers may create temporary housing sites and provide transportation during wildland firefighting operations. Outside of those circumstances, the Division is not aware of any public provision of housing/transportation which would be covered by this proposal.

Quantifiable annual costs of proposal (Local Government)

Subsection 3205(c)(3): Employer response to COVID-19 cases in the workplace ($30.22 * .5 hours * 42,155 cases)	$636,962
Subsection 3205(c)(9): Recordkeeping for COVID-19 cases ($30.22 * .2 hours * 42,155 cases)	$254,785
Subsection 3205(c)(10): Exclusion of employees with COVID-19 cases ($30.22 * .3 hours * 42,155 cases)	$382,177
Section 3205.1: Multi-infection incidents ($30.22 * 10 hours * 30 cases)	$9,066
Total	**$1,282,990**

As described in detail above, please note that **these are only the quantifiable costs**.

Annual savings for local government employers cannot be determined; please see the section on savings for state entities, above.

Costs or Savings in Federal Funding to the State:

None.

Addendum #1 to the Finding of Emergency.

Further Basis for the Finding of Emergency:

i. During the early stage of the pandemic, among other things the Division was directed to "have primary focus on providing technical assistance and support to have maximum effect to address to risk of COVID-19" and to "focus enforcement efforts where there are allegations of the most serious violations impacting health and safety." (Executive Order N-27-20, March 15, 2020.)

ii. At that point, and throughout the spring, the expected length of the pandemic was unclear. Stay-at-home orders had initially "flattened the curve" relative to other states, such as New York. Among the workplaces most affected by the pandemic, the existing Aerosol Transmissible Disease Standard, title 8 section 5199, protected many employees because they were involved in patient care or other activities covered by that section. For all other employees, the Division relied on existing regulations, including title 8 section 3203, Injury and Illness Prevention Plans.

iii. In May, businesses began to reopen according to the state's phased reopening plan. On May 20, 2020, the Occupational Safety and Health Standards Board (OSHSB) received a petition, filed by Worksafe and the National Lawyers' Guild, Labor & Employment Committee (Petitioners), requesting the Board amend title 8 standards to create new temporary emergency standards. Petitioners requested OSHSB provide specific protections to California employees who may have exposure to COVID-19, but who are not protected by the Aerosol Transmissible Diseases standards (sections 5199 and 5199.1).

iv. The Board directed Staff to prioritize the evaluation of this petition and the efficacy of existing regulations to address the health and safety of workers in the wake of the novel corona virus. The evaluation process included an analysis of current regulations, finding that while protections exist in Cal/OSHA's Aerosol Transmissible Diseases (ATD) standard (title 8, section 5199), they are limited in scope primarily to medical facilities. Employers not included in the scope of the ATD standard have generally applicable requirements, which include the Injury and Illness Prevention Program (IIPP, section 3203), Washing facilities (sections 1527, 3366, 3457, and 8397.4), PPE (section 3380), Respiratory Protection (section 5144), Sanitation (article 9), and Control of Harmful Exposures (section 5141).

v. While existing regulations (such as IIPP, section 3203) require employers to protect workers from harmful exposures, they do not necessarily identify specific measures that must be taken to fight the spread of a novel infectious disease. Instead, the responsibility is placed on employers, given their intimate knowledge of the hazards at issue and the workings of the place of employment, to devise such methods or procedures. Investigations in the field over the summer, along with rising positivity

rates, showed that employers were struggling to address the novel hazards presented by COVID-19.

vi. Given the unprecedented nature of the COVID-19 pandemic, and informed by analysis performed by OSHSB staff and the Division, on September 17, 2020, the Board found a specific emergency regulation in title 8 is necessary to provide clear instructions to employers and employees on what needs to be done to protect workers from COVID-19, eliminating any confusion and enhancing compliance. The Board requested the Division work with Board staff to expeditiously submit a proposal for an emergency regulation to protect all workers not covered by section 5199 from COVID-19 exposure in the workplace, for consideration no later than the November 19, 2020 Board meeting.

vii. Throughout the course of the pandemic, the Division issued guidance for employers regarding safe reopening. This guidance, much of which was issued jointly with other state agencies, included industry-specific information. Nonetheless, cases began to rise precipitously in October and November 2020. Guidance is not sufficient to address the present increase in cases and the risk of occupational spread. Furthermore, the proposed emergency regulations introduce specific requirements, such as employer-provided testing, that are critical to reduce occupational spread during the ongoing rise in infections. The present threat of exponential growth in COVID-19 cases demands immediate action.

Documents Relied Upon:

The dates of the following documents-relied-upon are corrected as follows:

34. CDC; People with Certain Medical Conditions. October 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html

35. CDC; Evidence used to update the list of underlying medical conditions that increase a person's risk of severe illness from COVID-19. October 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/evidence-table.html

38. CDC; Considerations for Restaurants and Bars. September 6, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/business-employers/bars-restaurants.html

61. CDC; Agriculture Workers and Employers. November 10, 2020. https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html

Local Mandate Determination

There is no local mandate imposed by these proposed regulations.

Non-duplication

Portions of the proposed regulations repeat or rephrase, in whole or part, state statutes and regulations. This duplication is necessary so that employers and employees will be able to review all provisions specific to prevention of COVID-19 in the workplace within the same portion of title 8, making compliance easier. In addition, to the extent that some language within the proposed regulations may repeat portions of AB 685 (Chaptered September 17, 2020), that bill does not take effect until January 1, 2021, after the effective date of these regulations.

Comparison of Emergency Temporary Standards with Cal/OSHA Guidance

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Written COVID-19 Prevention Program: The employer "shall establish, implement, and maintain an effective, written COVID-19 Prevention Program." § 3205(c).	"California employers are required to establish and implement an IIPP (title 8 section 3203) to protect employees from workplace hazards, including infectious diseases. Employers are required to determine if COVID-19 infection is a hazard in their workplace. If it is a workplace hazard, then employers must implement infection control measures, including applicable and relevant recommendations from the Centers for Disease Control and Prevention (CDC), Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19), and Coronavirus Disease 2019 (COVID-19): How to Protect Yourself & Others. For most California workplaces, adopting changes to their IIPP is mandatory since COVID-19 is widespread in the community." *Cal/OSHA Interim General Guidelines on Protecting Workers from COVID-19* (May 14, 2020) ("*General Guidelines*"), https://www.dir.ca.gov/dosh/coronavirus/General-Industry.html. The *General Guidelines* then include various infection prevention measures to include in a written IIPP. The employer should "develop an infectious disease preparedness and response plan that can help guide protective actions against COVID-19." Fed/OSHA, *Guidance on Preparing Workplaces for COVID-19* at 7 (Mar. 9, 2020) ("*Fed/OSHA Preparation Guidance*"), https://www.osha.gov/Publications/OSHA3990.pdf "Before reopening, all facilities must . . . create a work site-specific COVID-19 prevention plan." *California's COVID-19 Employer Playbook* at 6 (Sept. 25, 2020) ("*Employer Playbook*"), https://files.covid19.ca.gov/pdf/employer-playbook-for-safe-reopening--en.pdf.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
System for Employee Reporting: "The employer shall . . . [a]sk employees to report to the employer, without fear of reprisal, COVID-19 symptoms, possible COVID-19 exposures, and possible COVID-19 hazards at the workplace." § 3205(c)(1)(A).	The IIPP shall "[i]nclude a system for communicating with employees in a form readily understandable by all affected employees on matters relating to occupational safety and health, including provisions designed to encourage employees to inform the employer of hazards at the worksite without fear of reprisal. Substantial compliance with this provision includes meetings, training programs, posting, written communications, a system of anonymous notification by employees about hazards, labor/management safety and health committees, or any other means that ensures communication with employees." § 3203(a)(3). The employer should "[e]nsure workers understand their rights to a safe and healthful work environment, who to contact with questions or concerns about workplace safety and health, and prohibitions against retaliation for raising workplace safety and health concerns" and "[e]nsure workers understand their right to raise workplace safety and health concerns and seek an OSHA inspection under the Occupational Safety and Health Act." Fed/OSHA, *Guidance on Returning to Work* at (June 17, 2020) ("*Fed/OSHA Returning to Work Guidance*"), https://www.osha.gov/Publications/OSHA4045.pdf
System for Accommodating Vulnerable Employees: "The employer shall . . . [d]escribe procedures or policies for accommodating employees with medical or other conditions that put them at increased risk of severe COVID-19 illness." § 3205(c)(1)(B).	The employer's COVID-19 response plan "should consider and address the level(s) of risk associated with various worksites and job tasks workers perform at those sites. Such considerations may include … "[w]orkers' individual risk factors (e.g., older age; presence of chronic medical conditions, including immunocompromising conditions; pregnancy). *Fed/OSHA Preparation Guidance* at 7-8.
System for Communicating Testing Information: "The employer shall . . . [p]rovide information about access to COVID-19 testing." § 3205(c)(1)(C).	"Close contacts of cases should be given instructions on home quarantine and symptom monitoring, information regarding the closest COVID-19 testing sites, referral to their LHD." *Employer Playbook* at 12.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
System for Communicating Policies and Procedures: "The employer shall . . . communicate information about COVID-19 hazards and the employer's COVID-19 policies and procedures to employees and to other employers, persons, and entities within or in contact with the employer's workplace." § 3205(c)(1)(D).	The IIPP shall "[i]nclude a system for ensuring that employees comply with safe and healthy work practices. Substantial compliance with this provision includes recognition of employees who follow safe and healthful work practices, training and retraining programs, disciplinary actions, or any other such means that ensures employee compliance with safe and healthful work practices." § 3203(a)(2). The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). The employer shall provide training in a language that is readily understandable by all employee on "the employer's procedures for preventing [COVID-19's] spread at the workplace." *General Guidelines*.
Employee Participation in Hazard Assessment: "The employer shall allow for employee and authorized employee representative participation in the identification and evaluation of COVID-19 hazards." § 3205(c)(2)(A).	New requirement.
Employee Screening Process: "The employer shall develop and implement a process for screening employees for and responding to employees with COVID-19 symptoms." § 3205(c)(2)(B).	The employer shall "[i]mmediately send employees home or to medical care, as needed, if they have a frequent cough, fever, difficulty breathing, chills, muscle pain, headache, sore throat, or recent loss of taste or smell." *General Guidelines*. "Before reopening, all facilities must . . . [s]et up individual control measures and screenings." *Employer Playbook* at 6. The employer's COVID-19 response plan should include the "identification and isolation of sick employees, including practices for worker self-monitoring or screening, and isolating and excluding from the workplace any employees with signs or symptoms of COVID-19." The employer should "[a]sk employees to evaluate themselves for signs/symptoms of COVID-19 before coming to work, and to stay home if they are not well." *Fed/OSHA Returning to Work Guidance* at 7.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Response to COVID-19 Case in Workplace: "The employer shall develop COVID-19 policies and procedures to respond effectively and immediately to individuals at the workplace who are a COVID-19 case to prevent or reduce the risk of transmission of COVID-19 in the workplace." § 3205(c)(2)(C).	"If an employee is confirmed to have COVID-19 infection," the employer should follow specific procedures to reduce the risk of transmission in the workplace. *General Guidelines*. The employer's COVID-19 response plan should include the "identification and isolation of sick employees, including practices for worker self-monitoring or screening, and isolating and excluding from the workplace any employees with signs or symptoms of COVID-19." The employer should "[e]stablish a protocol for managing people who become ill in the workplace, including details about how and where a sick person will be isolated (in the event they are unable to leave immediately) while awaiting transportation from the workplace, to their home or to a health care facility, and cleaning and disinfecting spaces the ill person has occupied to prevent exposure to other workers, customers, or visitors." *Fed/OSHA Returning to Work Guidance* at 7.
Hazard Assessment: "The employer shall conduct a workplace-specific identification of all interactions, areas, activities, processes, equipment, and materials that could potentially expose employees to COVID-19 hazards." § 3205(c)(2)(D).	The IIPP shall "[i]nclude procedures for identifying and evaluating work place hazards including scheduled periodic inspections to identify unsafe conditions and work practices." "Inspections shall be made to identify and evaluate hazards: . . . [w]henever the employer is made aware of a new or previously unrecognized hazard." § 3205(a)(4)(C). "Before reopening, all facilities must . . . [p]erform a detailed risk assessment." *Employer Playbook* at 6. The employer should conduct a "[h]azard assessment, including practices to determine when, where, how, and to what sources of SARS-CoV-2 workers are likely to be exposed in the course of their job duties." *Fed/OSHA Returning to Work Guidance* at 6.
Assessment of Indoor Ventilation: "For indoor locations, the employer shall evaluate how to maximize the quantity of outdoor air and whether it is possible to increase filtration efficiency to the highest level compatible with the existing ventilation system." § 3205(c)(2)(E).	"Employers should work with a heating, ventilation, and air conditioning (HVAC) professional to consider steps to optimize building ventilation," such as using filters with a MERV rating of 13 or higher and increasing the HVAC system's outdoor air intake. Fed/OSHA, *COVID-19 Guidance on Ventilation in the Workplace* (Nov. 4, 2020) ("*Fed/OSHA Ventilation Guidance*"), https://www.osha.gov/Publications/OSHA4103.pdf.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Monitoring of Orders and Guidance: "The employer shall review applicable orders and guidance from the State of California and the local health department related to COVID-19 hazards and prevention." § 3205(c)(2)(F).	The IIPP shall "[i]nclude procedures for identifying and evaluating work place hazards including scheduled periodic inspections to identify unsafe conditions and work practices." "Inspections shall be made to identify and evaluate hazards: . . . [w]henever the employer is made aware of a new or previously unrecognized hazard." § 3205(a)(4)(C).
Assessment of Existing Controls: "The employer shall evaluate existing COVID-19 prevention controls at the workplace and the need for different or additional controls." § 3205(c)(2)(G).	The IIPP shall "[i]nclude procedures for identifying and evaluating work place hazards including scheduled periodic inspections to identify unsafe conditions and work practices." "Inspections shall be made to identify and evaluate hazards: . . . [w]henever the employer is made aware of a new or previously unrecognized hazard." § 3205(a)(4)(C).
Periodic Inspections: "The employer shall conduct periodic inspections as needed to identify unhealthy conditions, work practices, and work procedures related to COVID-19 and to ensure compliance with employers' COVID-19 policies and procedures." § 3205(c)(2)(H).	The IIPP shall "[i]nclude procedures for identifying and evaluating work place hazards including scheduled periodic inspections to identify unsafe conditions and work practices." "Inspections shall be made to identify and evaluate hazards: . . . [w]henever the employer is made aware of a new or previously unrecognized hazard." § 3205(a)(4)(C).
Investigation of COVID-19 Cases: The employer "shall have an effective procedure to investigate COVID-19 cases in the workplace." § 3205(c)(3)(A). The employer shall "[i]nvestigate whether any workplace conditions could have contributed to the risk of COVID-19 exposure and what could be done to reduce exposure to COVID-19 hazards." § 3205(c)(3)(B)(5).	The IIPP shall include the employer's "procedure to investigate occupational injury or occupational illness." § 3203(a)(5).

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Contact Tracing: The employer shall perform contact tracing and determine who may be a close contact. § 3205(c)(3)(B)(1)-(2).	"In consultation with the LHD, [the employer should] interview workers with laboratory-confirmed COVID-19 by phone to determine when their symptoms began, the shifts they worked during their infectious period, and to identify other workers with whom they had close contact during their infectious period . . . . Close contacts should be instructed to quarantine at home for 14 days from their last known contact with the worker with COVID-19 and should be tested for COVID-19. Use employment records to verify shifts worked during the infectious period and other workers who may have worked closely with them during that time period." *Employer Playbook* at 14.
Notice to Close Contacts: The employer shall give notice of potential COVID-19 exposure to employees, their authorized employee representatives, independent contractors, and other employers about close contact. § 3205(c)(3)(B)(3).	"If an employee is confirmed to have COVID-19 infection," the employer should "[i]nform employees of their possible exposure to COVID-19 in the workplace but maintain confidentiality as required by the Americans with Disabilities Act (ADA)." *General Guidelines*. "Employers must notify all workers who were potentially exposed to the individuals with COVID-19" and should "include worker representative groups in communicating strategies." *Employer Playbook* at 12.
Testing for Close Contacts: The employer shall provide testing and information on available benefits to employees who qualify as close contacts. § 3205(c)(3)(B)(4).	No requirement to provide testing. "Close contacts of cases should be given instructions on home quarantine and symptom monitoring, information regarding the closest COVID-19 testing sites, referral to their LHD." *Employer Playbook* at 12. The employer should "ensure that sick leave policies are sufficiently generous and flexible to enable workers who are sick to stay home without penalty and ensure that workers are aware of such policies." *Employer Playbook* at 10.
Keep Personal and Medical Information Confidential: Personal identifying information of COVID-19 cases or persons with COVID-19 symptoms shall be kept confidential." § 3205(c)(3)(C)-(D).	"Employers must make every effort to maintain the confidentiality of workers with suspected or confirmed COVID-19 infection when communicating with other workers. Employers should refer to the guidelines issued by DFEH and EEOC." *Employer Playbook* at 12.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Correction of COVID-19 Hazards: The employer "shall implement effective policies and/or procedures for correcting unsafe or unhealthy conditions, work practices, policies and procedures in a timely manner based on the severity of the hazard." § 3205(c)(4).	The IIPP shall "[i]nclude methods and/or procedures for correcting unsafe or unhealthy conditions, work practices and work procedures in a timely manner based on the severity of the hazard: (A) When observed or discovered; and, (B) When an imminent hazard exists which cannot be immediately abated without endangering employee(s) and/or property, remove all exposed personnel from the area except those necessary to correct the existing condition. Employees necessary to correct the hazardous condition shall be provided the necessary safeguards. § 3203(a)(6).
Training on Policies and Procedures: "The employer shall provide effective training and instruction to employees" on "[t]he employer's COVID-19 policies and procedures to protect employees from COVID-19 hazards." § 3205(c)(5)(A).	The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). The employer shall provide training in a language that is readily understandable by all employee on "the employer's procedures for preventing its spread at the workplace." *General Guidelines*.
Training on COVID-19 Related Benefits: "The employer shall provide effective training and instruction to employees" on "[i]nformation regarding COVID-19-related benefits to which the employee may be entitled under applicable federal, state, or local laws." § 3205(c)(5)(B).	The employer should "ensure that sick leave policies are sufficiently generous and flexible to enable workers who are sick to stay home without penalty and ensure that workers are aware of such policies." *Employer Playbook* at 10. The employer should "Train workers in the appropriate language and literacy level about their risks of exposure to SARS-CoV-2, what the employer is doing to protect them, including site-specific measures, and how they can protect themselves." *Fed/OSHA Returning to Work Guidance* at 9.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Training on COVID-19 Transmission: "The employer shall provide effective training and instruction to employees" on how COVID-19 can spread through the air and may be transmitted by touch. § 3205(c)(5)(C).	The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). The employer shall provide training in a language that is readily understandable by all employee on the "when to seek medical attention, how to prevent its spread," and "[h]ow an infected person can spread COVID-19 to others even if they are not sick." *General Guidelines*. "Before reopening, all facilities must . . . [t]rain workers on how to limit the spread of COVID-19. This includes how to screen themselves for symptoms and when to stay home." *Employer Playbook* at 6.
Training on Physical Distancing: "The employer shall provide effective training and instruction to employees" on "[m]ethods of physical distancing of at least six feet and the importance of combining physical distancing with the wearing of face coverings" and that "physical distancing must be combined with other controls, including face coverings and hand hygiene, to be effective." § 3205(c)(5)(D)-(E).	The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). "Before reopening, all facilities must . . . [e]stablish physical distancing guidelines." *Employer Playbook* at 6.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Training on Hand Hygiene: "The employer shall provide effective training and instruction to employees" on "[t]he importance of frequent hand washing with soap and water for at least 20 seconds and using hand sanitizer when employees do not have immediate access to a sink or hand washing facility, and that hand sanitizer does not work if the hands are soiled." § 3205(c)(5)(F).	The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). The employer shall provide training in a language that is readily understandable by all employee on the "[w]ashing hands with soap and water for at least 20 seconds, after interacting with other persons and after contacting shared surfaces or objects." *General Guidelines*.
Training on Face Covering Use: "The employer shall provide effective training and instruction to employees" on "[p]roper use of face coverings and the fact that face coverings are not respiratory protective equipment." § 3205(c)(5)(G).	The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). The employer shall provide training in a language that is readily understandable by all employee on the "h]ow to prevent the spread of COVID-19 by using cloth face covers, including: • CDC guidelines that everyone should use cloth face covers when around other persons. • How cloth face covers can help protect persons around the user when combined with physical distancing and frequent hand washing. • Information that cloth face covers are not protective equipment and do not protect the person wearing a cloth face cover from COVID-19. • Instructions on washing and sanitizing hands before and after using face coverings, which should be washed after each shift." *General Guidelines*.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Training on COVID-19 Symptoms: "The employer shall provide effective training and instruction to employees" on "COVID-19 symptoms, and the importance of not coming to work and obtaining a COVID-19 test if the employee has COVID-19 symptoms." § 3205(c)(5)(H).	The IIPP shall "[p]rovide training and instruction . . . (B) To all new employees; (C) To all employees given new job assignments for which training has not previously been received; (D) Whenever new substances, processes, procedures or equipment are introduced to the workplace and represent a new hazard; (E) Whenever the employer is made aware of a new or previously unrecognized hazard; and, (F) For supervisors to familiarize themselves with the safety and health hazards to which employees under their immediate direction and control may be exposed." § 3203(a)(7). The employer shall "[a]ctively encourage sick employees to stay home." *General Guidelines*. The employer shall provide training in a language that is readily understandable by all employee on the "[g]eneral description of COVID-19[] symptoms." *General Guidelines*. "Before reopening, all facilities must . . . [t]rain workers on how to limit the spread of COVID-19. This includes how to screen themselves for symptoms and when to stay home." *Employer Playbook* at 6.
Methods of Physical Distancing: "All employees shall be separated from other persons by at least six feet, except where an employer can demonstrate that six feet of separation is not possible, and except for momentary exposure while persons are in movement." The section then identifies general methods of physical distancing. § 3205(c)(6).	The employer shall "[e]ncourage employees to telework from home when possible" and "[p]ractice physical distancing by cancelling in-person meetings, using video or telephonic meetings, and maintaining a distance of at least 6 feet between persons at the workplace when possible." *General Guidelines*. "Before reopening, all facilities must . . . [e]stablish physical distancing guidelines." *Employer Playbook* at 6. The employer's COVID-19 response plan should include "[s]ocial distancing, including practices for maximizing to the extent feasible and maintaining distance between all people, including workers, customers, and visitors." *Fed/OSHA Returning to Work Guidance* at 9.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Face Coverings: The employer "shall provide face coverings and ensure they are worn by employees over the nose and mouth when indoors, when outdoors and less than six feet away from another person, and where required by orders from the CDPH or local health department." The employer "shall ensure face coverings are clean and undamaged." "Employees exempted from wearing face coverings due to a medical condition, mental health condition, or disability shall wear an effective non-restrictive alternative, such as a face shield with a drape on the bottom, if their condition or disability permits it." "Any employee not wearing a face covering, face shield with a drape or other effective alternative, or respiratory protection, for any reason, shall be at least six feet apart from all other persons unless the unmasked employee is tested at least twice weekly for COVID-19. Employers may not use COVID-19 testing as an alternative to face coverings when face coverings are otherwise required by this section." "No employer shall prevent any employee from wearing a face covering when not required by this section, unless it would create a safety hazard, such as interfering with the safe operation of equipment." "Employers shall implement measures to communicate to non-employees the face coverings requirements on their premises." "The employer shall develop COVID-19 policies and procedures to minimize employee exposure to COVID-19 hazards originating from any person not wearing a face covering, including a member of the public." § 3205(c)(7).	The employer shall "[p]rovide employees with cloth face covers or encourage employees to use their own face covers for use whenever employees may be in workplaces with other persons." *General Guidelines*. "If exposures to the general public cannot be eliminated with engineering controls, require or encourage customers to wear face coverings, which are mandatory in some jurisdictions." *General Guidelines*. "Before reopening, all facilities must . . . [e]stablish universal face covering requirements (with allowed exceptions) in accordance with CDPH guidelines. Additionally, refer to Appendix A: Resources for further guidance for employers and workers in enforcing mask requirements." *Employer Playbook* at 6.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Engineering Controls – Partitions: "At fixed work locations where it is not possible to maintain the physical distancing requirement at all times, the employer shall install cleanable solid partitions that effectively reduce aerosol transmission between the employee and other persons." § 3205(c)(8)(A).	"Protect cashiers and other workers who have frequent interaction with the public with engineering controls such as Plexiglas screens or other physical barriers, or spatial barriers of at least six feet, if feasible." *General Guidelines*. Engineering control for COVID-19 include "[i]nstalling physical barriers, such as clear plastic sneeze guards. *Fed/OSHA Preparation Guidance* at 12. The employer should "[s]elect and implement appropriate engineering controls (e.g., physical barriers/shields to separate workers[])."*Fed/OSHA Returning to Work Guidance* at 8.
Engineering Controls – Ventilation: "For buildings with mechanical or natural ventilation, or both, employers shall maximize the quantity of outside air provided to the extent feasible, except when the United States Environmental Protection Agency (EPA) Air Quality Index is greater than 100 for any pollutant or if opening windows or letting in outdoor air by other means would cause a hazard to employees, for instance from excessive heat or cold." § 3205(c)(8)(B).	"Employers should work with a heating, ventilation, and air conditioning (HVAC) professional to consider steps to optimize building ventilation," such as using filters with a MERV rating of 13 or higher and increasing the HVAC system's outdoor air intake. *Fed/OSHA Ventilation Guidance*.
Cleaning and Disinfecting Procedures: The employer shall identify and regularly clean and disinfect frequently touched surfaces and objects and inform employees and authorized employee representatives of cleaning and disinfection protocols. The employer shall prohibit the sharing of PPE and, to the extent feasible, equipment. The employer will clean and disinfect areas, material, and equipment used by a COVID-19 case during the high-risk exposure period. § 3205(c)(8)(C).	The employer shall "[a]void shared workspaces (desks, offices, and cubicles) and work items (phones, computers, other work tools, and equipment) when possible, but "[i]f they must be shared, clean and disinfect shared workspaces and work items before and after use." *General Guidelines*. The employer shall "[e]stablish procedures to routinely clean and disinfect commonly touched objects and surfaces." *General Guidelines*. In response to a confirmed case in the workplace, the employer shall "[c]onduct deep cleaning of the entire general area where the infected employee worked and may have been, including breakrooms, restrooms and travel areas, with a cleaning agent approved for use by the EPA against coronavirus." *General Guidelines*. "Before reopening, all facilities must . . . [p]ut disinfection protocols in place." *Employer Playbook* at 6. Employers must perform certain cleaning actions after a worker with COVID-19 has been to work. *Employer Playbook* at 19.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Handwashing: "[T]he employer shall evaluate its handwashing facilities, determine the need for additional facilities, encourage and allow time for employee handwashing, and provide employees with an effective hand sanitizer. Employers shall encourage employees to wash their hands for at least 20 seconds each time. Provision or use of hand sanitizers with methyl alcohol is prohibited." § 3205(c)(8)(D).	All employers must provide washing facilities that have an adequate supply of suitable cleansing agents, water, and single-use towels or blowers. §§ 1527, 3366, 3457, 8397.4. The employer shall provide training in a language that is readily understandable by all employee on the "[w]ashing hands with soap and water for at least 20 seconds, after interacting with other persons and after contacting shared surfaces or objects." *General Guidelines*.
Personal Protected Equipment: The employer "shall evaluate the need for personal protective equipment to prevent exposure to COVID-19 hazards, such as gloves, goggles, and face shields, and provide such personal protective equipment as needed." "Employers shall evaluate the need for respiratory protection in accordance with section 5144 when the physical distancing requirements in subsection (c)(6) are not feasible or are not maintained." Employers shall provide and ensure use of respirators in accordance with section 5144 when deemed necessary by Cal/OSHA. § 3205(c)(8)(E).	Employers must conduct a hazard assessment to determine if any PPE is needed to protect employees from hazards that are present or are likely to be present in the workplace, including health hazards. Employers must select and provide employees with properly fitting and sanitary PPE that will effectively protect them against these hazards. Employers must also ensure the appropriate PPE is provided to and used by employees who use cleaners and disinfectants. § 3380. "As required by OSHA standards for PPE, including respiratory protection, and consistent with OSHA and CDC guidance, train workers how to put on, use, and take off PPE; how to clean, maintain, store, and dispose of PPE; and what the limitations of the PPE are." *Fed/OSHA Returning to Work Guidance* at 9.
Reporting to Local Health Department: "The employer shall report information about COVID-19 cases at the workplace to the local health department whenever required by law, and shall provide any related information requested by the local health department." § 3205(c)(9)(A).	In non-healthcare or non-residential congregate setting workplaces, an outbreak is three or more laboratory-confirmed cases of COVID-19 among employees who live in different households within a two-week period. As of July 28, 2020, employers are required to report outbreaks to the LHD in the jurisdiction where the workplace is located and the LHDs of residence of employees with COVID-19." *Employer Playbook* at 9. "Employers must notify the LHD where the workplace is located and where the workers live" when there is an outbreak. *Employer Playbook* at 10-11.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Reporting to Cal/OSHA: "The employer shall report immediately to the Division any COVID-19-related serious illnesses or death, as defined under section 330(h), of an employee occurring in a place of employment or in connection with any employment." § 3205(c)(9)(B).	California employers must report to Cal/OSHA any serious illness, serious injury or death of an employee that occurred at work or in connection with work within eight hours of when they knew or should have known of the illness. § 342. "This includes a COVID-19 illness if it meets the definition of serious illness." https://www.dir.ca.gov/dosh/coronavirus/Reporting-Requirements-COVID-19.html A "serious injury or illness" means any injury or illness occurring in a place of employment or in connection with any employment that requires inpatient hospitalization for other than medical observation or diagnostic testing."§ 330(h).
Recordkeeping of Steps to Implement CPP: "The employer shall maintain records of the steps taken to implement the written COVID-19 Prevention Program in accordance with section 3203(b)." § 3205(c)(9)(C).	The employer must maintain records of the steps taken to implement and maintain the IIPP, which includes records of scheduled and periodic inspections and documentation of safety and health training. § 3203(b).
Access to CPP: "The written COVID-19 Prevention Program shall be made available at the workplace to employees, authorized employee representatives, and to representatives of the Division immediately upon request." § 3205(c)(9)(D).	The employer shall allow employees and their "designated representative" access to examine and receive a copy of the IIPP. § 3203(a)(8).
Contact Tracing Recordkeeping: "The employer shall keep a record of and track all COVID-19 cases with the employee's name, contact information, occupation, location where the employee worked, the date of the last day at the workplace, and the date of a positive COVID-19 test." "The information shall be made available to employees, authorized employee representatives, or as otherwise required by law, with personal identifying information removed. § 3205(c)(9)(E).	Employees or their representatives have the right to request and obtain an employer's Log of Work-Related Injuries and Illnesses (Log 300), without redaction, or to request and obtain information as otherwise allowed by law. § 14300.35.
Exclusion of Confirmed COVID-19 Cases: The employer "shall ensure that COVID-19 cases are excluded from the workplace until the return to work requirements of subsection (c)(11) are met." § 3205(c)(10)(A).	"When employers identify a worker who has tested positive for COVID-19 or a worker who has symptoms, they should make sure the worker does not remain at work." *Employer Playbook* at 21.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Exclusion of Close Contacts: The employer "shall exclude employees with COVID-19 exposure from the workplace for 14 days after the last known COVID-19 exposure to a COVID-19 case." § 3205(c)(10)(B).	"Close contacts of cases should be given instructions on home quarantine and symptom monitoring, information regarding the closest COVID-19 testing sites, referral to their LHD." *Employer Playbook* at 12.
Exclusion Pay and Benefits: For excluded employees whose exclusion is not work-related and who are otherwise able and available to work, "employers shall continue and maintain an employee's earnings, seniority, and all other employee rights and benefits, including the employee's right to their former job status, as if the employee had not been removed from their job." "At the time of exclusion, the employer shall provide the employee the information on benefits." § 3205(c)(10)(C).	No requirement to provide exclusion pay beyond paid sick leave and supplemental paid sick leave benefits or workers' compensation. The employer shall "[p]rovide employees with paid sick leave or expanded family and medical leave for specified reasons related to COVID-19 if required to by the Families First Coronavirus Response Act." *General Guidelines*. "Employers should support workers time away from work for the protection of others through flexible leave policies." *Employer Playbook* at 21.
Return to Work Criteria: COVID-19 cases cannot return to work until certain criteria are met. "A negative COVID-19 test shall not be required for an employee to return to work." § 3205(c)(11).	"Employers should consult with the LHD and most recent CDC guidance for when a confirmed case may be released from home isolation and return to work." *Employer Playbook* at 15. The Employer Playbook contains return to work criteria matching that of the ETS. *Employer Playbook* at 16.
Outbreak – COVID-19 Testing Required: "The employer shall provide COVID-19 testing to all employees at the exposed workplace except for employees who were not present during the period of an outbreak identified by a local health department or the relevant 14-day period(s) under subsection (a), as applicable. COVID-19 testing shall be provided at no cost to employees during employees' working hours." § 3205.1(b).	No requirement to provide testing to all employees at the exposed workplace during an outbreak.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Outbreak – Exclusion of Confirmed COVID-19 Cases and Close Contacts: The employer "shall ensure COVID-19 cases and employees who had COVID-19 exposure are excluded from the workplace in accordance with subsections 3205(c)(10) and (c)(11) and local health officer orders if applicable." § 3205.1(c).	"When employers identify a worker who has tested positive for COVID-19 or a worker who has symptoms, they should make sure the worker does not remain at work." *Employer Playbook* at 21. "Close contacts of cases should be given instructions on home quarantine and symptom monitoring, information regarding the closest COVID-19 testing sites, referral to their LHD." *Employer Playbook* at 12.
Outbreak – Investigation of Workplace COVID-19 Illnesses: "The employer shall immediately investigate and determine possible workplace related factors that contributed to the COVID-19 outbreak in accordance with subsection 3205(c)(3)." § 3205.1(d).	The IIPP shall include the employer's "procedure to investigate occupational injury or occupational illness." § 3203(a)(5).
Outbreak – Investigation, Review and Hazard Correction: "[T] the employer shall immediately perform a review of potentially relevant COVID-19 policies, procedures, and controls and implement changes as needed to prevent further spread of COVID-19." The investigation and review shall be documented and include the investigation of new or unabated COVID-19 hazard. The review shall be updated every thirty days the outbreak continues when necessary. "The employer shall implement changes to reduce the transmission of COVID-19 based on the investigation and review." § 3205.1(e).	The IIPP shall include the employer's "procedure to investigate occupational injury or occupational illness." § 3203(a)(5). The IIPP shall "[i]nclude methods and/or procedures for correcting unsafe or unhealthy conditions, work practices and work procedures in a timely manner based on the severity of the hazard: (A) When observed or discovered; and, (B) When an imminent hazard exists which cannot be immediately abated without endangering employee(s) and/or property, remove all exposed personnel from the area except those necessary to correct the existing condition. Employees necessary to correct the hazardous condition shall be provided the necessary safeguards. § 3203(a)(6).

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Outbreak – Reporting to Local Health Department: "The employer shall contact the local health department immediately but no longer than 48 hours after the employer knows, or with diligent inquiry would have known, of three or more COVID-19 cases for guidance on preventing the further spread of COVID-19 within the workplace." "The employer shall provide to the local health department the total number of COVID-19 cases and for each COVID-19 case, the name, contact information, occupation, workplace location, business address, the hospitalization and/or fatality status, and North American Industry Classification System code of the workplace of the COVID-19 case, and any other information requested by the local health department. The employer shall continue to give notice to the local health department of any subsequent COVID-19 cases at the workplace." § 3205.1(f).	"In non-healthcare or non-residential congregate setting workplaces, an outbreak is three or more laboratory-confirmed cases of COVID-19 among employees who live in different households within a two-week period. As of July 28, 2020, employers are required to report outbreaks to the LHD in the jurisdiction where the workplace is located and the LHDs of residence of employees with COVID-19." *Employer Playbook* at 9. "Employers must notify the LHD where the workplace is located and where the workers live" when there is an outbreak. *Employer Playbook* at 10-11.
Major Outbreak – COVID-19 Testing Required: The employer "shall provide twice a week COVID-19 testing, or more frequently if recommended by the local health department, to all employees present at the exposed workplace during the relevant 30-day period(s) and who remain at the workplace. COVID-19 testing shall be provided at no cost to employees during employees' working hours." § 3205.2(b).	No requirement to provide twice a week testing to all employees at the exposed workplace during a major outbreak.
Major Outbreak –Exclusion of Confirmed COVID-19 Cases and Close Contacts: The employer "shall ensure COVID-19 cases and employees with COVID-19 exposure are excluded from the workplace in accordance with subsections 3205(c)(10) and (c)(11) and any relevant local health department orders." § 3205.2(c).	"When employers identify a worker who has tested positive for COVID-19 or a worker who has symptoms, they should make sure the worker does not remain at work." *Employer Playbook* at 21. "Close contacts of cases should be given instructions on home quarantine and symptom monitoring, information regarding the closest COVID-19 testing sites, referral to their LHD." *Employer Playbook* at 12.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Major Outbreak – Investigation of Workplace COVID-19 Illnesses: "The employer shall comply with the requirements of subsection 3205(c)(3)." § 3205.2(d).	The IIPP shall include the employer's "procedure to investigate occupational injury or occupational illness." § 3203(a)(5).
Major Outbreak – COVID-19 Hazard Correction: In addition to the requirements of subsection 3205(c)(4), the employer shall meet certain filtration requirements, determine the need for a respiratory protection program or changes to an existing respiratory protection program under section 5144, and evaluate whether to halt some or all operations at the workplace until COVID-19 hazards have been corrected. § 3205.2(e).	The IIPP shall "[i]nclude methods and/or procedures for correcting unsafe or unhealthy conditions, work practices and work procedures in a timely manner based on the severity of the hazard: (A) When observed or discovered; and, (B) When an imminent hazard exists which cannot be immediately abated without endangering employee(s) and/or property, remove all exposed personnel from the area except those necessary to correct the existing condition. Employees necessary to correct the hazardous condition shall be provided the necessary safeguards. § 3203(a)(6).
Major Outbreak – Reporting to Local Health Department: The employer "shall comply with the requirements of section 3205.1(f)." § 3205.2(f).	"In non-healthcare or non-residential congregate setting workplaces, an outbreak is three or more laboratory-confirmed cases of COVID-19 among employees who live in different households within a two-week period. As of July 28, 2020, employers are required to report outbreaks to the LHD in the jurisdiction where the workplace is located and the LHDs of residence of employees with COVID-19." *Employer Playbook* at 9. "Employers must notify the LHD where the workplace is located and where the workers live" when there is an outbreak. *Employer Playbook* at 10-11.
Employer-Provided Housing – Assignment of Housing Units: The employer shall ensure that shared housing unit assignments are prioritized for family members, followed by employees who work in the same crew or at the same worksite. § 3205.3(b).	Fed/OSHA, *Additional Considerations for Workers Who Reside in Communal Living Arrangements* ("*Fed/OSHA Communal Living Guidance*"), https://www.osha.gov/coronavirus/control-prevention/workers-in-shared-housing. The employer should "[c] Consider grouping healthy workers together into cohorts that include the same workers each day. This can increase the effectiveness of altering normal shift schedules by making sure that groups of workers are always assigned to the same shifts with the same coworkers. Effectiveness is optimized if it is aligned with shared living quarters and shared transportation." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers* (Nov. 10, 2020), https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-agricultural-workers.html.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Employer-Provided Housing – Physical Distancing: The employer shall "[e]nsure the premises are of sufficient size and layout to permit at least six feet of physical distancing between residents in housing units, common areas, and other areas of the premises." The employer shall "[e]nsure beds are spaced at least six feet apart in all directions and positioned to maximize the distance between sleepers' heads," or at least arranged to minimize face to face sleeping. § 3205.3(c).	"Employers who house workers are encouraged to be proactive in making physical distancing possible." Cal/OSHA, COVID-19 Infection Prevention for Agricultural Employers and Employees" (Oct. 27, 2020), https://www.dir.ca.gov/dosh/Coronavirus/COVID-19-Infection-Prevention-in-Agriculture.pdf. "Efforts to eliminate the hazard from shared living arrangements may include: . . . using single unit housing (e.g., trailers/recreational vehicles, hotel or motel rooms) rather than dormitory/bunkhouse style housing." *Fed/OSHA Communal Living Guidance.* "Examples of engineering controls in shared living arrangements that may be useful for protecting workers from COVID-19 include: Configuring common living areas (e.g., kitchens, bathrooms, living rooms) to support social distancing of workers spaced at least six feet apart and to minimize the need for workers to be face-to-face and in close proximity to one another . . . Extending the minimum separation distances between beds and minimizing or avoiding the use of bunk beds so that a minimum of six feet is achieved between each bed, with workers sleeping in opposite directions (head to toe) to keep heads as far away from each other as possible." *Fed/OSHA Communal Living Guidance.* The employer should "[s]upport social distancing during the entire time farmworkers are housed, including while recreating, cooking, and sleeping." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers.*
Employer-Provided Housing – Face Coverings: The employer "shall provide face coverings to all residents and provide information to residents on when they should be used in accordance with state or local health officer orders or guidance." § 3205.3(d).	"Examples of administrative controls and safe work practices in shared living arrangements that may be useful for protecting workers from COVID-19 include: . . . Encouraging use of cloth face coverings in shared spaces, especially when it is difficult to maintain social distancing." *Fed/OSHA Communal Living Guidance.* Encourage residents to wear cloth face coverings in shared spaces. *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers.*

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Employer-Provided Housing – Cleaning and Disinfecting: Employers shall ensure that housing units, kitchens, bathrooms, and common areas are effectively cleaned and disinfected at least once a day to prevent the spread of COVID-19. Cleaning and disinfecting shall be done in a manner that protects the privacy of residents." "Employers shall ensure that unwashed dishes, drinking glasses, cups, eating utensils, and similar items are not shared." § 3205.3(e).	Enhanced sanitation measures include the following: "Provide disposable gloves, soap for hand washing, and household cleaners to help residents and staff implement personal preventive measures. Develop and implement enhanced sanitation and cleaning plans that address frequency of sanitation and cleaning, and identify a responsible person. Do not share dishes, drinking glasses, cups, or eating utensils. Non-disposable food service items used should be handled with gloves and washed with dish soap and hot water or in a dishwasher." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers*.
Employer-Provided Housing – Screening: "The employer shall encourage residents to report COVID-19 symptoms to the employer." § 3205.3(f).	"Efforts to eliminate the hazard from shared living arrangements may include: . . . screening workers moving into employer-furnished housing for symptoms of COVID-19 before they enter (e.g., using mechanisms for worker self-reporting of symptoms)." *Fed/OSHA Communal Living Guidance.* The employer should "[c]onsider instituting daily health checks (e.g., symptom and/or temperature screening) and daily reporting to supervisors prior to and during the housing period to identify illnesses early." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers*.
Employer-Provided Housing – COVID-19 Testing: "The employer shall establish, implement, and maintain effective policies and procedures for COVID-19 testing of occupants who had a COVID-19 exposure, who have COVID-19 symptoms, or as recommended by the local health department." § 3205.3(g).	No guidance on testing.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Employer-Provided Housing – Isolation of Confirmed COVID-19 Cases and Close Contacts: Employers shall effectively isolate COVID-19 cases from all occupants who are not COVID-19 cases and effectively isolate close contacts from all other occupants. § 3205.3(h).	"Employers who house workers are encouraged . . . to take affirmative steps to quarantine any housed worker exhibiting symptoms." Cal/OSHA, COVID-19 Infection Prevention for Agricultural Employers and Employees" (Oct. 27, 2020), https://www.dir.ca.gov/dosh/Coronavirus/COVID-19-Infection-Prevention-in-Agriculture.pdf. "Efforts to eliminate the hazard from shared living arrangements may include: assigning workers who have been tested for COVID-19 and do not have the virus to reside in designated employer-furnished housing, separate from those who have not yet been tested (i.e., cohorting workers); screening workers moving into employer-furnished housing for symptoms of COVID-19 before they enter (e.g., using mechanisms for worker self-reporting of symptoms); assigning workers who are ill or exhibiting signs and symptoms of COVID-19 to reside in designated employer-furnished housing away from healthy workers (quarantining workers); and using single unit housing (e.g., trailers/recreational vehicles, hotel or motel rooms) rather than dormitory/bunkhouse style housing." *Fed/OSHA Communal Living Guidance.* The employer should "[e] Establish isolation plans for responding to farmworkers with COVID-19." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers.*
Employer-Provided Transportation – Assignment of Transportation: : The employer shall prioritize transportation assignments for the same housing unit, followed by employees who work in the same crew or at the same worksite. § 3205.4(b).	"Owners/operators should maximize opportunities to place farmworkers residing together in the same vehicles for transportation and in the same cohorts to limit exposure." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers.* The employer should "[g]roup (or cohort) workers in the same crews and/or those sharing living quarters together when transporting." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers.*

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Employer-Provided Transportation – Physical Distancing and Face Coverings: The employer shall ensure the following "[p]hysical distancing and face covering requirements of subsection 3205(c)(6) and (c)(7) are followed for employees waiting for transportation;" "[t]he vehicle operator and any passengers are separated by at least three feet in all directions during the operation of the vehicle, regardless of the vehicle's normal capacity;" and "[t]he vehicle operator and any passengers are provided and wear a face covering in the vehicle as required by subsection 3205(c)(7)." § 3205.4(c).	The employer should "[g] Provide as much space between riders as possible" and "[i]ncrease the number of vehicles and the frequency of trips to limit the number of people in a vehicle." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers*.
Employer-Provided Transportation – Screening: The employer "shall develop, implement, and maintain effective procedures for screening and excluding drivers and riders with COVID-19 symptoms prior to boarding shared transportation." § 3205.4(d).	No specific guidance on screening for transportation.
Employer-Provided Transportation – Cleaning and Disinfecting: The employer shall ensure that all high-contact surfaces are cleaned and disinfected before each trip and between different drivers. The employer "shall provide sanitizing materials and ensure they are kept in adequate supply." § 3205.4(e).	"Transportation vehicles should be cleaned and disinfected in accordance with CDC guidelines for non-emergency transport vehicles before and after each trip, or daily at minimum." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers*.
Employer-Provided Transportation – Ventilation: The employer "shall ensure that vehicle windows are kept open, and the ventilation system set to maximize outdoor air and not set to recirculate air." Windows do not have to be kept open if certain conditions are met. § 3205.4(f).	No specific guidance on ventilation for transportation.

Cal/OSHA's COVID-19 Emergency Temporary Standards	Cal/OSHA's General and Industry-Specific Guidance (Pre-Nov. 19, 2020)
Employer-Provided Transportation – Hand Hygiene: The employer "shall provide hand sanitizer in each vehicle and ensure that all drivers and riders sanitize their hands before entering and exiting the vehicle. Hand sanitizers with methyl alcohol are prohibited." § 3205.4(g).	The employer should "[m]ake hand hygiene (hand washing/hand sanitizer) available and encourage riders to use hand hygiene before entering the vehicle and when arriving at destination." *Fed/OSHA & CDC Joint Guidance on Agriculture Workers & Employers*.

PETITION FILE NO. 583
PROPOSED PETITION DECISION OF THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS BOARD

INTRODUCTION

The Occupational Safety and Health Standards Board (Board) received a petition on May 20, 2020, filed by Worksafe and National Lawyers' Guild, Labor & Employment Committee (Petitioners), requesting that the Board amend title 8 standards to create two new regulations. The first, a temporary emergency standard that would provide specific protections to California employees who may have exposure to COVID-19, but who are not protected by the Aerosol Transmissible Diseases standards (sections 5199 and 5199.1)[1]. The second proposed standard would be a permanent rulemaking effort to protect workers from infectious diseases including novel pathogens (e.g. COVID-19).

Labor Code section 142.2 permits interested persons to propose new or revised regulations concerning occupational safety and health and requires the Board to consider such proposals and render a decision no later than six months following receipt. This time frame has been extended by 120 days, by California Governor Gavin Newsom's Executive Orders N-63-20, and N-71-20, in recognition of the State of Emergency caused by COVID-19.

Further, as required by Labor Code section 147, any proposed occupational safety or health standard received by the Board from a source other than the Division of Occupational Safety and Health (Division) must be referred to the Division for evaluation. The Division has 60 days after receipt to submit an evaluation regarding the proposal; this timeline, running concurrently with the Board's timeline as described above, has also been extended by 120 days pursuant to Executive Orders N-63-20 and N-71-20.

SUMMARY

The Petition requests the Board adopt new regulatory requirements including, but not restricted to:

- Establishing a framework parallel to the Illness and Injury Prevention Program (IIPP) regulation, section 3203, which requires employers to create a written plan for employee protection;

[1] Unless otherwise noted, all references are to the California Code of Regulations, title 8.

- Creating procedures to identify and evaluate COVID-19 hazards, and to identify jobs categories, tasks, and procedures where employees may be exposed to COVID-19, as well as procedures to control the hazard of exposure;
- Creating procedures to respond to employees who have been diagnosed with COVID-19, who have symptoms of COVID-19, and who have been exposed to COVID-19;
- Establishing a job hazard analysis to identify modes of transmission in the workplace and adopt and implement preventative measures to minimize risk, including social distancing, ventilation systems, hygiene measures, and personal protective equipment (PPE);
- Institute a provision of employee training.

EMERGENCY RULEMAKING

The Government Code section 11346.1 provides for expedited rulemaking, under certain emergency circumstances, allowing for adoption of regulations generally remaining in effect for 180 days. The requisite "emergency" is defined as "a situation that calls for immediate action to avoid serious harm to the public peace, health, safety, or general welfare." (G.C. section 11342.545.) Per G.C. section 11346.1(b)(2), "[a] finding of emergency based only upon expediency, convenience, best interest, general public need, or speculation, shall not be adequate to demonstrate the existence of an emergency. If the situation identified in the finding of emergency existed and was known by the agency adopting the emergency regulation in sufficient time to have been addressed through nonemergency regulations… the finding of emergency shall include facts explaining the failure to address the situation through nonemergency regulations."

At least five days prior to submission of the proposed emergency regulation to the Office of Administrative Law (OAL) for review, notice of the proposed action is to be sent to persons having filed a request for notice of regulatory action with OAL. (G.C. section 11346.1(a)(2).) OAL guidelines specify completion of its pre-adoption review within 10 calendar days of submission. (G. C. section 11349.6(b).).

The submitting agency is not required to provide the 5 day notice if the emergency situation clearly poses such an immediate, serious harm that delaying action to allow public comment would be inconsistent with the public interest. (G.C. section 11346.1(a)(3).)

DIVISION EVALUATION

In its report concerning the Petition, dated July 30, 2020, the Division reviewed the Petitioner's proposed changes to title 8. The review included an assessment of the hazards associated with exposure to COVID-19, information provided in the Petition, applicable title 8 standards, federal OSHA standards, and Cal/OSHA enforcement authority.

The Division staff evaluation recommends the Petition be approved. The Division's report finds that an emergency regulation is warranted by the COVID-19 public health crisis. While section 5199 provides specific protections for infectious diseases such as COVID-19, it does not cover all California workers. The Division's report also finds that while there are general title 8

provisions that constitute a basis for Cal/OSHA to enforce the protection of workers from COVID-19, enforcement efforts would benefit from a specific regulatory mandate related to prevention of the spread of infectious diseases. Moreover, guidance currently exists from a number of authorities—including both federal OSHA and Cal/OSHA—on how employers can best protect workers from COVID-19, making development of an emergency standard feasible.

The Division's evaluation concludes that protections similar to current guidelines could be adopted via an emergency regulation, and the adoption of such standards would create clarity for employers and assist the Division's enforcement efforts. The Division also recommends an advisory committee be convened after the pandemic subsides to determine whether a permanent regulation should be adopted to address the protection of non-5199 workers from infectious diseases, including novel pathogens.

BOARD STAFF EVALUATION

The Board staff evaluation dated August 10, 2020, included a review of the Petition, and relevant federal, California, consensus, and other standards. The evaluation notes that as of September 8, 2020, state government website https://covid19.ca.gov reports there were over 453,000 COVID-19 cases in California, and over 8,000 people had died from the illness. That website, as of September 2, 2020, reports over 737,000 cases of COVID-19, and 13,758 deaths. Moreover, the overall impact of the illness has been disproportionally borne by the state's Latino population.

The Board staff evaluation recognizes that COVID-19 exposure is a significant issue, but the evaluation is not persuaded that further rulemaking is necessary. Many of the regulatory additions requested by the Petitioner were found by the Board staff evaluation to already be required by existing title 8 regulations. The Board staff evaluation suggests that enforcement and consultative outreach, rather than new regulations, would be the most effective use of limited state resources.

DISCUSSION

According to research cited in the Division's evaluation, organ failure and death may result from COVID-19. (Division, p. 5.) Approximately 14% of COVID-19 patients are hospitalized, and individuals with underlying health conditions being most at risk for hospitalization and death. (*Id.*) Both the Division and Board staff evaluations clearly set forth the seriousness of the COVID-19 pandemic, which is responsible for the illnesses, hospitalizations, and deaths of thousands of Californians. The Board staff evaluation, however, questions whether new regulations are necessary.

The Board acknowledges the concerns presented by the Board staff evaluation, regarding promulgation of new regulations and use of State resources. While those concerns are taken seriously, ultimately, the Board is in agreement with the Petitioners' assessment, and Division's assertion as the enforcement agency, that an emergency regulation would enhance worker safety. COVID-19 is a hazard to working people. The Division is well positioned, as the State agency

responsible for enforcement, to advise the Board regarding the enforceability of new safety order requirements under consideration. Accordingly, the Board also accepts the Division's assertion that an emergency regulation would strengthen, rather than complicate, the Division's enforcement efforts.

CONCLUSION AND ORDER

The Board has considered the Petition and the recommendations of the Division and Board staff. For reasons stated in the preceding discussion, the Petition is hereby GRANTED in part as follows:

The Division is requested to work with Board staff to expeditiously submit a proposal for an emergency regulation to protect all workers not covered by section 5199 from COVID-19 exposure in the workplace, for consideration no later than the November 19th, 2020 Board meeting. The proposal should include the proposed Emergency Regulatory Text, Finding of Emergency, and an Economic Impact Statement.

In the event the Board adopts an emergency regulation as a result of said proposal:

The Board requests the Division work with Board staff to convene a representative advisory committee to review any emergency COVID-19 rulemaking(s) adopted by the Board, for the purpose of establishing reasonable and necessary improvements required to avoid serious harm, as further guidance on the prevention of workplace transmission and exposure becomes available. The emergency rulemaking advisory committee should address these issues:

1. The prevailing guidance for worker protections from COVID-19 exposure in the workplace;
2. Notification for affected employers and workers;
3. Current industry best practices and guidelines; and
4. Considerations for the most vulnerable/impacted industries and professions.

The Petitioners should be invited to participate. Representatives for the following stakeholders should also be invited to participate:

1. California Department of Public Health
2. A representative cross-section of County and City Public Health Officers
3. A representative cross-section of Labor and Management representatives

The Division is requested to report back to the Board within 4 months, and again at 8 months, after the initial adoption of an emergency regulation, and within 4 months of any re-adoption.[2] The Board requests that this report include the following items at a minimum:

[2] Pursuant to Governor's Executive Order N-40-20, the timelines for filing, refiling, certification and/or review of regulations and emergency regulations are extended for a period of 60 calendar days. These timelines are further extended for 60 days by Executive Order N-66-20.

1. The dates of any advisory committee meetings and a list of invitees and participants;
2. A brief summary of the discussion, including participant concerns, and any available minutes;
3. Dates of future meetings, if applicable; and
4. Whether the Division is preparing to propose amendments to the emergency rulemaking, and the projected timeframe for providing the proposal to Board staff for notice of proposed emergency rulemaking.

If proposed amendments to an emergency rulemaking are being prepared, it should include the proposed updated Emergency Regulatory Text, updated Finding of Emergency (including evidence of necessity to avoid serious harm), and updated Economic Impact Statement.

Furthermore, the Board requests the Division convene a representative advisory committee after the COVID-19 pandemic subsides, as evidenced by the lifting of the State of Emergency declared by Governor's proclamation on March 4, 2020, to consider the necessity for a permanent regulation to protect workers not covered by section 5199 from airborne infectious diseases, including novel pathogens.

Subject: Cal/OSHA Emergency Regulations to Protect Workers from COVID-19

Dear H-2A Employer,

We hope that this email finds you well during this challenging time. The Employment Development Department (EDD), Foreign Labor Certification Unit (FLCU), is responsible for administering the Temporary Agricultural Program (H-2A) program in California. In order to assist H-2A employers during the COVID-19 pandemic, we are sharing recently approved Emergency Temporary Standards on COVID-19 Prevention.

The California Occupational Health and Safety Standards Board adopted the Emergency Temporary Standards effective November 30, 2020. These new standards require employers to establish a written COVID-19 Prevention Program to add to your Injury and Illness Prevention Program, which addresses requirements on how to protect employees in the workplace, employer-provided housing, and transportation.

The EDD would like to emphasize the new housing requirements by including the two sections the

Division of Occupational Safety and Health (Cal/OSHA) has included in its *Model COVID-19 Prevention Program* (CPP) as examples that employers will adopt in their CPP:

Assignment of Housing Units

Ensure that shared housing unit assignments are prioritized in the following order:

- Residents who usually maintain a household together outside of work, such as family members, will be housed in the same housing unit without other persons.
- Residents who work in the same crew or work together at the same worksite will be housed in the same housing unit without other persons.
- Employees who do not usually maintain a common household, work crew, or worksite will be housed in the same housing unit only when no other housing alternatives are possible.

Physical Distancing and Controls

Ensure:

- The premises are of sufficient size and layout to permit at least six feet of physical distancing between residents in housing units, common areas, and other areas of the premises.
- Beds are spaced at least six feet apart in all directions and positioned to maximize the distance between sleepers' heads. For beds positioned next to each other, i.e., side by side, the beds will be arranged so that the head of one bed is next to the foot of the next bed. For beds positioned across from each other, i.e., end to end, the beds will be arranged so that the foot of one bed is closest to the foot of the next bed. Bunk beds will not be used.
- Maximization of the quantity and supply of outdoor air and increase filtration efficiency to the highest level compatible with the existing ventilation system in housing units.

The EDD will be following the new Emergency Temporary Standards with an emphasis on the Housing Inspections to ensure compliance within the H-2A Program.

For more information on the new Emergency Temporary Standards, contact the Cal/OSHA's Consultation Services Branch at 1-800-963-9424.

For questions regarding employer-provided housing, contact Brenda Wherry, EDD Housing Coordinator, at 916-639-0462; Cornelio Gomez, Foreign Labor and Farmworker Services Group Manager, at 916-926-9047; or email WSBHousingH2A@edd.ca.gov.

SUMMARY

R46288

October 20, 2020

Scott D. Szymendera
Analyst in Disability Policy

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

The Occupational Safety and Health Administration (OSHA) does not currently have a specific standard that protects healthcare or other workers from airborne or aerosol transmission of disease or diseases transmitted by airborne droplets. Some in Congress, and some groups representing healthcare, meat and poultry processing, and other workers, are calling on OSHA to promulgate an emergency temporary standard (ETS) to protect workers from exposure to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). The Occupational Safety and Health Act of 1970 (OSH Act) gives OSHA the ability to promulgate an ETS that would remain in effect for up to six months without going through the normal review and comment process of rulemaking. OSHA, however, has rarely used this authority in the past—not since the courts struck down its ETS on asbestos in 1983.

The California Division of Occupational Safety and Health (Cal/OSHA), which operates California's state occupational safety and health plan, has had an aerosol transmissible disease (ATD) standard since 2009. This standard includes, among other provisions, the requirement that employers provide covered employees with respirators, rather than surgical masks, when these workers interact with ATDs, such as known or suspected COVID-19 cases. In addition, according to the Cal/OSHA ATD standard, certain procedures require the use of powered air purifying respirators (PAPR).

The Virginia state occupational safety and health plan (VOSH) and the Michigan state occupational safety and health plan (MIOSHA) have each promulgated emergency standards to specifically address COVID-19 in workplaces. Unlike the Cal/OSHA ATD standard, these emergency standards are in effect for only six months and apply to all employers.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020, would require OSHA to promulgate an ETS on COVID-19 that incorporates both the Cal/OSHA ATD standard and the Centers for Disease Control and Prevention's (CDC's) 2007 guidelines on occupational exposure to infectious agents in healthcare settings; similar provisions appear in S. 3475. The CDC's 2007 guidelines generally require stricter controls than its interim guidance on COVID-19 exposure. The provisions of H.R. 6139 were incorporated into the version of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The OSHA ETS provisions were not included in the House- and Senate-passed version of legislation that was signed into law as P.L. 116-127.

H.R. 6379, as introduced in the House, also would include a requirement for an OSHA ETS and permanent standard to address COVID-19 exposure; similar provisions appear in S. 3584. H.R. 6559 would include the requirements for an ETS and permanent standard, clarify the requirement that employers must report work-related COVID-19 cases, and expand protections for whistleblowers; similar provisions appear in S. 3677. The provisions of H.R. 6559 were included in H.R. 6800, The Heroes Act, passed by the House on May 15, 2020, and in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act passed by the House on October 1, 2020.

Through October 1, 2020, OSHA has issued COVID-19-related citations to employers at 62 work sites, with total proposed penalties of $913,133. These citations have been issued for violations of the OSH Act's General Duty Clause and other existing OSHA standards, such as those for respiratory protection, that may apply to COVID-19. Senators Elizabeth Warren and Cory A. Booker have raised concerns about the low amount of penalties being assessed for COVID-19-related violations.

Occupational Safety and Health Administration Standards

Section 6 of the Occupational Safety and Health Act of 1970 (OSH Act) grants the Occupational Safety and Health Administration (OSHA) of the Department of Labor (DOL) the authority to promulgate, modify, or revoke occupational safety and health standards that apply to private sector employers, the United States Postal Service, and the federal government as an employer.[1] In addition, Section 5(a)(1) of the OSH Act, commonly referred to as the General Duty Clause, requires that all employers under OSHA's jurisdiction provide workplaces free of "recognized hazards that are causing or are likely to cause death or serious physical harm" to their employees.[2] OSHA has the authority to enforce employer compliance with its standards and with the General Duty Clause through the issuance of abatement orders, citations, and civil monetary penalties. The OSH Act does not cover state or local government agencies or units. Thus, certain entities that may be affected by Coronavirus Disease 2019 (COVID-19), such as state and local government hospitals, local fire departments and emergency medical services, state prisons and county jails, and public schools, are not covered by the OSH Act or subject to OSHA regulation or enforcement.

State Plans

Section 18 of the OSH Act authorizes states to establish their own occupational safety and health plans and preempt standards established and enforced by OSHA.[3] OSHA must approve state plans if they are "at least as effective" as OSHA's standards and enforcement.[4] If a state adopts a state plan, it also must cover state and local government entities, such as public schools, not covered by OSHA. Currently, 21 states and Puerto Rico have state plans that cover all employers, and 5 states and the U.S. Virgin Islands have state plans that cover only state and local government employers not covered by the OSH Act.[5] In the remaining states, state and local government employers are not covered by OSHA standards or enforcement. State plans may incorporate OSHA standards by reference, or states may adopt their own standards that are at least as effective as OSHA's standards. State plans do not have jurisdiction over federal agencies and generally do not cover maritime workers and private-sector workers at military bases or other federal facilities.

Promulgation of OSHA Standards

OSHA may promulgate occupational safety and health standards on its own initiative or in response to petitions submitted to the agency by various government agencies, the public, or employer and employee groups.[6] OSHA is not required, however, to respond to a petition for a

[1] 29 U.S.C. §655. The provisions of the Occupational Safety and Health Act of 1970 (OSH Act) are extended to the legislative branch as an employer by the Congressional Accountability Act (P.L. 104-1).

[2] 29 U.S.C. §654(a)(1).

[3] 29 U.S.C. §667.

[4] For additional information on Occupational Safety and Health Administration (OSHA) state plans, see CRS Report R43969, *OSHA State Plans: In Brief, with Examples from California and Arizona*.

[5] Information on specific state plans is available from the OSHA website at https://www.osha.gov/stateplans.

[6] Per Section 6(b)(1) of the OSH Act [29 §655(b)(1)], a petition may be submitted by "an interested person, a representative of any organization of employers or employees, a nationally recognized standards-producing

standard or to promulgate a standard in response to a petition. OSHA may also consult with one of the two statutory standing advisory committees—the National Advisory Committee on Occupational Safety and Health (NACOSH) or the Advisory Committee on Construction Safety and Health (ACCSH)—or an ad-hoc advisory committee for assistance in developing a standard.[7]

Notice and Comment

OSHA's rulemaking process for the promulgation of standards is largely governed by the provisions of the Administrative Procedure Act (APA) and Section 6(b) of the OSH Act.[8] Under the APA informal rulemaking process, federal agencies, including OSHA, are required to provide notice of proposed rules through the publication of a Notice of Proposed Rulemaking in the *Federal Register* and provide the public a period of time to provide comments on the proposed rules.

Section 7(b) of the OSH Act mirrors the APA in that it requires notice and comment in the rulemaking process.[9] After publishing a proposed standard, the public must be given a period of at least 30 days to provide comments. In addition, any person may submit written objections to the proposed standard and may request a public hearing on the standard.

Statement of Reasons

Section 6(e) of the OSH Act requires OSHA to publish in the *Federal Register* a statement of the reasons the agency is taking action whenever it promulgates a standard, conducts other rulemaking, or takes certain additional actions, including issuing an order, compromising on a penalty amount, or settling an issued penalty.[10]

Other Relevant Laws and Executive Order 12866

In addition to the APA and OSH Act, other federal laws that generally apply to OSHA rulemaking include the Paperwork Reduction Act,[11] Regulatory Flexibility Act,[12] Congressional Review Act,[13] Information Quality Act,[14] and Small Business Regulatory Enforcement Fairness Act (SBREFA).[15] Also, Executive Order 12866, issued by President Clinton in 1993, requires

---

organization, the Secretary of Health and Human Services (HHS), the National Institute for Occupational Safety and Health, or a state or political subdivision."

[7] The National Advisory Committee on Occupational Safety and Health (NACOSH) was established by Section 7(a) of the OSH Act [29 U.S.C. §656(a)]. The Advisory Committee on Construction Safety and Health (ACCSH) was established by Section 107 of the Contract Work Hours and Safety Act (P.L. 87-581). Section 7(b) of the OSH Act provides OSHA the authority to establish additional advisory committees.

[8] The Administrative Procedure Act (APA) is codified at 5 U.S.C. §§500-596. For detailed information on federal agency rulemaking and the APA, see CRS Report RL32240, *The Federal Rulemaking Process: An Overview*.

[11] 44 U.S.C. §§3501-3520.

[12] 5 U.S.C. §§601-612.

[13] 5 U.S.C. §§801-808.

[14] 44 U.S.C. §3516 note.

[15] 5 U.S.C. §601 note. For information on these additional laws that apply to OSHA rulemaking, see U.S. Government Accountability Office (GAO), *Workplace Safety and Health: Multiple Challenges Lengthen OSHA's Standard Setting*, GAO-12-330, April 2012, Appendix II, at https://www.gao.gov/products/GAO-12-330 (hereinafter cited as GAO-12-330, *Workplace Safety and Health*).

agencies to submit certain regulatory actions to the Office of Management and Budget (OMB) and Office of Information and Regulatory Affairs (OIRA) for review before promulgation.[16]

OSHA Rulemaking Time Line

OSHA rulemaking for new standards historically has been a relatively time-consuming process. In 2012, at the request of Congress, the Government Accountability Office (GAO) reviewed 59 significant OSHA standards promulgated between 1981 (after the enactments of the Paperwork Reduction Act and Regulatory Flexibility Act) and 2010.[17] For these standards, OSHA's average time between beginning formal consideration of the standard—either through publishing a Request for Information or Advance Notice of Proposed Rulemaking in the *Federal Register* or placing the rulemaking on its semiannual regulatory agenda—and promulgation of the standard was 93 months (7 years, 9 months). Once the Notice of Proposed Rulemaking was published for these 59 standards, the average time until promulgation of the standard was 39 months (3 years, 3 months).

In 2012, OSHA's Directorate of Standards and Guidance published a flowchart of the OSHA rulemaking process on the agency's website.[18] This flowchart includes estimated duration ranges for a variety of rulemaking actions, beginning with pre-rule activities—such as developing the idea for the standard and meeting with stakeholders—and ending with promulgation of the standard. The flowchart also includes an estimated duration range for post-promulgation activities, such as judicial review. The estimated time from the start of preliminary rulemaking to the promulgation of a standard ranges from 52 months (4 years, 4 months) to 138 months (11 years, 6 months). After a Notice of Proposed Rulemaking is published in the *Federal Register,* the estimated length of time until the standard is promulgated ranges from 26 months (2 years, 2 months) to 63 months (5 years, 3 months). **Table 1** provides OSHA's estimated time lines for six major pre-rulemaking and rulemaking activities leading to the promulgation of a standard.

Table 1. OSHA Rulemaking Process: Estimated Durations of Activities

Stage	Activities	Estimated Duration
1	Preliminary rulemaking activities	12-36 months
2	Developing the proposed rule	12-36 months
3	Publishing the Notice of Proposed Rulemaking (NPRM)	2-3 months
4	Developing and analyzing the rulemaking record, including public comments and hearings	6-24 months
5	Developing the final rule, including Office of Information and Regulatory Affairs (OIRA) submission	18-36 months
6	Publishing the final rule (promulgating the new standard)	2-3 months
Total estimated duration		52-138 months
Estimated duration from NPRM to final rule		26-63 months

Judicial Review

Both the APA and the OSH Act provide for judicial review of OSHA standards. Section 7(f) of the OSH Act provides that any person who is "adversely affected" by a standard may file, within 60 days of its promulgation, a petition challenging the standard with the U.S. Court of Appeals for the circuit in which the person lives or maintains his or her principal place of business.[19] A petition for judicial review does not automatically stay the implementation or enforcement of the standard. However, the court may order such a stay. OSHA estimates that post-promulgation activities, including judicial review, can take between 4 and 12 months after the standard is promulgated.[20]

Emergency Temporary Standards

Section 6(c) of the OSH Act provides the authority for OSHA to issue an Emergency Temporary Standard (ETS) without having to go through the normal rulemaking process. OSHA may promulgate an ETS without supplying any notice or opportunity for public comment or public hearings. An ETS is immediately effective upon publication in the *Federal Register*. Upon promulgation of an ETS, OSHA is required to begin the full rulemaking process for a permanent standard with the ETS serving as the proposed standard for this rulemaking. An ETS is valid until superseded by a permanent standard, which OSHA must promulgate within six months of publishing the ETS in the *Federal Register*.[21] An ETS must include a statement of reasons for the action in the same manner as required for a permanent standard. State plans are required to adopt or adhere to an ETS, although the OSH Act is not clear on how quickly a state plan must come into compliance with an ETS.

ETS Requirements

Section 6(c)(1) of the OSH Act requires that both of the following determinations be made in order for OSHA to promulgate an ETS:

- that employees are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful or from new hazards, and
- that such emergency standard is necessary to protect employees from such danger.

Grave Danger Determination

The term *grave danger*, used in the first mandatory determination for an ETS, is not defined in statute or regulation. The legislative history demonstrates the intent of Congress that the ETS process "not be utilized to circumvent the regular standard-setting process," but the history is unclear as to how Congress intended the term grave danger to be defined.[22]

---

[19] 29 U.S.C. §655(f).

[20] OSHA, Directorate of Standards and Guidance, *The OSHA Rulemaking Process*, October 15, 2012, at https://www.osha.gov/OSHA_FlowChart.pdf.

[21] 29 U.S.C §655(c)(2).

[22] U.S. Congress, Senate Labor and Public Welfare, Subcommittee on Labor, *Legislative History of the Occupational Safety and Health Act of 1970 (S. 2193, P.L. 91-596)*, committee print, prepared by Subcommittee on Labor, 91st Cong., 1 sess., June 1971, 52-531 (Washington: GPO, 1971), p. 1218.

In addition, although the federal courts have ruled on challenges to previous ETS promulgations, the courts have provided no clear guidance as to what constitutes a grave danger. In 1984, the U.S. Court of Appeals for the Fifth Circuit in *Asbestos Info. Ass'n v. OSHA* issued a stay and invalidated OSHA's November 1983 ETS lowering the permissible exposure limit for asbestos in the workplace.[23] In its decision, the court stated that "gravity of danger is a policy decision committed to OSHA, not to the courts."[24] The court, however, ultimately rejected the ETS, in part on the grounds that OSHA did not provide sufficient support for its claim that 80 workers would ultimately die because of exposures to asbestos during the six-month life of the ETS.

Necessity Determination

In addition to addressing a grave danger to employees, an ETS must also be *necessary* to protect employees from that danger. In *Asbestos Info. Ass'n*, the court invalidated the asbestos ETS for the additional reason that OSHA had not demonstrated the necessity of the ETS. The court cited, among other factors, the duplication between the respirator requirements of the ETS and OSHA's existing standards requiring respirator use. The court dismissed OSHA's argument that the ETS was necessary because the agency felt that the existing respiratory standards were "unenforceable absent actual monitoring to show that ambient asbestos particles are so far above the permissible limit that respirators are necessary to bring employees' exposure within the PEL of 2.0 f/cc."[25] The court determined that "fear of a successful judicial challenge to enforcement of OSHA's permanent standard regarding respirator use hardly justifies resort to the most dramatic weapon in OSHA's enforcement arsenal."[26]

Although OSHA has not promulgated an ETS since the 1983 asbestos standard, it has since determined the necessity of an ETS. In 2006, the agency considered a petition from the United Food and Commercial Workers (UFCW) and International Brotherhood of Teamsters (IBT) for an ETS on diacetyl. The UFCW and IBT petitioned OSHA for the ETS after the National Institute for Occupational Safety and Health (NIOSH) and other researchers found that airborne exposure to diacetyl, then commonly used as an artificial butter flavoring in microwave popcorn and a flavoring in other food and beverage products, was linked to the lung disease *bronchiolitis obliterans*, now commonly referred to as "popcorn lung."[27] According to GAO's 2012 report on OSHA's standard-setting processes, OSHA informed GAO that although the agency may have been able to issue an ETS based on the grave danger posed by diacetyl, the actions taken by the food and beverage industries, including reducing or removing diacetyl from products, made it less likely that the necessity requirement could be met.[28]

ETS Duration

Section 6(c)(2) of the OSH Act provides that an ETS is effective until superseded by a permanent standard promulgated pursuant to the normal rulemaking provisions of the OSH Act. Section 6(c)(3) of the OSH Act requires OSHA to promulgate a permanent standard within six months of

[24] 727 F.2d at 427 (5th Cir. 1984).

[25] 727 F.2d at 427 (5th Cir. 1984). The ETS mandated a permissible exposure limit (PEL) for asbestos of two asbestos fibers per cubic centimeter of air (2.0 f/cc).

[26] 727 F.2d at 427 (5th Cir. 1984).

[27] See, for example, Centers for Disease Control and Prevention (CDC): National Institute for Occupational Safety and Health (NIOSH), *NIOSH Alert: Preventing Lung Disease in Workers who Use or Make Flavorings*, DHHS (NIOSH) publication no. 2004–110, December 2003, at https://www.cdc.gov/niosh/docs/2004-110/.

[28] GAO-12-330, *Workplace Safety and Health*.

promulgating the ETS. As shown earlier in this report, six months is well outside of historical and currently expected time frames for developing and promulgating a standard under the notice and comment provisions of the APA and OSH Act, as well as under other relevant federal laws and executive orders. This dichotomy between the statutory mandate to promulgate a standard and the time lines that, based on historical precedent, other provisions in the OSH Act might realistically require for such promulgation raises the question of whether or not OSHA could extend an ETS's duration without going through the normal rulemaking process. The statute and legislative history do not clearly address this question.

OSHA has used its ETS authority sparingly in its history and not since the asbestos ETS promulgated in 1983. As shown in **Table A-1** in the Appendix, of the nine times OSHA has issued an ETS, the courts have fully vacated or stayed the ETS in four cases and partially vacated the ETS in one case.[29] Of the five cases that were not challenged or that were fully or partially upheld by the courts, OSHA issued a permanent standard either within the six months required by the statute or within several months of the six-month period and always within one year of the promulgation of the ETS.[30] Each of these cases, however, occurred before 1980, when a combination of additional federal laws and court decisions added additional procedural requirements to the OSHA rulemaking process. OSHA did not attempt to extend the ETS's expiration date in any of these cases.

Although the courts have not ruled directly on an attempt by OSHA to solely extend the life of an ETS, in 1974, the U.S. Court Appeals for the Fifth Circuit held in *Florida Peach Growers Ass'n v. United States Department of Labor* that OSHA was within its authority to amend an ETS without going through the normal rulemaking process.[31] The court stated that "it is inconceivable that Congress, having granted the Secretary the authority to react quickly in fast-breaking emergency situations, intended to limit his ability to react to developments subsequent to his initial response."[32] The court also recognized the difficulty OSHA may have in promulgating a standard within six months due to the notice and comment requirements of the OSH Act, stating that in the case of OSHA seeking to amend an ETS to expand its focus, "adherence to subsection (b) procedures would not be in the best interest of employees, whom the Act is designed to protect. Such lengthy procedures could all too easily consume all of the temporary standard's six months life."[33]

OSHA-003227

OSHA Standards Related to COVID-19

Current OSHA Standards

Currently, no OSHA standard directly covers exposure to airborne or aerosol diseases in the workplace. As a result, OSHA is limited in its ability to enforce protections for healthcare and other workers who may be exposed to SARS-CoV-2, the virus that causes COVID-19.[34]

OSHA may enforce the General Duty Clause in the absence of a standard, if it can be determined that an employer has failed to provide a worksite free of "recognized hazards" that are "causing or are likely to cause death or serious physical harm" to workers.[35] In addition, OSHA's standards for the use of personal protective equipment (PPE) may apply in cases in which workers require eye, face, hand, or respiratory protection against COVID-19 exposure.[36]

As of October 1, 2020, OSHA has issued citations related to COVID-19 to employers at 62 work sites resulting in a total of $913,133 in proposed civil penalties.[37] The majority of these citations were issued to healthcare, nursing, and long-term care providers, including two Department of Veterans Affairs facilities—a hospital in Indianapolis, Indiana, and a community living center in Queens, New York.[38] Two employers in the meat processing industry—Smithfield Packaged Foods, Inc. in Sioux Falls, South Dakota and JBS Foods, Inc. in Greeley, Colorado—were also cited.[39] In the two meat processing cases, citations were issued for General Duty Clause violations. Other citations were issued for violations of OSHA's respiratory protection, injury and illness reporting, and recordkeeping standards.

The highest amount of proposed penalties issued to a single employer for COVID-19-related violations was $28,070 to the Harborage nursing home operated by Hackensack Meridian Healthcare in New Jersey for four serious and one other than serious violations of the respiratory protection standard.[40] For two of the serious violations, OSHA issued the maximum allowable penalty of $13,494.[41] For the other two serious violations, OSHA issued citations but no monetary penalties. For the other than serious violation, OSHA issued a penalty of $1,082. The two meat processing employers were each assessed maximum penalties of $13,494 for serious violations of the General Duty Clause.

In a letter to OSHA, Senators Elizabeth Warren and Cory A. Booker raised concerns over the amount of penalties issued to these employers.[42] The Senators asked OSHA why these employers

[38] A list of all COVID-19-related citations issued by OSHA through October 1, 2020, is available at https://www.osha.gov/enforcement/covid-19-data/inspections-covid-related-citations.

[39] OSHA has the authority to issue citations to Executive Branch agencies, but does not have the authority to issue civil monetary penalties to these agencies.

[40] Detailed information on the citations issued to this employer is available at https://www.osha.gov/pls/imis/establishment.inspection_detail?id=1476465.015.

[41] OSHA citations are classified as "serious," "other than serious," "willful," or "repeated." The maximum amounts of OSHA penalties are subject to annual inflationary adjustments.

[42] Letter from Senators Elizabeth Warren and Cory A. Booker to Loren Sweatt, Principal Deputy Assistant Secretary of

were each cited for single serious violations of the General Duty Clause rather than multiple violations for each area of the facilities in which social distancing measures were not implemented. They also asked why OSHA did not issue penalties for willful or repeated violations that carry maximum penalties of $134,937 per violation. None of the employers cited for COVID-19-related violations were issued penalties for willful or repeated violations.

OSHA Respiratory Protection Standard

National Institute for Occupational Safety and Health Certification

The OSHA respiratory protection standard requires the use of respirators certified by NIOSH in cases in which engineering controls, such as ventilation or enclosure of hazards, are insufficient to protect workers from breathing contaminated air.[43] Surgical masks, procedure masks, and dust masks are not considered respirators. NIOSH certifies respirators pursuant to federal regulations.[44] For nonpowered respirators, such as filtering face piece respirators commonly used in healthcare and construction, NIOSH classifies respirators based on their efficiency at filtering airborne particles and their ability to protect against oil particles. Under the NIOSH classification system, the letter (N, R, or P) indicates the level of oil protection as follows: N—no oil protection; R—oil resistant; and P—oil proof. The number following the letter indicates the efficiency rating of the respirator as follows: 95—filters 95% of airborne particles; 97—filters 97% of airborne particles; and 100—filters 99.7% of airborne particles. Thus an N95 respirator, the most common type, is one that does not protect against oil particles and filters out 95% of airborne particles. An R or P respirator can be used in place of an N respirator.

A respirator that is past its manufacturer-designated shelf life is no longer considered to be certified by NIOSH. However, in response to potential shortages in respirators, NIOSH has tested and approved certain models of respirators for certified use beyond their manufacturer-designated shelf lives.[45]

Respirators designed for certain medical and surgical uses are subject to both certification by NIOSH (for oil protection and efficiency) and regulation by the Food and Drug Administration (FDA) as medical devices. In general, respirators with exhalation valves cannot be used in surgical and certain medical settings because, although the presence of an exhalation valve does not affect the respirator's protection afforded the user, it may allow unfiltered air from the user into a sterile field. On March 2, 2020, FDA issued an Emergency Use Authorization (EUA) to approve for use in medical settings certain NIOSH-certified respirators not previously regulated by FDA.[46]

Labor, Occupational Safety and Health Administration, September 22, 2020, https://www.warren.senate.gov/imo/media/doc/Letter%20from%20Senators%20Warren,%20Booker%20to%20OSHA%209-22-20.pdf.

The list of respirators approved under this Emergency Use Authorization (EUA) is in Appendix B to this letter, updated at https://www.fda.gov/media/135921/download.

CDC Interim Guidance on Respiratory Protection

On March 10, 2020, the Centers for Disease Control and Prevention (CDC) updated its interim guidance for the protection of healthcare workers against exposure to COVID-19 to permit healthcare workers caring for known or suspected COVID-19 cases to use "facemasks" when respirators are not available or are in limited supply.[47] This differs from the CDC's 2007 guidelines for control of infectious agents in healthcare settings, which required the use of respirators for treatment of known or suspected cases.[48] CDC states that respirators should be prioritized for use in medical procedures likely to generate respiratory aerosols. Before this interim guidance was released, Representative Bobby Scott, Chairman of the House Committee on Education and Labor, and Representative Alma Adams, Chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Health and Human Services (HHS) Alex M. Azar II expressing their opposition to this change in the interim standard.[49]

Medical Evaluation and Fit Testing

The OSHA respiratory protection standard requires that the employer provide a medical evaluation to the employee to determine if the employee is physiologically able to use a respirator. This medical evaluation must be completed before any fit testing. For respirators designed to fit tightly against the face, the specific type and model of respirator that an employee is to use must be fit tested in accordance with the procedures provided in Appendix A of the OSHA respiratory protection standard to ensure there is a complete seal around the respirator when worn.[50] Once an employee has been fit tested for a respirator, he or she is required to be fit tested annually or whenever the model of respirator, but not the actual respirator itself, is changed. Each time an individual uses a respirator, he or she is required to perform a check of the seal of the respirator to his or her face in accordance with the procedures provided in Appendix B of the standard.[51] On March 14, 2020, OSHA issued guidance permitting employers to suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator.

---

[47] Although the interim guidance does not specifically define the term *facemask*, it does differentiate between a facemask and a respirator such that any recommendation to use a facemask does not require the use of a respirator. CDC, *Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings*, updated March 10, 2020, at https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html.

[51] 29 C.F.R. §1910.134 Appendix B.

Temporary OSHA Enforcement Guidance on the Respiratory Protection Standard

In response to shortages of respirators and other PPE during the national response to the COVID-19 pandemic, OSHA has issued three sets of temporary enforcement guidance to permit the following exceptions to the respiratory protection standard:

1. Employers may suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator;[52]
2. Employers may permit the use of expired respirators and the extended use or reuse of respirators, provided the respirator maintains its structural integrity and is not damaged, soiled, or contaminated (e.g., with blood, oil, or paint);[53] and
3. Employers may permit the use of respirators not certified by NIOSH, but approved under standards used by the following countries or jurisdictions, in accordance with the protection equivalency tables provided in Appendices A and B of the enforcement guidance document:
   - Australia,
   - Brazil,
   - European Union,
   - Japan,
   - Mexico,
   - People's Republic of China, and
   - Republic of Korea.[54]

California: Cal/OSHA Aerosol Transmissible Disease Standard

Although no OSHA standard specifically covers aerosol or airborne disease transmission, the California Division of Occupational Safety and Health (Cal/OSHA), under its state plan, promulgated its aerosol transmissible disease (ATD) standard in 2009.[55] The ATD standard covers most healthcare workers, laboratory workers, as well as workers in correctional facilities, homeless shelters, and drug treatment programs. Under the ATD standard, SARS-CoV-2, the virus that causes COVID-19, is classified as a disease or pathogen requiring airborne isolation. This classification subjects the virus to stricter control standards than diseases requiring only

[53] OSHA, *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-respiratory-protection-and-n95-shortage-due-coronavirus. Under this guidance, employers are required to address in their written respiratory protection plans when respirators are contaminated and not available for use or reuse.

[54] OSHA, *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-use-respiratory-protection-equipment-certified-under.

[55] Cal. Code Regs. tit. 8, §5199. The California state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers; workers on military bases and in national parks, monuments, memorials, and recreation areas; workers on federally recognized Native American reservations and trust lands; and U.S. Postal Service contractors.

OSHA-003231

droplet precautions, such as seasonal influenza.[56] The key requirements of the ATD standard include

- written ATD exposure control plan and procedures,
- training of all employees on COVID-19 exposure, use of PPE, and procedures if exposed to COVID-19,
- engineering and work practice controls to control COVID-19 exposure, including the use of airborne isolation rooms,
- provision of medical services to employees, including removal of exposed employees,
- specific requirements for laboratory workers, and
- PPE requirements.

Cal/OSHA Aerosol Transmissible Disease PPE Requirements

The Cal/OSHA ATD standard requires that employers provide employees PPE, including gloves, gowns or coveralls, eye protection, and respirators certified by NIOSH at least at the N95 level whenever workers

- enter or work in an airborne isolation room or area with a case or suspected case;
- are present during procedures or services on a case or suspected case;
- repair, replace, or maintain air systems or equipment that may contain pathogens;
- decontaminate an area that is or was occupied by a case or suspected case;
- are present during aerosol generating procedures on cadavers of cases or suspected cases;
- transport a case or suspected case within a facility or within a vehicle when the patient is not masked; and
- are working with a viable virus in the laboratory.[57]

In addition, a powered air purifying respirator (PAPR) with a high-efficiency particulate air (HEPA) filter must be used whenever a worker performs a *high-hazard procedure* on a known or suspected COVID-19 case.[58] High-hazard procedures are those in which "the potential for being exposed to aerosol transmissible pathogens is increased due to the reasonably anticipated generation of aerosolized pathogens"—they include intubation, airway suction, and caring for patients on positive pressure ventilation.[59] Emergency medical services (EMS) workers may use N100, R100, or P100 respirators in place of PAPRs.

[56] Cal. Code Regs. tit. 8, §5199 Appendix A.

[57] California Division of Occupational Safety and Health (Cal/OSHA), *Interim Guidance for Protecting Health Care Workers from Exposure to Coronavirus Disease (COVID-19)*, March 2020, at https://www.dir.ca.gov/dosh/Coronavirus-info.html.

[58] A PAPR uses a mechanical device to draw in room air and filter it before expelling that air over the user's face. In general, PAPRs do not require a tight seal to the user's face and do not need to be fit tested.

[59] Cal. Code Regs. tit. 8, §5199(b).

Cal/OSHA Interim Guidance on COVID-19

Cal/OSHA has issued interim guidance in response to shortages of respirators in the state due to the COVID-19 pandemic response.[60] Under this interim guidance, if the supply of N95 respirators or PAPRs are insufficient to meet current or anticipated needs, surgical masks may be used for low-hazard patient contacts that would otherwise require the use of respirators, and respirators may be used for high-hazard procedures that would otherwise require the use of PAPRs.

Virginia: VOSH COVID-19 ETS

On July 15, 2020, the Virginia Safety and Health Codes Board adopted an ETS to specifically protect employees from exposure to SARS-CoV-2, the virus that causes COVID-19.[61] This ETS, promulgated under Virginia's state occupational safety and health plan (VOSH) is the first state standard to specifically address COVID-19 in the workplace.[62] As an ETS, the VOSH standard expires within six months of its effective date, upon expiration of the Governor's State of Emergency, when superseded by a permanent standard, or when repealed by the Virginia Safety and Health Codes Board, whichever comes first. The ETS can be extended only through the normal state rulemaking process.

Unlike the Cal/OSHA ATD standard, the VOSH ETS applies to all state and local government agencies and all covered private-sector employees in the state. As part of a state plan, the VOSH ETS applies to state and local government entities, such as public schools, as employers. All covered employers in Virginia must comply with the following ETS requirements:

- exposure assessment and determination, notification of suspected cases and contacts with those cases, and employee access to their own exposure and medical records;
- return to work of employees known or suspected to have COVID-19 based on a duration of time since last symptoms or negative COVID-19 tests;[63]
- maintenance of physical distancing between employees while working and on paid breaks at the worksite, including restricted access to the worksite and common areas and break rooms;
- compliance with applicable existing PPE and respiratory protection standards when physical distancing between employees is not possible; and
- sanitation and disinfection requirements.

For all employers, if engineering, administrative, or work practice controls are not feasible or do not provide sufficient protection from SARS-CoV-2 transmission, then PPE, including respiratory PPE—such as respirators, if necessary—must be provided to employees.

---

[60] California Division of Occupational Safety and Health (Cal/OSHA), *Cal/OSHA Interim Guidance on COVID-19 for Health Care Facilities: Severe Respirator Supply Shortages*, March 28, 2020, at https://www.dir.ca.gov/dosh/coronavirus/Cal-OSHA-Guidance-for-respirator-shortages.pdf.

[61] *Infectious Disease Prevention: SARS-CoV-2 Virus That Causes COVID-19*, 16 Va. Admin. Code §25-220. This ETS is effective upon publication in a Richmond, VA, newspaper during the week of July 27, 2020.

[62] The Virginia state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S Postal Service contractors, workers at military bases or other federal enclaves in which the federal government has civil jurisdiction, workers at the U.S. Department of Energy's Southeastern Power Administration Kerr-Philpott System, and aircraft cabin crew members.

[63] A COVID-19 test for the purposes of determining if an employee can return to work must be paid for by the employer or offered such that the employee bears no cost for the test.

Hazard and Job Task Classification

The VOSH ETS requires that each employer assess its workplace for hazards and job tasks that potentially expose employees to the SARS-CoV-2 virus. Employers must classify each job task as having a "very high," "high," "medium," or "lower" risk level of exposure, according to the hazards to which employees are potentially exposed. The VOSH ETS provides the following examples of activities for the "very high" and "high" risk levels:

- "very high" risk activities include
  - using aerosol-generating procedures, such as intubation, on patients known or suspected to be infected with SARS-CoV-2;
  - collecting or handling specimens from patients known or suspected to be infected with SARS-CoV-2; and
  - performing an autopsy involving aerosol-generating procedures on the body of a person known or suspected to be infected with the SARS-CoV-2 virus at the time of death; and
- "high risk" activities include
  - health care services, including inpatient care, outpatient care, skilled nursing care, and nonmedical support services such as room cleaning, provided to patients known or suspected to be infected with SARS-CoV-2;
  - first responder and medical transport services to patients known or suspected to be infected with SARS-CoV-2; and
  - mortuary services to persons known or suspected to be infected with the SARS-CoV-2 virus at the time of death.

"Medium" risk activities are those that require employees to have more than minimal contact, within six feet of other employees, customers, or members of the public who are not known or suspected to be infected with SARS-CoV-2.[64] "Lower" risk activities are those that do not require contact with other persons within six feet or that are able to utilize the following types of engineering, administrative, or work practice controls to minimize contact between persons:

- installation of floor to ceiling barriers, such as barriers between cashiers and customers;
- telecommuting;
- staggered work shifts to reduce the number of workers at a site;
- delivering services remotely, including curbside pickup of retail purchases; and
- mandatory physical distancing of persons.

The use of face coverings other than respirators or medical or surgical masks, including cloth face coverings now required by several states, is not an acceptable method of minimizing physical contact between persons. However, the VOSH ETS requires the use of face coverings for brief contacts between persons within six feet of each other.

[64] Examples of "medium" risk work activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-30.

Engineering, Administrative, Work Practice, and PPE Requirements for "Very High," "High," and "Medium" Risk Activities

Employers with job tasks or activities in the "very high," "high," or "medium" risk classifications must adhere to specific engineering, administrative, work practice, and PPE requirements. For "very high" and "high" risk activities, engineering controls include the use of airborne infection isolation rooms (AIIR) for known or suspected COVID-19 patients and aerosol-generating procedures and Biosafety Level 3 (BSL-3) precautions for the handling of specimens from known or suspected COVID-19 patients.[65]

Employers with "very high" and "high" risk activities must implement administrative and work practice controls, including the prescreening of all employees to ensure that employees do not have signs or symptoms of COVID-19; enhanced medical screening of employees during COVID-19 outbreaks; and the use of flexible work arrangements, such as telecommuting, when feasible. In addition, all employers with "very high" or "high" risk activities must provide, to the extent feasible, psychological and behavioral support to address employee stress at no cost to the employee.

The standard also provides for engineering, administrative, and work practice controls for "medium" risk activities.[66]

PPE Requirements for "Very High" and "High" Risk Activities

Employers with "very high" and "high" risk activities, who are not already covered by the general OSHA PPE standards, are required to comply with the VOSH ETS requirements for PPE. An employer subject to these requirements must assess the workplace to determine if there are any COVID-19 hazards present or likely to be present that would require the use of PPE by employees. The employer must provide for the participation of employees and employee representatives in this assessment process and verify that this assessment has been conducted through a written certification.

If hazards that require PPE are identified, the employer must select and provide the appropriate PPE to each employee and ensure that PPE fits properly. If respiratory PPE, such as respirators or PAPR are used as PPE, the existing OSHA standards for respiratory PPE, which include medical evaluation of employees and fit testing, must be followed.

Unless contraindicated by the hazard and PPE assessment, when any employee is in contact within six feet of any person known or suspected to be infected with SARS-CoV-2, that employee must be provided with the following types of PPE:

- gloves,
- gown large enough to cover areas needing protection,
- face shield or goggles, and
- respirator.

---

[65] The VOSH ETS requires compliance with Biosafety Level 3 precautions provided in HHS, *Biosafety in Microbiological and Biomedical Laboratories. Fifth Edition*, HHS Publication no. (CDC) 21-1112, December 2009, at https://www.cdc.gov/labs/BMBL.html.

[66] Engineering, administrative, and work practice controls for "medium" risk activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-60.

While there are no specific PPE requirements for "medium" risk activities, PPE may be required based on an assessment of the hazards of these activities.

Infectious Disease Preparedness and Response Plan and Training

Infectious Disease Preparedness and Response Plan

All employers with "very high" and "high" risk activities, and employers with 11 or more employees and "medium" risk activities, must develop written infectious disease preparedness and response plans. These plans must be developed with input from employees. The deadline for the development of these plans is 60 days from the effective date of the ETS.

The infectious disease preparedness plan must include a consideration of the COVID-19 risks in the workplace, and to the extent possible and in compliance with medical privacy laws, the specific risks faced by employees with certain preexisting medical conditions. The plan must include contingency plans for continued operations during a COVID-19 outbreak and provide for the prompt identification and isolation of employees with known or suspected COVID-19 and a procedure for employees to notify the employer of COVID-19 signs or symptoms. The plan must also address interactions between the employer's worksite and other businesses, such as vendors and contractors to ensure employees of these businesses comply with the VOSH ETS and the employer's infectious disease preparedness and response plan.

Training

All employers with "very high," "high," or "medium" risk activities must provide training to all employees, including those employees whose work does not involve any COVID-19 risks. This training must teach employees to recognize the hazards of the SARS-CoV-2 virus, signs and symptoms of COVID-19, and the procedures to minimize SARS-CoV-2 hazards. If the employer has an infectious disease preparedness and response plan, training must be provided on this plan. Written certification of training must be prepared, and retraining must be provided when necessary.

Employers with only "lower" risk activities are not required to prepare a formal training plan but must provide oral or written communication on the hazards of SARS-CoV-2, the signs and symptoms of COVID-19, and measures to minimize SARS-CoV-2 exposure. VOSH is required to develop an information sheet that employers can use to satisfy this training requirement.

Training must be provided within 30 days of the effective date of the standard, except for training on the infectious disease preparedness and response plan, which must be completed within 60 days.

Whistleblower Protections

The VOSH ETS prohibits any employer from discharging or otherwise discriminating against any employee who does the following:

- exercises his or her rights under the ETS or existing whistleblower protection provisions, including the limited right of an employee to refuse work because of a reasonable fear of injury or death or serious injury;[67]

[67] To exercise this right, the employee must, if possible, have sought unsuccessfully to have the employer remedy the hazard, and there must be insufficient time to attempt to remedy the hazard through normal regulatory enforcement

- provides and wears his or her own PPE, provided the PPE does not create a greater hazard to the employee or create a serious hazard to other employees; or
- raises a reasonable concern about SARS-CoV-2 and COVID-19 infection control to the employer, the employer's agent, other employees, the government, or the public through any type of media including social media.

Michigan: MIOSHA COVID-19 Emergency Rules

On October 14, 2020, the director of the Michigan Department of Labor and Economic Opportunity, which operates Michigan's state occupational safety and health plan (MIOSHA), promulgated emergency rules to address workplace exposure to COVID-19.[68] These rules, which apply to all employers in the state, went into immediate effect and will remain in effect for six months. In addition to rules that apply to all employers, the emergency rules include specific provisions that apply to the following industries:

- construction;
- manufacturing;
- retail, libraries, and museums;
- restaurants and bars;
- healthcare;
- in-home services such as house cleaning and repair;
- personal care services such as hair styling and tattooing;
- public accommodations such as sports and entertainment venues;
- sports and exercise facilities;
- meat and poultry processing; and
- casinos.[69]

Exposure Determination

Rule 3 of the MIOSHA emergency rules requires all employers to evaluate all routine and anticipated job tasks and categorize these job tasks based on potential employee exposure to COVID-19 into one of the following four categories:

1. "Lower exposure risk" tasks are those that do not require contact with known or suspected COVID-19 cases or frequent close (within six feet) contact with the general public.
2. "Medium exposure risk" tasks are those that require frequent or close contact with persons who may be infected with COVID-19 but who are not known or suspected COVID-19 cases. In areas of the state without ongoing community

channels. This right is provided in the OSHA standards at 29 C.F.R. §1977.12(b)(2) and in the VOSH standards at 16 Va. Admin. Code §25-60-110.

[68] Department of Labor and Economic Opportunity, Michigan Occupational Safety and Health Administration (MIOSHA) Emergency Rules: Coronavirus 2019 (COVID-19), available at https://www.michigan.gov//documents/leo/Final_MIOSHA_Rules_705164_7.pdf. The Michigan state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S. Postal Service contractors, workers at businesses owned or operated by tribal members at Indian reservations, and aircraft cabin crew members.

[69] MIOSHA Emergency Rules: Coronavirus 2019 (COVID-19), Rule 11.

transmission of COVID-19, tasks that require frequent contact with persons travelling from areas with widespread COVID-19 transmission are included in this category. In areas with ongoing community transmission, tasks that involve contact with the general public are included in this category.

3. "High exposure risk" tasks are those with high potential for exposure to known or suspected COVID-19 cases. Licensed healthcare providers, medical first responders, nursing home workers, law enforcement and correctional officers, and mortuary workers are examples of types of workers that may perform tasks in this category.
4. "Very high exposure risk" tasks are those that involve the generation of aerosols during medical or mortuary procedures on known or suspected COVID-19 cases and the collection and handling of laboratory specimens from known or suspected COVID-19 cases.

Preparedness and Response Plan

Rule 4 of the MIOSHA emergency rules requires all employers to develop a written COVID-19 preparedness and response plan based on current CDC and OSHA guidance. This plan must detail measures the employer will take to protect employees from COVID-19 exposure and must be readily available to employees and their representatives.

Basic Infection Prevention Measures

Rule 5 of the MIOSHA emergency rules requires all employers to implement the following basic infection prevention measures:

- promote frequent hand-washing and provide hand-washing facilities or hand sanitizer to workers, customers, and visitors;
- require employees who are sick to not report to work or to report to an isolated location;
- prohibit workers from using other workers' desks, phones, and other equipment when possible;
- increase facility cleaning, especially of high-touch surfaces and shared equipment;
- establish procedures, consistent with CDC guidance, for disinfection of the worksite if a worker, customer, or visitor has a known case of COVID-19;
- use Environmental Protection Agency (EPA) approved disinfectants that are expected to effective against SARS-CoV-2;
- follow all manufacturer's guidelines for use of all cleaning and disinfectant products; and
- prohibit in-person work for employees whose work can be done remotely.

Health Surveillance

Rule 6 of the MIOSHA emergency rules requires all employers to implement a health surveillance system for the workplace. This system must include, at a minimum, a COVID-19 screening questionnaire for all employees and contractors entering the workplace. Employees must be directed to immediately report any signs or symptoms of COVID-19 to the employer and known and suspected COVID-19 cases must be isolated from the rest of the workforce. When an

employer learns of an employee, contractor, customer, or visitor to the worksite with a known case of COVID-19, the employer must immediately notify the local health department and, must notify, within 24 hours, any workers, contractors, or suppliers who may have come into contact with the infected person. When determining if an employee with a known or suspected case of COVID-19 may return to the workplace, the employer must follow CDC guidelines and health department quarantine and isolation orders.

Workplace Controls

Rule 7 of the MIOSHA emergency rules requires all employers to implement the following workplace controls:

- designate one or more worksite COVID-19 safety coordinators to implement, monitor, and report on COVID-19 control strategies developed by the employer and to remain on site at all times when employees are present;
- place posters in appropriate languages in the workplace that provide information on staying away from work while sick, cough and sneeze etiquette, and hand hygiene;
- keep all persons at least six feet from each other using signs, floor markings, and barriers appropriate for the worksite, to the extent possible;
- provide all employees with non-medical grade face coverings at no cost to the employees;
- require the use of face coverings when employees cannot maintain six feet of distance from other persons in the workplace, and consider the use of face shields when three feet of distance cannot be maintained;
- require face coverings in shared spaces, such as restrooms and hallways and during in-person meetings.

PPE

Rule 8 of the MIOSHA emergency rules requires that employers provide appropriate PPE, including respiratory protection, to employees based on the exposure risks of the job and current CDC and OSHA guidelines. All PPE must be properly fitted, inspected, maintained, cleaned, stored, and disposed of. In workplaces that provide medical treatment to known or suspected COVID-19 cases, employees with frequent or prolonged close contact with such patients must be provided with and wear, at a minimum, an N95 respirator, goggles or face shield, and gown.

Training Requirements

Rule 10 of the MIOSHA emergency rules requires all employers to provide training and communication, in languages common among the employees, on the following subjects:

- workplace infection-control practices;
- proper use of PPE;
- how to notify the employer of COVID-19 symptoms or diagnosis;
- how to report unsafe working conditions.

This training must be updated if the employer's COVID-19 preparedness and response plan changes or new information on COVID-19 transmission becomes available.

Recordkeeping Requirements

Rule 11 of the MIOSHA emergency rules requires that all employers maintain, for one year, records of employee training, the screening of persons entering the workplace, and any health surveillance notifications required by Rule 6.

OSHA Infectious Disease Standard Rulemaking

In 2010, OSHA published a Request for Information in the *Federal Register* seeking public comments on strategies to control exposure to infectious diseases in healthcare workplaces.[70] After collecting public comments and holding public meetings, OSHA completed the SBREFA process in 2014. Since then, however, no public actions have occurred on this rulemaking; since spring 2017, this rulemaking has been listed as a "long-term action" in DOL's semiannual regulatory agenda.

Congressional Activity to Require an OSHA Emergency Temporary Standard on COVID-19

On March 5, 2020, Representative Bobby Scott, chairman of the House Committee on Education and Labor, and Representative Alma Adams, chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Labor Eugene Scalia calling on OSHA to promulgate an ETS to address COVID-19 exposure among healthcare workers.[71] This letter followed a January 2020 letter requesting that OSHA reopen its rulemaking on the infectious disease standard and begin to formulate for possible future promulgation an ETS to address COVID-19 exposure.[72] Senator Patty Murray, ranking member of the Senate Committee on Health, Education, Labor, and Pensions and a group of Democratic Senators sent a similar letter to the Secretary of Labor calling for an OSHA ETS.[73]

In addition, in March 2020, David Michaels, who served as the Assistant Secretary of Labor for Occupational Safety and Health during the Obama Administration, wrote an op-ed in *The Atlantic* calling on OSHA to promulgate a COVID-19 ETS.[74] On March 6, 2020, the AFL-CIO and 22 other unions petitioned OSHA for an ETS on infectious diseases that would cover all workers with potential exposures.[75] OSHA formally denied the AFL-CIO petition on May 29, 2020, claiming that an ETS is not necessary to protect employees from infectious diseases generally, or

[75] Letter from Richard L. Trumka, president, AFL-CIO, to The Honorable Eugene Scalia, Secretary of Labor, March 6, 2020, at https://aflcio.org/statements/petition-secretary-scalia-osha-emergency-temporary-standard-infectious-disease.

from COVID-19.[76] National Nurses United submitted a similar petition requesting that OSHA promulgate an ETS based largely on the Cal/OSHA ATD standard.[77] On May 4, 2020, the Center for Food Safety and Food Chain Workers Alliance submitted a petition requesting that OSHA promulgate an ETS to protect meat and poultry processing workers from COVID-19 exposure in the workplace.[78] On May 18, 2020, the AFL-CIO petitioned the U.S. Court of Appeals for the D.C. Circuit for a writ of mandamus to compel OSHA to promulgate a COVID-19 ETS.[79] The circuit court denied this petition on June 11, 2020.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020

On March 9, 2020, Representative Bobby Scott introduced H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020. This bill would require OSHA to promulgate a COVID-19 ETS within one month of enactment. The ETS would be required to cover healthcare workers and any workers in sectors determined by the CDC or OSHA to be at an elevated risk of COVID-19 exposure. The ETS would be required to include an exposure control plan provision and be, at a minimum, based on CDC's 2007 guidance and any updates to this guidance. The ETS would also be required to provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD standard, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS. Title II of the bill would provide that hospitals and skilled nursing facilities that receive Medicare funding and that are owned by state or local government units and not subject to state plans would be required to comply with the ETS. Similar provisions are included in S. 3475.

P.L. 116-127, the Families First Coronavirus Response Act

The provisions of H.R. 6139 were included as Division C of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The American Hospital Association (AHA) issued an alert to its members expressing its opposition to the OSHA ETS provisions in the bill.[80] Specifically, the AHA opposed the requirement that the ETS be based on the CDC's 2007 guidance. The AHA stated that unlike severe acute respiratory syndrome (SARS), which was transmitted through the air, COVID-19 transmission is through droplets and surface contacts. Thus, the requirement of the 2007 CDC guidance that N95 respirators, rather than surgical masks, be used for patient contact is not necessary to protect healthcare workers from COVID-19, and the use of surgical masks is consistent with World Health Organization guidance. The AHA also

[79] In re: American Federation of Labor and Congress of Industrial Organizations, D.C. Cir., No. 19-1158, May 18, 2020. This petition was filed in the U.S. Court of Appeals as Section 6(f) of the OSH Act [29 U.S.C. §655(f)] grants this court exclusive jurisdiction to provide judicial review of OSHA standards.

[80] Emily Kopp, "Hospitals want to kill a policy shielding nurses from COVID-19 because there aren't enough masks," *Roll Call*, March 3, 2020, at https://www.rollcall.com/2020/03/13/hospitals-want-to-kill-a-policy-shielding-nurses-from-covid-19-because-there-arent-enough-masks/. This alert is available to American Hospital Association (AHA) members on the AHA website at https://www.aha.org.

claimed that shortages of available respirators could reduce the capacity of hospitals to treat COVID-19 patients, due to a lack of respirators for staff. The OSHA ETS provisions were not included in the version of the legislation that was passed by the House and the Senate and signed into law as P.L. 116-127.

H.R. 6379, the Take Responsibility for Workers and Families Act

Division D of H.R. 6379, the Take Responsibility for Workers and Families Act, as introduced in the House on March 23, 2020, includes the requirement that OSHA promulgate an ETS on COVID-19 within seven days of enactment and a permanent COVID-19 standard within 24 months of enactment to cover healthcare workers, firefighters and emergency response workers, and workers in other occupations that CDC or OSHA determines to have an elevated risk of COVID-19 exposure. Division D of H.R. 6379 would amend the OSH Act, for the purposes of the ETS only, such that state and local government employers in states without state plans would be covered by the ETS. The provisions of Division D of H.R. 6379 were also included in S. 3584, the COVID-19 Workers First Protection Act of 2020, as introduced in the Senate.

This legislation would specifically provide that the ETS would remain in force until the permanent standard is promulgated and would explicitly exempt the ETS from the Regulatory Flexibility Act, Paperwork Reduction Act, and Executive Order 12866. OSHA would be granted enforcement discretion in cases in which it is not feasible for an employer to fully comply with the ETS (such as a case in which PPE is unavailable) if the employer is exercising due diligence to comply and implementing alternative means to protect employees.

Like the provisions in H.R. 6139 and the version of H.R. 6201 introduced in the House, the ETS and permanent standard under H.R. 6379 would be required to include an exposure control plan and provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS and permanent standard. Although the ETS provisions in H.R. 6139 and H.R. 6201 would require that the ETS be based on the 2007 CDC guidance, specific reference to the 2007 guidance is not included in this legislation. Rather, under H.R. 6379, the ETS and permanent standard would have to incorporate, as appropriate, "guidelines issued by the Centers for Disease Control and Prevention, and the National Institute for Occupational Safety and Health, which are designed to prevent the transmission of infectious agents in healthcare settings" and scientific research on novel pathogens.

States with occupational safety and health plans would be required to adopt the ETS, or their own ETS at least as effective as the ETS, within 14 days of the legislation's enactment.

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020, was introduced in the House by Representative Bobby Scott on April 21, 2020. This legislation includes the ETS and permanent standard provisions of Division D of H.R. 6379 and S. 3584 and would require that these standards cover healthcare workers, emergency medical responders, and "other employees at occupational risk" of COVID-19 exposure. This legislation also adds two provisions that would clarify the requirements for employers to record work-related COVID-19 infections and strengthen the protections against retaliation and discrimination offered to whistleblowers. Similar provisions are included in S. 3677 and were incorporated into H.R. 6800, the Heroes Act, as passed by the House.

COVID-19 Recordkeeping

Sections 8(c) and 24(a) of the OSH Act require employers to maintain records of occupational injuries and illnesses in accordance with OSHA regulations.[81] OSHA's reporting and recordkeeping regulations require that employers with 10 or more employees must keep records of work-related injuries and illnesses that result in lost work time for employees or that require medical care beyond first aid.[82] Employers must also report to OSHA, within 8 hours, any workplace fatality, and within 24 hours, any injury or illness that results in in-patient hospitalization, amputation, or loss of an eye. Employers in certain industries determined by OSHA to have lower occupational safety and health hazards are listed in the regulations as being exempt from the recordkeeping requirements but not the requirement to report to OSHA serious injuries, illnesses, and deaths.[83] Offices of physicians, dentists, other health practitioners, and outpatient medical clinics are included in the industries that are exempt from the recordkeeping requirements.

OSHA regulations require the employer to determine if an employee's injury or illness is related to his or her work and thus subject to the recordkeeping requirements.[84] The regulations provide a presumption that an injury or illness that occurs in the workplace is work-related and recordable, unless one of the exemptions provided in the regulations applies.[85] One of the listed exemptions is "The illness is the common cold or flu (Note: contagious diseases such as tuberculosis, brucellosis, hepatitis A, or plague are considered work-related if the employee is infected at work)."[86]

Because of the nature of COVID-19 transmission, which can occur in the community as well as the workplace, it can be difficult to determine the exact source of any person's COVID-19 transmission. Absent any specific guidance, this may make it difficult for employers to determine if an employee's COVID-19 is subject to the recordkeeping requirements.

Initial OSHA Recordkeeping Guidance

On April 10, 2020, OSHA issued enforcement guidance on how cases of COVID-19 should be treated under the recordkeeping requirements.[87] This guidance stated that COVID-19 cases were recordable if they were work-related.

Under this guidance, employers in the following industry groups were to fully comply with the recordkeeping regulations, including the requirement to determine if COVID-19 cases were work-related:

- healthcare;
- emergency response, including firefighting, emergency medical services, and law enforcement; and
- correctional institutions.

---

[81] 29 U.S.C. §§657(c) and 673(a).

[82] OSHA's reporting and recordkeeping regulations are at 29 C.F.R. Part 1904.

[83] The list of exempted industries is at 29 C.F.R. Subpart B, Appendix A. States with state occupational safety and health plans may require employers in these exempted industries to comply with the recordkeeping requirements.

[84] 29 C.F.R. §1904.5.

[85] 29 C.F.R. §1905.5(a).

[86] 29 C.F.R. §1904.5(b)(2)(viii).

[87] OSHA, *Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, April 10, 2020, at https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

For all other employers, OSHA required employers to determine if COVID-19 cases were work-related and subject to the recordkeeping requirements only if both of the following two conditions were met:

1. There was objective evidence that a COVID-19 case may have been work-related. This could have included, for example, a number of cases developing among workers who worked closely together without an alternative explanation.
2. The evidence of work-relatedness was reasonably available to the employer. For purposes of this guidance, examples of reasonably available evidence included information given to the employer by employees, as well as information that an employer learned regarding its employees' health and safety in the ordinary course of managing its business and employees.

Updated OSHA Recordkeeping Guidance

OSHA issued new guidance, effective May 26, 2020, on recordkeeping of COVID-19 cases.[88] This new guidance rescinds the previous guidance issued by OSHA on April 10, 2020. Under this new guidance, all employers, regardless of type of industry or employment, are subject to the recordkeeping and recording regulations for work-related cases of COVID-19. To determine if an employer has made a reasonable determination that a case of COVID-19 was work-related, OSHA says it will consider the following factors:

- the reasonableness of the employer's investigation of the COVID-19 case and its transmission to the employee;
- the evidence that is available to the employer; and
- the evidence that COVID-19 was contracted at work.

The guidance provides examples of evidence that can be used to demonstrate that a COVID-19 case was or was not work-related such as if an employee had frequent close contact with members of the public in an area with ongoing community transmission of COVID-19.

H.R. 6559

H.R. 6559 would require that the ETS and permanent standard established pursuant to the legislation include the requirement for the recording and reporting of all COVID-19 cases in accordance with OSHA regulations in place at the time of enactment. By referencing the regulations in place, this provision would serve to supersede OSHA's guidance from April 10, 2020, and apply the requirement, currently provided in the guidance effective May 26, 2020, to determine the work-relatedness of COVID-19 cases to all employers covered by the recordkeeping regulations.

Whistleblower Protections

Section 11(c) of the OSH Act prohibits any person from retaliating or discriminating against any employee who exercises certain rights provided by the OSH Act.[89] Commonly referred to as the

[88] OSHA, *Revised Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, May 19, 2020, at https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

[89] 29 U.S.C. §660(c). OSHA also enforces whistleblower provisions in 22 other federal statutes. Information on statutes with whistleblower provisions enforced by OSHA is at OSHA, *Whistleblower Statutes Summary Chart*, October 17, 2009, at https://www.whistleblowers.gov/sites/wb/files/2019-12/WB-Statute-Summary-Chart-10.8-Final.pdf.

whistleblower protection provision, this provision protects any employee who takes any of the following actions:

- files a complaint with OSHA related to a violation of the OSH Act;
- causes an OSHA proceeding, such as an investigation, to be instituted;
- testifies or is about to testify in any OSHA proceeding; and
- exercises on his or her own behalf, or on behalf of others, any other rights afforded by the OSH Act.[90]

Other rights afforded by the OSH Act that are covered by the whistleblower protection provision include the right to inform the employer about unsafe work conditions; the right to access material safety data sheets or other information required to be made available by the employer; and the right to report a work-related injury, illness, or death to OSHA.[91] In limited cases, the employee has the right to refuse to work if conditions reasonably present a risk of serious injury or death and there is not sufficient time to eliminate the danger through other means.[92]

H.R. 6559 would require that the ETS and permanent standard promulgated pursuant to the legislation expand the protections for whistleblowers. The following additional activities taken by employees would grant them protection from retaliation and discrimination from employers and agents of employers:

- reporting to the employer; a local, state, or federal agency; or the media; or on a social media platform; the following:
  - a violation of the ETS or permanent standard promulgated pursuant to the legislation;
  - a violation of the infectious disease control plan required by the ETS or permanent standard; or
  - a good-faith concern about an infectious disease hazard in the workplace;
- seeking assistance from the employer or a local, state, or federal agency with such a report; and
- using personally supplied PPE with a higher level of protection than offered by the employer.

H.R. 6800, The Heroes Act

The provisions of H.R. 6559, including the provisions relating to recordkeeping and whistleblower protections, were included as Title III of Division L of H.R. 6800, The Heroes Act. H.R. 6800 was passed by the House on May 15, 2020. In a letter to Speaker of the House Nancy Pelosi, the AHA expressed its opposition to the ETS provisions in The Heroes Act citing the potential for confusion that new regulations could bring and the "ongoing global lack of supplies, equipment and testing capability" faced by hospitals.[93] The AHA also stated that the provision

[90] 29 C.F.R. §1977.3. Public-sector employees, except employees of the United States Postal Service, are not protected by the whistleblower provision, but may be covered by whistleblower provisions in other federal and state statutes.

[91] For additional information on other rights covered by the whistleblower protection provision, see OSHA, January 9, 2019, *Investigator's Desk Aid to the Occupational Safety and Health Act (OSH Act) Whistleblower Protection Provision*, pp. 5-7, at https://www.osha.gov/sites/default/files/11cDeskAid.pdf.

[92] 29 C.F.R. §1977.12(b)(2).

[93] Letter from Thomas P. Nickels, executive vice president, American Hospital Association, to Hon. Nancy Pelosi,

OSHA-003245

that would require the ETS to be based on state standards "suggests that the federal government is surrendering its responsibility to appropriately regulate the nation to a state government agency without consideration of whether that state's decisions are appropriate for implementation anywhere and everywhere."

H.R. 925, The Heroes Act (Revised)

The provisions of H.R. 6559 and H.R. 6800 were included in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act, passed by the House on October 1, 2020.

Speaker, U.S. House of Representatives, May 14, 2020, at https://www.aha.org/system/files/media/file/2020/05/web-AHALettertoHouseonHEROESAct051420final.pdf.

Chris and Evert,
FYI, I got the email from David Muraskin, below. His organizations are seeking reconsideration of Judge Kay's order in the dismissed case against Smithfield. The motion is attached.

Hi Kim and Charles,

So that you felt fully informed, I wanted to provide you a copy of the attached, which we just filed in our federal court case against the Plant related to its failure to protect workers from COVID-19. It asks the Court to stay rather than dismiss the action—it had dismissed the case so OSHA could act. I want to make clear, we very much intend and hope to work with you to protect workers in the Plant. Our request that the Court reopen the

case so we can go back to it if need be was just made so that we had all options available to us. Today was the last day we could file such a request under one of the rules.

I also don't believe b(6) has been contacted about arranging interviews, so I just wanted to make sure you have his information. He is copied on this email and his cell phone is b(6)

IN THE UNITED STATES DISTRICT COURT
FOR WESTERN DISTRICT OF MISSOURI

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE; *Plaintiffs*, v. SMITHFIELD FOODS, INC. AND SMITHFIELD FRESH MEATS CORP., *Defendants*.	Case No. 5:20-cv-06063-DGK

PLAINTIFFS' MOTION TO RECONSIDER AND SUGGESTIONS IN SUPPORT

When this case was last before the Court, there had not yet been any documented spread of the virus that causes COVID-19 at the Smithfield Plant in Milan, Missouri. Sadly, that is no longer the case. In the weeks since the Court's order, there has been substantial, documented spread at the Plant and into the broader community. Furthermore, while Plaintiffs have filed an OSHA imminent danger complaint, as recommended by this Court, OSHA's recent statements make it unclear whether the agency *can* protect these workers and the broader community. Therefore, Plaintiffs respectfully request this Court reconsider its order of dismissal, Dkt. No. 51, and instead reopen this case and stay it to allow for the possibility of further proceedings. Fed. R. Civ. P. 59(e); *see also* Fed. R. Civ. P. 60(b).

This Court's dismissal rested on its conclusions that: (a) "given the significant measures Smithfield is now taking to protect its essential workers from COVID-19 and the fact that there are no confirmed cases of COVID-19 currently at the Plant, the Court cannot conclude that the spread of COVID-19 at the Plant is inevitable," Dkt. No. 51, at 20; and (b) although "there may be some delay" in relief, in light of the risks the Court believed Plaintiffs faced, it should defer to

OSHA under the primary jurisdiction doctrine to determine what "occupational safety and health standards" should be enforced, *id.* at 16-17.

While Plaintiffs disagree with the Court's decision, their motion to reconsider is narrow. In light of the recent developments described herein, Plaintiffs merely ask this Court to reopen this case and stay it so that Plaintiffs can quickly seek relief should facts develop that demonstrate OSHA's remedial scheme is inadequate. If Plaintiffs have not returned in 90 days, the parties can submit briefing on whether a further stay is warranted in light of the pandemic, conditions at the Plant, and OSHA's actions, or lack thereof. Such a result is both fair and in the interests of judicial efficiency.

Under the primary jurisdiction doctrine, a court should only dismiss a case if the "parties would not be unfairly disadvantaged." *Reiter v. Cooper*, 507 U.S. 258, 268-69 (1993). Otherwise it should stay the action. *Id.* Courts in this district have provided much more substantial stays than the 90 days sought by Plaintiffs here, in cases concerning much less significant risks. *See Asarco, LLC v. NL Indus., Inc.,* No. 11-00138-CV-SW-BP, 2013 WL 12177089, at *6 (W.D. Mo. Mar. 18, 2013) (providing indefinite stay of environmental claims under the primary jurisdiction doctrine); *Sprint Spectrum L.P. v. AT&T Corp.,* 168 F. Supp. 2d 1095, 1102 (W.D. Mo. 2001) (providing 10-month stay in dispute about the use of the wireless communications network).

It is now established that every day of delay in bringing Smithfield's Milan Plant into compliance with workplace health and safety standards exposes workers to deadly infection. At the time of this Court's decision, there was only one positive case of COVID-19 in Sullivan County (where the Plant is located). Dkt. No. 48, at 1. Less than a week later, COVID-19 testing began at the plant. Almost immediately, Smithfield determined that between 20 and 30 workers

needed to be quarantined because of their contacts with infected individuals in the workplace.[1] By the beginning of the next week, neighboring Adair County, where many workers live, documented a "surge in cases," with many of those cases linked to the Smithfield Plant.[2] Just days later, Adair County had the "highest percentage increase" of COVID-19 cases of "any county in the state."[3] Thus, it appears, while Smithfield was contesting Plaintiffs' allegations, the virus was already spreading at its Milan Plant. What Plaintiffs' expert Dr. Melissa Perry stated was inevitable, Dkt. No. 35-2 ¶ 10, has come to fruition.

At the same time, it remains to be seen whether OSHA will be able to protect the Smithfield workers. Although OSHA has increased its enforcement activities since this Court's decision, its interpretation of its enforcement authority remains unclear. OSHA recently revised its policy that it would largely limit inspections during the pandemic to health-related facilities, to state it will now inspect a broader array of workplaces, including meatpacking plants. OSHA,

[2] AJ Capuano, *COVID-19: Kraft Heinz workers positive for virus, cases in Adair Co. linked to Smithfield*, KTVO (May 18, 2020), https://ktvo.com/news/local/covid-19-kraft-heinz-workers-sent-home-with-covid-19-smithfield-closing (noting that the City Manager at one point indicated so many cases were tied to Smithfield the Manager believed the Plant would need to close, although not providing the number of cases tied to the Plant, and the Plant remained open following that statement); *see also* Austin Miller, *Adair with 22 COVID cases, Sullivan up to 35*, Kirksville Daily (May 15, 2020), https://www.kirksvilledailyexpress.com/news/20200515/adair-with-22-covid-cases-sullivan-up-to-35 (describing "spike" in COVID-19 cases following testing at the Smithfield Plant).

[3] Austin Miller, *Adair County's COVID numbers continue to rise*, Kirksville Daily (May 21, 2020), https://www.kirksvilledailyexpress.com/news/20200521/adair-countys-covid-numbers-continue-to-rise.

Updated Interim Enforcement Response Plan for Coronavirus Disease 2019 (May 19, 2020) ("May 19 Memo").[4] Consistent with this, Plaintiff Rural Community Workers Alliance's imminent danger complaint led to an OSHA inspection of the Milan Plant.[5] But OSHA has been non-committal regarding what standards it can enforce against meatpackers. The May 19 Memo allows that breaches of "CDC guidance" may *not* constitute a "recognized hazard" that OSHA can correct. *Id.* It is also dubious that OSHA could *ever* act to protect the public outside of the workplace, which was the basis for Plaintiffs' public nuisance claim. *Steel Inst. of N.Y. v. City of New York*, 716 F.3d 31, 33 (2d Cir. 2013). If it is determined that OSHA has no authority to act, then even the mandamus action against the agency the Court recommended in its dismissal order, *see* 29 U.S.C. § 662(d), could not be used to obtain the essential and urgent relief they sought in this suit.

For these reasons, this Court should revisit its decision and stay, rather than dismiss, the case. Any unnecessary delay in Smithfield fully protecting its Milan Plant workers places Plaintiffs at an unfair disadvantage. It is beyond dispute that the continued operation of the Plant has contributed to the spread of the virus. At the same time, while Plaintiffs are attempting to work through OSHA as the Court recommended, whether the agency can provide them redress—even if they employ the 29 U.S.C. § 662(d) right of action—is uncertain. Thus, this Court should provide Plaintiffs a mechanism to quickly return and enforce their common-law rights. Dismissing the case would require Plaintiffs to draft a new complaint, that Smithfield would almost certainly seek to dismiss, a motion to which Plaintiffs would have to respond. Staying the

---

[4] https://www.osha.gov/memos/2020-05-19/updated-interim-enforcement-response-plan-coronavirus-disease-2019-covid-19.

[5] Plaintiffs understand OSHA plans to take addition steps related to its inspection and no enforcement action has yet been brought against the Plant.

case would allow Plaintiffs to immediately return to this Court by filing a new request for relief, which could build upon the existing record and this Court's familiarity with it. *See Microchip Tech., Inc. v. Motorola, Inc.*, No. CIV.A. 01-264-JJF, 2002 WL 32332753, at *3 (D. Del. May 28, 2002) (explaining "efficienc[y]" is a core consideration in whether to stay an action). Plaintiffs should be provided such an opportunity to update the Court if their OSHA complaint, or a related mandamus petition, proves unavailing, and renew their request to enforce their common-law rights to keep themselves and their community safe.

Thus, Plaintiffs respectfully request that this Court reconsider its prior dismissal order, stay the case for 90-days, and order the parties to submit additional filings at that time.

Media Inquiry:
Today we received a media inquiry from the BBC that was referred to Chicago's OPA Scott Allen. Scott spoke to the reporter who was inquiring about Smithfield's OSHA history. The reporter also wanted to know whether we are doing an inspection, but he has not yet answered her. We told him that we would let him know if we were going to open an inspection there.

As of this time, we have had no reports of hospitalizations at Smithfield. (b) 5

Subject: Smithfield Foods - Major employer in Sioux Falls - April 13, 2020 - Update

Hello – Update on Smithfield

Throughout the weekend the number of Covid-19 cases continued to rise and one recent news article says that 238 of Minnehaha's 438 cases involve "individuals who work at Smithfield Foods". The initial plan was that Smithfield close for three days but, the cases continued to climb throughout the weekend, initially prompting a 14-day shutdown – urged by the Governor Noem and Mayor TenHaken. The plant took an additional step to close the facility until further notice.

Several other news outlets have higher numbers for Smithfield Food employees infected with Covid-19. The US News says nearly 300 employees are infected.

Here is the news release that Smithfield issued:

https://www.smithfieldfoods.com/press-room/company-news/smithfield-foods-to-close-sioux-falls-sd-plant-indefinitely-amid-covid-19

Here is the most recent story in the Argus Leader:

https://www.argusleader.com/story/news/2020/04/12/smithfield-foods-close-sioux-falls-plant-indefinetly-amid-covid-19-outbreak/2978385001/

State-wide we currently have 730 cases.

Here is the link to the US News Story:

Subject: Reporter, DTN Re: Smithfield Foods COVID-19 citation
Attachments: OSHA citations Smithfield UFCW Local 304A.pdf

Importance: High

Megan,
My name is Todd Neeley and I'm a reporter with DTN in Omaha, Nebraska. We have been covering the outbreak of COVID-19 in meatpacking plants this year. This week Smithfield Foods' plant in Sioux Falls, South Dakota, received an OSHA citation for allegedly not taking steps to protect workers at the plant in March. It was a full month before OSHA released COVID-19 guidelines for meatpackers. We are curious, why was the plant cited for activities a full month before OSHA sent out guidelines? I've enclosed a copy of the complaint. We would appreciate a response by 10 a.m. central on Friday. Thanks for your consideration.

Sincerely,

Todd Neeley

Sioux Falls, SD 57106

Citation and Notification of Penalty

To:
Smithfield Packaged Meats Corporation
1400 North Weber Avenue
Sioux Falls, SD 57103

Inspection Number: 1472736
Inspection Date(s): 04/20/2020 - 09/02/2020
Issuance Date: 09/08/2020

Inspection Site:
1400 North Weber Avenue
Sioux Falls, SD 57103

The violation described in this Citation and Notification of Penalty is alleged to have occurred on or about the day(s) the inspection was made unless otherwise indicated within the description given below.

This Citation and Notification of Penalty (this Citation) describes violations of the Occupational Safety and Health Act of 1970. The penalty listed herein is based on these violations. You must abate the violations referred to in this Citation by the dates listed and pay the penalties proposed, unless within 15 working days (excluding weekends and Federal holidays) from your receipt of this Citation and Notification of Penalty **you either call to schedule an informal conference (see paragraph below) or** you mail a notice of contest to the U.S. Department of Labor Area Office at the address shown above. Please refer to the enclosed booklet (OSHA 3000) which outlines your rights and responsibilities and which should be read in conjunction with this form. Issuance of this Citation does not constitute a finding that a violation of the Act has occurred unless there is a failure to contest as provided for in the Act or, if contested, unless this Citation is affirmed by the Review Commission or a court.

Posting - The law requires that a copy of this Citation and Notification of Penalty be posted immediately in a prominent place at or near the location of the violation cited herein, or, if it is not practicable because of the nature of the employer's operations, where it will be readily observable by all affected employees. This Citation must remain posted until the violation cited herein has been abated, or for 3 working days (excluding weekends and Federal holidays), whichever is longer.

Informal Conference - An informal conference is not required. However, if you wish to have such a conference you may request one with the Area Director during the 15 working day contest period by calling 605-361-9566. During such an informal conference you may present any evidence or views which you believe would support an adjustment to the citation and/or penalty.

If you are considering a request for an informal conference to discuss any issues related to this Citation and Notification of Penalty, you must take care to schedule it early enough to allow time to contest after the informal conference, should you decide to do so. Please keep in mind that a written letter of intent to contest must be submitted to the Area Director within 15 working days of your receipt of this Citation. The running of this contest period is not interrupted by an informal conference.

If you decide to request an informal conference, please complete, remove and post the Notice to Employees next to this Citation and Notification of Penalty as soon as the time, date, and place of the informal conference have been determined. Be sure to bring to the conference any and all supporting documentation of existing conditions as well as any abatement steps taken thus far. If conditions warrant, we can enter into an informal settlement agreement which amicably resolves this matter without litigation or contest.

Right to Contest – You have the right to contest this Citation and Notification of Penalty. You may contest all citation items or only individual items. You may also contest proposed penalties and/or abatement dates without contesting the underlying violations. **Unless you inform the Area Director in writing that you intend to contest the citation and/or proposed penalty within 15 working days after receipt, the citation and the proposed penalty will become a final order of the Occupational Safety and Health Review Commission and may not be reviewed by any court or agency.**

Penalty Payment – Penalties are due within 15 working days of receipt of this notification unless contested. (See the enclosed booklet and the additional information provided related to the Debt Collection Act of 1982.) Make your check or money order payable to "DOL-OSHA". Please indicate the Inspection Number on the remittance. You can also make your payment electronically on www.pay.gov. On the left side of the pay.gov homepage, you will see an option to Search Public Forms. Type "**OSHA**" and click Go. From the results, click on **OSHA Penalty Payment Form**. The direct link is:

https://www.pay.gov/paygov/forms/formInstance.html?agencyFormId=53090334.

You will be required to enter your inspection number when making the payment. Payments can be made by credit card or Automated Clearing House (ACH) using your banking information. Payments of $25,000 or more require a Transaction ID, and also must be paid using ACH. If you require a Transaction ID, please contact the OSHA Debt Collection Team at (202) 693-2170.

OSHA does not agree to any restrictions or conditions or endorsements put on any check, money order, or electronic payment for less than the full amount due, and will process the payments as if these restrictions or conditions do not exist.

Notification of Corrective Action – For each violation which you do not contest, you must provide ***abatement certification*** to the Area Director of the OSHA office issuing the citation and identified above. This abatement certification is to be provided by letter within 10 calendar days after each abatement date. Abatement certification includes the date and method of abatement. If the citation indicates that the violation was corrected during the inspection, no abatement certification is required for that item. The abatement certification letter must be posted at the location where the violation appeared and the corrective action took place or employees must otherwise be effectively informed about abatement activities. A sample abatement certification letter is enclosed with this Citation. In addition, where the citation indicates that ***abatement documentation*** is necessary, evidence of the purchase or repair of equipment, photographs or video, receipts, training records, etc., verifying that abatement has occurred is required to be provided to the Area Director.

Employer Discrimination Unlawful – The law prohibits discrimination by an employer against an

employee for filing a complaint or for exercising any rights under this Act. An employee who believes that he/she has been discriminated against may file a complaint no later than 30 days after the discrimination occurred with the U.S. Department of Labor Area Office at the address shown above.

Employer Rights and Responsibilities – The enclosed booklet (OSHA 3000) outlines additional employer rights and responsibilities and should be read in conjunction with this notification.

Notice to Employees – The law gives an employee or his/her representative the opportunity to object to any abatement date set for a violation if he/she believes the date to be unreasonable. The contest must be mailed to the U.S. Department of Labor Area Office at the address shown above and postmarked within 15 working days (excluding weekends and Federal holidays) of the receipt by the employer of this Citation and Notification of Penalty.

Inspection Activity Data – You should be aware that OSHA publishes information on its inspection and citation activity on the Internet under the provisions of the Electronic Freedom of Information Act. The information related to these alleged violations will be posted when our system indicates that you have received this citation. You are encouraged to review the information concerning your establishment at www.osha.gov. If you have any dispute with the accuracy of the information displayed, please contact this office.

NOTICE TO EMPLOYEES OF INFORMAL CONFERENCE

An informal conference has been scheduled with OSHA to discuss the citation issued on 09/08/2020. The conference will be held by telephone or at the OSHA office located at 4404 South Technology Drive, Sioux Falls, SD 57106 on _____ at _____. Employees and/or representatives of employees have a right to attend an informal conference.

CERTIFICATION OF CORRECTIVE ACTION WORKSHEET

Inspection Number: 1472736

Company Name: Smithfield Packaged Meats Corporation
Inspection Site: 1400 North Weber Avenue, Sioux Falls, SD 57103
Issuance Date: 09/08/2020

List the specific method of correction for each item on this citation in this package that does not read "Corrected During Inspection" and return to: **U.S. Department of Labor – Occupational Safety and Health Administration, 4404 South Technology Drive, Sioux Falls, SD 57106**

Citation Number _____ and Item Number _____ was corrected on _____
By (Method of Abatement): _____
_____

Citation Number _____ and Item Number _____ was corrected on _____

By (Method of Abatement): _____
_____

I certify that the information contained in this document is accurate and that the affected employees and their representatives have been informed of the abatement.

_____ _____
Signature Date

_____ _____
Typed or Printed Name Title

NOTE: 29 USC 666(g) whoever knowingly makes any false statements, representation or certification in any application, record, plan or other documents filed or required to be maintained pursuant to the Act shall, upon conviction, be punished by a fine of not more than $10,000 or by imprisonment of not more than 6 months or both.

POSTING: A copy of completed Corrective Action Worksheet should be posted for employee review

Citation and Notification of Penalty

Company Name: Smithfield Packaged Meats Corporation
Inspection Site: 1400 North Weber Avenue, Sioux Falls, SD 57103

Citation 1 Item 1 Type of Violation: **Serious**

OSH ACT of 1970 Section 5(a)(1): The employer did not furnish employment and a place of employment which were free from recognized hazards that were causing or likely to cause death or serious physical harm to employees in that employees were working in close proximity to each other and were exposed to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19):

(a) Smithfield Packaged Meats Corporation at 1400 North Weber Avenue in Sioux Falls, SD 57103: On or about and at times prior to March 23, 2020, the employer did not develop or implement timely and effective measures to mitigate exposures to the hazard of SARS-CoV-2. Between March 22, 2020, and June 16, 2020, approximately 1,294 employees had tested positive for SARS-CoV-2. Of those employees, approximately 43 were hospitalized and four employees died of complications related to the virus.

Among other methods, recognized and feasible means of abatement for this hazard include:

1. The implementation of proactive social distancing measures to ensure that employee work activities, on and off the production line, allow for at least a six-foot distance between workers and at times, and if a six-foot distance is unattainable, the use of barriers between work stations, in lunchrooms, in break areas, and other common areas such as classrooms and conference rooms. Examples of these measures include:

    a. Providing visual cues such as floor markings and/or signs to remind employees to remain six feet apart from each other. Areas where this would be most effective include areas such as time clocks, locker rooms, the symptom screening area, office areas, breakrooms, the cafeteria, equipment and supply areas and some production areas.
    b. Staggering shifts to minimize the number of employees entering or exiting the facility and accessing common areas simultaneously.
    c. Staggering break and meal times to minimize the number of employees in common areas at the same time.
    d. Expanding or providing additional space for employee use of breakrooms and cafeterias to ensure that employees have adequate room to practice social distancing.

See pages 1 through 4 of this Citation and Notification of Penalty for information on employer and employee rights and responsibilities.

Citation and Notification of Penalty

Company Name: Smithfield Packaged Meats Corporation
Inspection Site: 1400 North Weber Avenue, Sioux Falls, SD 57103

e. Modifying line speed to enable employees to stand farther apart.
f. Modifying workstation orientation and/or arrangement so that employees do not work directly across from each other where feasible.
g. Installing hardened plastic or other dividers between workstations where employees are not able to practice social distancing where feasible.
h. Installing barriers in common areas where employees are not able to practice social distancing and in areas where employees with fixed workstations may interact with multiple employees on a routine basis (reception areas, security building, Human Resources customer service counter, areas were equipment/supplies are provided to employees, etc.).

2. Require employee use of protective measures including faceshields and/or face coverings where employees are not able to practice social distancing onsite.

3. The employer should work with state, local, tribal and/or territorial health officials to facilitate the identification of other exposed and potentially exposed employees at the facility.

4. Screening employees to determine if they are experiencing symptoms associated with being infected with SARS-CoV-2 prior to employees entering the facility. Screening should include:

   a. Implementing federal, state, and local health officials' guidance regarding evaluation of employee symptoms.
   b. Ensuring employees understand the screening questions.
   c. Ensuring written materials used during the screening process are available in languages that employees understand.

Abatement Note: Although each method is recognized to reduce employee exposure to this hazard, combined implementation of multiple methods is recognized to be most effective.

Abatement Note: Abatement documentation and certification are required for this item (See enclosed "Certification of Corrective Action Worksheet").

See pages 1 through 4 of this Citation and Notification of Penalty for information on employer and employee rights and responsibilities.

INVOICE / DEBT COLLECTION NOTICE

Company Name:	**Smithfield Packaged Meats Corporation**
Inspection Site:	**1400 North Weber Avenue, Sioux Falls, SD 57103**
Issuance Date:	**09/08/2020**

Summary of Penalties for Inspection Number	**1472736**
Citation 1, Serious	**$13494.00**
TOTAL PROPOSED PENALTIES	**$13494.00**

To avoid additional charges, please remit payment promptly to this Area Office for the total amount of the uncontested penalties summarized above. Make your check or money order payable to: "DOL-OSHA". Please indicate OSHA's Inspection Number (indicated above) on the remittance. You can also make your payment electronically on www.pay.gov. On the left side of the pay.gov homepage, you will see an option to Search Public Forms. Type "**OSHA**" and click Go. From the results, click on **OSHA Penalty Payment Form**. The direct link is https://www.pay.gov/paygov/forms/formInstance.html?agencyFormId=53090334. You will be required to enter your inspection number when making the payment. Payments can be made by credit card or Automated Clearing House (ACH) using your banking information. Payments of $25,000 or more require a Transaction ID, and also must be paid using ACH. If you require a Transaction ID, please contact the OSHA Debt Collection Team at (202) 693-2170.

OSHA does not agree to any restrictions or conditions or endorsements put on any check, money order, or electronic payment for less than the full amount due, and will cash the check or money order as if these restrictions or conditions do not exist.

If a personal check is issued, it will be converted into an electronic fund transfer (EFT). This means that our bank will copy your check and use the account information on it to electronically debit your account for the amount of the check. The debit from your account will then usually occur within 24 hours and will be shown on your regular account statement. You will not receive your original check back. The bank will destroy your original check, but will keep a copy of it. If the EFT cannot be completed because of insufficient funds or closed account, the bank will attempt to make the transfer up to 2 times.

Pursuant to the Debt Collection Act of 1982 (Public Law 97-365) and regulations of the U.S. Department of Labor (29 CFR Part 20), the Occupational Safety and Health Administration is required to assess interest, delinquent charges, and administrative costs for the collection of delinquent penalty debts for violations of the Occupational Safety and Health Act.

Interest: Interest charges will be assessed at an annual rate determined by the Secretary of the Treasury on all penalty debt amounts not paid within one month (30 calendar days) of the date on which the debt amount becomes due and payable (penalty due date). The current interest rate is two percent (2%). Interest will accrue from the date on which the penalty amounts (as proposed or adjusted) become a final order of the Occupational Safety and Health Review Commission (that is, 15 working days from your receipt of the Citation and Notification of Penalty), unless you file a notice of contest. Interest charges will be waived if the full amount owed is paid within 30 calendar days of the final order.

Delinquent Charges: A debt is considered delinquent if it has not been paid within one month (30 calendar days) of the penalty due date or if a satisfactory payment arrangement has not been made. If the debt remains delinquent for more than 90 calendar days, a delinquent charge of six percent (6%) per annum will be assessed accruing from the date that the debt became delinquent.

Administrative Costs: Agencies of the Department of Labor are required to assess additional charges for the recovery of delinquent debts. These additional charges are administrative costs incurred by the Agency in its attempt to collect an unpaid debt. Administrative costs will be assessed for demand letters sent in an attempt to collect the unpaid debt.

Media Inquiry:
Today we received a media inquiry from the BBC that was referred to Chicago's OPA Scott Allen. Scott spoke to the reporter who was inquiring about Smithfield's OSHA history. The reporter also wanted to know whether we are doing an inspection, but he has not yet answered her. We told him that we would let him know if we were going to open an inspection there.

As of this time, we have had no reports of hospitalizations at Smithfield. (b) 5

Subject: Smithfield Foods - Major employer in Sioux Falls - April 13, 2020 - Update

Hello – Update on Smithfield

Throughout the weekend the number of Covid-19 cases continued to rise and one recent news article says that 238 of Minnehaha's 438 cases involve "individuals who work at Smithfield Foods". The initial plan was that Smithfield close for three days but, the cases continued to climb throughout the weekend, initially prompting a 14-day shutdown – urged by the Governor Noem and Mayor TenHaken. The plant took an additional step to close the facility until further notice.

Several other news outlets have higher numbers for Smithfield Food employees infected with Covid-19. The US News says nearly 300 employees are infected.

Here is the news release that Smithfield issued:

https://www.smithfieldfoods.com/press-room/company-news/smithfield-foods-to-close-sioux-falls-sd-plant-indefinitely-amid-covid-19

Here is the most recent story in the Argus Leader:

https://www.argusleader.com/story/news/2020/04/12/smithfield-foods-close-sioux-falls-plant-indefinetly-amid-covid-19-outbreak/2978385001/

State-wide we currently have 730 cases.

Here is the link to the US News Story:

Bob – For your approval

OUTLET: USA Today
REPORTER: Kyle Bagenstose

QUESTIONS

1. Our statistics (#s 1, 2, and 3 from **Findings)** suggest a significant gap between the number of meatpacking plants where workers have died from COVID-19 and the number of plants where inspections have been conducted. Can the agency explain those discrepancies?

2. Interviewees have criticized the agency's use of "remote inspections" for COVID-19 matters at meatpacking plants. They say that video conferencing, fax, and email are inadequate to ensure safe conditions. Any comment?

3. Interviewees have noted that under existing OSHA guidance, healthcare facilities have been deemed priority for in-person OSHA inspections. Interviewees have offered that this is inadequate for meatpacking plants, given that they are subject to the Defense Production Act via executive order and are known to be superspreader facilities in line with nursing homes and prisons. Any comment? Early on, the most exposure would be those treating COVID patients. As we moved forward, we

4. Interviewees have criticized OSHA's in-person inspections of meatpacking plants, including giving advance notice to employers, being too brief, and relying too much on employers' guidance through the plants. Any comment?

5. In at least two plants, OSHA inspectors gave companies advance notice of their on-site inspections. In both instances, workers and their advocates say that prompted changes that didn't last beyond the OSHA inspection. In a July hearing in federal court, a Pennsylvania inspector testified that she gave Maid-Rite Specialty Foods advance notice of an inspection for her own protection from the coronavirus. What has OSHA advised inspectors about alerting employers to inspections in advance during the pandemic?

6. Our calculations show that the agency has issued COVID-19 related violations to only three employers, totaling about $54,000: a JBS plant in Greeley, Colorado; Smithfield Foods in Sioux Falls, South Dakota; and Quality Sausage in Dallas, Texas. Is this accurate, and if so, why have so few workplaces been cited when so many workers have fallen ill or died?

7. What is the status of the inspection of the Noah's Ark facility in Hastings, NE? (Please see our description in the **Facilities** portion.) Can the agency comment on the allegations that the plant continues to be an unsafe work place?

8. Through interviews and document reviews, we have come to understand that guidances released by OSHA in April stipulate that employers are able to determine whether or not an employee's COVID-19 diagnosis is workplace related, and thus reportable to OSHA. The guidances create a "more likely than not" test for employers to make that determination. Is this accurate?

9. Interviewees have been critical of this approach, saying it places too much control in the hands of companies, bucks usual OSHA policy to have employers report illnesses and injuries and let area offices decide on workplace connectedness, and has ultimately led to an underreporting of legitimate workplace-connected COVID-19 cases. Any comment?

10. Through interviews and document reviews, it is our understanding that some unions have observed discrepancies between the number of employees sick with or dead from COVID-19 and the incidents recorded in employers' 300 logs. Any comment? I think we'd need specific instances to comment.

11. It is our understanding that in a FAQ guidance released by OSHA in September, the agency informed employers they only had to report COVID-19 hospitalizations if they occurred within 24 hours of a workplace exposure. Deaths would only be reportable if they occurred within 30 days of a known exposure. Given that COVID-19's incubation period typically begins several days after exposure, and that some individuals suffer a prolonged COVID-19 illness that can last months before death, this would appear to allow for a significant undercounting of employee hospitalizations and deaths. Is our reading of the FAQ accurate, and if so, any comment?

12. Our understanding is that in September, U.S. senators signed a letter to DOL Secretary Eugene Scalia (The "Sherrod Brown" letter) inquiring about the inspections of meat plants. The senators have apparently received no response. Is this accurate and any comment?

13. Interviewees have been critical about OSHA's release of meatpacking safety guidelines in the spring, saying they are largely voluntarily and include language such as "when possible" and "if feasible." They opined that OSHA should have crafted mandatory emergency standards instead to ensure bare minimum safety conditions were met. Any comment?

14. Interviewees were critical of OSHA's reliance on the general duty clause to ensure worker protections, saying citations are difficult to defend in court and allow for unsafe conditions to continue while being litigated. Any comment?

15. Please comment on the allegations described at Seaboard Foods in Guymon, OK, as described in the **Facilities** section.

16. Please review the description of the Smithfield facility in Crete, NE in the **Facilities** section. In addition to any comment, how many employee COVID-19 deaths have been reported to OSHA by the facility? How many are being investigated? What are the status of those investigations?

17. Overall, interviews say the above allegations all culminate in an abdication of OSHA's responsibility to protect meatpacking workers from COVID-19. What is the agency's response?

UFCW v. USDA, No. 19-2660, Dkt. No. 24 (D. Minn.) 10

I. INTRODUCTION

Plaintiffs seek a straightforward and uncontroversial remedy: an order from this Court that pursuant to Missouri's "stay at home" order, Defendants Smithfield Foods, Inc. and Smithfield Fresh Meats Corp. (together, "Smithfield") must operate their Milan, Missouri plant (the "Plant") consistent with Centers for Disease Control ("CDC") guidance, including guidance issued by the CDC this weekend regarding the operation of slaughterhouses and meatpacking plants during the COVID-19 pandemic, Dkt. No. 29-5 (collectively, "CDC guidance"). Consistent with the purpose of that guidance, and with the support of a range of public health experts, Plaintiffs argue that Smithfield's failure to comply with this guidance poses an urgent and ongoing threat to Plant workers, their community, and to the nation, including the food supply, which would be threatened further if the Plant experienced an outbreak like those that have emerged at other Smithfield plants.

Smithfield's Motion to Dismiss ("Smithfield Br."), Dkt. No. 29, does not argue that Plaintiffs have not pled the elements of their state law claims for public nuisance and breach of the duty to provide a reasonably safe workplace. Smithfield also does not argue they are somehow free to ignore Missouri's "stay at home" order or the CDC guidance that it incorporates. Instead, Smithfield asks this Court to step back and wait to adjudicate this case and protect public health and safety because it is possible that the federal Occupational Safety and Health Administration ("OSHA") or the Missouri Department of Health and Senior Services ("MDHSS") may, at some future point, decide to step in.

No law or doctrine prohibits this Court from addressing the urgent risks posed by Smithfield's operation of the Plant in a manner inconsistent with CDC guidance. Missouri courts have long allowed private plaintiffs to go to court to seek abatement of public nuisances that may cause harm to the public health, *Scheurich v. Sw. Missouri Light Co.*, 84 S.W. 1003, 1007 (Mo.

Ct. App. 1905), and to seek injunctions for breaches of the duty to provide a reasonably safe workplace, *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 13 (Mo. Ct. App. 1982). This case is consistent with those bedrock principles of Missouri tort law. The doctrines of primary jurisdiction and *Burford* abstention do nothing to change that tradition.

There is also nothing to wait for. OSHA and MDHSS have already acted by pointing to the CDC guidelines as the standards that employers should follow to prevent further spread of COVID-19. Those standards have recently become even more specific and undeniable pursuant to recommendations issued by CDC and OSHA to protect workers at poultry and meat processing facilities from the disease. *See* Dkt. No. 29-5.[1] Plaintiffs allege that Smithfield's failure to follow those guidelines violates Missouri common law and requires injunctive relief. The Court need not defer to agencies who have said all they need to say on this matter to resolve Plaintiffs' claims. This is all the more true because neither OSHA nor the MDHSS is engaged in enforcement of the CDC guidance within the Milan plant and OSHA and Missouri's public statements establish they will not enforce these essential rules.

This litigation and the Court's Order of April 26, which required Smithfield to comply with CDC guidance pending a hearing on Plaintiffs' motion for a preliminary injunction, *see* Dkt. No. 20, have already resulted in concrete improvements at the Milan Plant. New social distancing protocols and mask-wearing requirements, announced for the first time on April 27, are already making workers and the surrounding community safer than they were before. Supplemental Declaration of Jane Doe ("Second Doe Decl.") ¶¶ 6-8. These changes also put the

[1] Importantly, this new guidance calls for many of the same reforms recommended in Dr. Robert Harrison's declaration in support of Plaintiffs' Motion for Preliminary Injunction. Dkt. No. 3-4.

lie to Smithfield's prior representations to the Court that they were already in compliance when Plaintiffs filed suit. Smithfield Br. 3.

There remains much more that Smithfield must do to comply with the CDC guidance and ensure the Plant can remain open without the disastrous spread of COVID-19 that has forced other plants to close. Dismissing this action now in hopes of enforcement by OSHA and/or MDHSS, when both have indicated enforcement action is *not* forthcoming, undermines basic rights and threatens the safety of the Nation. Neither law nor logic suggests such a result.

II. FACTUAL BACKGROUND

Smithfield's argument that the Court need not order the requested relief because, so far, there are no *confirmed* cases of COVID-19 among workers at the Plant and relatively low numbers of cases in surrounding counties compared to other parts of the state misses the point. Smithfield Br. 3-4. Most importantly, "confirmed cases" is a peculiar standard on which to rely, because workers have already shown symptoms, Dkt. No. 3-5 ¶ 4 ("First Doe Decl.") (identifying at least 8 workers with symptoms), and Smithfield continues to refuse to offer the workers testing, Second Doe Decl. ¶ 13. A public health and slaughterhouse expert explains to the Court that without the relief requested here, spread of the disease in the Plant is "inevitable." *E.g.*, Declaration of Dr. Melissa Perry ("Perry Decl.") ¶¶ 9-10, 32.

Without Court intervention, Milan will likely join a long line of slaughterhouses around the country to become the source of a virus cluster. This morning, Smithfield's packing facility in Clinton, North Carolina reported two new positive cases.[2] Just this past Monday, Crete, Nebraska officials stated Smithfield's plant there would be closed because of an outbreak

[2] Chris Berendt, *Virus cases at Smithfield rise to seven*, THE SAMPSON INDEPENDENT (Apr. 29, 2020), https://www.clintonnc.com/news/48498/virus-casesat-smithfieldrise-to-seven.

(although it now appears Smithfield may be keeping that plant open despite the health and safety concerns).[3] Last week, a report examining meat and poultry plants determined that 150 such plants are located in counties that have an infection rate higher than 75% of the United States.[4] Plaintiffs filed this suit seeking solely injunctive relief to bring the Plant into compliance with existing public health guidance so that it could remain in operation, and so that the residents of the surrounding counties would not join the list of other rural areas that have turned into COVID-19 hot spots because they are home to meat processing facilities.

Plaintiffs' efforts to enforce Missouri law appear to be working already. In response to the suit, this Court Ordered Smithfield on April 26 to "comply with all guidance from CDC and other public authorities." Dkt. No. 20, at 3. Then, on April 27, a new sign appeared in the plant stating that masks must be worn at all times. Second Declaration of Axel Fuentes ("Fuentes Decl.") ¶¶ 4-5 & Ex. A. That same day, another new sign provided an updated protocol for clock-in and -out procedures to permit greater social distancing. *Id* ¶ 6*;* Second Doe Decl. ¶ 7.

However, Smithfield's Milan workers remain without some basic protections. They continue to stand shoulder-to-shoulder on the line. Second Doe Decl. ¶ 5. Hallways, restrooms, and break areas remain crowded, with workers "regularly closer than 6-feet apart." *Id.* ¶ 9. Smithfield has failed to provide handwashing breaks or allow workers to step off the line to blow

[4] Kyle Bagenstose, Sky Chadde & Matt Wynn, *Coronavirus at meatpacking plants worse than first thought, USA TODAY investigation finds: Coronavirus closed Smithfield and JBS meatpacking plants. Many more are at risk. Operators may have to choose between worker health or meat in stores*, USA TODAY (Apr. 22, 2020), https://www.usatoday.com/in-depth/news/investigations/2020/04/22/meat-packing-plants-covid-may-force-choice-worker-health-food/2995232001/.

their noses. *Id.* ¶ 10. Smithfield's actual enforcement of its stated mask policy appears non-existent. *Id.* ¶¶ 3-4. Smithfield provides no paid sick leave and encourages workers to come in sick. *Id.* ¶¶ 12, 15. And Smithfield has not provided for testing or any system of contact tracing. *Id.* ¶ 13. These facts remain contrary to what Dr. Robert Harrison, Dr. Melissa Perry, and the CDC explain is necessary to keep the Plant from becoming an incubator for disease. *See* Declaration of Dr. Robert Harrison ("Harrison Decl.), Dkt. No. 3-4. In fact, Dr. Perry explains that immediately correcting these conditions is both practical and essential. Perry Decl. ¶¶ 8-32.

III. ARGUMENT

A. The Court Should Not Exercise Its Discretion to Apply the Primary Jurisdiction Doctrine Where the Relevant Federal Guidance Has Already Been Issued and the Only Question Is Its Enforcement, Which OSHA Has Disclaimed.

Primary jurisdiction "is to be 'invoked sparingly, as it often results in added expense and delay.'" *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005) (quoting *Red Lake Bank of Chippewa Indians v. Barlow*, 846 F.2d 474, 477 (8th Cir. 1988)). The district court should dismiss a case and refer a matter to a federal agency pursuant to the primary jurisdiction doctrine only where "the parties would not be unfairly disadvantaged." *Reiter v. Cooper*, 507 U.S. 258, 268-69 (1993). This is not such a case.

Here, Jane Doe and her coworkers, including many Rural Community Workers Alliance ("RCWA") members, as well as the communities where they live, have already benefitted from the changes instituted at the Plant in response to this Court's Order. Plaintiffs would be unfairly disadvantaged if the Court withdrew its supervisory presence, which ensures that Smithfield will continue complying with applicable OSHA and CDC guidance. This is particularly the case where Smithfield relies entirely on an "informal" letter they have received from OSHA, that cannot and—based on OSHA's statements—will not result in federal enforcement. Declaration

of Dr. David Michaels ("Michaels Decl.") ¶¶ 13-14; Declaration of Ann Rosenthal ("Rosenthal Decl.") ¶¶ 12-14.

1. Plaintiffs' Claims Do Not Involve OSHA Expertise.

The Eighth Circuit explains that a core objective of this prudential doctrine is to take advantage of "agency expertise," *Alpharma*, 411 F.3d at 938, but here, Plaintiffs ask the Court to consider claims that call for judicial, not administrative, resolution. Plaintiffs' public nuisance claims seek a remedy against business operations that cause a harm to the public generally. OSHA's jurisdiction focuses on the workplace. It has no authority to promulgate standards to protect the general public. *Steel Inst. of N.Y. v. City of New York*, 716 F.3d 31, 33 (2d Cir. 2013) ("the Act does not protect the general public, but applies only to employers and employees in workplaces"); *accord* Michaels Decl. ¶ 8; Rosenthal Decl. ¶ 5. And although Missouri's cause of action for violation of the right to a safe workplace certainly relates to occupational safety, that claim has long formed the basis for injunctive relief in court, even subsequent to the creation of OSHA in 1970. *See, e.g.*, *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 12-13 (Mo. App. 1982).[5] Plaintiffs bring claims under state common law doctrines that OSHA's regulatory scheme does not displace, and there is no reason for this Court to defer to the primary jurisdiction of OSHA before resolving those claims. *See* 29 U.S.C. § 653(b)(4); *United Steelworkers of America v. Marshall*, 647 F.2d 1189, 1235-36 (D.C. Cir. 1980) (OSHA leaves "state schemes wholly intact as a legal matter"). In fact, primary jurisdiction is not applicable where plaintiffs do not seek to

[5] The Missouri court expressly rejected an argument that it should defer and allow OSHA to address the problem because it could not identify an "OSHA standard which would appear to cover tobacco smoke." *Smith*, 643 S.W.2d at 14. Similarly, OSHA "has not adopted a specific standard that protects employees from the risks of infectious disease like COVID-19." Michaels Decl. ¶ 10.

enforce a federal statute or regulation but bring "an independent state law cause of action for negligence and strict liability." *Ryan v. Chemlawn Corp.*, 935 F.2d 129, 132 (7th Cir. 1991).

Allowing Plaintiffs claims to proceed will also further national "consistency"—the other rationale for primary jurisdiction—because any relevant OSHA activity has already occurred, and the Court already has the benefit of the agency's "expertise." *See Alpharma*, 411 F.3d at 938. In particular, OSHA, in conjunction with the CDC, has published detailed guidelines on how to mitigate the spread of COVID-19 in meat processing facilities. Dkt. No. 29-5 (guidance). Plaintiffs simply request that the Court require Smithfield to comply with those guidelines, as Drs. Harrison and Perry recommend. Eighth Circuit precedent instructs that courts should not defer to agencies under the primary jurisdiction doctrine when the court is asked to analyze what an agency has already done, not substitute its judgment as to what an agency might or should do in the future. *Alpharma*, 411 F.3d at 939 ("The question of whether Pennfield's BMD has been approved as safe and effective is much different from the question of whether Pennfield's BMD should be approved as safe and effective, and it is only the latter that requires the FDA's scientific expertise."); *see also Illinois Pub. Interest Research Grp. v. PMC, Inc. Through PMC Specialties Grp.*, 835 F. Supp. 1070, 1076 (N.D. Ill. 1993) (declining to defer to agency's primary jurisdiction where the court was not being asked to set standards but merely "to enforce existing standards"); *Segedie v. Hain Celestial Grp., Inc.*, No. 14-5029, 2015 WL 2168374, at *13 (S.D.N.Y. May 7, 2015) (declining to defer to agency's primary jurisdiction where the "claims seek to hold Defendant to existing regulations, not proposed regulations").

2. There Are No Relevant OSHA Proceedings.

Further, there is no administrative activity to which the Court could defer—as is necessary for the primary jurisdiction doctrine to apply. *See, e.g., Natural Res. Def. Council v.*

Metro. Water Reclamation Dist. of Greater Chi., No. 11-02937, 2016 WL 1298124, at *4 (N.D. Ill. Mar. 31, 2016) (holding primary jurisdiction doctrine does not apply because defendant did "not identify with precision any relevant proceedings to which this Court should defer for the resolution of the question presented."). Smithfield argues that an April 22 letter from OSHA's regional administrator suggests that "OSHA is already in the process of exercising its jurisdiction at the Plant." Smithfield Br. 1. But that letter responds to a specific workplace injury that occurred on April 15 and says nothing about COVID-19. Dkt. No. 29-2. The sole reference to the virus appears in a generic COVID-19 questionnaire following a more specific questionnaire addressing the April 15 incident. *Id.*

Moreover, the April 22 letter represents an inquiry, not an inspection, and does not suggest an inspection is imminent. It is conceivable that under OSHA's regulatory regime this written exchange of information, called an investigation, could lead OSHA to request an in-person inspection. Michaels Decl. ¶¶ 15-16. However, the interim guidance OSHA has issued for its administrators during the pandemic makes this unlikely; OSHA has expressly stated its policy is *not* to inspect meat packing plants. Michaels Decl. ¶¶ 13-14; Rosenthal Decl. ¶ 13; *see also* Dkt. No. 29-4 (guidance).[6] An inspection is ***a prerequisite*** to any OSHA action that could require a workplace to abate unsafe conditions. 29 U.S.C. § 658(a); *see also* Michaels Decl. ¶ 15; Rosenthal Decl. ¶ 14. Furthermore, if such an inspection did occur, it could in turn lead to a

[6] Indeed, Dr. Michaels, the longest serving head of OSHA in its history, and a current scholar on its practices states that throughout the crisis "OSHA has failed to enforce any of its limited requirements that could conceivably protect meatpacking workers from illness." Michaels Decl. ¶ 8; *see also id.* ¶¶ 10, 12 (explaining OSHA's only potentially applicable standards leave their implementation to the discretion of the employer and that OSHA has not taken any steps to make them mandatory in response to COVID-19). *See also* Rosenthal Decl. ¶¶ 10-12 (stating substantially the same).

citation issued anytime in the next six months, which would then be reviewable by the independent Occupational Safety and Health Review Commission before it could be enforced. 29 U.S.C. § 658(c), 659(c); *see also* Michaels Decl. ¶¶ 16-17; Rosenthal Decl. ¶¶ 15-17.

Dr. Michaels and Anne Rosenthal, both of whom served long stints within high levels of OSHA, are of the opinion that written investigation letters like the one sent to Smithfield on April 22 rarely, if ever, lead to citations, enforcement actions, or penalties, particularly in light of OSHA's stated non-enforcement policy against meat packing plants. Michaels Decl. ¶¶ 13-16. Rosenthal Decl. ¶¶ 11-3. Michaels and Rosenthal also opine that even if the letter did lead to an inspection and to any kind of enforcement on a reasonable timeline, none of the specific OSHA standards spelled out on page 13 of Smithfield's motion would be sufficiently strong to allow OSHA to enforce the CDC guidelines, even the guidelines that OSHA has helped to promulgate. Michaels Decl. ¶¶ 10-12; Rosenthal Decl. ¶¶ 8-9.

Smithfield argues that the Department of Labor could seek an emergency injunction to enforce OSHA standards even absent an inspection, but that argument is belied by statute and Supreme Court and Eighth Circuit law. 29 U.S.C. § 662(c) (noting that the Secretary of Labor will request an injunction only in response to a recommendation from an in-person inspector); *Whirlpool Corp. v. Marshall*, 445 U.S. 1, 8-9 (1980) (explaining that OSHA's emergency injunction process begins with an inspection); *N.L.R.B. v. Tamara Foods, Inc.*, 692 F.2d 1171, 1181 (8th Cir. 1982) (same). Furthermore, Smithfield points to no case where this power was actually used. Plaintiffs could locate only two in the entire country, neither of which was decided in the past 25 years. *Reich v. Dayton Tire, a Div. of Bridgestone/Firestone, Inc.*, 853 F. Supp. 376, 378-79 (W.D. Okla. 1994) (Secretary issued request for injunction following multiple inspections over an eleven-month period); *Marshall v. Daniel Const. Co., Inc.*, 563 F.2d 707,

710-15 (5th Cir. 1977) (noting that employee's right under OSH Act is limited to requesting an inspection, and inspector's right is limited to recommending that the Secretary seek an emergency injunction from the court in the event that dangerous conditions are found).[7]

Finally, Smithfield attempts to frighten this Court with claims that the injunctive relief Plaintiffs are seeking is "truly unprecedented" because it gives Plaintiffs' experts too much control over crafting a remedy. Smithfield Br. 14. Although some courts have declined to issue preliminary injunctive relief responding to emergency conditions caused by COVID-19, many other courts have granted such relief, even when it required detailed changes to facility operations recommended by plaintiffs and their experts. *See, e.g.*, *Fraihat v. U.S. Immigration & Customs Enf't*, No. 19-1546, 2020 WL 1932570, at *21-*29 (C.D. Cal. Apr. 20, 2020) (granting preliminary injunction mandating that ICE revisit custody determinations, including considering release for all persons in ICE detention whose age or health conditions place them at increased risk due to the COVID-19 pandemic); *Esshaki v. Whitmer*, No. 20-10831-, 2020 WL 1910154, at

---

[7] Last night, the President issued an Executive Order stating that the United States Department of Agriculture ("USDA") would be protecting worker health and safety at meat packing plants. *See* "Executive Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19," The White House (April 28, 2020), https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/. This order does not impact these proceedings. Importantly, twice in the last six months USDA expressly disclaimed that its Food Safety and Inspection Service, which is its division that works in the plants, has *any* role to play in worker safety and thus any expertise on how to protect workers. USDA Brief, *UFCW v. USDA*, No. 19-2660, Dkt. No. 16, at 29 (D. Minn.) ("[N]or are issues of workplace safety reasonably related to FSIS's food safety mission" (citing *Dawkins ex rel. Estate of Dawkins v. United States*, 226 F. Supp. 2d 750, 757 (M.D.N.C. 2002)); USDA Reply, *UFCW v. USDA*, No. 19-2660, Dkt. No. 24, at 15 (D. Minn.) ("[W]orker safety falls outside FSIS's regulatory authority" and therefore USDA defers to OSHA). Moreover, the Executive Order references OSHA guidance—not USDA promulgating any new standard—confirming that the Court already has before it whatever expertise the government can provide.

*1 (E.D. Mich. Apr. 20, 2020) (granting preliminary injunction reducing Michigan signature requirement for inclusion on ballot by 50% in light of COVID-19 pandemic); *Cameron v. Bouchard*, No. 20-10949, 2020 WL 1929876, at *2 (E.D. Mich. Apr. 17, 2020), modified on reconsideration, No. 20-10949, 2020 WL 1952836 (E.D. Mich. Apr. 23, 2020) (granting TRO requiring jail to implement certain minimum measures to protect against spread of COVID-19, including ensuring access to no-cost soap and hand sanitizer, ensuring staff wash hands and wear PPE, conduct testing, and provide for "adequate spacing of six feet or more between people incarcerated, to the maximum extent possible, so that social distancing can be accomplished").

Here, where Plaintiffs' experts' recommendations track closely if not completely CDC guidance, including recent guidance specific to the meat processing industry, Court action will not be radical. Plaintiffs merely request the Court extend the Order it already issued and allow an inspection by Plaintiffs' designated expert to determine whether the guidelines are being followed and if additional measures may be necessary given the particular feature of the Plant. In light of the certain crisis that will result if Smithfield continues to delay protecting its workers, it is Smithfield's request the Court decline to act that is extraordinary. *See generally* Perry Decl.

B. The Court Should Not Exercise Its Discretion to Defer to State and County Health Departments That Expressly Embrace the Same CDC Guidance Plaintiffs Seek to Enforce.

With its primary jurisdiction argument, Smithfield suggests that the workplace safety issues at stake in this case are so uniquely committed to the expertise of federal OSHA that this Court should dismiss the matter and defer to OSHA. With its *Burford* abstention argument, Smithfield makes the entirely contradictory suggestion that the matters at stake here are so bound up with the *state* public health regulatory scheme that the federal courts should defer to the State of Missouri, its agencies, and its courts in this matter. Smithfield's self-defeating *Burford* argument provides no basis to dismiss Plaintiffs' claims.

With respect to *Burford* abstention, the Supreme Court has instructed that "federal courts have a strict duty to exercise the jurisdiction conferred upon them by Congress" and may decline to do so only "under exceptional circumstances." *Quackenbush v. Allstate Ins. Co.*, 517 U.S. 706, 716 (1996) (citations and internal quotations omitted). The Eighth Circuit has likewise stated "*Burford* abstention applies when a state has established a complex regulatory scheme supervised by state courts and serving important state interests, and when resolution of the case demands specialized knowledge and the application of complicated state laws." *Bilden v. United Equitable Ins. Co.*, 921 F.2d 822, 825 (8th Cir. 1990). *Burford* applies only where the state has developed a centralized "system of thorough judicial review" specific to the complex regulatory scheme at issue. *Burford v. Sun Oil Co.*, 319 U.S. 315, 325 (1943); *see also United States v. Morros*, 268 F.3d 695, 705 (9th Cir. 2001) (applying *Burford* abstention only when a state has consolidated all disputes regarding the regulatory scheme at issue into a single, designated court). This balancing of interests "only rarely favors abstention." *Quackenbush*, 517 U.S. at 728. Where, as here, federal court jurisdiction is conferred by diversity of citizenship, even if there were "difficult or uncertain" questions of state law (and there are not) the Supreme Court has made clear that *Burford* supplies no basis to relinquish the jurisdiction Congress has conferred. *Meredith v. City of Winter Haven*, 320 U.S. 228, 234 (1943).

In lieu of actually meeting the doctrine, Smithfield suggests vaguely that "this matter should be handled by state and county public health agencies." Smithfield Br. 17. But the fact that state and local health agencies have the authority, in theory, to enforce public health rules does not amount to a centralized "system for thorough judicial review" of disputes relating to the common law rights that Plaintiffs assert here. Instead, to enforce their rights, Plaintiffs must rely on their time-honored ability to petition a court, including a federal court where federal

jurisdiction otherwise lies. *See, e.g.*, *Jackson v. City of Blue Springs*, 904 S.W.2d 324, 329 (Mo. App. 1995); *K.C. 1986 Ltd. P'ship v. Reade Mfg.*, 33 F. Supp. 2d 1143, 1156 (W.D. Mo. 1998). The alternative to federal courts exercising their jurisdiction over cases like these is that these cases will go to state court where they are just as likely to be heard by courts without public health expertise in these matters and just as likely to yield inconsistent outcomes. *Compare Burford*, 319 U.S. at 326 ("To prevent the confusion of multiple review of the same general issues, the [Texas] legislature provided for concentration of all direct review of the Commission's orders in the State district courts of Travis County.").

Furthermore, although state courts may have jurisdiction to hear Plaintiffs' claims, *Burford* abstention is only appropriate "[w]here timely and adequate state-court review is available." *New Orleans Pub. Serv., Inc. v. Council of City of New Orleans*, 491 U.S. 350, 361 (1989); *Univ. of Maryland at Baltimore v. Peat Marwick Main & Co.*, 923 F.2d 265, 271 (3d Cir. 1991). In this case, remanding this issue to state court would require delay that Plaintiffs and the public generally cannot afford.

The Court's exercise of its jurisdiction here likewise "would [not] disrupt a state administrative process." *Heartland Hosp. v. Stangler*, 792 F. Supp. 670, 672 (W.D. Mo. 1992) (quoting *Cty of Allegheny v. Frank Mashuda Co.*, 360 U.S. 185, 189 (1959)). It may be true that public health agencies in Missouri have expertise regarding public health matters and have a responsibility for exercising public enforcement. But the "exceptional circumstances" warranting abstention apply only where the party seeking abstention can point to a specific state administrative process that will be disrupted by the federal proceedings. *Caranchini v. Kozeny &*

McCubbin, LLC, No. 11-0464, 2011 WL 5921364, at *5 (W.D. Mo. Nov. 28, 2011) (Kays, J.). Smithfield identifies no such process here.[8]

Assuming there was a special forum to which the Court could defer (and there is not), there is also no reason to defer as nothing in Missouri's law of public nuisance or its right to a safe workplace tort is "particularly complicated," and the Court's exercise of its jurisdiction here would not frustrate Missouri's interest in managing public health issues. *Doe v. McCulloch*, 835 F.3d 785, 788 (8th Cir. 2016) (declining to apply *Burford* abstention to question of Missouri state law). Aside from general principles of Missouri tort law, the only state law at issue here is the "stay at home" order issued by the Governor in March. That already-promulgated order provides a relatively straightforward mandate. It includes multiple references to "CDC guidance," Dkt. No. 29-1 ("stay at home" order), and makes the same recommendations regarding social distancing, even for essential businesses that must remain open, that the CDC and OSHA have emphasized in their guidance documents, including guidance documents specific to the meat processing industry, *see* Dkt. No. 29-4. An established state regime that actually relies on federal guidance, which is what Plaintiffs seek to enforce, is not a basis for *Burford* abstention.

Smithfield seeks to manufacture a complex question by pointing to language in the "stay at home" order that designates meatpacking Plants as essential operations that should stay open

[8] It bears mentioning that Missouri's attorney general saw no need to oforgo litigation or even to litigate in state court because of the "active[] involve[ment]" of state and local public health agencies, *See* Smithfield Br. 17. He filed a lawsuit in federal district court against the People's Republic of China, asserting Missouri common law claims of public nuisance. *Missouri v. The People's Republic of China*, No. 20-99, Compl., Dkt. No. 1 (E.D. Mo.). The chief law enforcement officer of the state properly concluded that the federal interests in "in affording foreign litigants a neutral forum for the adjudication of state law claims against them" outweigh any state law interests regarding coherent application of its public nuisance doctrine. *See Cleveland Hous. Renewal Project v. Deutsche Bank Tr. Co.*, 621 F.3d 554, 568 (6th Cir. 2010).

and suggesting Plaintiffs' request that Smithfield provide for social distancing would prevent Smithfield from operating. Smithfield Br. 17. Not so. Plaintiffs do not seek to close the Plant. Smithfield and its workers can continue operations while complying with social distancing requirements. In fact, that may be the *only* way that Smithfield can operate the Plant safely. Dr. Perry, an occupational health and safety professor and past president of the American College of Epidemiology, states that in her professional opinion, workers on meat production lines must stand at least six feet apart in order to perform their jobs safely during the current pandemic. If they do not, disease *will* spread in the Plant and into the surrounding community. Perry Decl. ¶¶ 9-13 ("Without social distancing, it is my expert opinion that the spread of COVID-19 in slaughterhouses and meat packing plants is inevitable."). Requiring social distancing in this case, therefore, would not be "disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern," *Wolfson v. Mutual Benefit Life Ins.*, 51 F.3d 141, 144 (8th Cir. 1995). Smithfield fails "to prove that the exercise of federal jurisdiction would in any way frustrate the state's interests on the facts of this case" as is necessary for *Burford* abstention. *Melahn v. Pennock Ins., Inc.*, 965 F.2d 1497, 1507 (8th Cir. 1992).

IV. CONCLUSION

For the foregoing reasons, Plaintiffs respectfully request that the Court deny Smithfield's motion to dismiss.

April 29, 2020

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

Updated October 20, 2020

Congressional Research Service
https://crsreports.congress.gov
R46288

CRS REPORT
Prepared for Members and
Committees of Congress

OSHA-003280

Congressional Research Service
Informing the legislative debate since 1914

SUMMARY

R46288

October 20, 2020

Scott D. Szymendera
Analyst in Disability Policy

Occupational Safety and Health Administration (OSHA): Emergency Temporary Standards (ETS) and COVID-19

The Occupational Safety and Health Administration (OSHA) does not currently have a specific standard that protects healthcare or other workers from airborne or aerosol transmission of disease or diseases transmitted by airborne droplets. Some in Congress, and some groups representing healthcare, meat and poultry processing, and other workers, are calling on OSHA to promulgate an emergency temporary standard (ETS) to protect workers from exposure to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). The Occupational Safety and Health Act of 1970 (OSH Act) gives OSHA the ability to promulgate an ETS that would remain in effect for up to six months without going through the normal review and comment process of rulemaking. OSHA, however, has rarely used this authority in the past—not since the courts struck down its ETS on asbestos in 1983.

The California Division of Occupational Safety and Health (Cal/OSHA), which operates California's state occupational safety and health plan, has had an aerosol transmissible disease (ATD) standard since 2009. This standard includes, among other provisions, the requirement that employers provide covered employees with respirators, rather than surgical masks, when these workers interact with ATDs, such as known or suspected COVID-19 cases. In addition, according to the Cal/OSHA ATD standard, certain procedures require the use of powered air purifying respirators (PAPR).

The Virginia state occupational safety and health plan (VOSH) and the Michigan state occupational safety and health plan (MIOSHA) have each promulgated emergency standards to specifically address COVID-19 in workplaces. Unlike the Cal/OSHA ATD standard, these emergency standards are in effect for only six months and apply to all employers.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020, would require OSHA to promulgate an ETS on COVID-19 that incorporates both the Cal/OSHA ATD standard and the Centers for Disease Control and Prevention's (CDC's) 2007 guidelines on occupational exposure to infectious agents in healthcare settings; similar provisions appear in S. 3475. The CDC's 2007 guidelines generally require stricter controls than its interim guidance on COVID-19 exposure. The provisions of H.R. 6139 were incorporated into the version of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The OSHA ETS provisions were not included in the House- and Senate-passed version of legislation that was signed into law as P.L. 116-127.

H.R. 6379, as introduced in the House, also would include a requirement for an OSHA ETS and permanent standard to address COVID-19 exposure; similar provisions appear in S. 3584. H.R. 6559 would include the requirements for an ETS and permanent standard, clarify the requirement that employers must report work-related COVID-19 cases, and expand protections for whistleblowers; similar provisions appear in S. 3677. The provisions of H.R. 6559 were included in H.R. 6800, The Heroes Act, passed by the House on May 15, 2020, and in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act passed by the House on October 1, 2020.

Through October 1, 2020, OSHA has issued COVID-19-related citations to employers at 62 work sites, with total proposed penalties of $913,133. These citations have been issued for violations of the OSH Act's General Duty Clause and other existing OSHA standards, such as those for respiratory protection, that may apply to COVID-19. Senators Elizabeth Warren and Cory A. Booker have raised concerns about the low amount of penalties being assessed for COVID-19-related violations.

Occupational Safety and Health Administration Standards

Section 6 of the Occupational Safety and Health Act of 1970 (OSH Act) grants the Occupational Safety and Health Administration (OSHA) of the Department of Labor (DOL) the authority to promulgate, modify, or revoke occupational safety and health standards that apply to private sector employers, the United States Postal Service, and the federal government as an employer.[1] In addition, Section 5(a)(1) of the OSH Act, commonly referred to as the General Duty Clause, requires that all employers under OSHA's jurisdiction provide workplaces free of "recognized hazards that are causing or are likely to cause death or serious physical harm" to their employees.[2] OSHA has the authority to enforce employer compliance with its standards and with the General Duty Clause through the issuance of abatement orders, citations, and civil monetary penalties. The OSH Act does not cover state or local government agencies or units. Thus, certain entities that may be affected by Coronavirus Disease 2019 (COVID-19), such as state and local government hospitals, local fire departments and emergency medical services, state prisons and county jails, and public schools, are not covered by the OSH Act or subject to OSHA regulation or enforcement.

State Plans

Section 18 of the OSH Act authorizes states to establish their own occupational safety and health plans and preempt standards established and enforced by OSHA.[3] OSHA must approve state plans if they are "at least as effective" as OSHA's standards and enforcement.[4] If a state adopts a state plan, it also must cover state and local government entities, such as public schools, not covered by OSHA. Currently, 21 states and Puerto Rico have state plans that cover all employers, and 5 states and the U.S. Virgin Islands have state plans that cover only state and local government employers not covered by the OSH Act.[5] In the remaining states, state and local government employers are not covered by OSHA standards or enforcement. State plans may incorporate OSHA standards by reference, or states may adopt their own standards that are at least as effective as OSHA's standards. State plans do not have jurisdiction over federal agencies and generally do not cover maritime workers and private-sector workers at military bases or other federal facilities.

Promulgation of OSHA Standards

OSHA may promulgate occupational safety and health standards on its own initiative or in response to petitions submitted to the agency by various government agencies, the public, or employer and employee groups.[6] OSHA is not required, however, to respond to a petition for a

[1] 29 U.S.C. §655. The provisions of the Occupational Safety and Health Act of 1970 (OSH Act) are extended to the legislative branch as an employer by the Congressional Accountability Act (P.L. 104-1).

[2] 29 U.S.C. §654(a)(1).

[3] 29 U.S.C. §667.

[4] For additional information on Occupational Safety and Health Administration (OSHA) state plans, see CRS Report R43969, *OSHA State Plans: In Brief, with Examples from California and Arizona*.

[5] Information on specific state plans is available from the OSHA website at https://www.osha.gov/stateplans.

[6] Per Section 6(b)(1) of the OSH Act [29 §655(b)(1)], a petition may be submitted by "an interested person, a representative of any organization of employers or employees, a nationally recognized standards-producing

standard or to promulgate a standard in response to a petition. OSHA may also consult with one of the two statutory standing advisory committees—the National Advisory Committee on Occupational Safety and Health (NACOSH) or the Advisory Committee on Construction Safety and Health (ACCSH)—or an ad-hoc advisory committee for assistance in developing a standard.[7]

Notice and Comment

OSHA's rulemaking process for the promulgation of standards is largely governed by the provisions of the Administrative Procedure Act (APA) and Section 6(b) of the OSH Act.[8] Under the APA informal rulemaking process, federal agencies, including OSHA, are required to provide notice of proposed rules through the publication of a Notice of Proposed Rulemaking in the *Federal Register* and provide the public a period of time to provide comments on the proposed rules.

Section 7(b) of the OSH Act mirrors the APA in that it requires notice and comment in the rulemaking process.[9] After publishing a proposed standard, the public must be given a period of at least 30 days to provide comments. In addition, any person may submit written objections to the proposed standard and may request a public hearing on the standard.

Statement of Reasons

Section 6(e) of the OSH Act requires OSHA to publish in the *Federal Register* a statement of the reasons the agency is taking action whenever it promulgates a standard, conducts other rulemaking, or takes certain additional actions, including issuing an order, compromising on a penalty amount, or settling an issued penalty.[10]

Other Relevant Laws and Executive Order 12866

In addition to the APA and OSH Act, other federal laws that generally apply to OSHA rulemaking include the Paperwork Reduction Act,[11] Regulatory Flexibility Act,[12] Congressional Review Act,[13] Information Quality Act,[14] and Small Business Regulatory Enforcement Fairness Act (SBREFA).[15] Also, Executive Order 12866, issued by President Clinton in 1993, requires

---

organization, the Secretary of Health and Human Services (HHS), the National Institute for Occupational Safety and Health, or a state or political subdivision."

[7] The National Advisory Committee on Occupational Safety and Health (NACOSH) was established by Section 7(a) of the OSH Act [29 U.S.C. §656(a)]. The Advisory Committee on Construction Safety and Health (ACCSH) was established by Section 107 of the Contract Work Hours and Safety Act (P.L. 87-581). Section 7(b) of the OSH Act provides OSHA the authority to establish additional advisory committees.

[8] The Administrative Procedure Act (APA) is codified at 5 U.S.C. §§500-596. For detailed information on federal agency rulemaking and the APA, see CRS Report RL32240, *The Federal Rulemaking Process: An Overview*.

[10] 29 U.S.C §655(e).

[11] 44 U.S.C. §§3501-3520.

[12] 5 U.S.C. §§601-612.

[13] 5 U.S.C. §§801-808.

[14] 44 U.S.C. §3516 note.

[15] 5 U.S.C. §601 note. For information on these additional laws that apply to OSHA rulemaking, see U.S. Government Accountability Office (GAO), *Workplace Safety and Health: Multiple Challenges Lengthen OSHA's Standard Setting*, GAO-12-330, April 2012, Appendix II, at https://www.gao.gov/products/GAO-12-330 (hereinafter cited as GAO-12-330, *Workplace Safety and Health*).

agencies to submit certain regulatory actions to the Office of Management and Budget (OMB) and Office of Information and Regulatory Affairs (OIRA) for review before promulgation.[16]

OSHA Rulemaking Time Line

OSHA rulemaking for new standards historically has been a relatively time-consuming process. In 2012, at the request of Congress, the Government Accountability Office (GAO) reviewed 59 significant OSHA standards promulgated between 1981 (after the enactments of the Paperwork Reduction Act and Regulatory Flexibility Act) and 2010.[17] For these standards, OSHA's average time between beginning formal consideration of the standard—either through publishing a Request for Information or Advance Notice of Proposed Rulemaking in the *Federal Register* or placing the rulemaking on its semiannual regulatory agenda—and promulgation of the standard was 93 months (7 years, 9 months). Once the Notice of Proposed Rulemaking was published for these 59 standards, the average time until promulgation of the standard was 39 months (3 years, 3 months).

In 2012, OSHA's Directorate of Standards and Guidance published a flowchart of the OSHA rulemaking process on the agency's website.[18] This flowchart includes estimated duration ranges for a variety of rulemaking actions, beginning with pre-rule activities—such as developing the idea for the standard and meeting with stakeholders—and ending with promulgation of the standard. The flowchart also includes an estimated duration range for post-promulgation activities, such as judicial review. The estimated time from the start of preliminary rulemaking to the promulgation of a standard ranges from 52 months (4 years, 4 months) to 138 months (11 years, 6 months). After a Notice of Proposed Rulemaking is published in the *Federal Register,* the estimated length of time until the standard is promulgated ranges from 26 months (2 years, 2 months) to 63 months (5 years, 3 months). **Table 1** provides OSHA's estimated time lines for six major pre-rulemaking and rulemaking activities leading to the promulgation of a standard.

Table 1. OSHA Rulemaking Process: Estimated Durations of Activities

Stage	Activities	Estimated Duration
1	Preliminary rulemaking activities	12-36 months
2	Developing the proposed rule	12-36 months
3	Publishing the Notice of Proposed Rulemaking (NPRM)	2-3 months
4	Developing and analyzing the rulemaking record, including public comments and hearings	6-24 months
5	Developing the final rule, including Office of Information and Regulatory Affairs (OIRA) submission	18-36 months
6	Publishing the final rule (promulgating the new standard)	2-3 months
Total estimated duration		52-138 months
Estimated duration from NPRM to final rule		26-63 months

Judicial Review

Both the APA and the OSH Act provide for judicial review of OSHA standards. Section 7(f) of the OSH Act provides that any person who is "adversely affected" by a standard may file, within 60 days of its promulgation, a petition challenging the standard with the U.S. Court of Appeals for the circuit in which the person lives or maintains his or her principal place of business.[19] A petition for judicial review does not automatically stay the implementation or enforcement of the standard. However, the court may order such a stay. OSHA estimates that post-promulgation activities, including judicial review, can take between 4 and 12 months after the standard is promulgated.[20]

Emergency Temporary Standards

Section 6(c) of the OSH Act provides the authority for OSHA to issue an Emergency Temporary Standard (ETS) without having to go through the normal rulemaking process. OSHA may promulgate an ETS without supplying any notice or opportunity for public comment or public hearings. An ETS is immediately effective upon publication in the *Federal Register*. Upon promulgation of an ETS, OSHA is required to begin the full rulemaking process for a permanent standard with the ETS serving as the proposed standard for this rulemaking. An ETS is valid until superseded by a permanent standard, which OSHA must promulgate within six months of publishing the ETS in the *Federal Register*.[21] An ETS must include a statement of reasons for the action in the same manner as required for a permanent standard. State plans are required to adopt or adhere to an ETS, although the OSH Act is not clear on how quickly a state plan must come into compliance with an ETS.

ETS Requirements

Section 6(c)(1) of the OSH Act requires that both of the following determinations be made in order for OSHA to promulgate an ETS:

- that employees are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful or from new hazards, and
- that such emergency standard is necessary to protect employees from such danger.

Grave Danger Determination

The term *grave danger*, used in the first mandatory determination for an ETS, is not defined in statute or regulation. The legislative history demonstrates the intent of Congress that the ETS process "not be utilized to circumvent the regular standard-setting process," but the history is unclear as to how Congress intended the term grave danger to be defined.[22]

[19] 29 U.S.C. §655(f).

[20] OSHA, Directorate of Standards and Guidance, *The OSHA Rulemaking Process*, October 15, 2012, at https://www.osha.gov/OSHA_FlowChart.pdf.

[21] 29 U.S.C §655(c)(2).

[22] U.S. Congress, Senate Labor and Public Welfare, Subcommittee on Labor, *Legislative History of the Occupational Safety and Health Act of 1970 (S. 2193, P.L. 91-596)*, committee print, prepared by Subcommittee on Labor, 91st Cong., 1 sess., June 1971, 52-531 (Washington: GPO, 1971), p. 1218.

In addition, although the federal courts have ruled on challenges to previous ETS promulgations, the courts have provided no clear guidance as to what constitutes a grave danger. In 1984, the U.S. Court of Appeals for the Fifth Circuit in *Asbestos Info. Ass'n v. OSHA* issued a stay and invalidated OSHA's November 1983 ETS lowering the permissible exposure limit for asbestos in the workplace.[23] In its decision, the court stated that "gravity of danger is a policy decision committed to OSHA, not to the courts."[24] The court, however, ultimately rejected the ETS, in part on the grounds that OSHA did not provide sufficient support for its claim that 80 workers would ultimately die because of exposures to asbestos during the six-month life of the ETS.

Necessity Determination

In addition to addressing a grave danger to employees, an ETS must also be *necessary* to protect employees from that danger. In *Asbestos Info. Ass'n*, the court invalidated the asbestos ETS for the additional reason that OSHA had not demonstrated the necessity of the ETS. The court cited, among other factors, the duplication between the respirator requirements of the ETS and OSHA's existing standards requiring respirator use. The court dismissed OSHA's argument that the ETS was necessary because the agency felt that the existing respiratory standards were "unenforceable absent actual monitoring to show that ambient asbestos particles are so far above the permissible limit that respirators are necessary to bring employees' exposure within the PEL of 2.0 f/cc."[25] The court determined that "fear of a successful judicial challenge to enforcement of OSHA's permanent standard regarding respirator use hardly justifies resort to the most dramatic weapon in OSHA's enforcement arsenal."[26]

Although OSHA has not promulgated an ETS since the 1983 asbestos standard, it has since determined the necessity of an ETS. In 2006, the agency considered a petition from the United Food and Commercial Workers (UFCW) and International Brotherhood of Teamsters (IBT) for an ETS on diacetyl. The UFCW and IBT petitioned OSHA for the ETS after the National Institute for Occupational Safety and Health (NIOSH) and other researchers found that airborne exposure to diacetyl, then commonly used as an artificial butter flavoring in microwave popcorn and a flavoring in other food and beverage products, was linked to the lung disease *bronchiolitis obliterans*, now commonly referred to as "popcorn lung."[27] According to GAO's 2012 report on OSHA's standard-setting processes, OSHA informed GAO that although the agency may have been able to issue an ETS based on the grave danger posed by diacetyl, the actions taken by the food and beverage industries, including reducing or removing diacetyl from products, made it less likely that the necessity requirement could be met.[28]

ETS Duration

Section 6(c)(2) of the OSH Act provides that an ETS is effective until superseded by a permanent standard promulgated pursuant to the normal rulemaking provisions of the OSH Act. Section 6(c)(3) of the OSH Act requires OSHA to promulgate a permanent standard within six months of

promulgating the ETS. As shown earlier in this report, six months is well outside of historical and currently expected time frames for developing and promulgating a standard under the notice and comment provisions of the APA and OSH Act, as well as under other relevant federal laws and executive orders. This dichotomy between the statutory mandate to promulgate a standard and the time lines that, based on historical precedent, other provisions in the OSH Act might realistically require for such promulgation raises the question of whether or not OSHA could extend an ETS's duration without going through the normal rulemaking process. The statute and legislative history do not clearly address this question.

OSHA has used its ETS authority sparingly in its history and not since the asbestos ETS promulgated in 1983. As shown in **Table A-1** in the Appendix, of the nine times OSHA has issued an ETS, the courts have fully vacated or stayed the ETS in four cases and partially vacated the ETS in one case.[29] Of the five cases that were not challenged or that were fully or partially upheld by the courts, OSHA issued a permanent standard either within the six months required by the statute or within several months of the six-month period and always within one year of the promulgation of the ETS.[30] Each of these cases, however, occurred before 1980, when a combination of additional federal laws and court decisions added additional procedural requirements to the OSHA rulemaking process. OSHA did not attempt to extend the ETS's expiration date in any of these cases.

Although the courts have not ruled directly on an attempt by OSHA to solely extend the life of an ETS, in 1974, the U.S. Court Appeals for the Fifth Circuit held in *Florida Peach Growers Ass'n v. United States Department of Labor* that OSHA was within its authority to amend an ETS without going through the normal rulemaking process.[31] The court stated that "it is inconceivable that Congress, having granted the Secretary the authority to react quickly in fast-breaking emergency situations, intended to limit his ability to react to developments subsequent to his initial response."[32] The court also recognized the difficulty OSHA may have in promulgating a standard within six months due to the notice and comment requirements of the OSH Act, stating that in the case of OSHA seeking to amend an ETS to expand its focus, "adherence to subsection (b) procedures would not be in the best interest of employees, whom the Act is designed to protect. Such lengthy procedures could all too easily consume all of the temporary standard's six months life."[33]

OSHA Standards Related to COVID-19

Current OSHA Standards

Currently, no OSHA standard directly covers exposure to airborne or aerosol diseases in the workplace. As a result, OSHA is limited in its ability to enforce protections for healthcare and other workers who may be exposed to SARS-CoV-2, the virus that causes COVID-19.[34]

OSHA may enforce the General Duty Clause in the absence of a standard, if it can be determined that an employer has failed to provide a worksite free of "recognized hazards" that are "causing or are likely to cause death or serious physical harm" to workers.[35] In addition, OSHA's standards for the use of personal protective equipment (PPE) may apply in cases in which workers require eye, face, hand, or respiratory protection against COVID-19 exposure.[36]

As of October 1, 2020, OSHA has issued citations related to COVID-19 to employers at 62 work sites resulting in a total of $913,133 in proposed civil penalties.[37] The majority of these citations were issued to healthcare, nursing, and long-term care providers, including two Department of Veterans Affairs facilities—a hospital in Indianapolis, Indiana, and a community living center in Queens, New York.[38] Two employers in the meat processing industry—Smithfield Packaged Foods, Inc. in Sioux Falls, South Dakota and JBS Foods, Inc. in Greeley, Colorado—were also cited.[39] In the two meat processing cases, citations were issued for General Duty Clause violations. Other citations were issued for violations of OSHA's respiratory protection, injury and illness reporting, and recordkeeping standards.

The highest amount of proposed penalties issued to a single employer for COVID-19-related violations was $28,070 to the Harborage nursing home operated by Hackensack Meridian Healthcare in New Jersey for four serious and one other than serious violations of the respiratory protection standard.[40] For two of the serious violations, OSHA issued the maximum allowable penalty of $13,494.[41] For the other two serious violations, OSHA issued citations but no monetary penalties. For the other than serious violation, OSHA issued a penalty of $1,082. The two meat processing employers were each assessed maximum penalties of $13,494 for serious violations of the General Duty Clause.

In a letter to OSHA, Senators Elizabeth Warren and Cory A. Booker raised concerns over the amount of penalties issued to these employers.[42] The Senators asked OSHA why these employers

[34] OSHA has a standard on blood-borne pathogens (29 C.F.R. §1910.1030) but does not have a standard on pathogens transmitted by airborne droplets.

[35] 29 U.S.C. §654(a)(1).

[38] A list of all COVID-19-related citations issued by OSHA through October 1, 2020, is available at https://www.osha.gov/enforcement/covid-19-data/inspections-covid-related-citations.

[39] OSHA has the authority to issue citations to Executive Branch agencies, but does not have the authority to issue civil monetary penalties to these agencies.

[40] Detailed information on the citations issued to this employer is available at https://www.osha.gov/pls/imis/establishment.inspection_detail?id=1476465.015.

[41] OSHA citations are classified as "serious," "other than serious," "willful," or "repeated." The maximum amounts of OSHA penalties are subject to annual inflationary adjustments.

[42] Letter from Senators Elizabeth Warren and Cory A. Booker to Loren Sweatt, Principal Deputy Assistant Secretary of

were each cited for single serious violations of the General Duty Clause rather than multiple violations for each area of the facilities in which social distancing measures were not implemented. They also asked why OSHA did not issue penalties for willful or repeated violations that carry maximum penalties of $134,937 per violation. None of the employers cited for COVID-19-related violations were issued penalties for willful or repeated violations.

OSHA Respiratory Protection Standard

National Institute for Occupational Safety and Health Certification

The OSHA respiratory protection standard requires the use of respirators certified by NIOSH in cases in which engineering controls, such as ventilation or enclosure of hazards, are insufficient to protect workers from breathing contaminated air.[43] Surgical masks, procedure masks, and dust masks are not considered respirators. NIOSH certifies respirators pursuant to federal regulations.[44] For nonpowered respirators, such as filtering face piece respirators commonly used in healthcare and construction, NIOSH classifies respirators based on their efficiency at filtering airborne particles and their ability to protect against oil particles. Under the NIOSH classification system, the letter (N, R, or P) indicates the level of oil protection as follows: N—no oil protection; R—oil resistant; and P—oil proof. The number following the letter indicates the efficiency rating of the respirator as follows: 95—filters 95% of airborne particles; 97—filters 97% of airborne particles; and 100—filters 99.7% of airborne particles. Thus an N95 respirator, the most common type, is one that does not protect against oil particles and filters out 95% of airborne particles. An R or P respirator can be used in place of an N respirator.

A respirator that is past its manufacturer-designated shelf life is no longer considered to be certified by NIOSH. However, in response to potential shortages in respirators, NIOSH has tested and approved certain models of respirators for certified use beyond their manufacturer-designated shelf lives.[45]

Respirators designed for certain medical and surgical uses are subject to both certification by NIOSH (for oil protection and efficiency) and regulation by the Food and Drug Administration (FDA) as medical devices. In general, respirators with exhalation valves cannot be used in surgical and certain medical settings because, although the presence of an exhalation valve does not affect the respirator's protection afforded the user, it may allow unfiltered air from the user into a sterile field. On March 2, 2020, FDA issued an Emergency Use Authorization (EUA) to approve for use in medical settings certain NIOSH-certified respirators not previously regulated by FDA.[46]

The list of respirators approved under this Emergency Use Authorization (EUA) is in Appendix B to this letter, updated at https://www.fda.gov/media/135921/download.

CDC Interim Guidance on Respiratory Protection

On March 10, 2020, the Centers for Disease Control and Prevention (CDC) updated its interim guidance for the protection of healthcare workers against exposure to COVID-19 to permit healthcare workers caring for known or suspected COVID-19 cases to use "facemasks" when respirators are not available or are in limited supply.[47] This differs from the CDC's 2007 guidelines for control of infectious agents in healthcare settings, which required the use of respirators for treatment of known or suspected cases.[48] CDC states that respirators should be prioritized for use in medical procedures likely to generate respiratory aerosols. Before this interim guidance was released, Representative Bobby Scott, Chairman of the House Committee on Education and Labor, and Representative Alma Adams, Chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Health and Human Services (HHS) Alex M. Azar II expressing their opposition to this change in the interim standard.[49]

Medical Evaluation and Fit Testing

The OSHA respiratory protection standard requires that the employer provide a medical evaluation to the employee to determine if the employee is physiologically able to use a respirator. This medical evaluation must be completed before any fit testing. For respirators designed to fit tightly against the face, the specific type and model of respirator that an employee is to use must be fit tested in accordance with the procedures provided in Appendix A of the OSHA respiratory protection standard to ensure there is a complete seal around the respirator when worn.[50] Once an employee has been fit tested for a respirator, he or she is required to be fit tested annually or whenever the model of respirator, but not the actual respirator itself, is changed. Each time an individual uses a respirator, he or she is required to perform a check of the seal of the respirator to his or her face in accordance with the procedures provided in Appendix B of the standard.[51] On March 14, 2020, OSHA issued guidance permitting employers to suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator.

---

[47] Although the interim guidance does not specifically define the term *facemask*, it does differentiate between a facemask and a respirator such that any recommendation to use a facemask does not require the use of a respirator. CDC, *Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings*, updated March 10, 2020, at https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html.

[51] 29 C.F.R. §1910.134 Appendix B.

Temporary OSHA Enforcement Guidance on the Respiratory Protection Standard

In response to shortages of respirators and other PPE during the national response to the COVID-19 pandemic, OSHA has issued three sets of temporary enforcement guidance to permit the following exceptions to the respiratory protection standard:

1. Employers may suspend annual fit testing of respirators for employees that have already been fit tested on the same model respirator;[52]
2. Employers may permit the use of expired respirators and the extended use or reuse of respirators, provided the respirator maintains its structural integrity and is not damaged, soiled, or contaminated (e.g., with blood, oil, or paint);[53] and
3. Employers may permit the use of respirators not certified by NIOSH, but approved under standards used by the following countries or jurisdictions, in accordance with the protection equivalency tables provided in Appendices A and B of the enforcement guidance document:
   - Australia,
   - Brazil,
   - European Union,
   - Japan,
   - Mexico,
   - People's Republic of China, and
   - Republic of Korea.[54]

California: Cal/OSHA Aerosol Transmissible Disease Standard

Although no OSHA standard specifically covers aerosol or airborne disease transmission, the California Division of Occupational Safety and Health (Cal/OSHA), under its state plan, promulgated its aerosol transmissible disease (ATD) standard in 2009.[55] The ATD standard covers most healthcare workers, laboratory workers, as well as workers in correctional facilities, homeless shelters, and drug treatment programs. Under the ATD standard, SARS-CoV-2, the virus that causes COVID-19, is classified as a disease or pathogen requiring airborne isolation. This classification subjects the virus to stricter control standards than diseases requiring only

[53] OSHA, *Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-respiratory-protection-and-n95-shortage-due-coronavirus. Under this guidance, employers are required to address in their written respiratory protection plans when respirators are contaminated and not available for use or reuse.

[54] OSHA, *Enforcement Guidance for Use of Respiratory Protection Equipment Certified under Standards of Other Countries or Jurisdictions During the Coronavirus Disease 2019 (COVID-19) Pandemic*, April 3, 2020, at https://www.osha.gov/memos/2020-04-03/enforcement-guidance-use-respiratory-protection-equipment-certified-under.

[55] Cal. Code Regs. tit. 8, §5199. The California state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers; workers on military bases and in national parks, monuments, memorials, and recreation areas; workers on federally recognized Native American reservations and trust lands; and U.S. Postal Service contractors.

droplet precautions, such as seasonal influenza.[56] The key requirements of the ATD standard include

- written ATD exposure control plan and procedures,
- training of all employees on COVID-19 exposure, use of PPE, and procedures if exposed to COVID-19,
- engineering and work practice controls to control COVID-19 exposure, including the use of airborne isolation rooms,
- provision of medical services to employees, including removal of exposed employees,
- specific requirements for laboratory workers, and
- PPE requirements.

Cal/OSHA Aerosol Transmissible Disease PPE Requirements

The Cal/OSHA ATD standard requires that employers provide employees PPE, including gloves, gowns or coveralls, eye protection, and respirators certified by NIOSH at least at the N95 level whenever workers

- enter or work in an airborne isolation room or area with a case or suspected case;
- are present during procedures or services on a case or suspected case;
- repair, replace, or maintain air systems or equipment that may contain pathogens;
- decontaminate an area that is or was occupied by a case or suspected case;
- are present during aerosol generating procedures on cadavers of cases or suspected cases;
- transport a case or suspected case within a facility or within a vehicle when the patient is not masked; and
- are working with a viable virus in the laboratory.[57]

In addition, a powered air purifying respirator (PAPR) with a high-efficiency particulate air (HEPA) filter must be used whenever a worker performs a *high-hazard procedure* on a known or suspected COVID-19 case.[58] High-hazard procedures are those in which "the potential for being exposed to aerosol transmissible pathogens is increased due to the reasonably anticipated generation of aerosolized pathogens"—they include intubation, airway suction, and caring for patients on positive pressure ventilation.[59] Emergency medical services (EMS) workers may use N100, R100, or P100 respirators in place of PAPRs.

[56] Cal. Code Regs. tit. 8, §5199 Appendix A.

[57] California Division of Occupational Safety and Health (Cal/OSHA), *Interim Guidance for Protecting Health Care Workers from Exposure to Coronavirus Disease (COVID-19)*, March 2020, at https://www.dir.ca.gov/dosh/Coronavirus-info.html.

[58] A PAPR uses a mechanical device to draw in room air and filter it before expelling that air over the user's face. In general, PAPRs do not require a tight seal to the user's face and do not need to be fit tested.

[59] Cal. Code Regs. tit. 8, §5199(b).

Cal/OSHA Interim Guidance on COVID-19

Cal/OSHA has issued interim guidance in response to shortages of respirators in the state due to the COVID-19 pandemic response.[60] Under this interim guidance, if the supply of N95 respirators or PAPRs are insufficient to meet current or anticipated needs, surgical masks may be used for low-hazard patient contacts that would otherwise require the use of respirators, and respirators may be used for high-hazard procedures that would otherwise require the use of PAPRs.

Virginia: VOSH COVID-19 ETS

On July 15, 2020, the Virginia Safety and Health Codes Board adopted an ETS to specifically protect employees from exposure to SARS-CoV-2, the virus that causes COVID-19.[61] This ETS, promulgated under Virginia's state occupational safety and health plan (VOSH) is the first state standard to specifically address COVID-19 in the workplace.[62] As an ETS, the VOSH standard expires within six months of its effective date, upon expiration of the Governor's State of Emergency, when superseded by a permanent standard, or when repealed by the Virginia Safety and Health Codes Board, whichever comes first. The ETS can be extended only through the normal state rulemaking process.

Unlike the Cal/OSHA ATD standard, the VOSH ETS applies to all state and local government agencies and all covered private-sector employees in the state. As part of a state plan, the VOSH ETS applies to state and local government entities, such as public schools, as employers. All covered employers in Virginia must comply with the following ETS requirements:

- exposure assessment and determination, notification of suspected cases and contacts with those cases, and employee access to their own exposure and medical records;
- return to work of employees known or suspected to have COVID-19 based on a duration of time since last symptoms or negative COVID-19 tests;[63]
- maintenance of physical distancing between employees while working and on paid breaks at the worksite, including restricted access to the worksite and common areas and break rooms;
- compliance with applicable existing PPE and respiratory protection standards when physical distancing between employees is not possible; and
- sanitation and disinfection requirements.

For all employers, if engineering, administrative, or work practice controls are not feasible or do not provide sufficient protection from SARS-CoV-2 transmission, then PPE, including respiratory PPE—such as respirators, if necessary—must be provided to employees.

---

[60] California Division of Occupational Safety and Health (Cal/OSHA), *Cal/OSHA Interim Guidance on COVID-19 for Health Care Facilities: Severe Respirator Supply Shortages*, March 28, 2020, at https://www.dir.ca.gov/dosh/coronavirus/Cal-OSHA-Guidance-for-respirator-shortages.pdf.

[61] *Infectious Disease Prevention: SARS-CoV-2 Virus That Causes COVID-19*, 16 Va. Admin. Code §25-220. This ETS is effective upon publication in a Richmond, VA, newspaper during the week of July 27, 2020.

[62] The Virginia state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S Postal Service contractors, workers at military bases or other federal enclaves in which the federal government has civil jurisdiction, workers at the U.S. Department of Energy's Southeastern Power Administration Kerr-Philpott System, and aircraft cabin crew members.

[63] A COVID-19 test for the purposes of determining if an employee can return to work must be paid for by the employer or offered such that the employee bears no cost for the test.

Hazard and Job Task Classification

The VOSH ETS requires that each employer assess its workplace for hazards and job tasks that potentially expose employees to the SARS-CoV-2 virus. Employers must classify each job task as having a "very high," "high," "medium," or "lower" risk level of exposure, according to the hazards to which employees are potentially exposed. The VOSH ETS provides the following examples of activities for the "very high" and "high" risk levels:

- "very high" risk activities include
  - using aerosol-generating procedures, such as intubation, on patients known or suspected to be infected with SARS-CoV-2;
  - collecting or handling specimens from patients known or suspected to be infected with SARS-CoV-2; and
  - performing an autopsy involving aerosol-generating procedures on the body of a person known or suspected to be infected with the SARS-CoV-2 virus at the time of death; and
- "high risk" activities include
  - health care services, including inpatient care, outpatient care, skilled nursing care, and nonmedical support services such as room cleaning, provided to patients known or suspected to be infected with SARS-CoV-2;
  - first responder and medical transport services to patients known or suspected to be infected with SARS-CoV-2; and
  - mortuary services to persons known or suspected to be infected with the SARS-CoV-2 virus at the time of death.

"Medium" risk activities are those that require employees to have more than minimal contact, within six feet of other employees, customers, or members of the public who are not known or suspected to be infected with SARS-CoV-2.[64] "Lower" risk activities are those that do not require contact with other persons within six feet or that are able to utilize the following types of engineering, administrative, or work practice controls to minimize contact between persons:

- installation of floor to ceiling barriers, such as barriers between cashiers and customers;
- telecommuting;
- staggered work shifts to reduce the number of workers at a site;
- delivering services remotely, including curbside pickup of retail purchases; and
- mandatory physical distancing of persons.

The use of face coverings other than respirators or medical or surgical masks, including cloth face coverings now required by several states, is not an acceptable method of minimizing physical contact between persons. However, the VOSH ETS requires the use of face coverings for brief contacts between persons within six feet of each other.

[64] Examples of "medium" risk work activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-30.

Engineering, Administrative, Work Practice, and PPE Requirements for "Very High," "High," and "Medium" Risk Activities

Employers with job tasks or activities in the "very high," "high," or "medium" risk classifications must adhere to specific engineering, administrative, work practice, and PPE requirements. For "very high" and "high" risk activities, engineering controls include the use of airborne infection isolation rooms (AIIR) for known or suspected COVID-19 patients and aerosol-generating procedures and Biosafety Level 3 (BSL-3) precautions for the handling of specimens from known or suspected COVID-19 patients.[65]

Employers with "very high" and "high" risk activities must implement administrative and work practice controls, including the prescreening of all employees to ensure that employees do not have signs or symptoms of COVID-19; enhanced medical screening of employees during COVID-19 outbreaks; and the use of flexible work arrangements, such as telecommuting, when feasible. In addition, all employers with "very high" or "high" risk activities must provide, to the extent feasible, psychological and behavioral support to address employee stress at no cost to the employee.

The standard also provides for engineering, administrative, and work practice controls for "medium" risk activities.[66]

PPE Requirements for "Very High" and "High" Risk Activities

Employers with "very high" and "high" risk activities, who are not already covered by the general OSHA PPE standards, are required to comply with the VOSH ETS requirements for PPE. An employer subject to these requirements must assess the workplace to determine if there are any COVID-19 hazards present or likely to be present that would require the use of PPE by employees. The employer must provide for the participation of employees and employee representatives in this assessment process and verify that this assessment has been conducted through a written certification.

If hazards that require PPE are identified, the employer must select and provide the appropriate PPE to each employee and ensure that PPE fits properly. If respiratory PPE, such as respirators or PAPR are used as PPE, the existing OSHA standards for respiratory PPE, which include medical evaluation of employees and fit testing, must be followed.

Unless contraindicated by the hazard and PPE assessment, when any employee is in contact within six feet of any person known or suspected to be infected with SARS-CoV-2, that employee must be provided with the following types of PPE:

- gloves,
- gown large enough to cover areas needing protection,
- face shield or goggles, and
- respirator.

---

[65] The VOSH ETS requires compliance with Biosafety Level 3 precautions provided in HHS, *Biosafety in Microbiological and Biomedical Laboratories. Fifth Edition*, HHS Publication no. (CDC) 21-1112, December 2009, at https://www.cdc.gov/labs/BMBL.html.

[66] Engineering, administrative, and work practice controls for "medium" risk activities are provided in the VOSH ETS at 16 Va. Admin. Code §25-220-60.

While there are no specific PPE requirements for "medium" risk activities, PPE may be required based on an assessment of the hazards of these activities.

Infectious Disease Preparedness and Response Plan and Training

Infectious Disease Preparedness and Response Plan

All employers with "very high" and "high" risk activities, and employers with 11 or more employees and "medium" risk activities, must develop written infectious disease preparedness and response plans. These plans must be developed with input from employees. The deadline for the development of these plans is 60 days from the effective date of the ETS.

The infectious disease preparedness plan must include a consideration of the COVID-19 risks in the workplace, and to the extent possible and in compliance with medical privacy laws, the specific risks faced by employees with certain preexisting medical conditions. The plan must include contingency plans for continued operations during a COVID-19 outbreak and provide for the prompt identification and isolation of employees with known or suspected COVID-19 and a procedure for employees to notify the employer of COVID-19 signs or symptoms. The plan must also address interactions between the employer's worksite and other businesses, such as vendors and contractors to ensure employees of these businesses comply with the VOSH ETS and the employer's infectious disease preparedness and response plan.

Training

All employers with "very high," "high," or "medium" risk activities must provide training to all employees, including those employees whose work does not involve any COVID-19 risks. This training must teach employees to recognize the hazards of the SARS-CoV-2 virus, signs and symptoms of COVID-19, and the procedures to minimize SARS-CoV-2 hazards. If the employer has an infectious disease preparedness and response plan, training must be provided on this plan. Written certification of training must be prepared, and retraining must be provided when necessary.

Employers with only "lower" risk activities are not required to prepare a formal training plan but must provide oral or written communication on the hazards of SARS-CoV-2, the signs and symptoms of COVID-19, and measures to minimize SARS-CoV-2 exposure. VOSH is required to develop an information sheet that employers can use to satisfy this training requirement.

Training must be provided within 30 days of the effective date of the standard, except for training on the infectious disease preparedness and response plan, which must be completed within 60 days.

Whistleblower Protections

The VOSH ETS prohibits any employer from discharging or otherwise discriminating against any employee who does the following:

- exercises his or her rights under the ETS or existing whistleblower protection provisions, including the limited right of an employee to refuse work because of a reasonable fear of injury or death or serious injury;[67]

[67] To exercise this right, the employee must, if possible, have sought unsuccessfully to have the employer remedy the hazard, and there must be insufficient time to attempt to remedy the hazard through normal regulatory enforcement

- provides and wears his or her own PPE, provided the PPE does not create a greater hazard to the employee or create a serious hazard to other employees; or
- raises a reasonable concern about SARS-CoV-2 and COVID-19 infection control to the employer, the employer's agent, other employees, the government, or the public through any type of media including social media.

Michigan: MIOSHA COVID-19 Emergency Rules

On October 14, 2020, the director of the Michigan Department of Labor and Economic Opportunity, which operates Michigan's state occupational safety and health plan (MIOSHA), promulgated emergency rules to address workplace exposure to COVID-19.[68] These rules, which apply to all employers in the state, went into immediate effect and will remain in effect for six months. In addition to rules that apply to all employers, the emergency rules include specific provisions that apply to the following industries:

- construction;
- manufacturing;
- retail, libraries, and museums;
- restaurants and bars;
- healthcare;
- in-home services such as house cleaning and repair;
- personal care services such as hair styling and tattooing;
- public accommodations such as sports and entertainment venues;
- sports and exercise facilities;
- meat and poultry processing; and
- casinos.[69]

Exposure Determination

Rule 3 of the MIOSHA emergency rules requires all employers to evaluate all routine and anticipated job tasks and categorize these job tasks based on potential employee exposure to COVID-19 into one of the following four categories:

1. "Lower exposure risk" tasks are those that do not require contact with known or suspected COVID-19 cases or frequent close (within six feet) contact with the general public.
2. "Medium exposure risk" tasks are those that require frequent or close contact with persons who may be infected with COVID-19 but who are not known or suspected COVID-19 cases. In areas of the state without ongoing community

channels. This right is provided in the OSHA standards at 29 C.F.R. §1977.12(b)(2) and in the VOSH standards at 16 Va. Admin. Code §25-60-110.

[68] Department of Labor and Economic Opportunity, Michigan Occupational Safety and Health Administration (MIOSHA) Emergency Rules: Coronavirus 2019 (COVID-19), available at https://www.michigan.gov//documents/leo/Final_MIOSHA_Rules_705164_7.pdf. The Michigan state plan covers all state and local government agencies and all private-sector workers in the state, with the exception of maritime workers, U.S. Postal Service contractors, workers at businesses owned or operated by tribal members at Indian reservations, and aircraft cabin crew members.

[69] MIOSHA Emergency Rules: Coronavirus 2019 (COVID-19), Rule 11.

transmission of COVID-19, tasks that require frequent contact with persons travelling from areas with widespread COVID-19 transmission are included in this category. In areas with ongoing community transmission, tasks that involve contact with the general public are included in this category.

3. "High exposure risk" tasks are those with high potential for exposure to known or suspected COVID-19 cases. Licensed healthcare providers, medical first responders, nursing home workers, law enforcement and correctional officers, and mortuary workers are examples of types of workers that may perform tasks in this category.
4. "Very high exposure risk" tasks are those that involve the generation of aerosols during medical or mortuary procedures on known or suspected COVID-19 cases and the collection and handling of laboratory specimens from known or suspected COVID-19 cases.

Preparedness and Response Plan

Rule 4 of the MIOSHA emergency rules requires all employers to develop a written COVID-19 preparedness and response plan based on current CDC and OSHA guidance. This plan must detail measures the employer will take to protect employees from COVID-19 exposure and must be readily available to employees and their representatives.

Basic Infection Prevention Measures

Rule 5 of the MIOSHA emergency rules requires all employers to implement the following basic infection prevention measures:

- promote frequent hand-washing and provide hand-washing facilities or hand sanitizer to workers, customers, and visitors;
- require employees who are sick to not report to work or to report to an isolated location;
- prohibit workers from using other workers' desks, phones, and other equipment when possible;
- increase facility cleaning, especially of high-touch surfaces and shared equipment;
- establish procedures, consistent with CDC guidance, for disinfection of the worksite if a worker, customer, or visitor has a known case of COVID-19;
- use Environmental Protection Agency (EPA) approved disinfectants that are expected to effective against SARS-CoV-2;
- follow all manufacturer's guidelines for use of all cleaning and disinfectant products; and
- prohibit in-person work for employees whose work can be done remotely.

Health Surveillance

Rule 6 of the MIOSHA emergency rules requires all employers to implement a health surveillance system for the workplace. This system must include, at a minimum, a COVID-19 screening questionnaire for all employees and contractors entering the workplace. Employees must be directed to immediately report any signs or symptoms of COVID-19 to the employer and known and suspected COVID-19 cases must be isolated from the rest of the workforce. When an

employer learns of an employee, contractor, customer, or visitor to the worksite with a known case of COVID-19, the employer must immediately notify the local health department and, must notify, within 24 hours, any workers, contractors, or suppliers who may have come into contact with the infected person. When determining if an employee with a known or suspected case of COVID-19 may return to the workplace, the employer must follow CDC guidelines and health department quarantine and isolation orders.

Workplace Controls

Rule 7 of the MIOSHA emergency rules requires all employers to implement the following workplace controls:

- designate one or more worksite COVID-19 safety coordinators to implement, monitor, and report on COVID-19 control strategies developed by the employer and to remain on site at all times when employees are present;
- place posters in appropriate languages in the workplace that provide information on staying away from work while sick, cough and sneeze etiquette, and hand hygiene;
- keep all persons at least six feet from each other using signs, floor markings, and barriers appropriate for the worksite, to the extent possible;
- provide all employees with non-medical grade face coverings at no cost to the employees;
- require the use of face coverings when employees cannot maintain six feet of distance from other persons in the workplace, and consider the use of face shields when three feet of distance cannot be maintained;
- require face coverings in shared spaces, such as restrooms and hallways and during in-person meetings.

PPE

Rule 8 of the MIOSHA emergency rules requires that employers provide appropriate PPE, including respiratory protection, to employees based on the exposure risks of the job and current CDC and OSHA guidelines. All PPE must be properly fitted, inspected, maintained, cleaned, stored, and disposed of. In workplaces that provide medical treatment to known or suspected COVID-19 cases, employees with frequent or prolonged close contact with such patients must be provided with and wear, at a minimum, an N95 respirator, goggles or face shield, and gown.

Training Requirements

Rule 10 of the MIOSHA emergency rules requires all employers to provide training and communication, in languages common among the employees, on the following subjects:

- workplace infection-control practices;
- proper use of PPE;
- how to notify the employer of COVID-19 symptoms or diagnosis;
- how to report unsafe working conditions.

This training must be updated if the employer's COVID-19 preparedness and response plan changes or new information on COVID-19 transmission becomes available.

Recordkeeping Requirements

Rule 11 of the MIOSHA emergency rules requires that all employers maintain, for one year, records of employee training, the screening of persons entering the workplace, and any health surveillance notifications required by Rule 6.

OSHA Infectious Disease Standard Rulemaking

In 2010, OSHA published a Request for Information in the *Federal Register* seeking public comments on strategies to control exposure to infectious diseases in healthcare workplaces.[70] After collecting public comments and holding public meetings, OSHA completed the SBREFA process in 2014. Since then, however, no public actions have occurred on this rulemaking; since spring 2017, this rulemaking has been listed as a "long-term action" in DOL's semiannual regulatory agenda.

Congressional Activity to Require an OSHA Emergency Temporary Standard on COVID-19

On March 5, 2020, Representative Bobby Scott, chairman of the House Committee on Education and Labor, and Representative Alma Adams, chair of the Subcommittee on Workforce Protections, sent a letter to Secretary of Labor Eugene Scalia calling on OSHA to promulgate an ETS to address COVID-19 exposure among healthcare workers.[71] This letter followed a January 2020 letter requesting that OSHA reopen its rulemaking on the infectious disease standard and begin to formulate for possible future promulgation an ETS to address COVID-19 exposure.[72] Senator Patty Murray, ranking member of the Senate Committee on Health, Education, Labor, and Pensions and a group of Democratic Senators sent a similar letter to the Secretary of Labor calling for an OSHA ETS.[73]

In addition, in March 2020, David Michaels, who served as the Assistant Secretary of Labor for Occupational Safety and Health during the Obama Administration, wrote an op-ed in *The Atlantic* calling on OSHA to promulgate a COVID-19 ETS.[74] On March 6, 2020, the AFL-CIO and 22 other unions petitioned OSHA for an ETS on infectious diseases that would cover all workers with potential exposures.[75] OSHA formally denied the AFL-CIO petition on May 29, 2020, claiming that an ETS is not necessary to protect employees from infectious diseases generally, or

[75] Letter from Richard L. Trumka, president, AFL-CIO, to The Honorable Eugene Scalia, Secretary of Labor, March 6, 2020, at https://aflcio.org/statements/petition-secretary-scalia-osha-emergency-temporary-standard-infectious-disease.

from COVID-19.[76] National Nurses United submitted a similar petition requesting that OSHA promulgate an ETS based largely on the Cal/OSHA ATD standard.[77] On May 4, 2020, the Center for Food Safety and Food Chain Workers Alliance submitted a petition requesting that OSHA promulgate an ETS to protect meat and poultry processing workers from COVID-19 exposure in the workplace.[78] On May 18, 2020, the AFL-CIO petitioned the U.S. Court of Appeals for the D.C. Circuit for a writ of mandamus to compel OSHA to promulgate a COVID-19 ETS.[79] The circuit court denied this petition on June 11, 2020.

H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020

On March 9, 2020, Representative Bobby Scott introduced H.R. 6139, the COVID-19 Health Care Worker Protection Act of 2020. This bill would require OSHA to promulgate a COVID-19 ETS within one month of enactment. The ETS would be required to cover healthcare workers and any workers in sectors determined by the CDC or OSHA to be at an elevated risk of COVID-19 exposure. The ETS would be required to include an exposure control plan provision and be, at a minimum, based on CDC's 2007 guidance and any updates to this guidance. The ETS would also be required to provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD standard, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS. Title II of the bill would provide that hospitals and skilled nursing facilities that receive Medicare funding and that are owned by state or local government units and not subject to state plans would be required to comply with the ETS. Similar provisions are included in S. 3475.

P.L. 116-127, the Families First Coronavirus Response Act

The provisions of H.R. 6139 were included as Division C of H.R. 6201, the Families First Coronavirus Response Act, as introduced in the House. The American Hospital Association (AHA) issued an alert to its members expressing its opposition to the OSHA ETS provisions in the bill.[80] Specifically, the AHA opposed the requirement that the ETS be based on the CDC's 2007 guidance. The AHA stated that unlike severe acute respiratory syndrome (SARS), which was transmitted through the air, COVID-19 transmission is through droplets and surface contacts. Thus, the requirement of the 2007 CDC guidance that N95 respirators, rather than surgical masks, be used for patient contact is not necessary to protect healthcare workers from COVID-19, and the use of surgical masks is consistent with World Health Organization guidance. The AHA also

[79] In re: American Federation of Labor and Congress of Industrial Organizations, D.C. Cir., No. 19-1158, May 18, 2020. This petition was filed in the U.S. Court of Appeals as Section 6(f) of the OSH Act [29 U.S.C. §655(f)] grants this court exclusive jurisdiction to provide judicial review of OSHA standards.

[80] Emily Kopp, "Hospitals want to kill a policy shielding nurses from COVID-19 because there aren't enough masks," *Roll Call*, March 3, 2020, at https://www.rollcall.com/2020/03/13/hospitals-want-to-kill-a-policy-shielding-nurses-from-covid-19-because-there-arent-enough-masks/. This alert is available to American Hospital Association (AHA) members on the AHA website at https://www.aha.org.

claimed that shortages of available respirators could reduce the capacity of hospitals to treat COVID-19 patients, due to a lack of respirators for staff. The OSHA ETS provisions were not included in the version of the legislation that was passed by the House and the Senate and signed into law as P.L. 116-127.

H.R. 6379, the Take Responsibility for Workers and Families Act

Division D of H.R. 6379, the Take Responsibility for Workers and Families Act, as introduced in the House on March 23, 2020, includes the requirement that OSHA promulgate an ETS on COVID-19 within seven days of enactment and a permanent COVID-19 standard within 24 months of enactment to cover healthcare workers, firefighters and emergency response workers, and workers in other occupations that CDC or OSHA determines to have an elevated risk of COVID-19 exposure. Division D of H.R. 6379 would amend the OSH Act, for the purposes of the ETS only, such that state and local government employers in states without state plans would be covered by the ETS. The provisions of Division D of H.R. 6379 were also included in S. 3584, the COVID-19 Workers First Protection Act of 2020, as introduced in the Senate.

This legislation would specifically provide that the ETS would remain in force until the permanent standard is promulgated and would explicitly exempt the ETS from the Regulatory Flexibility Act, Paperwork Reduction Act, and Executive Order 12866. OSHA would be granted enforcement discretion in cases in which it is not feasible for an employer to fully comply with the ETS (such as a case in which PPE is unavailable) if the employer is exercising due diligence to comply and implementing alternative means to protect employees.

Like the provisions in H.R. 6139 and the version of H.R. 6201 introduced in the House, the ETS and permanent standard under H.R. 6379 would be required to include an exposure control plan and provide no less protection than any state standard on novel pathogens, thus requiring OSHA to include the elements of the Cal/OSHA ATD, the VOSH COVID-19 ETS, and the MIOSHA emergency rules in this ETS and permanent standard. Although the ETS provisions in H.R. 6139 and H.R. 6201 would require that the ETS be based on the 2007 CDC guidance, specific reference to the 2007 guidance is not included in this legislation. Rather, under H.R. 6379, the ETS and permanent standard would have to incorporate, as appropriate, "guidelines issued by the Centers for Disease Control and Prevention, and the National Institute for Occupational Safety and Health, which are designed to prevent the transmission of infectious agents in healthcare settings" and scientific research on novel pathogens.

States with occupational safety and health plans would be required to adopt the ETS, or their own ETS at least as effective as the ETS, within 14 days of the legislation's enactment.

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020

H.R. 6559, the COVID-19 Every Worker Protection Act of 2020, was introduced in the House by Representative Bobby Scott on April 21, 2020. This legislation includes the ETS and permanent standard provisions of Division D of H.R. 6379 and S. 3584 and would require that these standards cover healthcare workers, emergency medical responders, and "other employees at occupational risk" of COVID-19 exposure. This legislation also adds two provisions that would clarify the requirements for employers to record work-related COVID-19 infections and strengthen the protections against retaliation and discrimination offered to whistleblowers. Similar provisions are included in S. 3677 and were incorporated into H.R. 6800, the Heroes Act, as passed by the House.

COVID-19 Recordkeeping

Sections 8(c) and 24(a) of the OSH Act require employers to maintain records of occupational injuries and illnesses in accordance with OSHA regulations.[81] OSHA's reporting and recordkeeping regulations require that employers with 10 or more employees must keep records of work-related injuries and illnesses that result in lost work time for employees or that require medical care beyond first aid.[82] Employers must also report to OSHA, within 8 hours, any workplace fatality, and within 24 hours, any injury or illness that results in in-patient hospitalization, amputation, or loss of an eye. Employers in certain industries determined by OSHA to have lower occupational safety and health hazards are listed in the regulations as being exempt from the recordkeeping requirements but not the requirement to report to OSHA serious injuries, illnesses, and deaths.[83] Offices of physicians, dentists, other health practitioners, and outpatient medical clinics are included in the industries that are exempt from the recordkeeping requirements.

OSHA regulations require the employer to determine if an employee's injury or illness is related to his or her work and thus subject to the recordkeeping requirements.[84] The regulations provide a presumption that an injury or illness that occurs in the workplace is work-related and recordable, unless one of the exemptions provided in the regulations applies.[85] One of the listed exemptions is "The illness is the common cold or flu (Note: contagious diseases such as tuberculosis, brucellosis, hepatitis A, or plague are considered work-related if the employee is infected at work)."[86]

Because of the nature of COVID-19 transmission, which can occur in the community as well as the workplace, it can be difficult to determine the exact source of any person's COVID-19 transmission. Absent any specific guidance, this may make it difficult for employers to determine if an employee's COVID-19 is subject to the recordkeeping requirements.

Initial OSHA Recordkeeping Guidance

On April 10, 2020, OSHA issued enforcement guidance on how cases of COVID-19 should be treated under the recordkeeping requirements.[87] This guidance stated that COVID-19 cases were recordable if they were work-related.

Under this guidance, employers in the following industry groups were to fully comply with the recordkeeping regulations, including the requirement to determine if COVID-19 cases were work-related:

- healthcare;
- emergency response, including firefighting, emergency medical services, and law enforcement; and
- correctional institutions.

---

[81] 29 U.S.C. §§657(c) and 673(a).

[82] OSHA's reporting and recordkeeping regulations are at 29 C.F.R. Part 1904.

[83] The list of exempted industries is at 29 C.F.R. Subpart B, Appendix A. States with state occupational safety and health plans may require employers in these exempted industries to comply with the recordkeeping requirements.

[84] 29 C.F.R. §1904.5.

[85] 29 C.F.R. §1905.5(a).

[86] 29 C.F.R. §1904.5(b)(2)(viii).

[87] OSHA, *Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, April 10, 2020, at https://www.osha.gov/memos/2020-04-10/enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

For all other employers, OSHA required employers to determine if COVID-19 cases were work-related and subject to the recordkeeping requirements only if both of the following two conditions were met:

1. There was objective evidence that a COVID-19 case may have been work-related. This could have included, for example, a number of cases developing among workers who worked closely together without an alternative explanation.
2. The evidence of work-relatedness was reasonably available to the employer. For purposes of this guidance, examples of reasonably available evidence included information given to the employer by employees, as well as information that an employer learned regarding its employees' health and safety in the ordinary course of managing its business and employees.

Updated OSHA Recordkeeping Guidance

OSHA issued new guidance, effective May 26, 2020, on recordkeeping of COVID-19 cases.[88] This new guidance rescinds the previous guidance issued by OSHA on April 10, 2020. Under this new guidance, all employers, regardless of type of industry or employment, are subject to the recordkeeping and recording regulations for work-related cases of COVID-19. To determine if an employer has made a reasonable determination that a case of COVID-19 was work-related, OSHA says it will consider the following factors:

- the reasonableness of the employer's investigation of the COVID-19 case and its transmission to the employee;
- the evidence that is available to the employer; and
- the evidence that COVID-19 was contracted at work.

The guidance provides examples of evidence that can be used to demonstrate that a COVID-19 case was or was not work-related such as if an employee had frequent close contact with members of the public in an area with ongoing community transmission of COVID-19.

H.R. 6559

H.R. 6559 would require that the ETS and permanent standard established pursuant to the legislation include the requirement for the recording and reporting of all COVID-19 cases in accordance with OSHA regulations in place at the time of enactment. By referencing the regulations in place, this provision would serve to supersede OSHA's guidance from April 10, 2020, and apply the requirement, currently provided in the guidance effective May 26, 2020, to determine the work-relatedness of COVID-19 cases to all employers covered by the recordkeeping regulations.

Whistleblower Protections

Section 11(c) of the OSH Act prohibits any person from retaliating or discriminating against any employee who exercises certain rights provided by the OSH Act.[89] Commonly referred to as the

[88] OSHA, *Revised Enforcement Guidance for Recording Cases of Coronavirus Disease 2019 (COVID-19)*, May 19, 2020, at https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19.

[89] 29 U.S.C. §660(c). OSHA also enforces whistleblower provisions in 22 other federal statutes. Information on statutes with whistleblower provisions enforced by OSHA is at OSHA, *Whistleblower Statutes Summary Chart*, October 17, 2009, at https://www.whistleblowers.gov/sites/wb/files/2019-12/WB-Statute-Summary-Chart-10.8-Final.pdf.

whistleblower protection provision, this provision protects any employee who takes any of the following actions:

- files a complaint with OSHA related to a violation of the OSH Act;
- causes an OSHA proceeding, such as an investigation, to be instituted;
- testifies or is about to testify in any OSHA proceeding; and
- exercises on his or her own behalf, or on behalf of others, any other rights afforded by the OSH Act.[90]

Other rights afforded by the OSH Act that are covered by the whistleblower protection provision include the right to inform the employer about unsafe work conditions; the right to access material safety data sheets or other information required to be made available by the employer; and the right to report a work-related injury, illness, or death to OSHA.[91] In limited cases, the employee has the right to refuse to work if conditions reasonably present a risk of serious injury or death and there is not sufficient time to eliminate the danger through other means.[92]

H.R. 6559 would require that the ETS and permanent standard promulgated pursuant to the legislation expand the protections for whistleblowers. The following additional activities taken by employees would grant them protection from retaliation and discrimination from employers and agents of employers:

- reporting to the employer; a local, state, or federal agency; or the media; or on a social media platform; the following:
  - a violation of the ETS or permanent standard promulgated pursuant to the legislation;
  - a violation of the infectious disease control plan required by the ETS or permanent standard; or
  - a good-faith concern about an infectious disease hazard in the workplace;
- seeking assistance from the employer or a local, state, or federal agency with such a report; and
- using personally supplied PPE with a higher level of protection than offered by the employer.

H.R. 6800, The Heroes Act

The provisions of H.R. 6559, including the provisions relating to recordkeeping and whistleblower protections, were included as Title III of Division L of H.R. 6800, The Heroes Act. H.R. 6800 was passed by the House on May 15, 2020. In a letter to Speaker of the House Nancy Pelosi, the AHA expressed its opposition to the ETS provisions in The Heroes Act citing the potential for confusion that new regulations could bring and the "ongoing global lack of supplies, equipment and testing capability" faced by hospitals.[93] The AHA also stated that the provision

[90] 29 C.F.R. §1977.3. Public-sector employees, except employees of the United States Postal Service, are not protected by the whistleblower provision, but may be covered by whistleblower provisions in other federal and state statutes.

[91] For additional information on other rights covered by the whistleblower protection provision, see OSHA, January 9, 2019, *Investigator's Desk Aid to the Occupational Safety and Health Act (OSH Act) Whistleblower Protection Provision*, pp. 5-7, at https://www.osha.gov/sites/default/files/11cDeskAid.pdf.

[92] 29 C.F.R. §1977.12(b)(2).

[93] Letter from Thomas P. Nickels, executive vice president, American Hospital Association, to Hon. Nancy Pelosi,

OSHA-003307

that would require the ETS to be based on state standards "suggests that the federal government is surrendering its responsibility to appropriately regulate the nation to a state government agency without consideration of whether that state's decisions are appropriate for implementation anywhere and everywhere."

H.R. 925, The Heroes Act (Revised)

The provisions of H.R. 6559 and H.R. 6800 were included in the House Amendment to the Senate Amendment to H.R. 925, the revised Heroes Act, passed by the House on October 1, 2020.

Speaker, U.S. House of Representatives, May 14, 2020, at https://www.aha.org/system/files/media/file/2020/05/web-AHALettertoHouseonHEROESAct051420final.pdf.

Appendix. OSHA Emergency Temporary Standards

Table A-1. OSHA Emergency Temporary Standards (ETS)

Year	Subject of ETS	*Federal Register* Citation of ETS	Result of Judicial Review	Judicial Review Case Citation
1971	Asbestos	36 *Federal Register* 23207 (December 7, 1971)	Not challenged	—
1973	Organophosphorous pesticides	38 *Federal Register* 10715 (May 1, 1973); amended by 38 *Federal Register* 17214 (June 29, 1973)	Vacated	*Florida Peach Growers Ass'n v. United States Department of Labor,* 489 F.2d 120 (5th Cir. 1974)

IN THE UNITED STATES DISTRICT COURT
FOR WESTERN DISTRICT OF MISSOURI

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE; *Plaintiffs*, v. SMITHFIELD FOODS, INC. AND SMITHFIELD FRESH MEATS CORP., *Defendants*.	Case No. 5:20-cv-06063-DGK

PLAINTIFFS' SUGGESTIONS IN OPPOSITION TO LETTER INCLUDING REQUEST FOR EXTENSION OF TIME TO RESPOND TO PLAINTIFFS' EMERGENCY MOTION FOR A PRELIMINARY INJUNCTION

The Court should deny Defendants' request for an extension of time to respond to Plaintiffs' Emergency Motion for a Preliminary Injunction ("Motion"), Dkt. No. 3.[1] Defendants seek to delay this Court's consideration of the Motion based on a forthcoming, but baseless, argument that the Occupational Safety and Health Administration ("OSHA") has "primary jurisdiction." But, even if OSHA were to act, and it has said it will not, that action would not impact Plaintiffs' state-law tort claims in this matter. Any delay risks further spread of the COVID-19 virus, both among workers at the Milan, Missouri plant and in the wider community.

Workers at Defendants' Milan, Missouri plant (the "Plant") have symptoms of COVID-19, and without prompt Court intervention, the virus will surely spread.[2] This is not idle

[1] Defendants have not formally moved for an extension of time to respond to Plaintiffs' Motion. But in their letter to the Court of April 24, 2020, Defendants appear to request that "the Court permit Smithfield to file its response [to Plaintiffs' Motion] on May 4, 2020." Dkt. No. 15, at 1.

[2] Defendants' claim that they "are not aware of any confirmed diagnoses of COVID-19," Dkt. No. 15, at 1, is dangerously misleading. As Plaintiffs explain, Defendants have "not implemented

speculation. Smithfield plants around the country are closing every day because of COVID-19.[3] In this case, Plaintiffs do not request that the Court order the Plant closed. All they are asking is that if Defendants continue operating the Plant, they comply with basic requirements included in federal and state public health orders and guidance to prevent further spread in Milan and the surrounding region. Every day that the Plant continues to operate without making these changes substantially increases the likelihood of illness and even death, and yet further disruption of the nation's food supply chain.

Defendants' suggestion that the Court allow them to delay opposing Plaintiffs' Motion so they can raise a prudential primary jurisdiction claim runs counter to the doctrine. Primary jurisdiction "is to be invoked sparingly, as it often results in added expense and delay," which is particularly unacceptable here. *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005).

Moreover, a defendant moving to dismiss based on an agency's primary jurisdiction must "identif[y] a[] relevant proceeding[] to which" the court should defer, and there is not one here. *Curran v. Bayer Healthcare LLC*, No. 17 C 7930, 2019 WL 398685, at *3 (N.D. Ill. Jan. 31, 2019). Defendants contend that OSHA "is currently investigating and enforcing work place

---

any policies that allow [them] to contact trace or test workers who have symptoms." Complaint, Dkt. No. 1 ¶ 105.

[3] Chicago Digital Team, *Kane County Health Department Closes St. Charles' Smithfield Foods Due to COVID-19 Concerns*, ABC7 (Apr. 25, 2020), https://abc7chicago.com/amp/smithfield-foods-st-charles-closing-coronavirus-illinois/6129026/; *Smithfield to close Illinois pork facility after workers test positive for virus*, Reuters (Apr. 24, 2020), https://in.reuters.com/article/us-health-coronavirus-smithfield/smithfield-to-close-illinois-pork-facility-after-workers-test-positive-for-virus-idINKCN22636X?il=0; *see also* Greg Barnes, *Two more processing plants identified as having coronavirus outbreaks*, North Carolina Health News (Apr. 24, 2020), https://www.northcarolinahealthnews.org/2020/04/24/two-more-meat-processing-plants-identified-as-having-coronavirus-outbreaks/.

OSHA-003428

safety issues concerning COVID-19 throughout the country." Dkt. No. 15, at 1. But, in fact, OSHA is hardly performing any onsite inspections. Of particular import, it has classified meat packing jobs as "[m]edium exposure risk" for COVID-19—medical, postmortem, and laboratory workplaces were the only ones identified as "[h]igh and very high exposure risk jobs"—and directed its inspectors to "not normally" perform "on-site inspection[s]" for such medium risk jobs. OSHA, *Interim Enforcement Response Plan for Coronavirus Disease 2019 (COVID-19)* (Apr. 13, 2020).[4] OSHA may only issue a citation to "abate[]" a violation after an inspection. 29 U.S.C. § 658(a).[5]

Furthermore, even if Plaintiffs' claims were not emergent, the wait for OSHA to act would likely be years. If an investigation were to be scheduled, OSHA has six months to issue a citation from the date of inspection, 29 U.S.C. § 658(c). Should OSHA issue a citation, Defendants would have fifteen days to respond, and, if they objected to the citation, no action would be required of them until a final decision by the independent Occupational Safety and Health Review Commission, *id.* § 659(c). That commission regularly takes years to issue decisions. *See, e.g., Sec. of Labor v. Science App. Int'l Corp.*, OSHRC Dkt. No. 14-1668 (Apr. 16, 2020) (decision on wrongful death citation, almost exactly six years after the fact).

The nature of Plaintiffs' state law claims also makes the primary jurisdiction doctrine inapplicable. *See State ex rel. Schmitt v. Henson*, No. ED 107970, 2020 WL 1862001, at *4 (Mo.

---

[4] https://www.osha.gov/memos/2020-04-13/interim-enforcement-response-plan-coronavirus-disease-2019-covid-19#attach2.

[5] Thus, that by April 28 Defendants "intend[] to cooperate fully with" a written request from OSHA that Defendants identify the conditions at the Milan Plant does not suggest any agency action is forthcoming. Dkt. No. 15, at 1. Further, that Defendants can respond to OSHA by April 28 disproves their claim they need additional time to investigate Plaintiffs' contentions. There is no reason Defendants cannot provide the Court the information they are already collecting.

Ct. App. Apr. 14, 2020) (describing Missouri public nuisance law); *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 12-13 (Mo. Ct. App. 1982) (identifying Missouri's right to a safe workplace). Courts have observed that where, as here, plaintiffs "allege[] state common law causes of action and remedies that are not dependent on any provisions [of a statute enforced by a federal agency]," primary jurisdiction is inapplicable. *Ryan v. Chemlawn Corp.*, 935 F.2d 129, 132 (7th Cir. 1991). OSHA is actually prohibited from "secur[ing] the safety of the general public," which is precisely what Plaintiffs seek to protect through their public nuisance claim. *Steel Inst. v. City of New York*, 716 F.3d 31, 41 (2d Cir. 2013). The Occupational Health and Safety Act also includes a savings clause that permits private parties to pursue tort claims in court independent of OSHA. 29 U.S.C. § 653(b)(4); *Schweiss v. Chrysler Motors Corp.*, 922 F.2d 473, 474 (8th Cir. 1990). Deferring resolution of Plaintiffs' tort claims is not what the governing statute or doctrine of "primary jurisdiction" intended.

Finally, the Eighth Circuit has explained the purpose of deferring to an agency under the primary jurisdiction doctrine is to ensure "consistency" in regulation or to take advantage of "agency expertise," *Alpharma*, 411 F.3d at 938, but neither consideration would be advanced by delay here. OSHA has deferred to a different federal agency, the Centers for Disease Control ("CDC"), suggesting that CDC guidelines should inform employers in developing workplace safety policies to protect against COVID-19. *Interim Enforcement Response Plan for Coronavirus Disease 2019*, *supra* ("The most current CDC guidance should be consulted in assessing potential workplace hazards and to evaluate the adequacy of an employer's protective measures for workers."). Defendants' refusal to adhere to the CDC guidelines is the foundation of Plaintiffs' claims, Complaint ¶¶ 62-107, because Missouri's "stay-at-home order" incorporates the CDC guidelines and establishes the standard of care Defendants are violating in

this case, *id.* ¶¶ 57-61. Providing Plaintiffs' requested relief would further, not hamper, consistency. For these reasons too, OSHA's expertise also does not appear to bear meaningfully on what is needed to protect the Plant's workers and Milan. Indeed, it was the *CDC*, not OSHA, that issued guidance relating to reopening Defendants' South Dakota plant following the tragic spread of COVID-19 in that workplace and the community beyond.[6]

This Court should not grant Defendants' request to delay by a week their response to Plaintiffs' Motion. Defendants' claim of primary jurisdiction is frivolous and founded in the erroneous suggestion that OSHA can or will address the concerns raised in Plaintiffs' Complaint. Delay will only place public safety at risk.

Respectfully Submitted,

I. PRELIMINARY STATEMENT

Plaintiffs Rural Community Workers Alliance ("RCWA") and Jane Doe ("Plaintiffs") initiated this action on April 23, 2020 seeking extraordinary relief in the form of a mandatory injunction. In support, they have offered allegations that grossly misrepresent the substantial safety measures that Smithfield has implemented at its Milan, Missouri Plant (the "Plant"). It is not surprising that not a single Smithfield employee was willing to apply their name to this baseless lawsuit. Plaintiffs' request that this Court develop, monitor, and administer Smithfield's occupational health and safety program at the Plant is unprecedented and improper.

In any event, the Court never needs to reach the merits of the Complaint or consider Plaintiffs' overreaching request for injunctive relief. Rather, pursuant to the primary jurisdiction doctrine, the Court can—and should—dismiss or stay this suit in favor of the Occupational Health and Safety Administration's ("OSHA") regulatory authority over workplace safety issues and the Missouri Department of Health and Senior Services' ("MDHSS") jurisdiction over public health in Missouri. Even if the Court does not dismiss or stay the suit because OSHA has primary jurisdiction, there is an independent basis for dismissal under *Burford* abstention.

Indeed, OSHA is already in the process of exercising its jurisdiction at the Plant. On the day before Plaintiffs filed their Complaint in this case, OSHA sent Smithfield a "Rapid Response Investigation" requesting information regarding its COVID-19 work practices and infection at the Plant, giving Smithfield only seven days to respond. Smithfield is preparing its response for submission on April 29, and intends to cooperate fully with OSHA. The Court should defer to OSHA and its expertise to investigate and enforce any purported safety violations at the Plant. Indeed, on Sunday, April 26, 2020, OSHA and the Centers for Disease Control ("CDC") joined together and issued specific COVID-19 guidance for meat processing plants.

In addition to OSHA's oversight, the MDHSS has the authority to implement all appropriate and necessary measures to protect the public from the spread of COVID-19. And another layer of public health oversight—county public health administrators—provides further protection. Indeed, where food processing plants in Missouri have seen *actual* employee infections—as opposed to speculation about *future* infections—county public health administrators have worked closely with plants to protect employees and the public.

Public policy strongly supports the Court deferring to OSHA and MDHSS on these issues. Smithfield is an essential business critical to the nation's food supply. There are many other essential businesses operating throughout the country that are critical to the country's survival. Subjecting these entities to private lawsuits for injunctive relief, in which safety standards are determined piecemeal by plaintiffs and the courts, will result in inconsistent rulings and uncertainty for both employers and employees.

The workplace safety and public health concerns created by the novel coronavirus are both outside the conventional experience of judges and squarely within the technical and policy expertise of OSHA and MDHSS. The agencies are already responding to these concerns in real time, adapting as new facts emerge. That is not a role that a district court can or should take on. Plaintiffs are wrong to ask the Court to interpose itself between these agencies and essential businesses like Smithfield's Milan Plant. Considerations of institutional competency and prudence militate strongly in favor of a dismissal or stay on primary jurisdiction, or a dismissal based on *Burford* abstention, and the Court should grant Smithfield's Motion.

II. FACTS

A. Smithfield and the Plant

The named defendants in this action are Smithfield Foods, Inc. and its wholly owned subsidiary, Smithfield Fresh Meats Corp. (collectively, "Smithfield"). The Plant at issue is a meat

processing facility, which is an essential business that has lawfully continued to operate under the Governor of Missouri's stay at home order.[1] The Plant and its operations constitute "critical infrastructure" pursuant to the guidelines issued by the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency, which were adopted in Missouri's stay at home order.[2]

The Plant has voluntarily implemented substantial workplace safety measures in response to COVID-19, including providing personal protective equipment such as masks and face shields to all workers and persons who enter the building, social distancing both in common areas,, installing partitions between line workers, conducting temperature scans, providing multiple hand-sanitizer stations, implementing additional sanitation of workspaces and other areas, and encouraging workers to stay home when sick with pay and without penalty. These measures will be further detailed in Smithfield's response to Plaintiffs' Motion for Preliminary Injunction/Temporary Restraining Order to be filed on April 29, 2020.

As of the date of this filing, there have been no confirmed diagnoses of COVID-19 at the Plant.[3] Moreover, to Smithfield's knowledge, there have been no positive cases reported in Sullivan County (which surrounds the city of Milan). A majority of counties adjacent to Sullivan

---

[1] Mo. Exec. Order (April 3, 2020), https://governor.mo.gov/priorities/stay-home-order, *see* **Exhibit 1**.

[2] *See id.* Item 2 (incorporating CISA's definition of "critical infrastructure); U.S. CYBERSECURITY AND INFRASTRUCTURE SECURITY AGENCY, ADVISORY MEMORANDUM ON IDENTIFICATION OF ESSENTIAL CRITICAL INFRASTRUCTURE WORKERS DURING COVID-19 RESPONSE (April 17, 2020), https://www.cisa.gov/sites/default/files/publications/Version_3.0_CISA_Guidance_on_Essential_Critical_Infrastructure_Workers_4.pdf, p. 8 (defining "critical infrastructure" employees to include "food manufacturer employees," such as those working in "livestock [and] poultry … slaughter facilities").
[The order references Version 2.0 of the guidance, which appears to be no longer publicly available, as it was removed from the CISA website after Version 3.0 was published. A description of the update on CISA's website indicates the definitions regarding food processing plants remain unchanged. *See* https://www.cisa.gov/publication/guidance-essential-critical-infrastructure-workforce.]

[3] *See* MISSOURI DEPT. OF HEALTH & SENIOR SERVICES, COVID-19 OUTBREAK GUIDE, https://health.mo.gov/living/healthcondiseases/communicable/novel-coronavirus/results.php (last accessed April 27, 2020).

County also have zero positive cases to date, and the case counts are relatively low in the few adjacent counties that have reported positive cases.[4]

B. Plaintiffs' Allegations and Request for Relief

Plaintiffs assert claims about Smithfield's safety practices as they relate to potential COVID-19 exposure and seek declaratory and injunctive relief. *See* Compl. However, Plaintiffs do not allege that there have been any positive diagnoses associated with the Plant, and as noted above, Smithfield is aware of none.

To be clear, this is not a suit for personal injury or wrongful death. RCWA does not allege that any of its members have contracted COVID-19 at the Plant or otherwise. Likewise, Jane Doe does not allege that she has tested positive for COVID-19. Indeed, Plaintiffs stipulate that they are not seeking money damages. Compl. at ¶ 16.

Plaintiffs seek a declaration that "Smithfield's failure to implement appropriate worker protections during the COVID-19 crisis constitutes a public nuisance under Missouri law and a violation of the right to a safe work place under Missouri law." Compl. at ¶ 123. However, the primary relief sought by Plaintiffs is a Court Order, in the form of an injunction, requiring Smithfield to adopt a list of work practices, many of which are vague and ill-defined, such as "providing sufficient personal protective equipment" and "creating and implementing a social distancing plan for the Plant" and "creating and implementing a protocol to clean surfaces." Complaint at ¶ 123. Plaintiffs also request that the Court require Smithfield to allow Plaintiffs' experts to inspect the plant to identify additional precautions that Smithfield should take. *Id.* at ¶ 123(viii). Smithfield will demonstrate in its response to Plaintiffs' Motion for Preliminary

[4] Compare the number of positive cases in neighboring counties (Adair - 12, Livingston - 2, Linn - 5, and Macon - 2) with other significant outbreak locations in the state (St. Louis County - 2,897, Kansas City - 500, Greene County - 83). *Id.*

Injunction that it has already implemented all of the safety measures for which Plaintiffs' seek injunctive relief.

C. OSHA's Request for Information

On the day before this case was filed, Smithfield received a request for information from OSHA regarding its COVID-19 safety practices at the Plant. *See* **Exhibit 2**. OSHA has directed Smithfield to respond to the request for information by Wednesday, April 29, 2020. *Id.* Smithfield intends to cooperate fully with OSHA in this matter.

D. OSHA's Role

The Occupational Safety and Health Act, 29 U.S.C. §§ 651, *et. seq.* (the "Act"), was enacted "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources." 29 U.S.C. § 651(b). The Act authorizes "the Secretary of Labor to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce." *Id.* at § 651(b)(3).

OSHA is the federal agency charged with administering the Act. OSHA provides a procedure for an employee who is concerned about workplace safety to file a confidential complaint requesting that OSHA initiate an investigation into the employer's work practices.[5]

The Act provides for "an effective enforcement program." *Id.* at § 651(b)(10). The Act authorizes OSHA to inspect or investigate any place of employment in order to carry out the purposes of the Act. *Id.* at § 657. OSHA may issue a citation to an employer for any violation of the Act, including the General Duty Clause, which requires an employer to furnish "a place of employment which [is] free from recognized hazards that are causing or are likely to cause death

[5] *See* https://www.osha.gov/workers/file_complaint.html

or serious harm." *Id.* at § 658. Any such citation "shall fix a reasonable time for the abatement of the violation." *Id.* The Act provides for additional enforcement mechanisms if an employer does not correct a violation for which a citation has been issued. *Id.* at § 659. The Act further provides for penalties for violations and/or failure to abate. *Id.* at § 666.

The Act specifically includes procedures to address an imminent danger. *Id.* at § 662. The Act permits the Secretary of Labor to petition the court

> to restrain any conditions or practices in any place of employment which are such that a danger exists which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by [the Act].

Id. The Act authorizes an employee to file a writ of mandamus to compel the Secretary to seek such an order if the employee believes that the Secretary "arbitrarily or capriciously fails to seek relief." *Id.*[6] In such a case, OSHA is directly involved, and the court is not acting without the agency's participation.

OSHA has published "Guidance on Preparing Workplaces for COVID-19," which makes clear that the agency will use the General Duty Clause to enforce any unsafe conditions relating to COVID-19. **Exhibit 3** at 4. OSHA's General Duty Clause provides that "employers are required to provide their employees with a workplace free of recognized hazards likely to cause death or serious physical harm." *Id.* OSHA has also issued Interim Enforcement Guidance for Coronavirus Disease 2018 (issued April 13, 2020), which identifies applicable standards that may apply to COVID-19.[7] *See* **Exhibit 4.** On Sunday, April 26, 2020, the CDC and OSHA jointly issued Interim Guidance ***specific*** to the meat processing industry. *See* **Exhibit 5**.

---

[6] Plaintiffs' Opposition, which purports to provide a timeline of OSHA action, ignores these emergency procedures. Opposition at 3.

[7] These include the following:

29 CFR § 1904, Recording and Reporting Occupational Injuries and Illness;

E. Plaintiffs' Criticisms of OSHA

In Plaintiffs' Opposition to Letter Request for Extension of Time to Respond to Plaintiffs' Emergency Motion for a Preliminary Injunction (Doc. 19), Plaintiffs make several unfounded criticisms of OSHA and its response to COVID-19, to which Smithfield briefly responds below.

- Plaintiffs contend that "OSHA is hardly performing any onsite inspections," Opposition at 2-3. However, Plaintiffs do not provide any support for this statement. Whether true or not, OSHA continues to pursue its mission and is conducting aggressive investigations using electronic means and demands for information, as is evidenced by its request to Smithfield regarding the Milan Plant.
- Plaintiffs suggest that OSHA is not investigating meat processing plants. Opposition at 3. This is a red herring. Whatever OSHA's general policy is with respect to meat processing plants, it has inserted itself into safety issues at Smithfield's Milan Plant. Moreover, just yesterday, OSHA and CDC issued joint guidance regarding COVID-19 safety issues directed at meat processing facilities.
- Plaintiffs contend that OSHA may only issue a citation to "abate[]" a violation after an inspection. 29 U.S.C. § 658(a). Opposition at 3. This is patently incorrect. OSHA may seek an immediate injunction under its emergency powers, as discussed above.

---

29 CFR § 1910.132, General Requirements [Personal Protective Equipment]
29 CFR § 1910.133, Eye and Face Protection
29 CFR § 1910.134, Respiratory Protection
29 CFR § 1910.141, Sanitation
29 CFR § 1910.145, Specifications for Accident Prevention Signs and Tags
29 CFR § 1910.1020, Access to Employee Exposure and Medical Records
29 CFR § 1910.1030, Bloodborne Pathogens

- Plaintiffs contend that "even if their claims were not emergent, the wait for OSHA to act would likely be years." Opposition at 3. Again, this is incorrect. Plaintiffs cite to statutes of limitations (6 months for OSHA to issue a citation) and employer response times (15 days), which are outer limits. Moreover, Plaintiffs assume an appeals process—a process that is available in the courts is well.

F. State and Local Public Health Authority Over COVID-19

While OSHA is responsible for *workplace* safety, Missouri state and local government has a corresponding responsibility for *public* safety. Missouri, like other states around the country, has implemented statewide policies to address the threat of COVID-19 exposure and transmission.

Governor Parson, through the Missouri Department of Health and Senior Services ("MDHSS"), issued a "stay-at-home" order on April 3, 2020.[8] The order includes general COVID-19 safety requirements and guidelines pertaining to individuals, as well as the operations of both essential and non-essential businesses.[9] The Governor assigned responsibility for implementing and enforcing specific COVID-19 safety measures to "all local and state health authorities." Mo. Rev. Stat. Ann. § 192.290.[10]

MDHSS continues to fulfill this responsibility, as it has issued dozens of guidance statements[11] containing specific COVID-19 safety measures, including several statements pertaining specifically to workplace safety.[12] Additionally, MDHSS and local health agencies

---

[8] Mo. Exec. Order (April 3, 2020), https://governor.mo.gov/priorities/stay-home-order, *see* **Exhibit 1**.
[9] *See id.*, Items 1-3.
[10] *See id.*, p. 2.
[11] *See* MDHSS, HEALTH ALERTS, ADVISORIES & UPDATES, https://health.mo.gov/emergencies/ert/alertsadvisories/index.php (last accessed April 26, 2020)
[12] *See, e.g.,* MDHSS, INTERIM GUIDANCE FOR IMPLEMENTING SAFETY PRACTICES FOR CRITICAL INFRASTRUCTURE WORKERS, https://health.mo.gov/emergencies/ert/ alertsadvisories/pdf/update 4920.pdf (last accessed April 26, 2020); MDHSS, COVID-19 AND RETURN TO WORK MESSAGING - EXPANDED GUIDANCE FOR CRITICAL INFRASTRUCTURE PERSONNEL INVOLVED IN THE PROVISION OF DIRECT CLIENT CARE, https://health.mo.gov/emergencies/ert/alertsadvisories/pdf/guidance41720.pdf (last accessed April 26, 2020).

have worked closely with a number of private businesses to monitor and develop their COVID-19 safety measures.[13] MDHSS has also worked closely with federal agencies in responding to the virus,[14] and the Center for Disease Control has made itself available to assist state and local agencies in their response to health emergencies such as COVID-19.[15]

Missouri's COVID-19 response led by state and local agencies is consistent with—and in fact required by—Missouri law. All "public health functions and programs" in Missouri must be supervised and managed by the MDHSS. Mo. Rev. Stat. Ann. § 192.005. Further, Missouri regulations specifically provide that the Director of MDHSS must use "the legal means necessary to control … any disease or condition listed in 19 Mo. CSR 20-20.020 which is a threat to the public health." 19 Mo. C.S.R. 20-20.040. Listed diseases and conditions include "[o]utbreaks (including nosocomial) or epidemics of any illness, disease, or condition that may be of public health concern." 19 Mo. C.S.R. 20-20.020. That provision undoubtedly covers COVID-19.

Under MDHSS regulations, upon report of an infectious disease under Section 20-20.020, both the Director and "local health authorit[ies]" have a duty to take appropriate measures to lessen the effect of the disease:

(A) Inspect any premises that they have reasonable grounds to believe are in a condition conducive to the spread of the disease; . . .

(E) Establish and maintain quarantine, isolation or other measures as required;...

(G) Establish appropriate control measures which may include isolation, quarantine, disinfection, immunization, closure of establishment, notification to the public of the risk or potential risk of the disease and such information required to avoid or appropriately respond to the exposure, the creation and enforcement of adequate orders to prevent the spread of the disease and other measures considered by the department and/or local health authority as appropriate disease control measures based upon the disease, the patient's circumstances, the type of facility available, and any other available information related to the patient and the disease or infection.

19 Mo. C.S.R. 20-20.040.

III. ARGUMENT

A. The Court Should Dismiss or Stay This Action In Favor of OSHA's Primary Jurisdiction Over Workplace Safety.

1. Legal Standard for Invoking Primary Jurisdiction Doctrine

The doctrine of primary jurisdiction applies to claims "properly cognizable in court that contain some issue within the special competence of an administrative agency." *Reiter v. Cooper*, 507 U.S. 258, 268 (1993). It is a "common-law doctrine that is utilized to coordinate judicial and administrative decision making." *Access Telecommunications v. Southwestern Bell Tel. Co.*, 137 F.3d 605, 608 (8th Cir. 1998) (citations omitted). The doctrine "is concerned with promoting proper relationships between the courts and administrative agencies charged with particular regulatory duties." *United States v. Western Pac. R.R. Co,* 352 U.S. 59, 63 (1956).

There is no set formula for when the doctrine applies, but "[i]n every case the question is whether the reasons for the existence of the doctrine are present and whether the purposes it serves will be aided by its application in the particular litigation." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 909 (8th Cir. 2015) (quoting *United States v. Western Pac. R.R. Co.*, 352 U.S. 59, 64 (1956)); *Asarco, LLC v. NL Indus.*, No. 11-00123-CV-SW-BP, 2013 U.S. Dist. LEXIS 43013,

OSHA-003446

*9 (W.D. Mo. Mar. 18, 2013). The two primary reasons for applying the primary jurisdiction doctrine are: (1) "to obtain the benefit of the agency's expertise and experience"; and (2) "to promote uniformity and consistency within the particular field of regulation." *Sprint Spectrum L.P. v. AT&T Corp.*, 168 F.Supp.2d 1095, 1097-98 (W.D. Mo. 2001) (citations omitted).

The doctrine of primary jurisdiction may be applied even where claims arise under state law. For example, in *Sprint Sprectrum L.P.*, the plaintiff asserted state law claims for implied contract and quantum meruit. 168 F.Supp.2d at 1099. Nevertheless, the court stayed the case in favor of an FCC proceeding because the outcome turned on the "reasonableness" of Sprint's rates, "a fact that must be proven and one which the FCC is in a better position than the Court to evaluate." *Id.* at 1099-1100; *see also Nader v. Allegheny Airlines*, 426 U.S. 290, 296-97 (1976) (observing that the D.C. Court of Appeals determined that the viability of plaintiff's common-law fraudulent misrepresentation claim would be affected by agency determination).[16]

Moreover, as the cases cited herein demonstrate, there need not be an existing agency proceeding for the court to invoke the doctrine of primary jurisdiction.[17] However, the fact that a collateral agency action is already underway weighs in favor of the court deferring to the agency process. *See Asarco*, 2013 U.S. Dist. 43013 at *14-19.

In applying the primary jurisdiction doctrine, the court has discretion whether to dismiss or stay the lawsuit pending the agency determination. *Chlorine Institute*, 792 F.3d at 913 (citing *Reiter*, 507 U.S. at 268-69). Generally, dismissal is appropriate where resolution of the deferred

---

[16] Plaintiffs' Opposition brief incorrectly argues that the primary jurisdiction doctrine cannot be applied to state law claims. Opposition at 3-4.

[17] Plaintiffs' Opposition suggests that primary jurisdiction may only be applied where there is an *existing* agency proceeding. Opposition at 2. However, the case cited, *Curran v. Bayer Healthcare*, does not stand for this proposition. It merely indicates that defendant in that case failed to identify any such proceeding. Moreover, the case on which *Curran* relies focused on whether such a proceeding is available—not whether it has already been initiated. Here, Plaintiffs have available relief through OSHA's complaint process and emergency powers.

issue will likely dispose of the entire case. *See id.* However, the Court may choose to stay the matter while the agency action proceeds. *See id.*

2. The Primary Jurisdiction Doctrine Applies Here.

This is a quintessential case for application of the primary jurisdiction doctrine. The issues presented by Plaintiffs' Complaint relate to workplace safety. Plaintiffs seek only declaratory and injunctive relief. Specifically, they seek a Court order requiring Smithfield to adopt a list of work practices identified by Plaintiffs to protect against the spread of COVID-19. But there is a federal agency, OSHA, with special expertise in this area. Moreover, OSHA is actively involved in investigating and enforcing COVID-19 safe work practices throughout the country. Indeed, OSHA has already contacted Smithfield using a "Rapid Response Investigation" to obtain information regarding its COVID-19 safety practices at the Plant, and Smithfield is cooperating with OSHA. The Court should defer to OSHA as to whether Smithfield's existing safety practices are sufficient to protect employee health, or whether additional measures should be implemented.[18]

Plaintiffs' request for injunctive relief implicates several specific OSHA regulations. The table below highlights some of the specific OSHA standards at issue:

[18] Plaintiffs' reference the OSHA savings clause in their Opposition. Opposition at 4. However, the savings clause relates to preemption—not primary jurisdiction. Smithfield will address the issue of OSHA preemption in its Opposition to Plaintiffs' Motion for Preliminary Injunction/Temporary Restraining Order.

Relief Requested in Complaint	OSHA Standard
Order Smithfield to provide "sufficient personal protective equipment" Compl. ¶ 123(c)(i).	General Personal Protective Equipment (PPE), 29 CFR 1910.132 1910.132(d) *Hazard assessment and equipment selection.* 1910.132(d)(1) The employer shall assess the workplace to determine if hazards necessitate the use of personal protective equipment (PPE). If such hazards are present, or likely to be present, the employer shall: 1910.132(d)(1)(i) Select and require the use of PPE that will protect the affected employee;
Order Smithfield to "create[] and implement[] a social distancing plan" Compl. ¶ 123(c)(ii).	Bloodborne Pathogens, 29 CFR 1910.1030 (which OSHA has stated provides guidance for purposes of COVID-19 safety) 1910.1030(d)(2) *Engineering and Work Practice Controls.* 1910.1030(d)(2)(i) Engineering and work practice controls shall be used to eliminate or minimize employee exposure.
Order Smithfield to " create[] and implement[] a protocol to clean surfaces" Compl. ¶ 123(c)(v).	Sanitation, 29 CFR 1910.141: 1910.141(a)(3)(i) All places of employment shall be kept clean to the extent that the nature of the work allows.
Order Smithfield to "provide[] tissues"[19] Compl. ¶ 123(c)(iv).	Medical Services and First Aid, 29 CFR 1910.151 1910.151(b) Adequate first aid supplies shall be readily available.

OSHA is in the best position to assess Smithfield's COVID-19 work practices—not the Court in the first instance. Moreover, deferring to OSHA will promote uniformity, which is critical in these unprecedented times. Essential businesses that continue to operate to provide the public

[19] For obvious reasons, the United States Department of Agriculture would not allow production line workers to have tissues while working on the line.

and the government critical products and services should not be subject to piecemeal and inconsistent safety requirements imposed by private plaintiffs and courts.

The relief requested by Plaintiffs is truly unprecedented. Plaintiffs are asking this Court to develop, monitor, and administer Smithfield's occupational health and safety program at the Plant. Plaintiffs have appointed themselves and their "experts" the role of inspecting the Plant and making determinations about what safety procedures must be implemented. The Court is then expected to take their recommendations and fashion a ***mandatory*** injunction that will require Smithfield to implement a specific safety program, which the Court presumably will police over the course of the pandemic.

Smithfield is not aware of a single case where a court commandeered an employer's occupational safety and health program in such a manner, and Plaintiffs have cited none. Indeed, courts have refused such invitations—even in the face of the COVID-19 pandemic. For example, in *Alaska State Employees Association, Local 52 v. SOA*, 3AN-20-056652CI, the Union representing the state employees of Alaska filed suit against the state for alleged violation of the duty to provide a safe place to work and seeking injunctive relief to require the state to implement work practices to protect the employees from COVID-19. The court denied the injunction and declined to insert itself in the state's determination of how to best protect its employees and continue to provide essential services. *See* Order Regarding ASEA's Motion for a Temporary Restraining Order and Preliminary Injunction, attached as **Exhibit 6**. Courts have denied similar requests for injunctive relief that would require the court to oversee safety protocols at prisons. *Baxley v. Jividen*, 2020 WL 1802935 (W.D. Va. April 8, 2020).[20] The Court should likewise

[20] In *Valentine v. Collier*, __ F.3d __, 2020 WL 1934431 (5th Cir. Apr. 22, 2020), the district court granted injunctive relief related to the state prison system's response to COVID-19, but the Court of Appeals stayed the injunction pending appeal. The Court noted that the prison system's "ability to continue to adjust [their] policies [would be]

OSHA-003450

decline Plaintiffs' invitation here, and defer workplace safety issues to OSHA and its expertise, working in conjunction with the Plant.

B. This Court Should Abstain from Injecting Itself into Areas of Public Health Which Are Uniquely State Issues.

1. Legal standard for *Burford* abstention.

Federal courts "'should exercise their discretionary power with proper regard for the rightful independence of state governments in carrying out their domestic policy.'" *Burford v. Sun Oil Co.*, 319 U.S. 315, 334-35 (1943) (Douglas, J., concurring) (quoting *Commonwealth of Pennsylvania v. Williams*, 294 U.S. 176, 185 (1935)); *see Johnson v. Collins Entertainment Co., Inc.*, 199 F.3d 710, 720 (4th Cir. 1999) (holding that federal court abstention is required when states are protecting their residents' health, safety, and welfare, and "different states can arrive at different answers based on their different experiences").

A federal court may abstain from jurisdiction under the *Burford* abstention doctrine when (1) "there have been presented difficult questions of state law bearing on policy problems of substantial public import whose importance transcends the result in the case at bar"; and (2) "exercise of federal review of the question in a case and in similar cases would be disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern." *Wolfson v. Mutual Benefit Life Ins. Co.*, 51 F.3d 141, 144 (8th Cir. 1995); *Melahn v. Pennock Insurance Inc.*, 965 F.2d 1497, 1506 (8th Cir. 1992) ("*Burford* abstention applies when a state has established a complex regulatory scheme supervised by state courts and serving important state interests, and when resolution of the case demands specialized knowledge and the application of

---

significantly hampered by the preliminary injunction, which locks in place a set of policies for a crisis that defies fixed approaches." *Id.* (citing *Jacobson v. Mass.*, 197 U.S. 11, 28-29 (1905); *In re Abbott*, 954 F.3d 772, 791 (5th Cir. 2020)).

OSHA-003451

complicated state laws") (quoting *Bilden v. United Equitable Ins. Co.*, 921 F.2d 822, 825-26 (8th Cir. 1990)).

The application of the *Burford* doctrine does not require that a state authority have already intervened with respect to the specific matter. *See generally Johnson*. Rather, it is enough that a plaintiff may seek redress in a state court, where questions of local policy related to regulation and enforcement should be decided. *See id.* at 716 (noting that "[t]he state courts are intimately involved in [the regulatory] scheme through the adjudication of private actions and the review of administrative decisions"); *see also Heartland Hosp. v. Strangler*, 792 F.Supp. 670, 672 (W.D. Mo. 1992) ("*Burford* abstention is necessary when federal review would likely be 'disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern'" (quoting *Colorado River Water Conservation Dist. v. U.S.*, 424 U.S. 800, 814 (1976))).

Abstention is especially appropriate when the issue to be decided "lies at the heart of the state's police power" because "[f]ormulations of that power underscore the state's paramount interest in the health, welfare, safety, and morals of its citizens." *See Johnson*, 199 F.3d at 720. Otherwise, "the federal courts might adjudicate all kinds of disputes involving the most sensitive questions of state law and policy that arrive at their door . . . . This would in time endanger the independence of state policy at the core of state police power and cause friction between the federal and state systems." *Id.*

2. The Court should abstain in favor of Missouri's Public Health Agencies.

The Court should exercise its discretion to abstain in this case pursuant to the *Burford* abstention doctrine. Plaintiffs are seeking to serve as private attorneys general to enforce the state of Missouri's public health law. A federal court should not insert itself into the state's public policy regarding the protection of its citizens from COVID-19 exposure and transmission, particularly when there is a substantial risk that the federal court would decide the case differently

than the state. *See Lac D'Amiante du Quebec, Ltee v. Am. Home Assur. Co.*, 864 F.2d 1033, 1046 (3d Cir. 1988) (abstaining because "the risk is not insubstantial" that state agencies "would adopt a different interpretation than did the district court"). Rather, this matter should be handled by state and local public health agencies.

There is no question that the State of Missouri is already actively involved in protecting the public from COVID-19 exposure and transmission. The Governor has issued a "stay-at-home" order for this express purpose, but made the decision to permit businesses such as the Plant, which are essential to the State and nation's food supply, to continue to operate. The order specifically provided that essential businesses need not require six feet between individuals if the workers' "job duties require contact with other people closer than six feet." The injunction Plaintiffs seek requiring Plant employees to remain more than six feet apart would directly contradict the Governor's order. That is improper: "The purpose of *Burford* abstention is to discourage such federal court second-guessing of state regulatory matters." *Sierra Club v. City of San Antonio*, 112 F.3d 789, 796 (5th Cir. 1997) (vacating preliminary injunction because the district court should have abstained under *Burford*).

Moreover, the Governor assigned responsibility for implementing and enforcing specific COVID-19 safety measures to Missouri's local and state health authorities. MDHSS has embraced this responsibility, and both MDHSS and local health agencies have worked closely with a number of private businesses to monitor and develop their COVID-19 safety response. MDHSS has also worked closely with federal agencies in responding to the virus, and has the ability to invite the Centers for Disease Control to assist with state and local response as needed.

Missouri law specifically vests authority over public health matters with MDHSS, and *requires* MDHSS to use "the legal means necessary to control" a disease such as COVID-19,

OSHA-003453

"which is a threat to the public health." 19 Mo. C.S.R. 20-20.040. Under state law, public health authorities have the duty and authority to inspect premises suspected of spreading disease, establish and maintain quarantines, and implement appropriate control measures to prevent the spread of disease. *Id.* Public health agencies throughout Missouri have acted on these duties and responsibilities, and there is no reason to believe they would not also do so if alerted to any threat to public health associated with the Plant.

It is entirely improper for this Court to assume responsibility for Missouri's public health law. Plaintiffs have not asserted a federal law claim, and the federal court has no overriding interest in this matter. If there are truly public health concerns related to the Plant (and Smithfield vehemently disputes that), then addressing those issues is a matter of state policy that can be addressed by MDHSS and the local public health authorities. This is not the proper forum to adjudicate Missouri's public health policy.

Plaintiffs cite to examples of Smithfield and other meat processing plants being shut down in other jurisdictions. However, in none of these examples was a state or federal court involved. Rather, in some instances state and local public health agencies made the decision to order the plant to close pending further investigation, and in others, the plants voluntarily closed in response to requests from state government or for other reasons (e.g., Smithfield's Cudahy, Wisconsin facility that Plaintiffs cite closed because of supply chain issues – not a COVID-19 outbreak in the plant). These examples do not support the federal court's involvement in this matter. To the contrary, they militate against it. The Court should therefore dismiss this action pursuant to the *Burford* abstention doctrine.

IV. CONCLUSION

A stay or dismissal is proper here. The principle of comity underlying primary jurisdiction and *Burford* abstention takes on heightened importance – and militates even more heavily in favor

OSHA-003454

of invoking the doctrines – where the possibility exists that the relief in the private action might conflict with the agency action. *Davies v. Nat'l Coop. Refinery Ass'n*, 963 F. Supp. 990, 997 (D. Kan. 1998) (abstaining from exercising RCRA jurisdiction in favor of the agency "charged by state law with responsibility for … protecting human health and the environment" to avoid "prospect of conflicting directives from this court as to how the contamination should be remedied").[21]

It is not hard to imagine the chaos that would flow if courts take over the occupational health and safety programs of essential businesses around the country and appoint themselves keepers of the public health. An employee who claims an unsafe workplace already can file an OSHA complaint or seek the assistance of public health officials. If this additional avenue of court oversight of safety were opened businesses, already strapped to survive during the pandemic, would be faced with increased financial costs of litigation. A company that operates in multiple jurisdictions, such as Smithfield, would have no expectation of uniformity and could even be in a position to have inconsistent legal obligations as between OSHA and a decision from the court.

None of this is necessary. OSHA has broad powers to investigate and enforce workplace safety, and MDHSS has the necessary police power to regulate plant operation and ensure public health. This Court need not—and should not—wade into this area, and put itself in the position of policing workplace safety and directing state public health policy at the behest of a private plaintiff. The Court should grant Smithfield's Motion, and dismiss or stay this action in favor of the authority and expertise of OSHA and MDHSS.

SMITHFIELD FOODS, INC. and
SMITHFIELD FRESH MEATS CORP.

[21] The *Davies* court based its decision to abstain on both primary jurisdiction and the *Burford* abstention doctrine.

Counsel for Plaintiffs

/s/ Jean Paul Bradshaw II
An Attorney for Defendants

IN THE UNITED STATES DISTRICT COURT FOR THE WESTERN DISTRICT OF MISSOURI ST. JOSEPH DIVISION

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,	)	
Plaintiffs,	)	
v.	)	No. 5:20-CV-06063-DGK
SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,	)	
Defendants.	)	

ORDER SETTING PRELIMINARY INJUNCTION HEARING

This lawsuit arises from Plaintiffs' allegations that Defendants Smithfield Foods, Inc. and Smithfield Fresh Meats Corporation (collectively, "Smithfield") have failed to adequately protect workers at a Milan, Missouri, meat-processing plant during the coronavirus ("COVID-19") pandemic. Plaintiffs filed a motion for a temporary restraining order and/or preliminary injunction requesting this Court order Smithfield to implement several precautions to protect its workers from COVID-19. Defendants' response is due April 29, 2020, at 12:00 p.m. To expeditiously rule on Plaintiffs' motion, the Court orders a hearing be set the next day, April 30, 2020, at 10:00 a.m. via videoconferencing.

The Judicial Conference of the United States has found that emergency conditions due to the virus have affected—and will continue to affect—the functioning of federal courts generally. For example, Congress passed, and the President signed, legislation authorizing the use of video conferencing for various criminal proceedings during the COVID-19 emergency. In this district, Chief Judge Beth Phillips found in her General Order dated March 30, 2020, that, based on guidance from the Centers for Disease Control and Prevention ("CDC"), in-person hearings

cannot be conducted without seriously jeopardizing public health and safety. Other courts have also held videoconferencing to be the preferred method for civil proceedings during these unprecedented times. *See, e.g.*, *In re RFC & ResCap Liquidating Tr. Action*, No. 0:13-CV-3451-SRN, 2020 WL 1280931, at *4 (D. Minn. Mar. 13, 2020) (ordering the last two days of a trial be conducted via videoconferencing due to coronavirus pandemic). Accordingly, in order to reduce the amount of exposure to individuals at the courthouse, the Court will conduct the hearing on Plaintiff's motion via the videoconferencing app Zoom.

All individuals who plan to attend will be required to download Zoom in order to participate. The application works best when connected to WiFi without a VPN connection. Prior to the hearing, the Court's Courtroom Deputy, Ms. Tracy Strodtman, will send an invitation via email to the parties to join the hearing. Thus, counsel for the parties shall email Ms. Strodtman at tracy_strodtman@mow.uscourts.gov with a list of email addresses for individuals who wish to participate in the hearing on or before 5:00 p.m. on April 29, 2020.

When signing into the application, individuals shall use a naming convention identifying first which party they are associated with (P for Plaintiffs; D for Defendants), followed by their full name (*e.g.*, P-Jane Doe, D-James Smith). Make sure devices are sufficiently charged or plugged into a power source. While the application is in use, individuals should exit out of all other applications; if other applications are necessary, the use of a separate device or computer is required. Attendees should keep microphones muted if they are not speaking, and the use of headphones with a microphone is strongly encouraged. If using an Apple device, individuals should turn on the "Do Not Disturb" setting.

OSHA-003459

The Court further asks that each party identify lead counsel and ensure that only one person is speaking at a time. This is important, as the court reporter will be transcribing during the hearing.

Finally, given the serious nature of this matter and in the interest of judicial economy, all parties are directed to meet and confer, share witness lists, and disclose with specificity all evidence they intend to produce at the hearing within twenty-four hours of the hearing time.

IT IS SO ORDERED.

Date: April 27, 2020

/s/ Greg Kays
GREG KAYS, JUDGE
UNITED STATES DISTRICT COURT

IN THE UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF MISSOURI

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE; *Plaintiffs*, v. SMITHFIELD FOODS, INC. AND SMITHFIELD FRESH MEATS CORP., *Defendants*.	CIVIL ACTION NO:

COMPLAINT

INTRODUCTORY STATEMENT

1. Supplying the nation with food during the COVID-19 crisis is an essential task.

2. Equally essential is the need for businesses engaged in the production and sale of food—including large corporate meat and poultry processors like Defendants Smithfield Foods, Inc. and Smithfield Fresh Meats Corp. (collectively "Smithfield")—to ensure the safety and protection of their critical workforce, the communities within which they operate, and the public generally

3. In the last month, America has seen how an employer's failure to protect its workforce can result in disaster. Thousands of workers employed in the food supply chain around the country have fallen ill with COVID-19. They have gone on to infect family members and community members and their illnesses have strained our healthcare infrastructure. Many workers and their family members have died as a consequence of infections that have spread at workplaces in our Nation's food supply chain.

4. Workers employed by Smithfield are all too familiar with this phenomenon.

5. Smithfield is one of the largest and most profitable meat producers in the United States.

6. Yet, several plants owned and operated by Smithfield around the country have become major COVID-19 hot spots.

7. Earlier this month, hundreds of employees of Smithfield's plant in South Dakota contracted COVID-19, and Smithfield was forced to close that plant after it became the country's leading hot spot. At least two of those employees has died.

8. Also recently, workers at a Smithfield plant in Cudahy, Wisconsin raised concerns after that plant experienced more than two dozen confirmed cases.

9. Notwithstanding the horrific situation facing many of its employees around the country and abundantly clear guidance from the Centers for Disease Control (CDC) and state public health officials, Smithfield continues to operate its plant in Milan, Missouri in a manner that contributes to the spread of disease.

10. In direct contravention of CDC guidelines, at its Milan, MO plant Smithfield (1) provides insufficient personal protective equipment; (2) forces workers to work shoulder to shoulder and schedules their worktime and breaks in a manner that forces workers to be crowded into cramped hallways and restrooms, (3) refuses to provide workers sufficient opportunities or time to wash their hands, (4) discourages workers from taking sick leave when they are ill and even establishes bonus payments that encourage workers to come into work sick, and (5) has failed to implement a plan for testing and contact-tracing workers who may have been exposed to the virus that causes COVID-19.

11. Smithfield is so unwilling to acknowledge its responsibilities to its workers and the communities where it operates that it recently blamed "certain cultures" for the spread of the disease in its South Dakota plant, rather than its failure to provide personal protective equipment,

OSHA-003462

failure to allow for hand washing and social distancing, and the policies its maintains in plants around the country to incentivize sick workers to continue coming to work.[1]

12. Smithfield may perceive that these policies allow the company to continue producing and packaging as much pork as possible for as cheaply as possible.

13. In fact, however, the costs of Smithfield's conduct are extraordinary, but they are borne by Smithfield's workers, their family members, and the broader community.

14. Put simply, workers, their family members, and many others who live in Milan and in the broader community may die—all because Smithfield refused to change its practices in the face of this pandemic.

15. Fortunately, workers and other community members at risk are not helpless in protecting themselves from this harm. Centuries-old common law principles, including the doctrine of public nuisance, allow private parties to enforce the right of the public generally to abate conduct that contributes to the spread of pestilence and disease.

16. This suit does not seek money damages. All Plaintiffs seek is an injunction to force Smithfield to change its practices such that if it continues to operate, it must comply with, at a bare minimum, CDC guidance, the orders of state public health officials, and additional protective measures that public and occupational health experts deem necessary based on the particular structure and operation of the Milan plant.

17. Because Smithfield will not act, the law allows Plaintiffs to seek redress to ensure the safe operation of the facility and to protect their community.

---

[1] Albert Samaha, *Smithfield Foods Is Blaming 'Living Circumstances In Certain Cultures' For One of America's Largest COVID-19 Clusters*, BuzzFeed News (Apr. 20, 2020), https://www.buzzfeednews.com/article/albertsamaha/smithfield-foods-coronavirus-outbreak

THE PARTIES

Defendant Smithfield

18. Defendant Smithfield Foods, Inc. is a Virginia corporation with its headquarters in Smithfield, Virginia.

19. Defendant Smithfield Fresh Meats Corp. is a Virginia corporation with its principal place of business in Smithfield, Virginia.

20. Smithfield owns and operates a meat processing plant in Milan, Missouri (the "Plant").

21. Smithfield is one of the largest meat processors in the United States. It has over 50,000 employees nationwide. As of late 2018, its annual revenues exceeded $15 billion.

Plaintiff Jane Doe

22. Plaintiff Jane Doe is participating in this action under a pseudonym because her years of experience working for Smithfield suggest to her that Smithfield is likely to retaliate against her for speaking out against the company.

23. Doe resides in Milan, Missouri and has worked at Smithfield in Milan for more than 5 years.

24. For most of that time, she has worked on the "cut floor" where she works side-by-side with several other workers to cut and process pig meat for up to eleven hours every day.

25. Doe's work at the plant has always been grueling, repetitive, and in many cases, dangerous, but since the emergence of the COVID-19 pandemic, she has become more fearful and concerned than ever by the workplace conditions to which she is subjected while working at the Milan Plant.

26. Doe is aware of at least eight co-workers who have had to stay home after displaying COVID-19 symptoms.

OSHA-003464

27. Doe is scared of the potential consequences she faces for filing this lawsuit; she and her family depend on Smithfield, and she does not want to lose her job or hurt her standing with the company.

28. Doe is participating in this case, notwithstanding those fears, because she considers Smithfield's failure to follow the health and safety standards that she has heard so much about through the media—including setting up rules to allow for social distancing, hand washing, and to encourage workers to take sick leave—to present a dire threat to her health, the health of her coworkers, her family, including her children, and to her entire community.

Plaintiff RCWA

29. Plaintiff Rural Community Workers Alliance ("RCWA") is a Missouri non-profit corporation with its principal place of business in Green City, Missouri.

30. RCWA is a membership organization whose members consist exclusively of workers in Northern Missouri, including numerous members who work at the Plant. Seven members of RCWA's current leadership council work at the Plant and between 60 and 70 workers who attend its meetings work at the Plant. Hundreds of the Plant's workers have used RCWA's services over the years.

31. RCWA's members nominate representatives to serve on the organization's Health Action Council, which in turn sets the direction and activities of the organization.

32. RCWA's members continue to perform their essential job functions at the Plant, but they are fearful for their own health and safety and the health and safety of their families and community due to the risk of contracting COVID-19 created by Smithfield's working environment.

OSHA-003465

33. RCWA has expended significant resources and time responding on behalf of its members to Smithfield's failure to implement adequate policies related to the COVID-19 crisis.

34. Prior to COVID-19, RCWA was especially focused on (i) advocating for greater protections from repetitive stress injuries that are rampant at the Smithfield plant, (ii) advocating for increased opportunities for bathroom breaks, as employees have had to wear diapers on the line; and (iii) organizing gatherings and cultural events for the workers. RCWA's work included educating workers on their rights, helping them obtain legal and medical support to aid treatment for the musculoskeletal problems and kidney disorders that are common at the Smithfield plant—including transporting the workers to those appointments—and developing contacts to help workers with those concerns.

35. Since COVID-19, at the direction of its worker members, RCWA has diverted its resources to focus almost entirely on the immediate threat to health and safety due to COVID-19, particularly the lack of personal protective equipment, paid sick leave, and overcrowding. These were not issues that RCWA focused on in the past.

36. Because COVID-19 exposure at the Plant also places families and the community at risk, RCWA has also been working on ways to protect people once workers leave the plant. This has included research and hosting virtual meetings about these issues, such as instructing workers about how to decontaminate at home. These were not concerns that RCWA addressed previously.

37. Because Smithfield is placing its community at risk, it is also placing RCWA at risk.

38. RCWA is a small organization with a single staff person, Axel Fuentes. Because he lives in Kirksville, near Milan, Mr. Fuentes fears for the health and safety of his family due to Smithfield's failure to adequately respond to the COVID-19 crisis. Many Plant workers live in

OSHA-003466

Kirksville, and it has one of the few grocery stores in the area, which is frequented by people from the Plant. Mr. Fuentes and his family make reasonable efforts to protect themselves from the disease, but need to interact with the world, including walking outside and buying groceries. Mr. Fuentes also fears for the health and safety of himself and his family because his job with RCWA brings him into close contact with workers from the Plant, whom Smithfield is failing to protect. It is part of Mr. Fuentes' job to continue to support RCWA's worker members, including workers at the Plant. For example, Mr. Fuentes gathered signatures from workers on a letter that was sent to Smithfield on April 2 documenting unsafe conditions at the plant, and obtaining these signatures required Mr. Fuentes to come into close contact with plant workers. Providing this type of support to workers is core to Mr. Fuentes' functions as Executive Director of RCWA. Mr. Fuentes could not fully carry out his duties without being in contact with workers in these ways, including RCWA members who work at the Plant.

39. Mr. Fuentes and his family are at heightened risk for contracting COVID-19 due to the points of transmission Smithfield has created at the Plant. Mr. Fuentes' inability to work would undermine RCWA's ability to operate, which would place its members and the community at risk.

JURISDICTION AND VENUE

40. This Court has jurisdiction over this matter pursuant to 28 U.S.C. § 1331(federal question) and 28 U.S.C. § 1332 (diversity).

41. Plaintiffs' claims arise under the laws of the United States because the question of whether Smithfield's conduct violates state law involves interpreting federal rules and guidance, including guidance from the Centers for Disease Control and the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency.

42. The Court has diversity jurisdiction because both Plaintiffs are residents of Missouri and both Defendants are residents of Virginia with their principal place of business in Virginia.

43. Furthermore, the cost to Smithfield of implementing the injunctive relief requested below, including the costs necessitated by providing proper personal protective equipment, implementing proper social distancing, providing COVID-19-related sick leave, providing additional break time, altering the configuration or speed of the line or staggering shifts, and developing and implementing a testing and contact-tracing protocol, is in excess of $75,000.00.

44. Venue is proper pursuant to 28 U.S.C. § 1391 in the Western District of Missouri because the acts and omissions that are the subject of this action all occurred in the Western District of Missouri.

STATEMENT OF FACTS

A. The COVID-19 Pandemic

45. COVID-19 is an infectious respiratory disease caused by a novel coronavirus.

46. COVID-19 can result in serious, long-term health complications and has resulted in more than 40,000 reported deaths in the United States to date. Among these serious health complications, COVID-19 can cause inflammation in the lungs, clogging the air sacs in the lungs, limiting the body's oxygen supply and blood clots, organ failure, intestinal damage, heart inflammation, problems with the liver, neurological malfunction, and acute kidney disease.

47. Some populations are especially vulnerable to the consequences of COVID-19, including individuals 65 years and older, people living in a nursing home or long-term care facility, and others of all ages with underlying medical conditions, such as people with lung disease, asthma, heart conditions, severe obesity, diabetes, kidney disease, or liver disease and people who are immunocompromised.

OSHA-003468

48. Some conditions that can cause compromised immunity include cancer treatment, smoking, bone marrow or organ transplantation, immune deficiencies, poorly controlled HIV or AIDS, and prolonged use of corticosteroids and other immune weakening medications.

49. The novel coronavirus that causes COVID-19 is also highly contagious.

50. COVID-19 appears to spread easily and sustainably across the world through "community spread."

51. Community spread means that people have been infected with the virus in an area, including some who are not sure how or where they became infected.

52. The virus spreads mainly person to person, primarily through respiratory droplets produced when an infected person coughs or sneezes.

53. Spread is more likely when people are in close contact with one another (within about 6 feet for longer than 10 minutes).

54. The virus can be spread even by people who are "asymptomatic," meaning they carry the active virus in their body but never develop any symptoms; "pre-symptomatic," meaning they have been infected and are incubating the virus but don't yet show symptoms; or very mildly symptomatic, feeling unwell but continuing to come in close contact with others.

55. Recent research from the CDC suggests that a single person with COVID-19 is likely to infect five or six other individuals absent aggressive social distancing practices.

56. The best way to prevent illness is to avoid being exposed to this virus.

OSHA-003469

B. Missouri's Response to the COVID-19 Crisis

57. On March 13, 2020, Governor Parson declared a state of emergency in the State of Missouri in response to the COVID-19 crisis.[2]

58. On April 3, 2020, the Missouri Department of Health and Senior Services issued a stay-at-home order, which limited operations for, or closed, all non-essential businesses in Missouri.[3]

59. The stay-at-home order defined essential businesses consistent with federal guidance from the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency.[4]

60. The federal guidance defines the following category of businesses as essential businesses:

> Food manufacturer employees and their supplier employees—to include those employed in food ingredient production and processing facilities; ***livestock, poultry, seafood slaughter facilities***; pet and animal feed processing facilities; human food facilities producing by-products for animal food; beverage production facilities; and the production of food packaging.[5]

61. According to the federal guidance, the labeling of essential businesses is based on "key principles," including:

> 1. Response efforts to the COVID-19 pandemic are locally executed, state managed, and federally supported.

---

[2] *See* Mo. Exec. Order No. 20-20 (Mar. 13, 2020), https://www.sos.mo.gov/CMSImages/Library/Reference/Orders/2020/20-02.pdf.

[5] *Id.* at 6 (emphasis added).

OSHA-003470

> 2. ***Everyone should follow guidance from the CDC***, as well as State and local government officials, regarding strategies to limit disease spread.
>
> 3. Workers should be encouraged to work remotely when possible and focus on core business activities. In-person, non-mandatory activities should be delayed until the resumption of normal operations.
>
> 4. ***When continuous remote work is not possible, businesses should enlist strategies to reduce the likelihood of spreading the disease. This includes, but is not necessarily limited to, separating staff by off-setting shift hours or days and/or social distancing. These steps can preserve the workforce and allow operations to continue.***
>
> 5. All organizations should implement their business continuity and pandemic plans or put plans in place if they do not exist. Delaying implementation is not advised and puts at risk the viability of the business and the health and safety of the employees.[6]

C. <u>The Centers for Disease Control Response to the COVID-19 Pandemic</u>

62. In response to the COVID-19 crisis, the CDC published guidance for employers and employees, including *Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19).*[7]

63. The purpose of the guidance is "help prevent workplace exposures to COVID-19, in non-healthcare settings" and to "provide[] planning considerations for community spread of COVID-19." *Id.*

64. The following is a summary of some of these guidelines:

> 1. Employees who have symptoms should stay home and employers should develop flexible leave policies to allow

---

[6] *Id.* at 3-4 (emphasis added).

[7] *See* https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-business-response.html.

OSHA-003471

employees to stay home, particular by creating non-punitive leave sick leave policies;

2. Employers should not require a positive COVID-19 test or a healthcare provider's note for employees to take sick leave;

3. Sick employees should not return to work except in consultation with independent health care providers and state and local health departments;

4. Employers should reduce face-to-face contact between employees;

5. Employers should take steps to reduce transmission at the workplace by reassigning work tasks to maintain social distance of six-feet, staggering shifts, or allowing telework;

6. Employers should establish policies to minimize spread through a workplace by using contact-tracing and testing to identify workers who have likely been exposed to the disease and quarantining infected workers;

7. Employees should be encouraged to wash their hands and employers should facilitate this by providing hand washing stations;

8. Employers should provide tissues;

9. Employers should increase ventilation rates; and

10. Employers should develop plans to clean high touch areas with an EPA-approved cleaning agent.[8]

65. In addition, the CDC recommends that all Americans wear cloth face coverings in public settings where other social distancing measures are difficult to maintain.[9]

OSHA-003472

D. Smithfield Has Failed to Respond to the COVID-19 Crisis by Satisfying Even these Minimum Public Health Standards

66. After the issuance of the Missouri stay at home order, the Milan Plant remained open as an "essential business."

67. On April 2, 2020, seventy workers at the Plant sent a letter in which they explained they were being put at risk: they had no masks, the plant had no social distancing plan, workers were punished for trying to cover their mouths when they coughed or sneezed and provided no tissues, and Smithfield was punishing workers who took sick leave.

68. Much of this remains true today.

69. It was not until April 16, 2020 that ***any*** of the workers at the Milan plant reported receiving masks. Even then, those masks were only distributed to workers who divide the carcasses (the "cut floor"). Workers who strip the animal down to a carcass (on the "kill floor") did not receive masks until April 17, 2020.

70. As of April 20, 2020, most of the workers in the Plant were receiving only one simple surgical mask from Smithfield every week. Smithfield has explained to some workers they can only receive a new mask if the first one broke.

71. Smithfield still allows members of the Plant cleaning crew to enter, move around the workstations, and use the cafeteria and locker rooms without masks.

72. Meat moves through the Plant from the point of slaughter on a conveyer belt along which workers are stationed. Each worker is assigned a particular task to dismember the animal. The animal then is transferred to another area of the plant where workers similarly stand side-by-side to break down the animal into pieces for shipment. Finally, the animal is transferred to a packing area.

OSHA-003473

73. To process as much meat as possible, as quickly and cheaply as possible, Smithfield packs many workers together in cramped spaces along processing lines.

74. Workers on the kill and cut floors have long described their fear of being cut by their neighbors' knives because they work so closely together.

75. Even workers in packaging describe so little space to move that they regularly bump into one another.

76. On both the kill and cut floors workers continue to work shoulder-to-shoulder, even while the rest of society exists under strict social distancing.

77. In fact, in an effort to continue processing as much meat as possible as cheaply as possible, Smithfield forces many workers to work so closely together that they are literally touching.

78. Smithfield has made no effort to alter any of these conditions. Although Smithfield has posted signs saying to avoid close contact with people who are sick, on the lines and in the packing areas workers are currently, regularly forced to stand significantly less than six feet apart.

79. Smithfield has installed "Plexiglas dividers" between some workers on the lines, but Smithfield failed to consider workers' varying heights, so the Plexiglas does not cover all workers' faces.

80. Many workers continue to work immediately next to their neighbors without any Plexiglass dividers, leading them to come into physical contact with one another on the line.

81. If Smithfield slowed the line, workers, including RCWA members, could be spaced farther apart and have time to take effective preventive measures, like wiping spittle from their mouths and covering their mouths when they cough or sneeze.

82. However, since the closure of other Smithfield plants due to pandemic flare ups, Smithfield has only increased the line speed at the Milan Plant, placing more pressure on its workers at the Milan Plant and subjecting them to greater risk of disease.

83. Smithfield also implements punitive measures to ensure its preferred line speed is maintained, including that missing even one piece of meat to clean one's face could result in punitive employment action.

84. On the lines, workers, including RCWA members, are still not provided tissues or other materials to wipe away fluids that might come out during coughing or sneezing.

85. Although Smithfield has erected some hand cleaning stations, it has not provided workers, including Jane Doe and RCWA members, with any additional break time to wash their hands or to use hand sanitizer.

86. At times, Smithfield has sent people onto the line with sanitizer for the workers, but they will only spray workers' gloves, not their hands, allowing the worker to return to work as quickly as possible.

87. This means that workers can go several hours performing grueling, monotonous work, shoulder to shoulder and sometimes even touching their coworkers, often without time to even cover their mouths when they sneeze or cough, and without any time to wash or sanitize their hands.

88. Things are not much better off the line. While entering and leaving work and during breaks and lunch, workers, including Jane Doe and RCWA members, are forced to crowd into cramped hallways, including when they clock in and clock out for work.

89. Furthermore, Smithfield has started taking workers' temperatures before they enter but it allows a close line to form while workers wait to be checked.

OSHA-003475

90. Smithfield has not made efforts to stagger rest or meal breaks, meaning that while off the line, workers are cramped closely into hallways, bathrooms, and the cafeteria.

91. Although Smithfield did expand the cafeteria and has hung signs recommending distancing there is still not enough space within the cafeteria for workers to sit six feet apart.

92. Moreover, while Smithfield has installed Plexiglas down the center of the cafeteria tables, it has not provided protection for workers sitting side-by-side.

93. Smithfield also continues to discourage workers from taking sick leave and encourages them to come into work sick.

94. When the first reports of COVID-19 symptoms began to emerge at the Plant, some workers were scared and called in sick.

95. Immediately after that, Smithfield began incentivizing workers not to take leave from work. Most importantly, early in the pandemic Smithfield offered a $500 bonus to all of its workers, but with an important catch: the bonus would not be available to any worker who misses a shift for any reason between April 1 and May 1.

96. Smithfield even offered workers a free lunch at which Smithfield promoted the bonus.

97. The image below is of a poster that remains posted inside the Plant:

OSHA-003476

98. Translated into English, the poster reads:

Heroes come in many forms. #ThankaFoodWorker

At Smithfield, we accept responsibility in everything we do. And we reward those who accept responsibility. As a show of our gratitude, you will receive a Responsibility Bonus of $500, paid the 15th of May 2020. To the members of our team who are crucial in our nation's response to COVID-19, thank you!

> ***Note: To qualify for the Responsibility Bonus, you must work all scheduled hours and not receive a single attendance point between 4/1/20 and 5/1/20***

99. Jane Doe and RCWA's members cannot afford to lose their jobs, and $500 represents a significant amount of money for them.

100. Milan does not offer many employment opportunities other than the Plant, and Smithfield is the largest employer in the area.

101. Many of the workers have families, including children they need to support, and many are currently living paycheck-to-paycheck. The $500 bonus is a substantial incentive for workers to continue working at the Plant even when they are experiencing symptoms.

102. It is also unclear whether Smithfield will take negative actions, such as awarding a negative attendance "point," against employees who voluntarily quarantine.

103. Typically, Smithfield does not provide sick leave and assigns a "point" for any shift missed. If a worker receives 9 points in a year, Smithfield can take disciplinary action, including terminating workers.

104. At least some workers report that Smithfield has said it will continue to assign points if a worker displaying COVID-19 symptoms stays home, as recommended by the CDC, unless Smithfield or a doctor order the worker to stay home.

105. Finally, Smithfield has not implemented any policies that allow it to contact trace or test workers who have symptoms of the disease or have come into contact with the disease.

106. Workers at the Plant work long and hard days and often have very little information about the lives of their hundreds of coworkers.

107. But Smithfield knows precisely who is reporting symptoms and who has tested positive for the disease. Neither Jane Doe nor RCWA are aware, however, of any efforts by Smithfield to perform contact tracing to identify other workers who may have come into contact with the disease, including workers who have worked immediately side-by-side with infected workers.

COUNT I: PUBLIC NUISANCE AND DECLARATORY JUDGMENT PURSUANT TO 28 U.S.C. § 2201

(BY JANE DOE AND RCWA AGAINST ALL DEFENDANTS)

108. Smithfield's failure to comply with minimum basic health and safety standards in its workplace, including the CDC guidelines and other minimum public health standards necessary to stop the spread of COVID-19, is causing, or is reasonably certain to cause, community spread of the disease.

OSHA-003478

109. This community spread is not or will not be limited to the Plant. Infected workers will go home to interact with their families and with other members of the public as they undertake their day-to-day activities, like grocery shopping.

110. Thus, increased community spread at the Plant will cause increased community spread in the cities of Milan and Kirksville, Sullivan and Adair Counties, the State of Missouri, and the United States.

111. This community spread will result in disease and possibly death. It will also stress healthcare resources and cause financial harm.

112. As a result, Smithfield's current operations constitute a public nuisance because they unreasonably interfere with the common public right to public health.

113. The public nuisance causes special harm to Jane Doe, RCWA members, and RCWA because they are directly exposed to the dangerous working conditions at the Plant.

114. Indeed, multiple members of the Plant workforce are currently self-quarantined because of COVID-19 symptoms.

115. This public nuisance causes special harm to Jane Doe because of the risks she will be exposed to at work or in the community, requiring her to quarantine, losing income, and putting anyone she may come into close contact with at risk.

116. This public nuisance causes special harm to RCWA and puts RCWA at risk of even greater special harm because of the resources it must spend to help its members cope with the nuisance.

117. Plaintiffs therefore request a declaration that the Plant constitutes a public nuisance and injunctive relief to abate the nuisance.

COUNT II: BREACH OF DUTY TO PROVIDE A SAFE WORKPLACE AND DECLARATORY JUDGMENT PURSUANT TO 28 U.S.C. § 2201

(BY JANE DOE AND RCWA AGAINST ALL DEFENDANTS)

118. Smithfield owes its employees, including Jane Doe and its RCWA member employees, the following duties:

1. The duty to provide a safe place to work.
2. The duty to provide safe appliances, tools, and equipment for work.
3. The duty to give warning of dangers of which the employee might reasonably be expected to remain in ignorance.
4. The duty to provide a sufficient number of suitable fellow servants.
5. The duty to promulgate and enforce rules for the conduct of employees which would make the work safe.

119. By failing to properly implement worker protections during the COVID-19 crisis, Smithfield breached these duties.

120. Jane Doe and RCWA members have already been harmed as a result of this breach, including emotional harm and in some cases pecuniary harm and physical harm associated with the COVID-19 infection.

121. Jane Doe and RCWA members are also likely to experience future harm if Smithfield does not immediately satisfy its duties to provide a reasonably safe workplace as a matter of Missouri law.

122. Jane Doe and RCWA request a declaration that these workplace safety duties are being breached and injunctive relief to ameliorate the breach.

OSHA-003480

PLAINTIFFS DO NOT DEMAND A JURY TRIAL

PRAYER FOR RELIEF

123. Plaintiffs respectfully request an Order from this Court:

a. Entering judgment for Plaintiffs and against all Defendants;

b. Declaring that Smithfield's failure to implement appropriate worker protections during the COVID-19 crisis constitutes a public nuisance under Missouri law and a violation of the right to a safe work place under Missouri law.

c. Entering preliminary and final injunctive relief to protect the workers and community from transmission, including but not limited to:

i. Providing sufficient personal protective equipment, including clean masks, to all individuals who enter the Plant;

ii. Creating and implementing a social distancing plan for the Plant that will allow the workers to stay 6 feet apart to the extent possible, including on the line;

iii. Providing breaks so workers can wash their hands and providing handwashing stations for them to use;

iv. Providing tissues;

v. Creating and implementing a protocol to clean surfaces;

vi. Altering leave policies to allow workers showing COVID-19 symptoms to stay home without any form of punishment to their wages or future prospects and to clearly and conspicuously inform all workers of that plan;

vii. Developing and implementing a plan to test workers showing symptoms and perform contact tracing for those they have been near who could have been exposed; and

viii. Providing a specific date for inspection of the Plant by Plaintiffs' workplace health and safety experts so they can determine what additional steps may be required.

Respectfully Submitted,

OSHA-003482

IN THE UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF MISSOURI

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE; *Plaintiffs*, v. SMITHFIELD FOODS, INC. AND SMITHFIELD FRESH MEATS CORP., *Defendants*.	CIVIL ACTION NO: 20-cv06063-DKG

PLAINTIFFS' EMERGENCY MOTION FOR A PRELIMINARY INJUNCTION OR, IN THE ALTERNATIVE, A TEMPORARY RESTRAINING ORDER AND AN EMERGENCY HEARING ON THE SAME

For the reasons stated in the attached Suggestions, Plaintiffs request an emergency preliminary injunction or, if Defendants refuse to appear, that the Court construe this motion as a request for a temporary restraining order and grant the requested relief. Moreover, Plaintiffs request that the Court schedule a hearing on this matter two days after Plaintiffs confirm service of the Complaint and these filings on Defendants, or at the Court's earliest opportunity.

Pursuant to this Court's April 20, 2020 Superseding General Order on Operations Under the Exigent Circumstances Created by the Outbreak of Coronavirus Disease (COVID-19) ¶ 4, while this Court has continued non-emergent hearings, it will continue to schedule emergency matters. This is such a matter. Without the actions requested here, Defendants' Milan, Missouri slaughterhouse will incubate COVID-19, spreading it among its workers and the community. Thus, Plaintiffs request an Order from this Court directing that Defendants:

OSHA-003483

(1) Provide clean masks to all workers, contractors or inspectors who enter their Milan, Missouri slaughterhouse, and require that masks be worn at all times in public areas except when eating;

(2) Ensure social distancing throughout the slaughterhouse, including on the lines;

(3) Ensure that all workers at the slaughterhouse have the opportunity to wash their hands as needed without penalty;

(4) Provide tissues to workers throughout the slaughterhouse;

(5) Ensure high-touch surfaces in the slaughterhouse are disinfected with a suitable cleaning agent throughout the day;

(6) Change all relevant policies to meaningfully encourage workers who are diagnosed with, have symptoms of, or who believe they have been exposed to COVID-19 to take sick leave whether or not they have been seen by a healthcare provider including by eliminating the "perfect attendance" bonus, and eliminating accrual of "points" for COVID-related absences;

(7) Ensure that measures are in place for workers to obtain testing when necessary;

(8) Develop and implement a plan for contact tracing, in coordination with public health officials; and

(9) Set a date certain for Plaintiffs' experts to inspect the slaughterhouse to determine what other steps, beyond these, must be implemented.

For the reasons stated below, Plaintiffs satisfy all the requirements for the requested relief.

April 23, 2020 Respectfully submitted,

No. 20-99, Complaint, Dkt. No. 1 (E.D. Mo.) 15

Restatement (Second) of Torts § 821B cmt. G 15

I. INTRODUCTION

Weeks ago, workers at the Milan, Missouri slaughterhouse (the "Plant") operated by Defendants Smithfield Foods, Inc. and Smithfield Fresh Meats Corp. (collectively "Smithfield") placed the company on notice that it had taken inadequate steps to protect them and their communities from COVID-19 and implored Smithfield to act to prevent further spread of the virus. Even as evidence mounts that Smithfield's plants around the country are incubators for spread of the disease—to the detriment of their workers, the families of their workers, and the communities in which the plants operate—Smithfield still has not acted in Milan.

Plaintiffs here seek preliminary injunctive relief because they do not want to wait until what has happened at Smithfield facilities around the country happens in Milan. While Smithfield may benefit from speeding production lines and packing workers into tight spaces until there is an outbreak in Milan, its workers and the public will suffer tremendously. All of that waiting will mean infection, illness, and in some cases death. Plaintiffs are not asking this Court to shut down Smithfield. Food production is essential. All Plaintiffs ask is that Smithfield take necessary steps to guard against the spread of the disease. Currently, in contravention of unambiguous public health guidance and orders from the Centers for Disease Control and the State of Missouri, Smithfield allows people to enter and remain inside the Plant without masks. It has no social distancing plan in place: In addition to standing shoulder to shoulder on the production line, workers are crowded into hallways to clock in and out as fast as possible. Smithfield does not provide workers with additional breaks to wash their hands. In fact, Smithfield punishes workers if they stay home sick with symptoms. Smithfield is currently offering a $500 bonus to any worker who manages to not miss a shift. Smithfield offers no way for workers who fear they are ill to get tested or a system to perform contact tracing. Smithfield's callous disregard for the health and

OSHA-003490

safety of its employees, their families, and their communities will accelerate the spread of the virus in the Plant and then to others. Smithfield's conduct is a textbook example of a public nuisance and a violation of Missouri's right to a safe work environment.

Plaintiffs Jane Doe and the Rural Community Workers Alliance ("RCWA"), a membership organization that includes numerous workers at the Plant, ask this Court to protect their health and safety. Specifically, Plaintiffs respectfully request that this Court promptly order Smithfield to come into compliance with the Center for Disease Control's recommendations, which mirror the recommendations of occupational health specialist Dr. Robert Harrison, by instituting the following safety measures immediately:

(i) Provide clean masks to all workers, inspectors, or contractors who enter the Plant, and require that they be worn at all times except when eating;

(ii) Ensure social distancing throughout the Plant, including on the lines;

(iii) Ensure that all workers at the Plant have the opportunity to wash their hands as needed without penalty;

(iv) Provide tissues;

(v) Ensure high-touch surfaces are disinfected with a suitable cleaning agent throughout the day;

(vi) Change all relevant policies to meaningfully encourage workers who are diagnosed with, have symptoms of, or who believe they have been exposed to COVID-19 to take sick leave whether or not they have seen a healthcare provider, including by eliminating the "perfect attendance" bonus and eliminating accrual of "points" for COVID-related absences;

(vii) Ensure that measures are in place for workers to obtain testing when necessary; and

(viii) Develop and implement a plan for contact tracing, in coordination with public health officials.

It is likely that additional relief will be required to fully protect Plant workers and the larger community, and therefore Plaintiffs also request this Court set a date for Plaintiffs' experts to inspect the Plant to determine additional steps that should be taken. In the meantime, these bare minimum protections, all of which align with the CDC's guidance, must be put in place immediately. Without Court intervention, Smithfield will continue to ignore the threat to public health and place people and communities at risk.

II. FACTS

A. The COVID-19 Pandemic Is a Global Health Crisis.

Since February and continuing through the present, the COVID-19 pandemic has swept the United States as it swept the rest of the world. As of the writing of this motion, more than 2.5 million people worldwide have been diagnosed with COVID-19, and more than 170,000 people have died as a result.[1] In the United States, as of April 21, 2020, over 800,000 people had been diagnosed with COVID-19, and approximately 45,000 have died.[2] In Missouri, as of April 22, 2020, there are 6,137 cases and 208 deaths from the virus.[3] In recent days, more than two thousand Americans have died from the disease each day, making it the leading cause of death in the country.[4] COVID-19 is highly infectious and continues to spread rapidly. By the time this motion is read, these numbers will likely be woefully out of date.

OSHA-003492

The virus spreads quickly, efficiently, and often silently. When a person becomes infected with COVID-19, they do not become sick right away. More worrisome still, "epidemiologists have made the dismaying discovery that people start shedding the virus — potentially making others sick — in advance of symptoms."[5]

As the virus spreads, it kills. Worldwide, the "case-fatality rate"—the proportion of people infected with COVID-19 who die from it—has varied widely from country to country.[6] The United States' case fatality rate has been estimated at between 4 and 5 percent.[7] Although older individuals and individuals with preexisting conditions appear to be more likely to experience severe infections and therefore are more likely to die as a result,[8] people of all ages and health conditions have fallen ill, and there have been reports of deaths in every age group, including infants and children.[9]

The rapid spread and deadly nature of COVID-19 has forced drastic changes in nearly every aspect of daily life. Approximately 95 percent of Americans are now under some version of

a stay-at-home order.[10] The Missouri Department of Health and Senior Services has placed the state under its own stay-at-home order, which directs Missourians to "avoid leaving their homes or places of residence."[11] When they must leave their homes to work or engage in other necessary activities, Missourians "should at all times practice social distancing."[12] "In accordance with the guidelines from the President and the CDC," the order states that "every person and business in the State of Missouri shall abide by social distancing requirements, including maintaining six feet (6') of space between individuals" except where an individual's "job duties require contact with other people closer than six feet (6')."[13]

For its part, the CDC has issued guidelines for businesses to keep their workers safe during the pandemic.[14] Those guidelines "strongly encourage[]" businesses to "coordinate with state and local health officials so timely and accurate information can guide appropriate responses."[15] CDC directs employers to reduce the spread of illness among their employees by "[a]ctively encourage[ing] sick employees to stay home"—regardless of whether those employees have a confirmed positive COVID-19 test.[16] The guidelines instruct employers to "[i]dentify where and how workers might be exposed to COVID-19 at work" and to follow OSHA guidance on how to protect workers from potential exposure at work.[17] They encourage employers to "[i]mplement

flexible sick leave and supportive policies and practices," and to implement social distancing "if recommended by state and local health authorities." CDC provides social distancing "[s]trategies that business could use," including implementing flexible work hours (e.g., staggered shifts), increasing physical space between employees at the worksite, and ensuring limited face-to-face contact.[18] And CDC directs employers to maintain healthy work environments by implementing measures such as improving ventilation in the worksite, supporting "respiratory etiquette and hand hygiene for employees, customers, and worksite visitors," providing tissues, and routinely cleaning and disinfecting all frequently touched surfaces.[19] For workers who may have been exposed to COVID-19, CDC guidelines also encourage pre-screening employees (measuring the employee's temperature and assessing symptoms prior to them starting work) and regular monitoring (through which employees self-monitor under the supervision of their employer's occupational health program). The CDC also advises everyone to wear face coverings to protect themselves and others.[20]These strategies are an essential minimum standard, particularly to stop the spread of the virus in meat packing plants. Dr. Robert Harrison, a physician and clinical professor of medicine who serves as the Chief of the Occupational Health Surveillance and Evaluation Program at the California Department of Public Health, emphasizes the importance, in slaughterhouses and other meat processing plants, of (1) encouraging workers with symptoms to stay home, including by eliminating policies that discourage sick leave; (2) developing a social distancing plan that is implemented throughout the Plant, including at workspaces and in hallways and break areas; (3)

providing face coverings to all workers within the Plant; (4) developing a plan to decontaminate surfaces; (5) providing additional breaks and facilities for handwashing; and (6) developing a plan to test workers and perform contact tracing to identify those who have been in contact with workers who test positive.[21] Dr. Harrison explains that additional site-specific requirements may be necessary, but the above steps, all of which align with the CDC guidelines, are "essential."[22]

B. Slaughterhouses Are COVID-19 "Hot Spots."

Without such intervention, slaughterhouses present ideal conditions for the spread of a respiratory virus like COVID-19. Plant workers and United States Department of Agriculture (USDA) inspectors work "shoulder-to-shoulder on slaughter lines and in processing facilities where carcasses are butchered."[23] During breaks and shift changes, Plant workers and USDA inspectors leaving their stations are packed together into small hallways.[24] Workers' lockers are not separated from one another, but instead are "literally stacked next to one another."[25] And the work of a slaughterhouse is "extremely strenuous," causing workers to "expel[] spittle and other bodily fluids, such as sweat" while they labor.[26]

In recent weeks, slaughterhouses have emerged as some of the country's greatest vectors for the COVID-19 disease. On April 21, 2020, the Chief Medical Officer for the State of Nebraska stated, "If there's one thing that might keep me up at night, it's the meat processing plants and manufacturing plants."[27] The Smithfield slaughterhouse in South Dakota became the country's leading COVID-19 "hot spot" because the workers there were required to stand shoulder-to-

OSHA-003496

shoulder and not given Personal Protective Equipment.[28] Workers at Smithfield's Cudahy, Wisconsin plant raised concerns about spread of the virus after learning that Smithfield allowed them to continue working shoulder to shoulder despite knowing of infections among plant workers.[29] Colorado shut down a JBS beef slaughterhouse for similar conduct after 50 people tested positive for COVID-19, and two died.[30] On April 17, 2020, the Ogle County, Illinois Health Department ordered the Hormel Foods plant in Rochelle, Illinois, to close immediately due to an outbreak of the novel coronavirus.[31] Health officials say there are at least two dozen cases linked to the facility.[32]

C. Smithfield Fails to Remedy Unsafe Conditions at the Milan Plant.

Smithfield is the largest employer in the Milan, Missouri area,[33] employing more than 1,000 workers at the Milan plant.[34] Other than Smithfield, the Milan area "does not offer many employment opportunities."[35] Smithfield's workers, many of whom live paycheck-to-paycheck, depend on their jobs at the Plant to support their families.[36]

As the COVID-19 pandemic spread, Smithfield Milan workers became alarmed at the lack of safety measures in their workplace and the backwards incentives Smithfield's policies seemed

OSHA-003497

geared to impose.[37] For instance, Smithfield employs a "points" system, whereby workers receive "points" if they miss a shift.[38] If a worker receives nine points in a year, he or she can be fired.[39] Under this system, employees are incentivized to go to work when they are feeling ill, or exhibiting symptoms of COVID-19, for fear of losing the jobs on which they and their families rely.[40]

On April 2, 2020, a group of seventy Milan employees sent a letter to management in which they alerted management to the unsafe working conditions in the Plant and asked for increased measures to prevent spread of the virus.[41] The workers described safety issues such as a lack of distance between workers, which leads to unavoidable physical contact in the cafeteria and hallways; the high speed of the line, which prevents workers from covering their faces if they need to cough or sneeze; a lack of masks and other personal protection equipment; and a sick-leave policy that penalizes employees who miss work for coronavirus symptoms.[42]

After receiving the workers' letter, Smithfield has *slowly* instituted a *few*, minimal safety measures. But those measures fall far short of meaningful protection for workers, and Smithfield's incentive system continues to work against public health goals, encouraging employees to come to work instead of prioritizing safety.[43] For instance, Smithfield did not give masks to any of its workers until April 16, 2020, two weeks after workers expressed their concerns about the lack of

---

OSHA-003498

masks and protective equipment.[44] The only workers who received masks were those who divide a carcass (on the "cut floor"),[45] and they must use the same, dirty mask throughout the week.[46] As of April 16, 2020, workers who strip the animal down to a carcass (on the "kill floor") still had not received masks.[47] While more masks were distributed in subsequent days, Smithfield has suggested it may ask the workers to use the same, dirty mask, throughout the week.[48] In addition, members of the late-night sanitation crew are still in the building, including the cut floor, when Jane Doe and other workers report for their shift, and many of these sanitation workers are not wearing masks.[49]

Workers remain "shoulder-to-shoulder"—so close that they have "described the risk of cuts from their neighbors' knives."[50] Even those who work in packaging have described so "little space to move" that they "regularly bump into one another."[51]

Although "Smithfield has installed Plexiglass dividers between workers on some of the lines, it has "failed to take into account workers' varying heights, so the Plexiglas does not cover all workers' faces."[52] And, "rather than slowing the line as the workers requested so they could wipe [fluids] from their faces" when needed, workers report that "Smithfield has *increased* the line speed" at the Milan plant since closing its other plants.[53] Smithfield continues to instruct workers that missing even one piece of meat to clean one's face could result in punitive

employment action.[54] Nor can the workers leave the line to safely clean their faces—Smithfield has not provided tissues or other materials for workers to wipe their faces, and it does not offer breaks for handwashing.[55] As Plaintiffs' experts explain, if Smithfield wanted to, it could slow the line to space workers and allow them to clean their hands and face.[56]

In plant areas off the line, "the workers remain crowded," with little opportunity to social distance.[57] Workers report being forced to "crowd[] into the hallway to 'clock in' and 'clock out.'[58] "Smithfield has started taking workers' temperatures before they enter the workplace, but the company allows a close line to form while workers wait to be checked."[59]

"Smithfield did expand the cafeteria and hang signs recommending distancing, but there still is not enough space for workers to sit six-feet apart" during their breaks.[60] Smithfield also "installed Plexiglas [dividers] down the center of the [cafeteria] tables, but has provided no protection for workers sitting side-by-side."[61]

What's more, Smithfield "continues to discourage workers from taking sick-leave" and staying home when needed, in direct contravention of CDC guidelines.[62] Smithfield has touted a program it is calling its "Responsibility Bonus" as part of its COVID-19 response.[63] Through the program, workers receive a bonus, which Smithfield claims will be paid "in recognition of an immense gratefulness for the dedication and performance" of its workers.[64] But signs posted at the

Plant in recent weeks make plain that the bonus is, in fact, a mechanism to ensure workers continue to come in to work at the Plant—even if they are sick.[65]

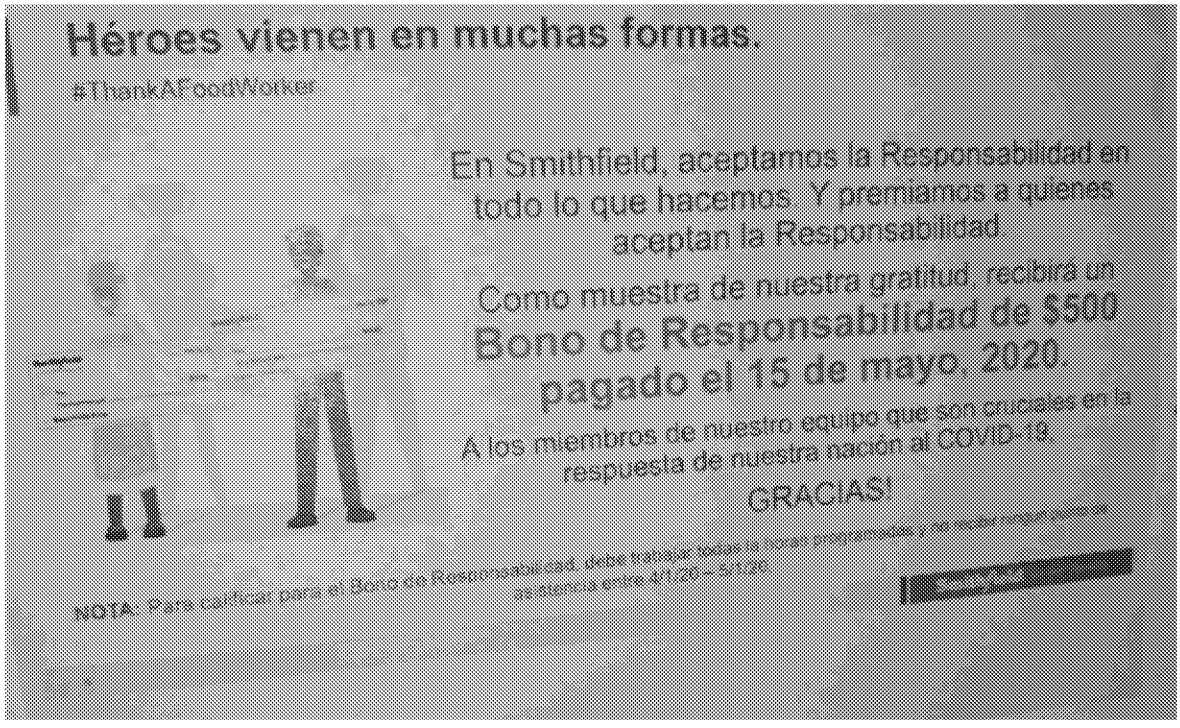

Fig. 1: Photo of Smithfield "Responsibility Bonus" Sign[66]

This sign, translated into English, reads as follows:

> Heroes come in many forms.
> #ThankAFoodWorker
>
> At Smithfield, we accept responsibility in everything we do. And we reward those who accept responsibility. As a show of our gratitude, you will receive a Responsibility Bonus of $500, paid the 15th of May 2020. To the members of our team who are crucial in our nation's response to COVID-19, thank you!
>
> ***Note: To qualify for the Responsibility Bonus, you must work all scheduled hours and not receive a single attendance point between 4/1/20 and 5/1/20***

[65] *See* Fuentes Decl. ¶ 24; Doe Decl. ¶¶ 17-18.
[66] Doe Decl. ¶ 18.

Some workers have been told that if they take a sick day not only will they lose the bonus, but they will also be assigned a "point" for each missed shift.[67] The only exception would be if Smithfield or a doctor orders the worker to stay home.[68] Such requirements are particularly cruel as Smithfield has not offered the workers an opportunity to be tested,[69] or performed contact tracing to identify which workers have come into contact with a sick individual and thus should be ordered to quarantine.[70]

III. ARGUMENT

The Court should exercise its discretion under Fed. R. Civ. P. 65 to grant Plaintiffs the preliminary relief they seek. Specifically, Plaintiffs move for a preliminary injunction directing Smithfield to immediately take the following actions: (1) Provide clean masks to all workers, contractors or inspectors who enter the Plant, and require that masks be worn at all times in public areas except when eating; (2) Ensure social distancing throughout the Plant, including on the lines; (3) Ensure that all workers at the Plant have the opportunity to wash their hands as needed without penalty; (4) Provide tissues; (5) Ensure high-touch surfaces are disinfected with a suitable cleaning agent throughout the day; (6) Change all relevant policies to meaningfully encourage workers who are diagnosed with, have symptoms of, or who believe they have been exposed to COVID-19 to take sick leave whether or not they have been seen by a healthcare provider including by eliminating the "perfect attendance" bonus and eliminating accrual of "points" for COVID-related absences; (7) Ensure that measures are in place for workers to obtain testing when necessary; and (8) Develop and implement a plan for contact tracing, in coordination with public health officials. Plaintiffs also request the Court set a date certain for Plaintiffs' experts to inspect the Plant to

[67] Fuentes Decl. ¶¶ 8, 23.
[68] *Id.*
[69] Fuentes Decl. ¶ 25.
[70] *See id.*; *see also* Doe Decl. ¶ 22; *accord* Corbo Decl. ¶ 10 (explaining Smithfield could offer paid sick leave).

determine what other steps, beyond these, which have been identified by the CDC and Dr. Harrison as bare minimum necessities, must be implemented.

As discussed in more detail below, Plaintiffs meet all of the Rule 65 criteria for preliminary injunction, because "[they are] likely to succeed on the merits, . . . [they are] likely to suffer irreparable harm in the absence of preliminary relief, . . . the balance of equities tips in [their] favor, and . . . an injunction is in the public interest." *Winter v. Nat. Res. Def. Council, Inc.*, 555 U.S. 7, 20 (2008); *Wise v. Dep't of Transp.*, 943 F.3d 1161, 1165 (8th Cir. 2019); *see also Dataphase Sys., Inc. v. C L Sys., Inc.*, 640 F.2d 109, 114 (8th Cir. 1981) (en banc). Because the requested relief requires no further factual development and because Smithfield appears unwilling to act on its own, Court intervention is both necessary and appropriate.

A. Plaintiffs Are Likely to Succeed On the Merits.

i. Plaintiffs Are Likely to Succeed On Their Public Nuisance Claim.

"A public nuisance is an offense against the public order and economy of the state and violates the public's right to life, health, and the use of property, while, at the same time annoys, injures, endangers, renders insecure, interferes with, or obstructs the rights or property of the whole community, or neighborhood, or of any considerable number of persons." *State ex rel. Schmitt v. Henson*, No. ED 107970, 2020 WL 1862001, at *4 (Mo. Ct. App. Apr. 14, 2020) (quoting *City of Greenwood v. Martin Marietta Materials, Inc.,* 299 S.W.3d 606, 616 (Mo. App. W.D. 2009)). Smithfield's failure to follow basic public health guidelines during the COVID-19 pandemic is a paradigmatic public nuisance, which endangers Plaintiffs and threatens the public health.

To succeed on their public nuisance claim, Plaintiffs must demonstrate that Smithfield's private action "interferes with community right of public safety." *Id.* at *1. (cleaned up). Courts in Missouri and elsewhere have long held that conduct by a private entity that is "disease-breeding" creates a public nuisance. *Roth v. City of St. Joseph*, 147 S.W. 490, 491 (Ks. Ct. App. 1912)

(affirming that public nuisance claim lies against city that allowed creation of a stagnant, disease-breeding pond on its property); *Birke v. Oakwood Worldwide*, 169 Cal. App. 4th 1540, 1548-53 (2009) (second-hand smoke is a public nuisance because it can cause lung cancer and heart disease); *accord* Restatement (Second) of Torts § 821B cmt. g ("[T]he threat of communication of smallpox to a single person may be enough to constitute a public nuisance because of the possibility of an epidemic."). The Missouri Attorney General recently explained that the failure to follow established public health guidelines in response to COVID-19 amounts to a public nuisance. *Missouri v. The People's Republic of China*, No. 20-99, Complaint, Dkt. No. 1 ¶¶ 139-48 (E.D. Mo.). This is exactly what Smithfield has done in Milan and if it does not take the steps sought here, its Plant will continue to be a "disease-breeding" entity exacerbating the existing threat to the public health. *Roth*, 147 S.W. at 491.[71]

Plaintiffs will also establish that they will suffer a "special injury," "differing in kind and not merely in degree from the general injury to the public." *Grommet v. St. Louis Cty.*, 680 S.W.2d 246, 252 (Mo. App. E.D. 1984) (quoting *Lademan v. Lamb Constr. Co.*, 297 S.W. 184, 186[3, 4] (Mo.App.1927)). Although the public health will be affected by Smithfield's conduct through increased spread of COVID-19 and the associated impacts on hospitals and the health system at large, Plaintiff Doe suffers an increased risk of direct exposure to the virus because of Smithfield's refusal to take proper measures to protect Plant workers.[72] Likewise, Plaintiff RCWA will suffer the unique harms of diversion of resources and the increased risk of infection of its Executive Director and sole staff member, Axel Fuentes.[73]

ii. Plaintiffs Are Likely to Succeed On Their Right to a Safe Workplace Claim.

---

[71] *See generally* Harrison Decl.
[72] Doe Decl. ¶¶ 24-25.
[73] Fuentes Decl. ¶¶ 28-36.

OSHA-003504

An employer in Missouri has a duty to use "all reasonable care to provide a reasonably safe workplace and protect the employee from avoidable perils." *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 12-13 (Mo. Ct. App. 1982) (citing *Hightower v. Edwards*, 445 S.W.2d 273, 275 (Mo. 1969) (en banc)). Under Missouri law, courts can issue injunctive relief to enforce this right. In *Smith*, for instance, the employer breached this duty "by failing to exercise its control and assume its responsibility to eliminate the hazardous condition caused by tobacco smoke." *Id.* at 13. Therefore, the appellate court held, "an injunction would be an appropriate remedy" to address the "irreparable" "deterioration of [the] plaintiff's health," a "harm for which money damages cannot adequately compensate." *Id.* The court held that this was "particularly true where the harm has not yet resulted in full-blown disease or injury." *Id.*

Here, Smithfield is aware of a severe risk from COVID-19 to its slaughterhouse workers.[74] Smithfield's failure to take action has already allowed the disease to ravage its other plants,[75] and there is little reason to expect the outcome will be different at this Plant, particularly because workers are already showing symptoms. As in *Smith*, the requested injunction will remedy the avoidable peril faced by Plaintiff Doe and members of Plaintiff RWCA, before it results in "full-blown disease." *See Smith*, 643 S.W.2d at 13.

B. Plaintiffs Will Suffer Irreparable Harm Absent Immediate Relief.

As stated by Missouri Attorney General Eric Schmitt, "In Missouri, the impact of the virus is very real—thousands have been infected and many have died, families have been separated from dying loved ones, small businesses are shuttering their doors, and those living paycheck to

[74] Fuentes Decl. Ex. A.
[75] *See supra* notes 28 and 29.

OSHA-003505

paycheck are struggling to put food on their table."[76] Further, hundreds of slaughterhouse workers around the country—many of whom are Smithfield's own employees—have already contracted the virus and spread it through their workplaces and beyond, prompting the shutdowns of similar plants.[77] Workers have died.[78] Plaintiff Doe, Plant workers who are RCWA's members, and the broader Milan community face this same threat without Court intervention because there is a meaningful risk that the virus will spread, potentially infecting Plaintiff Doe and other Plant workers as well as members of the wider community.

There can be no doubt that "[d]eath constitutes an irreparable injury." *Lee v. State*, 869 F. Supp. 1491, 1501 (D. Or. 1994); *see also Harris v. Bd. of Supervisors, Los Angeles Cty.*, 366 F.3d 754, 766 (9th Cir. 2004) (risk of pain, infection, medical complications, and death deemed sufficient irreparable harm for granting of preliminary injunction). Likewise, "[T]he danger to plaintiffs' health, and perhaps even their lives, gives them a strong argument of irreparable injury." *Kai v. Ross*, 336 F.3d 650, 656 (8th Cir. 2003); *see also Harris v. Blue Cross Blue Shield of Mo.*, 995 F.2d 877, 879 (8th Cir. 1993) ("We entertain no question but that irreparable injury exist[s]" when the harm contemplated is "a life threatening illness."); *Mertzlufft v. Bunker Res. Recycling & Reclamation, Inc.*, 760 S.W.2d 592, 598 (Mo. Ct. App. 1988) (to wait "until residents of a community . . . became infected with a dread disease and thus suffered irreparable harm before injunctive relief was possible, [makes it] entirely possible that infectious and contagious diseases of epidemic proportions could follow.").

C. The Balance of Harms Tips Decidedly in Plaintiffs' Favor.

[77] *See supra* notes 308-31.

[78] *See supra* note 30.

OSHA-003506

Balancing the tremendous public health risks (and the significant strain on RCWA's meagre resources) against any economic loss Smithfield may incur as a result of implementing common-sense, CDC-recommended practices,[79] weighs plainly in Plaintiffs' favor. *See Teamsters Local No. 120 v. Marathon Petroleum Co. LLC*, No. 06-3431, 2006 WL 2971667, at *6 (D. Minn. Aug. 29, 2006) (balance of harms weighed in plaintiff's favor where"[t]he harm to the Plaintiff employees and their families is the risk to their health, whereas Defendants will incur only minimal financial risk."); *Nemnich v. Stangler*, No. 91-4517, 1992 WL 178963, at *3 (W.D. Mo. Jan. 7, 1992) (rejecting defendant's argument that estimated costs of over $8 million were greater than potential health consequences and holding that "the harm to the plaintiffs' life and health clearly outweighs any fiscal harm the [defendant] may suffer"). After all, the nation has already shut down the economy, closed schools and workplaces around the country, and otherwise taken unprecedented steps to prevent the very harm Smithfield continues to cause here—the continued spread of COVID-19.

To the extent Smithfield stands to experience any potential harm as a result of the prayed-for injunction, that harm is nothing more than the burden of complying with CDC guidelines to safeguard workers. On the other hand, the risk to Plaintiff Doe and other Smithfield workers and the public health if the preliminary injunction is not granted is grave. They risk infection with COVID-19, which not only places them at risk of serious illness and death, but also may result in their exposing families and communities to the disease. The Court need look no further than the outbreak stemming from Smithfield's Sioux Falls, South Dakota plant to understand the consequences of Smithfield's failure to act.[80] Where, as here, there is a "conflict between financial

[79] *See* Missouri Stay At Home Order, *supra* note 11 (incorporating federal guidelines and mandating social distancing).
[80] *See, e.g.*, Caitlin Dickerson & Miriam Jordan, *supra* note 28.

concerns and preventable human suffering," this Court should have "little difficulty concluding that the balance of hardships tips decidedly in plaintiffs' favor." *Lopez v. Heckler*, 713 F.2d 1432, 1437 (9th Cir. 1983).

D. The Preliminary Injunction Is In the Public Interest.

Safeguarding the public health is in the public interest. *See Coteau Props. Co. v. Dep't of Interior*, 53 F.3d 1466, 1480-81 (8th Cir. 1995) (considering whether public health and safety will be impacted when evaluating the public interest factor); *W.B. v. Crossroads Acad.-Cent. St.*, No. 19-00682, 2019 WL 6257963, at *3 (W.D. Mo. Nov. 22, 2019) (concluding that safeguarding the public health is in the public interest); *Sak v. City of Aurelia, Iowa*, 832 F. Supp. 2d 1026, 1047 (N.D. Iowa 2011) (weighing public interest in health and safety against other public interests); *Union Pac. R. Co. v. U.S. Envtl. Protection Agency*, No. 10-235, 2010 WL 2560455, at *2 (D. Neb. June 24, 2010) (noting that public health, safety, and welfare are important to the public interest).

The preliminary injunctive relief Plaintiffs seek would promote public health, and thus is in the public interest. The safety measures Plaintiffs seek at the Smithfield plant are those recommended by public health officials and will serve not only to protect the individual workers inside that plant, but the community as a whole. Smithfield's Milan workers must interact with their community when they travel to and from work, shop for groceries, go to the doctor, and engage in other activities of daily life.[81] Where Smithfield's failure to provide safety measures creates the conditions for an outbreak inside the Plant, it also imposes that burden on the surrounding community. This burden consists not only of the predictable consequence of additional COVID-19 infections, but the added risk that the local health care system will become

[81] *See* Fuentes Decl. ¶ 34; Doe Decl. ¶ 24.

overloaded, and the scarce healthcare resources in the rural Milan community will be unavailable to its residents. Indeed, in Dr. Harrison's professional opinion, Smithfield has a "public health responsibility" to adopt the protective measures described in his declaration in order to control the spread of the pandemic in the community.[82]

IV. CONCLUSION

For the foregoing reasons, Plaintiffs request the Court enter a preliminary injunction awarding the relief requested, or, in the alternative, construe this motion as a request for a temporary restraining order and award the requested relief.

IN THE UNITED STATES DISTRICT COURT FOR THE WESTERN DISTRICT OF MISSOURI ST. JOSEPH DIVISION

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,[1]	)	
Plaintiffs,	)	
v.	)	No. 5:20-CV-06063-DGK
SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,	)	
Defendants.	)	

ORDER GRANTING DEFENDANTS' MOTION TO DISMISS

This lawsuit arises from Plaintiffs' allegations that Defendant Smithfield Foods, Inc. and its wholly owned subsidiary, Defendant Smithfield Fresh Meats Corporation (collectively, "Smithfield") have failed to adequately protect workers at its meat processing plant in Milan, Missouri, ("the Plant" or "the Milan Plant") from the virus that causes COVID-19. Now before the Court are Plaintiffs' Motion for a Temporary Restraining Order ("TRO") and Preliminary Injunction (Doc. 3), and Smithfield's motion to dismiss and/or stay pursuant to the primary-jurisdiction doctrine (Doc. 28).

After carefully reviewing the motions and the existing record, the Court holds that it should decline to hear this matter pursuant to the primary-jurisdiction doctrine to allow the Occupational Health and Safety Administration ("OSHA") to consider the issues raised by this case. But even if the Court did not apply the primary-jurisdiction doctrine, the Court would not

[1] The Court notes that there is currently a motion pending to allow Jane Doe to proceed using a pseudonym (Doc. 42). Given the Court's dismissal of this action and the denial of injunctive relief, the Court finds that requiring Plaintiff to reveal her identity would serve no important purpose, especially given that another named plaintiff appears in this case. The issues presently before the Court are—for the most part—purely legal, and the majority of Plaintiff's allegations are not individualized. Thus, the public's interest in Plaintiff's identity and the prejudice to Smithfield in allowing Plaintiff to proceed anonymously for purposes of deciding the instant motions is minimal. Plaintiff Doe may therefore use a pseudonym for purposes of the motions presently before this Court. This Court reserves judgment on her ability to do so should this case proceed to further stages of litigation.

OSHA-003533

issue a preliminary injunction because Plaintiffs have not met their burden of proving that the extraordinary remedy of an affirmative injunction is justified. Smithfield's motion is GRANTED, and the case is DISMISSED WITHOUT PREJUDICE.

Background

The Background section of this order is arranged in chronological order. Although regrettably lengthy, it details how the regulatory environment in which meat-processing plants operate is constantly changing during this unique national emergency.

In late 2019, a new coronavirus emerged named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).[2] This virus causes coronavirus disease 2019 (COVID-19), a respiratory illness that can cause serious health problems, including death.[3] SARS-CoV-2 is highly contagious; it appears to spread from person to person through respiratory droplets produced when an infectious person coughs, sneezes, or talks, and the virus can be spread by presymptomatic, or even asymptomatic, individuals.[4]

A global pandemic ensued, and the virus and COVID-19 reached the United States in early 2020. On March 13, 2020, the President declared a national emergency concerning COVID-19. That same day, Missouri's governor also declared a state emergency, and on April 3, the Missouri Department of Health and Senior Services issued a stay-at-home order that mandated all individuals abide by social-distancing requirements and closed all nonessential

[3] *Id.*

[4] *Id.*

businesses in Missouri through May 4.[5] The stay-at-home order defines essential businesses in accordance with guidance from the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency ("Homeland Security"), which identified livestock-slaughter facilities, including the Plant and its operations, as "critical infrastructure."[6] On April 9, the Centers for Disease Control ("CDC") published *Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19)*, which outlined several policies and procedures employers should implement to help prevent workplace exposure and community spread of the virus.

On April 22, OSHA sent Smithfield a "Rapid Response Investigation" requesting information regarding its COVID-19 work practices and infection at the Milan Plant, giving Smithfield seven days to respond. As part of its inquiry, OSHA requested information about Smithfield's COVID-19 practices including what, if any, personal protective equipment has been given to its workers, what engineering controls have been implemented, what contact tracing methods have been employed, and what policies have been changed or implemented in light of the pandemic (Doc. 29-2). Smithfield responded on April 29 (Doc. 41).

The next day, on April 23, Plaintiffs Jane Doe and the Rural Community Workers Alliance ("RCWA") filed suit. They allege Smithfield is not taking adequate steps to prevent transmission of the virus at its Plant, thereby endangering workers and members of the surrounding community. According to her declaration, Doe is a current Smithfield employee who has worked at its Milan Plant for at least five years. She claims she currently works on the

"cut floor" where animals are broken down into products and packaged.

The RCWA is a Missouri non-profit advocacy group whose members consist exclusively of workers in Northern Missouri. Several members of RCWA's current leadership council work at the Plant, and sixty to seventy workers who attend its meetings work at the Plant, including Jane Doe.

Defendant Smithfield is one of the largest meat-processing companies in the world, with meat-processing plants all over the United States, including in Milan, Missouri. Several of its meat-processing plants in the United States have closed recently due to outbreaks of COVID-19 among its workers.

The Complaint (Doc. 1) alleges that several meat-processing plants in this country owned and operated by Smithfield have become major COVID-19 "hot spots." It also alleges that in direct contravention of CDC guidelines, Smithfield has not implemented certain precautions to keep its workers and the Milan community safe from the virus. Such measures include keeping adequate distance between workers, prohibiting workers from taking a break to wash their hands or face, preventing workers from covering their faces if they need to cough or sneeze, implementing a sick-leave policy that penalizes workers for missing work even if they are exhibiting COVID-19 symptoms, and failing to implement plans for testing and contact tracing.

The Complaint brings state-law claims for public nuisance and breach of duty to provide a safe workplace. Plaintiffs are not seeking monetary damages, only declaratory judgments stating that: (1) Smithfield's practices at the Plant constitute a public nuisance; and (2) Smithfield has breached its duty to provide a safe workplace.

The same day Plaintiffs filed suit, they also moved for a temporary restraining order and preliminary injunction (Doc. 3), seeking to force Smithfield to: provide masks; ensure social

distancing; give employees an opportunity to wash their hands while on the line; provide tissues; change its leave policy to discourage individuals to show up to work when they have symptoms of the virus; give workers access to testing; develop a contact-tracing policy; and allow their expert to tour the Plant. Attached to the motion were declarations from: (1) Jane Doe, who described working conditions at the Plant and stated she was afraid for health and safety, as well as the health and safety of the Milan community, because of what she considers inadequate safety procedures at the Plant; (2) RCWA's Executive Director, Alex Fuentes; (3) a senior lobbyist with the non-profit organization Food & Water Watch ("FWW"), Anthony Corbo; (4) a lawyer, Thomas Fritzsche, who has interviewed a number of Alabama poultry-plant workers about working conditions and authored a 2013 report for the Southern Poverty Law Center about modern industrial slaughterhouse workers; and (5) an occupational-medicine specialist, Dr. Robert Harrison, who works as Clinical Professor of Medicine at the University of California, and also serves the California Department of Public Health.

On April 26, the Court set a videoconference hearing on the preliminary injunction motion for April 30. That same day, the CDC and OSHA issued *Meat and Poultry Processing Workers and Employers – Interim Guidance* ("the Joint Guidance"), which provided supplemental guidance to meat-processing plants concerning COVID-19.[7] The Joint Guidance states that to reduce the risk of transmission among employees, employers at meat-processing facilities should, where "feasible," implement engineering controls, such as staggering shifts and breaks, requiring workers to stay six-feet apart, and/or erecting physical barriers; place handwashing or hand-sanitizing stations in multiple locations and encourage hand hygiene; give workers additional short breaks to wash hands; provide tissues; and allow workers to take breaks

[7] Ctrs. for Disease Control and Prev. & Occ. Safety and Health Admin., Meat and Poultry Processing Workers and Employers, https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html (Apr. 26, 2020).

in alternative areas to ensure social distancing. It also recommends employers provide personal protective equipment for workers to use during their shift and increase the frequency of sanitization in work and common spaces. It states employers should educate employees on measures they can take to decrease the risk of spreading the virus and provides a specific list of measures employers should take to promote social distancing, such as providing visual cues on floors, as reminders for social distancing. It encourages employers to screen workers for COVID-19 by implementing temperature checks prior to entering the workplace and sending home workers who appear to have symptoms (e.g., cough, fever, or shortness of breath), and monitor workers' contacts so they can alert anyone who may have been exposed to the virus. Finally, it recommends employers review leave and incentive policies so as to not penalize workers for taking sick leave if they contract COVID-19.

On April 27, Smithfield filed a motion to dismiss this case pursuant to the primary-jurisdiction doctrine, arguing this Court should defer to OSHA in this case. The next day—April 28—the President signed an executive order ("the Executive Order") under § 4511(b) of the Defense Production Act ("DPA"), 50 U.S.C. § 2061 *et seq*., delegating authority to the Secretary of Agriculture to take all appropriate action "to ensure that meat and poultry processors continue operations consistent with the guidance for their operations jointly issued by" the CDC and OSHA.[8]

On April 29, Smithfield made several filings, including a supplemental brief to its motion to dismiss, which alleged that pursuant to the Executive Order, the United States Department of Agriculture ("USDA") now had jurisdiction over this case. It also submitted its Suggestions in

[8] Exec. Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/ (Apr. 28, 2020).

Opposition (Doc. 32) to the preliminary injunction motion. Attached to its brief as exhibit A (Doc. 32-1) is a declaration from the Plant's general manager, Tim Messman, along with pictures of the Plant and copies of the Plant's policies and procedures related to COVID-19. Exhibit B (Doc. 32-2) is a declaration from John Henshaw, the head of OSHA from 2001 to 2003.

Later that same day, Plaintiffs' filed their suggestions in opposition (Doc. 35) to Smithfield's motion to dismiss. Included in it is a declaration from Dr. Melissa Perry (Doc. 35-2), a professor of environmental health at George Washington University.

On April 30, the Court held a hearing on the motion via teleconferencing. The Court offered the parties an opportunity to introduce evidence, including witness testimony, but both parties elected to stand on the existing record. The parties then argued their respective positions.

After the hearing, the parties filed supplemental briefs. Attached to Smithfield's brief (Doc. 46) is a supplemental declaration from Smithfield's plant manager, clarifying Smithfield's leave policy and updating the Court on additional safety changes at the Plant.

Plaintiffs concede that Smithfield implemented new policies and procedures after this lawsuit was filed and have narrowed their requested injunctive relief to direct Smithfield to:

> (1) make all reasonable changes to its "production practices," including potentially lowering its line speeds, to place as many workers as possible at least six feet apart; (2) provide reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing; and (3) ensure that its policies do not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers.

(Doc. 48 at 10). Plaintiffs characterize their requested relief as compliance with the Joint Guidance.

Findings of Fact

The Court gives the various declarations submitted by the parties the following

OSHA-003539

evidentiary weight.[9]

The Court gives Jane Doe's declaration limited weight. While she has personal knowledge of conditions in those parts of the Plant in which she works, it is unclear exactly what part of the "cutting floor" she works in, and whether she can see all that she claims to see from this area. Further, it appears that some of the information in her declaration is no longer accurate due to recent changes in the Plant's policies and procedures. For example, although her declaration may be correct that Smithfield initially told workers they would receive only one mask per week, this policy has been superseded. As discussed below, workers are now given masks every day. Finally, because her identify is unknown, there is no way to determine, through the adversarial process or otherwise, whether Doe has some bias against Smithfield that could lead her to misrepresent or exaggerate conditions at the Plant. The Court notes that at least one of her statements—that Smithfield has increased the line speed at the Plant during the pandemic—is contradicted by other, more persuasive evidence.

Mr. Fuentes' declaration concerning working conditions at the Plant are even less reliable than Jane Doe's, and so the Court gives them less weight. Mr. Fuentes has no personal knowledge of conditions at the Plant because he has never set foot in it. His understanding is based on hearsay from unidentified employees whose statements to him, even if accurately relayed by Mr. Fuentes, were not made under penalty of perjury. That said, the Court finds the portions of his declaration concerning RCWA's membership and activities are credible.

The Court finds the declarations of Messrs. Corbo, Fritzsche, and Harrison are based on some relevant knowledge, education, and experience concerning working conditions in American meat-processing plants generally, and so they possess some limited insight into what

[9] Smithfield filed a motion to strike Plaintiffs' five declarations attached to the motion for a temporary restraining order and/or preliminary injunction (Doc. 34). The Court denies the motion, since, in considering these motions, the issues it complains of go to the weight of the evidence rather than its admissibility.

steps could be taken to prevent the spread of the SARS-CoV-2 virus in a generic American meat-processing facility. Because they are unfamiliar with specific working conditions at the Plant, however, their declarations provide limited help in determining whether Smithfield's policies and procedure at the Plant are sufficient to stem transmission of the virus.

Finally, the Court turns to the declaration of Dr. Melissa J. Perry, Professor and Chair of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University. Dr. Perry credentials are excellent: She is a past President of the American College of Epidemiology and a past chair of the Board of Scientific Counselors for the CDC. She has also served as a member of the National Institute for Occupational Safety and Health research grant-review panel. She has studied meat-processing facilities since 2004 and has published six peer-reviewed-journal articles on work health and safety at meat-processing facilities. As part of that work, she has visited four meat-processing plants and spoken with engineers regarding the organizational structure of processing plants and how they can be redesigned to further worker health and safety.

Dr. Perry opines that meat-processing plants can allow workers to stand six feet apart if they reduce production line speed, and that, if they do not space production line workers six feet apart, the plants will "inevitably" have a COVID-19 outbreak. She contends slowing the production line is the only way the plant will be able to continue meat production without an outbreak. She also endorses the other requests Plaintiffs make, such as for more rest breaks and paid leave, as "absolutely necessary" so the Plant can continue operating.

This Court has respect for Dr. Perry's opinion but finds it of limited value in this case. While this Court agrees that slowing down line speed may be beneficial for workers and allow more opportunities for social distancing, the Court found nothing in the Joint Guidance

recommending a decrease in line speed. To that point, she provides no specific opinion regarding whether the Milan Plant is currently in compliance with the Joint Guidance, and there is no evidence that Dr. Perry reviewed the policies and procedures at the Milan Plant in forming her opinion. Accordingly, the Court gives little weight to her opinion that unless the production line speed is slowed and workers spread six feet apart, spread of the virus through the Plant is "inevitable" and it "will be forced to shutter." This assertion appears to be more of a good-faith speculation than an evidenced-based conclusion.

The Court gives more weight to the declarations provided by Smithfield. The statements made by Mr. Messman, the Plant's general plant manager, are almost all based on his personal knowledge. He possesses the most recent information concerning working conditions at the Plant, and he appears to be a reliable source of information about Smithfield's policies and procedures there.

The Court gives considerable weight to the declaration of John Henshaw, Smithfield's expert witness. After reviewing Smithfield's written policies and procedures at the Plant, the general manager's declaration, the pictures, and the declarations in Plaintiffs' motion, Mr. Henshaw opined that Smithfield's current policies and procedures, if followed, were consistent with the Joint Guidance as of April 29, 2020. Although the Court is aware that he is a retained expert witness whose assumptions and conclusions have not been tested by cross-examination, his opinion is measured, qualified, and grounded in the facts at the Milan Plant.

With the credibility determinations in mind, the Court makes the following findings of fact concerning current the Plant's working conditions and Smithfield's COVID-19 policies and procedures.

Before entering the Plant, Smithfield requires all employees to undergo thermal screening. If employees exhibit one primary symptom or two secondary symptoms of COVID-19,[10] Smithfield provides them with instructions for next steps, including directions to quarantine and call their physician for guidance, and sends the employee home for fourteen days of paid leave or until the individual receives a negative COVID-19 test result. Employees with underlying health concerns—verified by a doctor—that place them at a higher risk of COVID-19 are given fourteen days of paid leave and then are shifted to short-term disability leave.

While quarantining as a result of COVID-19 symptoms, Smithfield requires employees to complete a questionnaire that in part entails naming all other employees they have closely contacted within the two days before experiencing symptoms. If the employee tests positive for COVID-19, Smithfield notifies and screens the close contacts. As of April 29, 2020, thirteen employees had been tested for COVID-19. None were positive.

If employees miss work as a result of COVID-related symptoms, Smithfield does not penalize them. They do not receive attendance points and remain eligible for Smithfield's Responsibility Bonus ($500), regardless of whether individuals provide a doctor's or nurse's note. Moreover, Smithfield has expanded its employee benefits by eliminating co-pays for COVID-related testing and treatment.

To ensure that those inside the Plant are complying with Smithfield's COVID-19 safety procedures and policies, Smithfield has assigned both a nurse and a health-and-safety clerk to perform checks throughout the Plant. Smithfield has communicated these procedures and policies to its employees by several different media, including on televisions and signs at the Plant, through the Beekeeper communications app, and through the Textcaster mass

[10] Primary symptoms include fever, persistent dry cough, and shortness of breath, while secondary symptoms include chills, repeated shaking with chills, muscle pain/extreme fatigue, headache, sore throat, and/or loss of taste or smell (Doc. 46-2 at 8).

text-messaging tool. Signs at the Plant relay the information in English, Spanish, and French, while the Beekeeper and Textcaster communications are available in the employee's language of choice. Interpreters are also available at the Plant to assist with these communications.

The Plant provides workers with an ear-looped face mask upon entry to the Plant each day, and if a mask breaks or becomes soiled, it provides a new one. Smithfield now requires all workers at the Plant to wear a mask at all times other than during meals and in certain offices where employees are spaced six feet apart. These masks prevent the spread of germs if an employee sneezes or coughs while on the line, reducing the need for tissues to reduce the spread of COVID-19. Additionally, Smithfield requires employees on the production floor to wear nitrile gloves and a plastic face shield.

As Smithfield concedes, it does not provide tissues to employees. It cannot provide tissues to individuals working on the production line because doing so would violate health standards set by the USDA. Thus, one of Plaintiff's original complaints cannot be remedied. Smithfield could, however, provide tissues for employees to wipe their nose while on breaks, but the record does not support that employees are banned from bringing their own tissues or other hygienic wipes to use while on breaks.

As for Plaintiffs' claim that Smithfield does not allow employees to wash their hands without penalty, the Court finds that Smithfield policies and procedures are reasonable under the circumstances. Due to the nature of the meat-processing business, employees must wear gloves on the production line. When workers leave the line for a break, they remove their gloves and sanitize their hands before entering common areas. They must also wash their hands and put on gloves before returning to the line. Smithfield currently administers hand sanitizer to employees every thirty minutes to use on their gloves and has added approximately 110 hand-sanitizing

stations throughout the Plant. Smithfield also expects a shipment of small hand-sanitizer bottles soon, which it will make available to employees for personal use. In the meantime, the Plant has invited employees to bring in personal bottles they may refill using the company supply. Thus, the need for continued hand washing is unnecessary because any contamination that may occur on the line is contained by the required use of gloves.

Moreover, Smithfield has also enhanced cleaning and disinfection of the Plant's frequently touched surfaces in common areas using cleaning solutions identified by the CDC for use against the virus. These cleanings are performed as often as every two hours throughout the workday. Additional deep cleanings occur over the weekends, and Smithfield is working to implement use of fogging/misting disinfectants where possible.

Finally, the Court turns to the steps Smithfield has taken steps to facilitate social distancing at the Plant. Smithfield has staggered workday start times, as well as lunch and break times, to avoid large numbers of workers congregating in break rooms or around time clocks. Smithfield is currently working to secure a wireless means for employees to clock in and out of their shifts to minimize crowding. In the meantime, it has expanded the number of available clocks for employees to use and will implement a grace period for workers to clock in and out of their shifts, all increasing the ability of workers to maintain social distance.

Smithfield has erected two large tents and three carport structures on the Plant lawn and placed tables and chairs underneath each so that workers have more space to eat while on breaks. The Plant has also installed plastic barriers on eating tables that separate employees from those sitting beside and across from them. Tables are sanitized after one employee leaves and before another sits down.

Smithfield has also reduced the number of hogs harvested each day and sends some employees home before lunch. This requires fewer employees to be at the Plant, helping to minimize crowding in the cafeteria and other areas. However, these policies reduce the number of hours worked by the affected employees, thereby decreasing their weekly pay. To ease the resulting financial burden on employees, Smithfield has temporarily increased pay by $5/hour, and such pay is available to any employee who takes an approved leave as a result of COVID-related symptoms. Smithfield has also installed clear plastic barriers along the Plant production line to separate employees working across from each other and employees working side by side.

Discussion

I. The primary-jurisdiction doctrine applies.[11]

Before reaching the merits of Plaintiffs' request for a preliminary injunction, the Court must determine whether it should dismiss or stay this case pursuant to the primary-jurisdiction doctrine. "Primary jurisdiction is a common-law doctrine that is utilized to coordinate judicial and administrative decision making." *Access Telecomms. v. Sw. Bell Tel. Co.,* 137 F.3d 605, 608 (8th Cir. 1998) (citation omitted). "The doctrine allows a district court to refer a matter to the appropriate administrative agency for ruling in the first instance, even when the matter is initially cognizable by the district court." *Id.* (citation omitted). "There exists no fixed formula for determining whether to apply the doctrine of primary jurisdiction." *Id.* (citing *United States v. W. Pac. R.R. Co.,* 352 U.S. 59, 64 (1956)). Instead, courts must consider in each case "whether the reasons for the doctrine are present and whether applying the doctrine will aid the purposes

[11] Although Smithfield previously argued *Burford* abstention also applied here, it conceded during the preliminary-injunction hearing that that argument no longer applies due to the President's Executive Order. Accordingly, the Court does not address it. Because this Court finds the primary jurisdiction doctrine applies, it does not address Smithfield's preemption arguments, which were asserted after the preliminary-injunction hearing.

for which the doctrine was created." *Id.* (citation omitted). In undertaking this analysis, a court must be mindful that the primary-jurisdiction doctrine "is to be invoked sparingly, as it often results in added expense and delay." *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005). "Once a district court decides to refer an issue or claim to an administrative agency under the doctrine of primary jurisdiction, it may either dismiss or stay the action." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 913 (8th Cir. 2015).

There are two primary reasons courts apply the primary-jurisdiction doctrine. First, "to obtain the benefit of an agency's expertise and experience . . . 'in cases raising issues of fact not within the conventional experience of judges or cases requiring the exercise of administrative discretion. . . .'" *Access Telecomms.*, 137 F.3d at 608 (noting "'agencies created by Congress for regulating the subject matter should not be passed over'") (quoting *Far E. Conference v. United States*, 342 U.S. 570, 574 (1952)). Second, "to promote uniformity and consistency within the particular field of regulation." *Id.* (citation omitted). Thus, in deciding whether to apply the doctrine, courts focus on two questions: (1) "whether the issues raised in the case 'have been placed within the special competence of an administrative body,'" and (2) whether the court's disposition of the case could lead to inconsistent regulation of businesses in the same industry. *Sprint Spectrum L.P. v. AT&T Corp.*, 168 F. Supp. 2d 1095, 1098 (W.D. Mo. 2001) (quoting *United States v. W. Pac. R.R. Co.,* 352 U.S. at 64). In this case, the answer to both questions is yes.

Plaintiffs allege that because the Plant is not abiding by the Joint Guidance, it constitutes a public nuisance and has created an unreasonably unsafe workplace. Thus, Plaintiffs' claims both succeed or fail on the determination of whether the Plant is complying with the Joint Guidance. Due to its expertise and experience with workplace regulation, OSHA (in

coordination with the USDA per the Executive Order) is better positioned to make this determination than the Court is. Indeed, this determination goes to the heart of OSHA's special competence: its mission includes "enforcing" occupational safety and health standards. In fact, OSHA has already shown interest in determining whether the Plant is abiding by the Joint Guidance. The day before Plaintiffs filed this lawsuit, OSHA sent Smithfield a request for information regarding its COVID-19 work practices and infection at the Plant.

Turning to the second question, the Court finds only deference to OSHA/USDA will ensure uniform national enforcement of the Joint Guidance. If the Court ruled on whether the Plant is complying with the Joint Guidance, this ruling would be binding on Smithfield but not other meat-processing facilities because the Court lacks personal jurisdiction over them. Thus, any determination by this Court whether the Plant is complying with the Joint Guidance could easily lead to inconsistent regulation of businesses in the same industry. And under these circumstances, where the guidelines are rapidly evolving, maintaining a uniform source for guidance and enforcement is crucial.

Plaintiffs' argue that deference will add delay. But OSHA has already requested information about the Plant's safety measures. And if OSHA fails to act quickly on this information, Plaintiffs have a remedy: they may receive emergency relief through OSHA's statutory framework. Section 662(a) of the Occupational Safety and Health Act ("the Act"), 29 U.S.C. §§ 651 *et seq.*, permits the Secretary of Labor to petition the court "to restrain any [dangerous] conditions or practices in any place of employment . . . which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by [the Act]." Upon the filing of such petition, "the district court shall have jurisdiction to grant such injunctive

relief or temporary restraining order pending the outcome of an enforcement proceeding." *Id.* at § 662(b). If the Secretary "arbitrarily or capriciously fails to seek relief," a worker can file a writ of mandamus to compel the Secretary to seek such an order. *Id.* at § 662(d). Granted, there may be some delay before Plaintiffs can invoke this procedure, but following this procedure ensures the USDA and OSHA can take a measured and uniform approach to the meat-processing plants under its oversight. The Court's intervention at this point, on the other hand, would only risk haphazard application of the Joint Guidance.

In sum, the Court holds that the issue of Smithfield's compliance with OSHA's guidelines and regulations falls squarely within OSHA/USDA's jurisdiction. The Court finds dismissal without prejudice is preferable to a stay here so that Plaintiffs may seek relief through the appropriate administrative and regulatory framework.

III. Plaintiffs' have not met their burden for a preliminary injunction.

Although the Court's ruling on the primary-jurisdiction doctrine is dispositive, to aid in any appellate review, the Court will consider whether Plaintiffs have met their extraordinary burden of proving an affirmative preliminary injunction is proper in this case.

In determining whether to grant injunctive relief the Court considers the following factors, which were set forth in the seminal decision *Dataphase Sys., Inc. v. C L Sys., Inc.*, 640 F.2d 109, 114 (8th Cir. 1981): 1) the threat of irreparable harm to the movant; 2) the balance between this harm and any injury that granting the injunction will inflict on the non-moving party; 3) the likelihood that the moving party will prevail on the merits; and 4) the public interest. *Phelps-Roper v. Nixon*, 509 F.3d 480, 484 (8th Cir. 2007). No single factor is determinative; they must be "balanced to determine whether they tilt towards or away" from

granting the injunction. *Noodles Dev., LP. v. Ninth St. Partners, LLP*, 507 F. Supp. 2d 1030, 1034 (E.D. Mo. 2007).

Preliminary injunctive relief "is an 'extraordinary and drastic remedy, one that should not be granted unless the movant, by a clear showing, carries the burden of persuasion.'" *North Dakota v. U.S. Army Corps of Eng'rs*, 264 F. Supp. 2d 871, 878 (N.D. 2003) (quoting *Mazurek v. Armstrong*, 520 U.S. 968, 972 (1997)). This burden is particularly great where, as here, Plaintiffs seek a preliminary injunction requiring an affirmative act. *Sanborn Mfg. Co. v. Campbell Hausfeld/Scott Fetzer Co.*, 997 F.2d 484, 484 (8th Cir. 1993).

1. Plaintiffs have not demonstrated a threat of irreparable harm.

To demonstrate a sufficient threat of irreparable harm, the moving party must show that there is no adequate remedy at law; that is, that an award of damages cannot compensate the movant for the harm. *See Noodles Dev.*, 507 F.Supp.2d at 1036-37. But, when analyzing this factor, the Eighth Circuit has held that "[m]erely demonstrating the 'possibility of harm' is not enough." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 915 (8th Cir. 2015); *see also S.J.W.* ex rel *Wilson v. Lee's Summit R–7 Sch. Dist.,* 696 F.3d 771, 779 (8th Cir. 2012) ("Speculative harm does not support a preliminary injunction."). In the context of a global pandemic, this Court must consider the threat after "accounting for the protective measures" defendant has already implemented. *Valentine v. Collier*, --- F.3d ---, 2020 WL 1934431, *5 (5th Cir. Apr. 22, 2020).

Plaintiffs argue that their injury is potentially contracting COVID-19, which could result in serious illness or even death. But this type of injury is too speculative under Eighth Circuit precedent.

Plaintiffs' claim otherwise, citing two cases from the Eighth Circuit, which they argue held the possibility of "death or serious illness" constitutes an irreparable injury (Doc. 3 at 24). Plaintiffs' cite *Kai v. Ross*, 336 F.3d 650, 656 (8th Cir. 2003), a case in which the state of Nebraska revoked a program providing medical care for the needy. The plaintiffs, who suffered from physical and mental disabilities and received their prescription medications through the program, sought to enjoin revocation of the program. *Id.* The Eighth Circuit held that the present danger to plaintiffs' health without their medications is an irreparable harm. *Id.* Plaintiffs also cite *Harris v. Blue Cross Blue Shield of Mo.*, 995 F.2d 877, 879 (8th Cir. 1993), which similarly held that denial of coverage for the treatment of a life-threating illness is an irreparable injury. These two cases are inapposite, since the plaintiffs were already suffering from illnesses, and would undoubtedly suffer serious illness or death in the absence of an injunction.[12] In other words, the threat of serious injury or death was a certainty and not merely a possibility.

The Court is not unsympathetic to the threat that COVID-19 presents to the Plant's workers. But in conducting its analysis, the Court must determine whether Plaintiffs will suffer an actual, imminent harm if the injunction is denied. This is not the same as analyzing whether employees risk exposure if they continue to work, and, unfortunately, no one can guarantee health for essential workers—or even the general public—in the middle of this global pandemic.

[12] Plaintiffs also cite *Mertzlufft v. Bunker Res. Recycling & Reclamation, Inc.*, 760 S.W.2d 592 (Mo. Ct. App. 1988) as persuasive authority. In *Mertzluff*, the plaintiffs sought to enjoin a business which was illegally transporting, storing, and incinerating hazardous waste without a permit. *Id.* at 595. The plaintiffs brought a citizen's suit to enjoin the defendant from charging and loading the incinerator with hospital wastes, or otherwise operating it, which the trial court granted. *Id.* The Missouri court of appeals, reviewing the case under a standard deferential to the trial court's judgment—not operating under the preliminary injunction standard set forth in *Dataphase*—held that the preliminary injunction was warranted. *Id.* at 598. It did not, however, address whether the plaintiffs proved there was a threat of irreparable harm. *Id.* at 598. To the contrary, the court held that plaintiffs were "not obligated to allege and prove they had suffered irreparable harm in order to obtain injunctive relief, but were only required to prove that they were adversely affected in fact by the unlicensed operation, which they did." *Id.* Accordingly, this case is also inapplicable because the court of appeals did not consider—and plaintiffs were not required to prove—a threat of irreparable harm. But, even if they were, the defendant was illegally operating a hazardous waste facility, and thus presented a present threat of certain harm to the plaintiffs.

But given the significant measures Smithfield is now taking to protect its essential workers from COVID-19 and the fact that there are no confirmed cases of COVID-19 currently at the Plant, the Court cannot conclude that the spread of COVID-19 at the Plant is inevitable or that Smithfield will be unable to contain it if it occurs. Thus, Plaintiffs have not established an immediate threat of irreparable harm.

2. Plaintiffs have not shown that the balance of harms favors issuing injunctive relief.

The second factor "examines the harm of granting or denying the injunction upon both of the parties to the dispute and upon other interested parties, including the public." *Noodles Dev.*, 507 F. Supp. 2d at 1038 (citing *Dataphase*, 640 F.2d at 114). "To determine what must be weighed, . . . courts of this circuit have looked at the threat to each of the parties' rights that would result from granting or denying the injunction." *Id.* The "potential economic harm to the parties" is a relevant consideration, as is "whether the defendant has already voluntarily taken remedial action." *Id.*

Here, there is no doubt that if workers at the Plant contract COVID-19, the harm to Plaintiffs could be great. But Plaintiffs have alleged only that—potential harm—and, in this time, no essential-business employer can completely eliminate the risk that COVID-19 will spread to its employees through the workplace. Thus, it is important that employers make meaningful, good faith attempts to reduce the risk. Here, Smithfield has taken significant remedial steps in accordance with the Joint Guidance to protect its workers from COVID-19.

Moreover, national and local guidance on COVID-19 is continuously evolving and changing. An injunction would deny Smithfield the flexibility needed to quickly alter workplace procedures to remain safe during the ever-changing circumstances of this pandemic. *Valentine*, 2020 WL 1934431 at *5 (staying injunction that would "interfer[e] with the rapidly changing and

flexible system-wide approach that [defendant] has used to respond to the pandemic so far" and "[defendant's] ability to continue to adjust its policies is significantly hampered by the preliminary injunction, which locks in place a set of policies for a crisis that defies fixed approaches") (citing *Jacobson v. Massachusetts*, 197 U.S. 11, 28–29 (1905); *In re Abbott*, 954 F.3d 772, 791 (5th Cir. 2020)). Thus, the remedial measures Smithfield has implemented convince the Court that the balance of harms weighs in its favor.

3. Plaintiffs have not shown a likelihood of success on the merits.

To demonstrate likelihood of success on the merits, a movant does not need to show that it ultimately will succeed on its claims, only that the movant's prospects for success is *sufficiently likely* to support the kind of relief it requests. *See Noodles Dev.*, 507 F.Supp.2d at 1036–37 (emphasis added) (citations omitted). That is, the movant need only show "a fair chance of prevailing." *Phelps-Roper*, 509 F.3d at 485. On this record, Plaintiffs have not shown a fair chance of prevailing on either of their claims.

a. Plaintiffs have not shown they are likely to succeed on their public-nuisance claim.

Under Missouri law, "a public nuisance is an offense against the public order and economy of the state and violates the public's right to life, health, and the use of property, while, 'at the same time annoys, injures, endangers, renders insecure, interferes with, or obstructs the rights or property of the whole community, or neighborhood, or of any considerable number of persons.'" *State* ex rel. *Schmitt v. Henson*, ED 107970, 2020 WL 1862001, at *4 (Mo. Ct. App. April 14, 2020) (citations omitted).

The parties agree that the Plant cannot be a public nuisance simply by virtue of the fact that it is a meat-processing plant during a global pandemic. Moreover, in this case, Smithfield has implemented substantial health and safety measures to protect Plant workers, and no

employees of the Plant have been diagnosed with COVID-19. While Plaintiffs argue that Smithfield could do more to protect its workers, that is not the issue before this Court. The issue is whether the Plant, as it is currently operating, constitutes an offense against the public order. Because of the significant measures Smithfield has implemented to combat the disease and the lack of COVID-19 at the facility, the Plant cannot be said to violate the public's right to health and safety. Thus, the Court finds that Plaintiffs are unlikely to be succeed on their public nuisance claim.

b. Plaintiffs have shown they are unlikely to succeed on their right to a safe workplace claim.

Under Missouri law, Plaintiffs must prove that Smithfield negligently breached its duty to provide a safe place to work and that such negligence was the direct and proximate cause of the Plaintiffs injuries. *Hamilton v. Palm*, 621 F.3d 816, 818 (8th Cir. 2010). As discussed, Smithfield has taken substantial steps to reduce the potential for COVID-19 exposure at the Plant and appears to the Court to be complying with the Joint Guidance regarding the same. Thus, Plaintiffs are not substantially likely to prove Smithfield breached any duty.

More importantly, however, Plaintiffs have not alleged they have suffered any injury, only that they may suffer an injury in the future. A potential injury is insufficient to state a claim of the breach of the duty to provide a safe workplace under Missouri law. Plaintiffs citation to *Smith v. W. Elec. Co.*, 643 S.W.2d 10 (Mo. Ct. App. 1982), to establish that they have stated a sufficient injury is unavailing. In *Smith*, the plaintiff proved that he had been exposed to harmful second-hand smoke in the workplace which caused him to suffer a severe adverse reaction. *Id.* at 12. The adverse reaction was the actual injury he suffered, and he suffered this harm—and sought relief through an administrative process—before seeking an injunction. Thus, *Smith* is not analogous to this case, and Plaintiffs have not shown they are likely to be successful on their

breach of a safe workplace claim.

4. The public interest factor is neutral.

Certainly, the spread of COVID-19 is a public-health matter of great concern, and, so, preventing transmission of the virus which causes COVID-19 is within the public interest. At the same time, the public has an interest in maintaining the food-supply chain and access to meat products, an interest which might be impaired if the Court granted the injunction. Because Smithfield's current policies and procedures temper public health worries, the Court finds a preliminary injunction is not in the public interest at this time.

Thus, Plaintiffs have not met their extraordinary burden of showing an affirmative preliminary injunction is warranted in this case.

III. Plaintiffs' requested relief lacks the specificity required for a preliminary injunction.

Finally, the Court finds that Plaintiffs requested relief is impermissibly vague. Federal Rule of Civil Procedure 65(d) states that an injunction must be "specific in [its] terms" and describe in reasonable detail the actions sought to be enjoined. Fed. R. Civ. P. 65(d). This specificity requirement is "designed to prevent uncertainty and confusion on the part of those to whom the injunction is directed and to avoid the possible founding of a contempt citation on a decree too vague to be understood." *Helzberg's Diamond Shops, Inc. v. Valley W. Des Moines Shopping Ctr., Inc.*, 564 F.2d 816, 820 (8th Cir. 1977).

In this case, Plaintiffs request this Court enter an injunction requiring Smithfield to "make all reasonable changes to its 'production practices,' including potentially lowering its line speeds, to place as many workers as possible at least six feet apart" (Doc. 46 at 10). Plaintiffs do not explain what changes would be "reasonable," except for "potentially" reducing line speeds. In other words, they do not specify in reasonable detail what Smithfield should do. They

demand workers have "reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing," but they do not specify how often or how long such breaks should take place, or what would constitute a reasonable break. Finally, Plaintiffs request the Court order Smithfield to change its policies to "not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers." But Plaintiffs do not identify which policies should be eliminated, what constitutes "reasonable steps," or why Smithfield's current policies are insufficient. Because "a person of ordinary intelligence" would not understand what is prohibited based on Plaintiffs' proposed preliminary injunction, *Schenck v. Pro-Choice Network of W. N.Y.*, 519 U.S. 357, 383 (1997), it is impermissibly vague, and thus unenforceable.

Conclusion

Plaintiffs are naturally concerned for their health and the health of their community in these unprecedented times. The Court takes their concern seriously. Nevertheless, the Court cannot ignore the USDA's and OSHA's authority over compliance with the Joint Guidance or the significant steps Smithfield has taken to reduce the risk of a COVID-19 outbreak at the Plant.

For the reasons discussed above, Defendants motion to dismiss is GRANTED, and the case is DISMISSED without prejudice.

IT IS SO ORDERED.

President Donald J. Trump
The White House
1600 Pennsylvania Avenue, N.W.
Washington, D.C. 20500

Dear President Trump:

We, the undersigned Attorneys General of Maryland, California, Colorado, Delaware, the District of Columbia, Illinois, Maine, Massachusetts, Michigan, Minnesota, Nevada, New Jersey, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Virginia, Washington, and Wisconsin, write to express our urgent concern about the effect of your Executive Order invoking the Defense Production Act with respect to meat and poultry processing plants during the pandemic.[1] The industry's workers are risking their lives to maintain production in these facilities under extremely unsafe working conditions. Your action purporting to force plants to stay open and employees to continue working must be accompanied by the enforcement of standards to ensure the safety of these essential workers.

Already considered some of the most dangerous workplaces in America,[2] the crisis of COVID-19 outbreaks in the nation's meat and poultry processing operations is dire and escalating. Recent reports indicate that over 10,000 COVID-19 cases have been tied to these outbreaks, and at least 45 workers have died. Infection clusters at forty plants have been so severe they have been

[1] https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/; Defense Production Act of 1950, 50 U.S.C. § 4501 *et seq.*

[2] https://www.safetyandhealthmagazine.com/articles/15617-study-of-severe-injury-data-finds-poultry-and-meat-workers-at-high-risk

required to close for some period, with some reporting hundreds of employees falling ill.[3] Just a few days ago, one facility reported nearly 900 of its 2,200 workers testing positive for the virus.[4]

Grueling workplace conditions in the industry often require thousands of employees to stand shoulder to shoulder for hours, sometimes close enough to accidentally cut coworkers. The jobs frequently entail backbreaking exertion to debone, cleave, and handle carcasses on "disassembly" and "evisceration" lines.[5] The push for faster line speeds and limited access to protective equipment have increased dangers on the job. Even as recently as these last two weeks, the U.S. Department of Agriculture (USDA) has approved over a dozen new line speed waivers, which force employees to work faster and even closer to one another, reduce the number of federal safety inspectors at plants, and shift inspection duties to employees.[6] The spread of disease in these plants has also devastated surrounding communities, with rates of infection in counties with one-third of the country's beef, pork and poultry processing plants higher than those of 75% of other U.S. counties.[7]

The industry's failure to act earlier to protect its labor force, and the Administration's lack of leadership and support for testing, procurement of personal protective equipment (PPE), and enforcement of federal worker safety standards, will be among the many regrettable lapses contributing to the tragic story of America's experience with this pandemic. Historically, meat and poultry processing workers are rarely paid when they fall ill, and most are not covered by the paid sick leave established by Congress in response to the pandemic because employers with more than 500 employees are exempted. In some plants, workers also receive disciplinary points or "demerits" for calling in sick.[8] Only within the last month have some companies changed their policies to eliminate any punitive effect for missing work due to illness. Efforts to provide

[6] https://civileats.com/2020/04/17/poor-conditions-at-meatpacking-plants-have-long-put-workers-at-risk-the-pandemic-makes-it-much-worse/

[7] USDA; Johns Hopkins University; SHO; DCD; USA Today Analysis, https://www.usatoday.com/in-depth/news/investigations/2020/04/22/meat-packing-plants-covid-may-force-choice-worker-health-food/2995232001/

[8] https://www.propublica.org/article/what-happens-if-workers-cutting-up-the-nations-meat-get-sick

employees PPE and enable social distancing, if happening at all, have been even more recent and sporadic.[9] Even in facilities where some PPE has been distributed to workers, reports from within the plants are harrowing—*e.g.*, masks breaking and falling off amid the frenetic activity on the disassembly lines and face coverings fogging up and obscuring vision, which heightens the risk of injury.[10]

Without adequate and enforceable mandates to protect worker safety, your Executive Order may perpetuate this spread of illness and death. The Order directs the Secretary of USDA to take actions to ensure the continued supply of meat and poultry "consistent with the guidance for their operations jointly issued by the CDC and OSHA."[11] This guidance provides a series of recommendations regarding steps processing facilities should take to promote safe working conditions.[12] Even if these recommendations were sufficient to maintain worker safety, however, they are entirely voluntary. Without making these standards mandatory and taking decisive action to enforce them, the Administration will fail in its duty to provide meaningful protection to workers that have been deemed essential to maintaining our food supply.[13] The toll may be thousands more falling victim to this disease. In addition, the Administration will thwart its own goal of keeping the plants open, as increasing prevalence of COVID-19 infection results in mounting labor shortages.

We request, therefore, that your Administration take immediate action to ensure the safety of these essential workers. The CDC and OSHA guidance must be strengthened and made mandatory, with vigorous and robust federal enforcement. At a minimum, it must include: 1) priority testing for workers in the processing plants; 2) immediate access to adequate PPE; 3) the suspension of all line speed waivers, and a halt to approval of any additional waivers; 4) 6-foot

[12] https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html

[13] In a letter dated May 5, 2020, USDA Secretary Perdue wrote to "exhort" meat and poultry processing plants to follow the examples of facilities that were restoring operations in accordance with the CDC/OSHA guidance, and he said that plants "should utilize the guidance" to "implement practices and protocols for safeguarding the health of the workers and the community while staying operational or resuming operations." https://www.usda.gov/sites/default/files/documents/stakeholder-letters-covid.pdf. In a separate letter, he notified governors that he was directing plants to utilize the guidance. https://www.usda.gov/sites/default/files/documents/stakeholder-letters-covid.pdf. As with the guidance itself, however, the Secretary's exhortation for plants to follow it falls far short of imposing mandatory standards and committing to enforce them.

physical and social distancing where possible, and plexiglass barriers where distancing cannot be achieved; and 5) isolation and quarantine of COVID-19 positive workers, with full pay.[14]

The Defense Production Act (DPA) is an important tool that presidents since the Korean War have wielded to protect the country and keep Americans safe from threats to national security and public health. Since the onset of this crisis, many have urged more initiative, leadership and use of the law to increase production of critically needed testing supplies and PPE that are vital to the country's efforts to wrest control of this pandemic. Yet your Executive Order, rather than using the DPA to compel production of the supplies necessary to keep essential and frontline workers safe, attempts instead to invoke the law to make them show up for work regardless. Your invocation of the DPA on behalf of the meat industry may force workers to risk their own health or give up their jobs in order to guarantee meat and poultry on America's grocery shelves.

Despite the fact that State and local authorities have been left to their own devices to obtain tests, PPE and medical equipment, your Order may also be used to attempt to seize from states and local jurisdictions control over the difficult decisions as to when meat and poultry plants should remain open.[15] In addition, the Order's implication that it confers immunity from liability on companies for harm suffered by their employees would, if invoked and upheld, further undermine the ability of State and local leaders to protect their own workers.

We fully recognize the complexities at issue here: the security of the national food supply; the jobs and livelihoods of farmers, meat and poultry processors, distributors, and other employers; workers up and down the supply chain; the waste and animal cruelty concerns that arise when processing components of the supply chain break down; the imperative of slowing the spread of disease; and many other issues made more difficult by this pandemic. Yet we must attend to them all without sacrificing the health and safety of hard-working people whose labor helps ensure we can continue feeding the country. By implementing mandatory and effective worker safety standards, and by working together on the myriad other challenges facing the country, we believe

[14] http://www.ufcw.org/2020/04/30/covidpacking/

[15] In fact, the U.S. Department of Labor has issued a statement confirming this view of the Order, stating, "because of the President's invocation of the DPA, no part of the Joint Meat Processing Guidance should be construed to indicate that state and local authorities may direct a meat and poultry processing facility to close, to remain closed, or to operate in accordance with procedures other than those provided for in this Guidance." https://www.dol.gov/newsroom/releases/osha/osha20200428-1

we can achieve that goal and overcome this historic threat to the health and well-being of our country and our people.

Sincerely,

Dear Small Business Representatives:

Attached are the three PowerPoint presentations from today's Small Business Labor Safety (OSHA/MSHA) Roundtable from Dr. John Howard, Director of NIOSH, Mandy Edens, Deputy Assistant Secretary of Labor for OSHA, and Manesh Rath and David Sarvadi from Keller and Heckman, LLC.

Also, here are links to NIOSH and OSHA's COVID-19 webpages where you can find a lot of information, guidance, and other materials about the pandemic that is very helpful to small business: https://www.cdc.gov/niosh/emres/2019_ncov.html?deliveryName=USCDC_308-DM26149 and https://www.osha.gov/SLTC/covid-19/.

Thank you again to all of the of the speakers and attendees who participated in today's roundtable for helping make the meeting a success, especially under such difficult circumstances. I thought it was a really interesting and informative meeting. Thank you also to the small entity representatives (SERs) to the Tree Care Operations SBREFA panel who have taken considerable time from there busy schedules to participate in the panel and discuss the process today.

Be safe, and please feel free to contact me if you have any questions or require additional information.

Small Business Labor Safety (OSHA/MSHA) Roundtable

Friday, July 17, 2020, 10:00 a.m. - 12:00 noon (Eastern)

Via Team Webinar

Dear Small Business Representatives:

Attached is the Agenda for this Friday's **Small Business Labor Safety (OSHA/MSHA) Roundtable**. The meeting will be held via Team Webinar on **Friday, July 17, 2020 from 10:00 a.m. until 12:00 noon (Eastern)**. The agenda includes discussions of COVID-19 guidance from NIOSH and OSHA, the recent AFL-CIO v. OSHA decision on the ETS for Infectious Diseases by the D.C. Circuit, and a post-op on the recent Tree Care Operations SBREFA panel.

If you would like to join the webinar, and have not already done so, please RSVP to me by reply email and I will send you the web/call-in access information.

I hope you can join us on Friday. Please feel free to contact me if you have any questions or require additional information.

Bruce

Roundtable meetings are open to all interested persons, with the exception of the press, in order to facilitate an open and frank discussion about small business-related issues. Agendas and presentations are available to all, including the press. Anyone who would like to receive roundtable agendas or presentations, or be included in the regular distribution, should forward such requests to (b) 6 @sba.gov. The purpose of these roundtable meetings is to exchange opinions, facts, and information and to obtain the attendees' individual views and opinions regarding small business concerns. The meetings are not intended to communicate or achieve any consensus positions of the attendees.

Via Webinar

Dear Small Business Representatives:

We have scheduled the next **Small Business Labor Safety (OSHA/MSHA) Roundtable** for **Friday, July 17, 2020 from 10:00 a.m. until 12:00 noon**. The meeting will be held via Webinar, so please mark your calendars.

We are currently in the process of developing the agenda for the meeting, so please let me know if there are any issues you would like to discuss (particularly if you want to make a presentation). A final Agenda for the Roundtable will be developed and circulated prior to the meeting.

Please RSVP by reply email if you would like to join the meeting and I will forward you the webinar access information.

The Office of Advocacy takes its direction from small businesses and hosts roundtables to receive input on what issues are of greatest importance. We need your help, as representatives of small businesses, to set our priorities in the labor safety area. Please join us as we review regulatory actions by OSHA and MSHA and discuss which issues are of key importance to small business.

I hope you can join us on the 17th. Please feel free to contact me if you have any questions or require additional information.

Bruce

Roundtable meetings are open to all interested persons, with the exception of the press, in order to facilitate an open and frank discussion about small business-related issues. Agendas and presentations are available to all, including the press. Anyone who would like to receive roundtable agendas or presentations, or be included in the regular distribution, should forward such requests to bruce.lundegren@sba.gov. The purpose of these roundtable meetings is to exchange opinions, facts, and information and to obtain the attendees' individual views and opinions regarding small business concerns. The meetings are not intended to communicate or achieve any consensus positions of the attendees.

Bruce E. Lundegren

DAVID G. SARVADI

Mr. Sarvadi practices in the areas of occupational health and safety, toxic substance management, pesticide regulation, and product safety.

Mr. Sarvadi represents clients before a variety of federal and state enforcement agencies in legal proceedings involving OSHA citations, EPA Notice of Violations, TSCA consent orders, CPSC Notices, FIFRA Stop Sale Use and Removal Orders, and EEOC Charges of Discrimination. He works with clients in developing, reviewing, and auditing compliance programs in all of these areas, and in obtaining agency rulings on proposed or novel activities and questions, seeking interpretations of regulations as they apply to specific sets of facts. He has been counsel to the National Coalition on Ergonomics from its inception.

He has a background in occupational safety and health, having worked as an industrial hygienist for more than 15 years and became a Certified Industrial Hygienist in 1978, a designation he held until he voluntarily relinquished it in 2010. Prior to becoming an attorney, he managed a corporate industrial hygiene program for a Fortune 500 company. Mr. Sarvadi was selected by the National Academy of Sciences to participate in a panel of the Institute of Medicine that was asked to review a NIOSH study on the use of respirators. He was asked to participate because of his expertise in law and industrial hygiene.

TOPICS TO BE DISCUSSED

- Background on AFL-CIO emergency petition
- Understanding OSHA Emergency Temporary Standards
- Agency deference
- OSHA's approach to COVID-19
- What employers should do

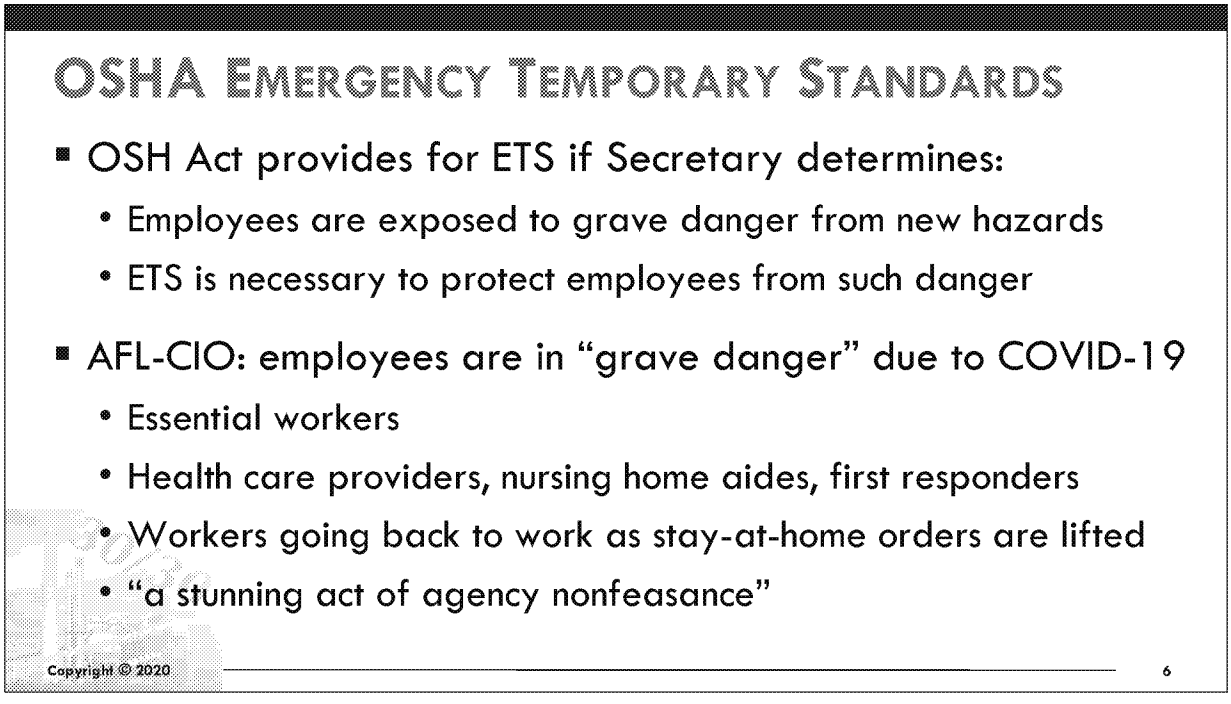
Copyright © 2020

RATH

RATH

This is not the first time the AFL-CIO has petitioned OSHA to issue a rulemaking for infectious disease. AFL-CIO has done similar petitions in the past:
Asked OSHA to issue ETS in 2005 to address influenza
Asked OSHA to issue permanent standard in 2009 for infectious diseases
OSHA began rulemaking for infectious diseases but never completed it
Request for information from 2010
SBREFA panel took place and issued report on infectious diseases in 2014
Public stakeholder meetings on an infectious disease standard in 2011.

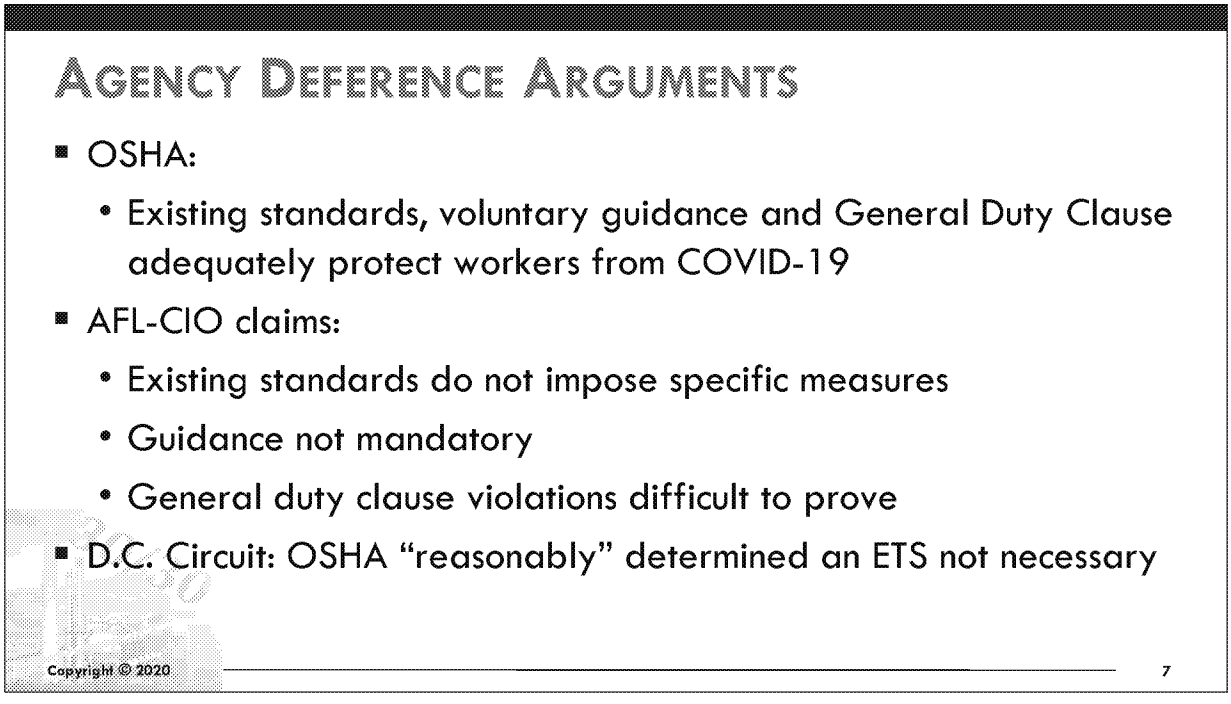
This petition came about in response to COVID-19
AFL-CIO: in the face of a global health emergency causing more deaths in less time than any other workplace crisis OSHA has faced in its fifty-year existence, OSHA's refusal to issue an ETS constitutes an abuse of agency discretion so blatant and of "such magnitude" as to amount to a clear "abdication of statutory responsibility."



Argued that OSHA's evolving voluntary guidance "no substitute" for mandatory COVID-19-specific duties on employers.

AFL-CIO argued that OSHA effectively denied its petition and is unreasonably delaying its statutory obligations by not formally responding to the petition in 2 months, besides an informal letter from the Secretary or Labor defending the adequacy of OSHA's guidance.

The AFL-CIO filed a petition for a writ of mandamus in the DC Circuit to compel OSHA to issue the ETS within 30 days (Argue OSHA can issue ETS within 30 days because it has been working on infectious disease standard already).



The Court of Appeals has authority to consider claims that an agency unlawfully withheld or unreasonably delayed regulatory action and the court can compel the agency to take action

OSHA denial of petition: Letter from Loren Sweatt , Principal Deputy Assistant Secretary for OSHA, said that OSHA determined it lacks compelling evidence to find that an undefined category of infectious diseases generally pose a grave danger for which an ETS is an appropriate remedy. Also not necessary to issue an ETS for COVID-19 because the guidance issued, enforcement of existing standards, in combination with COVID-19 related requirements and guidelines by other entities render an ETS unnecessary
It would be counter productive to attempt to fashion a COVID-19 standard at this time given that it is the subject of a constantly evolving multi-agency response

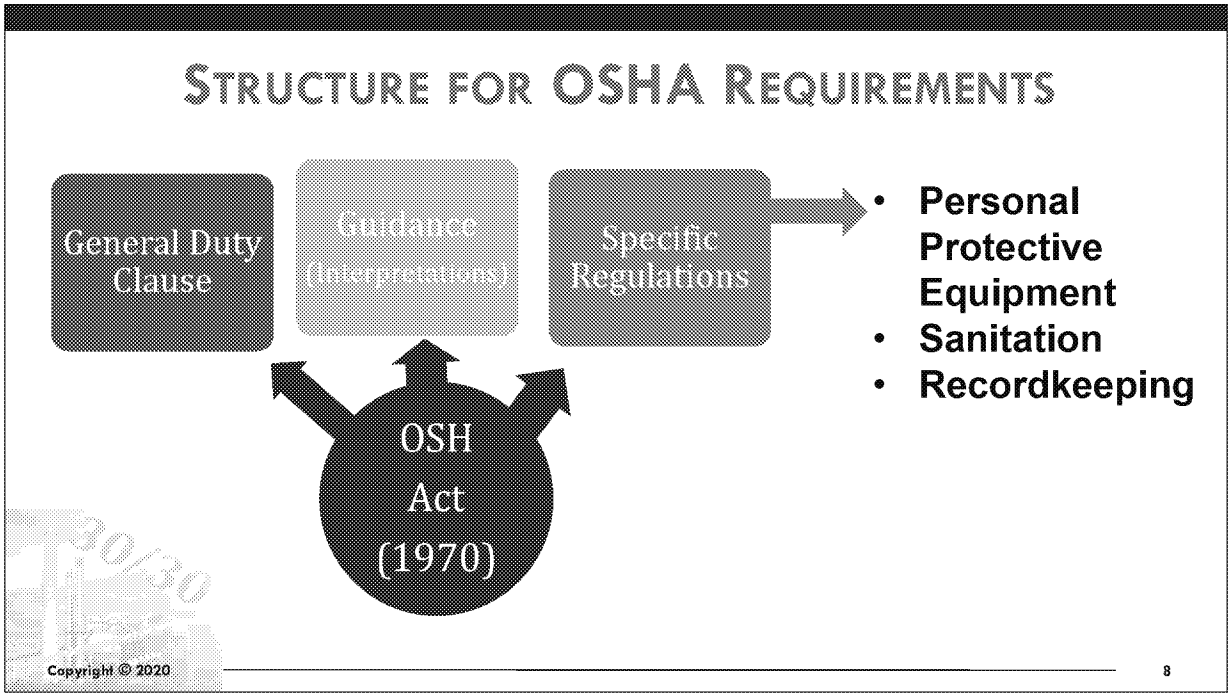
JAV
- Section 6 of the OSH Act gives OSHA the authority to issue emergency temporary standards if the Agency determines:
--that employees are exposed to grave danger from exposure to new hazards, and
--that an emergency standard is necessary to protect employees from such danger.
-So if OSHA issues an emergency temporary standard, it takes effect immediately until it is superseded by a permanent standard which OSHA is supposed to promulgate within 6 months of the ETS
AFL-CIO argued that and ETS is appropriate because COVID-19 put employees in grave danger, saying that the virus poses a danger of incurable, permanent, or fatal consequences to workers exposed to the hazard. They cite to figures that over 2 million people in the US have been infected with the virus and about 110,000 people have died.
The AFL-CIO also discussed how the dangers of COVID are especially true for workers who were deemed to be essential workers so they still went into work, and of course health care workers and nursing home aides and emergency responders who come into direct contact with people with the virus, and also for workers going back to work as state stay at home orders are lifted.
AFL-CIO argued that an OSHA standard for infectious diseases is necessary to protect employees from this grave danger. They asked OSHA to issue an ETS that would require employers to evaluate their workplaces for the risk of airborne disease transmission and to develop a comprehensive infection control plan with specified elements like social distancing, PPE, access to hand sanitizers, testing and quarantining.

And the AFL-CIO called OSHA's refusal to take action on an ETS a stunning act of nonfeasance in the midst of this workplace heath emergency.

RATH

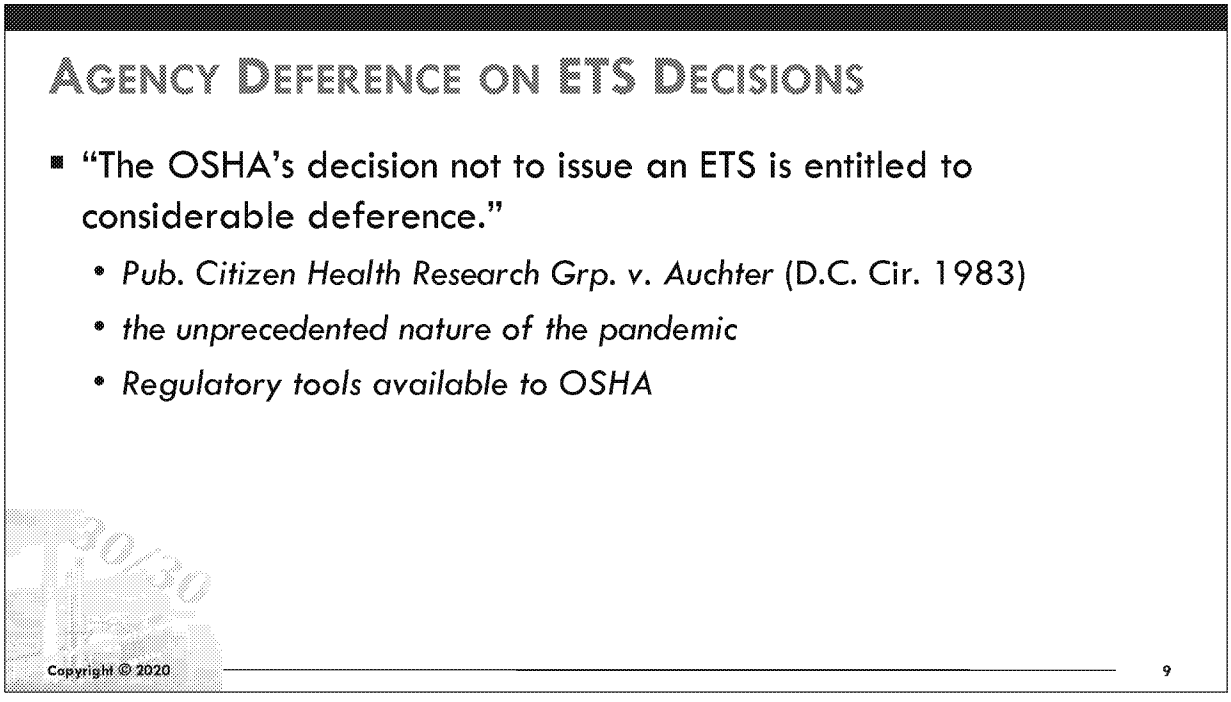
OSHA:
-- two prong strategy:
1) enforcing existing rules
2) using rapid, flexible guidance that is industry specific so that it can be easily updated as information on COVID and spread prevention continues to evolve
- AFL-CIO wants OSHA to issue ETS which would go into effect immediately without public input, and then a permanent rule informed by comment just 6 mos later
- "That is warp-speed for an agency like OSHA that must act upon substantial evidence with extensive public input, and ill-suited for an evolving hazard"
--ETS is rarely used and a drastic measure
-- to find that an ETS is necessary to address the grave danger, OSHA has to show that an ETS would substantially reduce the grave danger during the time the ETS would be in effect and that such a reduction could not be obtained by enforcing existing OSH Act requirements or widespread voluntary efforts to address the hazard
-- AFL-CIO lacks evidence that infectious diseases generally (as a group) pose a grave danger to worker safety (cannot issue broad standard to entire class of known and unknown substances and agents) or that enforcement of existing standards would not substantially reduce the danger and so an ETS is needed
-- AFL-CIO fails to meet its high burden of overcoming the great deference that is due to OSHA's assessment of facts and policies underlying its decision that an ETS is not necessary now.
-- all enforcement guidance and guidance to industries; investigations of complaints
-- existing standards and general duty clause
-- coordination with other agencies and businesses and employee groups
-- coordination with state plans
-- monitoring state and local activities and industry guidance
-- attempting to permanently address workplace exposure to COVID based on evolving information is counterproductive and would deprive agency of needed flexibility to respond
AFL-CIO has not demonstrated that the lack of an ETS is the traceable cause of any injury
Setting rules in stone through an ETS and later a permanent rule may undermine worker protection by permanently mandating precautions that later prove to be ineffective

AFL-CIO
--Concerned about nonmandatory guidance because of non-uniform implementation
--Says given reported illnesses and deaths, it "should be obvious" that voluntary employer action has not adequately protected workers from COVID
--Also argued other agencies are taking regulatory action to address COVID to OSHA should too



--General duty clause: difficult to prove that hazard is present and that it is feasible for employers to abate the hazard

The Court accords great deference to the policy judgments of the agency unless their decision lacks support in the record.
DC Circuit: denied AFL-CIO petition for a writ of mandamus
OSHA's decision to not issue an ETS is entitled to considerable deference
In light of the unprecedented nature of the COVID 19 pandemic, as well as the regulatory tools that OSHA has at its disposal to ensure employers are maintaining hazard-free work environments, OSHA reasonably determined that an ETS is not necessary at this time



---

FYI Amicus briefs arguing why Secretary's decision is supported:
Chamber and other associations amicus brief
Secretary's decision is supported
Enforceable OSHA standards already protect workers from COVID such as PPE, eye and face protection, respiratory protection, sanitation, and hazard communication standard
OSHA has issued industry specific guidance explaining how these existing standards apply and articulated best practices for businesses and employers to follow in light of evolving scientific understanding of COVID
Approach is reasonable and preferable because data on COVID continues to develop so employers have to be able to adapt to the changing circumstances
Also CDC has issued guidance for industries
Better than a rigid uniform standard
Easier to quickly revise guidance
Guidance can be tailored to the needs of a specific industry
Private sector also issuing best practices

NAHB, ABC and other contractors amicus brief
Already a lot of construction specific guidance out there so no need for ETS
Not enough time for OSHA to assess how rule can apply to all industries
AFL-CIO petition does not present evidence of a need or risk specific to construction
Petition trivializes extensive industry efforts to implement control measures and active involvement of state and local authorities
The ETS would not provide for construction specific considerations (like being outdoors with continuous air flow)

STRUCTURE FOR OSHA REQUIREMENTS
General Duty Clause
Guidance (Interpretations)
Specific Regulations
• Personal Protective Equipment
• Sanitation
• Recordkeeping
OSH Act (1970)
30/30

RATH

JAV
So before we get into the DC Circuit's ruling on the case, we wanted to give some background on the level of deference the D.C. Circuit affords OSHA when it decides not to issue an ETS

The D.C. Circuit here looked to precedent in the Public Citizen Health Research Group vs. Auchter case from 1983 where the DC Circuit decided that OSHA is entitled to considerable deference when deciding whether or not to issue an ETS unless their decision lacks support in the record.

So that was the standard applied in this case by the D.C. Circuit.

JAV
Let's dig in more to the actions that OSHA has taken so far to address COVID-19 that OSHA cited to for support that an ETS is not required

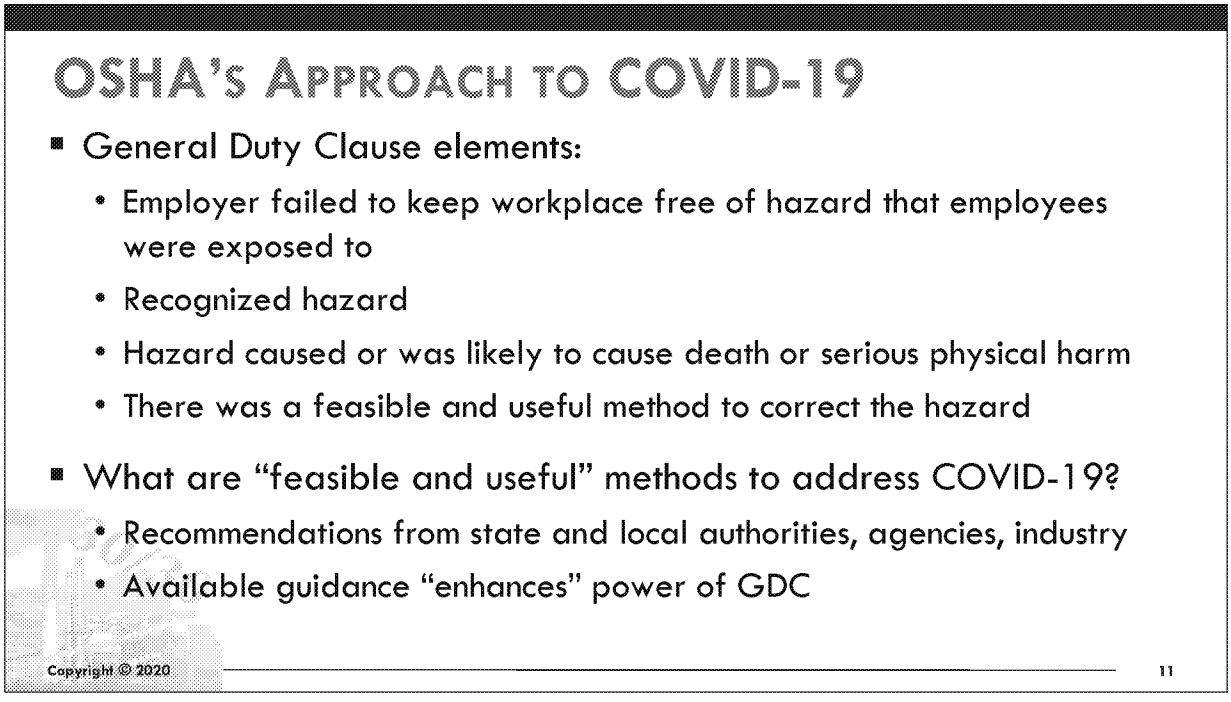
First, OSHA already has existing standards that can address worker protections that are relevant to infectious diseases. For example, the respiratory protection, PPE, hazard communication, sanitation and bloodborne pathogens standards impose enforceable requirements on employers that can protect employees from airborne exposures.

OSHA has also worked to provide compliance assistance to companies by answering employers', workers', industry representatives and union representatives questions webinars, OSHA's online portal, and phone calls.
OSHA also shares best practices with its State Plan states every two weeks
OSHA's consultation programs have also conducted over 4,000 outreach activities and its regional and area offices have conducted over 900 outreach activities related to COVID-19.

OSHA has also responded to COVID-19- related complaints. OSHA cited that as of May 21, OSHA has received about 4,200 COVID-19 related complaints, of which almost 3000 have been closed. And they are addressing whistleblower complaints

And finally, OSHA has issued numerous guidance documents since March that address COVID-19, starting with guidance for preparing workplaces for COVID-19 so employers can assess the hazards in their workplaces; to issuing 5 different guidances on the use of respirators, and 3 different guidances that address recordkeeping and reporting, and at least 9 guidance documents addressing specific high risk industries like nursing home workers and food delivery services and meat packaging workers
And it clarified its enforcement policy during COVID-19 as well as its procedures for handling complaints and referrals during the pandemic

So OSHA has been using all of these tools to address COVID-19



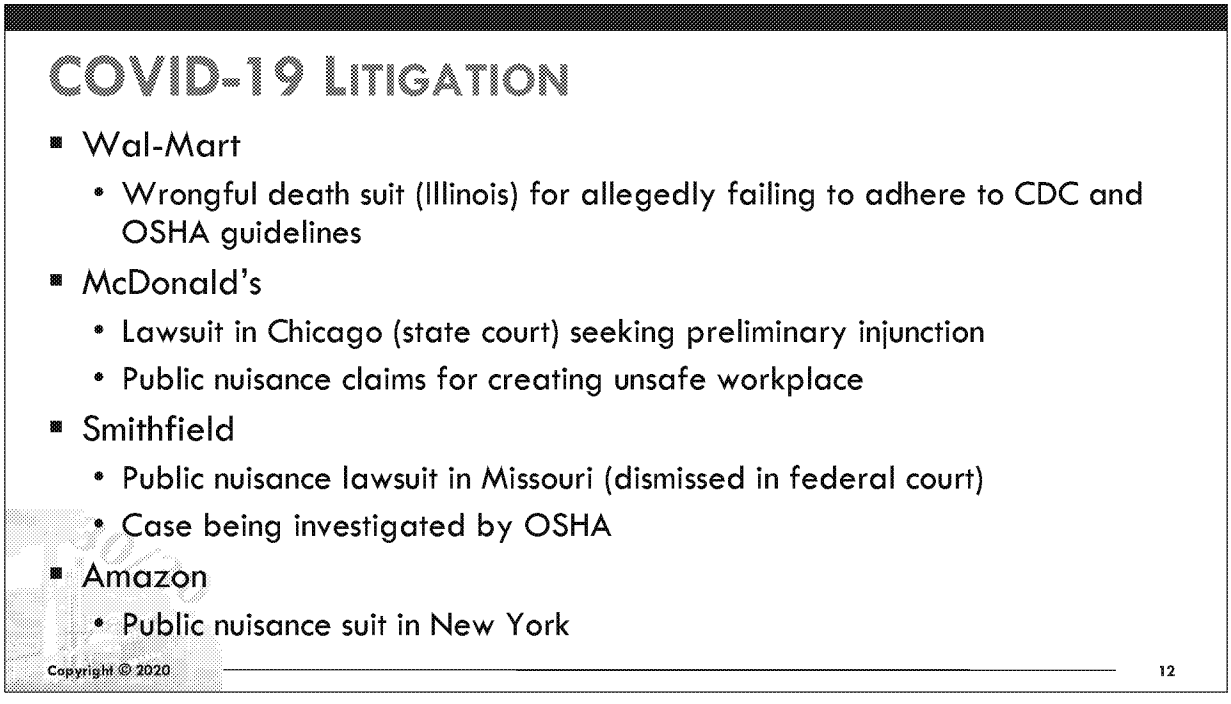
Guidance: From: https://www.osha.gov/news/newsreleases/national/05282020

Respirator Guidance:
U.S. Department of Labor Expands Temporary Guidance for Respirator Fit-Testing to All Industries During COVID-19 Pandemic – OSHA has expanded temporary guidance provided in a March 14, 2020, memorandum regarding supply shortages of N95s or other filtering facepiece respirators (FFRs) due to the COVID-19 pandemic. This expanded guidance applies to all workplaces covered by OSHA where there is required respirator use.
U.S. Department of Labor Issues Temporary Enforcement Guidance for Respirator Fit-Testing in Healthcare during COVID-19

Outbreak – Following President Donald J. Trump's memorandum on the availability of respirators during the COVID-19 outbreak, OSHA has issued new temporary guidance regarding the enforcement of its s Respiratory Protection standard.
U.S. Department of Labor Issues Additional Respirator Guidance for Healthcare During The Coronavirus Pandemic – OSHA issued its fifth guidance document aimed at expanding availability of respirators as front line workers respond to the coronavirus pandemic. The latest interim guidance document outlines acceptable methods for decontaminating and reusing disposable N95 FFRs.
U.S. Department of Labor Issues Guidance for Respirators Certified under Other Countries' Standards During COVID-19 Pandemic – OSHA has issued interim enforcement guidance regarding disposable N95 FFRs that are either certified under certain standards of other countries or jurisdictions or certified under other countries' or jurisdictions' standards but are expired.
U.S. Department of Labor Issues Guidance for Respiratory Protection During N95 Shortage Due to COVID-19 Pandemic – OSHA has issued interim enforcement guidance to help combat supply shortages of disposable N95 FFRs. The action marks the department's latest step to ensure the availability of respirators and follows President Donald J. Trump's Memorandum on Making General Use Respirators Available.
Protecting Workers in High-Risk Industries
U.S. Department of Labor Issues Alert to Keep Nursing Home and Long-Term Care Facility Workers Safe During Coronavirus Pandemic – OSHA issued an alert listing safety tips employers can follow to help protect nursing home and long-term care facility workers from exposure to the coronavirus.
U.S. Department of Labor Issues Alert to Help Keep Retail Pharmacy Workers Safe During the Coronavirus Pandemic – OSHA has issued an alert listing safety tips employers can follow to help protect retail pharmacy workers from exposure to the coronavirus.
U.S. Department of Labor Issues Alert for Rideshare, Taxi And Car Service Safety During Coronavirus Pandemic – OSHA has issued an alert listing safety tips to help reduce the risk of exposure to the coronavirus in the car service industry.
U.S. Department of Labor Publishes New OSHA Poster Aimed At Reducing Workplace Exposure to the Coronavirus – OSHA issued a new poster listing steps all workplaces can take to reduce the risk of exposure to coronavirus.
U.S. Department of Labor Issues Alert to Keep Package Delivery Workers Safe during COVID-19 Pandemic – OSHA issued an alert listing safety tips employers can follow to help protect package delivery workers from exposure to coronavirus.
U.S. Department of Labor Issues Alert to Keep Retail Workers Safe During Coronavirus Pandemic – OSHA issued an alert listing safety tips employers can follow to help protect retail workers from exposure to coronavirus.
U.S. Department of Labor Issues Alert to Help Keep Manufacturing Workers Safe During Coronavirus Pandemic – OSHA issued an alert identifying workplace safety practices to help protect manufacturing workers from exposure to coronavirus.
U.S. Department of Labor Issues Alert to Help Keep Construction Workers Safe During The Coronavirus Pandemic – OSHA issued an alert identifying workplace safety practices to help protect construction workers from exposure to coronavirus.
OSHA Issue Safety Alert for Restaurant, Food and Beverage Businesses Providing Curbside Pickup and Takeout Service – OSHA released guidance to help restaurant, food and beverage businesses to keep employees safe while utilizing curbside pickup and takeout service delivery methods. The guidance includes practical recommendations like avoiding direct hand-off when possible and practicing social distancing.
Enforcing Safety in the Workplace
U.S. Department of Labor Adopts Revised Enforcement Policies For Coronavirus – OSHA has adopted revised policies for enforcing its requirements with respect to coronavirus as economies reopen in states throughout the country.
U.S. Department of Labor Announces OSHA Interim Enforcement Response Plan to Protect Workers During The Coronavirus Pandemic – OSHA announced an interim enforcement response plan for the coronavirus pandemic that provides instructions and guidance to OSHA Area Offices and compliance safety and health officers for handling coronavirus-related complaints, referrals and severe illness reports. The plan concentrates enforcement on coronavirus exposures of health workers, emergency responders and others.
U.S. Department of Labor Reminds Employers That They Cannot Retaliate Against Workers Reporting Unsafe Conditions During Coronavirus Pandemic – OSHA is reminding employers that it is illegal to retaliate against workers because they report unsafe and unhealthful working conditions during the coronavirus pandemic. Acts of retaliation can include terminations, demotions, denials of overtime or promotion, or reductions in pay or hours.
OSHA and CDC Issue Interim Guidance to Protect Workers in Meatpacking and Processing Industries – OSHA and the Centers for Disease Control and Prevention released joint interim guidance for meatpacking and meat processing workers and employers—including those involved in beef, pork, and poultry operations. The guidance includes recommended actions employers can take to reduce the risk of exposure to the coronavirus.
Statement of Enforcement Policy by Solicitor of Labor Kate O'Scannlain and Principal Deputy Assistant Secretary for OSHA Loren Sweatt regarding Meat and Poultry Processing Facilities – Responding to President Trump's Executive Order, Solicitor of Labor Kate O'Scannlain and OSHA Principal Deputy Assistant Secretary Loren Sweatt released a statement of enforcement policy. The statement, which addresses guidance and enforcement actions regarding worker safety at meat, pork and poultry processing facilities, provides clarity for businesses whose continued operation will be critical to America's food supply.
Offering Clear Direction for Employers:
U.S. Department of Labor Issues Enforcement Guidance For Recording Cases of COVID-19 – OSHA issued interim guidance for enforcing its recordkeeping requirements (29 CFR Part 1904) as it relates to recording cases of COVID-19.
U.S. Department of Labor Considers Employer's Good Faith Efforts When Enforcing Compliance During COVID-19 Pandemic – OSHA issued interim guidance that advises compliance safety and health officers to evaluate an employer's good faith efforts to comply with safety and health standards during the coronavirus pandemic. Employers are also expected to take corrective

action as soon as possible once normal activities resume.

OSHA-003729



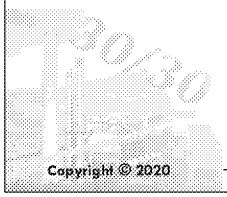
JAV

OSHA also has asserted that in addition to its standards, the General Duty Clause imposes additional mandatory obligations on employers.
Under Section 5(a)(1) of the OSH Act, employers are required to furnish its employees a place of employment free from recognized hazards that cause or are likely to cause death or serious physical harm
And so OSHA can cite an employer for a general duty clause violation if (READ ELEMENTS)

Even in OSHA's April guidance on Interim Enforcement Response for Coronavirus, it says that if there are deficiencies that are not addressed by OSHA's standards, then the general duty clause can be considered

OSHA said in its brief that COVID is a recognized hazard and that "employers who fail to take preventative measures against COVID-19 face potential liability under the general duty clause."
-- So all of the guidance from CDC, OSHA, and other government authorities and private entities demonstrate the possible feasible methods employers may use.
--employers have the ability to choose the effective method to abate the hazard under the general duty clause.
--The public availability of so much COVID-19 guidance actually enhances the power of the general duty clause as an enforcement tool.

RATH
Walmart case: from April OSHA 30/30
Wal-Mart claim in Cook County, Illinois
Two employees died of COVID-19 and others experienced symptoms
Estate of one deceased employee brought suit alleging wrongful death, negligence, and willful and wanton misconduct for allegedly failing to adhere to CDC and OSHA guidelines
Alleged failures:
Cleaning failures
Social distancing
Failures in Providing PPE
Failure to warn employees of other symptomatic employees
Infection prevention measures
https://abcnews.go.com/Business/walmart-hit-wrongful-death-lawsuit-employee-dies-covid/story?id=70040675
McDonalds
Suit brought by 4-5 employees
Public nuisance claim: https://news.bloomberglaw.com/daily-labor-report/mcdonalds-case-tests-nuisance-theory-for-workplace-virus-safety
Legal theory in the public heath context and could provide a way for the courts to enforce COVID-19 safety precautions
Allegedly failed to provide hand sanitizer, gloves, masks, and has not notified its staff when an employee becomes infected with coronavirus
https://www.nydailynews.com/coronavirus/ny-coronavirus-chicago-mcdonalds-file-lawsuit-fail-adequate-protection-20200526-wqhq43yvejgzdpk47ivvsh5lmu-story.html
https://www.law360.com/articles/1281347/covid-suits-test-public-nuisance-claim-in-workplace-cases

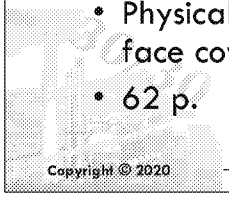


Smithfield– similar suit but bought in federal court. Dismissed. The court concluded that dismissal was appropriate because the two traditional requirements of the primary jurisdiction doctrine applied. First, the court reasoned that the merits of plaintiffs' claims will hinge on the determination of whether the company is complying with the CDC/OSHA joint guidance for industry operations, a matter that OSHA, in coordination with the USDA, is better positioned to assess. Second, the court concluded that deference to OSHA/USDA will ensure uniform national enforcement of the regulatory guidance. The court rejected plaintiffs' argument that deferral would result in delay that might adversely impact employees and the community, citing emergency relief procedures available through OSHA's statutory framework.
https://www.crowell.com/NewsEvents/AlertsNewsletters/all/Court-Tosses-Complaint-Against-Meatpacker-Alleging-COVID-19-Related-Health-and-Safety-Violations

Amazon public nuisance suit (common law)
Brief from members of Congress (Open Society Policy Center)- brief submitted to U,.S. District Court for the Eastern District of

New York in Amazon case (also public nuisance case).
Plaintiffs identified practices in a fulfilment center that promote the spread of COVID like practices that limit handwashing, sanitization, use of sick and personal leave, and limiting worker knowledge of potential exposures.
Brief asks court to take action and not defer to OSHA (primary jurisdiction doctrine). OSHA has not promulgated a relevant standard here and OSHA does not protect non-employees (family members of plaintiffs)
OSHA has not issued citations for COVID violations– only one, and it was a recordkeeping violation
Argue OSHA not inspecting enough facilities (only focusing on health care facilities); mostly doing non-formal investigations (hazard alert letters) and not prioritizing onsite inspections
No standard directly addresses exposure to airborne or aerosol diseases in the workplace
Court can enforce common law tort of public nuisance
This is a claim that affects the public (outside of the workplace) and not just workers
Not preempted by OSHA
No state law actions are preempted by GDC

AFL-CIO Filed For Rehearing



- June 18
- Moved for rehearing *en banc*
- Alleges that the three-judge panel "misstated" OSHA's arguments

Copyright © 2020

COMMONWEALTH OF VIRGINIA

- State Plan State
- Emergency Temporary Standard
  - Six month
  - Recognizes droplet, airborne nuclei droplets, surface contact
  - Compliance with CDC publications deemed compliance
  - Exposure assessment
  - Training
  - Reporting symptoms and barring from workplace, return policy
  - Physical barriers, telecommuting, staggered shifts, mandatory distancing, face coverings, hand washing, sanitizing
  - 62 p.

Copyright © 2020

WHAT EMPLOYERS SHOULD DO

- Develop an exposure assessment and control plan
- Continue to follow:
  - CDC and OSHA guidance
  - Other agency guidance
  - State and local regulations
  - Monitor as guidance evolves
- Tailor employee protections to specific industry and circumstances
- If require certain precautions (social distancing, face masks, testing, disinfecting procedures, etc.) document source of recommendation and date of source

Subject: FW: Meat Plant COVID - Potential Case Coming
Attachments: Foster Farms Health Order FINAL 8.26.2020.pdf

(b) 5

ORDER OF THE HEALTH OFFICER OF THE COUNTY OF MERCED
DIRECTING FOSTER FARMS POULTRY PROCESSING PLANT
IN LIVINGSTON, CA TO RESPOND TO CURRENT OUTBREAKS AT THE LIVINGSTON
COMPLEX AND COMPLY WITH OTHER DIRECTIVES OF THIS ORDER
DATE OF ORDER: August 26 , 2020

WHEREAS, the worldwide pandemic of COVID-19 disease, also known as "novel coronavirus" has infected over 7,500 Merced County residents and has resulted in the death of 112 Merced County residents.

WHEREAS, over 800 residents in the City of Livingston, located in Merced County, have been infected with COVID-19.

WHEREAS, there is significant evidence of increasing transmission of COVID-19 within the County of Merced and surrounding counties, placing a measurable strain on the local healthcare systems.

WHEREAS, according to the Meat and Poultry Processing Workers and Employers Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA), meat and poultry processing facilities are particularly vulnerable to COVID-19 infections due to working conditions. These conditions include prolonged, close contact with coworkers on the production line.

WHEREAS, Foster Poultry Farms maintains a poultry processing facility located in the City of Livingston.

WHEREAS, the California Department of Public Health has defined an outbreak in a congregate employment setting as three (3) or more cases of laboratory confirmed COVID-19 in employees not linked outside of the workplace.

WHEREAS, the Foster Farms complex at Livingston consists of multiple buildings on the same campus. Foster Farms first experienced an outbreak of COVID-19 at their Livingston facility on June 29, 2020, the first known case dated to June 9, 2020. As of the date of this Order, the initial outbreak is ongoing and outbreaks are widespread throughout multiple separate buildings at the Livingston facility. One department at the facility currently has an active outbreak that has affected 105 workers and other departments have active outbreaks affecting over 20 workers. Of the approximate 2,600 workers at the Livingston facility, 13.7 percent of the workforce has received a positive test result based on worker self-reporting. Most concerning is that these current testing figures do not accurately represent the extent of outbreak at the facility as universal testing has not been accomplished within the timeline necessary to accurately identify the extent of the outbreak.

WHEREAS, since April 24, 2020, the Merced County Department of Public Health (MCDPH) has received report of 358 confirmed cases of COVID-19 and eight (8) deaths attributed to COVID-19 linked to workers from the Foster Farms Livingston facility. Five (5) of the eight (8) deaths occurred in a hospital located outside of Merced County, illustrating the serious impact of the Foster Farms outbreak on healthcare systems and the community-at-large in California.

WHEREAS, in the past month, Foster Farms has experienced an increase of 214 reported cases of COVID-19 positive workers and six (6) deaths. Weekly reports from Foster Farms indicate the outbreak has continued since the initial reported outbreak on June 29, 2020.

WHEREAS, to-date, there has been insufficient timely testing of Foster Farms workers to assess the true extent of cases at the facility. Without accurate information on the number of cases, it is not possible to properly identify workers who require testing and/or quarantine because of exposure to the virus. This is hampered by the difficulty of testing and monitoring a growing temporary workforce. Hospital data on current hospitalizations and mortality has been slowly reported to MCDPH, further complicating decisive interventions that would allow a safe production process to continue at the facility.

WHEREAS, the Merced County Health Officer issued Directives to Foster Farms on August 5, 2020 and August 11, 2020, providing specific direction on testing requirements and other measures to control the spread of COVID-19 within the Livingston building. In summary, these Directives required immediate COVID PCR testing of all permanent, volunteer, and temporary employees who share air within a facility that has an outbreak (three or more individuals within the same building). Once an outbreak is initiated within a building, the outbreak is not considered resolved until the building reports zero additional cases for two consecutive weeks, or until universal testing of the building within the previous three (3) day period, reveals less than 1% positivity rate within the workforce.

WHEREAS, in response to the previous Merced County Health Officer Directives, Foster Farms has not implemented the required universal testing of the entire Livingston Complex, as directed. Over the three-week period since the August 5, 2020 directive was issued, the spread of disease within the facility has not been contained and active outbreaks continue to spread, creating a public nuisance as defined by California Penal Code 370 and Civil Code 3479, and posing a great risk to the health and safety of Merced County residents and the surrounding counties. Given the current epidemiological data, the slowness in testing workers, and the time necessary to complete comprehensive contact tracing and quarantine those who are exposed, partial closure of the facility for timely, universal testing of all workers and sanitation is necessary.

WHEREAS, based on the increasing number of positive COVID-19 cases at the Foster Farms Livingston Facility, the mounting death rates, the delay in implementation of a comprehensive testing scheme, the need for comprehensive contact tracing and quarantine of those exposed, decisive intervention is essential to control the COVID-19 outbreak. It is imperative that the Merced County Health Officer issue this Order to protect and preserve the health of workers at the Facility and residents of Merced County, surrounding counties, and the State of California.

Under the authority of California Health and Safety Code Sections 101040, 101085, 120175; California Government Code Sections 8610, 8630, and 8634; Article XI of the California Constitution; Title 17 California Code of Regulations Section 2501; and Merced County Code Chapter 2.72, the Health Officer of the County of Merced ("Health Officer") Orders Foster Poultry Farms A Corp (Foster Farms):

OSHA-004060

1. **Livingston Plant (including, but not limited to, Food Service Operations, Livingston Plant 1, Livingston Plant 2, Livingston Retail Packaging, Livingston Weigh and Price, and Livingston Rotis Room)** located at 843 Davis St., Livingston, CA 95334: To cease all operations within twelve (12) hours of issuance of this Order including any and all on-site manufacturing, transportation, processing, food service, packing, administrative, and/or other similar operations within Livingston Plant for the purposes of deep cleaning and testing all workers (permanent, temporary, contract, volunteer, and other) for clearance (as defined as two (2) negative PCR COVID-19 tests taken at least three (3) days but no more than seven (7) days apart), and implementing other measures in compliance with this Order. Foster Farms is further required to direct its agents, employees, officers, and others acting on its behalf, as well as subsidiaries, affiliates, and other entities controlled by Foster Farms, in such a manner as to ensure the closure of the entire Livingston Plant and that Livingston Plant on-site operations cease and resume only in accordance with this Order.
    a. Once Foster Farms accomplishes the requirements of this Section to the satisfaction of the Merced County Public Health Officer and/or Health Officer designee (MCDPH contact), Foster Farms may be able to resume operations at the Livingston Plant facility.
    b. No worker may return to work at the Livingston Plant until they have received two (2) negative PCR COVID-19 tests taken at least three (3) days but no more than seven (7) days apart.

2. **NCDC 2** located at 843 Davis St., Livingston, CA 95334: will be allowed to remain open and operational despite active outbreak status due to the ability to maintain at least six (6) foot social distancing within the workplace and a lower worker density within the facility, if:
    a. Foster Farms enforces 6 feet of social distancing between workers at NCDC 2;
    b. The current break room(s) are closed and Foster Farms provides an alternative, appropriate break space that can accommodate and ensure social distancing (that is actively monitored); and
    c. Foster Farms to provides food provisions, accommodating dietary needs to its workers to preventing the need for kitchen facilities for all workers with the facility until outbreak is cleared from NCDC 2 facility;
    d. Items 2(b)-(c) shall remain in place until the facility is cleared, defined as <1% positivity rate of the entire workforce at the NCDC 2, tested same day, for 2 rounds of testing, three (3) days apart. If testing positivity rate is greater than 1%, testing must be continued every three (3) days until outbreak is cleared.

3. **All Other Facilities** located at 843 Davis St., Livingston, CA 95334 and 1000 Davis St., Livingston, CA 95334: can remain open and operational, if:
    a. All employees (permanent, temporary, contract, volunteer, and other) are tested immediately and every seven (7) days thereafter until Livingston Complex is cleared from outbreak. If testing positivity rate is greater than 1%, testing must be increased to every three (3) days.

4. Conduct a terminal cleaning of the entirety of the Livingston Complex through a qualified cleaning agency either during facility closure or within seven (7) days of the issuance of this Order. Ensure that high-traffic areas and high-touch areas are disinfected following CDC guidelines:
https://www.cdc.gov/coronavirus/2019-ncov/community/disinfecting-building-facility.html and
https://www.cdc.gov/coronavirus/2019-ncov/community/pdf/REopening_America_Guidance.pdf.

5. The following COVID-19 line lists of data, at a minimum and as required by MCDPH, shall be reported to the MCDPH contact directly in a format determined by MCDPH and at intervals determined by MCDPH, but at no time less often than two times each week on Tuesdays and Fridays by 12:00PM:
    a. Worker full name, date of birth, gender, race, phone number, county of residence, job title, location in facility/assigned department, unit/shift (e.g., day, night, swing), if the individual works in another facility/location and name of the other facility, positive test date, last day worked, symptom start date (note if asymptomatic), testing location, if worker was tested due to part of mandated response testing, type of test used (e.g., PCR, antigen), return to work date, if worker was hospitalized due to illness, hospitalization date, if worker died due to illness (if yes, immediately e-mail the MCDPH contact), date of death, number of close contacts sent home/teleworking due to exposure, and if the case was a close contact to another index/case in the facility.
    b. The full laboratory testing line list data (including on-site testing), at a minimum, shall be reported to the MCDPH contact directly in a format and at intervals determined by MCDPH, including worker full name, date of birth, phone number, address of residence, county of residence, test result, and test date. Submission via the CalREDIE system alone will not be accepted.

6. Immediately upon issuance of this Order, a COVID-19 Mitigation Plan for the entire Livingston Complex is required to be prepared and submitted to and approved by the MCDPH contact and shall include continued proper COVID-19 worker medical screening, symptom-based testing, and testing of new hires and temporary workers, including the following:
    a. Permanent employees, temporary workers, contract workers, and/or volunteers that present with a positive COVID-19 test result shall be sent home from work for the required quarantine period and follow MCDPH, California Department of Public Health (CDPH), and CDC requirements and guidance. Workers who refuse or are unable to be tested as directed by MCDPH should be quarantined at home for 14 days, and shall not be allowed to work during the isolation period as defined by CDC:
    https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-in-home-patients.html.
    b. Workplace contact tracing shall be conducted by Foster Farms within 24 hours of notification of a positive employee. Close contacts, is defined as being within six

OSHA-004062

(6) feet for more than 15 minutes during the case's infectious period to positive workers. Close contacts shall be sent home from work for a 14-day quarantine period. The infectious period begins 48 hours prior to development of symptoms. For the purposes of contact tracing of individual who were asymptomatic and tested positive, the infectious period commences 48 hours prior to the day the sample was collected.

c. Temporary workers, permanent employees, contract employees, and/or volunteers will not be allowed to begin work without submitting proof to Foster Farms of a COVID-19 negative point-of-care antigen or PCR test result dated same day before start of work up to 48 hours before the start date.

d. Symptom-based testing is required when a permanent employee, temporary worker, contract worker, and/or volunteer presents with any one of the COVID-19 symptoms described by the CDC in the following guidance: https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html. Immediately upon notice to or observation by Foster Farms of any one of the COVID-19 symptoms by any worker at the site, testing of the worker shall immediately occur by either PCR or point-of-care antigen testing, or other Health Officer approved testing method, and results shall be obtained within 24-48 hours.

e. When there is a COVID-19 outbreak of three (3) permanent employees, temporary workers, contract workers, and/or volunteers in any building, or area that shares the same air supply, all individuals who had worked in the area during the potential outbreak period (within 48 hours prior to the onset of symptoms of a positive employee throughout the duration of the outbreak) must be tested for COVID-19 by PCR immediately and every seven (7) days thereafter until the building reports zero additional cases for two consecutive weeks, or until universal testing of the building reveals less than 1% positivity rate within the workforce.

f. The employer is responsible for ensuring all workers, including temporary workers, permanent employees, contract employees, and/or volunteers, are offered and provided COVID-19 testing at no cost to the employee.

7. As soon as practical, but no less than 14 days of issuance of this Order, expand the on-site Occupational Health program and clinic, consisting of a designated licensed medical or nursing professional and liaison for MCDPH to ensure and oversee proper COVID-19 worker medical screening processes, contact tracing, case investigation and referral to health care provider as needed, accurate data collection and reporting of all workers tested, reporting of all COVID-19 positive results regardless of county of residence, immediate notification of COVID-19 related hospitalizations to the MCDPH contact and CalOSHA, immediate reporting of COVID-19 related deaths to the MCDPH contact and CalOSHA, data quality assurance verification protocol, and the implementation of adequate COVID-19 surveillance testing and reporting to the MCDPH contact, as approved by MCDPH. These requirements are subject to review and supervision by MCDPH to ensure adequate procedures and practices are implemented.

8. Foster Farms management shall ensure that all employees be informed of testing requirements, outbreaks that occur, areas affected, and trained on safety requirements, in English, Spanish, and Punjabi, working with the union as applicable.

9. Provide proper face coverings at no cost to all contract employees, permanent employees, temporary workers, and/or volunteers prior to each shift, and if a replacement is needed during a shift, and require use as directed in the Merced County Health Officer Order.

10. Foster Farms shall follow all State Orders, including State COVID-19 Industry Guidance for Food Packing and Processing: https://files.covid19.ca.gov/pdf/guidance-food-packing--en.pdf.

11. This Order is issued in accordance with, and incorporates by reference, the: March 4, 2020 Proclamation of a State of Emergency issued by Governor Gavin Newsom; March 12, 2020 Executive Order N-25-20 and March 19, 2020 Executive Order N-33-20, each issued by Governor Newsom ordering all state residents to heed any orders and guidance of state and local public health officials with respect to COVID-19; May 4, 2020 Executive Order N-60-20 issued by Governor Newsom ordering various protocols and reaffirming the existing authority of local health officers to establish public health measures that are more restrictive or additional to statewide directives; Government Code section 8567(a); the March 13, 2020 Declaration of Local Health Emergency in Merced County pursuant to Health and Safety Code section 101080; the March 13, 2020 Proclamation of Local Emergency pursuant to Government Code section 8630 and Merced County Code section 2.72.060; the March 16, 2020 Resolutions of the Board of Supervisors of the County of Merced ratifying the Local Emergency and Local Health Emergency; and the California Department of Public Health, Cal/OSHA, and the California Department of Food and Agriculture jointly issued Industry Guidance for Food Packing and Processing updated on July 29, 2020 and any future dated updates.

12. Violation of this Order by Foster Farms is a misdemeanor punishable by fines up to $1,000 per day, imprisonment of 90 days, or both. Violation also subjects Foster Farms to civil enforcement actions including injunctive relief, attorneys' fees and costs. A violation of this Order constitutes a public nuisance. (Health and Safety Code Sections 120275 and 120295; Penal Code Sections 19 and 370; Government Code Sections 25132 and 8665; Merced County Code 2.72.100)

13. Pursuant to Government Code Sections 26602 and 41601 and Health and Safety Code Sections 101029, the Health Officer requests that the Sheriff and all chiefs of police in the County ensure compliance with and enforce this Order.

14. Copies of this Order shall promptly be: (1) made available at the County Administration Building at 2222 M Street, Merced, California 95340; (2) and provided to any member of the public requesting a copy of this Order.

UFCW v. USDA, No. 19-2660, Dkt. No. 24 (D. Minn.) 10

I. INTRODUCTION

Plaintiffs seek a straightforward and uncontroversial remedy: an order from this Court that pursuant to Missouri's "stay at home" order, Defendants Smithfield Foods, Inc. and Smithfield Fresh Meats Corp. (together, "Smithfield") must operate their Milan, Missouri plant (the "Plant") consistent with Centers for Disease Control ("CDC") guidance, including guidance issued by the CDC this weekend regarding the operation of slaughterhouses and meatpacking plants during the COVID-19 pandemic, Dkt. No. 29-5 (collectively, "CDC guidance"). Consistent with the purpose of that guidance, and with the support of a range of public health experts, Plaintiffs argue that Smithfield's failure to comply with this guidance poses an urgent and ongoing threat to Plant workers, their community, and to the nation, including the food supply, which would be threatened further if the Plant experienced an outbreak like those that have emerged at other Smithfield plants.

Smithfield's Motion to Dismiss ("Smithfield Br."), Dkt. No. 29, does not argue that Plaintiffs have not pled the elements of their state law claims for public nuisance and breach of the duty to provide a reasonably safe workplace. Smithfield also does not argue they are somehow free to ignore Missouri's "stay at home" order or the CDC guidance that it incorporates. Instead, Smithfield asks this Court to step back and wait to adjudicate this case and protect public health and safety because it is possible that the federal Occupational Safety and Health Administration ("OSHA") or the Missouri Department of Health and Senior Services ("MDHSS") may, at some future point, decide to step in.

No law or doctrine prohibits this Court from addressing the urgent risks posed by Smithfield's operation of the Plant in a manner inconsistent with CDC guidance. Missouri courts have long allowed private plaintiffs to go to court to seek abatement of public nuisances that may cause harm to the public health, *Scheurich v. Sw. Missouri Light Co.*, 84 S.W. 1003, 1007 (Mo.

Ct. App. 1905), and to seek injunctions for breaches of the duty to provide a reasonably safe workplace, *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 13 (Mo. Ct. App. 1982). This case is consistent with those bedrock principles of Missouri tort law. The doctrines of primary jurisdiction and *Burford* abstention do nothing to change that tradition.

There is also nothing to wait for. OSHA and MDHSS have already acted by pointing to the CDC guidelines as the standards that employers should follow to prevent further spread of COVID-19. Those standards have recently become even more specific and undeniable pursuant to recommendations issued by CDC and OSHA to protect workers at poultry and meat processing facilities from the disease. *See* Dkt. No. 29-5.[1] Plaintiffs allege that Smithfield's failure to follow those guidelines violates Missouri common law and requires injunctive relief. The Court need not defer to agencies who have said all they need to say on this matter to resolve Plaintiffs' claims. This is all the more true because neither OSHA nor the MDHSS is engaged in enforcement of the CDC guidance within the Milan plant and OSHA and Missouri's public statements establish they will not enforce these essential rules.

This litigation and the Court's Order of April 26, which required Smithfield to comply with CDC guidance pending a hearing on Plaintiffs' motion for a preliminary injunction, *see* Dkt. No. 20, have already resulted in concrete improvements at the Milan Plant. New social distancing protocols and mask-wearing requirements, announced for the first time on April 27, are already making workers and the surrounding community safer than they were before. Supplemental Declaration of Jane Doe ("Second Doe Decl.") ¶¶ 6-8. These changes also put the

[1] Importantly, this new guidance calls for many of the same reforms recommended in Dr. Robert Harrison's declaration in support of Plaintiffs' Motion for Preliminary Injunction. Dkt. No. 3-4.

lie to Smithfield's prior representations to the Court that they were already in compliance when Plaintiffs filed suit. Smithfield Br. 3.

There remains much more that Smithfield must do to comply with the CDC guidance and ensure the Plant can remain open without the disastrous spread of COVID-19 that has forced other plants to close. Dismissing this action now in hopes of enforcement by OSHA and/or MDHSS, when both have indicated enforcement action is *not* forthcoming, undermines basic rights and threatens the safety of the Nation. Neither law nor logic suggests such a result.

II. FACTUAL BACKGROUND

Smithfield's argument that the Court need not order the requested relief because, so far, there are no *confirmed* cases of COVID-19 among workers at the Plant and relatively low numbers of cases in surrounding counties compared to other parts of the state misses the point. Smithfield Br. 3-4. Most importantly, "confirmed cases" is a peculiar standard on which to rely, because workers have already shown symptoms, Dkt. No. 3-5 ¶ 4 ("First Doe Decl.") (identifying at least 8 workers with symptoms), and Smithfield continues to refuse to offer the workers testing, Second Doe Decl. ¶ 13. A public health and slaughterhouse expert explains to the Court that without the relief requested here, spread of the disease in the Plant is "inevitable." *E.g.*, Declaration of Dr. Melissa Perry ("Perry Decl.") ¶¶ 9-10, 32.

Without Court intervention, Milan will likely join a long line of slaughterhouses around the country to become the source of a virus cluster. This morning, Smithfield's packing facility in Clinton, North Carolina reported two new positive cases.[2] Just this past Monday, Crete, Nebraska officials stated Smithfield's plant there would be closed because of an outbreak

[2] Chris Berendt, *Virus cases at Smithfield rise to seven*, THE SAMPSON INDEPENDENT (Apr. 29, 2020), https://www.clintonnc.com/news/48498/virus-casesat-smithfieldrise-to-seven.

OSHA-004097

(although it now appears Smithfield may be keeping that plant open despite the health and safety concerns).[3] Last week, a report examining meat and poultry plants determined that 150 such plants are located in counties that have an infection rate higher than 75% of the United States.[4] Plaintiffs filed this suit seeking solely injunctive relief to bring the Plant into compliance with existing public health guidance so that it could remain in operation, and so that the residents of the surrounding counties would not join the list of other rural areas that have turned into COVID-19 hot spots because they are home to meat processing facilities.

Plaintiffs' efforts to enforce Missouri law appear to be working already. In response to the suit, this Court Ordered Smithfield on April 26 to "comply with all guidance from CDC and other public authorities." Dkt. No. 20, at 3. Then, on April 27, a new sign appeared in the plant stating that masks must be worn at all times. Second Declaration of Axel Fuentes ("Fuentes Decl.") ¶¶ 4-5 & Ex. A. That same day, another new sign provided an updated protocol for clock-in and -out procedures to permit greater social distancing. *Id* ¶ 6; Second Doe Decl. ¶ 7.

However, Smithfield's Milan workers remain without some basic protections. They continue to stand shoulder-to-shoulder on the line. Second Doe Decl. ¶ 5. Hallways, restrooms, and break areas remain crowded, with workers "regularly closer than 6-feet apart." *Id.* ¶ 9. Smithfield has failed to provide handwashing breaks or allow workers to step off the line to blow

OSHA-004098

their noses. *Id.* ¶ 10. Smithfield's actual enforcement of its stated mask policy appears non-existent. *Id.* ¶¶ 3-4. Smithfield provides no paid sick leave and encourages workers to come in sick. *Id.* ¶¶ 12, 15. And Smithfield has not provided for testing or any system of contact tracing. *Id.* ¶ 13. These facts remain contrary to what Dr. Robert Harrison, Dr. Melissa Perry, and the CDC explain is necessary to keep the Plant from becoming an incubator for disease. *See* Declaration of Dr. Robert Harrison ("Harrison Decl.), Dkt. No. 3-4. In fact, Dr. Perry explains that immediately correcting these conditions is both practical and essential. Perry Decl. ¶¶ 8-32.

III. ARGUMENT

A. The Court Should Not Exercise Its Discretion to Apply the Primary Jurisdiction Doctrine Where the Relevant Federal Guidance Has Already Been Issued and the Only Question Is Its Enforcement, Which OSHA Has Disclaimed.

Primary jurisdiction "is to be 'invoked sparingly, as it often results in added expense and delay.'" *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005) (quoting *Red Lake Bank of Chippewa Indians v. Barlow*, 846 F.2d 474, 477 (8th Cir. 1988)). The district court should dismiss a case and refer a matter to a federal agency pursuant to the primary jurisdiction doctrine only where "the parties would not be unfairly disadvantaged." *Reiter v. Cooper*, 507 U.S. 258, 268-69 (1993). This is not such a case.

Here, Jane Doe and her coworkers, including many Rural Community Workers Alliance ("RCWA") members, as well as the communities where they live, have already benefitted from the changes instituted at the Plant in response to this Court's Order. Plaintiffs would be unfairly disadvantaged if the Court withdrew its supervisory presence, which ensures that Smithfield will continue complying with applicable OSHA and CDC guidance. This is particularly the case where Smithfield relies entirely on an "informal" letter they have received from OSHA, that cannot and—based on OSHA's statements—will not result in federal enforcement. Declaration

of Dr. David Michaels ("Michaels Decl.") ¶¶ 13-14; Declaration of Ann Rosenthal ("Rosenthal Decl.") ¶¶ 12-14.

1. Plaintiffs' Claims Do Not Involve OSHA Expertise.

The Eighth Circuit explains that a core objective of this prudential doctrine is to take advantage of "agency expertise," *Alpharma*, 411 F.3d at 938, but here, Plaintiffs ask the Court to consider claims that call for judicial, not administrative, resolution. Plaintiffs' public nuisance claims seek a remedy against business operations that cause a harm to the public generally. OSHA's jurisdiction focuses on the workplace. It has no authority to promulgate standards to protect the general public. *Steel Inst. of N.Y. v. City of New York*, 716 F.3d 31, 33 (2d Cir. 2013) ("the Act does not protect the general public, but applies only to employers and employees in workplaces"); *accord* Michaels Decl. ¶ 8; Rosenthal Decl. ¶ 5. And although Missouri's cause of action for violation of the right to a safe workplace certainly relates to occupational safety, that claim has long formed the basis for injunctive relief in court, even subsequent to the creation of OSHA in 1970. *See, e.g.*, *Smith v. W. Elec. Co.*, 643 S.W.2d 10, 12-13 (Mo. App. 1982).[5] Plaintiffs bring claims under state common law doctrines that OSHA's regulatory scheme does not displace, and there is no reason for this Court to defer to the primary jurisdiction of OSHA before resolving those claims. *See* 29 U.S.C. § 653(b)(4); *United Steelworkers of America v. Marshall*, 647 F.2d 1189, 1235-36 (D.C. Cir. 1980) (OSHA leaves "state schemes wholly intact as a legal matter"). In fact, primary jurisdiction is not applicable where plaintiffs do not seek to

[5] The Missouri court expressly rejected an argument that it should defer and allow OSHA to address the problem because it could not identify an "OSHA standard which would appear to cover tobacco smoke." *Smith*, 643 S.W.2d at 14. Similarly, OSHA "has not adopted a specific standard that protects employees from the risks of infectious disease like COVID-19." Michaels Decl. ¶ 10.

enforce a federal statute or regulation but bring "an independent state law cause of action for negligence and strict liability." *Ryan v. Chemlawn Corp.*, 935 F.2d 129, 132 (7th Cir. 1991).

Allowing Plaintiffs claims to proceed will also further national "consistency"—the other rationale for primary jurisdiction—because any relevant OSHA activity has already occurred, and the Court already has the benefit of the agency's "expertise." *See Alpharma*, 411 F.3d at 938. In particular, OSHA, in conjunction with the CDC, has published detailed guidelines on how to mitigate the spread of COVID-19 in meat processing facilities. Dkt. No. 29-5 (guidance). Plaintiffs simply request that the Court require Smithfield to comply with those guidelines, as Drs. Harrison and Perry recommend. Eighth Circuit precedent instructs that courts should not defer to agencies under the primary jurisdiction doctrine when the court is asked to analyze what an agency has already done, not substitute its judgment as to what an agency might or should do in the future. *Alpharma*, 411 F.3d at 939 ("The question of whether Pennfield's BMD has been approved as safe and effective is much different from the question of whether Pennfield's BMD should be approved as safe and effective, and it is only the latter that requires the FDA's scientific expertise."); *see also Illinois Pub. Interest Research Grp. v. PMC, Inc. Through PMC Specialties Grp.*, 835 F. Supp. 1070, 1076 (N.D. Ill. 1993) (declining to defer to agency's primary jurisdiction where the court was not being asked to set standards but merely "to enforce existing standards"); *Segedie v. Hain Celestial Grp., Inc.*, No. 14-5029, 2015 WL 2168374, at *13 (S.D.N.Y. May 7, 2015) (declining to defer to agency's primary jurisdiction where the "claims seek to hold Defendant to existing regulations, not proposed regulations").

2. There Are No Relevant OSHA Proceedings.

Further, there is no administrative activity to which the Court could defer—as is necessary for the primary jurisdiction doctrine to apply. *See, e.g., Natural Res. Def. Council v.*

Metro. Water Reclamation Dist. of Greater Chi., No. 11-02937, 2016 WL 1298124, at *4 (N.D. Ill. Mar. 31, 2016) (holding primary jurisdiction doctrine does not apply because defendant did "not identify with precision any relevant proceedings to which this Court should defer for the resolution of the question presented."). Smithfield argues that an April 22 letter from OSHA's regional administrator suggests that "OSHA is already in the process of exercising its jurisdiction at the Plant." Smithfield Br. 1. But that letter responds to a specific workplace injury that occurred on April 15 and says nothing about COVID-19. Dkt. No. 29-2. The sole reference to the virus appears in a generic COVID-19 questionnaire following a more specific questionnaire addressing the April 15 incident. *Id.*

Moreover, the April 22 letter represents an inquiry, not an inspection, and does not suggest an inspection is imminent. It is conceivable that under OSHA's regulatory regime this written exchange of information, called an investigation, could lead OSHA to request an in-person inspection. Michaels Decl. ¶¶ 15-16. However, the interim guidance OSHA has issued for its administrators during the pandemic makes this unlikely; OSHA has expressly stated its policy is *not* to inspect meat packing plants. Michaels Decl. ¶¶ 13-14; Rosenthal Decl. ¶ 13; *see also* Dkt. No. 29-4 (guidance).[6] An inspection is ***a prerequisite*** to any OSHA action that could require a workplace to abate unsafe conditions. 29 U.S.C. § 658(a); *see also* Michaels Decl. ¶ 15; Rosenthal Decl. ¶ 14. Furthermore, if such an inspection did occur, it could in turn lead to a

---

[6] Indeed, Dr. Michaels, the longest serving head of OSHA in its history, and a current scholar on its practices states that throughout the crisis "OSHA has failed to enforce any of its limited requirements that could conceivably protect meatpacking workers from illness." Michaels Decl. ¶ 8; *see also id.* ¶¶ 10, 12 (explaining OSHA's only potentially applicable standards leave their implementation to the discretion of the employer and that OSHA has not taken any steps to make them mandatory in response to COVID-19). *See also* Rosenthal Decl. ¶¶ 10-12 (stating substantially the same).

citation issued anytime in the next six months, which would then be reviewable by the independent Occupational Safety and Health Review Commission before it could be enforced. 29 U.S.C. § 658(c), 659(c); *see also* Michaels Decl. ¶¶ 16-17; Rosenthal Decl. ¶¶ 15-17.

Dr. Michaels and Anne Rosenthal, both of whom served long stints within high levels of OSHA, are of the opinion that written investigation letters like the one sent to Smithfield on April 22 rarely, if ever, lead to citations, enforcement actions, or penalties, particularly in light of OSHA's stated non-enforcement policy against meat packing plants. Michaels Decl. ¶¶ 13-16. Rosenthal Decl. ¶¶ 11-3. Michaels and Rosenthal also opine that even if the letter did lead to an inspection and to any kind of enforcement on a reasonable timeline, none of the specific OSHA standards spelled out on page 13 of Smithfield's motion would be sufficiently strong to allow OSHA to enforce the CDC guidelines, even the guidelines that OSHA has helped to promulgate. Michaels Decl. ¶¶ 10-12; Rosenthal Decl. ¶¶ 8-9.

Smithfield argues that the Department of Labor could seek an emergency injunction to enforce OSHA standards even absent an inspection, but that argument is belied by statute and Supreme Court and Eighth Circuit law. 29 U.S.C. § 662(c) (noting that the Secretary of Labor will request an injunction only in response to a recommendation from an in-person inspector); *Whirlpool Corp. v. Marshall*, 445 U.S. 1, 8-9 (1980) (explaining that OSHA's emergency injunction process begins with an inspection); *N.L.R.B. v. Tamara Foods, Inc.*, 692 F.2d 1171, 1181 (8th Cir. 1982) (same). Furthermore, Smithfield points to no case where this power was actually used. Plaintiffs could locate only two in the entire country, neither of which was decided in the past 25 years. *Reich v. Dayton Tire, a Div. of Bridgestone/Firestone, Inc.*, 853 F. Supp. 376, 378-79 (W.D. Okla. 1994) (Secretary issued request for injunction following multiple inspections over an eleven-month period); *Marshall v. Daniel Const. Co., Inc.*, 563 F.2d 707,

710-15 (5th Cir. 1977) (noting that employee's right under OSH Act is limited to requesting an inspection, and inspector's right is limited to recommending that the Secretary seek an emergency injunction from the court in the event that dangerous conditions are found).[7]

Finally, Smithfield attempts to frighten this Court with claims that the injunctive relief Plaintiffs are seeking is "truly unprecedented" because it gives Plaintiffs' experts too much control over crafting a remedy. Smithfield Br. 14. Although some courts have declined to issue preliminary injunctive relief responding to emergency conditions caused by COVID-19, many other courts have granted such relief, even when it required detailed changes to facility operations recommended by plaintiffs and their experts. *See, e.g.*, *Fraihat v. U.S. Immigration & Customs Enf't*, No. 19-1546, 2020 WL 1932570, at *21-*29 (C.D. Cal. Apr. 20, 2020) (granting preliminary injunction mandating that ICE revisit custody determinations, including considering release for all persons in ICE detention whose age or health conditions place them at increased risk due to the COVID-19 pandemic); *Esshaki v. Whitmer*, No. 20-10831-, 2020 WL 1910154, at

---

[7] Last night, the President issued an Executive Order stating that the United States Department of Agriculture ("USDA") would be protecting worker health and safety at meat packing plants. *See* "Executive Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19," The White House (April 28, 2020), https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/. This order does not impact these proceedings. Importantly, twice in the last six months USDA expressly disclaimed that its Food Safety and Inspection Service, which is its division that works in the plants, has *any* role to play in worker safety and thus any expertise on how to protect workers. USDA Brief, *UFCW v. USDA*, No. 19-2660, Dkt. No. 16, at 29 (D. Minn.) ("[N]or are issues of workplace safety reasonably related to FSIS's food safety mission" (citing *Dawkins ex rel. Estate of Dawkins v. United States*, 226 F. Supp. 2d 750, 757 (M.D.N.C. 2002)); USDA Reply, *UFCW v. USDA*, No. 19-2660, Dkt. No. 24, at 15 (D. Minn.) ("[W]orker safety falls outside FSIS's regulatory authority" and therefore USDA defers to OSHA). Moreover, the Executive Order references OSHA guidance—not USDA promulgating any new standard—confirming that the Court already has before it whatever expertise the government can provide.

OSHA-004104

*1 (E.D. Mich. Apr. 20, 2020) (granting preliminary injunction reducing Michigan signature requirement for inclusion on ballot by 50% in light of COVID-19 pandemic); *Cameron v. Bouchard*, No. 20-10949, 2020 WL 1929876, at *2 (E.D. Mich. Apr. 17, 2020), modified on reconsideration, No. 20-10949, 2020 WL 1952836 (E.D. Mich. Apr. 23, 2020) (granting TRO requiring jail to implement certain minimum measures to protect against spread of COVID-19, including ensuring access to no-cost soap and hand sanitizer, ensuring staff wash hands and wear PPE, conduct testing, and provide for "adequate spacing of six feet or more between people incarcerated, to the maximum extent possible, so that social distancing can be accomplished").

Here, where Plaintiffs' experts' recommendations track closely if not completely CDC guidance, including recent guidance specific to the meat processing industry, Court action will not be radical. Plaintiffs merely request the Court extend the Order it already issued and allow an inspection by Plaintiffs' designated expert to determine whether the guidelines are being followed and if additional measures may be necessary given the particular feature of the Plant. In light of the certain crisis that will result if Smithfield continues to delay protecting its workers, it is Smithfield's request the Court decline to act that is extraordinary. *See generally* Perry Decl.

B. The Court Should Not Exercise Its Discretion to Defer to State and County Health Departments That Expressly Embrace the Same CDC Guidance Plaintiffs Seek to Enforce.

With its primary jurisdiction argument, Smithfield suggests that the workplace safety issues at stake in this case are so uniquely committed to the expertise of federal OSHA that this Court should dismiss the matter and defer to OSHA. With its *Burford* abstention argument, Smithfield makes the entirely contradictory suggestion that the matters at stake here are so bound up with the *state* public health regulatory scheme that the federal courts should defer to the State of Missouri, its agencies, and its courts in this matter. Smithfield's self-defeating *Burford* argument provides no basis to dismiss Plaintiffs' claims.

With respect to *Burford* abstention, the Supreme Court has instructed that "federal courts have a strict duty to exercise the jurisdiction conferred upon them by Congress" and may decline to do so only "under exceptional circumstances." *Quackenbush v. Allstate Ins. Co.*, 517 U.S. 706, 716 (1996) (citations and internal quotations omitted). The Eighth Circuit has likewise stated "*Burford* abstention applies when a state has established a complex regulatory scheme supervised by state courts and serving important state interests, and when resolution of the case demands specialized knowledge and the application of complicated state laws." *Bilden v. United Equitable Ins. Co.*, 921 F.2d 822, 825 (8th Cir. 1990). *Burford* applies only where the state has developed a centralized "system of thorough judicial review" specific to the complex regulatory scheme at issue. *Burford v. Sun Oil Co.*, 319 U.S. 315, 325 (1943); *see also United States v. Morros*, 268 F.3d 695, 705 (9th Cir. 2001) (applying *Burford* abstention only when a state has consolidated all disputes regarding the regulatory scheme at issue into a single, designated court). This balancing of interests "only rarely favors abstention." *Quackenbush*, 517 U.S. at 728. Where, as here, federal court jurisdiction is conferred by diversity of citizenship, even if there were "difficult or uncertain" questions of state law (and there are not) the Supreme Court has made clear that *Burford* supplies no basis to relinquish the jurisdiction Congress has conferred. *Meredith v. City of Winter Haven*, 320 U.S. 228, 234 (1943).

In lieu of actually meeting the doctrine, Smithfield suggests vaguely that "this matter should be handled by state and county public health agencies." Smithfield Br. 17. But the fact that state and local health agencies have the authority, in theory, to enforce public health rules does not amount to a centralized "system for thorough judicial review" of disputes relating to the common law rights that Plaintiffs assert here. Instead, to enforce their rights, Plaintiffs must rely on their time-honored ability to petition a court, including a federal court where federal

jurisdiction otherwise lies. *See, e.g.*, *Jackson v. City of Blue Springs*, 904 S.W.2d 324, 329 (Mo. App. 1995); *K.C. 1986 Ltd. P'ship v. Reade Mfg.*, 33 F. Supp. 2d 1143, 1156 (W.D. Mo. 1998). The alternative to federal courts exercising their jurisdiction over cases like these is that these cases will go to state court where they are just as likely to be heard by courts without public health expertise in these matters and just as likely to yield inconsistent outcomes. *Compare Burford*, 319 U.S. at 326 ("To prevent the confusion of multiple review of the same general issues, the [Texas] legislature provided for concentration of all direct review of the Commission's orders in the State district courts of Travis County.").

Furthermore, although state courts may have jurisdiction to hear Plaintiffs' claims, *Burford* abstention is only appropriate "[w]here timely and adequate state-court review is available." *New Orleans Pub. Serv., Inc. v. Council of City of New Orleans*, 491 U.S. 350, 361 (1989); *Univ. of Maryland at Baltimore v. Peat Marwick Main & Co.*, 923 F.2d 265, 271 (3d Cir. 1991). In this case, remanding this issue to state court would require delay that Plaintiffs and the public generally cannot afford.

The Court's exercise of its jurisdiction here likewise "would [not] disrupt a state administrative process." *Heartland Hosp. v. Stangler*, 792 F. Supp. 670, 672 (W.D. Mo. 1992) (quoting *Cty of Allegheny v. Frank Mashuda Co.*, 360 U.S. 185, 189 (1959)). It may be true that public health agencies in Missouri have expertise regarding public health matters and have a responsibility for exercising public enforcement. But the "exceptional circumstances" warranting abstention apply only where the party seeking abstention can point to a specific state administrative process that will be disrupted by the federal proceedings. *Caranchini v. Kozeny &*

OSHA-004107

McCubbin, LLC, No. 11-0464, 2011 WL 5921364, at *5 (W.D. Mo. Nov. 28, 2011) (Kays, J.). Smithfield identifies no such process here.[8]

Assuming there was a special forum to which the Court could defer (and there is not), there is also no reason to defer as nothing in Missouri's law of public nuisance or its right to a safe workplace tort is "particularly complicated," and the Court's exercise of its jurisdiction here would not frustrate Missouri's interest in managing public health issues. *Doe v. McCulloch*, 835 F.3d 785, 788 (8th Cir. 2016) (declining to apply *Burford* abstention to question of Missouri state law). Aside from general principles of Missouri tort law, the only state law at issue here is the "stay at home" order issued by the Governor in March. That already-promulgated order provides a relatively straightforward mandate. It includes multiple references to "CDC guidance," Dkt. No. 29-1 ("stay at home" order), and makes the same recommendations regarding social distancing, even for essential businesses that must remain open, that the CDC and OSHA have emphasized in their guidance documents, including guidance documents specific to the meat processing industry, *see* Dkt. No. 29-4. An established state regime that actually relies on federal guidance, which is what Plaintiffs seek to enforce, is not a basis for *Burford* abstention.

Smithfield seeks to manufacture a complex question by pointing to language in the "stay at home" order that designates meatpacking Plants as essential operations that should stay open

---

[8] It bears mentioning that Missouri's attorney general saw no need to oforgo litigation or even to litigate in state court because of the "active[] involve[ment]" of state and local public health agencies, *See* Smithfield Br. 17. He filed a lawsuit in federal district court against the People's Republic of China, asserting Missouri common law claims of public nuisance. *Missouri v. The People's Republic of China*, No. 20-99, Compl., Dkt. No. 1 (E.D. Mo.). The chief law enforcement officer of the state properly concluded that the federal interests in "in affording foreign litigants a neutral forum for the adjudication of state law claims against them" outweigh any state law interests regarding coherent application of its public nuisance doctrine. *See Cleveland Hous. Renewal Project v. Deutsche Bank Tr. Co.*, 621 F.3d 554, 568 (6th Cir. 2010).

and suggesting Plaintiffs' request that Smithfield provide for social distancing would prevent Smithfield from operating. Smithfield Br. 17. Not so. Plaintiffs do not seek to close the Plant. Smithfield and its workers can continue operations while complying with social distancing requirements. In fact, that may be the *only* way that Smithfield can operate the Plant safely. Dr. Perry, an occupational health and safety professor and past president of the American College of Epidemiology, states that in her professional opinion, workers on meat production lines must stand at least six feet apart in order to perform their jobs safely during the current pandemic. If they do not, disease *will* spread in the Plant and into the surrounding community. Perry Decl. ¶¶ 9-13 ("Without social distancing, it is my expert opinion that the spread of COVID-19 in slaughterhouses and meat packing plants is inevitable."). Requiring social distancing in this case, therefore, would not be "disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern," *Wolfson v. Mutual Benefit Life Ins.*, 51 F.3d 141, 144 (8th Cir. 1995). Smithfield fails "to prove that the exercise of federal jurisdiction would in any way frustrate the state's interests on the facts of this case" as is necessary for *Burford* abstention. *Melahn v. Pennock Ins., Inc.*, 965 F.2d 1497, 1507 (8th Cir. 1992).

IV. CONCLUSION

For the foregoing reasons, Plaintiffs respectfully request that the Court deny Smithfield's motion to dismiss.

U.S. Inspector Called Ahead of Meat Plant Visit, to Be Safe

Bloomberg
Clare Roth
August 14, 2020
https://www.bloomberg.com/news/articles/2020-08-15/u-s-inspector-called-ahead-of-meat-plant-visit-just-to-be-safe

A federal safety inspector tipped off a coronavirus-tainted Pennsylvania meatpacking plant before visiting the next day -- then failed to issue a citation, according to testimony in a lawsuit accusing the agency of failing to do its job.

The inspector said notifying a plant before an inspection wasn't typical practice for the Occupational Safety and Health Administration, but that she was told to do it by her supervisors for her own safety, according to a court transcript.

"OSHA has a right to protect their employees also," she said when pressed by a federal judge at a hearing.

Three anonymous workers at the Maid-Rite plant in Dumore claim the regulator failed to respond to complaints that they were forced to work shoulder-to-shoulder and weren't provided with masks or breaks to wash or sanitize their hands. That was after another worker told OSHA "about half the plant is out sick."

The coronavirus rampaged through U.S. meatpacking plants this spring, sickening thousands of employees in more than 200 facilities.

A plant manager at Maid-Rite said by phone late Friday that no one was available to comment.

In response to the Labor Department's request for dismissal of the suit, lawyers for the workers said in a filing Friday that the pre-planned visit defeated the purpose of surprise inspections.

"The advance notice mattered. Workers report that in anticipation of the inspection, Maid-Rite made changes to hide the extent of its unsafe working conditions, spacing workers further along production lines," according to the filing. "After the inspection, workers were once again forced to work immediately next to each other, sometimes touching."

They want the court to order OSHA to take steps to declare the plant an imminent danger or conduct a prompt, unannounced on-site inspection of the facility.

The Labor Department argued last month that workers failed to prove an imminent hazard existed and warned that if the court gives the workers what they seek, an "avalanche" of worker suits could follow.

The AFL-CIO sued OSHA earlier in the pandemic to put emergency safety standards in place. The U.S. Court of Appeals in Washington rejected the union's request.

The agency has received more than 7,000 complaints since the start of the pandemic, but has only issued four citations, officials said at the July 31 hearing.

OSHA didn't respond immediately to a request for comment Friday.

IN THE UNITED STATES DISTRICT COURT FOR THE WESTERN DISTRICT OF MISSOURI ST. JOSEPH DIVISION

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,[1]	)	
Plaintiffs,	)	
v.	)	No. 5:20-CV-06063-DGK
SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,	)	
Defendants.	)	

ORDER GRANTING DEFENDANTS' MOTION TO DISMISS

This lawsuit arises from Plaintiffs' allegations that Defendant Smithfield Foods, Inc. and its wholly owned subsidiary, Defendant Smithfield Fresh Meats Corporation (collectively, "Smithfield") have failed to adequately protect workers at its meat processing plant in Milan, Missouri, ("the Plant" or "the Milan Plant") from the virus that causes COVID-19. Now before the Court are Plaintiffs' Motion for a Temporary Restraining Order ("TRO") and Preliminary Injunction (Doc. 3), and Smithfield's motion to dismiss and/or stay pursuant to the primary-jurisdiction doctrine (Doc. 28).

After carefully reviewing the motions and the existing record, the Court holds that it should decline to hear this matter pursuant to the primary-jurisdiction doctrine to allow the Occupational Health and Safety Administration ("OSHA") to consider the issues raised by this case. But even if the Court did not apply the primary-jurisdiction doctrine, the Court would not

[1] The Court notes that there is currently a motion pending to allow Jane Doe to proceed using a pseudonym (Doc. 42). Given the Court's dismissal of this action and the denial of injunctive relief, the Court finds that requiring Plaintiff to reveal her identity would serve no important purpose, especially given that another named plaintiff appears in this case. The issues presently before the Court are—for the most part—purely legal, and the majority of Plaintiff's allegations are not individualized. Thus, the public's interest in Plaintiff's identity and the prejudice to Smithfield in allowing Plaintiff to proceed anonymously for purposes of deciding the instant motions is minimal. Plaintiff Doe may therefore use a pseudonym for purposes of the motions presently before this Court. This Court reserves judgment on her ability to do so should this case proceed to further stages of litigation.

OSHA-004116

issue a preliminary injunction because Plaintiffs have not met their burden of proving that the extraordinary remedy of an affirmative injunction is justified. Smithfield's motion is GRANTED, and the case is DISMISSED WITHOUT PREJUDICE.

Background

The Background section of this order is arranged in chronological order. Although regrettably lengthy, it details how the regulatory environment in which meat-processing plants operate is constantly changing during this unique national emergency.

In late 2019, a new coronavirus emerged named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).[2] This virus causes coronavirus disease 2019 (COVID-19), a respiratory illness that can cause serious health problems, including death.[3] SARS-CoV-2 is highly contagious; it appears to spread from person to person through respiratory droplets produced when an infectious person coughs, sneezes, or talks, and the virus can be spread by presymptomatic, or even asymptomatic, individuals.[4]

A global pandemic ensued, and the virus and COVID-19 reached the United States in early 2020. On March 13, 2020, the President declared a national emergency concerning COVID-19. That same day, Missouri's governor also declared a state emergency, and on April 3, the Missouri Department of Health and Senior Services issued a stay-at-home order that mandated all individuals abide by social-distancing requirements and closed all nonessential

[3] *Id.*

[4] *Id.*

businesses in Missouri through May 4.[5] The stay-at-home order defines essential businesses in accordance with guidance from the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency ("Homeland Security"), which identified livestock-slaughter facilities, including the Plant and its operations, as "critical infrastructure."[6] On April 9, the Centers for Disease Control ("CDC") published *Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19)*, which outlined several policies and procedures employers should implement to help prevent workplace exposure and community spread of the virus.

On April 22, OSHA sent Smithfield a "Rapid Response Investigation" requesting information regarding its COVID-19 work practices and infection at the Milan Plant, giving Smithfield seven days to respond. As part of its inquiry, OSHA requested information about Smithfield's COVID-19 practices including what, if any, personal protective equipment has been given to its workers, what engineering controls have been implemented, what contact tracing methods have been employed, and what policies have been changed or implemented in light of the pandemic (Doc. 29-2). Smithfield responded on April 29 (Doc. 41).

The next day, on April 23, Plaintiffs Jane Doe and the Rural Community Workers Alliance ("RCWA") filed suit. They allege Smithfield is not taking adequate steps to prevent transmission of the virus at its Plant, thereby endangering workers and members of the surrounding community. According to her declaration, Doe is a current Smithfield employee who has worked at its Milan Plant for at least five years. She claims she currently works on the

"cut floor" where animals are broken down into products and packaged.

The RCWA is a Missouri non-profit advocacy group whose members consist exclusively of workers in Northern Missouri. Several members of RCWA's current leadership council work at the Plant, and sixty to seventy workers who attend its meetings work at the Plant, including Jane Doe.

Defendant Smithfield is one of the largest meat-processing companies in the world, with meat-processing plants all over the United States, including in Milan, Missouri. Several of its meat-processing plants in the United States have closed recently due to outbreaks of COVID-19 among its workers.

The Complaint (Doc. 1) alleges that several meat-processing plants in this country owned and operated by Smithfield have become major COVID-19 "hot spots." It also alleges that in direct contravention of CDC guidelines, Smithfield has not implemented certain precautions to keep its workers and the Milan community safe from the virus. Such measures include keeping adequate distance between workers, prohibiting workers from taking a break to wash their hands or face, preventing workers from covering their faces if they need to cough or sneeze, implementing a sick-leave policy that penalizes workers for missing work even if they are exhibiting COVID-19 symptoms, and failing to implement plans for testing and contact tracing.

The Complaint brings state-law claims for public nuisance and breach of duty to provide a safe workplace. Plaintiffs are not seeking monetary damages, only declaratory judgments stating that: (1) Smithfield's practices at the Plant constitute a public nuisance; and (2) Smithfield has breached its duty to provide a safe workplace.

The same day Plaintiffs filed suit, they also moved for a temporary restraining order and preliminary injunction (Doc. 3), seeking to force Smithfield to: provide masks; ensure social

distancing; give employees an opportunity to wash their hands while on the line; provide tissues; change its leave policy to discourage individuals to show up to work when they have symptoms of the virus; give workers access to testing; develop a contact-tracing policy; and allow their expert to tour the Plant. Attached to the motion were declarations from: (1) Jane Doe, who described working conditions at the Plant and stated she was afraid for health and safety, as well as the health and safety of the Milan community, because of what she considers inadequate safety procedures at the Plant; (2) RCWA's Executive Director, Alex Fuentes; (3) a senior lobbyist with the non-profit organization Food & Water Watch ("FWW"), Anthony Corbo; (4) a lawyer, Thomas Fritzsche, who has interviewed a number of Alabama poultry-plant workers about working conditions and authored a 2013 report for the Southern Poverty Law Center about modern industrial slaughterhouse workers; and (5) an occupational-medicine specialist, Dr. Robert Harrison, who works as Clinical Professor of Medicine at the University of California, and also serves the California Department of Public Health.

On April 26, the Court set a videoconference hearing on the preliminary injunction motion for April 30. That same day, the CDC and OSHA issued *Meat and Poultry Processing Workers and Employers – Interim Guidance* ("the Joint Guidance"), which provided supplemental guidance to meat-processing plants concerning COVID-19.[7] The Joint Guidance states that to reduce the risk of transmission among employees, employers at meat-processing facilities should, where "feasible," implement engineering controls, such as staggering shifts and breaks, requiring workers to stay six-feet apart, and/or erecting physical barriers; place handwashing or hand-sanitizing stations in multiple locations and encourage hand hygiene; give workers additional short breaks to wash hands; provide tissues; and allow workers to take breaks

[7] Ctrs. for Disease Control and Prev. & Occ. Safety and Health Admin., Meat and Poultry Processing Workers and Employers, https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html (Apr. 26, 2020).

in alternative areas to ensure social distancing. It also recommends employers provide personal protective equipment for workers to use during their shift and increase the frequency of sanitization in work and common spaces. It states employers should educate employees on measures they can take to decrease the risk of spreading the virus and provides a specific list of measures employers should take to promote social distancing, such as providing visual cues on floors, as reminders for social distancing. It encourages employers to screen workers for COVID-19 by implementing temperature checks prior to entering the workplace and sending home workers who appear to have symptoms (e.g., cough, fever, or shortness of breath), and monitor workers' contacts so they can alert anyone who may have been exposed to the virus. Finally, it recommends employers review leave and incentive policies so as to not penalize workers for taking sick leave if they contract COVID-19.

On April 27, Smithfield filed a motion to dismiss this case pursuant to the primary-jurisdiction doctrine, arguing this Court should defer to OSHA in this case. The next day—April 28—the President signed an executive order ("the Executive Order") under § 4511(b) of the Defense Production Act ("DPA"), 50 U.S.C. § 2061 *et seq*., delegating authority to the Secretary of Agriculture to take all appropriate action "to ensure that meat and poultry processors continue operations consistent with the guidance for their operations jointly issued by" the CDC and OSHA.[8]

On April 29, Smithfield made several filings, including a supplemental brief to its motion to dismiss, which alleged that pursuant to the Executive Order, the United States Department of Agriculture ("USDA") now had jurisdiction over this case. It also submitted its Suggestions in

[8] Exec. Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/ (Apr. 28, 2020).

Opposition (Doc. 32) to the preliminary injunction motion. Attached to its brief as exhibit A (Doc. 32-1) is a declaration from the Plant's general manager, Tim Messman, along with pictures of the Plant and copies of the Plant's policies and procedures related to COVID-19. Exhibit B (Doc. 32-2) is a declaration from John Henshaw, the head of OSHA from 2001 to 2003.

Later that same day, Plaintiffs' filed their suggestions in opposition (Doc. 35) to Smithfield's motion to dismiss. Included in it is a declaration from Dr. Melissa Perry (Doc. 35-2), a professor of environmental health at George Washington University.

On April 30, the Court held a hearing on the motion via teleconferencing. The Court offered the parties an opportunity to introduce evidence, including witness testimony, but both parties elected to stand on the existing record. The parties then argued their respective positions.

After the hearing, the parties filed supplemental briefs. Attached to Smithfield's brief (Doc. 46) is a supplemental declaration from Smithfield's plant manager, clarifying Smithfield's leave policy and updating the Court on additional safety changes at the Plant.

Plaintiffs concede that Smithfield implemented new policies and procedures after this lawsuit was filed and have narrowed their requested injunctive relief to direct Smithfield to:

> (1) make all reasonable changes to its "production practices," including potentially lowering its line speeds, to place as many workers as possible at least six feet apart; (2) provide reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing; and (3) ensure that its policies do not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers.

(Doc. 48 at 10). Plaintiffs characterize their requested relief as compliance with the Joint Guidance.

Findings of Fact

The Court gives the various declarations submitted by the parties the following

evidentiary weight.[9]

The Court gives Jane Doe's declaration limited weight. While she has personal knowledge of conditions in those parts of the Plant in which she works, it is unclear exactly what part of the "cutting floor" she works in, and whether she can see all that she claims to see from this area. Further, it appears that some of the information in her declaration is no longer accurate due to recent changes in the Plant's policies and procedures. For example, although her declaration may be correct that Smithfield initially told workers they would receive only one mask per week, this policy has been superseded. As discussed below, workers are now given masks every day. Finally, because her identify is unknown, there is no way to determine, through the adversarial process or otherwise, whether Doe has some bias against Smithfield that could lead her to misrepresent or exaggerate conditions at the Plant. The Court notes that at least one of her statements—that Smithfield has increased the line speed at the Plant during the pandemic—is contradicted by other, more persuasive evidence.

Mr. Fuentes' declaration concerning working conditions at the Plant are even less reliable than Jane Doe's, and so the Court gives them less weight. Mr. Fuentes has no personal knowledge of conditions at the Plant because he has never set foot in it. His understanding is based on hearsay from unidentified employees whose statements to him, even if accurately relayed by Mr. Fuentes, were not made under penalty of perjury. That said, the Court finds the portions of his declaration concerning RCWA's membership and activities are credible.

The Court finds the declarations of Messrs. Corbo, Fritzsche, and Harrison are based on some relevant knowledge, education, and experience concerning working conditions in American meat-processing plants generally, and so they possess some limited insight into what

[9] Smithfield filed a motion to strike Plaintiffs' five declarations attached to the motion for a temporary restraining order and/or preliminary injunction (Doc. 34). The Court denies the motion, since, in considering these motions, the issues it complains of go to the weight of the evidence rather than its admissibility.

steps could be taken to prevent the spread of the SARS-CoV-2 virus in a generic American meat-processing facility. Because they are unfamiliar with specific working conditions at the Plant, however, their declarations provide limited help in determining whether Smithfield's policies and procedure at the Plant are sufficient to stem transmission of the virus.

Finally, the Court turns to the declaration of Dr. Melissa J. Perry, Professor and Chair of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University. Dr. Perry credentials are excellent: She is a past President of the American College of Epidemiology and a past chair of the Board of Scientific Counselors for the CDC. She has also served as a member of the National Institute for Occupational Safety and Health research grant-review panel. She has studied meat-processing facilities since 2004 and has published six peer-reviewed-journal articles on work health and safety at meat-processing facilities. As part of that work, she has visited four meat-processing plants and spoken with engineers regarding the organizational structure of processing plants and how they can be redesigned to further worker health and safety.

Dr. Perry opines that meat-processing plants can allow workers to stand six feet apart if they reduce production line speed, and that, if they do not space production line workers six feet apart, the plants will "inevitably" have a COVID-19 outbreak. She contends slowing the production line is the only way the plant will be able to continue meat production without an outbreak. She also endorses the other requests Plaintiffs make, such as for more rest breaks and paid leave, as "absolutely necessary" so the Plant can continue operating.

This Court has respect for Dr. Perry's opinion but finds it of limited value in this case. While this Court agrees that slowing down line speed may be beneficial for workers and allow more opportunities for social distancing, the Court found nothing in the Joint Guidance

recommending a decrease in line speed. To that point, she provides no specific opinion regarding whether the Milan Plant is currently in compliance with the Joint Guidance, and there is no evidence that Dr. Perry reviewed the policies and procedures at the Milan Plant in forming her opinion. Accordingly, the Court gives little weight to her opinion that unless the production line speed is slowed and workers spread six feet apart, spread of the virus through the Plant is "inevitable" and it "will be forced to shutter." This assertion appears to be more of a good-faith speculation than an evidenced-based conclusion.

The Court gives more weight to the declarations provided by Smithfield. The statements made by Mr. Messman, the Plant's general plant manager, are almost all based on his personal knowledge. He possesses the most recent information concerning working conditions at the Plant, and he appears to be a reliable source of information about Smithfield's policies and procedures there.

The Court gives considerable weight to the declaration of John Henshaw, Smithfield's expert witness. After reviewing Smithfield's written policies and procedures at the Plant, the general manager's declaration, the pictures, and the declarations in Plaintiffs' motion, Mr. Henshaw opined that Smithfield's current policies and procedures, if followed, were consistent with the Joint Guidance as of April 29, 2020. Although the Court is aware that he is a retained expert witness whose assumptions and conclusions have not been tested by cross-examination, his opinion is measured, qualified, and grounded in the facts at the Milan Plant.

With the credibility determinations in mind, the Court makes the following findings of fact concerning current the Plant's working conditions and Smithfield's COVID-19 policies and procedures.

Before entering the Plant, Smithfield requires all employees to undergo thermal screening. If employees exhibit one primary symptom or two secondary symptoms of COVID-19,[10] Smithfield provides them with instructions for next steps, including directions to quarantine and call their physician for guidance, and sends the employee home for fourteen days of paid leave or until the individual receives a negative COVID-19 test result. Employees with underlying health concerns—verified by a doctor—that place them at a higher risk of COVID-19 are given fourteen days of paid leave and then are shifted to short-term disability leave.

While quarantining as a result of COVID-19 symptoms, Smithfield requires employees to complete a questionnaire that in part entails naming all other employees they have closely contacted within the two days before experiencing symptoms. If the employee tests positive for COVID-19, Smithfield notifies and screens the close contacts. As of April 29, 2020, thirteen employees had been tested for COVID-19. None were positive.

If employees miss work as a result of COVID-related symptoms, Smithfield does not penalize them. They do not receive attendance points and remain eligible for Smithfield's Responsibility Bonus ($500), regardless of whether individuals provide a doctor's or nurse's note. Moreover, Smithfield has expanded its employee benefits by eliminating co-pays for COVID-related testing and treatment.

To ensure that those inside the Plant are complying with Smithfield's COVID-19 safety procedures and policies, Smithfield has assigned both a nurse and a health-and-safety clerk to perform checks throughout the Plant. Smithfield has communicated these procedures and policies to its employees by several different media, including on televisions and signs at the Plant, through the Beekeeper communications app, and through the Textcaster mass

[10] Primary symptoms include fever, persistent dry cough, and shortness of breath, while secondary symptoms include chills, repeated shaking with chills, muscle pain/extreme fatigue, headache, sore throat, and/or loss of taste or smell (Doc. 46-2 at 8).

text-messaging tool. Signs at the Plant relay the information in English, Spanish, and French, while the Beekeeper and Textcaster communications are available in the employee's language of choice. Interpreters are also available at the Plant to assist with these communications.

The Plant provides workers with an ear-looped face mask upon entry to the Plant each day, and if a mask breaks or becomes soiled, it provides a new one. Smithfield now requires all workers at the Plant to wear a mask at all times other than during meals and in certain offices where employees are spaced six feet apart. These masks prevent the spread of germs if an employee sneezes or coughs while on the line, reducing the need for tissues to reduce the spread of COVID-19. Additionally, Smithfield requires employees on the production floor to wear nitrile gloves and a plastic face shield.

As Smithfield concedes, it does not provide tissues to employees. It cannot provide tissues to individuals working on the production line because doing so would violate health standards set by the USDA. Thus, one of Plaintiff's original complaints cannot be remedied. Smithfield could, however, provide tissues for employees to wipe their nose while on breaks, but the record does not support that employees are banned from bringing their own tissues or other hygienic wipes to use while on breaks.

As for Plaintiffs' claim that Smithfield does not allow employees to wash their hands without penalty, the Court finds that Smithfield policies and procedures are reasonable under the circumstances. Due to the nature of the meat-processing business, employees must wear gloves on the production line. When workers leave the line for a break, they remove their gloves and sanitize their hands before entering common areas. They must also wash their hands and put on gloves before returning to the line. Smithfield currently administers hand sanitizer to employees every thirty minutes to use on their gloves and has added approximately 110 hand-sanitizing

stations throughout the Plant. Smithfield also expects a shipment of small hand-sanitizer bottles soon, which it will make available to employees for personal use. In the meantime, the Plant has invited employees to bring in personal bottles they may refill using the company supply. Thus, the need for continued hand washing is unnecessary because any contamination that may occur on the line is contained by the required use of gloves.

Moreover, Smithfield has also enhanced cleaning and disinfection of the Plant's frequently touched surfaces in common areas using cleaning solutions identified by the CDC for use against the virus. These cleanings are performed as often as every two hours throughout the workday. Additional deep cleanings occur over the weekends, and Smithfield is working to implement use of fogging/misting disinfectants where possible.

Finally, the Court turns to the steps Smithfield has taken steps to facilitate social distancing at the Plant. Smithfield has staggered workday start times, as well as lunch and break times, to avoid large numbers of workers congregating in break rooms or around time clocks. Smithfield is currently working to secure a wireless means for employees to clock in and out of their shifts to minimize crowding. In the meantime, it has expanded the number of available clocks for employees to use and will implement a grace period for workers to clock in and out of their shifts, all increasing the ability of workers to maintain social distance.

Smithfield has erected two large tents and three carport structures on the Plant lawn and placed tables and chairs underneath each so that workers have more space to eat while on breaks. The Plant has also installed plastic barriers on eating tables that separate employees from those sitting beside and across from them. Tables are sanitized after one employee leaves and before another sits down.

Smithfield has also reduced the number of hogs harvested each day and sends some employees home before lunch. This requires fewer employees to be at the Plant, helping to minimize crowding in the cafeteria and other areas. However, these policies reduce the number of hours worked by the affected employees, thereby decreasing their weekly pay. To ease the resulting financial burden on employees, Smithfield has temporarily increased pay by $5/hour, and such pay is available to any employee who takes an approved leave as a result of COVID-related symptoms. Smithfield has also installed clear plastic barriers along the Plant production line to separate employees working across from each other and employees working side by side.

Discussion

I. The primary-jurisdiction doctrine applies.[11]

Before reaching the merits of Plaintiffs' request for a preliminary injunction, the Court must determine whether it should dismiss or stay this case pursuant to the primary-jurisdiction doctrine. "Primary jurisdiction is a common-law doctrine that is utilized to coordinate judicial and administrative decision making." *Access Telecomms. v. Sw. Bell Tel. Co.,* 137 F.3d 605, 608 (8th Cir. 1998) (citation omitted). "The doctrine allows a district court to refer a matter to the appropriate administrative agency for ruling in the first instance, even when the matter is initially cognizable by the district court." *Id.* (citation omitted). "There exists no fixed formula for determining whether to apply the doctrine of primary jurisdiction." *Id.* (citing *United States v. W. Pac. R.R. Co.,* 352 U.S. 59, 64 (1956)). Instead, courts must consider in each case "whether the reasons for the doctrine are present and whether applying the doctrine will aid the purposes

[11] Although Smithfield previously argued *Burford* abstention also applied here, it conceded during the preliminary-injunction hearing that that argument no longer applies due to the President's Executive Order. Accordingly, the Court does not address it. Because this Court finds the primary jurisdiction doctrine applies, it does not address Smithfield's preemption arguments, which were asserted after the preliminary-injunction hearing.

for which the doctrine was created." *Id.* (citation omitted). In undertaking this analysis, a court must be mindful that the primary-jurisdiction doctrine "is to be invoked sparingly, as it often results in added expense and delay." *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005). "Once a district court decides to refer an issue or claim to an administrative agency under the doctrine of primary jurisdiction, it may either dismiss or stay the action." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 913 (8th Cir. 2015).

There are two primary reasons courts apply the primary-jurisdiction doctrine. First, "to obtain the benefit of an agency's expertise and experience . . . 'in cases raising issues of fact not within the conventional experience of judges or cases requiring the exercise of administrative discretion. . . .'" *Access Telecomms.*, 137 F.3d at 608 (noting "'agencies created by Congress for regulating the subject matter should not be passed over'") (quoting *Far E. Conference v. United States*, 342 U.S. 570, 574 (1952)). Second, "to promote uniformity and consistency within the particular field of regulation." *Id.* (citation omitted). Thus, in deciding whether to apply the doctrine, courts focus on two questions: (1) "whether the issues raised in the case 'have been placed within the special competence of an administrative body,'" and (2) whether the court's disposition of the case could lead to inconsistent regulation of businesses in the same industry. *Sprint Spectrum L.P. v. AT&T Corp.*, 168 F. Supp. 2d 1095, 1098 (W.D. Mo. 2001) (quoting *United States v. W. Pac. R.R. Co.,* 352 U.S. at 64). In this case, the answer to both questions is yes.

Plaintiffs allege that because the Plant is not abiding by the Joint Guidance, it constitutes a public nuisance and has created an unreasonably unsafe workplace. Thus, Plaintiffs' claims both succeed or fail on the determination of whether the Plant is complying with the Joint Guidance. Due to its expertise and experience with workplace regulation, OSHA (in

coordination with the USDA per the Executive Order) is better positioned to make this determination than the Court is. Indeed, this determination goes to the heart of OSHA's special competence: its mission includes "enforcing" occupational safety and health standards. In fact, OSHA has already shown interest in determining whether the Plant is abiding by the Joint Guidance. The day before Plaintiffs filed this lawsuit, OSHA sent Smithfield a request for information regarding its COVID-19 work practices and infection at the Plant.

Turning to the second question, the Court finds only deference to OSHA/USDA will ensure uniform national enforcement of the Joint Guidance. If the Court ruled on whether the Plant is complying with the Joint Guidance, this ruling would be binding on Smithfield but not other meat-processing facilities because the Court lacks personal jurisdiction over them. Thus, any determination by this Court whether the Plant is complying with the Joint Guidance could easily lead to inconsistent regulation of businesses in the same industry. And under these circumstances, where the guidelines are rapidly evolving, maintaining a uniform source for guidance and enforcement is crucial.

Plaintiffs' argue that deference will add delay. But OSHA has already requested information about the Plant's safety measures. And if OSHA fails to act quickly on this information, Plaintiffs have a remedy: they may receive emergency relief through OSHA's statutory framework. Section 662(a) of the Occupational Safety and Health Act ("the Act"), 29 U.S.C. §§ 651 *et seq.*, permits the Secretary of Labor to petition the court "to restrain any [dangerous] conditions or practices in any place of employment . . . which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by [the Act]." Upon the filing of such petition, "the district court shall have jurisdiction to grant such injunctive

relief or temporary restraining order pending the outcome of an enforcement proceeding." *Id.* at § 662(b). If the Secretary "arbitrarily or capriciously fails to seek relief," a worker can file a writ of mandamus to compel the Secretary to seek such an order. *Id.* at § 662(d). Granted, there may be some delay before Plaintiffs can invoke this procedure, but following this procedure ensures the USDA and OSHA can take a measured and uniform approach to the meat-processing plants under its oversight. The Court's intervention at this point, on the other hand, would only risk haphazard application of the Joint Guidance.

In sum, the Court holds that the issue of Smithfield's compliance with OSHA's guidelines and regulations falls squarely within OSHA/USDA's jurisdiction. The Court finds dismissal without prejudice is preferable to a stay here so that Plaintiffs may seek relief through the appropriate administrative and regulatory framework.

III. Plaintiffs' have not met their burden for a preliminary injunction.

Although the Court's ruling on the primary-jurisdiction doctrine is dispositive, to aid in any appellate review, the Court will consider whether Plaintiffs have met their extraordinary burden of proving an affirmative preliminary injunction is proper in this case.

In determining whether to grant injunctive relief the Court considers the following factors, which were set forth in the seminal decision *Dataphase Sys., Inc. v. C L Sys., Inc.*, 640 F.2d 109, 114 (8th Cir. 1981): 1) the threat of irreparable harm to the movant; 2) the balance between this harm and any injury that granting the injunction will inflict on the non-moving party; 3) the likelihood that the moving party will prevail on the merits; and 4) the public interest. *Phelps-Roper v. Nixon*, 509 F.3d 480, 484 (8th Cir. 2007). No single factor is determinative; they must be "balanced to determine whether they tilt towards or away" from

granting the injunction. *Noodles Dev., LP. v. Ninth St. Partners, LLP*, 507 F. Supp. 2d 1030, 1034 (E.D. Mo. 2007).

Preliminary injunctive relief "is an 'extraordinary and drastic remedy, one that should not be granted unless the movant, by a clear showing, carries the burden of persuasion.'" *North Dakota v. U.S. Army Corps of Eng'rs*, 264 F. Supp. 2d 871, 878 (N.D. 2003) (quoting *Mazurek v. Armstrong*, 520 U.S. 968, 972 (1997)). This burden is particularly great where, as here, Plaintiffs seek a preliminary injunction requiring an affirmative act. *Sanborn Mfg. Co. v. Campbell Hausfeld/Scott Fetzer Co.*, 997 F.2d 484, 484 (8th Cir. 1993).

1. Plaintiffs have not demonstrated a threat of irreparable harm.

To demonstrate a sufficient threat of irreparable harm, the moving party must show that there is no adequate remedy at law; that is, that an award of damages cannot compensate the movant for the harm. *See Noodles Dev.*, 507 F.Supp.2d at 1036-37. But, when analyzing this factor, the Eighth Circuit has held that "[m]erely demonstrating the 'possibility of harm' is not enough." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 915 (8th Cir. 2015); *see also S.J.W.* ex rel *Wilson v. Lee's Summit R–7 Sch. Dist.,* 696 F.3d 771, 779 (8th Cir. 2012) ("Speculative harm does not support a preliminary injunction."). In the context of a global pandemic, this Court must consider the threat after "accounting for the protective measures" defendant has already implemented. *Valentine v. Collier*, --- F.3d ---, 2020 WL 1934431, *5 (5th Cir. Apr. 22, 2020).

Plaintiffs argue that their injury is potentially contracting COVID-19, which could result in serious illness or even death. But this type of injury is too speculative under Eighth Circuit precedent.

Plaintiffs' claim otherwise, citing two cases from the Eighth Circuit, which they argue held the possibility of "death or serious illness" constitutes an irreparable injury (Doc. 3 at 24). Plaintiffs' cite *Kai v. Ross*, 336 F.3d 650, 656 (8th Cir. 2003), a case in which the state of Nebraska revoked a program providing medical care for the needy. The plaintiffs, who suffered from physical and mental disabilities and received their prescription medications through the program, sought to enjoin revocation of the program. *Id.* The Eighth Circuit held that the present danger to plaintiffs' health without their medications is an irreparable harm. *Id.* Plaintiffs also cite *Harris v. Blue Cross Blue Shield of Mo.*, 995 F.2d 877, 879 (8th Cir. 1993), which similarly held that denial of coverage for the treatment of a life-threating illness is an irreparable injury. These two cases are inapposite, since the plaintiffs were already suffering from illnesses, and would undoubtedly suffer serious illness or death in the absence of an injunction.[12] In other words, the threat of serious injury or death was a certainty and not merely a possibility.

The Court is not unsympathetic to the threat that COVID-19 presents to the Plant's workers. But in conducting its analysis, the Court must determine whether Plaintiffs will suffer an actual, imminent harm if the injunction is denied. This is not the same as analyzing whether employees risk exposure if they continue to work, and, unfortunately, no one can guarantee health for essential workers—or even the general public—in the middle of this global pandemic.

[12] Plaintiffs also cite *Mertzlufft v. Bunker Res. Recycling & Reclamation, Inc.*, 760 S.W.2d 592 (Mo. Ct. App. 1988) as persuasive authority. In *Mertzluff*, the plaintiffs sought to enjoin a business which was illegally transporting, storing, and incinerating hazardous waste without a permit. *Id.* at 595. The plaintiffs brought a citizen's suit to enjoin the defendant from charging and loading the incinerator with hospital wastes, or otherwise operating it, which the trial court granted. *Id.* The Missouri court of appeals, reviewing the case under a standard deferential to the trial court's judgment—not operating under the preliminary injunction standard set forth in *Dataphase*—held that the preliminary injunction was warranted. *Id.* at 598. It did not, however, address whether the plaintiffs proved there was a threat of irreparable harm. *Id.* at 598. To the contrary, the court held that plaintiffs were "not obligated to allege and prove they had suffered irreparable harm in order to obtain injunctive relief, but were only required to prove that they were adversely affected in fact by the unlicensed operation, which they did." *Id.* Accordingly, this case is also inapplicable because the court of appeals did not consider—and plaintiffs were not required to prove—a threat of irreparable harm. But, even if they were, the defendant was illegally operating a hazardous waste facility, and thus presented a present threat of certain harm to the plaintiffs.

But given the significant measures Smithfield is now taking to protect its essential workers from COVID-19 and the fact that there are no confirmed cases of COVID-19 currently at the Plant, the Court cannot conclude that the spread of COVID-19 at the Plant is inevitable or that Smithfield will be unable to contain it if it occurs. Thus, Plaintiffs have not established an immediate threat of irreparable harm.

2. Plaintiffs have not shown that the balance of harms favors issuing injunctive relief.

The second factor "examines the harm of granting or denying the injunction upon both of the parties to the dispute and upon other interested parties, including the public." *Noodles Dev.*, 507 F. Supp. 2d at 1038 (citing *Dataphase*, 640 F.2d at 114). "To determine what must be weighed, . . . courts of this circuit have looked at the threat to each of the parties' rights that would result from granting or denying the injunction." *Id.* The "potential economic harm to the parties" is a relevant consideration, as is "whether the defendant has already voluntarily taken remedial action." *Id.*

Here, there is no doubt that if workers at the Plant contract COVID-19, the harm to Plaintiffs could be great. But Plaintiffs have alleged only that—potential harm—and, in this time, no essential-business employer can completely eliminate the risk that COVID-19 will spread to its employees through the workplace. Thus, it is important that employers make meaningful, good faith attempts to reduce the risk. Here, Smithfield has taken significant remedial steps in accordance with the Joint Guidance to protect its workers from COVID-19.

Moreover, national and local guidance on COVID-19 is continuously evolving and changing. An injunction would deny Smithfield the flexibility needed to quickly alter workplace procedures to remain safe during the ever-changing circumstances of this pandemic. *Valentine*, 2020 WL 1934431 at *5 (staying injunction that would "interfer[e] with the rapidly changing and

flexible system-wide approach that [defendant] has used to respond to the pandemic so far" and "[defendant's] ability to continue to adjust its policies is significantly hampered by the preliminary injunction, which locks in place a set of policies for a crisis that defies fixed approaches") (citing *Jacobson v. Massachusetts*, 197 U.S. 11, 28–29 (1905); *In re Abbott*, 954 F.3d 772, 791 (5th Cir. 2020)). Thus, the remedial measures Smithfield has implemented convince the Court that the balance of harms weighs in its favor.

3. Plaintiffs have not shown a likelihood of success on the merits.

To demonstrate likelihood of success on the merits, a movant does not need to show that it ultimately will succeed on its claims, only that the movant's prospects for success is *sufficiently likely* to support the kind of relief it requests. *See Noodles Dev.*, 507 F.Supp.2d at 1036–37 (emphasis added) (citations omitted). That is, the movant need only show "a fair chance of prevailing." *Phelps-Roper*, 509 F.3d at 485. On this record, Plaintiffs have not shown a fair chance of prevailing on either of their claims.

a. Plaintiffs have not shown they are likely to succeed on their public-nuisance claim.

Under Missouri law, "a public nuisance is an offense against the public order and economy of the state and violates the public's right to life, health, and the use of property, while, 'at the same time annoys, injures, endangers, renders insecure, interferes with, or obstructs the rights or property of the whole community, or neighborhood, or of any considerable number of persons.'" *State* ex rel. *Schmitt v. Henson*, ED 107970, 2020 WL 1862001, at *4 (Mo. Ct. App. April 14, 2020) (citations omitted).

The parties agree that the Plant cannot be a public nuisance simply by virtue of the fact that it is a meat-processing plant during a global pandemic. Moreover, in this case, Smithfield has implemented substantial health and safety measures to protect Plant workers, and no

employees of the Plant have been diagnosed with COVID-19. While Plaintiffs argue that Smithfield could do more to protect its workers, that is not the issue before this Court. The issue is whether the Plant, as it is currently operating, constitutes an offense against the public order. Because of the significant measures Smithfield has implemented to combat the disease and the lack of COVID-19 at the facility, the Plant cannot be said to violate the public's right to health and safety. Thus, the Court finds that Plaintiffs are unlikely to be succeed on their public nuisance claim.

b. Plaintiffs have shown they are unlikely to succeed on their right to a safe workplace claim.

Under Missouri law, Plaintiffs must prove that Smithfield negligently breached its duty to provide a safe place to work and that such negligence was the direct and proximate cause of the Plaintiffs injuries. *Hamilton v. Palm*, 621 F.3d 816, 818 (8th Cir. 2010). As discussed, Smithfield has taken substantial steps to reduce the potential for COVID-19 exposure at the Plant and appears to the Court to be complying with the Joint Guidance regarding the same. Thus, Plaintiffs are not substantially likely to prove Smithfield breached any duty.

More importantly, however, Plaintiffs have not alleged they have suffered any injury, only that they may suffer an injury in the future. A potential injury is insufficient to state a claim of the breach of the duty to provide a safe workplace under Missouri law. Plaintiffs citation to *Smith v. W. Elec. Co.*, 643 S.W.2d 10 (Mo. Ct. App. 1982), to establish that they have stated a sufficient injury is unavailing. In *Smith*, the plaintiff proved that he had been exposed to harmful second-hand smoke in the workplace which caused him to suffer a severe adverse reaction. *Id.* at 12. The adverse reaction was the actual injury he suffered, and he suffered this harm—and sought relief through an administrative process—before seeking an injunction. Thus, *Smith* is not analogous to this case, and Plaintiffs have not shown they are likely to be successful on their

OSHA-004137

breach of a safe workplace claim.

4. The public interest factor is neutral.

Certainly, the spread of COVID-19 is a public-health matter of great concern, and, so, preventing transmission of the virus which causes COVID-19 is within the public interest. At the same time, the public has an interest in maintaining the food-supply chain and access to meat products, an interest which might be impaired if the Court granted the injunction. Because Smithfield's current policies and procedures temper public health worries, the Court finds a preliminary injunction is not in the public interest at this time.

Thus, Plaintiffs have not met their extraordinary burden of showing an affirmative preliminary injunction is warranted in this case.

III. Plaintiffs' requested relief lacks the specificity required for a preliminary injunction.

Finally, the Court finds that Plaintiffs requested relief is impermissibly vague. Federal Rule of Civil Procedure 65(d) states that an injunction must be "specific in [its] terms" and describe in reasonable detail the actions sought to be enjoined. Fed. R. Civ. P. 65(d). This specificity requirement is "designed to prevent uncertainty and confusion on the part of those to whom the injunction is directed and to avoid the possible founding of a contempt citation on a decree too vague to be understood." *Helzberg's Diamond Shops, Inc. v. Valley W. Des Moines Shopping Ctr., Inc.*, 564 F.2d 816, 820 (8th Cir. 1977).

In this case, Plaintiffs request this Court enter an injunction requiring Smithfield to "make all reasonable changes to its 'production practices,' including potentially lowering its line speeds, to place as many workers as possible at least six feet apart" (Doc. 46 at 10). Plaintiffs do not explain what changes would be "reasonable," except for "potentially" reducing line speeds. In other words, they do not specify in reasonable detail what Smithfield should do. They

demand workers have "reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing," but they do not specify how often or how long such breaks should take place, or what would constitute a reasonable break. Finally, Plaintiffs request the Court order Smithfield to change its policies to "not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers." But Plaintiffs do not identify which policies should be eliminated, what constitutes "reasonable steps," or why Smithfield's current policies are insufficient. Because "a person of ordinary intelligence" would not understand what is prohibited based on Plaintiffs' proposed preliminary injunction, *Schenck v. Pro-Choice Network of W. N.Y.*, 519 U.S. 357, 383 (1997), it is impermissibly vague, and thus unenforceable.

Conclusion

Plaintiffs are naturally concerned for their health and the health of their community in these unprecedented times. The Court takes their concern seriously. Nevertheless, the Court cannot ignore the USDA's and OSHA's authority over compliance with the Joint Guidance or the significant steps Smithfield has taken to reduce the risk of a COVID-19 outbreak at the Plant.

For the reasons discussed above, Defendants motion to dismiss is GRANTED, and the case is DISMISSED without prejudice.

IT IS SO ORDERED.

Date: May 5, 2020

Ms. Loren Sweatt, MBA
Principal Deputy Assistant Secretary
Occupational Safety and Health Administration
200 Constitution Avenue, NW
Washington, D.C. 20210

Dear Ms. Sweatt,

I would like to thank you for testifying at the May 28th Workforce Protections Subcommittee hearing entitled *"Examining the Federal Government's Actions to Protect Workers from COVID-19."*

Please find enclosed additional questions submitted by Committee Members following the hearing. Please provide a written response no later than Thursday, July 2, 2020 for inclusion in the official hearing record. Your responses should be sent to Jordan Barab of the Committee staff. He can be contacted at 202-225-3725 should you have any questions.

I appreciate your time and continued contribution to the work of the Committee.

Sincerely,

ROBERT C. "BOBBY" SCOTT
Chairman

Enclosure

Workforce Protections Subcommittee Hearing
"Examining the Federal Government's Actions to Protect Workers from COVID-19"
Thursday, May 28, 2020 10:15 a.m.

Chairman Robert C. "Bobby" Scott (D-VA)

- Has OSHA staff conducted any preliminary work on a draft Emergency Temporary Standard (ETS) for COVID-19? If so, what is the status of that preliminary work product?

- If an OSHA state plan requested a draft ETS for COVID-19 from OSHA, would OSHA provide a copy of its draft ETS for COVID-19?

- If an OSHA state plan requested technical assistance in drafting a state based ETS for COVID-19, would OSHA provide technical assistance in drafting an ETS for COVID-19?

- If an OSHA state plan issues an ETS that has additional safety requirements for COVID-19 beyond that set forth in the OSHA/CDC Guidance for Meat and Poultry Processing Workers and Employers, would OSHA seek to pre-empt that that state standard as inconsistent with the Guidance?

- The HEROES Act (H.R. 6800), which was passed by the House on May 15, 2020, includes a provision in Division L requiring OSHA to issue an Emergency Temporary Standard, That legislation would require employers to prepare an exposure control plan tailored to the particular workplace.

    - What is OSHA's position on this specific legislation? Does it support or oppose it? If opposed, please explain the specific reasons for OSHA's opposition?
    - Would you be prepared to work with the Committee to address OSHA's concerns?

Representative Alma Adams (D-NC)

- Do you believe that COVID-19 presents a "a grave danger" to workers?

    - If not, what is the DOL's threshold for determining whether COVID-19 presents a grave danger to workers?

- CDC reports that as of June 4, 2020, there are almost 80,000 health care workers infected with COVID-19 and over 400 who have died from COVID-19. Does this meet the threshold for COVID-19 to constitute a grave danger to health care workers?

- Last month, OSHA announced a new round of Susan Harwood Worker Training Grants, but these programs won't begin until October.

- In the meantime, is it true that OSHA is prohibiting current grantees from conducting COVID-19 training, or changing the terms of their work plans to include COVID-19 training?

- As you know, following the H1N1 pandemic, OSHA began work in earnest on an Infectious Disease Standard. Although OSHA's Bloodborne Pathogens Standard has been very effective in protecting workers from bloodborne pathogens, it does not address infectious diseases transmitted by other routes (e.g., contact, droplet and airborne). Work on the Infectious Disease Standard was relegated to the long-term agenda in 2017. Please address the following:

  - What remained to be done to issue an official proposal for this Infectious Disease Standard?

  - When do you expect to issue a proposed standard for notice and comment?

  - What specific actions have been taken with respect to the completion of the OSHA Infectious Disease Standard since it was relegated to the long-term agenda? Please list these actions.

  - Who specifically decided to remove the Infectious Disease Standard from the active regulatory agenda? Was this decision made by the Secretary of Labor? Was this decision made by the White House?

  - In addition to COVID-19, workers are also exposed to tuberculosis, influenza, MRSA and other transmissible pathogens (not covered under the bloodborne pathogen standard). What are the benefits to worker safety from finalizing a comprehensive Infectious Disease Standard particularly for health care workers, first responders, and other populations at elevated risk? How do these benefits compare with just relying on existing standards and the General Duty Clause?

  - If the permanent Infectious Disease Standard had been issued prior to the COVID-19 pandemic, would it have provided OSHA with additional tools to protect health care and social assistance workers during the COVID-19 pandemic?

  - Does OSHA intend to resume work on a permanent Infectious Disease Standard this calendar year?

  - What is OSHA's next planned action for a permanent infectious disease standard?

- There has been a widespread and growing number of COVID-19 infections of workers in the meatpacking industry.

- How many complaints has OSHA received regarding conditions in meatpacking and poultry plants?

- How many physical, onsite inspections has OSHA conducted in the meatpacking and poultry industry?

- How many of these inspections has OSHA closed?

- How many citations have been issued following these meatpacking and poultry plant inspections?

- After President Trump issued the April 28, 2020 Executive Order Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, you and Solicitor of Labor Kate O'Scannlain issued a statement stating that "OSHA will take into account good faith attempts to follow the Joint Meat Processing Guidance."

    - Who directed you and the Solicitor to issue this Memorandum?

    - Please define "good faith attempts" and provide any instructions to CSHO's describing how to determine whether an employer has made a "good faith attempt" to comply with CDC guidance.

    - Please explain how OSHA defines "feasible" in this context and provide any instructions to CSHO's describing how to determine whether an employer's claim that it was infeasible to comply with CDC guidance is legitimate.

    - How many times has OSHA declined to issue a citation, despite an identified violation of an OSHA standard or the General Duty Clause, because the employer documented a "good faith" attempt to comply with the OSHA/CDC Guidelines? Please provide examples.

    - How many times has OSHA declined to issue a citation, despite an identified violation of an OSHA standard or the General Duty Clause, because the employer documented infeasibility to comply with the OSHA/CDC Guidelines? Please provide examples.

    - Keeping workers infected with COVID-19 out of meatpacking plants is necessary. However, the OSHA/CDC Guidelines say that "Screening meat and poultry processing workers for COVID-19 symptoms (such as temperature checks) is an optional strategy that employers may use." How does an employer show "good faith", since testing is optional?

- Since studies show that many of those who are infected with COVID-19 are asymptomatic, or pre-symptomatic, please explain why screening for fevers prior to employee entry to a meatpacking plant is sufficient to keep the infection out of work

settings?

- Would mandatory testing of employees for COVID-19 on a regular basis prior to entry to a meatpacking plant be more effective than screening for fevers? If so, why has the OSHA/CDC Guidelines not been updated to require this?

- Except for state and local regulations that are of "general applicability", OSHA's regulations generally pre-empt the field of worker safety protections in those states where federal OSHA has jurisdiction.

    - Is it DOL's view that non-binding OSHA Guidance or non-binding OSHA/CDC Guidance pre-empts enforcement actions by state health agencies, if the state health agencies require meat processers to take more protective measures than those in the Joint CDC/OSHA Guidance for Meatpacking Industry?

    - Are regulations and enforcement actions by state health agencies, which are seeking to control infections in congregate workplace settings as a necessary means of controlling community spread, subject to federal pre-emption by OSHA?

- How are you ensuring that OSHA inspectors can perform inspections without putting themselves at risk of infection?

- OSHA officials have stated previously that the Bloodborne Pathogens Standard can be effectively used to keep workplaces safe from COVID-19. Can you explain how this standard is relatable to a virus that is spread through airborne droplets?

Representative Pramila Jayapal (D-WA)

- How many on-site inspections has OSHA conducted related to COVID-19?

    - How many remote investigations or inquiries related to COVID-19 has OSHA conducted using remote "Phone-Fax" or Rapid Response Investigation (RRI) procedures?

    - How many of those remote investigations or inquiries were the result of complaints?

    - How many of these remote investigations or inquiries resulted in inadequate responses from the employer?

    - In how many of those remote investigations or inquiries, conducted as a result of complaints, did OSHA contact the complainant to determine if the employer's assurances were accurate, as described in Chapter 9, Section I(I) of the Field Operations Manual?

- How many Hazard Alert Letters has OSHA issued recommending the implementation of protective measures that address SARS-CoV-2 hazards? Please provide a total, sorted by 4-digit NAICS code.

- How many COVID-19 related fatality reports has OSHA received? Please provide this information sorted by 4-digit NAICS code.

- How many of the fatality reports that OSHA has received were investigated?

- How many of those investigated were conducted by on-site inspections?

- Please provide a list of facilities that have submitted fatality reports to OSHA for deaths due to COVID-19 infections.

- How many of OSHA's fatality investigations for COVID-19 resulted in citations related to the fatality?

- Please describe any actions OSHA is taking to ensure that all COVID-19 work-related fatalities are reported to OSHA.

Representative Bradley Byrne (R-AL)

- Ms. Sweatt, OSHA's recent guidance on recording COVID-19 cases asked employers to ascertain whether an individual came down with COVID-19 as a result of exposure at work. The guidance requires employers to interview employees about other possible sources of exposure. I am concerned about workers' privacy. Does OSHA have suggestions on how to handle privacy concerns?

- Ms. Sweatt, I am also worried about the reliability of this data given that our understanding about transmission, recovering, and asymptotic infections is constantly evolving and that employers are not equipped to do the type of contract tracing needed to identify sources. Inaccurate data could later be used to make erroneous conclusions or misused to mischaracterize the situation at a workplace or in a community. While I know it's very important for public health agencies to track cases, has OSHA considered alternatives to having employers make cursory and possibly unreliable work-related determinations?

OSHA-004178

I. PRELIMINARY STATEMENT

Plaintiffs Rural Community Workers Alliance ("RCWA") and Jane Doe ("Plaintiffs") initiated this action on April 23, 2020 seeking extraordinary relief in the form of a mandatory injunction. In support, they have offered allegations that grossly misrepresent the substantial safety measures that Smithfield has implemented at its Milan, Missouri Plant (the "Plant"). It is not surprising that not a single Smithfield employee was willing to apply their name to this baseless lawsuit. Plaintiffs' request that this Court develop, monitor, and administer Smithfield's occupational health and safety program at the Plant is unprecedented and improper.

In any event, the Court never needs to reach the merits of the Complaint or consider Plaintiffs' overreaching request for injunctive relief. Rather, pursuant to the primary jurisdiction doctrine, the Court can—and should—dismiss or stay this suit in favor of the Occupational Health and Safety Administration's ("OSHA") regulatory authority over workplace safety issues and the Missouri Department of Health and Senior Services' ("MDHSS") jurisdiction over public health in Missouri. Even if the Court does not dismiss or stay the suit because OSHA has primary jurisdiction, there is an independent basis for dismissal under *Burford* abstention.

Indeed, OSHA is already in the process of exercising its jurisdiction at the Plant. On the day before Plaintiffs filed their Complaint in this case, OSHA sent Smithfield a "Rapid Response Investigation" requesting information regarding its COVID-19 work practices and infection at the Plant, giving Smithfield only seven days to respond. Smithfield is preparing its response for submission on April 29, and intends to cooperate fully with OSHA. The Court should defer to OSHA and its expertise to investigate and enforce any purported safety violations at the Plant. Indeed, on Sunday, April 26, 2020, OSHA and the Centers for Disease Control ("CDC") joined together and issued specific COVID-19 guidance for meat processing plants.

In addition to OSHA's oversight, the MDHSS has the authority to implement all appropriate and necessary measures to protect the public from the spread of COVID-19. And another layer of public health oversight—county public health administrators—provides further protection. Indeed, where food processing plants in Missouri have seen *actual* employee infections—as opposed to speculation about *future* infections—county public health administrators have worked closely with plants to protect employees and the public.

Public policy strongly supports the Court deferring to OSHA and MDHSS on these issues. Smithfield is an essential business critical to the nation's food supply. There are many other essential businesses operating throughout the country that are critical to the country's survival. Subjecting these entities to private lawsuits for injunctive relief, in which safety standards are determined piecemeal by plaintiffs and the courts, will result in inconsistent rulings and uncertainty for both employers and employees.

The workplace safety and public health concerns created by the novel coronavirus are both outside the conventional experience of judges and squarely within the technical and policy expertise of OSHA and MDHSS. The agencies are already responding to these concerns in real time, adapting as new facts emerge. That is not a role that a district court can or should take on. Plaintiffs are wrong to ask the Court to interpose itself between these agencies and essential businesses like Smithfield's Milan Plant. Considerations of institutional competency and prudence militate strongly in favor of a dismissal or stay on primary jurisdiction, or a dismissal based on *Burford* abstention, and the Court should grant Smithfield's Motion.

II. FACTS

A. Smithfield and the Plant

The named defendants in this action are Smithfield Foods, Inc. and its wholly owned subsidiary, Smithfield Fresh Meats Corp. (collectively, "Smithfield"). The Plant at issue is a meat

processing facility, which is an essential business that has lawfully continued to operate under the Governor of Missouri's stay at home order.[1] The Plant and its operations constitute "critical infrastructure" pursuant to the guidelines issued by the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency, which were adopted in Missouri's stay at home order.[2]

The Plant has voluntarily implemented substantial workplace safety measures in response to COVID-19, including providing personal protective equipment such as masks and face shields to all workers and persons who enter the building, social distancing both in common areas,, installing partitions between line workers, conducting temperature scans, providing multiple hand-sanitizer stations, implementing additional sanitation of workspaces and other areas, and encouraging workers to stay home when sick with pay and without penalty. These measures will be further detailed in Smithfield's response to Plaintiffs' Motion for Preliminary Injunction/Temporary Restraining Order to be filed on April 29, 2020.

As of the date of this filing, there have been no confirmed diagnoses of COVID-19 at the Plant.[3] Moreover, to Smithfield's knowledge, there have been no positive cases reported in Sullivan County (which surrounds the city of Milan). A majority of counties adjacent to Sullivan

---

[1] Mo. Exec. Order (April 3, 2020), https://governor.mo.gov/priorities/stay-home-order, *see* **Exhibit 1**.

[2] *See id.* Item 2 (incorporating CISA's definition of "critical infrastructure); U.S. CYBERSECURITY AND INFRASTRUCTURE SECURITY AGENCY, ADVISORY MEMORANDUM ON IDENTIFICATION OF ESSENTIAL CRITICAL INFRASTRUCTURE WORKERS DURING COVID-19 RESPONSE (April 17, 2020), https://www.cisa.gov/sites/default/files/publications/Version_3.0_CISA_Guidance_on_Essential_Critical_Infrastructure_Workers_4.pdf, p. 8 (defining "critical infrastructure" employees to include "food manufacturer employees," such as those working in "livestock [and] poultry … slaughter facilities").
[The order references Version 2.0 of the guidance, which appears to be no longer publicly available, as it was removed from the CISA website after Version 3.0 was published. A description of the update on CISA's website indicates the definitions regarding food processing plants remain unchanged. *See* https://www.cisa.gov/publication/guidance-essential-critical-infrastructure-workforce.]

[3] *See* MISSOURI DEPT. OF HEALTH & SENIOR SERVICES, COVID-19 OUTBREAK GUIDE, https://health.mo.gov/living/healthcondiseases/communicable/novel-coronavirus/results.php (last accessed April 27, 2020).

County also have zero positive cases to date, and the case counts are relatively low in the few adjacent counties that have reported positive cases.[4]

B. Plaintiffs' Allegations and Request for Relief

Plaintiffs assert claims about Smithfield's safety practices as they relate to potential COVID-19 exposure and seek declaratory and injunctive relief. *See* Compl. However, Plaintiffs do not allege that there have been any positive diagnoses associated with the Plant, and as noted above, Smithfield is aware of none.

To be clear, this is not a suit for personal injury or wrongful death. RCWA does not allege that any of its members have contracted COVID-19 at the Plant or otherwise. Likewise, Jane Doe does not allege that she has tested positive for COVID-19. Indeed, Plaintiffs stipulate that they are not seeking money damages. Compl. at ¶ 16.

Plaintiffs seek a declaration that "Smithfield's failure to implement appropriate worker protections during the COVID-19 crisis constitutes a public nuisance under Missouri law and a violation of the right to a safe work place under Missouri law." Compl. at ¶ 123. However, the primary relief sought by Plaintiffs is a Court Order, in the form of an injunction, requiring Smithfield to adopt a list of work practices, many of which are vague and ill-defined, such as "providing sufficient personal protective equipment" and "creating and implementing a social distancing plan for the Plant" and "creating and implementing a protocol to clean surfaces." Complaint at ¶ 123. Plaintiffs also request that the Court require Smithfield to allow Plaintiffs' experts to inspect the plant to identify additional precautions that Smithfield should take. *Id.* at ¶ 123(viii). Smithfield will demonstrate in its response to Plaintiffs' Motion for Preliminary

[4] Compare the number of positive cases in neighboring counties (Adair - 12, Livingston - 2, Linn - 5, and Macon - 2) with other significant outbreak locations in the state (St. Louis County - 2,897, Kansas City - 500, Greene County - 83). *Id.*

Injunction that it has already implemented all of the safety measures for which Plaintiffs' seek injunctive relief.

C. OSHA's Request for Information

On the day before this case was filed, Smithfield received a request for information from OSHA regarding its COVID-19 safety practices at the Plant. *See* **Exhibit 2**. OSHA has directed Smithfield to respond to the request for information by Wednesday, April 29, 2020. *Id.* Smithfield intends to cooperate fully with OSHA in this matter.

D. OSHA's Role

The Occupational Safety and Health Act, 29 U.S.C. §§ 651, *et. seq.* (the "Act"), was enacted "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources." 29 U.S.C. § 651(b). The Act authorizes "the Secretary of Labor to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce." *Id.* at § 651(b)(3).

OSHA is the federal agency charged with administering the Act. OSHA provides a procedure for an employee who is concerned about workplace safety to file a confidential complaint requesting that OSHA initiate an investigation into the employer's work practices.[5]

The Act provides for "an effective enforcement program." *Id.* at § 651(b)(10). The Act authorizes OSHA to inspect or investigate any place of employment in order to carry out the purposes of the Act. *Id.* at § 657. OSHA may issue a citation to an employer for any violation of the Act, including the General Duty Clause, which requires an employer to furnish "a place of employment which [is] free from recognized hazards that are causing or are likely to cause death

[5] *See* https://www.osha.gov/workers/file_complaint.html

or serious harm." *Id.* at § 658. Any such citation "shall fix a reasonable time for the abatement of the violation." *Id.* The Act provides for additional enforcement mechanisms if an employer does not correct a violation for which a citation has been issued. *Id.* at § 659. The Act further provides for penalties for violations and/or failure to abate. *Id.* at § 666.

The Act specifically includes procedures to address an imminent danger. *Id.* at § 662. The Act permits the Secretary of Labor to petition the court

> to restrain any conditions or practices in any place of employment which are such that a danger exists which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by [the Act].

Id. The Act authorizes an employee to file a writ of mandamus to compel the Secretary to seek such an order if the employee believes that the Secretary "arbitrarily or capriciously fails to seek relief." *Id.*[6] In such a case, OSHA is directly involved, and the court is not acting without the agency's participation.

OSHA has published "Guidance on Preparing Workplaces for COVID-19," which makes clear that the agency will use the General Duty Clause to enforce any unsafe conditions relating to COVID-19. **Exhibit 3** at 4. OSHA's General Duty Clause provides that "employers are required to provide their employees with a workplace free of recognized hazards likely to cause death or serious physical harm." *Id.* OSHA has also issued Interim Enforcement Guidance for Coronavirus Disease 2018 (issued April 13, 2020), which identifies applicable standards that may apply to COVID-19.[7] *See* **Exhibit 4.** On Sunday, April 26, 2020, the CDC and OSHA jointly issued Interim Guidance ***specific*** to the meat processing industry. *See* **Exhibit 5**.

---

[6] Plaintiffs' Opposition, which purports to provide a timeline of OSHA action, ignores these emergency procedures. Opposition at 3.

[7] These include the following:
29 CFR § 1904, Recording and Reporting Occupational Injuries and Illness;

E. Plaintiffs' Criticisms of OSHA

In Plaintiffs' Opposition to Letter Request for Extension of Time to Respond to Plaintiffs' Emergency Motion for a Preliminary Injunction (Doc. 19), Plaintiffs make several unfounded criticisms of OSHA and its response to COVID-19, to which Smithfield briefly responds below.

- Plaintiffs contend that "OSHA is hardly performing any onsite inspections," Opposition at 2-3. However, Plaintiffs do not provide any support for this statement. Whether true or not, OSHA continues to pursue its mission and is conducting aggressive investigations using electronic means and demands for information, as is evidenced by its request to Smithfield regarding the Milan Plant.
- Plaintiffs suggest that OSHA is not investigating meat processing plants. Opposition at 3. This is a red herring. Whatever OSHA's general policy is with respect to meat processing plants, it has inserted itself into safety issues at Smithfield's Milan Plant. Moreover, just yesterday, OSHA and CDC issued joint guidance regarding COVID-19 safety issues directed at meat processing facilities.
- Plaintiffs contend that OSHA may only issue a citation to "abate[]" a violation after an inspection. 29 U.S.C. § 658(a). Opposition at 3. This is patently incorrect. OSHA may seek an immediate injunction under its emergency powers, as discussed above.

---

29 CFR § 1910.132, General Requirements [Personal Protective Equipment]
29 CFR § 1910.133, Eye and Face Protection
29 CFR § 1910.134, Respiratory Protection
29 CFR § 1910.141, Sanitation
29 CFR § 1910.145, Specifications for Accident Prevention Signs and Tags
29 CFR § 1910.1020, Access to Employee Exposure and Medical Records
29 CFR § 1910.1030, Bloodborne Pathogens

- Plaintiffs contend that "even if their claims were not emergent, the wait for OSHA to act would likely be years." Opposition at 3. Again, this is incorrect. Plaintiffs cite to statutes of limitations (6 months for OSHA to issue a citation) and employer response times (15 days), which are outer limits. Moreover, Plaintiffs assume an appeals process—a process that is available in the courts is well.

F. State and Local Public Health Authority Over COVID-19

While OSHA is responsible for *workplace* safety, Missouri state and local government has a corresponding responsibility for *public* safety. Missouri, like other states around the country, has implemented statewide policies to address the threat of COVID-19 exposure and transmission.

Governor Parson, through the Missouri Department of Health and Senior Services ("MDHSS"), issued a "stay-at-home" order on April 3, 2020.[8] The order includes general COVID-19 safety requirements and guidelines pertaining to individuals, as well as the operations of both essential and non-essential businesses.[9] The Governor assigned responsibility for implementing and enforcing specific COVID-19 safety measures to "all local and state health authorities." Mo. Rev. Stat. Ann. § 192.290.[10]

MDHSS continues to fulfill this responsibility, as it has issued dozens of guidance statements[11] containing specific COVID-19 safety measures, including several statements pertaining specifically to workplace safety.[12] Additionally, MDHSS and local health agencies

---

[10] *See id.*, p. 2.
[11] *See* MDHSS, HEALTH ALERTS, ADVISORIES & UPDATES, https://health.mo.gov/emergencies/ert/alertsadvisories/index.php (last accessed April 26, 2020)
[12] *See, e.g.,* MDHSS, INTERIM GUIDANCE FOR IMPLEMENTING SAFETY PRACTICES FOR CRITICAL INFRASTRUCTURE WORKERS, https://health.mo.gov/emergencies/ert/ alertsadvisories/pdf/update 4920.pdf (last accessed April 26, 2020); MDHSS, COVID-19 AND RETURN TO WORK MESSAGING - EXPANDED GUIDANCE FOR CRITICAL INFRASTRUCTURE PERSONNEL INVOLVED IN THE PROVISION OF DIRECT CLIENT CARE, https://health.mo.gov/emergencies/ert/alertsadvisories/pdf/guidance41720.pdf (last accessed April 26, 2020).

OSHA-004186

have worked closely with a number of private businesses to monitor and develop their COVID-19 safety measures.[13] MDHSS has also worked closely with federal agencies in responding to the virus,[14] and the Center for Disease Control has made itself available to assist state and local agencies in their response to health emergencies such as COVID-19.[15]

Missouri's COVID-19 response led by state and local agencies is consistent with—and in fact required by—Missouri law. All "public health functions and programs" in Missouri must be supervised and managed by the MDHSS. Mo. Rev. Stat. Ann. § 192.005. Further, Missouri regulations specifically provide that the Director of MDHSS must use "the legal means necessary to control … any disease or condition listed in 19 Mo. CSR 20-20.020 which is a threat to the public health." 19 Mo. C.S.R. 20-20.040. Listed diseases and conditions include "[o]utbreaks (including nosocomial) or epidemics of any illness, disease, or condition that may be of public health concern." 19 Mo. C.S.R. 20-20.020. That provision undoubtedly covers COVID-19.

Under MDHSS regulations, upon report of an infectious disease under Section 20-20.020, both the Director and "local health authorit[ies]" have a duty to take appropriate measures to lessen the effect of the disease:

OSHA-004187

(A) Inspect any premises that they have reasonable grounds to believe are in a condition conducive to the spread of the disease; . . .

(E) Establish and maintain quarantine, isolation or other measures as required;…

(G) Establish appropriate control measures which may include isolation, quarantine, disinfection, immunization, closure of establishment, notification to the public of the risk or potential risk of the disease and such information required to avoid or appropriately respond to the exposure, the creation and enforcement of adequate orders to prevent the spread of the disease and other measures considered by the department and/or local health authority as appropriate disease control measures based upon the disease, the patient's circumstances, the type of facility available, and any other available information related to the patient and the disease or infection.

19 Mo. C.S.R. 20-20.040.

III. ARGUMENT

A. The Court Should Dismiss or Stay This Action In Favor of OSHA's Primary Jurisdiction Over Workplace Safety.

1. Legal Standard for Invoking Primary Jurisdiction Doctrine

The doctrine of primary jurisdiction applies to claims "properly cognizable in court that contain some issue within the special competence of an administrative agency." *Reiter v. Cooper*, 507 U.S. 258, 268 (1993). It is a "common-law doctrine that is utilized to coordinate judicial and administrative decision making." *Access Telecommunications v. Southwestern Bell Tel. Co.*, 137 F.3d 605, 608 (8th Cir. 1998) (citations omitted). The doctrine "is concerned with promoting proper relationships between the courts and administrative agencies charged with particular regulatory duties." *United States v. Western Pac. R.R. Co,* 352 U.S. 59, 63 (1956).

There is no set formula for when the doctrine applies, but "[i]n every case the question is whether the reasons for the existence of the doctrine are present and whether the purposes it serves will be aided by its application in the particular litigation." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 909 (8th Cir. 2015) (quoting *United States v. Western Pac. R.R. Co.*, 352 U.S. 59, 64 (1956)); *Asarco, LLC v. NL Indus.*, No. 11-00123-CV-SW-BP, 2013 U.S. Dist. LEXIS 43013,

OSHA-004188

*9 (W.D. Mo. Mar. 18, 2013). The two primary reasons for applying the primary jurisdiction doctrine are: (1) "to obtain the benefit of the agency's expertise and experience"; and (2) "to promote uniformity and consistency within the particular field of regulation." *Sprint Spectrum L.P. v. AT&T Corp.*, 168 F.Supp.2d 1095, 1097-98 (W.D. Mo. 2001) (citations omitted).

The doctrine of primary jurisdiction may be applied even where claims arise under state law. For example, in *Sprint Sprectrum L.P.*, the plaintiff asserted state law claims for implied contract and quantum meruit. 168 F.Supp.2d at 1099. Nevertheless, the court stayed the case in favor of an FCC proceeding because the outcome turned on the "reasonableness" of Sprint's rates, "a fact that must be proven and one which the FCC is in a better position than the Court to evaluate." *Id.* at 1099-1100; *see also Nader v. Allegheny Airlines*, 426 U.S. 290, 296-97 (1976) (observing that the D.C. Court of Appeals determined that the viability of plaintiff's common-law fraudulent misrepresentation claim would be affected by agency determination).[16]

Moreover, as the cases cited herein demonstrate, there need not be an existing agency proceeding for the court to invoke the doctrine of primary jurisdiction.[17] However, the fact that a collateral agency action is already underway weighs in favor of the court deferring to the agency process. *See Asarco*, 2013 U.S. Dist. 43013 at *14-19.

In applying the primary jurisdiction doctrine, the court has discretion whether to dismiss or stay the lawsuit pending the agency determination. *Chlorine Institute*, 792 F.3d at 913 (citing *Reiter*, 507 U.S. at 268-69). Generally, dismissal is appropriate where resolution of the deferred

---

[16] Plaintiffs' Opposition brief incorrectly argues that the primary jurisdiction doctrine cannot be applied to state law claims. Opposition at 3-4.

[17] Plaintiffs' Opposition suggests that primary jurisdiction may only be applied where there is an *existing* agency proceeding. Opposition at 2. However, the case cited, *Curran v. Bayer Healthcare*, does not stand for this proposition. It merely indicates that defendant in that case failed to identify any such proceeding. Moreover, the case on which *Curran* relies focused on whether such a proceeding is available—not whether it has already been initiated. Here, Plaintiffs have available relief through OSHA's complaint process and emergency powers.

issue will likely dispose of the entire case. *See id.* However, the Court may choose to stay the matter while the agency action proceeds. *See id.*

2. The Primary Jurisdiction Doctrine Applies Here.

This is a quintessential case for application of the primary jurisdiction doctrine. The issues presented by Plaintiffs' Complaint relate to workplace safety. Plaintiffs seek only declaratory and injunctive relief. Specifically, they seek a Court order requiring Smithfield to adopt a list of work practices identified by Plaintiffs to protect against the spread of COVID-19. But there is a federal agency, OSHA, with special expertise in this area. Moreover, OSHA is actively involved in investigating and enforcing COVID-19 safe work practices throughout the country. Indeed, OSHA has already contacted Smithfield using a "Rapid Response Investigation" to obtain information regarding its COVID-19 safety practices at the Plant, and Smithfield is cooperating with OSHA. The Court should defer to OSHA as to whether Smithfield's existing safety practices are sufficient to protect employee health, or whether additional measures should be implemented.[18]

Plaintiffs' request for injunctive relief implicates several specific OSHA regulations. The table below highlights some of the specific OSHA standards at issue:

[18] Plaintiffs' reference the OSHA savings clause in their Opposition. Opposition at 4. However, the savings clause relates to preemption—not primary jurisdiction. Smithfield will address the issue of OSHA preemption in its Opposition to Plaintiffs' Motion for Preliminary Injunction/Temporary Restraining Order.

Relief Requested in Complaint	OSHA Standard
Order Smithfield to provide "sufficient personal protective equipment" Compl. ¶ 123(c)(i).	General Personal Protective Equipment (PPE), 29 CFR 1910.132 1910.132(d) *Hazard assessment and equipment selection.* 1910.132(d)(1) The employer shall assess the workplace to determine if hazards necessitate the use of personal protective equipment (PPE). If such hazards are present, or likely to be present, the employer shall: 1910.132(d)(1)(i) Select and require the use of PPE that will protect the affected employee;
Order Smithfield to "create[] and implement[] a social distancing plan" Compl. ¶ 123(c)(ii).	Bloodborne Pathogens, 29 CFR 1910.1030 (which OSHA has stated provides guidance for purposes of COVID-19 safety) 1910.1030(d)(2) *Engineering and Work Practice Controls.* 1910.1030(d)(2)(i) Engineering and work practice controls shall be used to eliminate or minimize employee exposure.
Order Smithfield to " create[] and implement[] a protocol to clean surfaces" Compl. ¶ 123(c)(v).	Sanitation, 29 CFR 1910.141: 1910.141(a)(3)(i) All places of employment shall be kept clean to the extent that the nature of the work allows.
Order Smithfield to "provide[] tissues"[19] Compl. ¶ 123(c)(iv).	Medical Services and First Aid, 29 CFR 1910.151 1910.151(b) Adequate first aid supplies shall be readily available.

OSHA is in the best position to assess Smithfield's COVID-19 work practices—not the Court in the first instance. Moreover, deferring to OSHA will promote uniformity, which is critical in these unprecedented times. Essential businesses that continue to operate to provide the public

[19] For obvious reasons, the United States Department of Agriculture would not allow production line workers to have tissues while working on the line.

and the government critical products and services should not be subject to piecemeal and inconsistent safety requirements imposed by private plaintiffs and courts.

The relief requested by Plaintiffs is truly unprecedented. Plaintiffs are asking this Court to develop, monitor, and administer Smithfield's occupational health and safety program at the Plant. Plaintiffs have appointed themselves and their "experts" the role of inspecting the Plant and making determinations about what safety procedures must be implemented. The Court is then expected to take their recommendations and fashion a ***mandatory*** injunction that will require Smithfield to implement a specific safety program, which the Court presumably will police over the course of the pandemic.

Smithfield is not aware of a single case where a court commandeered an employer's occupational safety and health program in such a manner, and Plaintiffs have cited none. Indeed, courts have refused such invitations—even in the face of the COVID-19 pandemic. For example, in *Alaska State Employees Association, Local 52 v. SOA*, 3AN-20-056652CI, the Union representing the state employees of Alaska filed suit against the state for alleged violation of the duty to provide a safe place to work and seeking injunctive relief to require the state to implement work practices to protect the employees from COVID-19. The court denied the injunction and declined to insert itself in the state's determination of how to best protect its employees and continue to provide essential services. *See* Order Regarding ASEA's Motion for a Temporary Restraining Order and Preliminary Injunction, attached as **Exhibit 6**. Courts have denied similar requests for injunctive relief that would require the court to oversee safety protocols at prisons. *Baxley v. Jividen*, 2020 WL 1802935 (W.D. Va. April 8, 2020).[20] The Court should likewise

[20] In *Valentine v. Collier*, __ F.3d __, 2020 WL 1934431 (5th Cir. Apr. 22, 2020), the district court granted injunctive relief related to the state prison system's response to COVID-19, but the Court of Appeals stayed the injunction pending appeal. The Court noted that the prison system's "ability to continue to adjust [their] policies [would be]

decline Plaintiffs' invitation here, and defer workplace safety issues to OSHA and its expertise, working in conjunction with the Plant.

B. This Court Should Abstain from Injecting Itself into Areas of Public Health Which Are Uniquely State Issues.

1. Legal standard for *Burford* abstention.

Federal courts "'should exercise their discretionary power with proper regard for the rightful independence of state governments in carrying out their domestic policy.'" *Burford v. Sun Oil Co.*, 319 U.S. 315, 334-35 (1943) (Douglas, J., concurring) (quoting *Commonwealth of Pennsylvania v. Williams*, 294 U.S. 176, 185 (1935)); *see Johnson v. Collins Entertainment Co., Inc.*, 199 F.3d 710, 720 (4th Cir. 1999) (holding that federal court abstention is required when states are protecting their residents' health, safety, and welfare, and "different states can arrive at different answers based on their different experiences").

A federal court may abstain from jurisdiction under the *Burford* abstention doctrine when (1) "there have been presented difficult questions of state law bearing on policy problems of substantial public import whose importance transcends the result in the case at bar"; and (2) "exercise of federal review of the question in a case and in similar cases would be disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern." *Wolfson v. Mutual Benefit Life Ins. Co.*, 51 F.3d 141, 144 (8th Cir. 1995); *Melahn v. Pennock Insurance Inc.*, 965 F.2d 1497, 1506 (8th Cir. 1992) ("*Burford* abstention applies when a state has established a complex regulatory scheme supervised by state courts and serving important state interests, and when resolution of the case demands specialized knowledge and the application of

---

significantly hampered by the preliminary injunction, which locks in place a set of policies for a crisis that defies fixed approaches." *Id.* (citing *Jacobson v. Mass.*, 197 U.S. 11, 28-29 (1905); *In re Abbott*, 954 F.3d 772, 791 (5th Cir. 2020)).

OSHA-004193

complicated state laws") (quoting *Bilden v. United Equitable Ins. Co.*, 921 F.2d 822, 825-26 (8th Cir. 1990)).

The application of the *Burford* doctrine does not require that a state authority have already intervened with respect to the specific matter. *See generally Johnson*. Rather, it is enough that a plaintiff may seek redress in a state court, where questions of local policy related to regulation and enforcement should be decided. *See id*. at 716 (noting that "[t]he state courts are intimately involved in [the regulatory] scheme through the adjudication of private actions and the review of administrative decisions"); *see also Heartland Hosp. v. Strangler*, 792 F.Supp. 670, 672 (W.D. Mo. 1992) ("*Burford* abstention is necessary when federal review would likely be 'disruptive of state efforts to establish a coherent policy with respect to a matter of substantial public concern'" (quoting *Colorado River Water Conservation Dist. v. U.S.*, 424 U.S. 800, 814 (1976))).

Abstention is especially appropriate when the issue to be decided "lies at the heart of the state's police power" because "[f]ormulations of that power underscore the state's paramount interest in the health, welfare, safety, and morals of its citizens." *See Johnson*, 199 F.3d at 720. Otherwise, "the federal courts might adjudicate all kinds of disputes involving the most sensitive questions of state law and policy that arrive at their door . . . . This would in time endanger the independence of state policy at the core of state police power and cause friction between the federal and state systems." *Id.*

2. The Court should abstain in favor of Missouri's Public Health Agencies.

The Court should exercise its discretion to abstain in this case pursuant to the *Burford* abstention doctrine. Plaintiffs are seeking to serve as private attorneys general to enforce the state of Missouri's public health law. A federal court should not insert itself into the state's public policy regarding the protection of its citizens from COVID-19 exposure and transmission, particularly when there is a substantial risk that the federal court would decide the case differently

than the state. *See Lac D'Amiante du Quebec, Ltee v. Am. Home Assur. Co.*, 864 F.2d 1033, 1046 (3d Cir. 1988) (abstaining because "the risk is not insubstantial" that state agencies "would adopt a different interpretation than did the district court"). Rather, this matter should be handled by state and local public health agencies.

There is no question that the State of Missouri is already actively involved in protecting the public from COVID-19 exposure and transmission. The Governor has issued a "stay-at-home" order for this express purpose, but made the decision to permit businesses such as the Plant, which are essential to the State and nation's food supply, to continue to operate. The order specifically provided that essential businesses need not require six feet between individuals if the workers' "job duties require contact with other people closer than six feet." The injunction Plaintiffs seek requiring Plant employees to remain more than six feet apart would directly contradict the Governor's order. That is improper: "The purpose of *Burford* abstention is to discourage such federal court second-guessing of state regulatory matters." *Sierra Club v. City of San Antonio*, 112 F.3d 789, 796 (5th Cir. 1997) (vacating preliminary injunction because the district court should have abstained under *Burford*).

Moreover, the Governor assigned responsibility for implementing and enforcing specific COVID-19 safety measures to Missouri's local and state health authorities. MDHSS has embraced this responsibility, and both MDHSS and local health agencies have worked closely with a number of private businesses to monitor and develop their COVID-19 safety response. MDHSS has also worked closely with federal agencies in responding to the virus, and has the ability to invite the Centers for Disease Control to assist with state and local response as needed.

Missouri law specifically vests authority over public health matters with MDHSS, and *requires* MDHSS to use "the legal means necessary to control" a disease such as COVID-19,

"which is a threat to the public health." 19 Mo. C.S.R. 20-20.040. Under state law, public health authorities have the duty and authority to inspect premises suspected of spreading disease, establish and maintain quarantines, and implement appropriate control measures to prevent the spread of disease. *Id.* Public health agencies throughout Missouri have acted on these duties and responsibilities, and there is no reason to believe they would not also do so if alerted to any threat to public health associated with the Plant.

It is entirely improper for this Court to assume responsibility for Missouri's public health law. Plaintiffs have not asserted a federal law claim, and the federal court has no overriding interest in this matter. If there are truly public health concerns related to the Plant (and Smithfield vehemently disputes that), then addressing those issues is a matter of state policy that can be addressed by MDHSS and the local public health authorities. This is not the proper forum to adjudicate Missouri's public health policy.

Plaintiffs cite to examples of Smithfield and other meat processing plants being shut down in other jurisdictions. However, in none of these examples was a state or federal court involved. Rather, in some instances state and local public health agencies made the decision to order the plant to close pending further investigation, and in others, the plants voluntarily closed in response to requests from state government or for other reasons (e.g., Smithfield's Cudahy, Wisconsin facility that Plaintiffs cite closed because of supply chain issues – not a COVID-19 outbreak in the plant). These examples do not support the federal court's involvement in this matter. To the contrary, they militate against it. The Court should therefore dismiss this action pursuant to the *Burford* abstention doctrine.

IV. CONCLUSION

A stay or dismissal is proper here. The principle of comity underlying primary jurisdiction and *Burford* abstention takes on heightened importance – and militates even more heavily in favor

of invoking the doctrines – where the possibility exists that the relief in the private action might conflict with the agency action. *Davies v. Nat'l Coop. Refinery Ass'n*, 963 F. Supp. 990, 997 (D. Kan. 1998) (abstaining from exercising RCRA jurisdiction in favor of the agency "charged by state law with responsibility for … protecting human health and the environment" to avoid "prospect of conflicting directives from this court as to how the contamination should be remedied").[21]

It is not hard to imagine the chaos that would flow if courts take over the occupational health and safety programs of essential businesses around the country and appoint themselves keepers of the public health. An employee who claims an unsafe workplace already can file an OSHA complaint or seek the assistance of public health officials. If this additional avenue of court oversight of safety were opened businesses, already strapped to survive during the pandemic, would be faced with increased financial costs of litigation. A company that operates in multiple jurisdictions, such as Smithfield, would have no expectation of uniformity and could even be in a position to have inconsistent legal obligations as between OSHA and a decision from the court.

None of this is necessary. OSHA has broad powers to investigate and enforce workplace safety, and MDHSS has the necessary police power to regulate plant operation and ensure public health. This Court need not—and should not—wade into this area, and put itself in the position of policing workplace safety and directing state public health policy at the behest of a private plaintiff. The Court should grant Smithfield's Motion, and dismiss or stay this action in favor of the authority and expertise of OSHA and MDHSS.

SMITHFIELD FOODS, INC. and
SMITHFIELD FRESH MEATS CORP.

[21] The *Davies* court based its decision to abstain on both primary jurisdiction and the *Burford* abstention doctrine.

An Attorney for Defendants

IN THE UNITED STATES DISTRICT COURT FOR THE WESTERN DISTRICT OF MISSOURI ST. JOSEPH DIVISION

RURAL COMMUNITY WORKERS ALLIANCE and JANE DOE,[1]	)	
Plaintiffs,	)	
v.	)	No. 5:20-CV-06063-DGK
SMITHFIELD FOODS, INC. and SMITHFIELD FRESH MEATS CORP.,	)	
Defendants.	)	

ORDER GRANTING DEFENDANTS' MOTION TO DISMISS

This lawsuit arises from Plaintiffs' allegations that Defendant Smithfield Foods, Inc. and its wholly owned subsidiary, Defendant Smithfield Fresh Meats Corporation (collectively, "Smithfield") have failed to adequately protect workers at its meat processing plant in Milan, Missouri, ("the Plant" or "the Milan Plant") from the virus that causes COVID-19. Now before the Court are Plaintiffs' Motion for a Temporary Restraining Order ("TRO") and Preliminary Injunction (Doc. 3), and Smithfield's motion to dismiss and/or stay pursuant to the primary-jurisdiction doctrine (Doc. 28).

After carefully reviewing the motions and the existing record, the Court holds that it should decline to hear this matter pursuant to the primary-jurisdiction doctrine to allow the Occupational Health and Safety Administration ("OSHA") to consider the issues raised by this case. But even if the Court did not apply the primary-jurisdiction doctrine, the Court would not

[1] The Court notes that there is currently a motion pending to allow Jane Doe to proceed using a pseudonym (Doc. 42). Given the Court's dismissal of this action and the denial of injunctive relief, the Court finds that requiring Plaintiff to reveal her identity would serve no important purpose, especially given that another named plaintiff appears in this case. The issues presently before the Court are—for the most part—purely legal, and the majority of Plaintiff's allegations are not individualized. Thus, the public's interest in Plaintiff's identity and the prejudice to Smithfield in allowing Plaintiff to proceed anonymously for purposes of deciding the instant motions is minimal. Plaintiff Doe may therefore use a pseudonym for purposes of the motions presently before this Court. This Court reserves judgment on her ability to do so should this case proceed to further stages of litigation.

issue a preliminary injunction because Plaintiffs have not met their burden of proving that the extraordinary remedy of an affirmative injunction is justified. Smithfield's motion is GRANTED, and the case is DISMISSED WITHOUT PREJUDICE.

Background

The Background section of this order is arranged in chronological order. Although regrettably lengthy, it details how the regulatory environment in which meat-processing plants operate is constantly changing during this unique national emergency.

In late 2019, a new coronavirus emerged named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).[2] This virus causes coronavirus disease 2019 (COVID-19), a respiratory illness that can cause serious health problems, including death.[3] SARS-CoV-2 is highly contagious; it appears to spread from person to person through respiratory droplets produced when an infectious person coughs, sneezes, or talks, and the virus can be spread by presymptomatic, or even asymptomatic, individuals.[4]

A global pandemic ensued, and the virus and COVID-19 reached the United States in early 2020. On March 13, 2020, the President declared a national emergency concerning COVID-19. That same day, Missouri's governor also declared a state emergency, and on April 3, the Missouri Department of Health and Senior Services issued a stay-at-home order that mandated all individuals abide by social-distancing requirements and closed all nonessential

OSHA-004201

businesses in Missouri through May 4.[5] The stay-at-home order defines essential businesses in accordance with guidance from the U.S. Department of Homeland Security, Cybersecurity & Infrastructure Security Agency ("Homeland Security"), which identified livestock-slaughter facilities, including the Plant and its operations, as "critical infrastructure."[6] On April 9, the Centers for Disease Control ("CDC") published *Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19)*, which outlined several policies and procedures employers should implement to help prevent workplace exposure and community spread of the virus.

On April 22, OSHA sent Smithfield a "Rapid Response Investigation" requesting information regarding its COVID-19 work practices and infection at the Milan Plant, giving Smithfield seven days to respond. As part of its inquiry, OSHA requested information about Smithfield's COVID-19 practices including what, if any, personal protective equipment has been given to its workers, what engineering controls have been implemented, what contact tracing methods have been employed, and what policies have been changed or implemented in light of the pandemic (Doc. 29-2). Smithfield responded on April 29 (Doc. 41).

The next day, on April 23, Plaintiffs Jane Doe and the Rural Community Workers Alliance ("RCWA") filed suit. They allege Smithfield is not taking adequate steps to prevent transmission of the virus at its Plant, thereby endangering workers and members of the surrounding community. According to her declaration, Doe is a current Smithfield employee who has worked at its Milan Plant for at least five years. She claims she currently works on the

OSHA-004202

"cut floor" where animals are broken down into products and packaged.

The RCWA is a Missouri non-profit advocacy group whose members consist exclusively of workers in Northern Missouri. Several members of RCWA's current leadership council work at the Plant, and sixty to seventy workers who attend its meetings work at the Plant, including Jane Doe.

Defendant Smithfield is one of the largest meat-processing companies in the world, with meat-processing plants all over the United States, including in Milan, Missouri. Several of its meat-processing plants in the United States have closed recently due to outbreaks of COVID-19 among its workers.

The Complaint (Doc. 1) alleges that several meat-processing plants in this country owned and operated by Smithfield have become major COVID-19 "hot spots." It also alleges that in direct contravention of CDC guidelines, Smithfield has not implemented certain precautions to keep its workers and the Milan community safe from the virus. Such measures include keeping adequate distance between workers, prohibiting workers from taking a break to wash their hands or face, preventing workers from covering their faces if they need to cough or sneeze, implementing a sick-leave policy that penalizes workers for missing work even if they are exhibiting COVID-19 symptoms, and failing to implement plans for testing and contact tracing.

The Complaint brings state-law claims for public nuisance and breach of duty to provide a safe workplace. Plaintiffs are not seeking monetary damages, only declaratory judgments stating that: (1) Smithfield's practices at the Plant constitute a public nuisance; and (2) Smithfield has breached its duty to provide a safe workplace.

The same day Plaintiffs filed suit, they also moved for a temporary restraining order and preliminary injunction (Doc. 3), seeking to force Smithfield to: provide masks; ensure social

distancing; give employees an opportunity to wash their hands while on the line; provide tissues; change its leave policy to discourage individuals to show up to work when they have symptoms of the virus; give workers access to testing; develop a contact-tracing policy; and allow their expert to tour the Plant. Attached to the motion were declarations from: (1) Jane Doe, who described working conditions at the Plant and stated she was afraid for health and safety, as well as the health and safety of the Milan community, because of what she considers inadequate safety procedures at the Plant; (2) RCWA's Executive Director, Alex Fuentes; (3) a senior lobbyist with the non-profit organization Food & Water Watch ("FWW"), Anthony Corbo; (4) a lawyer, Thomas Fritzsche, who has interviewed a number of Alabama poultry-plant workers about working conditions and authored a 2013 report for the Southern Poverty Law Center about modern industrial slaughterhouse workers; and (5) an occupational-medicine specialist, Dr. Robert Harrison, who works as Clinical Professor of Medicine at the University of California, and also serves the California Department of Public Health.

On April 26, the Court set a videoconference hearing on the preliminary injunction motion for April 30. That same day, the CDC and OSHA issued *Meat and Poultry Processing Workers and Employers – Interim Guidance* ("the Joint Guidance"), which provided supplemental guidance to meat-processing plants concerning COVID-19.[7] The Joint Guidance states that to reduce the risk of transmission among employees, employers at meat-processing facilities should, where "feasible," implement engineering controls, such as staggering shifts and breaks, requiring workers to stay six-feet apart, and/or erecting physical barriers; place handwashing or hand-sanitizing stations in multiple locations and encourage hand hygiene; give workers additional short breaks to wash hands; provide tissues; and allow workers to take breaks

[7] Ctrs. for Disease Control and Prev. & Occ. Safety and Health Admin., Meat and Poultry Processing Workers and Employers, https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/meat-poultry-processing-workers-employers.html (Apr. 26, 2020).

OSHA-004204

in alternative areas to ensure social distancing. It also recommends employers provide personal protective equipment for workers to use during their shift and increase the frequency of sanitization in work and common spaces. It states employers should educate employees on measures they can take to decrease the risk of spreading the virus and provides a specific list of measures employers should take to promote social distancing, such as providing visual cues on floors, as reminders for social distancing. It encourages employers to screen workers for COVID-19 by implementing temperature checks prior to entering the workplace and sending home workers who appear to have symptoms (e.g., cough, fever, or shortness of breath), and monitor workers' contacts so they can alert anyone who may have been exposed to the virus. Finally, it recommends employers review leave and incentive policies so as to not penalize workers for taking sick leave if they contract COVID-19.

On April 27, Smithfield filed a motion to dismiss this case pursuant to the primary-jurisdiction doctrine, arguing this Court should defer to OSHA in this case. The next day—April 28—the President signed an executive order ("the Executive Order") under § 4511(b) of the Defense Production Act ("DPA"), 50 U.S.C. § 2061 *et seq*., delegating authority to the Secretary of Agriculture to take all appropriate action "to ensure that meat and poultry processors continue operations consistent with the guidance for their operations jointly issued by" the CDC and OSHA.[8]

On April 29, Smithfield made several filings, including a supplemental brief to its motion to dismiss, which alleged that pursuant to the Executive Order, the United States Department of Agriculture ("USDA") now had jurisdiction over this case. It also submitted its Suggestions in

[8] Exec. Order on Delegating Authority Under the DPA with Respect to Food Supply Chain Resources During the National Emergency Caused by the Outbreak of COVID-19, https://www.whitehouse.gov/presidential-actions/executive-order-delegating-authority-dpa-respect-food-supply-chain-resources-national-emergency-caused-outbreak-covid-19/ (Apr. 28, 2020).

OSHA-004205

Opposition (Doc. 32) to the preliminary injunction motion. Attached to its brief as exhibit A (Doc. 32-1) is a declaration from the Plant's general manager, Tim Messman, along with pictures of the Plant and copies of the Plant's policies and procedures related to COVID-19. Exhibit B (Doc. 32-2) is a declaration from John Henshaw, the head of OSHA from 2001 to 2003.

Later that same day, Plaintiffs' filed their suggestions in opposition (Doc. 35) to Smithfield's motion to dismiss. Included in it is a declaration from Dr. Melissa Perry (Doc. 35-2), a professor of environmental health at George Washington University.

On April 30, the Court held a hearing on the motion via teleconferencing. The Court offered the parties an opportunity to introduce evidence, including witness testimony, but both parties elected to stand on the existing record. The parties then argued their respective positions.

After the hearing, the parties filed supplemental briefs. Attached to Smithfield's brief (Doc. 46) is a supplemental declaration from Smithfield's plant manager, clarifying Smithfield's leave policy and updating the Court on additional safety changes at the Plant.

Plaintiffs concede that Smithfield implemented new policies and procedures after this lawsuit was filed and have narrowed their requested injunctive relief to direct Smithfield to:

> (1) make all reasonable changes to its "production practices," including potentially lowering its line speeds, to place as many workers as possible at least six feet apart; (2) provide reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing; and (3) ensure that its policies do not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers.

(Doc. 48 at 10). Plaintiffs characterize their requested relief as compliance with the Joint Guidance.

Findings of Fact

The Court gives the various declarations submitted by the parties the following

OSHA-004206

evidentiary weight.[9]

The Court gives Jane Doe's declaration limited weight. While she has personal knowledge of conditions in those parts of the Plant in which she works, it is unclear exactly what part of the "cutting floor" she works in, and whether she can see all that she claims to see from this area. Further, it appears that some of the information in her declaration is no longer accurate due to recent changes in the Plant's policies and procedures. For example, although her declaration may be correct that Smithfield initially told workers they would receive only one mask per week, this policy has been superseded. As discussed below, workers are now given masks every day. Finally, because her identify is unknown, there is no way to determine, through the adversarial process or otherwise, whether Doe has some bias against Smithfield that could lead her to misrepresent or exaggerate conditions at the Plant. The Court notes that at least one of her statements—that Smithfield has increased the line speed at the Plant during the pandemic—is contradicted by other, more persuasive evidence.

Mr. Fuentes' declaration concerning working conditions at the Plant are even less reliable than Jane Doe's, and so the Court gives them less weight. Mr. Fuentes has no personal knowledge of conditions at the Plant because he has never set foot in it. His understanding is based on hearsay from unidentified employees whose statements to him, even if accurately relayed by Mr. Fuentes, were not made under penalty of perjury. That said, the Court finds the portions of his declaration concerning RCWA's membership and activities are credible.

The Court finds the declarations of Messrs. Corbo, Fritzsche, and Harrison are based on some relevant knowledge, education, and experience concerning working conditions in American meat-processing plants generally, and so they possess some limited insight into what

[9] Smithfield filed a motion to strike Plaintiffs' five declarations attached to the motion for a temporary restraining order and/or preliminary injunction (Doc. 34). The Court denies the motion, since, in considering these motions, the issues it complains of go to the weight of the evidence rather than its admissibility.

OSHA-004207

steps could be taken to prevent the spread of the SARS-CoV-2 virus in a generic American meat-processing facility. Because they are unfamiliar with specific working conditions at the Plant, however, their declarations provide limited help in determining whether Smithfield's policies and procedure at the Plant are sufficient to stem transmission of the virus.

Finally, the Court turns to the declaration of Dr. Melissa J. Perry, Professor and Chair of Environmental and Occupational Health at the Milken Institute School of Public Health of the George Washington University. Dr. Perry credentials are excellent: She is a past President of the American College of Epidemiology and a past chair of the Board of Scientific Counselors for the CDC. She has also served as a member of the National Institute for Occupational Safety and Health research grant-review panel. She has studied meat-processing facilities since 2004 and has published six peer-reviewed-journal articles on work health and safety at meat-processing facilities. As part of that work, she has visited four meat-processing plants and spoken with engineers regarding the organizational structure of processing plants and how they can be redesigned to further worker health and safety.

Dr. Perry opines that meat-processing plants can allow workers to stand six feet apart if they reduce production line speed, and that, if they do not space production line workers six feet apart, the plants will "inevitably" have a COVID-19 outbreak. She contends slowing the production line is the only way the plant will be able to continue meat production without an outbreak. She also endorses the other requests Plaintiffs make, such as for more rest breaks and paid leave, as "absolutely necessary" so the Plant can continue operating.

This Court has respect for Dr. Perry's opinion but finds it of limited value in this case. While this Court agrees that slowing down line speed may be beneficial for workers and allow more opportunities for social distancing, the Court found nothing in the Joint Guidance

OSHA-004208

recommending a decrease in line speed. To that point, she provides no specific opinion regarding whether the Milan Plant is currently in compliance with the Joint Guidance, and there is no evidence that Dr. Perry reviewed the policies and procedures at the Milan Plant in forming her opinion. Accordingly, the Court gives little weight to her opinion that unless the production line speed is slowed and workers spread six feet apart, spread of the virus through the Plant is "inevitable" and it "will be forced to shutter." This assertion appears to be more of a good-faith speculation than an evidenced-based conclusion.

The Court gives more weight to the declarations provided by Smithfield. The statements made by Mr. Messman, the Plant's general plant manager, are almost all based on his personal knowledge. He possesses the most recent information concerning working conditions at the Plant, and he appears to be a reliable source of information about Smithfield's policies and procedures there.

The Court gives considerable weight to the declaration of John Henshaw, Smithfield's expert witness. After reviewing Smithfield's written policies and procedures at the Plant, the general manager's declaration, the pictures, and the declarations in Plaintiffs' motion, Mr. Henshaw opined that Smithfield's current policies and procedures, if followed, were consistent with the Joint Guidance as of April 29, 2020. Although the Court is aware that he is a retained expert witness whose assumptions and conclusions have not been tested by cross-examination, his opinion is measured, qualified, and grounded in the facts at the Milan Plant.

With the credibility determinations in mind, the Court makes the following findings of fact concerning current the Plant's working conditions and Smithfield's COVID-19 policies and procedures.

OSHA-004209

Before entering the Plant, Smithfield requires all employees to undergo thermal screening. If employees exhibit one primary symptom or two secondary symptoms of COVID-19,[10] Smithfield provides them with instructions for next steps, including directions to quarantine and call their physician for guidance, and sends the employee home for fourteen days of paid leave or until the individual receives a negative COVID-19 test result. Employees with underlying health concerns—verified by a doctor—that place them at a higher risk of COVID-19 are given fourteen days of paid leave and then are shifted to short-term disability leave.

While quarantining as a result of COVID-19 symptoms, Smithfield requires employees to complete a questionnaire that in part entails naming all other employees they have closely contacted within the two days before experiencing symptoms. If the employee tests positive for COVID-19, Smithfield notifies and screens the close contacts. As of April 29, 2020, thirteen employees had been tested for COVID-19. None were positive.

If employees miss work as a result of COVID-related symptoms, Smithfield does not penalize them. They do not receive attendance points and remain eligible for Smithfield's Responsibility Bonus ($500), regardless of whether individuals provide a doctor's or nurse's note. Moreover, Smithfield has expanded its employee benefits by eliminating co-pays for COVID-related testing and treatment.

To ensure that those inside the Plant are complying with Smithfield's COVID-19 safety procedures and policies, Smithfield has assigned both a nurse and a health-and-safety clerk to perform checks throughout the Plant. Smithfield has communicated these procedures and policies to its employees by several different media, including on televisions and signs at the Plant, through the Beekeeper communications app, and through the Textcaster mass

[10] Primary symptoms include fever, persistent dry cough, and shortness of breath, while secondary symptoms include chills, repeated shaking with chills, muscle pain/extreme fatigue, headache, sore throat, and/or loss of taste or smell (Doc. 46-2 at 8).

text-messaging tool. Signs at the Plant relay the information in English, Spanish, and French, while the Beekeeper and Textcaster communications are available in the employee's language of choice. Interpreters are also available at the Plant to assist with these communications.

The Plant provides workers with an ear-looped face mask upon entry to the Plant each day, and if a mask breaks or becomes soiled, it provides a new one. Smithfield now requires all workers at the Plant to wear a mask at all times other than during meals and in certain offices where employees are spaced six feet apart. These masks prevent the spread of germs if an employee sneezes or coughs while on the line, reducing the need for tissues to reduce the spread of COVID-19. Additionally, Smithfield requires employees on the production floor to wear nitrile gloves and a plastic face shield.

As Smithfield concedes, it does not provide tissues to employees. It cannot provide tissues to individuals working on the production line because doing so would violate health standards set by the USDA. Thus, one of Plaintiff's original complaints cannot be remedied. Smithfield could, however, provide tissues for employees to wipe their nose while on breaks, but the record does not support that employees are banned from bringing their own tissues or other hygienic wipes to use while on breaks.

As for Plaintiffs' claim that Smithfield does not allow employees to wash their hands without penalty, the Court finds that Smithfield policies and procedures are reasonable under the circumstances. Due to the nature of the meat-processing business, employees must wear gloves on the production line. When workers leave the line for a break, they remove their gloves and sanitize their hands before entering common areas. They must also wash their hands and put on gloves before returning to the line. Smithfield currently administers hand sanitizer to employees every thirty minutes to use on their gloves and has added approximately 110 hand-sanitizing

stations throughout the Plant. Smithfield also expects a shipment of small hand-sanitizer bottles soon, which it will make available to employees for personal use. In the meantime, the Plant has invited employees to bring in personal bottles they may refill using the company supply. Thus, the need for continued hand washing is unnecessary because any contamination that may occur on the line is contained by the required use of gloves.

Moreover, Smithfield has also enhanced cleaning and disinfection of the Plant's frequently touched surfaces in common areas using cleaning solutions identified by the CDC for use against the virus. These cleanings are performed as often as every two hours throughout the workday. Additional deep cleanings occur over the weekends, and Smithfield is working to implement use of fogging/misting disinfectants where possible.

Finally, the Court turns to the steps Smithfield has taken steps to facilitate social distancing at the Plant. Smithfield has staggered workday start times, as well as lunch and break times, to avoid large numbers of workers congregating in break rooms or around time clocks. Smithfield is currently working to secure a wireless means for employees to clock in and out of their shifts to minimize crowding. In the meantime, it has expanded the number of available clocks for employees to use and will implement a grace period for workers to clock in and out of their shifts, all increasing the ability of workers to maintain social distance.

Smithfield has erected two large tents and three carport structures on the Plant lawn and placed tables and chairs underneath each so that workers have more space to eat while on breaks. The Plant has also installed plastic barriers on eating tables that separate employees from those sitting beside and across from them. Tables are sanitized after one employee leaves and before another sits down.

Smithfield has also reduced the number of hogs harvested each day and sends some employees home before lunch. This requires fewer employees to be at the Plant, helping to minimize crowding in the cafeteria and other areas. However, these policies reduce the number of hours worked by the affected employees, thereby decreasing their weekly pay. To ease the resulting financial burden on employees, Smithfield has temporarily increased pay by $5/hour, and such pay is available to any employee who takes an approved leave as a result of COVID-related symptoms. Smithfield has also installed clear plastic barriers along the Plant production line to separate employees working across from each other and employees working side by side.

Discussion

I. The primary-jurisdiction doctrine applies.[11]

Before reaching the merits of Plaintiffs' request for a preliminary injunction, the Court must determine whether it should dismiss or stay this case pursuant to the primary-jurisdiction doctrine. "Primary jurisdiction is a common-law doctrine that is utilized to coordinate judicial and administrative decision making." *Access Telecomms. v. Sw. Bell Tel. Co.,* 137 F.3d 605, 608 (8th Cir. 1998) (citation omitted). "The doctrine allows a district court to refer a matter to the appropriate administrative agency for ruling in the first instance, even when the matter is initially cognizable by the district court." *Id.* (citation omitted). "There exists no fixed formula for determining whether to apply the doctrine of primary jurisdiction." *Id.* (citing *United States v. W. Pac. R.R. Co.,* 352 U.S. 59, 64 (1956)). Instead, courts must consider in each case "whether the reasons for the doctrine are present and whether applying the doctrine will aid the purposes

[11] Although Smithfield previously argued *Burford* abstention also applied here, it conceded during the preliminary-injunction hearing that that argument no longer applies due to the President's Executive Order. Accordingly, the Court does not address it. Because this Court finds the primary jurisdiction doctrine applies, it does not address Smithfield's preemption arguments, which were asserted after the preliminary-injunction hearing.

OSHA-004213

for which the doctrine was created." *Id.* (citation omitted). In undertaking this analysis, a court must be mindful that the primary-jurisdiction doctrine "is to be invoked sparingly, as it often results in added expense and delay." *Alpharma, Inc. v. Pennfield Oil Co.*, 411 F.3d 934, 938 (8th Cir. 2005). "Once a district court decides to refer an issue or claim to an administrative agency under the doctrine of primary jurisdiction, it may either dismiss or stay the action." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 913 (8th Cir. 2015).

There are two primary reasons courts apply the primary-jurisdiction doctrine. First, "to obtain the benefit of an agency's expertise and experience . . . 'in cases raising issues of fact not within the conventional experience of judges or cases requiring the exercise of administrative discretion. . . .'" *Access Telecomms.*, 137 F.3d at 608 (noting "'agencies created by Congress for regulating the subject matter should not be passed over'") (quoting *Far E. Conference v. United States*, 342 U.S. 570, 574 (1952)). Second, "to promote uniformity and consistency within the particular field of regulation." *Id.* (citation omitted). Thus, in deciding whether to apply the doctrine, courts focus on two questions: (1) "whether the issues raised in the case 'have been placed within the special competence of an administrative body,'" and (2) whether the court's disposition of the case could lead to inconsistent regulation of businesses in the same industry. *Sprint Spectrum L.P. v. AT&T Corp.*, 168 F. Supp. 2d 1095, 1098 (W.D. Mo. 2001) (quoting *United States v. W. Pac. R.R. Co.,* 352 U.S. at 64). In this case, the answer to both questions is yes.

Plaintiffs allege that because the Plant is not abiding by the Joint Guidance, it constitutes a public nuisance and has created an unreasonably unsafe workplace. Thus, Plaintiffs' claims both succeed or fail on the determination of whether the Plant is complying with the Joint Guidance. Due to its expertise and experience with workplace regulation, OSHA (in

coordination with the USDA per the Executive Order) is better positioned to make this determination than the Court is. Indeed, this determination goes to the heart of OSHA's special competence: its mission includes "enforcing" occupational safety and health standards. In fact, OSHA has already shown interest in determining whether the Plant is abiding by the Joint Guidance. The day before Plaintiffs filed this lawsuit, OSHA sent Smithfield a request for information regarding its COVID-19 work practices and infection at the Plant.

Turning to the second question, the Court finds only deference to OSHA/USDA will ensure uniform national enforcement of the Joint Guidance. If the Court ruled on whether the Plant is complying with the Joint Guidance, this ruling would be binding on Smithfield but not other meat-processing facilities because the Court lacks personal jurisdiction over them. Thus, any determination by this Court whether the Plant is complying with the Joint Guidance could easily lead to inconsistent regulation of businesses in the same industry. And under these circumstances, where the guidelines are rapidly evolving, maintaining a uniform source for guidance and enforcement is crucial.

Plaintiffs' argue that deference will add delay. But OSHA has already requested information about the Plant's safety measures. And if OSHA fails to act quickly on this information, Plaintiffs have a remedy: they may receive emergency relief through OSHA's statutory framework. Section 662(a) of the Occupational Safety and Health Act ("the Act"), 29 U.S.C. §§ 651 *et seq.*, permits the Secretary of Labor to petition the court "to restrain any [dangerous] conditions or practices in any place of employment . . . which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by [the Act]." Upon the filing of such petition, "the district court shall have jurisdiction to grant such injunctive

relief or temporary restraining order pending the outcome of an enforcement proceeding." *Id.* at § 662(b). If the Secretary "arbitrarily or capriciously fails to seek relief," a worker can file a writ of mandamus to compel the Secretary to seek such an order. *Id.* at § 662(d). Granted, there may be some delay before Plaintiffs can invoke this procedure, but following this procedure ensures the USDA and OSHA can take a measured and uniform approach to the meat-processing plants under its oversight. The Court's intervention at this point, on the other hand, would only risk haphazard application of the Joint Guidance.

In sum, the Court holds that the issue of Smithfield's compliance with OSHA's guidelines and regulations falls squarely within OSHA/USDA's jurisdiction. The Court finds dismissal without prejudice is preferable to a stay here so that Plaintiffs may seek relief through the appropriate administrative and regulatory framework.

III. Plaintiffs' have not met their burden for a preliminary injunction.

Although the Court's ruling on the primary-jurisdiction doctrine is dispositive, to aid in any appellate review, the Court will consider whether Plaintiffs have met their extraordinary burden of proving an affirmative preliminary injunction is proper in this case.

In determining whether to grant injunctive relief the Court considers the following factors, which were set forth in the seminal decision *Dataphase Sys., Inc. v. C L Sys., Inc.*, 640 F.2d 109, 114 (8th Cir. 1981): 1) the threat of irreparable harm to the movant; 2) the balance between this harm and any injury that granting the injunction will inflict on the non-moving party; 3) the likelihood that the moving party will prevail on the merits; and 4) the public interest. *Phelps-Roper v. Nixon*, 509 F.3d 480, 484 (8th Cir. 2007). No single factor is determinative; they must be "balanced to determine whether they tilt towards or away" from

OSHA-004216

granting the injunction. *Noodles Dev., LP. v. Ninth St. Partners, LLP*, 507 F. Supp. 2d 1030, 1034 (E.D. Mo. 2007).

Preliminary injunctive relief "is an 'extraordinary and drastic remedy, one that should not be granted unless the movant, by a clear showing, carries the burden of persuasion.'" *North Dakota v. U.S. Army Corps of Eng'rs*, 264 F. Supp. 2d 871, 878 (N.D. 2003) (quoting *Mazurek v. Armstrong*, 520 U.S. 968, 972 (1997)). This burden is particularly great where, as here, Plaintiffs seek a preliminary injunction requiring an affirmative act. *Sanborn Mfg. Co. v. Campbell Hausfeld/Scott Fetzer Co.*, 997 F.2d 484, 484 (8th Cir. 1993).

1. Plaintiffs have not demonstrated a threat of irreparable harm.

To demonstrate a sufficient threat of irreparable harm, the moving party must show that there is no adequate remedy at law; that is, that an award of damages cannot compensate the movant for the harm. *See Noodles Dev.*, 507 F.Supp.2d at 1036-37. But, when analyzing this factor, the Eighth Circuit has held that "[m]erely demonstrating the 'possibility of harm' is not enough." *Chlorine Inst., Inc. v. Soo Line R.R.*, 792 F.3d 903, 915 (8th Cir. 2015); *see also S.J.W.* ex rel *Wilson v. Lee's Summit R–7 Sch. Dist.,* 696 F.3d 771, 779 (8th Cir. 2012) ("Speculative harm does not support a preliminary injunction."). In the context of a global pandemic, this Court must consider the threat after "accounting for the protective measures" defendant has already implemented. *Valentine v. Collier*, --- F.3d ---, 2020 WL 1934431, *5 (5th Cir. Apr. 22, 2020).

Plaintiffs argue that their injury is potentially contracting COVID-19, which could result in serious illness or even death. But this type of injury is too speculative under Eighth Circuit precedent.

OSHA-004217

Plaintiffs' claim otherwise, citing two cases from the Eighth Circuit, which they argue held the possibility of "death or serious illness" constitutes an irreparable injury (Doc. 3 at 24). Plaintiffs' cite *Kai v. Ross*, 336 F.3d 650, 656 (8th Cir. 2003), a case in which the state of Nebraska revoked a program providing medical care for the needy. The plaintiffs, who suffered from physical and mental disabilities and received their prescription medications through the program, sought to enjoin revocation of the program. *Id.* The Eighth Circuit held that the present danger to plaintiffs' health without their medications is an irreparable harm. *Id.* Plaintiffs also cite *Harris v. Blue Cross Blue Shield of Mo.*, 995 F.2d 877, 879 (8th Cir. 1993), which similarly held that denial of coverage for the treatment of a life-threating illness is an irreparable injury. These two cases are inapposite, since the plaintiffs were already suffering from illnesses, and would undoubtedly suffer serious illness or death in the absence of an injunction.[12] In other words, the threat of serious injury or death was a certainty and not merely a possibility.

The Court is not unsympathetic to the threat that COVID-19 presents to the Plant's workers. But in conducting its analysis, the Court must determine whether Plaintiffs will suffer an actual, imminent harm if the injunction is denied. This is not the same as analyzing whether employees risk exposure if they continue to work, and, unfortunately, no one can guarantee health for essential workers—or even the general public—in the middle of this global pandemic.

[12] Plaintiffs also cite *Mertzlufft v. Bunker Res. Recycling & Reclamation, Inc.*, 760 S.W.2d 592 (Mo. Ct. App. 1988) as persuasive authority. In *Mertzluff*, the plaintiffs sought to enjoin a business which was illegally transporting, storing, and incinerating hazardous waste without a permit. *Id.* at 595. The plaintiffs brought a citizen's suit to enjoin the defendant from charging and loading the incinerator with hospital wastes, or otherwise operating it, which the trial court granted. *Id.* The Missouri court of appeals, reviewing the case under a standard deferential to the trial court's judgment—not operating under the preliminary injunction standard set forth in *Dataphase*—held that the preliminary injunction was warranted. *Id.* at 598. It did not, however, address whether the plaintiffs proved there was a threat of irreparable harm. *Id.* at 598. To the contrary, the court held that plaintiffs were "not obligated to allege and prove they had suffered irreparable harm in order to obtain injunctive relief, but were only required to prove that they were adversely affected in fact by the unlicensed operation, which they did." *Id.* Accordingly, this case is also inapplicable because the court of appeals did not consider—and plaintiffs were not required to prove—a threat of irreparable harm. But, even if they were, the defendant was illegally operating a hazardous waste facility, and thus presented a present threat of certain harm to the plaintiffs.

OSHA-004218

But given the significant measures Smithfield is now taking to protect its essential workers from COVID-19 and the fact that there are no confirmed cases of COVID-19 currently at the Plant, the Court cannot conclude that the spread of COVID-19 at the Plant is inevitable or that Smithfield will be unable to contain it if it occurs. Thus, Plaintiffs have not established an immediate threat of irreparable harm.

2. Plaintiffs have not shown that the balance of harms favors issuing injunctive relief.

The second factor "examines the harm of granting or denying the injunction upon both of the parties to the dispute and upon other interested parties, including the public." *Noodles Dev.*, 507 F. Supp. 2d at 1038 (citing *Dataphase*, 640 F.2d at 114). "To determine what must be weighed, . . . courts of this circuit have looked at the threat to each of the parties' rights that would result from granting or denying the injunction." *Id.* The "potential economic harm to the parties" is a relevant consideration, as is "whether the defendant has already voluntarily taken remedial action." *Id.*

Here, there is no doubt that if workers at the Plant contract COVID-19, the harm to Plaintiffs could be great. But Plaintiffs have alleged only that—potential harm—and, in this time, no essential-business employer can completely eliminate the risk that COVID-19 will spread to its employees through the workplace. Thus, it is important that employers make meaningful, good faith attempts to reduce the risk. Here, Smithfield has taken significant remedial steps in accordance with the Joint Guidance to protect its workers from COVID-19.

Moreover, national and local guidance on COVID-19 is continuously evolving and changing. An injunction would deny Smithfield the flexibility needed to quickly alter workplace procedures to remain safe during the ever-changing circumstances of this pandemic. *Valentine*, 2020 WL 1934431 at *5 (staying injunction that would "interfer[e] with the rapidly changing and

flexible system-wide approach that [defendant] has used to respond to the pandemic so far" and "[defendant's] ability to continue to adjust its policies is significantly hampered by the preliminary injunction, which locks in place a set of policies for a crisis that defies fixed approaches") (citing *Jacobson v. Massachusetts*, 197 U.S. 11, 28–29 (1905); *In re Abbott*, 954 F.3d 772, 791 (5th Cir. 2020)). Thus, the remedial measures Smithfield has implemented convince the Court that the balance of harms weighs in its favor.

3. Plaintiffs have not shown a likelihood of success on the merits.

To demonstrate likelihood of success on the merits, a movant does not need to show that it ultimately will succeed on its claims, only that the movant's prospects for success is *sufficiently likely* to support the kind of relief it requests. *See Noodles Dev.*, 507 F.Supp.2d at 1036–37 (emphasis added) (citations omitted). That is, the movant need only show "a fair chance of prevailing." *Phelps-Roper*, 509 F.3d at 485. On this record, Plaintiffs have not shown a fair chance of prevailing on either of their claims.

a. Plaintiffs have not shown they are likely to succeed on their public-nuisance claim.

Under Missouri law, "a public nuisance is an offense against the public order and economy of the state and violates the public's right to life, health, and the use of property, while, 'at the same time annoys, injures, endangers, renders insecure, interferes with, or obstructs the rights or property of the whole community, or neighborhood, or of any considerable number of persons.'" *State* ex rel. *Schmitt v. Henson*, ED 107970, 2020 WL 1862001, at *4 (Mo. Ct. App. April 14, 2020) (citations omitted).

The parties agree that the Plant cannot be a public nuisance simply by virtue of the fact that it is a meat-processing plant during a global pandemic. Moreover, in this case, Smithfield has implemented substantial health and safety measures to protect Plant workers, and no

employees of the Plant have been diagnosed with COVID-19. While Plaintiffs argue that Smithfield could do more to protect its workers, that is not the issue before this Court. The issue is whether the Plant, as it is currently operating, constitutes an offense against the public order. Because of the significant measures Smithfield has implemented to combat the disease and the lack of COVID-19 at the facility, the Plant cannot be said to violate the public's right to health and safety. Thus, the Court finds that Plaintiffs are unlikely to be succeed on their public nuisance claim.

b. Plaintiffs have shown they are unlikely to succeed on their right to a safe workplace claim.

Under Missouri law, Plaintiffs must prove that Smithfield negligently breached its duty to provide a safe place to work and that such negligence was the direct and proximate cause of the Plaintiffs injuries. *Hamilton v. Palm*, 621 F.3d 816, 818 (8th Cir. 2010). As discussed, Smithfield has taken substantial steps to reduce the potential for COVID-19 exposure at the Plant and appears to the Court to be complying with the Joint Guidance regarding the same. Thus, Plaintiffs are not substantially likely to prove Smithfield breached any duty.

More importantly, however, Plaintiffs have not alleged they have suffered any injury, only that they may suffer an injury in the future. A potential injury is insufficient to state a claim of the breach of the duty to provide a safe workplace under Missouri law. Plaintiffs citation to *Smith v. W. Elec. Co.*, 643 S.W.2d 10 (Mo. Ct. App. 1982), to establish that they have stated a sufficient injury is unavailing. In *Smith*, the plaintiff proved that he had been exposed to harmful second-hand smoke in the workplace which caused him to suffer a severe adverse reaction. *Id.* at 12. The adverse reaction was the actual injury he suffered, and he suffered this harm—and sought relief through an administrative process—before seeking an injunction. Thus, *Smith* is not analogous to this case, and Plaintiffs have not shown they are likely to be successful on their

OSHA-004221

breach of a safe workplace claim.

4. The public interest factor is neutral.

Certainly, the spread of COVID-19 is a public-health matter of great concern, and, so, preventing transmission of the virus which causes COVID-19 is within the public interest. At the same time, the public has an interest in maintaining the food-supply chain and access to meat products, an interest which might be impaired if the Court granted the injunction. Because Smithfield's current policies and procedures temper public health worries, the Court finds a preliminary injunction is not in the public interest at this time.

Thus, Plaintiffs have not met their extraordinary burden of showing an affirmative preliminary injunction is warranted in this case.

III. Plaintiffs' requested relief lacks the specificity required for a preliminary injunction.

Finally, the Court finds that Plaintiffs requested relief is impermissibly vague. Federal Rule of Civil Procedure 65(d) states that an injunction must be "specific in [its] terms" and describe in reasonable detail the actions sought to be enjoined. Fed. R. Civ. P. 65(d). This specificity requirement is "designed to prevent uncertainty and confusion on the part of those to whom the injunction is directed and to avoid the possible founding of a contempt citation on a decree too vague to be understood." *Helzberg's Diamond Shops, Inc. v. Valley W. Des Moines Shopping Ctr., Inc.*, 564 F.2d 816, 820 (8th Cir. 1977).

In this case, Plaintiffs request this Court enter an injunction requiring Smithfield to "make all reasonable changes to its 'production practices,' including potentially lowering its line speeds, to place as many workers as possible at least six feet apart" (Doc. 46 at 10). Plaintiffs do not explain what changes would be "reasonable," except for "potentially" reducing line speeds. In other words, they do not specify in reasonable detail what Smithfield should do. They

OSHA-004222

demand workers have "reasonable additional breaks to allow workers to care for their personal hygiene without penalty, including blowing their noses, using tissues, and hand washing," but they do not specify how often or how long such breaks should take place, or what would constitute a reasonable break. Finally, Plaintiffs request the Court order Smithfield to change its policies to "not require workers to come to the Plant to obtain COVID-19-related sick leave and take all reasonable steps to communicate that policy clearly to workers." But Plaintiffs do not identify which policies should be eliminated, what constitutes "reasonable steps," or why Smithfield's current policies are insufficient. Because "a person of ordinary intelligence" would not understand what is prohibited based on Plaintiffs' proposed preliminary injunction, *Schenck v. Pro-Choice Network of W. N.Y.*, 519 U.S. 357, 383 (1997), it is impermissibly vague, and thus unenforceable.

Conclusion

Plaintiffs are naturally concerned for their health and the health of their community in these unprecedented times. The Court takes their concern seriously. Nevertheless, the Court cannot ignore the USDA's and OSHA's authority over compliance with the Joint Guidance or the significant steps Smithfield has taken to reduce the risk of a COVID-19 outbreak at the Plant.

For the reasons discussed above, Defendants motion to dismiss is GRANTED, and the case is DISMISSED without prejudice.

IT IS SO ORDERED.

IFSCT Members,

Below are two follow up items and one action item from this morning's call:

- Attached is the National Business Emergency Operations Center (NBEOC) Snapshot referenced in our discussion.
- Protecting Seafood Processing Workers from COVID-19 – This is the recent guidance for seafood industry employers that was developed jointly by CDC, OSHA and FDA.
- **ACTION** – If you cannot participate in the smaller working group session, we still want to hear from you.
  - Click here to provide your feedback on the IFSCT.

Thank you for your continued efforts; your dedication to this critical work is greatly appreciated.

Best,
Todd

Background: The global COVID-19 pandemic and cascading supply chain impacts are unprecedented and there are unique challenges to the Food and Agriculture (FA) Sector including but not limited to worker safety; depopulation and carcass disposal; food production and processing; supply/demand/distribution; food security; cross-sector interdependencies; and related.

The FA Sector is composed of complex production, processing, and delivery systems and has the capacity to feed people and animals both within and beyond the boundaries of the United States. These food and agriculture systems are almost entirely under private ownership, operate in highly competitive global markets, strive to operate in harmony with the environment, and provide economic opportunities and an improved quality of life for American citizens and others worldwide. These factors contribute to unique challenges

related to disparate and disconnected data sources to inform FSC intelligence.

The continuity of critical infrastructure sectors, including the Food and Agriculture Sector, is not a given. Meat packing issues observed in recent weeks are the potential canary in the canary in the coal mine. There is a need to plan for secondary impacts of the pandemic such as increasing PPE demand and limited supply; demand for limited reagents to support operations (e.g., CO2, quat ammonia); worker absenteeism; widespread testing and public health strategies to facilitate critical infrastructure continuity and develop a better, macro-level understanding of potential disruptions due to local impacts. Further issue complexities along the FSC continuum have arisen and become apparent due to the bifurcation of demand networks between store bought consumables and products intended for dine-in locations.

> Hello Loren! I hope all is well. I appreciate all of your help over the past few weeks.

I have a question for you from some of our processors. They are beginning to experience inclement weather and some have shelters, but they are unable to socially distance in the shelter. I am assuming this would fall in the “if feasible” category as the workers should be protected from a storm. However, I want to check with you to make sure.

They have suggested wearing masks in the shelter areas. Let me know what you think about this.

Thank you.

Mindy.

Loren ,

May we use this language in a note that we are sending out to our stakeholders today?

OSHA has an extensive consultation program that offers no-cost and confidential occupational health and safety services in all 50 states. Though usually aimed at small- and medium-sized employers, OSHA has waived this size requirement for meat processing facilities during the national emergency. Facilities that need assistance in implementing the CDC/OSHA guidance in their facilities may contact their local consultation office.

Shawna Newsome

Implementation of Executive Order 13917

Executive Order 13917, signed by President Trump on April 28, 2020, delegated to the Secretary of Agriculture the powers of the President under the Defense Production Act to take all appropriate action to ensure America's meat and poultry processors continue operations.

Maintaining the health and safety of plant employees in addition to ensuring continued operations and a plentiful food supply during this unprecedented time is paramount. Our Nation's meat and poultry processing facilities and workers play an integral role in the continuity of our food supply chain.

FSIS' mission is to inspect meat and poultry products to ensure that they are wholesome and safe. For this reason, USDA is partnering with the Centers for Disease Control and Prevention (CDC) and the Occupational Safety and Health Administration (OSHA) as they have the authority and expertise over public health and worker safety issues for plant employees.

Effective immediately, meat and poultry processing plants should utilize the guidance issued on April 26, 2020, by the CDC and OSHA specific to the meat and poultry processing industry to implement practices and protocols for safeguarding the health of their workers and the community while staying operational or resuming operations to the maximum extent possible. Should you need technical assistance, OSHA has an extensive consultation program that offers no-cost and confidential occupational health and safety services in all 50 states. Though usually aimed at small and medium sized employers, OSHA has waived this size requirement for meat processing facilities during the national emergency. Facilities that need assistance in implementing the CDC/OSHA guidance in their facilities may contact their local consultation office.

USDA, alongside our federal partners at CDC and OSHA, will continue to work with state and local officials to ensure that facilities are implementing best practices designed to mitigate the spread of COVID-19, while maintaining operations. Further action under the Executive Order and the Defense Production Act will be taken if necessary. If you have questions, please see the FAQs on the USDA website under the "President Trump's Executive Order" tab.

FSIS thanks establishments for ensuring that their employees will be able to continue working to provide Americans with an abundant, healthy, and safe food supply.

Attachments: CDAP Access Instructions_200605.pdf
DAWG MAX Access Instructions_200605.pdf

IFSCT Members,

Per this morning's call, attached are two sets of instructions related to the demo provided:

- **COVID-19 Data and Assessment Portal (CDAP) Access Instructions** –This provides instructions for accessing the Data and Assessment Working Group's (DAWG) CDAP, which is the tool demo'ed this morning.
    - The first step in the process is to request access to the CDAP tool by emailing DAWG@anl.gov. In your request, you must provide your name and organizations. Access is free to all federal D/As.

- **DAWG MAX Access Instructions** – This provides instructions on how to access the DAWG's website on MAX.gov. MAX.gov is a government-wide suite of advanced collaboration, information sharing and data collection tools used to facilitate cross-government collaboration and knowledge management.

If anyone would like to follow up with SBA on their out brief this morning, please contact Lynda Lowe at SBA's Office of Disaster Assistance by emailing her at lynda.lowe@sba.gov.

Please let us know if there are any addition topics or questions that should be addressed in next week's meeting.

Thank you for participating in this morning's call, and we look forward to hearing from you next week.

Best,
Todd

Sent: Tuesday, June 16, 2020 10:16 AM
To: Interagency Food Supply Chain
Subject: USDA ESF #11 Interagency Food Supply Chain Team
When: Tuesday, June 23, 2020 8:00 AM-8:30 AM (UTC-05:00) Eastern Time (US & Canada).
Where: (b) (6) [redacted]

Purpose: To mitigate National Food Supply disruptions by identifying challenges and developing solutions to lessen the negative cascading impacts of COVID-19 on the Food Supply Chain (FSC); including but not limited to, Emergency Protective Measures to safeguard public health (i.e. Workforce Safety, Community Mitigation, Personal Protective Equipment (PPE), etc.).

Frequency: Every Tuesday (weekly) from 8:00 AM to 8:30 AM ET.

Location: (b) (6) [redacted]

Agenda:

- USDA ESF #11 IFSCT Opening Comments and Update – Todd McCoy
- ESF Updates
    - ESF # 6 – S*arah Egan (FEMA)*
    - ESF # 10 – Stephanie Wenning (EPA)
    - ESF # 14 – Dana Ahrens or Bob Rutledge (DHS-CISA)
    - ESF # 15 – Dirk Fillpot (*USDA Office of Communications)*
- Recovery Support Functions – Debbie Hill (*USDA)*
- Working Group Updates
    - Analytics – Ted *Kaouk (USDA)*
- Issue/Challenge Area Updates
    - Depopulation and Carcass Removal
    - Fruit and Vegetable Impacts
    - Seafood and Fisheries
    - Other Issue Areas As Needed
- Interagency Partner Updates and Open Discussion
    - USDA Agencies
    - FEMA
    - FDA
    - CDC
    - OSHA
    - DOI
    - DOL
    - NOAA
    - BIA
    - DHS (Other than FEMA)
    - DOD Agencies

Background: The global COVID-19 pandemic and cascading supply chain impacts are unprecedented and there are unique challenges to the Food and Agriculture (FA) Sector including but not limited to worker safety; depopulation and carcass disposal; food production and processing; supply/demand/distribution; food security; cross-sector interdependencies; and related.

The FA Sector is composed of complex production, processing, and delivery systems and has the capacity to feed people and animals both within and beyond the boundaries of the United States. These food and agriculture systems are almost entirely under private ownership, operate in highly competitive global markets, strive to operate in harmony with the environment, and provide economic opportunities and an improved quality of life for American citizens and others worldwide. These factors contribute to unique challenges

related to disparate and disconnected data sources to inform FSC intelligence.

The continuity of critical infrastructure sectors, including the Food and Agriculture Sector, is not a given. Meat packing issues observed in recent weeks are the potential canary in the canary in the coal mine. There is a need to plan for secondary impacts of the pandemic such as increasing PPE demand and limited supply; demand for limited reagents to support operations (e.g., CO2, quat ammonia); worker absenteeism; widespread testing and public health strategies to facilitate critical infrastructure continuity and develop a better, macro-level understanding of potential disruptions due to local impacts. Further issue complexities along the FSC continuum have arisen and become apparent due to the bifurcation of demand networks between store bought consumables and products intended for dine-in locations.

Media Inquiry:
Today we received a media inquiry from the BBC that was referred to Chicago's OPA Scott Allen. Scott spoke to the reporter who was inquiring about Smithfield's OSHA history. The reporter also wanted to know whether we are doing an inspection, but he has not yet answered her. We told him that we would let him know if we were going to open an inspection there.

As of this time, we have had no reports of hospitalizations at Smithfield. (b) (5)

Subject: Smithfield Foods - Major employer in Sioux Falls - April 13, 2020 - Update

Hello – Update on Smithfield

Throughout the weekend the number of Covid-19 cases continued to rise and one recent news article says that 238 of Minnehaha's 438 cases involve "individuals who work at Smithfield Foods". The initial plan was that Smithfield close for three days but, the cases continued to climb throughout the weekend, initially prompting a 14-day shutdown – urged by the Governor Noem and Mayor TenHaken. The plant took an additional step to close the facility until further notice.

Several other news outlets have higher numbers for Smithfield Food employees infected with Covid-19. The US News says nearly 300 employees are infected.

Here is the news release that Smithfield issued:

https://www.smithfieldfoods.com/press-room/company-news/smithfield-foods-to-close-sioux-falls-sd-plant-indefinitely-amid-covid-19

Here is the most recent story in the Argus Leader:

https://www.argusleader.com/story/news/2020/04/12/smithfield-foods-close-sioux-falls-plant-indefinetly-amid-covid-19-outbreak/2978385001/

State-wide we currently have 730 cases.

Here is the link to the US News Story:

https://www.usnews.com/news/national-news/articles/2020-04-13/smithfield-foods-closes-south-dakota-processing-plant-after-employees-test-positive-for-coronavirus

(b) (5) [redacted]

I will send an update on JBS later today.

I will update as I learn additional information.

QUESTIONS

1. Our statistics (#s 1, 2, and 3 from **Findings)** suggest a significant gap between the number of meatpacking plants where workers have died from COVID-19 and the number of plants where inspections have been conducted. Can the agency explain those discrepancies?

2. Interviewees have criticized the agency's use of "remote inspections" for COVID-19 matters at meatpacking plants. They say that video conferencing, fax, and email are inadequate to ensure safe conditions. Any comment?

3. Interviewees have noted that under existing OSHA guidance, healthcare facilities have been deemed priority for in-person OSHA inspections. Interviewees have offered that this is inadequate for meatpacking plants, given that they are subject to the Defense Production Act via executive order and are known to be superspreader facilities in line with nursing homes and prisons. Any comment? Early on, the most exposure would be those treating COVID patients. As we moved forward, we

4. Interviewees have criticized OSHA's in-person inspections of meatpacking plants, including giving advance notice to employers, being too brief, and relying too much on employers' guidance through the plants. Any comment?

5. In at least two plants, OSHA inspectors gave companies advance notice of their on-site inspections. In both instances, workers and their advocates say that prompted changes that didn't last beyond the OSHA inspection. In a July hearing in federal court, a Pennsylvania inspector testified that she gave Maid-Rite Specialty Foods advance notice of an inspection for her own protection from the coronavirus. What has OSHA advised inspectors about alerting employers to inspections in advance during the pandemic?

6. Our calculations show that the agency has issued COVID-19 related violations to only three employers, totaling about $54,000: a JBS plant in Greeley, Colorado; Smithfield Foods in Sioux Falls, South Dakota; and Quality Sausage in Dallas, Texas. Is this accurate, and if so, why have so few workplaces been cited when so many workers have fallen ill or died?

7. What is the status of the inspection of the Noah's Ark facility in Hastings, NE? (Please see our description in the **Facilities** portion.) Can the agency comment on the allegations that the plant continues to be an unsafe work place?

8. Through interviews and document reviews, we have come to understand that guidances released by OSHA in April stipulate that employers are able to determine whether or not an employee's COVID-19 diagnosis is

workplace related, and thus reportable to OSHA. The guidances create a "more likely than not" test for employers to make that determination. Is this accurate?

9. Interviewees have been critical of this approach, saying it places too much control in the hands of companies, bucks usual OSHA policy to have employers report illnesses and injuries and let area offices decide on workplace connectedness, and has ultimately led to an underreporting of legitimate workplace-connected COVID-19 cases. Any comment?

10. Through interviews and document reviews, it is our understanding that some unions have observed discrepancies between the number of employees sick with or dead from COVID-19 and the incidents recorded in employers' 300 logs. Any comment? I think we'd need specific instances to comment.

11. It is our understanding that in a FAQ guidance released by OSHA in September, the agency informed employers they only had to report COVID-19 hospitalizations if they occurred within 24 hours of a workplace exposure. Deaths would only be reportable if they occurred within 30 days of a known exposure. Given that COVID-19's incubation period typically begins several days after exposure, and that some individuals suffer a prolonged COVID-19 illness that can last months before death, this would appear to allow for a significant undercounting of employee hospitalizations and deaths. Is our reading of the FAQ accurate, and if so, any comment?

12. Our understanding is that in September, U.S. senators signed a letter to DOL Secretary Eugene Scalia (The "Sherrod Brown" letter) inquiring about the inspections of meat plants. The senators have apparently received no response. Is this accurate and any comment?

13. Interviewees have been critical about OSHA's release of meatpacking safety guidelines in the spring, saying they are largely voluntarily and include language such as "when possible" and "if feasible." They opined that OSHA should have crafted mandatory emergency standards instead to ensure bare minimum safety conditions were met. Any comment?

14. Interviewees were critical of OSHA's reliance on the general duty clause to ensure worker protections, saying citations are difficult to defend in court and allow for unsafe conditions to continue while being litigated. Any comment?

15. Please comment on the allegations described at Seaboard Foods in Guymon, OK, as described in the **Facilities** section.

16. Please review the description of the Smithfield facility in Crete, NE in the **Facilities** section. In addition to any comment, how many employee COVID-19 deaths have been reported to OSHA by the facility? How many are being investigated? What are the status of those investigations?

17. Overall, interviews say the above allegations all culminate in an abdication of OSHA's responsibility to protect meatpacking workers from COVID-19. What is the agency's response?

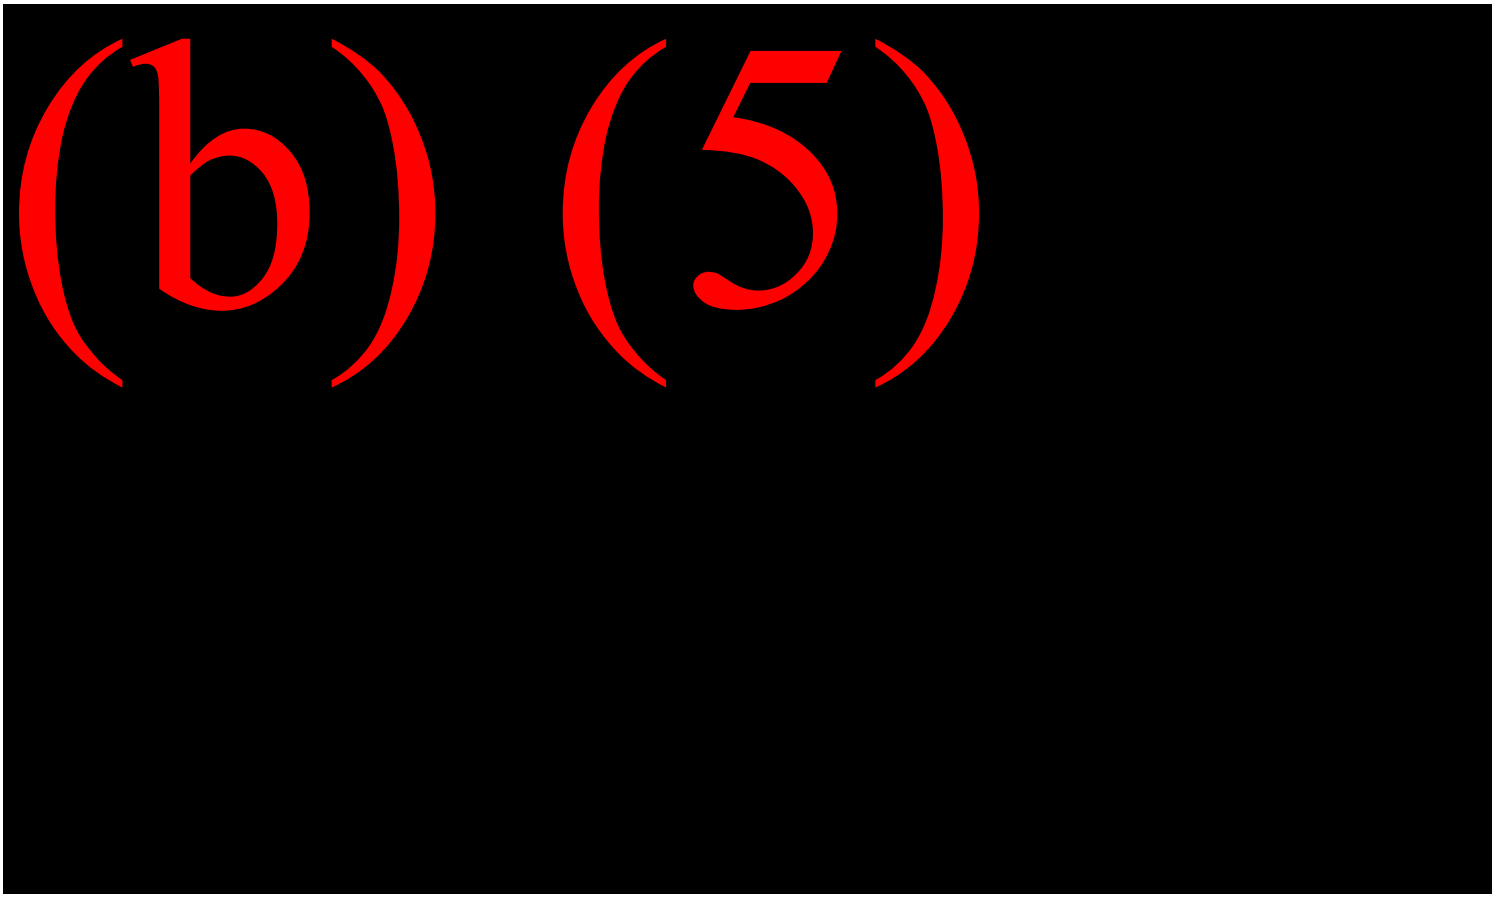
FINDINGS

I. According to our review of publicly available records, 45,000 workers in the meatpacking industry (311611, 311612, 311613, 311615) have fallen ill with COVID-19. 231 have died in 55 plants in 25 states. (b) (5) [redacted]

II. Of those 55 plants, 31 (56%) have received an OSHA inspection of any kind since 3/1/2020. The means 24 (44%), have not.

III. Since 3/1/2020, federal and state OSHA departments have opened only ~75 FAT/CAT investigations of the industry.

FACILITIES



A. **Cargill Fort Morgan, CO**: Public records indicate four employees have died from COVID-19, but no inspection.
B. **Made-Rite in Duncannon, PA:** From interviews and document reviews, we gained an understanding that at this facility in late May, conditions were such that workers were crowded on work lines and in common areas. Shortly thereafter, workers filed a complaint with OSHA alleging "imminent danger" for COVID-19. Our understanding was initially, OSHA submitted only a letter to Maid-Rite. After receiving an unsatisfactory response, several weeks later, OSHA opened and performed an inspection. Prior to the conduction of the inspection, we understand OSHA provided Maid-Rite a one-day advanced notice. Workers said that allowed the plant to correct unsafe conditions, which reverted after the OSHA visit. In July, the workers filed a lawsuit against OSHA, which is ongoing. In December, OSHA issued a letter effectively stating it would not be citing the plant. Attorneys for the employees allege this is evidence that OSHA is not interested in investigating or correcting conditions of imminent danger in meatpacking plants.
C. **Noah's Ark in Hastings, NE:** Our understanding is that workers felt conditions were unsafe in the plant. Our understanding is OSHA inspected the plant in September 2020, but provided a one-day advanced notice to the employer. Employees said that allowed time for lapses in crowding, the provision of hand sanitizer, and deteriorating plastic barriers to be corrected. It was alleged the OSHA inspector stayed for only a brief time and was largely led by the company's representatives. ACLU in November filed a lawsuit on behalf of the workers saying conditions have not improved. It is our understanding OSHA has yet to close its inspection of the facility.
D. **Seaboard Foods in Guymon, OK:** Our understanding is that four workers have died from COVID-19, but that OSHA has not opened any subsequent inspections. Our understanding is OSHA has conducted one inspection of the plant since 3/1/2020, but it was to examine faulty trailers. Interviewees have told us that due to the lack of oversight, the plant has relaxed safety conditions, now allowing for more crowding of the cafeteria.
E. **Smithfield in Crete, NE:** It is our understanding that 139 workers were infected with COVID-19 by early May, when the state and company stopped publicly releasing numbers. It is our understanding that by late May, the daughter of a worker filed an OSHA complaint claiming unsafe conditions continued in the plant, including inadequate mask protection, the moving of plastic barriers, and a lack of exposure notification for employees. It is our understanding the person who filed the complaint received a call from an OSHA employee, who informed the person that there would be no need to inspect the plant since it was taking adequate precautions. It is our understanding at least three employees have died at the plant and/or a separate Smithfield facility across the street, and potentially more. Our understanding is that OSHA has opened three FAT/CAT inspections at the plant, two in June and one in December. We understand at least one of the inspections resulting in an on-site visit. Two of the inspections remain open.
F. **Tyson Foods Camilla, GA:** Public records indicate four employees have died from COVID-19. No inspection.

Patrick ,

Would OSHA consider the mandatory use of face masks, surgical masks, and paper masks for the workplace to protect workers from CoVid-19 that are not NIOSH approved a violation of 29 CFR 1910.134(d)(i) and (d)(ii)?

All,
We think it would be productive to have a call. Please advise if your key participants can do a 4:30 interagency call. If so, OIRA will send an invite.
Thanks,
Q

If OMB has specific concerns, it would be helpful for us to hear those so that we can identify areas where we need to harmonize.

Others, feel free to weigh in if there seem to be sticking points from your perspectives. We would like to keep these document moving quickly, because of urgent need in the field.

October 2021 Record Release

DOL Chart of Fully-Withheld Records (version attached to email from Glass to Pulver (Oct. 6, 2021))

Document No. 27

ORDER OF THE HEALTH OFFICER OF THE COUNTY OF MERCED
DIRECTING FOSTER FARMS POULTRY PROCESSING PLANT
IN LIVINGSTON, CA TO RESPOND TO CURRENT OUTBREAKS AT THE LIVINGSTON COMPLEX AND COMPLY WITH OTHER DIRECTIVES OF THIS ORDER

DATE OF ORDER: August 26 , 2020

WHEREAS, the worldwide pandemic of COVID-19 disease, also known as "novel coronavirus" has infected over 7,500 Merced County residents and has resulted in the death of 112 Merced County residents.

WHEREAS, over 800 residents in the City of Livingston, located in Merced County, have been infected with COVID-19.

WHEREAS, there is significant evidence of increasing transmission of COVID-19 within the County of Merced and surrounding counties, placing a measurable strain on the local healthcare systems.

WHEREAS, according to the Meat and Poultry Processing Workers and Employers Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA), meat and poultry processing facilities are particularly vulnerable to COVID-19 infections due to working conditions. These conditions include prolonged, close contact with coworkers on the production line.

WHEREAS, Foster Poultry Farms maintains a poultry processing facility located in the City of Livingston.

WHEREAS, the California Department of Public Health has defined an outbreak in a congregate employment setting as three (3) or more cases of laboratory confirmed COVID-19 in employees not linked outside of the workplace.

WHEREAS, the Foster Farms complex at Livingston consists of multiple buildings on the same campus. Foster Farms first experienced an outbreak of COVID-19 at their Livingston facility on June 29, 2020, the first known case dated to June 9, 2020. As of the date of this Order, the initial outbreak is ongoing and outbreaks are widespread throughout multiple separate buildings at the Livingston facility. One department at the facility currently has an active outbreak that has affected 105 workers and other departments have active outbreaks affecting over 20 workers. Of the approximate 2,600 workers at the Livingston facility, 13.7 percent of the workforce has received a positive test result based on worker self-reporting. Most concerning is that these current testing figures do not accurately represent the extent of outbreak at the facility as universal testing has not been accomplished within the timeline necessary to accurately identify the extent of the outbreak.

WHEREAS, since April 24, 2020, the Merced County Department of Public Health (MCDPH) has received report of 358 confirmed cases of COVID-19 and eight (8) deaths attributed to COVID-19 linked to workers from the Foster Farms Livingston facility. Five (5) of the eight (8) deaths occurred in a hospital located outside of Merced County, illustrating the serious impact of the Foster Farms outbreak on healthcare systems and the community-at-large in California.

WHEREAS, in the past month, Foster Farms has experienced an increase of 214 reported cases of COVID-19 positive workers and six (6) deaths. Weekly reports from Foster Farms indicate the outbreak has continued since the initial reported outbreak on June 29, 2020.

WHEREAS, to-date, there has been insufficient timely testing of Foster Farms workers to assess the true extent of cases at the facility. Without accurate information on the number of cases, it is not possible to properly identify workers who require testing and/or quarantine because of exposure to the virus. This is hampered by the difficulty of testing and monitoring a growing temporary workforce. Hospital data on current hospitalizations and mortality has been slowly reported to MCDPH, further complicating decisive interventions that would allow a safe production process to continue at the facility.

WHEREAS, the Merced County Health Officer issued Directives to Foster Farms on August 5, 2020 and August 11, 2020, providing specific direction on testing requirements and other measures to control the spread of COVID-19 within the Livingston building. In summary, these Directives required immediate COVID PCR testing of all permanent, volunteer, and temporary employees who share air within a facility that has an outbreak (three or more individuals within the same building). Once an outbreak is initiated within a building, the outbreak is not considered resolved until the building reports zero additional cases for two consecutive weeks, or until universal testing of the building within the previous three (3) day period, reveals less than 1% positivity rate within the workforce.

WHEREAS, in response to the previous Merced County Health Officer Directives, Foster Farms has not implemented the required universal testing of the entire Livingston Complex, as directed. Over the three-week period since the August 5, 2020 directive was issued, the spread of disease within the facility has not been contained and active outbreaks continue to spread, creating a public nuisance as defined by California Penal Code 370 and Civil Code 3479, and posing a great risk to the health and safety of Merced County residents and the surrounding counties. Given the current epidemiological data, the slowness in testing workers, and the time necessary to complete comprehensive contact tracing and quarantine those who are exposed, partial closure of the facility for timely, universal testing of all workers and sanitation is necessary.

WHEREAS, based on the increasing number of positive COVID-19 cases at the Foster Farms Livingston Facility, the mounting death rates, the delay in implementation of a comprehensive testing scheme, the need for comprehensive contact tracing and quarantine of those exposed, decisive intervention is essential to control the COVID-19 outbreak. It is imperative that the Merced County Health Officer issue this Order to protect and preserve the health of workers at the Facility and residents of Merced County, surrounding counties, and the State of California.

Under the authority of California Health and Safety Code Sections 101040, 101085, 120175; California Government Code Sections 8610, 8630, and 8634; Article XI of the California Constitution; Title 17 California Code of Regulations Section 2501; and Merced County Code Chapter 2.72, the Health Officer of the County of Merced ("Health Officer") Orders Foster Poultry Farms A Corp (Foster Farms):

1. **Livingston Plant (including, but not limited to, Food Service Operations, Livingston Plant 1, Livingston Plant 2, Livingston Retail Packaging, Livingston Weigh and Price, and Livingston Rotis Room)** located at 843 Davis St., Livingston, CA 95334: To cease all operations within twelve (12) hours of issuance of this Order including any and all on-site manufacturing, transportation, processing, food service, packing, administrative, and/or other similar operations within Livingston Plant for the purposes of deep cleaning and testing all workers (permanent, temporary, contract, volunteer, and other) for clearance (as defined as two (2) negative PCR COVID-19 tests taken at least three (3) days but no more than seven (7) days apart), and implementing other measures in compliance with this Order. Foster Farms is further required to direct its agents, employees, officers, and others acting on its behalf, as well as subsidiaries, affiliates, and other entities controlled by Foster Farms, in such a manner as to ensure the closure of the entire Livingston Plant and that Livingston Plant on-site operations cease and resume only in accordance with this Order.
    a. Once Foster Farms accomplishes the requirements of this Section to the satisfaction of the Merced County Public Health Officer and/or Health Officer designee (MCDPH contact), Foster Farms may be able to resume operations at the Livingston Plant facility.
    b. No worker may return to work at the Livingston Plant until they have received two (2) negative PCR COVID-19 tests taken at least three (3) days but no more than seven (7) days apart.

2. **NCDC 2** located at 843 Davis St., Livingston, CA 95334: will be allowed to remain open and operational despite active outbreak status due to the ability to maintain at least six (6) foot social distancing within the workplace and a lower worker density within the facility, if:
    a. Foster Farms enforces 6 feet of social distancing between workers at NCDC 2;
    b. The current break room(s) are closed and Foster Farms provides an alternative, appropriate break space that can accommodate and ensure social distancing (that is actively monitored); and
    c. Foster Farms to provides food provisions, accommodating dietary needs to its workers to preventing the need for kitchen facilities for all workers with the facility until outbreak is cleared from NCDC 2 facility;
    d. Items 2(b)-(c) shall remain in place until the facility is cleared, defined as <1% positivity rate of the entire workforce at the NCDC 2, tested same day, for 2 rounds of testing, three (3) days apart. If testing positivity rate is greater than 1%, testing must be continued every three (3) days until outbreak is cleared.

3. **All Other Facilities** located at 843 Davis St., Livingston, CA 95334 and 1000 Davis St., Livingston, CA 95334: can remain open and operational, if:
    a. All employees (permanent, temporary, contract, volunteer, and other) are tested immediately and every seven (7) days thereafter until Livingston Complex is cleared from outbreak. If testing positivity rate is greater than 1%, testing must be increased to every three (3) days.

4. Conduct a terminal cleaning of the entirety of the Livingston Complex through a qualified cleaning agency either during facility closure or within seven (7) days of the issuance of this Order. Ensure that high-traffic areas and high-touch areas are disinfected following CDC guidelines:
https://www.cdc.gov/coronavirus/2019-ncov/community/disinfecting-building-facility.html and
https://www.cdc.gov/coronavirus/2019-ncov/community/pdf/REopening_America_Guidance.pdf.

5. The following COVID-19 line lists of data, at a minimum and as required by MCDPH, shall be reported to the MCDPH contact directly in a format determined by MCDPH and at intervals determined by MCDPH, but at no time less often than two times each week on Tuesdays and Fridays by 12:00PM:
    a. Worker full name, date of birth, gender, race, phone number, county of residence, job title, location in facility/assigned department, unit/shift (e.g., day, night, swing), if the individual works in another facility/location and name of the other facility, positive test date, last day worked, symptom start date (note if asymptomatic), testing location, if worker was tested due to part of mandated response testing, type of test used (e.g., PCR, antigen), return to work date, if worker was hospitalized due to illness, hospitalization date, if worker died due to illness (if yes, immediately e-mail the MCDPH contact), date of death, number of close contacts sent home/teleworking due to exposure, and if the case was a close contact to another index/case in the facility.
    b. The full laboratory testing line list data (including on-site testing), at a minimum, shall be reported to the MCDPH contact directly in a format and at intervals determined by MCDPH, including worker full name, date of birth, phone number, address of residence, county of residence, test result, and test date. Submission via the CalREDIE system alone will not be accepted.

6. Immediately upon issuance of this Order, a COVID-19 Mitigation Plan for the entire Livingston Complex is required to be prepared and submitted to and approved by the MCDPH contact and shall include continued proper COVID-19 worker medical screening, symptom-based testing, and testing of new hires and temporary workers, including the following:
    a. Permanent employees, temporary workers, contract workers, and/or volunteers that present with a positive COVID-19 test result shall be sent home from work for the required quarantine period and follow MCDPH, California Department of Public Health (CDPH), and CDC requirements and guidance. Workers who refuse or are unable to be tested as directed by MCDPH should be quarantined at home for 14 days, and shall not be allowed to work during the isolation period as defined by CDC:
    https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-in-home-patients.html.
    b. Workplace contact tracing shall be conducted by Foster Farms within 24 hours of notification of a positive employee. Close contacts, is defined as being within six

(6) feet for more than 15 minutes during the case's infectious period to positive workers. Close contacts shall be sent home from work for a 14-day quarantine period. The infectious period begins 48 hours prior to development of symptoms. For the purposes of contact tracing of individual who were asymptomatic and tested positive, the infectious period commences 48 hours prior to the day the sample was collected.

c. Temporary workers, permanent employees, contract employees, and/or volunteers will not be allowed to begin work without submitting proof to Foster Farms of a COVID-19 negative point-of-care antigen or PCR test result dated same day before start of work up to 48 hours before the start date.
d. Symptom-based testing is required when a permanent employee, temporary worker, contract worker, and/or volunteer presents with any one of the COVID-19 symptoms described by the CDC in the following guidance: https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html. Immediately upon notice to or observation by Foster Farms of any one of the COVID-19 symptoms by any worker at the site, testing of the worker shall immediately occur by either PCR or point-of-care antigen testing, or other Health Officer approved testing method, and results shall be obtained within 24-48 hours.
e. When there is a COVID-19 outbreak of three (3) permanent employees, temporary workers, contract workers, and/or volunteers in any building, or area that shares the same air supply, all individuals who had worked in the area during the potential outbreak period (within 48 hours prior to the onset of symptoms of a positive employee throughout the duration of the outbreak) must be tested for COVID-19 by PCR immediately and every seven (7) days thereafter until the building reports zero additional cases for two consecutive weeks, or until universal testing of the building reveals less than 1% positivity rate within the workforce.
f. The employer is responsible for ensuring all workers, including temporary workers, permanent employees, contract employees, and/or volunteers, are offered and provided COVID-19 testing at no cost to the employee.

7. As soon as practical, but no less than 14 days of issuance of this Order, expand the on-site Occupational Health program and clinic, consisting of a designated licensed medical or nursing professional and liaison for MCDPH to ensure and oversee proper COVID-19 worker medical screening processes, contact tracing, case investigation and referral to health care provider as needed, accurate data collection and reporting of all workers tested, reporting of all COVID-19 positive results regardless of county of residence, immediate notification of COVID-19 related hospitalizations to the MCDPH contact and CalOSHA, immediate reporting of COVID-19 related deaths to the MCDPH contact and CalOSHA, data quality assurance verification protocol, and the implementation of adequate COVID-19 surveillance testing and reporting to the MCDPH contact, as approved by MCDPH. These requirements are subject to review and supervision by MCDPH to ensure adequate procedures and practices are implemented.

8. Foster Farms management shall ensure that all employees be informed of testing requirements, outbreaks that occur, areas affected, and trained on safety requirements, in English, Spanish, and Punjabi, working with the union as applicable.

9. Provide proper face coverings at no cost to all contract employees, permanent employees, temporary workers, and/or volunteers prior to each shift, and if a replacement is needed during a shift, and require use as directed in the Merced County Health Officer Order.

10. Foster Farms shall follow all State Orders, including State COVID-19 Industry Guidance for Food Packing and Processing: https://files.covid19.ca.gov/pdf/guidance-food-packing--en.pdf.

11. This Order is issued in accordance with, and incorporates by reference, the: March 4, 2020 Proclamation of a State of Emergency issued by Governor Gavin Newsom; March 12, 2020 Executive Order N-25-20 and March 19, 2020 Executive Order N-33-20, each issued by Governor Newsom ordering all state residents to heed any orders and guidance of state and local public health officials with respect to COVID-19; May 4, 2020 Executive Order N-60-20 issued by Governor Newsom ordering various protocols and reaffirming the existing authority of local health officers to establish public health measures that are more restrictive or additional to statewide directives; Government Code section 8567(a); the March 13, 2020 Declaration of Local Health Emergency in Merced County pursuant to Health and Safety Code section 101080; the March 13, 2020 Proclamation of Local Emergency pursuant to Government Code section 8630 and Merced County Code section 2.72.060; the March 16, 2020 Resolutions of the Board of Supervisors of the County of Merced ratifying the Local Emergency and Local Health Emergency; and the California Department of Public Health, Cal/OSHA, and the California Department of Food and Agriculture jointly issued Industry Guidance for Food Packing and Processing updated on July 29, 2020 and any future dated updates.

12. Violation of this Order by Foster Farms is a misdemeanor punishable by fines up to $1,000 per day, imprisonment of 90 days, or both. Violation also subjects Foster Farms to civil enforcement actions including injunctive relief, attorneys' fees and costs. A violation of this Order constitutes a public nuisance. (Health and Safety Code Sections 120275 and 120295; Penal Code Sections 19 and 370; Government Code Sections 25132 and 8665; Merced County Code 2.72.100)

13. Pursuant to Government Code Sections 26602 and 41601 and Health and Safety Code Sections 101029, the Health Officer requests that the Sheriff and all chiefs of police in the County ensure compliance with and enforce this Order.

14. Copies of this Order shall promptly be: (1) made available at the County Administration Building at 2222 M Street, Merced, California 95340; (2) and provided to any member of the public requesting a copy of this Order.

SO ISSUED AND ORDERED:

Salvador Sandoval

Salvador Sandoval, MD, MPH
Merced County Health Officer

Dated: August 26, 2020
Time: 2025 hr

NOTICE OF RIGHTS

1. If you object to this order, you have a right to arrange for your own legal representative.
2. You have a right to also file for judicial relief to seek release from the order.
3. All requests to contact the County Health Officer will be through Merced County Department of Public Health at 209-381-1203 during normal business hours.

April 7, 2020

Ken Winter
Smithfield Foods
1400 North Weber Avenue
Sioux Falls, SD 57103

RE: OSHA Complaint No. 1566977

Dear Mr. Winter:

On April 7, 2020, the Occupational Safety and Health Administration (OSHA) received a notice of alleged workplace hazard(s) at your worksite at:

1400 North Weber Avenue
Sioux Falls, SD 57103

We notified you by telephone of these alleged hazards on April 7, 2020. The specific nature of the alleged hazards is as follows:

1) The employer has not instituted additional precautions/procedures for employees to assist in preventing employee exposure to the COVID-19 virus. Precautions/procedures to include, but not limited to, CDC/OSHA recommendations. Contrary to Section 5(a)(1) of the OSH Act of 1970.

We have not determined whether the hazards, as alleged, exist at your workplace, and we do not intend to conduct an inspection at this time. However, because allegations of violations and/or hazards have been made, we request that you immediately investigate the alleged conditions and make any necessary corrections or modifications. Please advise me in writing, no later than **April 14, 2020,** of the results of your investigation. You must provide supporting documentation of your findings. This includes any applicable measurements or monitoring results; photographs/video that you believe would be helpful; and a description of any corrective action you have taken or are in the process of taking, including documentation of the corrected condition. Please feel free to contact the office at (605) 361-9566 if you have any questions or concerns.

This letter is not a citation or a notification of proposed penalty which, according to the Occupational Safety and Health Act, may be issued only after an inspection or investigation of the workplace. It is our goal to assure that hazards are promptly identified and eliminated. Please take immediate corrective action where needed. **If we do not receive a response from you by April 14, 2020 indicating that appropriate action has been taken or that no hazard exists and why, an OSHA inspection will be conducted.** An inspection may include a review of the following: injury and illness records, hazard communication, personal protective equipment, emergency action or response, bloodborne pathogens, confined space entry, lockout/tagout, and related safety and health issues.

Please also be aware that OSHA conducts random inspections to verify that corrective actions asserted by the employer have actually been taken.

If you need assistance in resolving the issues alleged in this complaint, you may contact the OSHA on-site consultation service. This program offers free and confidential assistance to small and medium-sized businesses in all states across the country, with priority given to high-hazard worksites. If necessary, a consultant will visit your workplace and assess the validity of the complaint item(s). In addition, you will be provided with methods of correcting the hazard, where applicable. To discuss or request these services, contact the consultation project in your respective state. In South Dakota, the consultation program can be reached at the following address and phone number:

SDSU Engineering Extension / South Dakota OSHA Consultation Program
Jerome J. Lohr College of Engineering
Box 2219, Crothers Engineering Hall 316
Brookings, SD 57007
(605) 688-4101
http://www.sdstate.edu/engr/extension/index.cfm

Also, please find a copy of the OSHA pamphlet, "FREE Safety and Health Consultation Services" for your use in English or Spanish.

You are requested to post a copy of this letter where it will be readily accessible for review by all of your employees, and to return a copy of the signed Certificate of Posting (Attachment A) to this office. In addition, you are requested to provide a copy of this letter and your response to a representative of any recognized employee union or safety committee that exist at your facility. Failure to do this may result in an on-site inspection. The complainant has been furnished a copy of this letter and will be advised of your response. Section 11(c) of the Occupational Safety and Health Act provides protection for employees against discrimination because of their involvement in protected safety and health activity.

If you have any questions regarding this matter, please contact our office. The contact information is listed on the first page of this document. Your interest in the safety and health of your employees is appreciated.

Sincerely,

For Sheila Stanley
Area Director

Re: OSHA Activity No. 1566977

Dear Ms. Stanley,

This letter is in response to the correspondence OSHA Activity No. 1566977, received from your office on April 7, 2020. Please consider this our response to your letter. The specific nature of the allegations are as follows;

> *Complaint Item #1. The employer has not instituted additional precautions/procedures for employees to assist in preventing employee exposure to the COVID-19 virus. Precautions/procedures to include, but not limited to, CDC/OSHA recommendations. Contrary to Section 5(a)(1) of the OSH Act of 1970.*

Smithfield Foods is considered a critical infrastructure operating facility in the food and agriculture industry, as defined by the U.S. Department of Homeland Security. As such, our workers are needed to maintain the continuity of our processing functions. We have instituted practices consistent with those communicated by the Centers for Disease Control (CDC) and OSHA. To assist in protecting personnel we have taken the following steps;

- We have communicated to employees to watch for symptoms of COVID-19 including fever, cough, and shortness of breath;
- We have instructed employees to stay home if sick based on the symptoms above, if they have exposure to someone diagnosed with COVID-19, or have been to a location or area with widespread ongoing community spread such as Level 3 Travel Health Notice countries;
- We have communicated steps to protect self and others, through covering coughs and sneezes, with a tissue or use the inside of elbow, and to throw used tissues in the trash;
- We have promoted frequent and thorough hand washing and/or provided alcohol-based sanitizing solution; and,
- Personnel self-identified with potential elevated risk are allowed to work from home or stay home.

We have communicated these protective measures verbally to employees in one-on-one communications and in department meetings. In addition to verbal communications, we have signage and postings reiterating the information and also through a message from our Company CEO which plays continuously on our televisions in the break rooms. In addition to the steps noted above, we have limited all non-essential visitors to our facility.

Due to the nature of our business, employees in food production areas already are issued and wear nitrile gloves to prevent the spread of germs as part of their required attire. This PPE was in place prior to COVID-19. All employees washing and sanitizing their hands multiple times daily also is part of our pre-existing normal required work practices, but we have reiterated and emphasized the importance of these steps in our communications during this pandemic. We have also added sanitizer stations, both inside and outside the plant.

These infection management steps are monitored by management and quality assurance personnel and non-management employees are encouraged to monitor themselves and others as well, consistent with our policy that safety is everyone's job.

We encouraged employees to use cloth masks and have also made dust masks and surgical mask available if requested. We have implemented protocols for thermal screenings at employee entrances, and actions to take if an employee screens with an elevated temperature. Protocols also include social distancing and required PPE for personnel while conducting the screenings. Our employees have been instructed to stay home if sick. The Company is sending anyone home that becomes sick at work.

To assist with social distancing, we are staggering lunches and breaks, installed Plexiglas barriers to various areas such as Health Services, HR windows, mechanical store room, plant store room, cafeteria checkout counters, and main guard shack, etc. We have also added table dividers in lunch rooms and hung dividers on productions lines where 6 foot distance cannot be maintained and repositioned office spaces in the administration building for distancing and limited access to others. We have stressed the importance of social distancing and are continuously evaluating for additional measures to assist with social distancing while maintaining food production as an essential business.

Our production facility undergoes regular cleaning and sanitation by our in-house sanitation crew. Soon after news of COVID-19 broke, we began additional cleaning and disinfecting of frequently touched surfaces in welfare and common areas of our facility with cleaning solutions identified by the CDC for this purpose. This

additional cleaning is completed multiple times throughout each day. Areas cleaned and disinfected outside the production areas include but are not limited to the following;

Common Areas:

- Countertops, microwave control panel, copy machine control panel, tables, sink, faucets, all door handles (Offices, Restrooms, Entrance Doors) and handrails on all stairwells including maintenance and stockyards

Breakrooms:

- Countertops, microwave control panels, time clock control panels, tables, all door panels and handles (Entrances to Breakroom, Production, Restrooms and Locker Room Doors), all light switch covers, all vending machine controls and door handles

Lobbies:

- Door handles and counters

Offices:

- Copy machine control panels, light switch covers, office door handles, and conference room tables,

Restrooms:

- Sinks, faucets appliances, appliance handles, and door handles

Locker Rooms:

- Locker room door handles and benches

Additional deep cleaning and disinfection is occurring in these areas on weekends.

At Smithfield Foods – Sioux Falls, we are committed to the health and wellbeing of our employees. We are confident that the measures we've taken are assisting at protecting our employees. If you have further questions, or we can be of further assistance, please contact us.

Respectfully,

(b) (6), (b) (7)(C)

- *Eliminates Bacteria, Virus and Fungi*
- *24-Hour Residual Protection*
- *Odorless, No Skin Irritation, Non-flammable*
- *No Rinse Required*
- *Ideal for Use in Food Processing, Food Preparation and Hospitality*

40 CODE OF FEDERAL REGULATIONS (CFR) 180.940(a)

Historically, sanitizers were regulated by the FDA under 21 CFR 178.1010. The authority to regulate the use of sanitizers on food equipment and utensils was transferred to the US EPA by the 1996 Food Quality Protection Act (FQPA).

In 40 CFR 180.940(a) the EPA exempts electrically generated silver ions, stabilized in citric acid as silver dihydrogen citrate, not to exceed 50 ppm, from the requirements of a tolerance when used in accordance with Good Manufacturing Practices as an ingredient in an antimicrobial pesticide (sanitizer) formulation, provided that the formulation is applied on a semi-permanent or permanent food contact surface with adequate drainage before contact with food.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER. Corrosive. Causes irreversible eye damage and skin burns. Harmful if swallowed, inhaled or absorbed through the skin. Avoid breathing spray mist. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves and protective clothing when handling. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove contaminated clothing and wash clothing before reuse.

ENVIRONMENTAL HAZARDS

This product is toxic to fish and aquatic invertebrates. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product into sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

GENERAL DISINFECTION PERFORMANCE: This product kills the following bacteria in 10 minutes at 1.75 oz. per 5 gal. of water (260 ppm active) on hard, non-porous surfaces: *Salmonella enterica, Staphylococcus aureus*

NON-FOOD CONTACT SANITIZING PERFORMANCE: This product is an effective one-step non-food contact sanitizer in 3 minutes at 1 oz. per 5 gal. of water (150 ppm active) and 5% soil on hard, non-porous surfaces against: *Staphylococcus aureus, Klebsiella pneumoniae*

FOOD CONTACT SANITIZING PERFORMANCE: This product is an effective food contact sanitizer in 1 minute at 1 oz. per 4 gal. of 500 ppm hard water (200 ppm active) on hard, non-porous surfaces: *Aeromonas hydrophila, Campylobacter jejuni, Clostridium perfringens-vegetative, Escherichia coli, Escherichia coli* O111 H8, *Escherichia coli* O157 H7, *Escherichia coli* O45:K+ H-, *Escherichia coli* O103:K+ H8, *Escherichia coli* O121 K+ H10, *Escherichia coli* O26 H11, Enterococcus faecalis Vancomycin Resistant, *Enterobacter sakazakii, Listeria monocytogenes, Klebsiella pneumoniae, Salmonella enterica, Salmonella enteritidis, Salmonella typhi, Shigella dysenteriae, Shigella sonnei, Staphylococcus aureus, Staphylococcus aureus* Methicillin Resistant, *Streptococcus pyogenes, Yersinia enterocolitica*

This product is an effective food contact sanitizer in 1 minute at 0.75 oz. per 4 gal. of 300 ppm hard water (150 ppm active) on hard, non-porous surfaces: *Escherichia coli, Staphylococcus aureus*

This product is an effective food contact sanitizer in 1 minute at 2 oz. per 4 gal. of 1000 ppm hard water (400 ppm active) on hard, non-porous surfaces: *Escherichia coli, Staphylococcus aureus*

MILDEWSTATIC PERFORMANCE: This product controls the following mold in 10 minutes at 3 oz. per 5 gal. of water (450 ppm active) and 5% soil on hard, non-porous surfaces: *Aspergillus niger*

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Before using this product, food products and packaging materials must be removed from the room or carefully protected.

FOR USE AS A CLEANER/GENERAL DISINFECTANT ON HARD, NON-POROUS SURFACES: Pre-clean surfaces. Apply use solution of 1.75 oz. of this product per 5 gal. of water (260 ppm active) (or equivalent use dilution) to hard, non-porous surfaces with a sponge, brush, cloth, mop, by immersion, auto scrubber, mechanical spray device. For spray applications, spray 6-8 inches from surface. Do not breathe spray. Treated surfaces must remain wet for 10 minutes. Allow to air dry. Prepare a fresh solution daily or when visibly dirty.

MOLD/MILDEW: Prepare use solution by adding 3 oz. of this product per 5 gal. of water. Apply use solution to hard, non-porous surfaces for 10 minutes which will effectively inhibit the growth of mold and mildew and their odors. Repeat treatment every seven days, or more often if new growth appears.

FOGGING IN FOOD PREMISES

ALL SURFACES MUST BE CLEANED AND DISINFECTED IN ACCORDANCE WITH LABEL DIRECTIONS PRIOR TO FOGGING.

DIRECTIONS FOR FOGGING IN DAIRIES, BEVERAGE AND FOOD PROCESSING PLANTS: Prior to fogging, food products and packaging material must be removed from the room or carefully protected. After disinfecting, fog desired areas using 1 quart per 1000 cubic feet of room area with a solution containing 1.5 oz. of product per gal. of water (1,200 ppm active) (or equivalent use dilution). Wear a dust mist respirator when mixing the use solution and pouring it into the fogging apparatus. Vacate the area of all personnel during fogging and for a minimum of 2 hours after fogging and a minimum of 4 air exchanges (ACH) per hour in the facility. All food contact surfaces must be sanitized with an EPA approved food contact sanitizer solution prior to use. All food contact surfaces must be thoroughly rinsed with potable water prior to sanitizing. **Note:** The fog generated is irritating to the eyes, skin and mucous membranes. Under no circumstances must a room or building be entered by anyone within two hours of the actual fogging and a minimum of 4 air exchanges (ACH) per hour in the facility. If the building must be entered, then the individuals entering the building must wear a self-contained respirator approved by NIOSH/MSHA, goggles, long sleeves and long pants.

FOGGING IN POULTRY HOUSES

ALL SURFACES MUST BE CLEANED AND DISINFECTED IN ACCORDANCE WITH LABEL DIRECTIONS PRIOR TO FOGGING.

TREATMENT OF HATCHERY ROOMS USING FOGGING DEVICES: Remove all animals and feed from premises, vehicles and enclosures. Remove all litter and manure from floors, walls and surfaces of the room to be treated. Empty all troughs, racks and other feeding and watering appliances. Thoroughly clean all surfaces with soap or detergent and rinse with water. Close room off so fog is confined to room to be treated. Mix 140 oz. of this product per 2.5 gal. of water (or equivalent use dilution). Wear a dust mist respirator when mixing the use solution and pouring it into the fogging apparatus. Insert the nozzle of the fogger through a suitable opening into the room. With the setting in maximum output, fog for one minute for each 4000 cubic feet of space in the room. **Under no circumstances will a room be entered by anyone within 2 hours of actual fogging and a minimum of 4 air exchanges (ACH) per hour in the facility.** When fogging is completed ventilate buildings and other closed spaces. Do not house animals or employ equipment until treatment has been absorbed or dried. Thoroughly clean all treated surfaces with soap or detergent and rinse with water. **Note:** The fog generated is irritating to the eyes, skin and mucous membranes. Under no circumstances must a room or building be entered by anyone within two hours of the actual fogging and a minimum of 4 air exchanges (ACH) per hour in the facility. If the building must be entered, then the individuals entering the building must wear a self-contained respirator approved by NIOSH/MSHA, goggles, long sleeves and long pants.

NON-FOOD CONTACT SANITIZING DIRECTIONS

NON-FOOD CONTACT SANITIZING: Pre-clean heavily soiled surfaces. Add 1 oz. of this product per 5 gal. of water (150 ppm active). Apply solution to hard, non-porous surfaces with a sponge, brush, cloth, mop, by immersion, auto scrubber, mechanical spray device. For spray applications, spray 6-8 inches from surface. Do not breathe spray. Treated surfaces must remain wet for 3 minutes. Prepare a fresh solution daily or when visibly dirty.

S.S. 4 QUAT

Disinfectant - Sanitizer - Mildewstat
With Organic Soil Tolerance For Food Handling and Process Areas.

ACTIVE INGREDIENTS:

Alkyl (50% C14, 40% C12, 10% C16) Dimethyl Benzyl Ammonium Chloride	4.0%
Octyl Decyl Dimethyl Ammonium Chloride	3.0%
Didecyl Dimethyl Ammonium Chloride	1.5%
Dioctyl Dimethyl Ammonium Chloride	1.5%
OTHER INGREDIENTS:	90.0%
TOTAL:	100.0%

KEEP OUT OF REACH OF CHILDREN

DANGER PELIGRO

See left panel for additional precautionary statements.

SI USTED NO ENTIENDE LA ETIQUETA, BUSQUE A ALGUIEN PARA QUE SE LA EXPLIQUE A USTED EN DETALLE.

IF YOU DO NOT UNDERSTAND THE LABEL, FIND SOMEONE TO EXPLAIN IT TO YOU IN DETAIL.

FIRST AID

In case of emergency, call a poison control center or doctor for treatment advice. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

IF ON SKIN: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes.

IF SWALLOWED: Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person. Call a poison control center or doctor immediately for treatment advice.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage.

E-15

SHOE BATH SANITIZER DIRECTIONS: To prevent cross contamination from area to area and the packaging and storage areas of food plants, shoe baths containing one inch of freshly made sanitizing solution must be placed at all entrances to buildings, hatcheries and at all the entrances to the production and packaging rooms. Scrape waterproof shoes and place in a 1 oz. of this product per 5 gal. of water (or equivalent use dilution) (150 ppm active) use solution for 3 minutes prior to entering area. Prepare a fresh solution daily or when visibly dirty.

(For food processing or other facilities that have installed entryway sanitizing systems.)

ENTRYWAY SANITIZING SYSTEMS: To prevent cross contamination from area to area, set the system to deliver 1.25 – 2.5 oz. of this product per 2.5 gal. of water (or equivalent use dilution) (400-800 ppm active) of sanitizing solution. The spray/foam must cover the entire path of the doorway. Set the system so that a continuous wet blanket of sanitizer solution is delivered to the floor. Do not mix other foam additives with the sanitizing solution.

FOOD CONTACT SANITIZING DIRECTIONS

Prior to application, remove gross food particles and soil by a pre-flush or pre-scrape and when necessary, presoak. Then thoroughly wash or flush objects with a good detergent or compatible cleaner, followed by a potable water rinse before applications of the sanitizing solution.

FOOD CONTACT SANITIZING DILUTION TABLE : To prepare a 150, 200, 300 or 400 ppm active solution use the following dilution table. Prepare the correct dilution rate based upon the appropriate use site.

FOOD CONTACT SANITIZING DILUTION TABLE

Active solution	1 gallon	4 gallons	10 gallons	20 gallons
150 ppm	0.19 oz.	0.75 oz.	1.92 oz.	3.84 oz.
200 ppm	0.25 oz.	1.0 oz.	2.5 oz.	5.0 oz.
300 ppm	0.375 oz.	1.5 oz.	3.75 oz.	7.5 oz.
400 ppm	0.50 oz.	2.0 oz.	5.0 oz.	10.0 oz.

FOOD CONTACT SANITIZING PERFORMANCE FOR DAIRY PROCESSING EQUIPMENT AND FOOD PROCESSING EQUIPMENT, UTENSILS AND OTHER HARD, NON-POROUS FOOD CONTACT SURFACES IN FOOD PROCESSING LOCATIONS, MEAT PLANTS, BAKERIES, CANNERIES, BEVERAGE PLANTS DIRECTIONS (REGULATED BY 40 CFR sec 180.940(a)(c)):

Immerse pre-cleaned glassware, dishes, silverware, cooking utensils and other similar size food processing equipment in a solution of 0.75-2 oz. of this product per 4 gal. of water (0.19-0.5 oz. per gal. of water) (150-400 ppm active quat) (or equivalent use dilution) for at least 1 minute. Allow sanitized surfaces to adequately drain before contact with food. Do not rinse. For articles too large for immersing, apply a use solution of 0.75-2 oz. of this product per 4 gal. of water (0.19-0.5 oz. per gal. of water) (150-400 ppm active quat) (or equivalent use dilution) to sanitize hard, non-porous food contact surfaces with a brush, cloth, mop, sponge, auto scrubber, mechanical spray device. For spray applications, spray 6-8 inches from surface. Do not breathe spray. Surfaces must remain wet for at least 1 minute. Allow sanitized surfaces to adequately drain before contact with food. Do not rinse. Prepare a fresh solution daily or when visibly dirty. For mechanical application, use solution must not be reused for sanitizing applications but may be used for other purposes such as cleaning.

SANITIZING EGG SHELLS INTENDED FOR FOOD DIRECTIONS: To sanitize previously cleaned food-grade eggs in shell egg and egg product processing plants, spray with a solution of 0.75-2 oz. of this product per 4 gal. of water (0.19-0.5 oz. per gal. of water) (150-400 ppm active quat) (or equivalent use dilution) of this product. The solution must be warmer than the eggs, but not to exceed 130 F. Wet eggs thoroughly and allow solution to drain. Eggs sanitized with this product must be subjected to a potable water rinse only if they are to be broken immediately for use in the manufacture of egg products. Eggs must be reasonably dry before casing or breaking. The solution must not be re-used for sanitizing eggs.

Note: Only clean, whole eggs can be sanitized. Dirty, cracked or punctured eggs cannot be sanitized.

FOR TREATMENT OF MEAT AND POULTRY OR FRUIT AND VEGETABLE CONVEYORS: Remove gross food particles and excess soil by a pre-flush or pre-scrape. Wash with a good detergent or compatible cleaner. Rinse equipment thoroughly with potable water and then rinse equipment with a sanitizing solution. During processing apply 0.75-2 oz. of this product per 4 gal. of water (0.19-0.5 oz. per gal. of water) (150-400 ppm active quat) (or equivalent use dilution) of this product to conveyors with suitable feeding equipment. Do not allow this solution to be sprayed directly on food. Controlled volumes of sanitizer are applied to return portion of conveyor through nozzles so located as to permit maximum drainage of sanitizer from equipment and to prevent puddles on top of belt. During interruptions in operation, apply solution using coarse spray equipment to peelers, collators, slicers and saws, and other non-porous conveyor equipment. Allow surfaces to remain wet for at least 1 minute. Conveyors and other equipment must be free of product when applying this coarse spray.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

PESTICIDE STORAGE: Store only in original container. Keep this product under locked storage sufficient to make it inaccessible to children or persons unfamiliar with its proper use.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING:

For non-refillable containers equal to or less than 5 gal.

Non-Refillable Container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Fill the container ¼ full with water and recap. Shake for 10 seconds. Drain for 10 seconds after the flow begins to drip. Follow Pesticide Disposal instructions for rinsate disposal. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration.

For non-refillable containers greater than 5 gal

Non-Refillable Container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip back and forth several times. Turn the container over onto its other end and tip back and forth several times. Follow Pesticide Disposal instructions for rinsate disposal. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary land ill, or by incineration.

Citation and Notification of Penalty

To:
JBS Foods, Inc., dba Swift Beef Company
800 N. 8TH AVENUE
Greeley, CO 80631

Inspection Number: 1475131
Inspection Date(s): 05/11/2020 - 08/31/2020
Issuance Date: 09/11/2020

Inspection Site:
800 N. 8TH AVENUE
Greeley, CO 80631

The violation(s) described in this Citation and Notification of Penalty is (are) alleged to have occurred on or about the day(s) the inspection was made unless otherwise indicated within the description given below.

This Citation and Notification of Penalty (this Citation) describes violations of the Occupational Safety and Health Act of 1970 (the Act). The penalties listed herein are based on these violations. You must abate the violations referred to in this Citation by the dates listed and pay the penalties proposed, unless within 15 working days (excluding weekends and Federal holidays) from your receipt of this Citation and Notification of Penalty **you either call to schedule an informal conference (see paragraph below) or** you mail a notice of contest to the U.S. Department of Labor Area Office at the address shown above. Please refer to the enclosed booklet (OSHA 3000) which outlines your rights and responsibilities and which should be read in conjunction with this form. Issuance of this Citation does not constitute a finding that a violation of the Act has occurred unless there is a failure to contest as provided for in the Act or, if contested, unless this Citation is affirmed by the Review Commission or a court.

Posting - The law requires that a copy of this Citation and Notification of Penalty be posted immediately in a prominent place at or near the location of the violations cited herein, or, if it is not practicable because of the nature of the employer's operations, where it will be readily observable by all affected employees. This Citation must remain posted until the violations cited herein have been abated, or for 3 working days (excluding weekends and Federal holidays), whichever is longer.

Informal Conference - An informal conference is not required. However, if you wish to have such a conference you may request one with the Area Director during the 15 working day contest period by calling (303) 844-5285. During such an informal conference you may present any evidence or views which you believe would support an adjustment to the citations and/or penalties.

If you are considering a request for an informal conference to discuss any issues related to this Citation and Notification of Penalty, you must take care to schedule it early enough to allow time to contest after the informal conference, should you decide to do so. Please keep in mind that a written letter of intent to contest must be submitted to the Area Director within 15 working days of your receipt of this Citation. The running of this contest period is not interrupted by an informal conference.

If you decide to request an informal conference, please complete, remove, and post the Notice to Employees next to this Citation and Notification of Penalty as soon as the time, date, and place of the informal conference have been determined. Be sure to bring to the conference any and all supporting documentation of existing conditions as well as any abatement steps taken thus far. If conditions warrant, we can enter into an informal settlement agreement which amicably resolves this matter without litigation or contest.

Right to Contest – You have the right to contest this Citation and Notification of Penalty. You may contest all citation items or only individual items. You may also contest proposed penalties and/or abatement dates without contesting the underlying violations. **Unless you inform the Area Director in writing that you intend to contest the citations and/or proposed penalties within 15 working days after receipt, the citations and the proposed penalties will become a final order of the Occupational Safety and Health Review Commission and may not be reviewed by any court or agency.**

Penalty Payment – Penalties are due within 15 working days of receipt of this notification unless contested. (See the enclosed booklet and the additional information provided related to the Debt Collection Act of 1982.) Make your check or money order payable to "DOL-OSHA". Please indicate the Inspection Number on the remittance. You can also make your payment electronically on www.pay.gov. On the left side of the pay.gov homepage, you will see an option to Search Public Forms. Type "**OSHA**" and click Go. From the results, click on **OSHA Penalty Payment Form**. The direct link is:

https://www.pay.gov/paygov/forms/formInstance.html?agencyFormId=53090334.

You will be required to enter your inspection number when making the payment. Payments can be made by credit card or Automated Clearing House (ACH) using your banking information. Payments of $25,000 or more require a Transaction ID, and also must be paid using ACH. If you require a Transaction ID, please contact the OSHA Debt Collection Team at (202) 693-2170.

OSHA does not agree to any restrictions or conditions or endorsements put on any check, money order, or electronic payment for less than the full amount due, and will process the payments as if these restrictions or conditions do not exist.

Notification of Corrective Action – For each violation which you do not contest, you must provide ***abatement certification*** to the Area Director of the OSHA office issuing the citation and identified above. This abatement certification is to be provided by letter within 10 calendar days after each abatement date. Abatement certification includes the date and method of abatement. If the citation indicates that the violation was corrected during the inspection, no abatement certification is required for that item. The abatement certification letter must be posted at the location where the violation appeared and the corrective action took place or employees must otherwise be effectively informed about abatement activities. A sample abatement certification letter is enclosed with this Citation. In addition, where the citation indicates that ***abatement documentation*** is necessary, evidence of the purchase or repair of equipment, photographs or video, receipts, training records, etc., verifying that abatement has occurred is required to be provided to the Area Director.

Employer Discrimination Unlawful – The law prohibits discrimination by an employer against an

employee for filing a complaint or for exercising any rights under this Act. An employee who believes that he/she has been discriminated against may file a complaint no later than 30 days after the discrimination occurred with the U.S. Department of Labor Area Office at the address shown above.

Employer Rights and Responsibilities – The enclosed booklet (OSHA 3000) outlines additional employer rights and responsibilities and should be read in conjunction with this notification.

Notice to Employees – The law gives an employee or his/her representative the opportunity to object to any abatement date set for a violation if he/she believes the date to be unreasonable. The contest must be mailed to the U.S. Department of Labor Area Office at the address shown above and postmarked within 15 working days (excluding weekends and Federal holidays) of the receipt by the employer of this Citation and Notification of Penalty.

Inspection Activity Data – You should be aware that OSHA publishes information on its inspection and citation activity on the Internet under the provisions of the Electronic Freedom of Information Act. The information related to these alleged violations will be posted when our system indicates that you have received this citation. You are encouraged to review the information concerning your establishment at www.osha.gov. If you have any dispute with the accuracy of the information displayed, please contact this office.

Citation and Notification of Penalty

Company Name: JBS Foods, Inc., dba Swift Beef Company
Inspection Site: 800 N. 8TH AVENUE, Greeley, CO 80631

Citation 1 Item 1 Type of Violation: **Serious**

OSH ACT of 1970 Section (5)(a)(1): The employer did not furnish employment and a place of employment which were free from recognized hazards that were causing or likely to cause death or serious physical harm to employees in that employees were working in close proximity to each other and were exposed to SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19):

(a) **JBS Foods, Inc. dba Swift Beef Company at 800 N. 8th Avenue in Greeley, CO:** On or about and at times prior to March 25, 2020, the employer did not develop or implement timely and effective measures to mitigate the exposures to the hazard of SARS-CoV-2, the virus that causes Coronavirus Disease 2019 (COVID-19). Employees throughout the establishment worked in close proximity to each other during the COVID-19 pandemic exposing them to the hazard of contracting COVID-19. Hundreds of employees contracted the virus and developed symptoms ranging from mild irritation to severe illnesses that resulted in at least 51 hospitalizations and six fatalities due to COVID-19 related illnesses. As of July 30, 2020, the employer had 290 confirmed positive cases at the establishment.

Among other methods, recognized and feasible means of abatement for this hazard include:

1. Establish, implement, and enforce a social distancing program on the fabrication floor and in break areas that allow for at least a six-foot distance between workers where feasible;

2. When workers are unable to socially distance at least six feet from one another, implement protective measures such as barriers between work stations, face coverings, and face shields on the fabrication floor and in break areas and communicate the purpose and correct usage of such measures;

3. The use of symptom screening prior to allowing employees to enter the establishment and in the onsite clinic; and

4. The employer should work with state, local, tribal and/or territorial health officials to facilitate the identification of other exposed and potentially exposed employees at the establishment.

See pages 1 through 4 of this Citation and Notification of Penalty for information on employer and employee rights and responsibilities.

ABATEMENT CERTIFICATION AND DOCUMENTATION REQUIRED FOR THIS ITEM

Date By Which Violation Must be Abated:	10/29/2020
Proposed Penalty:	$13,494.00

See pages 1 through 4 of this Citation and Notification of Penalty for information on employer and employee rights and responsibilities.

Citation and Notification of Penalty

Company Name: JBS Foods, Inc., dba Swift Beef Company
Inspection Site: 800 N. 8TH AVENUE, Greeley, CO 80631

Citation 2 Item 1 Type of Violation: **Other-than-Serious**

29 CFR 1904.35(b)(iii): A copy of the OSHA 300 Log required in 1904.29(a) was not provided upon request to an employee, former employee, personal representative, or authorized employee representative by the end of the next business day:

(a) **JBS Foods, Inc. dba Swift Beef Company at 800 N 8th Ave in Greeley, CO:** On or about May 19, 2020, a copy of the OSHA 300 Log required in 1904.29(a) was not provided upon request to an employee, former employee, personal representative, or authorized employee representative by the end of the next business day. An employee representative from the UFCW Local 7 requested a copy of the OSHA 300 Log(s) on May 19, 2020. The employer did not provide a copy of the OSHA 300 Log(s) to an authorized employee representative until June 22, 2020.

Abatement Note: Abatement certification is required for this item (see enclosed "Certification of Corrective Action Worksheet").

Date By Which Violation Must be Abated: 10/29/2020
Proposed Penalty: $2,121.00

U.S. Department of Labor
Occupational Safety and Health Administration
1391 Speer Blvd, Suite 210
Denver, CO 80204

INVOICE / DEBT COLLECTION NOTICE

Company Name:	**JBS Foods, Inc., dba Swift Beef Company**
Inspection Site:	**800 N. 8TH AVENUE, Greeley, CO 80631**
Issuance Date:	**09/11/2020**

Summary of Penalties for Inspection Number: 1475131

Citation 1, Serious	**$13,494.00**
Citation 2, Other-than-Serious	**$2,121.00**
TOTAL PROPOSED PENALTIES	**$15,615.00**

To avoid additional charges, please remit payment promptly to this Area Office for the total amount of the uncontested penalties summarized above. Make your check or money order payable to: "DOL-OSHA". Please indicate OSHA's Inspection Number (indicated above) on the remittance. You can also make your payment electronically on www.pay.gov. On the left side of the pay.gov homepage, you will see an option to Search Public Forms. Type "**OSHA**" and click Go. From the results, click on **OSHA Penalty Payment Form**. The direct link is https://www.pay.gov/paygov/forms/formInstance.html?agencyFormId=53090334. You will be required to enter your inspection number when making the payment. Payments can be made by credit card or Automated Clearing House (ACH) using your banking information. Payments of $25,000 or more require a Transaction ID, and also must be paid using ACH. If you require a Transaction ID, please contact the OSHA Debt Collection Team at (202) 693-2170.

OSHA does not agree to any restrictions or conditions or endorsements put on any check, money order, or electronic payment for less than the full amount due, and will cash the check or money order as if these restrictions or conditions do not exist.

If a personal check is issued, it will be converted into an electronic fund transfer (EFT). This means that our bank will copy your check and use the account information on it to electronically debit your account for the amount of the check. The debit from your account will then usually occur within 24 hours and will be shown on your regular account statement. You will not receive your original check back. The bank will destroy your original check, but will keep a copy of it. If the EFT cannot be completed because of insufficient funds or closed

account, the bank will attempt to make the transfer up to 2 times.

Pursuant to the Debt Collection Act of 1982 (Public Law 97-365) and regulations of the U.S. Department of Labor (29 CFR Part 20), the Occupational Safety and Health Administration is required to assess interest, delinquent charges, and administrative costs for the collection of delinquent penalty debts for violations of the Occupational Safety and Health Act.

Interest: Interest charges will be assessed at an annual rate determined by the Secretary of the Treasury on all penalty debt amounts not paid within one month (30 calendar days) of the date on which the debt amount becomes due and payable (penalty due date). The current interest rate is two percent (2%). Interest will accrue from the date on which the penalty amounts (as proposed or adjusted) become a final order of the Occupational Safety and Health Review Commission (that is, 15 working days from your receipt of the Citation and Notification of Penalty), unless you file a notice of contest. Interest charges will be waived if the full amount owed is paid within 30 calendar days of the final order.

Delinquent Charges: A debt is considered delinquent if it has not been paid within one month (30 calendar days) of the penalty due date or if a satisfactory payment arrangement has not been made. If the debt remains delinquent for more than 90 calendar days, a delinquent charge of six percent (6%) per annum will be assessed accruing from the date that the debt became delinquent.

Administrative Costs: Agencies of the Department of Labor are required to assess additional charges for the recovery of delinquent debts. These additional charges are administrative costs incurred by the Agency in its attempt to collect an unpaid debt. Administrative costs will be assessed for demand letters sent in an attempt to collect the unpaid debt.
