NOVEMBER 2026

Guess Who's Coming To Dinner?

More than half the digital wallets competing for Trump's meme coin gala received $TRUMP directly from crypto exchanges that bar U.S. users

By Zach Everson

Introduction

On November 22, 2026, as many as 185 of the top holders of Donald Trump's meme coin—a speculative crypto token driven by internet hype and not backed by any underlying asset[1]—will join the president for a gala at Trump National Golf Club, Washington, D.C.[2] One of Trump's businesses is using a dinner with the U.S. president to incentivize people to buy its product.[3]

The names of the invitees have not been disclosed, so the public likely will not get a full account of the foreign interests, favor-seekers, lobbyists, and toadies who helped enrich the president in exchange for the privilege of dining with him. A Public Citizen analysis of blockchain transactions, however, reveals some details. More than half the wallets on the

leaderboard got $TRUMP directly from crypto exchanges that bar U.S. users.[4] (The largest example is Binance, which exited the U.S. market as part of its 2023 settlement with the Treasury Department over anti-money-laundering and sanctions violations.)[5]

If those bans are enforced, many of the people vying for a seat at the president's table don't live in the United States. Foreign nationals, who can't legally give a dollar to a U.S. campaign, can buy their way into the president's club for a private party—and none of them has to publicly disclose who they are.[6] Transfers between wallets also suggest that some entrants control more than one spot: four groups apparently hold nine of the 29 VIP seats, which come with a private reception, and a single person or group appears to run 14 other wallets.[7]

Key Findings[8]

- At least 66 of the 130 (51%) wallets on $TRUMP's final leaderboard, which lists who qualifies for an invite, received $TRUMP directly from crypto exchanges that do not serve U.S. customers, a sign that their owners may live abroad.[9] Those wallets hold 4.35 million $TRUMP, 44% of the board's total, worth about $4 million.
- Only 29 of the top 130 are linked solely to exchanges that serve U.S. users, such as Coinbase or Kraken. Those 29 wallets hold about 291,600 $TRUMP, roughly $270,000 or 3% of the board. Only three of them are in the top 29.
- Another 35 wallets (27%) could not be traced directly to either an exchange that bars U.S. users or one that serves them.
- At least 15 of the top 29 wallets (52%), whose owners are invited to a special VIP reception, got $TRUMP straight from exchanges that do not serve U.S. users.
- Of those 66 wallets, 52 received $TRUMP directly from a Binance address, 12 from Bybit only and two from BloFin. Four wallets received $TRUMP from both Binance and Bybit.
- The 130 wallets hold a total of 9,794,832.87 $TRUMP tokens worth around $9.1 million at the time the contest ended.[10]
- The top 10 wallets hold 81% of all $TRUMP on the board, and the top 29 hold 95%.
- No. 1 on the list, FastX, has about $1.65 million in total $TRUMP holdings, about 18% of all the $TRUMP on the public leaderboard. It received $TRUMP one step removed from Binance, through a wallet that got $TRUMP from a Binance address, so it isn't counted among the 66. On Oct. 28, a crypto-trading platform named FastX claimed to be behind the wallet and promoted its "Chinese $TRUMP coin community" (the video

[8] Leaderboard and methodologies explained in their respective sections. All dollar values are as of the leaderboard's close at 9 a.m. ET on 16 Nov. 2026, when $TRUMP traded at about $0.93. "Official Trump (TRUMP) Price." *CoinGecko*, coingecko.com/en/coins/official-trump?chart=type%3Dprice%26mode%3Dline%26timeframe%3Dmax. Accessed 20 Nov. 2026.

[9] "Received" means the blockchain shows $TRUMP moving from an address an exchange lists as its own into a wallet on the leaderboard. It doesn't show whether the wallet's owner bought the coins on the exchange or how they got there. The top 185 holders land invites, but the public leaderboard only showed the top 130.

[10] The contest relied on time-weighted holdings, which the leaderboard describes as a wallet's average $TRUMP holdings over the scoring period, as well as a "VIP Boost" for wallets that participated in an earlier Trump meme coin contest.

was first reported by CBS News).[11] FastX runs a $TRUMP trading contest in which entrants bet on the coin's price using leverage, up to 100 times their stake on one market, and are ranked by percentage profit. FastX's terms warn that such trades "can lose more than expected."[12]

- No. 130, JerryW, holds 9.71 $TRUMP, worth about $9. The wallet made the leaderboard because the contest ranks wallets by their average holdings over the scoring period, not by what they hold at its conclusion. JerryW received 3,760 $TRUMP directly from a Binance address in October and moved nearly all of it on Oct. 29, but those weeks of holding still earned it a score of 997.61, enough for the last spot.
- Four groups appear to hold nine of the 29 VIP seats. No. 1 FastX and No. 7 FASTXCO trace back to a common funder. No. 4 taotao and No. 5 Yulia were funded from the same source. No. 18 Surfer funded No. 21 CocaCola and No. 22 GEMIRO. No. 23 JZY funded No. 24 success. The transfers suggest, but do not prove, common owners.
- A single person or group appears to run 14 wallets. Each got about 3,700 $TRUMP from Binance in October (one received 10,000), and all of them sent nearly all of it to OKX deposit-style addresses within three minutes on Oct. 29. They emptied the wallets weeks before the cutoff but still rank between No. 61 and No. 130, because the contest scores average holdings over the period.
- $TRUMP was trading at around $0.929586 per CoinGecko at the time of the close (9 a.m. ET, Nov. 16). That's down 98.7% from its all-time high of $73.43 that it hit on Jan. 19, 2025, just after launching.

The meme coin known as $TRUMP launched on Jan. 17, 2025, three days before Donald Trump returned to the White House, when he announced it in a Truth Social post around 9 p.m. EST.[13] Within about 90 seconds of Trump's post, a single wallet—funded with roughly $1.1 million about two hours earlier—bought nearly 6 million tokens at around $0.18 each, roughly 6% of the coins then available, according to *Bloomberg*'s analysis.[14] Over the next two days, as many of Trump's millions of followers piled in, the price soared to an all-time high of $73.43.[15] The earliest buyers were positioned for extraordinary gains in this market for a digital token with no underlying value; the far larger waves that bought during and after the surge were left holding tokens now worth a fraction of what they paid. In effect, the coin transferred billions of dollars from a large group of later buyers to a small group of early ones.

In May 2025, the top meme coin holders were awarded a dinner with the president at his D.C.-area golf course and a White House tour.[16] (Public Citizen held a rally outside the dinner with Sen. Jeff Merkley, D-Ore., and more than 100 demonstrators.[17]) Trump hosted a similar event in April 2026 at Mar-a-Lago.[18] This gala on Nov. 22, 2026, will mark the third time the top holders of the meme coin have been invited to an event with the president.

Trump's CIC Digital is a partner in the venture with Fight Fight Fight LLC, which is connected to Bill Zanker, Trump's co-author on *Think Big and Kick Ass in Business and Life*.[19] The two companies retained ownership of 80% of the coins, which are scheduled to be released over the next three years, according to the coin's website.[20] The companies also collect revenue from trading activity.[21]

Trump made $635 million in licensing fees from his meme coin in 2025, according to his latest financial disclosure.[22]

In September 2026, *Forbes* estimated the meme coins Trump is sitting on were worth $183 million.[23] $TRUMP has fallen by about 50% since then, though, and is probably worth closer to $90 million now.[24] Trump's tokens were allocated to his company rather than purchased, and his other income from the meme coin came via licensing fees. Neither required any capital investment from him, meaning his proceeds should be nearly all profit.[25]

Two blockchain analytics firms examined $TRUMP trading at Public Citizen's request in August 2026, when it was trading at around $2.22—more than two times its price when the latest contest closed. Nansen, filtering to likely retail wallets, found that of about 1.6 million wallets that bought $TRUMP on Solana decentralized exchanges, roughly 1 million (65%) are underwater, down a combined $3.2 billion. Most of that is unrealized: only about $400 million was realized in sales at a loss. The gains were overwhelmingly concentrated: the top 1% of winning wallets captured about $2.7 billion—80% of all gains. Of the wallets that bought in the coin's first two days, roughly 45% of retail buyers, took nearly 90% of the gains. The median buyer was down $3.06, and almost 350,000 wallets were down more than $100. Bubblemaps, another analytics firm, counting all addresses that traded $TRUMP on decentralized exchanges, found about 1 million losing wallets down $4.5 billion, with 36 traders reaping profits that exceeded $10 million.[26]

Some investors made out in ways that transcend a cash return on their investment. Crypto billionaire Justin Sun bought $100 million in $TRUMP. In March 2026, Trump's SEC settled the fraud case it had brought against him and his companies during the Biden administration, penalizing one of his firms $10 million and dropping the rest.[28]

What is a meme coin?

In 2025, SEC staff called meme coins "a type of crypto asset inspired by internet memes, characters, current events, or trends for which the promoter seeks to attract an enthusiastic

online community to purchase the meme coin and engage in its trading."[29] Meme coins are typically not backed by any underlying asset, nor do they represent ownership in any business or revenue stream.[30] They often have no functionality, although some have utility in contests, access to chatrooms, or games.[31] Think of them like Beanie Babies.

No comprehensive federal law specifically regulates meme coins. In that same statement, made about six weeks after Trump became a meme coin entrepreneur, SEC staff wrote that "meme coins are akin to collectibles."[32] In March 2026, the SEC and CFTC issued a final rule formalizing the position, stating "a digital collectible does not constitute any of the financial instruments enumerated in the definition of 'security.'"[33] The CLARITY Act's definition of digital commodity excludes collectibles—which, combined with the SEC and CFTC's guidance, puts meme coins outside the bill's primary scope.[34] The bill passed the House in July 2025 but stalled in the Senate, where a procedural vote to take it up failed 49–50 in September 2026.[35]

Source: Contest leaderboard at https://gettrumpmemes.com/leaderboards?experience=trump-dinner, saved Nov. 16, 2026, at 8:59 a.m. ET; Public Citizen analysis of Solana transactions.

Methodology

To obtain information about accounts on the leaderboard, Public Citizen took the following steps.

While the leaderboard is available at gettrumpmemes.com/leaderboards?experience=trump-dinner, the wallet addresses are truncated. To get the complete addresses,

1. Open https://gettrumpmemes.com/leaderboards?experience=trump-dinner
2. Press Ctrl+Shift+I to open developer tools (on the Brave browser in the Pop OS operating system, could be different on other browsers or operating systems)
3. Click the Network tab.
4. Click Fetch/XHR to show only data requests
5. Reload the page with Ctrl+R.
6. Click the request that starts with leaderboard?experience=trump-dinner. The Headers pane shows its full URL (https://gettrumpmemes.com/api/leaderboard?experience=trump-dinner&page=1&pageSize=25).
7. To show the top 100 instead of just the top 25, change "=25" in the URL to "=100". The full URL is gettrumpmemes.com/api/leaderboard?experience=trump-dinner&page=1&pageSize=100.
8. To see the next 30, change the page number from 1 to 2. The full URL is gettrumpmemes.com/api/leaderboard?experience=trump-dinner&page=2&pageSize=100.

To obtain information about the wallets—

1. Open gettrumpmemes.com/api/leaderboard?experience=trump-dinner&page=1&pageSize=100 or gettrumpmemes.com/api/leaderboard?experience=trump-dinner&page=2&pageSize=100.
2. Copy the text immediately after "walletAddress". (For example, when Public Citizen did this, the first address was Dd54VRbnHiE7dbwdZTp3zBCTDjt6PbfTek2Cn1S1uHDD.)

3. Open Solscan.io in another browser tab. Solscan is a block explorer for the Solana network, one of two networks $TRUMP exists on (per gettrumpmemes.com) and the only one with wallets on the leaderboard.
4. In the search bar, enter the wallet address from step 2. (Continuing with our example, that will direct you to solscan.io/account/Dd54VRbnHiE7dbwdZTp3zBCTDjt6PbfTek2Cn1S1uHDD).
5. Select the Transfers tab.
6. Filter the token addresses for just Trump to only see transactions involving Trump's meme coin. (Make sure it's 6p6xgHyF7AeE6TZkSmFsko444wqoP15icUSqi2jfGiPN, as there are fake Trump tokens.)
7. Click the address in the From column to see the account that sent the $TRUMP to that wallet. (Solscan may show a name, example "Binance 2" instead of an address; those are usually accurate but still need to be verified every time. In these instances, right click the name). If the page says Token Account, click the Owner address.
8. Some crypto exchanges publish the wallet addresses for their reserves. Compare that wallet address with these
    a. Binance: binance.com/bapi/apex/v1/public/apex/market/por/address (does not serve the U.S. market per bin.bnbstatic.com/static/cms/cg08ou2ak0tn7mcplvfg/file/2dead3dd5d9bccb32694e2f0fe5c7f2c6b583e7a6f851296edef7088340e6df5.pdf).
    b. Bybit: bybit.com/common-static/cht-static/por/Bybit_PoR_Audit_2026_Sep_23.pdf (does not serve the U.S. market per bybit.com/en/help-center/article/Service-Restricted-Countries).
    c. BloFin: blofin.com/fr/proof-of-reserves (does not serve the U.S. market per blofin.com/en/support/Terms/7296238795279-TERMS-OF-USE). BloFin's page blocks U.S. visitors, so Public Citizen downloaded its reserve address file, dated Nov. 17, 2026, through a non-U.S. connection.
9. If the wallet that sent the $TRUMP to the wallet on the leaderboard is in one of those reserve lists, it means the wallet received $TRUMP directly from an address that exchange lists as its own.

To determine whether wallets on the leaderboard are connected, Public Citizen reviewed each wallet's transfers on Solscan.io and looked for five patterns:

- one leaderboard wallet sent the SOL that opened another's account
- one leaderboard wallet sent $TRUMP directly to another

- two wallets, or the wallets that funded them, received $TRUMP from the same unlabeled wallet
- two wallets got their first SOL from the same wallet, weighed by how many other accounts that wallet had opened (a source that had opened only a handful suggested a link, while one that had opened hundreds of thousands did not)
- wallets moved nearly identical amounts at nearly the same time.

For example, 18 wallets that were on the leaderboard on Nov. 6 each received a single Binance withdrawal of $TRUMP (about 3,700 tokens in most cases) between Oct. 5 and Oct. 17, then sent nearly all of it, within about three minutes on Oct. 29, to addresses that appear to be OKX deposit addresses; eight of them used the same address. These connections are inferred from on-chain transfers. They do not prove that the same person or entity controls the wallets.

ABOUT PUBLIC CITIZEN

Public Citizen is a nonprofit consumer advocacy organization that champions the public interest in the halls of power. We defend democracy, resist corporate power, and fight to ensure that government works for the people – not big corporations. Founded in 1971, we now have 1 million members and supporters throughout the country.
